MISCELLANEOUS AND LEXICOGRAPHICAL.

RE-
LIGION.

RELIGION, } Fr. *religion*, *religieux*, *religieuse*;
RELIGIONARY, } It. *religione*, *religioso*, *religiosa*;
RELIGIONIST, } Sp. *religion*, *religioso*; Lat. *re-*
RELIGIOUS, *adj.* } *ligio*, for which various Etymo-
RELIGIOUS, *n.* } logies have been proposed. See
RELIGIOUSLY, } them in Varro and Martinus.
RELIGIOUSNESS. } The most probable seems—a *re-*

ligando; the word *religio* seeming emphatically to express the reciprocal bond or obligation of Man to Man, and also the obligation or duty of Man to the Gods, in Heathen times, and to God among Christians. *Religion*, as in common usage, may be said to express, generally,

An acknowledgment of our bond or obligation as created Beings to God, our Creator; a consequent return of duty and obedience;—godliness, holiness, piety towards God; reverence towards Him, and to things sacred or consecrated to Him; a strict and conscientious discharge or observance of our duties or obligations to each other, as fellow-creatures, or creatures of the same God.

Hii ne sparede prest ne clerc þat hii ne slowe to grounde,
Ne men of *relygyon*, ware so hii eny founde.

R. Gloucester, p. 296.

To þo *religiouses* þat were in Gascoyne,
He gaf a þousand mark.

R. Brunne, p. 136.

Whan þei to Durham com, to þe Bisshop Waltere,
þer þei bigan a home of *religieuse* manere.

Id. p. 80.

Gregorie þe grete clerc, gart write in bokes
The rulle of alle *religious*, rightful & cbedient.

Piers Plouhman. Vision, p. 83.

A cleen *religioun* and an unwemmyd anentis God and the fadir
is this, to visite fadirles and modirless children and widewis in her
tribulacioun, and to kepe himsilff undefouled fro this world.

Wiclif, fol. 134. *James*, ch. i.

And if ony man gessith himsilff to be *religious*, and refreyneth
not his tunge, but disseyueth his herte, the *religion* of him is veyn.

Id. *Ib.*

A good man ther was of *religioun*,
That was a poor persone of a town;
But rich he was of holy thought and werk.

Chaucer. Prologue to the Canterbury Tales, l. 480.

VOL. XXVII.

Religious folk been all pitous,
Thou shalt not seene one dispitous,
They loven no pride, ne no strife,
But humbly they woll lede hir life.

Chaucer. The Romant of the Rose, l. 6163.

He was a man wont walke about,
He n'as not aye in cloister pent,
Ne couthe *religiouslyche* lout,
And therefore was he full ill shent.

Id. The Plowmannes Prologue.

That goddesse chaste, I kepen in no wise,
To serue, a figge for all her chastity,
Her law is for *religiosity*.

Id. The Court of Loue.

And thus when that thei were counseiled,
In black clothes thei them clothe,
The doughter and the lady both,
And yolde hem to *religion*.

Gower. Conf. Am. book viii.

It is not lawefull (quoth they) to put this money into corbon: that
is among the gyftes of the temple whiche they woulde haue esteemed
& regarded *religiously* and scrupulously.

Udall. Matthew, xxvii.

Faith of workes hath ben that light of darcnes in which a great
part of us Christen haue walked euer since Pelagius and Faustus
well about xii. c. years, and euer mo and mo; & in which all our
religious haue walked all and more to this foure or fiue hundred
yeare; & in which the priestes also haue walked a long season,
the Lord bryng them out again.

Tyndall. Workes, fol. 232. *An Exposition of Matthew* vi.

For all that thei pretende *religiousness* of very feare, lest the
iudge should forthwith haue punished them.

Udall. On John, ch. xviii.

Let mortals learn
To make *religion* of offending heaven;
And not at all to censure powers divine.

Ben Jonson. Cynthia's Revels, act v. sc. 11.

It hath been of late confidently asserted by some that never any
of the ancient philosophers dream'd of any such thing as incorporeal
substance; and therefore they would bear men in hand, that it was
nothing but an upstart and new-fangled invention of some bigotical
religionists, the falsity whereof we shall here briefly make to appear.

Cudworth. Intellectual System, book i. ch. i. sec. 19.

B

RE-
LIGION.

RE-
LIGION.
—
RELISH.

Come, there was never any great thing, yet,
Aspired but by violence or fraud:
And he that sticks (for folly of a conscience)
To reach it—
CAT. Is a good *religious* fool.

Ben Jonson. *Catiline*, act iii. sc. 3.

A solemn oath *religiously* they take,
By intermutual vows protesting there;
This never to reveal, nor to forsake,
So good a cause for danger, hope, or fear.

Daniel. *History of Civil Wars*, book iii.

If any one has a mind to relax the strictness of the gospel-rule, and to bring it down to his taste, he falls to declaiming against the excessive rigour of *religionists*, which frighten many sober persons, as it is said, from embracing *religion*.

Waterland. *Works*, vol. v. ch. v. p. 97. *Of the Holy Trinity*.

Lonely the vale, and full of horreur stood,
Brown with the shade of a *religious* wood.

Dryden. *The Wife of Bath's Tale*.

Our English translators among the rest, in innumerable instances, for the original Jehovah, which ought upon all occasions to have been *religiously* retained, have put the more general title of the Lord.

Horsley. *Sermon* 30. vol. iii. p. 7.

RELINQUISH, *v.* } Fr. *relinquer*; Lat. *relin-*
RELINQUISHMENT. } *quere*, (*re*, and *linquere*, to
leave.) See DELINQUENT.

To leave, to quit, to depart from, to forsake, to resign.

The Disdaine met him, and brought to him from her maiesty letters of reuocation, with commandement to *relinquish* (for his own part) the intended attempt.

Hakluyt. *Voyages*, &c. vol. ii. part ii. fol. 194. *The Madre de Dios taken*.

It is madness to hazard a crowne, or lose the love of a whole nation, rather than to *relinquish* or diminish a particular dependance, for which the publique must not be hazarded, nor subverted.

Prynne. *Treachery and Disloyalty*, part i. p. 18.

This is the thing they require in vs, the vtter *relinquishment* of all things popish.

Hooker. *Ecclesiasticall Politie*, book iv. fol. 132.

Chrysostom also bears his testimony to the same thing, and in words of like import, where he speaks of the converted Jews as *relinquishing* their corporeal services, upon their embracing Christianity.

Waterland. *Works*, vol. viii. p. 301. *Distinctions of Sacrifice*.

That natural tenderness of conscience, which must first create in the soul a sense of sin, and from thence produce a sorrow for it, and at length cause a *relinquishment* of it, is took away by a customary repeated course of sinning.

South.

Sir C. Cornwallis, in a letter to the Lord Cranburne, asserts, that England never lost such an opportunity of winning honour and wealth unto it, as by *relinquishing* the war against an exhausted kingdom, and a prince held in little veneration for suffering himself to be wholly governed by a man generally hated.

Bolingbroke. *Works*, vol. ii. p. 385. *Remarks on the History of England*.

RE'LISH, *n.* } Minshew (says Skinner) derives
RE'LISH, *v.* } from the Fr. *relecher*, *re*, and *lecher*,
lambere, to lick; because we lick again and again,
jucundi saporis voluptate illecti.

To lick again, *sc.* that we may retain or retake a pleasing taste; to dwell with pleasure (upon a taste or savour;) to have or cause to have, to feel, to enjoy, a pleasing taste or savour; to taste; to savour of.

But when I cum to seadyke syde
Then do I hope to drinke
Lyuely and myldlie *rellesde* wyne,
Wine that will make one thinke
Of cherie things.

Drant. *Horace. Epistles. To Valla*.

But for the duke his title must derive
Out of the blood, that bare that honour'd name
Therefore must cast and cunningly contrive,
To see how people *relished* the same.

Drayton. *Miseries of Queen Margaret*.

The body's life with meats and air is fed,
Therefore the soul doth use the tasting power,
In veins, which, through the tongue and palate spread,
Distinguish ev'ry *relish* sweet and sour.
Davies. *The Immortality of the Soul*, sec. 16.

Nevertheless we have some slides or *relishes* of the voice or strings, as it were continued without notes, from one tone to another, rising or falling, which are delightful.

Bacon. *Natural History*, Cent. xi. sec. 110.

So well and so thoroughly ripen'd they [figges] bee with the heat of the sun, notwithstanding the leaves be betweene, that they yeeld a most pleasant and sweet *rellice* in tast.

Holland. *Plinie*, book ii. ch. v.

On which with eager appetite they dine,
A savoury bit, that served to *relish* wine.

Dryden. *Ovid. Metamorphoses. Baucis and Philemon*.

The fruits of liberty have the more agreeable *relish* after the uneasy hours of a close and tedious confinement.

Waterland. *Works*, vol. viii. p. 459. *A Thanksgiving*.

We do not always find equal *relish* in the same enjoyment, nor does the prospect of it always appear in colours equally vivid.

Search. *Light of Nature*, vol. i. part i. p. 111.

RELIVE, see LIVE: to revive, to recreate; to live, create, or cause to live, again.

Neyther coude they yet conceyue in mind the mistery of y^e crosse, nor gesse for what purpose he would be slaine, if he would soon after his death *reliue* agayne, sith that he who can *reliue* when hym lust, can also, if it please hym, not dye at all.

Udall. *Paraphrase on Mark ix*.

As the angels of God in heauen, because there is among the no mortalitie, know not the use of matrimony; so shal they that shal be *reliued* in the general resurreccion, be made lyke vnto the angels.

Id. *Ib.* ch. xii.

For I wil *reliue* as I sayd on the third day, & being *reliued*, will goe before you into Galile.

Id. *Ib.* ch. xiii.

And, with it ronning hastily to her sonne,
Thought with that sight him much to have *reliv'd*.

Spenser. *Faerie Queene*, book iii. can. 8.

His mother swowned thrise, and the third time
Could scarce recovered be out of her paine;
Had she not beene devoide of mortall slime
She should not then have bene *relyv'd* againe.

Id. *Ib.* can. 4.

RELONGED. See REJOURNED.
Prolonged; postponed.

Then the kyng sent to Parys, commaundyng that the iourney and batayle between the squyer and y^e knyght sholde be *relonged* tyl his comynge to Parys, and so his commaundment was obeyed.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. lxi. p. 203.

RELUCENT, see LUCID: Fr. *reluire*, *reluisant*; It. *rilucere*, *rilucente*; Lat. *relucens*, present participle of *relucere*, (*re*, and *lucere*, to shine.)

Throwing back a light, a brilliancy; giving or yielding a brightness, or brilliancy, or splendour; brilliant, splendid, shining, resplendent.

There is no best sauage
Ne no tygre so wood
But she wold change his mood,
Suche *relucent* grace
Is form'd in her face.

Shelton. *The Boke of Philip Sparow*

By thee refin'd,
In brighter mazes the *relucent* stream
Plays o'er the mead.

Thomson. *Summer*.

Joy fill'd the breast of Idmon, to behold,
How from the thighs the flames *relucent* roll'd
In purple volumes and propitious smoke.

Fawkes. *Apollonius Rhodius. Argonautics*, book i.

RELISH.
—
RE-
LUCENT.

RELUCT. RELU'CT, } Fr. *relucter*; Lat. *reluctari*, to
RELUME. RELU'CTANT, } struggle or strive against.
RELU'CTANCE, } Struggling, striving against;
RELU'CTANCY, } resisting, opposing, contending
RELU'CTANTLY, } against; (unwilling, lingering, loi-
tering, generally) acting with unwillingness, with regret;
and hence the apparently harsh usage of the noun by
Wood, as equivalent to *regret*.

He was by nature passionate, but more apt to *reluct* at the excesses
of it. Walton. *Life of Donne*.

So spake the sovran voice, and clouds began
To darken all the hill, and smook to rowl
In duskie wreathes, *reluctant* flames, the signe
Of wrauth awak'd.

Milton. *Paradise Lost*, book vi. l. 58.

He who suffers want without *reluctancie*, may be poore not
miserable. Habington. *Castara*, part iii. *A Holy Man*.

But what! am I fallen again into a new *reluctation*? Have I
before contested with thy justice, and shall I now dispute thy
power? Reliquiae Wottonianae, p. 266.

[It cannot be understood that senseless matter] hath ἀποκατάστασιν,
an earnest expectation of some future good to itself; that it is now
made subject ματαλοτητι, to vanity, frustration and disappointment
of desire, and φθορά, to corruption and death; and that ἐκ ἑαυτῶν,
not willingly, but *reluctantly*.

Cudworth. *Intellectual System*, book i. ch. v.

For the holy spirit moves and inclines only, and does not compel;
he leads and conducts as many as will be led and conducted by
him; but does not so forcibly attract them as to overrule all stubborn
resistance or *reluctant* perverseness.

Waterland. *Works*, vol. ix. p. 330. Sermon 26.

Retiring to his relations then living in the city of Heretord,
James Scudamore was drown'd in the river adjoining, (to the great
reluctancy of all those who were acquainted with his pregnant parts.)
Wood. *Athenae Oxonienses*, vol. ii. fol. 271. Anno 1666.

The most unnatural rebellion broke out to the great horror and
reluctancy of all good men.

Id. *Ib.* fol. 405. Anno 1667. Stephen Skinner.

Mark! how with feign'd alacrity he bears
His strong *reluctance* down, his dark revenge,
And gives the charter, by which life indeed
Becomes of price, a glory to be man.

Thomson. *Liberty*, part iv.

Lay we aside all inveterate prejudices and stubborn *reluctances*,
as soon as ever we have light enough to see that we have been in
an error, and that we ought to retract.

Waterland. *Works*, vol. viii. p. 383. Sermon 30.

Well, says I, since it must be so, here is my arm; but I go half
reluctantly, for I like this place so well I could be content to live
here always.

Search. *Light of Nature*, vol. ii. part ii. ch. xxiii. p. 325.

Trust me, tho' I bid thee strike,
Reluctantly I bid thee, for my soul
Holds dear an ancient oak, nothing more dear;
It is an ancient friend.

Mason. *The English Garden*, book i.

RELUME, see LUMINE: Fr. *rallumer*.

To light, kindle, inflame or set on fire again. Cot-
grave.

But once put out thy light,
Thou cunning'st patterne of excelling nature,
I know not where is that Promethean heate
That can thy light *relume*.

Shakspeare. *Othello*, fol. 335.

(This noble theory—that the sun was in the centre of its system,
and that all the other bodies moved round it, in perpetual revolu-
tions) suffered a total eclipse throughout a long succession of
learned and unlearned ages; till these times *relumed* its ancient
splendour, and immoveably fixed it on the most unerring principles
of science,

Warburton. *Works*, vol. iv. book iv. sec. 3. p. 904. *The Divine
Legation*.

RELY', v. } Skimmer says from *re*, and *lye*, or the RELY.
RELI'ANCE, } Fr. *relier*, (*reliare*), to bind up. To REMAIN.
RELI'ER. } *rely* seems equivalent to *requiescere*,
reponere, to rest or repose upon.

To rest or repose in or upon; to depend upon, sc.
with trust or confidence; to trust or confide in.

In spite of fate they'll give their foe the worse,
On their own valour they so much *rely*.

Drayton. *Miseries of Queen Margaret*.

False hope, ah! whither now so speedy hiest?
In vain thy winged feet so fast thou pliest,
Hope thou art dead, and joy, in hope *relying*,
Bleeds in his hopeless wounds, and in his death lies dying.
Fletcher. *Eliza, an Elegy*.

I must serve my turne
Out of mine own, his dayes and times are past,
And my *reliances* on his fracted dates
Have smit my credit.

Shakspeare. *Timon of Athens*, fol. 83.

To thee, to thee, my heaved-up hands appeal,
Not to seducing lust, thy rash *relier*.

Id. *Poems*. *Rape of Lucrece*.

And he, when want requires, is truly wise,
Who slights not foreign aid, nor overbuys;
But on our native strength in time of need *relies*.

Dryden. *Epistle 13. To John Dryden of Chesterton*.

The Saviour, effecting every thing by his power, is represented
under the image of a great champion in the field, who is prompted
by his own courage, and a *reliance* on his own strength and skill,
to attempt what might seem impracticable.

Horsley. *Sermon 6*. vol. i. p. 119.

REMAI'N, v. } Fr. *remaindre*; It. *rimanere*;
REMAI'N, n. } Lat. *remanere*, (*re*, and *manere*,
REMAI'NDER, } Gr. μένειν, to stay, to abide;) to
REMAI'NDER, } stay, to be left, behind.
RE'MANENT, or } To stay, to abide, (sc. after a
RE'MNANT, } number or quantity taken away;)
RE'MANENCE. } to abide, to dwell, to continue; to
last, to wait or await.

& if þei Sir Frethebald haf now ouer comen,
þe to þere *remenant* of þe north son salle þei nomen.

R. Brunne, p. 16.

And now is time to you for to telle,
How that we baren us that ilke night
When we were in that hostelrie alight.
And after wol I tell of our viage,
And all the *remenant* of our pilgrimage.

Chaucer. *Prologue to the Canterbury Tales*, l. 422.

My herte was peersed with very compassion,
That in me *remayned* no life of nature.

Id. *The Lament of Mary Magdalen*.

After my wil my sorow to redoub,
Troy, and the *remainder* of our folke,
Restore I shold.

Surrey. *Virgil. Aeneis*, book iv.

To whom wilt thou me leaue,
Ready to dye, my swete guest? siþe this name
Is all as now that of a spouse *remaines*.

Id. *Ib.*

What cunning means soever these new physicians could devise to
overthrow the auncient manner of working by simples, yet it man-
tained still the *remnants* of the former credit, built surely upon the
undoubted grounds of long experience.

Holland. *Plinie*, book xxvi. ch. iii.

And in his braine,
Which is as dry as the *remainder* basket
After a voyage, he hath strange places cram'd
With obseruation.

Shakspeare. *As You Like It*, fol. 192

Entellus thus: My soul is still the same;
Unmov'd with fear, and moved with martial fame;
But my chill blood is curdled in my veins,
And scarce the shadow of a man *remains*.

Dryden. *Virgil. Aeneid*, book v.

REMAIN. Now in such cases all that can be expected, or need be desired, is, that the *remaining* part of the mixture, or some portion of it, affords crystals or grains of compounded solid figures.

Boyle. Works, vol. iii. p. 57. Of the Figures of Salts.

But worn with years when dire diseases come,
Then hide his not ignoble age at home;
In peace t' enjoy his former palms and pains;
And gratefully be kind to his *remains*.

Dryden. Virgil. Georgics, book iii.

Scarce seven, the thin *remainder* of my fleet,
From storms preserved within your harbour meet.

Id. Ib. Æneid, book i.

This salt is a volatile one, and requires no strong heat to make it sublime into finely figured crystals without a *remanence* at the bottom.

Boyle. Works, vol. iii. p. 81. Qualities and Forms. Experiment 4.

REMAINDER, in *Law*, an estate limited to take effect and be enjoyed after the determination of another estate. See **REVERSION**. Remainders are of two kinds, vested and contingent. A *vested* Remainder is, where the party who is entitled to it is ascertained, and the only thing necessary to put him into actual possession of the estate is the determination of the preceding one. Thus, if an estate be limited to A for life, with Remainder to B, an existing person in fee, the only thing necessary to entitle B to actual possession is the death of A. It is therefore a vested interest in A. A *contingent* Remainder is, where either the individual who is to take it is not ascertained, or, being ascertained, some event is to happen before his right to the Remainder is sure. Thus, if an estate be limited to A for life, with Remainder in fee to the first-born son of B, who has no son born at the time of making the limitation, here, until a son is born to B, it is uncertain whether such a son ever will be born, and, consequently, whether the Remainder will ever vest in any one. Until such a son be born the Remainder is contingent; as soon as such a son is born, if the life-estate be then still undetermined, the Remainder becomes vested. Again, if an estate be limited to A for life, and in case B, an existing person, survive him, then to B in fee; here, until one of the two die, it is wholly uncertain whether B's estate will ever vest, and it is, therefore, a contingent Remainder. There are three rules of paramount importance in the law of Remainders: 1. There must be a particular estate preceding, and, as it is called, to support the Remainder. A chattel interest in land can be granted to commence at a future period of time, but such an interest, so granted, is not a Remainder. But a freehold interest cannot, at Common Law, be made to commence *in futuro* without some preceding estate; because a freehold cannot, at Common Law, be erected without livery of seisin, which passes a present interest. If an estate be limited to A for ten years, with Remainder to B in fee, and livery of seisin be granted to A; here, by the livery of seisin, the freehold passes at once, and A and B are entitled to their respective estates according to the limitation. 2. The second rule is, that the Remainder must pass out of the grantor at the time of the creation of the particular estate; and 3. the third rule is, that if a Remainder be not vested at the time of making the limitation, it must vest, either during the continuance of the particular estate, or *eo instanti* that the particular estate determines; otherwise the Remainder can never take effect. Thus, in the case before put of a limitation to A for life, with remainder to the first-born son of B; here, if A dies before a son is born to B, no after-born son can ever take the estate. Whenever, therefore, the particular

estate is determined or destroyed before the contingency happens on which the Remainder is to vest, the Remainder is lost for ever. This has rendered it usual, in marriage and other settlements, where an estate is limited for life, with Remainder to unborn children, to insert a limitation to trustees, by way of Remainder expectant on the determination of the life-estate by forfeiture or otherwise in the life-time of the tenant, to hold to the trustees during the life-time of the tenant in trust to preserve the contingent Remainders. If, therefore, the first life-estate is forfeited before any child is born, the estate vests in the trustees, and their estate is a sufficient particular estate to support the Remainders,

REMAKE, see **MAKE**: to *make* again or anew.

That which she owns above her must perfectly *remake* us after the image of our Maker.

Glanvil. Apology.

REMAND, Fr. *remander*; to send back again into the hands (*man-us*;) to command back, to order back, (into the hands of a gaoler, keeper, &c.)

And whan he sawe that he coulde nat atcheue his busynesse, he sygnified his estate to the duke of Orlyance, wherevpon he was *remaunded*, and so he retourned to Parys.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 206.

They shall, notwithstanding, be *remanded* and remain prisoners.

Prynne. Treachery and Disloyalty, part iv. p. 27.

REMARK, *v.*

REMA'RK, *n.*

REMA'RKABLE,

REMA'RKABLENESS,

REMA'RKABLY.

See **MARK**: A. S. *mearc-an*, *signare, notare*; Fr. *remarquer*, (*re*, and *marquer*,) to *mark*, note, heed, regard attentively; also, to set a new *mark* or stamp upon.

To note again and again, to note attentively, carefully, to note or denote; to heed, to regard, to observe.

LOUELL. Now, sir, you speak of two

The most *remark'd* i' the kingdom.

Shakspeare. Richard III. fol. 227.

OFF. Ebrews, the pris'ner Samson here I seek.

CHO. His manacles *remark* him, there he sits.

Milton. Samson Agonistes, l. 1319.

Above all things this was *remarkable* and admirable in him, the arts he had to acquire the good opinion and kindnesses of all sorts of men.

Cowley. Essay 1. Liberty.

But I rest
Well satisfied in myself, being assured that
Extraordinary virtues, when they soar
Too high a pitch for common sights to judge of,
Losing their proper splendour, are condemn'd
For most *remarkable* vices.

Massinger. The Unnatural Combat, act ii. sc. 1.

This I have *remarkably* taken notice of in the opinion of the extension of a spirit.

Glanvil. A Key for Providence, ch. viii.

I shall only *remark* that when this text is away, there will be but one left in the whole Scripture where that particular form of expression is used, of God's making the world by the Son.

Waterland. Works, vol. ii. p. 32. Sermon 2.

Thus banish'd, David spent abroad his time,
When to be God's anointed was his crime,
And when restor'd made his proud neighbours rue,
Those choice *remarks* he from his travels drew.

Dryden. Astræa Redux.

Of all the gentle tenants of the place,
There was a man of special grave *remark*;
A certain tender gloom o'erspread his face,
Pensive, not sad, in thought involv'd, not dark.

Thomson. Castle of Indolence, can. 2.

That famous astronomer, Cassini, took the pains to calculate backward a *remarkable* eclipse or two that are mentioned in the Chinese annals.

Bolingbroke. Works, vol. vi. p. 228. On Monotheism. Essay 3.

**REMAIN-
DER.**

REMARK.

REMARK. My Lord Clarendon, whom the *remarker* hath so strangely yoked with the regicide, was unjustly, ungratefully, and cruelly persecuted.
 REMEDY. *Bolingbroke. Works*, vol. ii. p. 435. *A Final Answer to the Remarks on the History of England.*

Or tell me, if you can, what pow'r maintains
 A Briton's scorn of arbitrary chains;
 That were a theme might animate the dead,
 And move the lips of poets cast in lead.
 The cause, tho' worth the search, may yet elude
 Conjecture and *remark*, however shrewd.

Couper. Table Talk.

The saying of the prophet, "that the ways of God are not like those of men," was never more *remarkably* verified than in that great event which we this day commemorate, the death and passion of our Lord and Saviour Jesus Christ.

Horsley. Sermon 19. vol. ii. p. 112.

REMARRY, see MARRY: Fr. *remarier*, to marry again.

To wed again; to give or take in wedlock, to join in matrimony again.

If my daughter haue heyre or heyres by my lorde therle, and than she fortune to dye, thonghe the erle than *remary* againe a seconde tyme, and have issue by the seconde wyfe, yet for all that my daughter's heyre or heyres shall nat be disheryted.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 111.

Ne'er trust them, they'll *remary*
 Ere the worm pierce your winding sheet, ere the spider
 Make a thin curtain for your epitaphs.

Webster. The White Devil, act v. sc. 1.

REMBUS, in Zoology, a genus of Coleopterous insects.

Generic character. *Antennæ* short, filiform; *palpi* six, with the terminal joint elongate, subovate, truncate; *labrum* very deeply notched; mandibles short, bent, acute; *mentum* small, no tooth in the centre; head triangular; *thorax* nearly heart-shaped, rather narrower than the *elytra*, which are elongate; legs moderate; anterior *tarsi* of the males with three dilated joints; *tarsi* pentamerous.

Type of the genus, *Carabus impressus*; Fabricius, *Ent. Syst.* vol. i. p. 188. One species, a native of India, and has been by accident considered as an inhabitant of Britain.

REMEDY, *n.* } See MEDICINE: Lat. *medicina*,
 RE'MEDY, *v.* } from *med-eri*; Gr. *μεδέσθαι*, to
 REME'DIABLE, } heal, to cure; Fr. *remédie*, *remé-*
 REME'DIAL, } *dier*; It. *rimedio*, *rimediare*; Sp.
 REME'DIATE, } *remedio*, *remediar*; Lat. *remedium*.
 RE'MEDILESS, } Any thing healing, curing, giving
 RE'MEDYING, *n.* } or bestowing health or safety; aid,
 help, or assistance; reparation, relief, (from disease, pain,
 hurt, injury, &c.)

Phebus, that first found art of medicine,
 (Quod she) and could in euerie wighte's care
 Remedie, and rede, by herbes he knew fine.

Chaucer. Troilus and Creseide, book i. p. 233.

And toke him to her hands and grace,
 And said she would her minde apply,
 To helpe him in his wofull case,
 If she might be his remedy.

Vncertaine Auctors. A Comparison of his Loue, &c.

Whether the causes alledged to be so weighty and so urgent, that necessarily they require a general council, nor can otherwise be remedied.

Burnet. Records, vol. i. part ii. book iii. sec. 5.

To the intent to sollicite the said kyng to do by his mediation, for the remedying and redressing of those foresaid injuries and wrongfull dealings of the pope in this behalfe.

Fox. Martyrs, fol. 979. *Henry VIII.*

And [tell him] that his bale were better ouer bloune,
 Than thus to pine remedylesse in grief.

Gascoigne. Dan Bartholmew of Bathe.

So fast as the Spaniards did come to enter they gaue them such entertainment that some of them were glad to tumble alive into the sea, being remedillesse for euer to get up alive.

Hakluyt. Voyages, &c. vol. ii. part ii. fol. 169. *Sir R. Greenwill.*

I haue bought a piece of land in the field here, & I must remedillesse go thither to see what I haue bought.

Udall. Luke, ch. xiv.

He going away remedilesly chafing at his rebuke.

Sydney. Countess of Pembroke's Arcadia, book i.

Then shall Cadwallin die; and then the raine
 Of Britons eke with him att once shall dye;
 Ne shall the good Cadwallader, with paine,
 Or power, be hable it to remedy.

Spenser. Faerie Queene, book iii. can. 3.

His watry eies drizzling like deawy rayne,
 He up gan lifte toward the azure skies

From whence descende all hopelesse remedies.

Id. Ib. can. 5.

If their be a right, and a birth-right planted in the heir, and not remediable by courts of equity, and that right be submitted to your majesty, whereby it is both in your power and grace what to do, then I do wish that this rude mass and chaos of a good deed, were directed rather to a solid merit and durable charity, than to a blaze of glory that will but crackle a little in talk, and quickly extinguish.

Bacon. Works, vol. ii. p. 232. *Advice to the King.*

CORD. All blest secrets,
 All you vnpublished vertues of the earth,
 Spring with my tears, be aydant and remediate,
 In the good man's desires.

Shakspeare. Lear, fol. 302.

But now (alas) too late I know it that the riches I possessed then were but words and opinion, all which are turn'd now to my bitter sorrow, and remediless calamity.

Sir Thomas North. Plutarch, fol. 79. *Solon.*

To lament for sin here is a far less uneasy thing than to do it in a place where there is nothing but remediless wailing and gnashing of teeth.

Boyle. Works, vol. iii. p. 372. *Occasional Reflections. Med. 5.*

The instruments whereby this remedy is obtained (which are sometimes considered in the light of the remedy itself) are a diversity of suits and actions, which is defined by the mirror to be "the lawful demand of one's right."

Blackstone. Commentaries, book iii. ch. viii.

A third remedial, whereby a method is pointed out to recover a man's private rights, or redress his private wrongs.

Id. Ib. Introduction, sec. 2.

Now since all wrong may be considered as merely a privation of right, the plain natural remedy for every species of wrong is the being put in possession of that right, whereof the party injured is deprived.

Id. Commentaries, book iii. ch. viii.

REME'MBER, *v.* } See MEMORY: Fr. *remem-*
 REME'MBERER, } *brer*; It. *rimembrare*; Sp. *re-*
 REME'MBRANCE, } *membrar*; also, Fr. *rememorer*;
 REME'MBRANCER. } It. *rimemorare*; Sp. *rememorar*;
 to bring back again to mind or memory; to retain in
 mind or memory.

To bring back or recall to mind or memory; to keep, hold, retain, preserve, in mind; to remind, to put in or into the mind.

See ante, RECOLLECT, and the Quotations from Locke and Stewart.

And for to don his observance to May,
 Remembring on the point of his desire,
 He on his courser, sterling as the fire,
 Is ridden to the felde him to pley
 Out of the court, were it a mile or twey.

Chaucer. The Knightes Tale, l. 1432.

But ye lovers that bathen in gladnesse,
 If any droppe of pite in you be,
 Remembreth you of passed heavynesse
 That ye have felt, and on the adversite
 Of other folke.

Id. Troilus and Creseide, book i.

REMEDY.
 —
 RE-MEMBER.

RE-
MEMBER.RE-
MERCY.

And saied, Friend, in Aprill the last,
As well thou wost, if it *remember* thee,
How nigh the death for wo thou founde me.

Chaucer. *Troilus and Creside*, book iii.

The fourth point, that oughte make a man have contrition, is the sorweful *remembrance* of the good dedes that he hath lefte to don here in erthe, and also the good that he hath lorne.

Id. *The Persones Tale*.

For thy my counseil is that thou
Remembre well howe thou arte olde.

Gower. *Conf. Am.* book viii.

He shall draw into *remembrance*
The fortune of the worldes chance.

Id. *Ib.* Prologus.

Resoun wole, and allowith and approvith nedis that men visite and haunte, for the seid eende of solempne *remembraunce*, tho placis and tho ymagis whiche it is sure God to chese into the seid eende and by the seid evydencis of myraculis doing.

Waterland. *Works*, vol. x. p. 255. To Rev. Mr. Lewis.

Since these fairest stars,
Cover'd with clouds of your determinate will,
Denied their influence to my optic sense,
The splendour of the sun appear'd to me
But as some little glimpse of his bright beams
Convey'd into a dungeon to *remember*
The dark inhabitants there, how much they wanted.

Massinger. *The Bondman*, act iv. sc. 3.

But, Muse, these dear *remembrances* must be
In these convenient places registred,
When thou shalt bring stern discord to agree,
And bloody war into a quiet bed.

Daniel. *A Panegyric to the King's Majesty*.

A slye and constant knave
Not to be shak'd. The agent for his master,
And the *remembrancer* of her, to hold
The handfast to her lord.

Shakspeare. *Cymbeline*, fol. 373.

All which [feoffments, exchanges, &c.] are digested into apt books, and are then sent to the *remembrancer* of the lord treasurer in the exchequer, to the end that he may make and send out processes upon them.

Bacon. *Works*, vol. ii. p. 411. *The Office of Alienations*.

And so likewise, though not so frequently, religion is expressed by the *remembrance* of God; now *remembrance* is the actual thought of what we do habitually know. To *remember* God is to have him actually in our minds, and upon all proper occasions to revive the thoughts of him.

Tillotson. *Works*, fol. 654. Sermon 54.

And though all learning be not the *remembrance* of what the soul once actually understood in a pre-existent state, as Plato somewhere would have it, yet is all humane teaching but maientical or obstetricious.

Cudworth. *Intellectual System*, book i. ch. iv.

The bellowing winds with rage impetuous roar,
And dash the foaming billows on the shore;
Ev'n then the youth, with pleasing visions fed,
Glows with *remembrance* of the bridal bed.

Fawkes. *Hero and Leander*.

REMEMORATE, } See ante, to REMEMBER.
REMEMORATION, } Rememoratise, that can or
REMEMORATIVE. } may remind or recall to, or put
in, mind.

For whi, withoute *rememoratif* signes of a thing, or of thingis, the *rememoracioun*, or the remembrance of thilk thing or thingis muste needis be the febler.

Bishop Pecock in *Waterland*. *Works*, vol. x. p. 254.

How apt we are to forget those duties, wherewith we are only encharged in common, without the design of a particular *rememoration*.

Hall. *Rem.* p. 293.

The setting of them [images] up, suffering them to stand, using them as ornaments, for helps of memory, of affection, of *rememoration*, cannot bee abstracted, to my understanding, from reverence and honour simply in due kinde.

Mountague. *An Appeal to Cæsar*, p. 255.

REMERCY, Fr. *remercier*, to thank, i. e. to repay (thanks) for grace or favour shown.

She him *remercied* as the patrone of her life.

Spenser. *Faerie Queene*, book ii. can. 11.

RE-
MERCY.RE-
MIPES.

REMIGRATE, see MIGRATE: Lat. *emigrare*, to depart, to go away.

To go away back; to return again, (sc. into its former place or state.)

The Scots, transplanted hither, became acquainted with our customs, which, by occasional *remigrations*, became diffused in Scotland.

Hale.

When the salt of tartar from which it is distilled hath retained or deprived it of the sulphurous parts of the spirit of wine, the rest, which is incomparably the greater part of the liquor, will *remigrate* into phlegm.

Boyle. *Works*, vol. i. p. 499. *The Sceptical Chymist*.

REMIND, } To mind again; to call again to mind
REMINDER. } or memory, to the remembrance; to remember.

That the high priest, continually reflecting upon his attire, which represented the universe, might be *reminded* not to doe or speak any thing contrary to the laws thereof, or repugnantly to the rules of eternal reason, which is that everlasting high priest.

More. *Works*. Preface, fol. v.

There is an active and actual knowledge in a man, of which these outward objects are rather the *reminders* than the first beggeters or implanters.

Id. *Ib.* *Antidote against Atheism*, book i. ch. v.

What account will you give of many other places of Scripture, where God *reminds* his people that he is Jehovah, and where there is no reference at all to promises, or the like.

Waterland. *Works*, vol. i. part i. p. 45. *A Defence of some Queries*. Query 3.

REMINISCENCE, } Fr. *reminiscence*; It. *reminiscenza*; Lat. *reminiscens*:—
REMINISCENCY, } *reminisci*, (Varro, lib. v.) *cum*
REMINISCENTIAL. } *ea, quæ tenuit mens et memoria, cogitantur, et cogitando repetuntur*. Vossius refers to an ancient *menisci*, which he derives from *men-ere*, the obsolete theme of *memini*. The word is not used very discriminately.

A research for, a recalling to the mind, (sc. former ideas or thoughts;) recollection, remembrance.

But if you'll say that memory is in the brain, but *reminiscency* in the conarion, I answer, that these impresses, or signatures, made by outward objects in the brain must also of necessity be obliterated by superadvenient impressions.

More. *Antidote against Atheism*, ch. x. Appendix.

Those perceptions that have the soul for their cause, are either the perceptions of her own acts of will, or else of her speculation of things purely intelligible, or else of imaginations made at pleasure, or, finally, of *reminiscency*, when she searches out something that she has let slip out of her memory.

Id. *Immortality of the Soul*, book ii. ch. v.

Would truth dispense, we could be content, with Plato, that knowledge were but remembrance, that intellectual acquisition were but *reminiscential* evocation, and new impressions but the colouring of old stamps which stood pale in the soul before.

Sir Thomas Brown. *Vulgar Errours*. Preface, p. 1.

Plato imagined, after more ancient philosophers, that every man is born with a certain *reminiscence*, and that when we seem to be taught we are only put in mind of what we knew in a former state.

Bolingbroke. *Works*, vol. v. p. 396. *Presumption of Philosophers*. Essay 2.

REMIPES, in Zoology, a genus of *Macrourous Crustacea*.

Generic character. *Antennæ* six, lateral and intermediate ones short, almost of equal length, slightly bent; exterior feet-jaws resembling small arms with a strong hook at the end; first pair of legs terminated by pointed plates; the others with ciliated pointed fins; shell oval, denticulated in front.

Type of the genus, *R. testudinarius*, Latreille; Cuvier, *Règne Animal*, vol. iv. pl. xii. fig. 2. Inhabits the coast of New Holland.

RE-
MIREA.
REMIT.

REMIREA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*. Generic character: spikes collected into a head; calyx two-valved; corolla two-valved, smaller than the calyx; filaments very long.

One species, *R. maritima*, native of Guiana.

REMIT, v.

REMI'ZE, v.

REMI'TTANCE, v.

REMI'TTER,

REMI'SS,

REMI'SSIBLE,

REMI'SSION,

REMI'SSLY,

REMI'SSNESS,

REMI'SSORY.

See MISSION: Fr. *remettre*, *remis*; It. *rimettere*, *rimesso*; Sp. *remittir*, *remisso*; Lat. *remittere*, *remissum*, (*re*, and *mittere*, to send,) to send back.

To send, to cause to go back; to put or place back; to let or give leave to go back; to release, to relax, to resign, to relinquish; to refer, to reduce, to return, to restore; to release, to rebate or abate; to release, sc. from punishment or penalty, hence, to forgive, to pardon; to relax, sc. exertion, bodily or mental, and, hence, to neglect, to disregard.

To *remise*, (in Law,) to put away from, to part from, to release.

This is my blood of the new testament, which shall be shed out for manye into remission of synnes.

Wiclif. *Matthew*, ch. xxvi.

For certes, if he be baptised without penitence of his old gilt, he receiveth the marke of baptisme, but not the grace, ne the remission of his sinnes til he have veray repentance.

Chaucer. *The Persones Tale*, p. 147.

Notwithstandinge the traualle of the almoigner, that hath draw up in the cloth al the remissions, as trenchours, and the relief to bere to the almesse.

Id. *The Testament of Loue*. Prologue.

These be well nyghte the wordes of Luciane; whether the counsayle be good, I remytte it to the wyse reders.

Sir Thomas Elyot. *The Governour*, book iii. fol. 236.

Little regarding their inconstancy and remissnesse in God's cause or quarrell, [he] saide unto them right notably.

Fox. *Martyrs*, fol. 1693. Anno 1556. Queen Marie.

Propitiatory, expiatory, remissory, or satisfactory, signifie all one thing in effect, and is nothing els but a thing whereby to obtaine remission of sins, and to have salvation.

Latimer. *Sermon* 4. p. 22. *Of the Plough*.

CRAN. Methinks, sir, you might have that interest

In your wife's brother, to be more remiss,

In his hard dealing against poor Sir Charles.

Heywood. *A Woman Killed with Kindness*, act i. sc. 1.

They also doe by his divine permission,

Upon the thrones of mortal princes tend,

And often treat for pardon and remission

To suppliants, through frayltie which offend.

Spenser. *Faerie Queene*, book v. can. 9.

Like an unbent bow carelessly

His sinewy proboscis did remissly lie.

Donne. *The Progress of the Soul*.

This said, dumbe silence seiz'd them all, they shamed to deny,
And fear'd to undertake; at last, did Menelaus speake,
Check'd their remissnesse, and so sigh'd, as if his heart would breake,
Aye me, but onely threatning Greeks not worthy Grecian names.

Chapman. *Homer. Iliad*, book vii. fol. 98.

He [Ptutarch] spake of a *καλίντροπος αρμονία κοσμου*, a versatil harmony of the world, whereby things reciprocate forwards and backwards, as when a bow is successively intended and remitted.

Cudworth. *Intellectual System*, book i. ch. iv.

Continual claims I've made, injunctions got

To stay my rival's suit, that he should not

Proceed; spare me, in Hillary term I went:

You said, if I returned next 'size in Lent,

I should be in remitter of your grace.

Donne. *Satire* 2.

You object further, (*Disq. Mod.* p. 27. 33) that Christ would not suffer himself to be called good, but remitted that title to the Father only.

Waterland. *Works*, vol. ii. p. 257. *An Answer to Dr. Whitby*.

For whether Earth's an animal, and air
Imbibes, her lungs with coolness to repair,
And what she sucks *remits*, she still requires
Inlets for air, and outlets for her fires.

Dryden. *Ovid. Metamorphoses*, book xv.

A compact among private persons furnished out the several remittances.

Addison. *On Italy*.

This mild remissness, if it do not prune a vice, at least it does but lop, and that prohibits not its future growth.

Boyle. *Works*, vol. vi. p. 25. *Against Swearing*.

My generous brother is of gentle kind,

He seems remiss, but bears a valiant mind.

Pope. *Homer. Iliad*, book v.

A wise or good man will not break with his friend for every offence, for a hasty word, for a slight affront or disrespect, for some indiscretion of conduct or frowardness of temper, for some remissness or tardiness in good offices, or some neglects and failures in services.

Waterland. *Works*, vol. x. p. 140. *Sermon* 10.

A train of heroes followed through the field,
Who bore by turns great Ajax' seven-fold shield;
Whene'er he breath'd remissive of his might,
Fir'd with incessant slaughters of the fight.

Pope. *Homer. Iliad*, book xiii.

How often have I blessed the coming day,

When toil remitting lent its turn to play,

And all the village train, from labour free,

Led up their sports beneath the spreading tree.

Goldsmith. *The Deserted Village*.

Releases, which are a discharge or conveyance of a man's right in lands or tenements to another that hath some former estate in possession. The words generally used therein are, *remised*, *released*, and for ever quit-claimed.

Blackstone. *Commentaries*, book ii. ch. xx.

Perhaps we should grow remiss and thoughtless in these scenes of continual ease and delight, if we had not those dismal spectacles to rouse and alarm us.

Search. *Light of Nature*, vol. ii. part ii. ch. xxiii. p. 211.

When the laws were remissly or corruptly administered, good and ill would sometimes happen unequally to men.

Warburton. *The Divine Legation*, book v. sec. 4.

Their rents are remitted to them in sugar and rum, the produce of their estates.

Smith. *Wealth of Nations*, vol. iii. book v. ch. iii. p. 440.

The condition of a remitted forfeiture being as absolutely in the breast of the remitter as the condition on which the blessing was originally conferred, he was pleased it should be done by one man's willingly offering himself to death for an atonement for all.

Warburton. *Works*, vol. ix. p. 116. *Sermon* 5.

The same act of parliament which suppressed ten and five shilling bank notes, suppressed likewise this optional clause, and thereby restored the exchange between England and Scotland to its natural rate, or to what the course of trade and remittances might happen to make it.

Smith. *Wealth of Nations*, vol. ii. book ii. ch. ii. p. 78.

REMITTER, in Law, is where a valid and a defeasible title to lands or tenements unite in the same person, who is not *particeps criminis* in the creation of the defeasible title. In this case the defeasible title is destroyed, and the party is remitted to his better right. Thus, if tenant in tail makes a discontinuance, and afterwards disseises the party to whom, on making the discontinuance, he conveyed the land, and then dies in possession, here the right to the estate tail and the fee simple acquired by the disseisin descend at once to the heir, who is thereupon remitted to and holds by the elder and better title. The reason of this, that if the Law were to consider the party to hold the land by the defeasible title, he would be wholly without remedy for the recovery of his better title, as he could not enter upon his own possession, or bring an Action against himself. The right, however, to which a man may be remitted must be one for the recovery of which he has a

REMIT
RE-
MITTER.

RE-
MITTER.
—
REMORA.

remedy at Law. In the case above supposed, if the disseisor, after making the disseisin, had levied a fine before his death, such fine would have barred the right to the estate tail, in which case no Remitter would have taken place, and all that the heir would have acquired would have been the estate acquired by the disseisin, which would have been liable to be defeated at the suit of the party disseised.

REMOLTEN, *i. e.* remelted; melted or molten again. See MELT.

It were good to try in glass works, whether the crude materials of glasse, mingled with glasse already made, and remoulten, doe not facilitate the making of glass with less heat.

Bacon. *Natural History*, sec. 779.

It were good, therefore, to try whether glass remoulten do leesse any weight.

Id. *Ib.* sec. 799.

REMO'NSTRATE, *v.* } Fr. *remonstrer*; It. *ri-*
REMO'NSTRANT, *adj.* } *mostrare*; Sp. *remonstrar*;
REMO'NSTRANT, *n.* } Lat. *re*, and *monstrare*, to
REMO'NSTRANCE, } call to mind again.
REMONSTRATION, } To re-present (to the
REMO'NSTRATOR. } mind, to the attention;) to

bring again under consideration or review; to show or exhibit for reflection; to urge reasons against any previous act or judgment; to warn, to expostulate.

And, lastly, your majesty did exhort them, by the opportunity which the present time itself did yield unto it; which I did particularly *remonstrate* unto them.

Reliquiæ Wottonianæ, p. 494.

Is it not now rather to be wondered that such a weakness could fall from the pen of such a wise *remonstrant* man?

Milton. *Works*, vol. i. p. 81. *Animadversions upon the Remonstrants' Defence*, &c.

You are not armed, *remonstrant*, nor any of your band; you are not dieted, nor your loins girt for spiritual valour and Christian warfare, the luggage is too great that follows your camp.

Id. *Ib.* p. 77.

So that the king (with all main speed) was glad,
Both by his *remonstrances* well composed,
And with his sword (his best defence) provide
To right himself, and to correct their pride.

Daniel. *History of Civil Wars*, book iv.

It is a proper business of a divine to state cases of conscience, and to *remonstrate* against any growing corruptions in practice, and especially in principles.

Waterland. *Works*, vol. ii. p. 341. *Arian Subscription. Supplement*.

The ablest and soundest divines, as well Lutheran as Reformed, have reclaimed strongly against it, detesting the neutrality of the *remonstrant* brethren, as tending to undermine the Gospel of Christ.

Id. *Ib.* vol. v. p. 5. *Doctrine of the Trinity*.

Shortly after the beginning of the Parliament, there had been a committee appointed "to prepare and draw up a general *remonstrance* of the state of the kingdom, and the particular grievances it had sustained."

Clarendon. *History of the Rebellion*, &c. vol. i. part ii. book iv. p. 302.

And orders were sent down for clapping up three of the chief *remonstrators*.

Burnet. *Own Time*. Anno 1660.

How eloquently shines the glowing pole!
With what authority it gives its charge,
Remonstrating great truths in style sublime.

Young. *The Complaint*. Night 9.

REMORA, Fr. *remore*; Lat. *remora*, (*re*, and *mora*.) that which delays, hinders, retards; applied to a fish. See the Quotation from Spenser.

All sodainly there clove unto her keele
A little fish, that men call *remora*,
Which stopt her course, and held her by the heele,
That winde nor tide could move her thence away.

Spenser. *The World's Vanitie*.

Life is a voyage, and in our life's ways,
Countries, courts, towns, are rocks or *remoras*.

Donne. *To Sir Henry Wotton*.

Her store the tardy *remora* supplies,
With stones from eagle's warm, and dragon's eyes.
Rowe. *Lucan. Pharsalia*, book vi.

But these fantastical *remoras* do not obstruct us in the familiar transactions of life, nor do they ever enter into the head of a common man.

Search. *Light of Nature*, vol. ii. ch. xxvi. p. 3.

REMORD, *v.*

REMO'RDENCY,

REMO'RSE,

REMO'RSED,

REMO'RSEFUL,

REMO'RSELESS,

REMO'RSELESSNESS,

REMO'RSELESSLY.

Fr. *remordre*; It. *remordere*;
Sp. *remorder*; Lat. *remordere*,
(*re*, and *mordere*, to bite,) to
bite again.

To bite, to gnaw again; to prey upon continually or repeatedly. *Remorse* is applied to The gnawing pains of the mind or conscience for any act; to compunction or regret; to the relentings of compassion or sympathy.

And God yeueth and departeth to other folke, prosperitees and aduersities, medled to heape, after the qualitie of hir courages, and *remordeth* some folke by aduersities, for thei ne should not waxen proude by long welfulness.

Chaucer. *Boecius*, book iv. *De Consolatione*.

But for she had a manner *remors*
In her selfe, greuing her conscience.

Lidgate. *The Story of Thebes*, p. 3.

And venemously stingyng
Rebukyng and *remording*
And nothyng accordyng.

Shelton. *Against the Scottes*.

One which knewe of the conspiracie against him, and by all lykelihode did participate therein, beyng mened either with loue or pitie, or other wyse his conscience *remording* against the destructiō of so noble a prince, &c.

Sir Thomas Elyot. *The Governour*, book ii. p. 109.

The Phocenses at the sighte of the cognisaunce of the God, stricken with inwarde *remorse* of conscience for their offences, cast downe their wepons and take them to flight.

Arthur Goldyng. *Justine*, book iv. p. 42.

When troubled conscience reads accusing scroules,
Which witness'd are even by the breast's own blood;
O what a terrour wounds *remording* soules,
Who poyson finde, what seem'd a pleasant food.

Stirling. *Doomes-day. The first Houre*.

But they, him spyng, both with greedy Torse
Attonce upon him ran, and him beset
With strokes of mortall steele without *remorse*,
And on his shield like yron sledges bet.

Spenser. *Faerie Queene*, book ii. can. 2.

SIL. Oh, Eglamore, thou art a gentleman;
Thinke not I flatter, (for I sweare I doe not),
Valiant, wise, *remorse*-full, well accomplish'd.

Shakspeare. *Two Gentlemen of Verona*, fol. 34.

— He well might know he could not fashion him
In ruth's soft mould, he had no spirit to brooke that interim
In his hot furie: he was none of these *remorseful* men,
Gentle and affable; but fierce at all times, and mad then.

Chapman. *Homer. Iliad*, book xx. p. 286.

Eurylochus, straight hasted the report
Of this his fellowes most *remorseful* fate.

Id. *Ib.* *Odyssey*, book x. p. 151.

The Scythians, even the marble-hearted Fates,
Could not have acted more *remorseless* deeds,
In their relentless natures, than these of thine.

A Yorkshire Tragedy, act i. sc. 8.

For with such fell *remorselessness* she n'er
Had heartned up her tallons and her teeth,
To wage her monstrous hunger's war, as here.

Beaumont. *Love's Mystery*, can. 9. st. 139.

That *remordency* of conscience, that extremity of grief, they feel within themselves.

Killingbeck. *Sermons*, p. 175.

Thus having said, of kind *remorse* bereft,
He seiz'd his helm, and dragg'd him with his left;
Then with his right hand, whilst his neck he wreath'd,
Up to the hilts his shining falchion sheath'd.

Dryden. *Virgil. Aeneid*, book x.

REMORA.

REMORD.

RE-
MOUNT.RENAN-
THERA.

He, backe returning by the yvorie dore,
Remounted up as light as chearefull larke.
Spenser. Faerie Queene, book i. can. 2.

That very morn
The Sun was enter'd into Capricorn;
Which, by their bad astronomer's account,
That week the Virgin Balance should remount.
Dryden. The Hind and the Panther.

The shortest and the surest method of arriving at real knowledge is to unlearn the lessons we have been taught, to remount to first principles, and take nobody's word about them.

Bolingbroke. Works, vol. iv. p. 234. Idea of a Patriot King.

Without remounting to the remote antiquities of either the French or English monarchies, we may find in much later times many proofs that such effects must always flow from such causes.

Smith. Wealth of Nations, book iii. ch. iv.

REMUGIENT, see MUGIENT, *ante*.

Lowling or bellowing again; rebellowing.

Earthquakes accompanied with remugient echoes, and ghastly murmurs from below.

More. Mystery of Godliness, p. 63.

REMUNERATE, } Fr. remunerer; It. rimu-
REMUNERATION, } nerare; Sp. remunerar; Lat.
REMUNERATIVE, } remunerari, (re, and munus,
REMUNERATORY, } see MUNIFICENT,) to return,
REMUNERABILITY. } or repay, an office or service done.

To give or pay in return for, in recompense or requital of; to recompense, to requite, to reward.

And therewithal the execrable act
On their late murder'd king they aggravate:
How he employ'd the doers of the fact,
Whom afterwards he did remunerate.

Daniel. History of Civil Wars, book iv.

Such execrable infamous apostates as these can expect no other reall remuneration of this their treachery and perfidiousnesse.

Prynne. Treachery and Disloyalty, part iv. p. 216.

But liberty of will [is that] whereby men deserve commendation and blame, rewards and punishments, and so become fit objects for remunerative justice to display itself upon.

Cudworth. Intellectual System, book i. ch. v. fol. 690.

The liberty and remunerability of human actions.

Pearson. On the Creed, art. 2.

From the time of his first engagement till about the year 1770, he [Marchi] continued with Reynolds, who had for several years remunerated his services.

Reynolds. Works, vol. i. p. 151. Memoirs by Malone.

Human legislators have for the most part chosen to make the sanction of their laws rather vindictory than remuneratory, or to consist rather in punishments, than in actual particular rewards.

Blackstone. Commentaries, vol. i. sec. 2. p. 56. Introduction.

REMURMUR, re, and murmur; Lat. *murmurare*; Gr. *μurmύρειν*, properly spoken of flowing waters a little roughened. See MURMUR.

To murmur again; to repeat or re-echo, a murmur; sc. a sound similar to that of roughly flowing waters.

A jarring sound results, and mingles in the sky,
Like that of swans remurmuring to the floods,
Or birds of different kinds in hollow woods.

Dryden. Virgil. Aeneid, book xi.

Where'er he pass'd, a purple stream pursued
His thirsty falchion, fat with hostile blood;
Bath'd all his footsteps, dy'd the fields with gore,
And a low groan remurmur'd through the shore.

Pope. Homer. Iliad, book x. p. 71.

RENANTHERA, in Botany, a genus of the class Gynandria, order Monandria, natural order Orchidiae. Generic character: calyx a persisting spathe; corolla, petals five, the two superior undulated, the three inferior linear-lanceolate; lobes of the anthers reniform, spreading.

One species, a parasite on trees in Cochin China, Loureiro. RENANTHERA.

RENA'TE, } Lat. *renascens, renatus*, present
RENA'SCENCY, } and past participle of *renasci*, to be born again. See NATIVE. RENAY.

Born again; raised or risen again.

Beyng not onely strange and marueylous, but also prodigious and unnaturall, to feyne a dead man to be renated and newly borne agayne. *Hall. Henry VII. The seventh Yere.*

And to confirm yourself in me renate,
I hope you'll find my wits legitimate.

Beaumont and Fletcher. Wit at several Weapons, act i. sc. 1.

Leave the stools as close to the ground as may be, especially if you design a renascency from the roots.

Evelyn, book iii. ch. iii. p. 31.

Job would not only curse the day of his nativity, but also of his renascency, if he were to act over his disasters and the miseries of the dunghill. *Brown. Christian Mor. vol. iii. p. 23.*

RENA'Y, or } Fr. *renier*; It. *rinnegare*; Sp. *re-*
RENE'Y, } *negar*; Lat. *re*, and *negare*, (*ne-go*,
RENE'GE, } quasi *ne-ago*, Vossius. See NEGA-
RENEGA'TE, } TION.)
RENEGA'DE, } To deny or refuse; to say or af-
RENEGA'DO. } firm that a thing shall not be, is not, or has not been.

Renegate, or Renegade, one who denies, renounces, or rejects—his faith, his allegiance. See the Quotation from Hakluyt.

Reneyed occurs in Piers Plouhman, which Dr. Whitaker interprets *renegado*.

The lordes steward (God yeve him meschance),
A theef, that had reneyed our creance,
Came into the ship alone, and said, he wolde
Hire lemman be, whether she wolde or n'olde.

Chaucer. The Man of Lawes Tale, v. 5421.

How may this weke woman han the strength
Hire to defend again this renegate?

Id. Ib. v. 5353.

And he a stewarde had,
One Thelous, whiche all was bad,
A fals knight, and a renegade.

Gower. Conf. Am. book ii.

But also they affirmed themselues rather to dye then to renye theyr very God.

Joye. Exposition of Daniel, ch. iii. p. 34.

Those that vaunted themselues by the glorious name of Israel, those hath he *reneagued* and put away from the inheritaunce of the promises made vnto Israel.

Udall. Luke, ch. i. v. i. fol. 225.

In the meane season while Petre *reneagueth*, while he sweareth na, while he curseth hymself, while he geueth himself body and solle to the deuil: the cocke crewe the second tyme, whiche was the token that the Lorde had geuen him.

Id. Ib. ch. xxii. fol. 372.

And it was a plaine *renaying* of Christes faith to doo any ob-servauce therto (ydolles and mammettes.)

Sir T. More. Works, p. 179. A Dialogue concerning Heresies.

Manye other contumelies and dispightes, the Turkes and the false *renegade* Christiens manye tymes dooe.

Id. Ib. fol. 1212. The thirde Booke of Coumfort against Tribulation.

For he was a *renegado*, which is one that first was a Christian, and afterwards becometh a Turke.

Hakluyt. Voyages, &c. vol. ii. fol. 186. Tho. Sanders.

His captaines heart,
Which in the scuffles of great fights hath burst
The buckles on his brest, *reneages* all temper,
And is become the bellows and the fan
To coole a gypsies lust.

Shakspeare. Antony and Cleopatra, fol. 340.

RENAY.

REND.

Meanwhile, they knock'd against the door,
As fierce as at the gate before;
Which made the *renegado* knight
Relapse again t' his former fright.

Butler. *Hudibras*, part iii. can. 1.

For *renegadoes*, who ne'er turn by halves,
Are bound in conscience to be double knaves.

Dryden. *Absalom and Achitophel*.

RENCOUNTER, *v.* } Fr. *rencontrer*; It. *rincon-*
RENCO'UNTER, *n.* } *trare*; Sp. *rencontrar*; *re*,
and *en-counter*, to go, to run against.

To go or run against, to assault, to attack, to oppose;
to engage or fight with; to come against, to meet with,
to occur with.

As yet they sayd, blessed be God they kepte the felde, and none
to *recoûtre* them.

Lord Berners. *Froissart*. *Cronycle*, vol. ii. ch. lxxxviii.

They inuade the vttermost boues of the Chivrones, where they
recountred many as they fled scatered here and there, and gate a
great bootie of cattell.

Cæsar. *Commentaries*, book vi. fol. 169.

I fell in company with Sir Johan Joell and Sir Jaques Planchyn,
and, without any busynesse or *reencounter*, we came to the captall.

Lord Berners. *Froissart*. *Cronycle*, vol. ii. ch. xxix.

For I thinke verely that your aduersarie king Phillip will meete
with you to fight, and ye shall find many streight passages and
reecunncotries.

Grafton. *Edward III. The twentieth Yere*.

Who, seeing him from far so fierce to pricke,
His warlike armes about him gan embrace,
And in the rest his ready speare did sticke;
Tho', when as still he saw him towards pace,
He gan *rencounter* him in equall race.

Spenser. *Faerie Queene*, book ii. can. 1.

Which when this palmer saw, he gan to feare
His toward perill, and untoward blame,
Which by that new *rencounter* he should reare;
For death sate on the point of that enchaunted speare.

Id. *Ib.* book iii. can. 1.

Was it by mere chance that these blind parts of matter, floating
in an immense space, did, after several justlings and *rencounters*,
jumble themselves into this beautiful frame of things?

Scott. *Christian Life*, part ii. ch. iv. fol. 263.

REND, *v.* } A. S. *hrend-an*, *rend-an*, to tear,
RENT, *v.* } Upon *rent*, the past participle *rended*,
RENT, *n.* } *rend'd*, *rent*, has been formed the verb
RE'NTING, *n.* } To *rent*,
To tear asunder, to tear or pull away.

Away! lute wel þogte he, þo me ys wombe *rende*.

R. Gloucester, p. 239.

Ten schippes wer dryuen þorgh ille auisement,
þorgh a tempest ryuen, þe schipmen held þam schent
On þer was on depe broken & alle to *rent*.

R. Brunne, p. 148.

Whan Melibeus retorned was into his house, and sey al this mes-
chief, he, like a mad man, *rending* his clothes, gan to wepe and crie.

Chaucer. *The Tale of Melibeus*.

By God he smote me ones with his fist,
For that I *rent* out of his book a lefe,
That of the stroke myn ere wex al defe.

Id. *The Wife of Bathes Prologue*, v. 6216.

The Troyans on the tother part *rend* down
The turrets hye, and eke the palace rooffe.

Surrey. *Virgil. Aeneis*, book ii.

For fyrst and formost he *renteth* a newe vesture to patche vp an
old.

Udall. *Luke*, ch. v. fol. 270.

Thus both apparalled with the grievous *renting* of their long com-
bination, they took diuers ways.

Sidney. *Arcadia*, vol. ii. book iii. p. 628.

She at the first encounter on him ran
With furious rage, as if she had intended
Out of his breast the very heart have *rended*.

Spenser. *Faerie Queene*, book v. can. 5.

Where sighes, and groanes, and shrieks that *rend* the ayre
Are made, not mark'd.

Shakspeare. *Macbeth*, fol. 147.

A fearful vision doth his soul molest;
Seeming to see in rev'rent form appear
A fair and goodly woman all distrest;
Which, with full-weeping eyes and *rented* hair,
Wringing her hands, as one that griev'd and pray'd.

Daniel. *History of Civil Wars*, book i.

Oh thou! whose thunder *rends* the clouded air,
Who in the heaven of heavens has fix'd thy throne,
Supreme of Gods! unbounded and alone!
Hear! and before the burning sun descends,
Before the night her gloomy veil extends,
Low in the dust be laid yon hostile spires.

Pope. *Homer. Iliad*, book ii.

On Mount Vesuvio next he fixt his eyes,
And saw the smoking tops confus'dly rise;
(A hideous ruin!) that, with earthquakes *rent*,
A second *Ætna* to the view present.

Addison. *Silius Italicus*, book xii.

From Lyons there is another great *rent*, which runs across the
whole country in almost another straight line, and, notwithstanding
the vast height of the mountains that rise about it, gives it [the
Rhône] the shortest course it can take to fall into the sea.

Id. *Remarks on Italy*, p. 269.

RE'NDER, *v.* } Fr. *rendre*; It. *rendere*; Sp.
RE'NDER, *n.* } *rendir*; Lat. *reddere*, (*re*, and *do*,
RE'NDERER, } quasi *retro do*.) to give back.
RE'NDERING, *n.* } To give back, to restore, to re-
RE'NDIBLE, } turn; to give, yield, or deliver up;
RENDITION. } to deliver, to place or set before,
to present or represent, to return or turn, from one
state to another; to transfer, to translate; to give or
bestow, to cause to have, or to be.

Til þei couþe speke and spele. and in spm̄ sanctum
Recorden hit and *rendren* hit. wyth remissionem peccatōr.

Piers Plouhman. *Vision*, p. 303.

Mine herte foryeteth thereof right nought,
It is so writen in my thought,
And deepe grauen it is so tender
That all by herte I can it *render*.

Chaucer. *The Romant of the Rose*.

Al onely at his owne coste,
She shall be *rendred* forth with hir.

Gower. *Conf. Am.* book vii.

The husbandmen that would not *render* to the lorde of the fruit
in due tyme, and therefore [the vineyard] was takē from them, and
hyred out to other.

Tyndall. *Prologue to St. Matthew*, p. 35.

And yet (O Goddess) wouldst thou please to sweare
The God's great oath to me, before thou heare
Thy blessed sonne here; that thou wilt erect
A phane to him, to *render* the effect
Of men's demands to them, before they fall;
Then will thy sonnes renowne be general.

Chapman. *Homer. A Hymne to Apollo*.

Newnesse

Of Cloten's death (we being not knowne, not muster'd
Among the bands) may driue vs to a *render*
Where we haue liu'd.

Shakspeare. *Cymbeline*, fol. 391.

It wou'd be pretty now, if I shou'd insist upon the *rendering* up
of Tournay by Woolsey's treason.

Milton. *Works*, vol. i. p. 17. *Of Reformation in England*.

Every language hath certain idioms, proverbs, and peculiar ex-
pressions of its own, which are not *rendible* in any other, but para-
phrastically.

Howell. *Letter 21*. book iii. p. 436.

"Let us therefore lay aside every weight, and the sin that doth so
easily beset us;" so we read the words of the apostle: but St.
Chrysostom's *rendition* of them is better

Taylor. *Sermons*, p. 3. *The Christian's Conquest*.

For these two lords being pupills, and under the king's tuition,
were carried with him to Oxford, where they remained till the
rendition of the place.

Hutchinson. *Memoirs*, vol. ii. p. 133.

RENDER.

REN-
FREW-
SHIRE.

Encourag'd hence, maintain the glorious strife,
Till every soldier grasp a Phrygian wife,
Till Helen's woes at full reveng'd appear,
And Troy's proud matrons render tear for tear.
Pope. *Homer. Iliad*, book ii.

The heathen astrologers and renderers of oracles wisely forbore to venture on such predictions.

Boyle. *Works*, vol. vi. p. 679. *The Christian Virtuoso*.

St. John himself follows that rendering, as you may observe by comparing John vi. 45, with Is. liv. 13.

Waterland. *Works*, vol. i. part ii. p. 48. *A Defence of some Queries. Query 3.*

The Jews, who at all hands lie upon the catch, charge Paul as a perverter of the prophet's meaning, in a false rendition of the sense of the place.
South. *Sermon 2*. vol. vii. p. 27.

The true rendering of the original I take to be, "So likewise ye, when ye shall see all these things, know that he is near at the doors."

Horsley. *Sermons*, vol. i. p. 17.

RENDEZVOU'S, *n.* } Fr. *rendez-vous*. The

RENDEZVOU'S, *v.* } noun is common in our old writers; the verb formed upon it is not so.

Assembly or meeting, or place of assembling or meeting: of resort.

The generall agreement was to meete at Zante, an island neere to the maine continent of the west part of Morea, well knowne of all the pilots, and thought to be the fittest place of their rendezvous.

Hakluyt. *Voyages, &c.*, vol. ii. p. 285. *Fight in the Levant*.

If we shall not happen to meet at Cape Rase, then the place of rendezvous to be at Cape Briton, or the nearest harbour vnto the westward of Cape Briton.

Id. *Ib.* vol. iii. p. 148. *Sir Humf. Gilbert*.

The captaines call'd forthwith from euery tent,

Vnto the *rende-vous* he them inuites,

Letter on letter, post on post he sent,

Entreatance faire with counsell he vnites.

Fairfax. *Godfrey of Bullogne*, book i. v. 19.

The rest that escaped marched towards the Thames, and with others rendezvoused upon Blackheath.

Sir T. Herbert. *Memoirs of King Charles I.*

All men are to be rendezvoused in a general assembly.

Phillips. *Conf. of the Danish Mission*, 1719, p. 310.

The day was nam'd, the next that should be fair:

All to the general rendezvous repair,

They try their fluttering wings, and trust themselves in air.

Dryden. *The Hind and the Panther*.

There is the general rendezvous of all angels and all good souls; there they live in one family, and converse in the most familiar manner, and embrace one another with the most tender love.

Sharp. *Sermon 15*. vol. iv. p. 264.

RENEALMIA, in *Botany*, a genus of the class *Monadelphia*, order *Triandria*, natural order *Irideæ*. Generic character: calyx none; corolla, petals six, the three interior large, contracted at the base; stigmas three, thread-shaped; capsule inferior, obovate, three-celled; seeds angular.

Three species. natives of New South Wales and New Zealand.

RENERVE, *re*, and *nerve*, *q. v.*

To nerve, string, or strengthen again.

The sight re-nerved my courser's feet.

Byron. *Mazeppa*.

RENE'W, *v.*

RENE'WABLE,

RENE'WAL,

RENE'WER,

RENE'WEDNESS,

RENE'WING, *n.*

Re, and new, *q. v.* Fr. *renouer*.

To make or cause to be new

again; to begin or commence

again; to restore, to repair, to re-

vive, to refresh; to keep or pre-

serve new or fresh; to renovate, *q. v.*

Though oure uttir man be corruptid, netheles the ynnere man is renewid fro dai to dai.
Wiclif. *2 Corinth*, ch. iv.

To wring and waile, to turne, and sigh and grone,

Whan that thy lady absent is from thee,

And eke renew the wordes all that she

Between you twain hath said.

Chaucer. *The Court of Loue*.

He made solempne processe agaynst all prestres, deacons, and subdeacons that had marryed wyues, renuinge all his former statutes and actes made against them.

Bale. *English Votaries*, part ii.

The restfull place, renuer of my smart.

Wyat. *Complaint vpon Loue*.

Then gan he all this storie to renew,

And tell the course of his captivitee.

Spenser. *Faerie Queene*, book iv. can. 9.

Mirth-marring monster, [jealousy] born a subtle liar

Hateful unto thyself, flying thine own desire;

Feeding upon suspect, that doth renew thee;

Happy were lovers if they never knew thee.

Daniel. *The Complaint of Rosamond*.

The Apostle here [Gal. vi.] shewethe unprofitableness of all these [ceremonies,] and sets up an inward sanctity and renewedness of heart against them all.

Hammond. *Works*, vol. iv. p. 663. *Sermon 15*.

But well I wote that to an heavy hart

Thou art the roote and nourse of bitter cares,

Breeder of new, renewer of old smarts;

Instead of rest thou lendest rayling tears.

Spenser. *Faerie Queene*, book i. can. 5.

The words of the original may be rendered, "by the laver of regeneration, and by the renewing;" and so some have translated or interpreted them.

Waterland. *Works*, vol. vi. p. 342. *Regeneration Stated*.

The old custom upon many estates is to let for leases of lives, renewable at pleasure.

Swift. *Miscellanies*.

The revolution was, in many instances, and it ought to have been so in all, one of those renewals of our Constitution that we have often mentioned.

Bolingbroke. *Works*, vol. iii. p. 282. *Dissertation upon Parties*.

He is not his own regenerator, or parent, at all in his new birth: for that would be a solecism in speech, and a contradiction in notion: he is, however, his own renewer, though in part only, and in subordination to the principal agent.

Waterland. *Works*, vol. vi. p. 352. *Regeneration Stated*.

When it was first intimated to Abraham that the Messiah was to arise among his descendants, it was at the same time declared that the blessing was to reach to all the families of the earth: and this declaration was constantly repeated upon every renewal of the glorious promise to Isaac and to Jacob.

Horsley. *Sermon 25*. vol. ii. p. 281.

RE-
NERVE.REN-
FREW-
SHIRE.

R E N F R E W S H I R E.

RENFREWSHIRE, a small County in the West of Scotland, is bounded on the North by the River and Firth of Clyde, which divide it on this border from Dumbartonshire; on the West the same boundary separates it from Argyleshire; it has the County of Ayr on the South; and Lanarkshire on the East and North-East. According to Arrowsmith's Map of Scotland, Renfrewshire lies between 55° 40' 40" and 55° 58' 10"

North latitude; and between 4° 15' and 4° 52' 30" West longitude. Its extreme length, from East South-East to West North-West is about 31 miles; and its extreme breadth fully 13. The superficial extent of the County may be computed at 241 square miles, or 154,240 English acres. With the exception of part of the Parish of Renfrew, forming a small portion, under 1300 acres, and situated on the Northern side of the

REN-
FREW-
SHIRE.

REN-
FREW-
SHIRE.

Firth, it lies wholly on the Southern side of the Clyde. Renfrewshire comprehends twenty-one Parishes, of which nineteen are included in the Presbytery of Paisley, and the remaining two belong to that of Glasgow. The progress of population in the County has been very rapid. On comparing the Tables given in the four Censuses, from 1801 to 1831 inclusive, it will be found that the rate of increase in 1811 was 19 per cent.; in 1821, 21 per cent.; and 19 per cent. in 1831. The total returned in 1801 was 78,056 souls; and in the last Census of 1831, the amount given is 133,400. According to the assessment made in April 1815, the annual value of the real property of the County was £265,534.

Face of the
County.

Though this Shire is considerably elevated above the level of the sea, yet, in general, and more particularly along its Northern and North-Eastern portions, it presents no great irregularity of surface. The chief exceptions to this character are the hills towards its South-Eastern and Western extremities, and especially those on the borders of Ayrshire, from which its waters for the most part descend. The last, however, form rather a tract of bleak and elevated ridges than of remarkable mountains; but the prospects commanded from their heights are equally extensive and beautiful. Misty-Law, the highest hill on the South-West, in the Parish of Lochwinnoch, is 1240 feet above the sea-level; and Ballagiech and Dunwan, in the Parish of Eaglesham, the highest hills on the South-East side of the County, rise to a height of about 1000 feet. The loftiest elevation on the South is an insulated hill, called the Craig of Neilston, which is 820 feet above flood-mark, and rises all green and arable to its summit. On an average, the elevation of this district of the County may be estimated at between 500 and 600 feet. The middle district contains about 40,580 English acres of gently sloping grounds, interspersed with copses, and often watered in the bottoms by winding rivulets. To the North of Paisley lies a beautiful level tract, forming the low district, the best although the smallest: it contains about 12,062 English acres. Thus, considerably more than one half of the County is hilly, and devoted to pasture; and even in the cultivated parts, occupying the North, North-East, and centre of the County, nearly two-thirds of the arable land are kept in grass, owing to the great demand for the products of the dairy, the garden, and the fold, arising from the vicinity of large and populous towns.

Soil and
agriculture.

From the above character of the surface of the County, the soil, as might be expected, exhibits considerable diversity. The most prevalent soil is a free, light earth on a dry gravel or whinstone bottom. In the hilly division, the grounds are for the most part covered with heath or deep moss. In the midland district, the soil is a thin earth, and generally on what is termed a *till* bottom, although it is interspersed with many holms, presenting a rich, loamy, mellow soil, of great fertility. The low district is chiefly covered with a deep, dark brown loam, much of which is what is denominated Carse clay. In parts of this tract the subsoil is sandy. From what has been already stated, it will be perceived that agriculture is not carried on either on a very large or very scientific scale. The immense importations of corn which continually take place upon the Clyde to supply the manufacturing towns, and the ready market which the Renfrewshire farmer finds there for other produce, combine to produce this effect. Some of the more improved modes have, however, been introduced; but

fallowing and the rotation of crops are still imperfectly attended to. Green crops are little cultivated, and a general prejudice exists against turnip husbandry. The dairy is the paramount object. The cows, which are chiefly from Ayrshire, are small, of a brown and white colour, and yield abundant milk. Twelve of these small cows will give, for four or five months in the Summer, one hundred and twenty Scotch pints of milk each day. Their produce is chiefly sent to Glasgow, Paisley, and Greenock, in butter and butter-milk. In the remote districts the milk is made into the famous Dunlop cheese. Although the lands in many Parishes are well adapted for sheep-pasture, a very scanty portion is so occupied. The horses are of the best description, but few are bred in the County. They are for the most part purchased, at five years old, in Lanarkshire and Ayrshire. The arable farms vary in size from 50 to 100 acres, which circumstance alone is sufficient to put a bar to any great agricultural improvement. Leases are generally for nineteen years; and, according to an estimate made in 1811, the average rent was stated to be 17s., running from 3s. to £5; near the towns, garden-land fetches from £10 to £15 per acre.

This County was of old densely covered with forests; Timber. and it is still, in many parts, well wooded. The natural or *copse* woods lie chiefly in the parishes of Eastwood, Paisley, and Houston. They are cut every thirty years. Some of the plantations have been valued at £30,000. The Larch has, of late years, become the favourite tree for planting.

The commons, which amount to one-eleventh of the Waste superficial area of the Shire, have been recently divided lands. and improved. Lime and compost form the chief manure; and the annual outlay for the former, thus employed, has been computed at £12,000. The roads have, from 1792, attracted the attention which their importance demands; many excellent lines of communication have been formed since that period, and due care is taken to preserve them in the best order.

The waters of this County derive their chief importance Rivers and lakes. from the uses to which they are subservient. "The very beauties of Nature," says an agreeable Scottish tourist, "are here put out of sight or disguised: if there be a cataract, it is employed in driving a mill; if a lake, its sweets are lavished upon a bleach-field." The principal streams are the White Cart, the Black Cart, the Gryfe, and the Laveran, of which Mr. Chalmers quaintly observes, "they turn much machinery, whatever fish they may yield." The above four streams ultimately unite their waters, and fall into the Clyde below Inchinnan bridge, about half-way down the river between Glasgow and Port Glasgow. The White Cart, or as it is sometimes distinguished by way of eminence, the Cart, takes its rise in the high grounds or moors of East Kilbride, in Lanarkshire, and of Eaglesham within the County. It pursues a direction somewhat parallel to the Clyde, from South-East to North-West, passes Paisley, and flows Northward until it receives the united streams of the Black Cart and the Gryfe. The channel being shallow under Inchinnan bridge, a short cut has been formed which leaves the river a little above, and joins it again below the bridge, thus rendering the river navigable for small vessels from Paisley to the Clyde. The Black Cart rises out of the Loch of Castle Semple, in Lochwinnoch Parish; a beautiful lake of above 400 acres in extent, abounding in pikes and eels, and frequented by swans, geese, ducks, teals, bitterns, and other water

REN-
FREW-
SHIRE.

fowl. The Black Cart descends Northward towards Inchinnan, and meets the Gryfe at Moss Walkinshaw, about two miles above the junction of their united streams with the White Cart. The Gryfe has its source in the elevated territory above Largs, and at first flows rapidly, descending over several precipices, until it reaches the low country at Fullwood. Thence it glides slowly in a winding channel to its union with the Black Cart.

Besides the lake already mentioned, there is, in the same Parish, a piece of water extending over a surface of about twenty-one acres, named Queenside Loch, and which forms a reservoir for the supply of some cotton-mills. The formation of lakes for the latter purpose has been considered an important object, and of these artificial productions, that in the parish of Neilston is the most considerable.

Climate.

The air of Renfrewshire is moister and the rains are more frequent than in the Eastern parts of Scotland. The quantity of rain which falls annually, computing from an average of thirty years, is 29.65 inches; so that the quantity is less formidable, in an agricultural point of view, than its frequency. The Spring is earlier, and, consequently, every farming operation is commenced and finished sooner in the lower than in the upper districts. On the whole, the climate is healthy, and, notwithstanding the level tracts which occupy so large a portion of the County, and their intersection by numerous streams, ague is unknown.

Minerals.

The minerals of the County are of the highest importance, and constitute the main source of its commercial and manufacturing prosperity. Very little stratified matter is found in the upper division of the Shire, which chiefly abounds with whinstone, excepting the narrow strata of coal, lime, and freestone, which occur at Ouplay, in the Parish of Neilston, and some fissures of rhomboidal calcareous spar in the Parish of Kilmalcolm. It is in the central district that coal is obtained in the greatest quantities. Here more than twelve different coal-works have been established; the most extensive of which is that of Quareilton on the Black Cart. The coal in this place consists of five contiguous strata, the aggregate thickness of which, measured at right angles to their surface, is upwards of 50 feet; but since the seam, in other parts, forms a considerable angle with the horizon, the thickness of the strata, measured vertically, amounts to upwards of 90 feet. In the stratum of coal at Hurlet and Househill, pyrites are so abundant, as to have occasioned the establishment of manufactories of sulphate of iron or green vitriol, and of copperas. Limestone abounds, and there are about eight different quarries worked within the Shire. Ironstone everywhere accompanies the coal formation, and the middle division of the County abounds with freestone of excellent quality, lying near the surface. Many fossil substances are found in the various mines and quarries, well worthy the attention of the Mineralogist. Various marine exuviae, bitumens, and spars are also frequently met with.

Antiquities.

At the epoch of the Roman invasion, Renfrewshire was occupied by the Celtic Tribe of the *Damnii*, and subsequently it was incorporated in the Roman Province of *Valentia*. British and Roman remains are scattered over the County; and there are likewise found, although neither important by their number nor preservation, the vestiges of a later period in the ruins of Castles, old Chapels, and other Religious houses. Of Druidical monuments, the most remarkable is a large upright stone, consisting of the common whinstone of the coun-

try, and being about 22 feet long, 17 feet broad, and 12 feet high. It is of a rude, oval figure, extending East and West, resting on a narrow base; and there are at some distance around it a few large, grey stones, conjectured to have formed part of a sacred circle surrounding this—the altar. This stone is vulgarly called *Clocho-druck*, supposed to be a corruption of *Cloch-a-Druid*, the “Stone of the Druids.” It lies in the Parish of Kilbarchan, near Castle Semple; and in the same Parish, on the summit of Bar-hill, is an ancient circular encampment, stated by tradition to have been formed by Wallace, but more probably of Celtic origin. In Kilmalcolm are three remarkable mounts, lying in a row from West to East, and termed by the common people *Laws* or *Laws-hills*, thus confirming the supposition of some antiquaries, that they were used, in the early times of the Scoto-Saxon period, for the administration of justice, whilst others suppose them to have been connected with the worship of the Druids. The Parish of Cathcart is memorable as having been the scene of the Battle of Langside, in which the unfortunate Mary was defeated by the Regent Murray. The spot where Mary stood to view the conflict, near the old Castle of Cathcart, is marked by a hawthorn bush, which still bears the name of “Queen Mary’s Thorn.” An elliptical entrenchment found here, of about 300 feet in circumference, was most probably of Roman origin, since it is well known that no encampment was made by either party in this more recent period of History. Another Roman camp lies about six miles from the town of Paisley. The ruins of a Castle, the former seat of the ancestors of the great Scottish Reformer, Knox, are yet seen on the other side of the hills near which the *Cloch-a-Druid* stands. An artificial hill is near the Castle, being one of those green hills of forced earth usually called *moats*. It is a square, with its sides facing the cardinal points; three of them are covered by a trench cut out of the solid rock, and the remaining one, that on the West, rests on the precipitous edge of the rock itself. This hill measures 90 feet in length at its base, 57 at its top, and is 21 feet high. The summit appears to have been a hollow square, crested by a parapet, and having an entrance to the East. Five other artificial mounts may be seen from it. There have been frequently found in this Shire the remains of warriors of ancient times in their stone coffins, with urns and ashes; but the cairns or tumuli, in which these are usually discovered, are not numerous in the County. The Pail, or Peel, to which the Lairds of Semple used to retreat in times of extremity, may still be seen on an island in Loch Semple; and canoes have been found in this lake, formed of single trees, resembling the rudest fabric of the Indians. With the exception of four silver cups, preserved in the Parish of Kilmalcolm, and which possess an interest as having been employed by John Knox in the administration of the Sacrament, after the manner of the Reformed Calvinists, the remaining and, indeed, most important antiquities belong to Paisley.

According to a calculation made in 1810, a capital of £300,000 was employed in buildings and machinery; the annual sale of cotton goods, £125,000; that of cotton yarn, £630,000; looms occupied in weaving muslin, 7000 in number, and 500 driven by steam for the manufacture of cotton goods. The value of the corn and flour imported into the Clyde in the same year amounted to £397,000. Besides its

Eaglesham.

great maritime outlet, the Firth of Clyde, its trade is materially promoted by the Forth and Clyde Canal, which opens a communication with various parts of the country; and there is a canal in progress from Glasgow to Ardrossan. The County returns one Member to Parliament.

Eaglesham, a considerable village in a Parish of the same name, consists of two rows of houses, separated by a rivulet which converts the intermediate space into a bleaching-ground. Population 2372. Distant 9 miles South from Glasgow.

Greenock.

Greenock, a large town and seaport on the large united Bay of Greenock and Crawford's Dike, formerly called the Bay of St. Lawrence, from a chapel dedicated to that Saint, was erected to a Burgh or Barony by Charles I. in 1642, and is governed by two Baillies and nine Councillors. It consists of one principal street, nearly a mile in length, others parallel to it along the quays, and various intersecting cross streets, the whole occupying a narrow strip of land between the sea on the North and a high bank on the South. The Western end is the better built of the two. In the central part of the town is a Square, and the chief buildings are three Churches, a Theatre, an Infirmary, a Bridewell, a Tontine Hotel, a Custom-house, and a Town-house. The harbour, which of late years has been greatly improved, will admit 500 vessels, which float at the quays in nearly 20 feet of water. The trade is very considerable, and many hands are engaged in the Herring and Newfoundland Fisheries. Greenock contains sugar-houses, rope-walks, two dry docks admitting vessels of 500 tons burden, building-yards which have launched ships of 800 tons, a tanyard, and iron-foundries. It returns one Member to Parliament. Population 27,371. Distant from Glasgow 22 miles West, from Irvine 35 North-East.

Gourock.

Gourock is joined to it as a suburb.

Johnstown.

Johnstown, a large village, inhabited by cotton-spinners. Population 3647. Distant from Paisley four miles West, from Greenock 14.

Kilbarchan.

Kilbarchan, a well-built village in a Parish of the same name, has extensive bleach-fields, and many remains of antiquity, as Castles and Encampments, in its neighbourhood. Population of the whole Parish 4806. Distant from Paisley $3\frac{1}{2}$ miles, from Renfrew eight.

Loch-
winnoch.

Lochwinnoch, a village on the side of Castle Semple Loch, has large cotton-mills, and, from the abundance of coal, lime, freestone, and good water in the neighbourhood, is a place of considerable and increasing manufactures. Distant three miles West from Kilbarchan. Population of the whole Parish 4515. In the neighbourhood is a remarkable magnetic rock.

Paisley.

Paisley is a very large and rich manufacturing town, on the river White Cart. Although of great antiquity,

its rise into wealth is of recent date, and it may now probably be reckoned the fourth town in Scotland in extent and population. The Old Town lies on the Western bank of the river, and communicates with the New Town by three handsome bridges. The most celebrated ornament of the town exists in the remains of its Abbey, founded in the XIIth Century for Cluniac Monks. The chancel is still used for Ecclesiastical purposes. A Chapel adjoins it, containing a monument to Margaret, daughter of Robert Bruce, and two of his consorts, and still forming the burial-place of the Abercorn family. The Chapel is remarkable for its echo. The town has six Churches, a handsome Town-house with a lofty spire, a Gaol and Bridewell, a good Market-place, an Infirmary, and an Hospital. The chief manufactures are silk and cotton. The Ardrossan Canal skirts the town, and the neighbourhood abounds with useful minerals. The Marquess of Abercorn takes the title of Baron Paisley. It returns one Member to Parliament. Distant from Glasgow $7\frac{1}{2}$ miles West, from Edinburgh 46. Population 57,466.

Pollockshaws is a large village in the Parish of East Pollock-Wood, on the river Cart. It has cotton-mills, bleach-shaws, fields, and print-fields. The population, exceeding 2000, is principally employed by the manufacturers of Glasgow, from which it is distant between two and three miles. Adjoining the village are a handsome mansion and park of the Maxwell family.

Port-Glasgow, *New Port-Glasgow*, or *Newark*, is a Port-Glasgow town erected into a separate Parish for the convenience of the Glasgow shipping in 1695. The old Castle of Newark stands on the banks of the Clyde contiguously to the town. It has dry docks, a rope-walk, a sailcloth manufactory, good quays, an excellent harbour, and some sugar-houses. The population, however, decreases: in 1821 it was 5262; in 1831 it had lowered to 5132. Distant from Greenock three miles, from Glasgow 19.

Renfrew, a Royal Burgh erected by Robert II., who had a palace in it. The trade is inconsiderable, consisting of some muslin looms, chiefly employed for Paisley thread, soap and candle works. It stands in a rich plain, about half a mile South from the Clyde, over which it possesses a ferry, and from which vessels of 200 tons burden can approach it at spring-tides by a canal formed in a bed deserted by the Clyde. It is the County Town, and returns one Member to Parliament in conjunction with Rutherglen, Dumbarton, Kilmarnock, and Port-Glasgow. Population 2833. Distant from Glasgow six miles West; from Paisley three miles North.

RE'NNET, } Some derive from *reine*, the queen
RE'NNETING. } of apples; others from *rana*, because
it is spotted like a frog. Skinner suggests the city
Rennes. And see the Quotations, which point to an-
other source.

The pear-main, which to France long ere to us was known,
Which careful fruit'ers now have denizen'd our own.
The *renat*, which though first it from the pippin came,
Grown through his pureness nice, assumes that curious name.
Drayton. Poly-olbion, song 18.

And I am informed that pippins grafted on a pippin stock are
called *renates*, bettered in their generous nature by such double ex-
traction.
Fuller. Worthies. Lincolnshire.

RENNET. Holland so renders the Lat. *coagulum*,
and also by the word *rendle*, (the *rendle* of the male hare,
book xxviii. ch. xix.) Perhaps so called from *ge-runnen*,
rinnen, *concretus*, *coagulatus*, run together; Ger. *ren-
nen*, in *se fluere*, *h. e. coagulari*. See Skinner and
Wachter.

Let a nource annoint her breast with the *rennet* of an hare.

Holland. Plinie, book xxviii. ch. xix.

As for the mischeevous mouse called the hardishrew, the *rennet*
found in a lambes maw taken in wine healeth the hurt that com-
meth by her biting.
Id. Ib. book xxix. ch. iv.

RE'NOVATE, v. } Fr. *renouer*, *renouveler*; It.
RENOVA'TION. } *rinnovare*; Sp. *renovar*; Lat.
renovare. See *ante*, NOVEL. To *renovate* is equiva-
lent to

To renew, *q. v.* Chaucer uses *renovel* and *renovel-
ance*.

For whosoever hath done wickedly an act against God, and after-
ward is sorry for it, cryeth God mercy, and so commeth to forgive-
nesse of the same sinne, but by and by willingly and wittingly doth
the selfe same sin againe; he *renouateth* by so doing all those sinnes
which before times were forgiven him.

Latimer. Sermon 7. p. 170.

This ambassade was sent for three causes, one to visite and
comfort the king, beyng sorowfull and sadde for the death of so
good a queene and spouse. The second for the *renouation* of the
old league and amitie.

Grafton. Henry VII. The nineteenth Yere.

O man! tyrannic lord! how long, how long,
Shall prostrate nature groan beneath your rage,
Awaiting *renovation*?
Thomson. Winter.

Whereas *renovation*, the other article in the text, seems to mean
a more particular kind of *renewal*, namely, of the inward frame or
disposition of the man.

Waterland. Works, vol. vi. p. 349. *Regeneration Stated*.

Secondary qualities, resulting from the order wherein the sub-
stances forming a compound lie situate, are continually destroyed
and *renovated* according to the changes made in that order by mo-
tions of the component parts.

Search. Light of Nature, vol. ii. part i. ch. vii. p. 140.

RENOU'NCE, v. } Fr. *renoncer*; It. *renunziare*;
RENOU'NCE, n. } Sp. *renunciar*; Lat. *renun-
ciare*; to bring or carry back;
RENOU'NCEMENT, }
RENOU'NCER, } to report, to relate, what is said
RENOU'NCING, n. } or told; also, to speak against.
RENUNCIATION. } To reject, to disclaim, to ab-
jure, to disown, to deny.

This innocent, whiche was deceiued,
His papacie anone hath weiued,
Renounced and resigned eke.

Gower. Conf. Am. book ii.

The archebyssshop of Yorke, accordynge vnto the kynges desyre,
shewyed vnto them seryously the voluntary *renounsynge* of the
kyng, with also the fauoure the whiche he ought vnto his cosyn

the duke of Lancaster for to haue hym his successour, and ouer y^t
shewyd vnto theym the cedale or byll of *renouncement* sygnyd with
kyng Rychardis hand.

Fabyan. Richard II. fol. 348.

Conditionally that our subiects may euen so in all respects be
permitted to depart with the safety of their goods and liues out of
your dominions; this present *renuntiation*, reuocation, and retracta-
tion of the order and composition aforesayd notwithstanding.

Hakluyt. Voyages, &c. vol. i. p. 153. *Prussian Ambassador*.

And sayd, Paynim, this is thy dismall day;
Yet if thou wilt *renounce* thy miscreaunce,
And my trew liegeman yield thyselfe for aye,
Life will I graunt thee for thy valiaunce.
Spenser. Faerie Queene, book ii. can. 9.

I hold you as a thing en-skied, and sainted,
By your *renouncement*, an imortall spirit,
And to be talk'd with in sincerity,
As with a saint.

Shakspeare. Measure for Measure, p. 64.

On this firm principle I ever stood;
He of my sons who fails to make it good,
By one rebellious act *renounces* to my blood.

Dryden. The Hind and the Panther.

Such a kind of affection, though it were sufficient to make the
other a martyr, yet could not preserve him from being an apostate,
and *renouncer* or blasphemmer of religion.

Wilkins. Natural Religion, ch. xiv. p. 186.

But since they're at *renouncing*, 'tis our parts
To trump their diamonds, as they trump our hearts.

Dryden. Prologue to the Princess of Cleves.

The first may be taken from the known custom of the primitive
church, in requiring the *competentes*, or candidates for baptism,
first to make a solemn *renunciation* of idolatry and false worship,
under the general title of the devil and all his pomps, &c.

Waterland. Works, vol. ii. p. 190. *Christ's Divinity*.

All that the genial ray of morning gilds,
And all that echoes to the song of even,
All that the mountain's sheltering bosom shields,
And all the dread magnificence of heaven,
O how canst thou *renounce*, and hope to be forgiven?
Beattie. The Minstrel, book i.

Now, in the case of the Jews under Samuel, there was a *renun-
ciation*, it is true, on the part of the people, or, in plainer English,
a rebellion.

Warburton. The Divine Legation, book v. sec. 2.

Nor can we pay the fine and *rentage* due.
Fletcher. The Purple Island, can. 7.

Of all mankind beside, Fate had some care,
But for poor Wit no portion did prepare,
'Tis left a *rent-charge* to the brave and fair.
Dryden. Prologue. After the Fire.

Our kings, since the establishment of the Civil list, have not
only a private and separate estate, but receive a kind of *rent-charge*
out of the publick estate, to maintain their honour and dignity,
nothing else.
*Bolingbroke. Works, vol. iii. p. 285. A Dissertation upon Par-
ties, let. 17.*

His lordship's *rent-roll* is exceeding great.
Young. Love of Fame. Satire 6.

The word *rent* or *render*, *reditus*, signifies a compensation or re-
turn, it being in the nature of an acknowledgment given for the
possession of some corporeal inheritance. It is defined to be a
certain profit issuing yearly out of lands and tenements corporeal.
Blackstone. Commentaries, book ii. ch. iii. sec. 10.

RENT, in Law, otherwise *render*, *reditus*, signifies a
compensation or *return* given for the possession of some
corporeal inheritance. It is defined to be a certain profit
issuing yearly out of lands and tenements corporeal.
It must be a profit, but need not necessarily consist of
money. For if the profit be reserved in corn, or any
VOL. XXVII.

other personal chattel, or in services to be rendered by
the tenant, as by ploughing so many acres of ground or
serving in the wars, the profit so reserved is Rent. It
must issue out of the thing granted, and not be part of
that thing, therein differing from an exception whereby
part of the thing granted is excepted out of the grant.
And it must issue out of lands or tenements corporeal
whereon the party entitled to the Rent may distrain; and
therefore a Rent, in the strict sense of the word, cannot
be reserved out of an advowson, a common, or any other
incorporeal hereditament; and annual sums agreed to be
paid for the use of such incorporeal hereditaments are
payable by virtue of the personal contract between the
parties, and are not a charge upon the inheritance.

The three main divisions of Rents are, Rents-service,
Rents-charge, and Rents-seck.

Rents-service is where the owner of the land or other
corporeal hereditament demises it to another at a certain
Rent for some estate less than his own, thereby retaining
to himself a reversion expectant on the determination of
such less estate, to which reversion the Rent is incident.
In this case fealty and the Rent are the *services* by which
the land is holden, and therefore the Rent is called *Rent-
service*. It is the ordinary Rent payable by all tenants
to their landlords, and the landlords or persons entitled
to the reversion may distrain for it of common right,
though the lease contains no power of distress.

Rent-charge is not incident to any reversion; as where
a man conveys his whole estate to another, subject to a
certain Rent secured by a clause in the deed enabling
him to distrain on the land, or where a man merely
grants a Rent issuing out of his land to another, with a
power of distraining on the land if the Rent be in arrear.
In both these and similar cases the right of distraining
is not a common-law right, but is created by the act of
the parties who *charge* the land with the distress, and
therefore such Rent is called a Rent-charge.

Rent-seck, *reditus siccus*, is a Rent existing under such
circumstances as that the party entitled to the Rent has
no power of distress either by common right or by act
of the parties; but this difference as to the right of dis-
training is destroyed by Statute 4 Geo. II. c. 28. by
which all persons may have the like remedy by distress
for Rents-seck, Rents of Assize, and Chief Rents as in
case of Rents reserved upon lease.

Rents of Assize are the ancient established Rents of the
freeholders and copyholders in manors. Those of the
freeholders are sometimes called *chief Rents*, *reditus capi-
tales*; and both sorts are called *quit-rents*, *quieti reditus*,
because thereby the tenants go *quit* of other services.

Rack-rent is a Rent of the full or nearly the full value
of the land.

By Statute 3 and 4 Will. IV. c. 27. sec. 42. arrears of
Rent cannot be recovered by distress or action except
within six years after the same become due, or within
the same period after an acknowledgment of liability
made in writing, and signed by the party liable to the
Rent, or his agent, and given to the party entitled to the
Rent, or his agent.

RENULINA, in Zoology, a genus of *Cephalopodous
Mollusca*.

Generic character. Shell somewhat discoid, with
the spire eccentric, reniform, flattened, sulcate, multi-
locular, with linear contiguous turns curved round a
marginal axis, the most distant from the axis being the
largest.

These shells are found only in a fossil state.

REN-
VERSE.RE-
PACIFY.

RENVE'RSE,

RENVE'RSEMENT.

Cotgrave.

To reverse, *q. v.*

Whose shield he beares *renverst*, the more to heap disdayn.
Spenser. Faerie Queene, book i. can. 4.

First he his beard did shave, and fowly shent;
Then from him reft his shield, and it *renverst*,
And blotted out his armes with falsehood blent;
And himselfe baffuld, and his armes unherst;
And broke his sword in twaine, and all his armour sperst.
Id. Ib. book v. can. 4.

What fortune strange, what strange misfortune erst
Did tosse me with a thousand things in vaine,
Whiles sad despaires confounded did remaine?
Whiles all my hopes were to the winds disperst?
Erected whiles, and whiles againe *renuerst*?
Stirling. Aurora, song 77.

'Tis a total *renversement* of the order of nature before 'tis begun,
and every consideration opposes it.
Stukely. Palæologia Sacra, p. 60.

RE-OBTAIN, (*re*, and *obtain*), *q. v.*

To get or gain the hold or possession again.

I came to *re-obtaine* my dignitie,
And in the throne to seate my sire againe.
Mirror for Magistrates, p. 752.

RE-OPPOSE, *re*, and *oppose*, *q. v.*To *oppose* again, or in return; to put, place, or set against, or in resistance to, again.

And we shall so far encourage contradiction as to promise no disturbance, or *re-oppose* any pen that shall fallaciously or capriciously refute us; that shall only lay hold of our lapses, single out digressions, corollaries, or ornamental conceptions, to evidence his own in as indifferent truths.
Sir Thomas Brown. Vulgar Errours. Preface, p. vi.

RE-ORDAI'N, } *Re*, and *ordain*, *q. v.*RE-ORDINA'TION. } To *ordain* again or anew.The *re-ordaining* of priests is a matter already resolutely maintained.

Bacon. Works, vol. iii. p. 139. *Of Church Controversies*.

He proceeded in his ministry without expecting any new mission, and never thought himself obliged to a *reordination*.
Atterbury.

RE-ORDERING, *re*, and *order*, *q. v.*Ordering or arranging again; restoration to *order* or arrangement.

Yet thinking they would never be so bold,
To lead their lord in any shameful wise;
But rather would conduct him as their king,
As seeking but the state's *re-ordering*.
Daniel. History of Civil Wars, book ii. p. 468.

For the *re-ordering* of my exchanges, which have been much incommodated by the failing of Seignor Burlamachie's credit here.
Reliquiæ Wottonianæ, p. 485.

RE-ORGANIZE, *re*, and *organize*, *q. v.*To *organize* again; to compose or arrange again.

Allowing our resurrection to be but possible, it must be every whit as easy to that infinite power by which Christ was raised, to reduce all our scattered atoms into one mass again, and to *re-organize* them into a humane body, and re-unite it to its ancient soul, as it was to quicken the yet uncorrupted body of our Saviour.
Scott. Christian Life, part ii. ch. vii. sec. 11. p. 512.

By whose omnipotent agency all those holy relicks of the bodies of his saints, which are now scattered about the world, shall be gathered up, reunited, and *re-organized* into glorious bodies.
Id. Ib. p. 530.

REPACIFY, *re*, and *pacify*, *q. v.*To *pacify* or restore to *peace* again.

Which, on th' intelligence was notify'd
Of Richard's death, were wrought to mutiny;
And hardly came to be *repacify'd*,
And kept to hold in their fidelity.
Daniel. History of Civil Wars, book iv.

REPACK, *v.*, *re*, and *pack*, *q. v.*To *pack* again.

In order to render them what are called merchantable herrings, it is necessary to *repack* them with an additional quantity of salt; and in this case, it is reckoned that three barrels of sea sticks (*i. e.* herrings caught and cured at sea) are usually *repacked* into two barrels of merchantable herrings.
Smith. Wealth of Nations, vol. ii. book iv. ch. v. p. 332.

REPAINT, *re*, and *paint*, *q. v.*To *paint* again.

The sky has been ill *repainted*, and does not harmonize with the rest of the work.
Reynolds. Works, vol. ii. p. 306. *Journey to Flanders*.

The ground of this picture has been *repainted*, or the white horse, which was certainly intended to make the mass of light broader, has lost its brightness.
Id. Ib. p. 392.

REPAI'R, *v.*REPAI'R, *n.*

RE'PARABLE,

REPARA'TION,

REPA'RATIVE, *adj.*REPA'RATIVE, *n.*

REPAI'RER.

restitution.

Fr. *reparer*; It. *riparare*;
Sp. *reparar*; Lat. *reparare*,
(*re*, and *parare*.) to get again,
restore, or recover. See PRE-
PARE.

To restore, to recover, to
amend; to make amends or

Mo discords, and mo iealousies,
Mo murmures, and mo nouelries,
And also mo dissimulations,
And eke fained *reparations*.
Chaucer. The House of Fame, book ii.

Thane firste, quod he, I wyll and gyue to the chapell of Saynt George here in this castell, for the *reparacions* therof, a thousande and fyue hundred frankes.
Lord Berners. Froissart. Cronycle, vol. ii. ch. lii. p. 418.

The buck in brake his winter coate he flings:
The fishes flete with new *repaired* scale:
The adder all her slough away she flings;
The swift swallow pursueth the flies smale;
The busy bee her hony now she mings.
Surrey. Description of Spring.

Which when he felt to move, he hoped faire
To call backe life to her forsaken shop:
So well he did her deadly wounds *repaire*,
That at the last shee gan to breath out living aire.
Spenser. Faerie Queen, book ii. can. 1.

PAND. Before the curing of a strong disease,
Even in the instant of *repaire* and health,
The fit is strongest.
Shakspeare. King John, p. 12.

For the parts in man's body easily *reparable* (as spirits, blood, and flesh) die in the embracement of the parts hardly *reparable*, (as bones, nerves, and membranes.)
Bacon. Natural History, Cent. i. sec. 58.

He saw plainly that he must abroad again to rectifie, by his best endeavour under the publick service, his own reputation. Whereupon new preparatives were in hand, and partly *reparatives* of the former beaten at sea.
Reliquiæ Wottonianæ, p. 230.

And lastly all that castle quite he rased,
Even from the sole of his foundation,
And all the hewen stones thereof defaced,
That there mote be no hope of *reparation*,
Nor memory thereof to any nation.
Spenser. Faerie Queene, book v. can. 2.

These roads, that yet the Roman hand assert,
Beyond the weak *repaire* of modern toil.
Thomson. Liberty, part ii.

So may he add that other title to the rest of those you have deserved for your countries good, to make you *repairers* of the breaches of the city as well as of the nation, and restorers of paths to dwell in.
Stillington. Sermon 1. vol. i. p. 45.

The expense of maintaining the fixed capital in a great country may very properly be compared to that of *repairs* in a private estate.
Smith. Wealth of Nations, vol. ii. book ii. ch. ii. p. 19.

REPACK.

REPAIR.

REPAIR. **REPAIR**, *v.* } Fr. *reparer*, to go to, to frequent,
RE- **REPAIR**, *n.* } to haunt. The Lat. *reparare* was used
PARTEE. in the Lower Ages as equivalent to *redire*, to return. The
 Fr. *repair*, the haunt of a wild beast; the den to which
 it returns; to which it goes. And, hence, to *repair*,
 'To go to again, to go to; to make way to, to take or
 betake the way to; to have recourse, to resort.

This senatour *repareth* with victorie
 To Rome ward.

Chaucer. *The Man of Lawes Tale*, v. 5387.

Thus every thing by his reason
 Hath his own proper mansion,
 To which he seeketh to *repare*,
 There as it should nat appaie.

Id. *The House of Fame*, book ii. p. 351.

And Mars vnto his hous *repeireth*.

Gower. *Conf. Am.* book vii.

Assuryng hym on his honour that yf he would abyde and tary
 his comyng and *repaire*, whiche should be within sixe daies at the
 most, he would geue hym battayll.

Hall. *Henry IV.* fol. 17.

And in that case I am a sutor that my writ of Parliament as a
 peer of this realm may be sent unto me, and that my present
repair to London may not displease his majestie.

Cabbala. *The Earl of Bristol to the Lord Conway*, p. 19.

She hath ordained this law, which we approve,

That every knight which doth this way *repayre*,

In case he have no lady nor no love,

Shall doe unto her service, never to remove.

Spenser. *Faerie Queene*, book iii. can. 1.

And thou, the shepherd's tutelary God,

Leave for a while, O Pan! thy lov'd abode:

And, if Arcadian fleeces be thy care,

From fields and mountains to my song *repair*.

Dryden. *Virgil. Georgics*, book i. p. 303.

A vacant throne high plac'd in Smithfield view,

To sacred Dullness and her first-born due,

Thither with haste in happy hour *repair*,

Thy birthright claim, nor fear a rival there.

Churchill. *The Rosciad*, p. 277.

REPANDOUS, Lat. *repandus*, (*re*, and *pand-ere*, to
 open. See **EXPAND**.)

Opening, stretching backwards; bent or curved back.

And as indeed is deducible from pictures themselves; for though
 they be drawn *repandous*, or convexedly crooked in one piece, yet
 the Dolphin that carrieth Arion is concavously inverted.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. ii.

REPARREL, see *ante*, **RE-APPAREL**.

Let them but lend him a suit of *reparrel* and necessities,

And by gad,

If any of them all blow wind in the tail on him,

I'll be hang'd.

Beaumont and Fletcher. *The Knight of the Burning Pestle. Prologue*.

REPARTEE', *n.* } Fr. "*repartir*, to re-divide;

REPARTEE', *v.* } also, quickly to return a thrust
 or blow; to answer a thrust with a thrust, a blow with
 a blow, in fencing &c.; and, hence, to reply in speech."
 Cotgrave.

To return a quick answer or reply; to answer or
 reply quickly, smartly, wittily.

He would be never transported beyond himself with choler, but
 he would pass by any thing with some *repartee*, some witty strain,
 wherein he was excellent.

Howell. *Letter 18.* book i. sec. 1.

If wise thou wilt appear and knowing,

Repartie, repartie,

To what I'm doing.

Denham. *Martial. Epigram*, p. 246.

As for *reparty* in particular, as it is the very soul of conversation,
 so it is the greatest grace of comedy, where it is proper to the
 characters.

Dryden. *Preface to the Mock Astrologer*.

They fancy that a *repartee* is not so brisk, or a story not so well
 told, or a man's sense about any thing so solemnly delivered, unless
 it be larded, at every turn, with the name of God, or a curse upon
 themselves.

Sharp. *Works*, vol. iv. p. 308. *Sermon 18.*

A man renown'd for *repartee*

Will seldom scruple to make free

With friendship's finest feeling.

Cooper. *Friendship*.

REPA'SS, *v.* } Fr. *repasser*, (*re*, and *pass*, *q. v.*)

REPA'SSAGE. } To *pass* or go, lead or bring, back
 again; to go over, to travel over again.

When he had *repassed* his army, he cut off the bridge the length
 of cc. fote toward that side of the riuier that was next the Ubians.

Arthur Goldyng. *Cæsar. Commentaries*, book vi. fol. 146.

Twentie vnder the conduct of Cazenoue, getting betweene the
 fort and them which now were issued forth, cut off their *repassage*.

Hakluyt. *Voyages, &c.*, vol. iii. p. 359. *M. Dominique de Gourgues*.
 On the barons of England's side a very great number of choice
 elected lords; who the same year *repassed* back into England after
 the parliament.

Prynne. *Treachery and Disloyalty, &c.* part iv. fol. 48.

That 'twas not giv'n our armies to destroy
 The Phrygian empire, and the tow'rs of Troy,
 Till they should bring from Greece those favouring Gods,
 Who smil'd indulgent, when they plough'd the floods:
 With more auspicious signs *repass* the main,
 And with new omens take the field again.

Pitt. *Virgil. Æneid*, book ii. p. 540.

REPA'ST, *n.* } Fr. *repas*, *repastre*; Lat. *repas-*
REPA'ST, *v.* } *cere*, (*re*, and *pascere*, to feed,) to
REPA'STURE. } feed again.

Food or victuals, or the taking of food or victuals.

When he rysen romeþ out, and ryght wel aspiefþ
 War he may rapest have a *repast*. of a rounde of bacon.

Piers Plouhman. *Vision*, p. 154.

And if I did, it were a waste,
 But all without suche *repaste*
 Of lust, as ye me tolde aboue,
 Of wife, or yet of other loue,
 I faste, and maie no fode geate.

Gower. *Conf. Am.* book vi. p. 190.

When they at meate were set
 their daintie foode to taste,
 In stead of viands, heartie sighes
 I had for my *repaste*.

Turbervile. *To his Loue long absent*.

LA. To his good friends, thus wide Ile ope my armes:
 And, like the kinde life-rend'ring politician,
Repast them with my blood.

Shakspeare. *Hamlet*, p. 274.

Ne man nor beast may rest or take *repast*

For their sharpe wounds and noyous iniuries.

Spenser. *Faerie Queene*, book ii. can. 9.

But if thou striue (poore soule) what art thou then?

Foode for his rage, *repasture* for his den.

Shakspeare. *Love's Labour Lost*, p. 130.

And now they reach'd the naval walls, and found

The guards *repasting*, while the bowls go round.

Pope. *Homer. Iliad*, book xxiv. p. 155.

'Tis true-coarse diet, and a short *repast*,

She said, were weak inducements to the taste

Of one so nicely bred, and so unus'd to fast.

Dryden. *The Hind and the Panther*.

REPATRIATION, Low Lat. *repatriare*; Fr. *repa-*
trier, to repatriate, or to restore to his own home. Cot-
 grave. See **EXPATRIATE**.

Return to our own Country.

And so with humble recommendation of my self unto your
 favour, I wish your honour (in our Tuscan phrase) a most happy
repatriation.

Reliquiæ Wottonianæ, p. 670.

RE-
 PARTEE.
 —
 REPA-
 TRI-
 ATION.

REPAY. REPA'Y, v. } *Re*, and *pay*. *q. v.* Fr. *payer*.
 REPEAL. REPA'YMENT. } To *pay* back or return *payment*;
 to requite, to recompense.

I was content thy seruant to remaine;
 And not to be repayed on this fashion.

Wyat. *The Louer forsaketh his vnkinde Loue*.

Item he borrowed great somes of money, and bound him vnder
 his letters pattentes for the *repaimēt* of the same, and yet not one
 peny paid. Hall. *Henry IV.* fol. 8.

Faire sir, of friendship let me now you pray,
 That as I late adventured for your sake,
 The hurts whereof me now from battell stay,
 Ye will me now with like good turne repay,
 And justifie my cause on yonder knight.

Spenser. *Faerie Queene*, book iv. can. 2.

If any of the parliament's forces have misbehaved themselves in
 plundering any malignants or disaffected persons, more then by
 seising of their arms, distraining their goods for imposed asses-
 sements, or sequestering their plate, moneyes, estates, for the publike
 service upon promise of *repayment* and restitution, &c.

Prynne. *Power of Parliaments*, &c. part iv. p. 29.

He threatened to *repay* Diotrephes in his kind, to excommunicate
 or depose him, for his so rashly censuring other persons.

Waterland. *Works*, vol. v. ch. v. p. 145. *Doctrine of the Trinity*.

Preserve this man; and in some coming day
 The Cimbrian slaughter well he shall repay.

Rowe. *Lucan. Pharsalia*, book i.

Where a person has laid out and expended his own money for
 the use of another, at his request, the law implies a promise of *re-
 payment*, and an action will lie on this assumptit.

Blackstone. *Commentaries*, book iii. ch. ix. p. 163.

REPEAK. Skinner coins the Fr. *repicquer*, from
re, and *picquer*, to prick or pierce. In Spanish, *repicque*.

If I go to *picquet*, though it be but with a novice in't, he will
repicque, and capot me twenty times together.

Dryden. *The Feigned Innocence*, act i. sc. 1.

REPEAL, v. } Also written *repele*. Fr. *rappeler*,
 REPEAL, n. } to recall. See APPEAL.
 REPEALER. } To recall, to revoke; to recall, (*sc.*
 a judgment, a sentence, a law,) to abrogate, to annul.

This was concluded, written and sealed,
 That it might not be repealed
 In no wise, but aie be firme.

Chaucer. *Dream*.

That Henry duke of Herfford for diuerse consideracions and be-
 cause he hath displeased the kyng, shal within xv. daies departe
 out of the realme for terme of ten yeres, without returnyng, excepte
 by the kyng he be repealed again, and that vpon pain of death.

Hall. *Henry IV.* fol. 4. *Introduction*.

But where as ye nowe wolde *repell* agayne that ye ones wyllingly
 agreed vnto and graunted, therefore here openly he *repelyth*
 agayne all suche graces and grauntes as he hath made to you be-
 fore this tyme.

Lord Berners. *Froissart. Cronycle*, vol. ii. p. 686.

Though the hardenes of the law that by parliamēt was established,
 of that and other articles hath been *repelled*, yet that doctrine was
 neuer hitherto by any publike consaile or any thynge set forth by
 auctorite empayred.

Stephan, Bishop of Wynchester. *Explication of the true Catholique
 Fayth*, p. 93. *Of Transubstantiation*.

Which my liege lady seeing, thought it best
 With that his wife in friendly wise to deale,
 For stint of strife and stablishment of rest
 Both to herselfe and to her common-weale,
 And all forepast displeasures to repeale.

Spenser. *Faerie Queene*, book v. can. 8.

That she repeales him, for her bodies lust.

Shakspeare. *Othello*, p. 321.

Your last letters were acceptable; and our son before had inten-
 tion to finish the marriage in his person; but lately receiving
 intelligence that one Philenzo, of noble birth, now in exile, though
 without your consent, had long since interest in your daughter's
 affection, we thought meet rather to advise for his *repeal*, than pro-
 ceed to our dishonour.

Shirley. *The Bird in a Cage*, act v. sc. 1.

I leave him, and the noble lord who sits by him, to settle the
 matter, as well as they can, together; for if the *repeal* of American
 taxes destroys all our government in America—he is the man!—
 and he is the worst of all the *repealers*, because he is the last.

Burke. *Works*, vol. ii. p. 357. *On American Taxation*.

REPEAT, v. } Fr. *répéter*; It. *ripetere*; Sp.
 REPEAT, TER, } *repeter*; Lat. *re-petere*, (*re*, and
 REPEATEDLY, } *petere*.) to ask, to seek for, again.
 REPETITION, } See PETITION.
 REPETITIONAL, } To ask again, to say or speak
 REPETITIONARY. } again; to rehearse, to relate; to
 do the same thing again, frequently; to reiterate.

I may not forget here my *Scala Cæli*, that I spake of in my last
 sermon. I will *repeate* it now againe, desiring your grace in God's
 behalfe, that ye will remember it.

Latimer. *The second Sermon before King Edward*, p. 38.

Herein also thou mayest learne right meditation or contempla-
 tion, which is nothyng els saue y^e calling to minde, and a *repeatyng*
 in the harte of the glorious and wonderfull dedes of God.

Tyndall. *Prologue upon the five Books of Moses*, p. 21.

The often *repetition* of any thynge of graue or sadde importaunce,
 wyll be tedyous to the reders of this warke.

Sir Thomas Elyot. *The Governour*, book i. p. 1.

But Guyon all this while his booke did read,
 Nor yet has ended: for it was a great
 And ample volume, that doth far exceed
 My leasure so long leaves here to repeat.

Spenser. *Faerie Queene*, book ii. can. 11.

Yet I can *repeat* whole books that I have read, and poems of some
 selected friends, which I have liked to charge my memory with.

Ben Jonson. *Discoveries*.

For let a man be a diligent hearer and *repeater* of sermons and
 lectures; a constant reader and discourser of God's word; a strict
 observer of the Lord's day, &c.

Prynne. *Histrion-Mastix*, part i. p. 807.

And now she beats her heart, whereat it groans,
 That all the neighbour-caves, as seeming troubled,
 Make verbal *repetition* of her moans;
 Passion on passion deeply is redoubled.

Shakspeare. *Venus and Adonis*.

This second or *repetitional* law being indeed a recapitulation and
 compendium of the first.

Biblioth. Bibl. i. 15.

Where Moses delivered the second or *repetitionary* law.

Id. Ib. i. 27.

What feels the body when the soul expires,
 By time corrupted, or consum'd by fires?
 Nor dies the spirit, but new life repeats
 In other forms, and only changes seats.

Dryden. *Ovid. Metamorphoses*, book xv.

In 1665 he was the *repeater* or *repetitioner* in St. Mary's church
 on Low Sunday, of the four Easter sermons, which being admirably
 well performed, all to a word memoriter, without any hesitation, he
 obtained a great esteem among the academians.

Wood. *Fasti Oxonienses*, part ii. p. 141.

Your lordship will pardon me for the frequent *repetition* of these
 cant words, which I could not avoid in this abbreviation.

Dryden. *Æneid. Dedication*.

And still, as each *repeated* pleasure tir'd,
 Succeeding sports the mirthful band inspir'd.

Goldsmith. *The Deserted Village*.

Whatever action, either good or bad, hath been done once, is
 done a second time with more ease and with a better liking; and a
 frequent *repetition* heightens the ease and pleasure of the perform-
 ance without limit.

Horsley. *Sermon* 28. vol. ii. p. 351.

REPEDATION, Lat. *re-pedare*, (*re*, and *pes*, a foot,) to
 set the foot, to step, back.

A stepping back, a return.

To take notice of the directions, stations, and *repedations* of
 those errattick lights, and from thence most convincingly to inform
 himself of that pleasant and true paradox of the annual motion of
 the earth, &c.

More. *Antidote against Atheism*, book ii. ch. xii. p. 84.

REPEAL.

REPENT.

REPE'L, v. } Lat. *repellere*, (*re*, and *pellere*,
REPE'LLENT, *adj.* } Gr. *πᾶ-ειν*, to drive,) to drive or
REPE'LLENT, n. } beat back. See COMPEL, PULSE,
COMPULSION.

To beat or drive back; to force to return.

And yet S. Paule doth exclude them, and *repelleth* them dearely from iustification, with all their good zeale, and with all their good workes.

Barnes. *Workes*, p. 230. *Faith onely iustifyeth before God.*

But heare will subtyll blyndnes say, that God sawe beefore, that Jacob should doe good, and therefore dyd hee chuse hym. Hee sawe also, that Esau should doe no good, and therefore hee *re-pelled* hym.

Id. *lb.* p. 278.

Whereas they readie found them to *repell*,
Great hostes of men in order martiall,
Which them forbad to land, and footing did forstall.

Spenser. *Faerie Queene*, book v. can. 12.

The winds, like crafty courtezans, withheld
His flames from burning, but to blow them more:
And every fresh attempt he is *repell'd*

With faint denials weaker than before.

Dryden. *Annus Mirabilis*.

Why should the particles of common salt *repel* each other, so as not to subside in water? Why should the most *repellent* particles be the most attractive upon contact? Or why should the *repellent* begin where the attractive faculty leaves off.

Berkeley. *Siris*, sec. 237.

First that you do not use *repellents*; for cold and tough humours, of which these swellings are created, are not capable of returning back as hot tumours, but do encrease the more thereby.

Wiseman. *Surgery*, vol. i. book i. ch. xix. p. 153.

REPENT, *adj.* See REPTILE.

REPE'NT, v.

REPE'NTANT, *adj.*

REPE'NTANTLY,

REPE'NTANCE,

REPE'NTER,

REPE'NTING, n.

Fr. *repentir*; Sp. *repenter*.

See PENITENT, and the Quotation from Locke.

To have or feel *pain*, grief, or sorrow, for any act, for a fault,

for sin or the consequences of sin;

to feel remorse or contrition.

Of yr trepas byuore yre deþ *repentant* was ynou,
And rerde tuo nonneryes.

R. Gloucester, p. 291.

þe kýng biheld him a stound, & sauh no *repentance*,
He bad drawe away þat hound, God has taken vengeance.

R. Brunne, p. 55.

Repent þe quath *repentaunce*. as reson þe tauhte
And shrýf þe sharpliche. and shak of alle prýde.

Piers Ploukman. *Vision*, p. 87.

Thanne Judas that bitriede him saygh that he was dampned he *repentide* and broughte agen the thritty pens to the princes of prestis and to the eldre men of the puple, and seide, I have synned bitraynge rightful blood.

Wiclif. *Matthew*, ch. xxvii.

And to him yave I all the lond and fee,
That ever was me yeven therbefore;
But afterward *repented* me ful sore.

Chaucer. *The Wif of Bathes Prologue*, v. 6212.

But be a leon both in word and dede,
To hem that ben in *repentance* and drede,
As wel as to a proud dispitous man.

Id. *The Knightes Tale*, v. 1707.

For if he gave, he dorste make avant,
He wiste that a man was *repentant*.

Id. *Prologue to the Canterbury Tales*, v. 127.

It hath and shall be euermo,
To mourther who that woll assente,
He maie not faile to *repent*.

Gower. *Conf. Am.* book iii.

This God, whiche herde of this greuance,
Toke routhe vpon his *repentance*,
And bad hym go forth redily
Unto a flood was fast by,
Whiche Paceaole than hight,

Id. *lb.* book v.

And thus whan lone is euill wonne,
Full ofte it cometh to *repentaile*.

Gower. *Conf. Am.* p. 175.

Thē they were appallyd in theyr myndis, & were very *repētaūt* of y^e dede y^t they had done.

Fabyan. *Chronicle*, p. 526.

They coude neither agree nor disagree to any thing lōg time together. One whyle *repentyng* them of that they had determined, and streyghtwaies forthought them of that *repentance*.

Brende. *Quintus Curtius*, fol. 307.

The worde gone out she backe againe would call,
As her *repenting* so to have missayd.

Spenser. *Faerie Queene*, book iii. can. 2.

Thus the hard laws of death were satisf'd,
And he left us like orphan friends and dy'd.
Now from the pulpit to the peopl's ears
Whose speech shall send *repentant* sighs and tears.

Endymion Porter. *Epitaph upon Dr. Donne*.

For earthly sight can nought but sorrow breed,
And late *repentance*, which shall long abide.

Spenser. *Faerie Queene*, book i. can. 7.

But Saxo Grammaticus sayth, that the sayd Swanus or Sweno, beyng conuerted vnto the Christen fayth, dyed at the length very *repentauntly*, and lyke a good Christian man.

Grafton. *Egeldred*, vol. i. part vii. p. 166.

Those sentences from which a too-late *repenter* will suck desperation.

Donne. *Devotions*, p. 221.

Mine heart is turned within me; my *repētings* are rolled together.

Bible, Anno 1583.

What this *repentance* was which the new covenant required, as one of the conditions to be performed by all those who should receive the benefits of that covenant, is plain in the Scripture, to be not only a sorrow for sins past, but (what is a natural consequence of such sorrow, if it be real) a turning from them into a new and contrary life.

Locke. *The Reasonableness of Christianity*.

Amid the roses fierce *repentance* rears
Her snaky crest; a quick returning pang
Shoots through the conscious heart, where honour still,
And great design, against the oppressive load
Of luxury, by fits, impatient heave.

Thomson. *Spring*.

REPEO'PLE, v. } *Re*, and *people*, *q. v.*

REPEO'PLING, n. } To *people* again; to fill or stock again, with *people*, with inhabitants.

In us poor few the world consists alone,
And besides us there not remaineth one,
But from our seed the emptied earth agen
Must be *repeopled* with the race of men.

Drayton. *Noah's Flood*, p. 472.

It hath a most excellent congruity with the subsequents of the holy history touching the descendents from the first man, the flood, and the *repeopling* of the world from Noah.

Hale. *Origination of Mankind*, ch. vii. sec. 2. p. 179.

Thus love of honey can an insect fire,
And in a fly such generous thoughts inspire.
Yet by *repeopling* their decaying state,
Tho' seven short springs conclude their vital date,
Their ancient stocks eternally remain,
And in an endless race their children's children reign.

Addison. *Virgil. Georgic* 4. p. 527.

I should find it very difficult to believe (unless I were to read it somewhere in the Bible) that of the millions that perished in the general deluge, all died hardened in impenitence and unbelief, in-somuch that not one of that race could be an object of future mercy, beside the eight persons who were miraculously saved in the ark, for the purpose of *repeopling* the depopulated earth.

Horsley. *Sermon* 20. vol. ii. p. 174.

REPERCU'SS, } Fr. *repercuter*, (*Repercutif*, n.

REPERCU'SSION, } a *repercutive*, Cotgrave,) re-

REPERCU'SSIVE, *adj.* } *percussive*; It. *ripercussione*,

REPERCU'SSIVE, n. } *ripercussivo*; Sp. *repercutir*;

Lat. *repercutere*, (*re*, *per*, *quater*,) to drive back, *sc.* by a repetition of blows or strokes.

REPENT.
—
RE-
PERCUSS.

REPER-
CUS.S
—
REPINE.

To reverberate, to rebound, to reflect; to beat, drive, or strike back.

It doth *repercusse* and smite backe the said disease, so that it shall not arise and grow. *Plinie, book xxiii. ch. vii.*

Euen as the sunne (as th' astrologian dreames)
In th' airie region where it selfe doth moue,

Is neuer hote, yet, darting from aboue,
Doth parch all things that *repercusse* his beames.

Stirling. Aurora, song 37.

That (with the *repercussion* of the air)
Shook the great eagle sitting in his chair.

Drayton. The Man in the Moon.

There hang down certaine buttons (as it were) like berries round in a circle, which with the *repercussion* and reverberation of the sun beames, doe shine againe like resplendent gold.

Holland. Plinie, book xxi. ch. xxv.

An hearbe this is [nightshade] which hath a vertue *repercussive* and refrigerative. *Id. Ib. book xxvii. ch. xiii.*

Defluxions, if you apply a strong *repercussive* to the place affected, and do not take away the cause, will shift to another place.

Bacon. Natural History.

As long as we have strength to make any such resistance, I should prefer that method in agues before any violent *repercussions*.

Boyle. Works, vol. vi. p. 372. Letter from Mr. Beale.

What vigorous arm, what *repercussive* blow,
Bandies the mighty globe still to and fro,
Yet with such conduct, such unerring art,
He never did the trackless road desert?

Blackmore. Creation, book ii. p. 347.

REPERTORY, Fr. *repertoire*; It. *repertorio*; Sp. *repertorio*; Lat. *repertorium*, from *repertum*, past participle of *reperire*, to find, (*re*, and *parere*.)

An inventory, an index, a register, a repository, *sc.* by or in which any thing may be found.

Hermippus, who wrote of that art most exquisitely, and commented upon the poëme of Zoroaster, containing a hundred thousand verses twentie times told, of his making; and made besides a *repertorie* or index to every book of the said poësie.

Holland. Plinie, book xxx. ch. i.

His writings [Homer's] became the sole *repertory* to later ages of all the theology, philosophy, and history of those which preceded his.

Bolingbroke. Works, vol. vi. p. 9. Essay 2. sec. 3.

REPI'NE, } A word of English construction,
REPI'NER, } composed of *re*, and *pine*; A. S. *pin-*
REPI'NING, *n.* } *an.* See PINE.

REPI'NINGLY. } To *pine* at, to be sorry, to fret, to regret. See the Quotation from Cogan.

For where a louer thinketh him promote,
Enuy will grutch, *repining* at his wele.

Chaucer. The Court of Love.

In king Josias time, (who, being young, did alter, change, and correct wonderfully the religion,) it was never found in Jury that the people *repined* or saide The king is a childe; this geare will not last long.

Latimer. The third Sermon before King Edward, p. 43.

Certaine, which be *repiners* against the truth, do racke and wrest a few places out of doctors, and two or three counceils for their pretensed purpose.

Fox. Martyrs. The Antiquitie of Priests' Marriage, p. 4053.

She then began them humbly to intreat
To draw them longer out, and better twine,
That so their lives might be prolonged late:
But Lachesis thereat gan to *repine*.

Spenser. Faerie Queene, book iv. can. 3.

The English clergy had bickerings with their Dunstons; and stooped late and *repingly* to this yoke under Anselme.

Hall. Works, vol. i. book iii. sec. 9. p. 746. The Honour of the Married Clergie.

Let rash *repiners* stand appall'd,
In thee who dare not trust;
Whose abject souls, like demons dark,
Are murmuring in the dust.

Young. Resignation, part ii.

Repining is sorrow united with a degree of resentment against some superior agent, where the mind dares not to break forth into strong expressions of anger.

Cogan. On the Passions, vol. i. p. 99.

REPLA'CE, *v.* } *Re*, and *place*, *q. v.*

REPLA'CEMENT. } To *place* back again, to put back or restore to its *place*; to reinstate, to reinvest.

A third t' a point more near the matter draws;
Swears if they would, he would attempt the thing,
To chase th' usurper, and *replace* their king.

Daniel. History of Civil Wars, book iii.

The deities of Troy, and his own *penates*, are made the companions of his flight; they appear to him in his voyage, and advise him; and at last he *replaces* them in Italy, their native country.

Dryden. Æneid. Dedication.

What if we still rever'd the banish'd race,
And strove the royal vagrants to *replace*,
With fierce rebellions shook th' unsettled State,
And greatly dar'd, though cross'd by partial fate.

Churchill. The Prophecy of Famine.

The proportion between these two classes of consumers is determined by the proportion existing between that part of the annual produce destined to the *replacement* of capital, and that destined for the purpose of revenue.

Smith. Wealth of Nations, vol. i. p. 57.

REPLAIT. See *ante*, PLAIT.

To *plait*, to infold, back again, over again.

In Raphael's first works are many small foldings often *replaited*, (in some editions *repleated*;) which look like so many whip cords.

Dryden. On the Art of Painting, sec. 200.

REPLA'NT, } Fr. *replanter*; It. *ripiantare*, to
REPLANTA'TION, } *plant* again. See PLANT, IMPLANT.

REPLA'NTING, *n.* } To set or fix into (*sc.* the earth) again; to infix, place firmly, rootedly, again.

The chiefe enterpriser, with the fauour of her majesty, hath since continued the action by sending into the countrey againe and *replanting* this last yeere a new colony.

Hakluyt. Voyages, &c. vol. iii. p. 266. M. Tho. Hariot.

And these weake impes *replanted* by thy might.

Spenser. Faerie Queene, book v. can. 11.

As for the plants, when they be a cubite long, [they] are *replanted* in a trench a foot deepe.

Holland. Plinie, book xiii. ch. xxiv.

Hee had thought that it was materiall to the *replanting* of them, that they should stand just in the same position and accustomed coast of the heaven as they did before.

Id. Ib. book xvii. ch. xl.

Refining and purifying the minds and spirits of the lapsed creation, and every where attempting the *replantation* of that beautiful image [which] sin and vice had obliterated and defaced.

Hallywell. Saviour of Souls, p. 108.

REPLEADER. See *ante*, PLEA.

A *plea* or *pleading* again, anew.

In these cases the court will after verdict award a *repleader*, *quod partes replacent*; unless it appears from the whole record that nothing material can possibly be *pleaded* in any shape whatsoever, and then a *repleader* would be fruitless.

Blackstone. Commentaries, book iii. ch. xxiv.

REPLE'NISH, *v.* } Fr. *repletion*, *repletif*; (*re-*
REPLE'NISHER, } *pletive*, Cotgrave;) It. *reple-*
REPLE'TE, } *zione*; Sp. *repleto*, *replecion*;
REPLE'TION. } Lat. *replere*, *repletus*, (*re*, and

plere, to fill,) to fill to the brim. See PLENTY.
To restore plenty or fulness, or abundance; to fill to excess; to fulfil, to accomplish.

Ther as is neither hunger ne thirste, ne colde, but every soule *replenished* with the sight of the parfit knowing of God.

Chaucer. The Persones Tale, p. 170.

Ware that the sonne in his ascension
Ne find you not *replete* of humours hote.

Id. The Nonnes Preestes Tale, v. 15031.

Swevenes engendren of *repletions*.

Id. Ib. v. 14998.

REPINE.
—
REPLE-
NISH.

REPLE- NISH. I am fully assertayned by aunciente writings, that this lande was with people *replenished* long afore Noes dayes.

Bale. English Notaries, p. 12.

RE- PLEVIN. One God euerlasting, and without and before the beginning the Father, &c., maker and preserver of all things, and *replenisher* of all things every where.

Hakluyt. Voyages, &c. vol. i. p. 378. Priviledges granted, &c.

He therefore, moued and *replete* with furious ire and pestilent malice, goeth about to stirre all christen nations that will give eares to his diuelish enchantments.

Fox. Martyrs, p. 970. The Bishop's Booke.

More meate than accordeth with nature's measure is named *replecion*.

Sir Thomas Elyot. Castel of Helth, book iii. ch. i. p. 52.

Daily they grow, and daily forth are sent
Into the world, it to *replenish* more.

Spenser. Faerie Queene, book iii. can. 6.

Then tooke the angry witch her golden cup,
Which still she bore, *replete* with magic artes.

Id. Ib. book i. ch. viii.

————— We smothered
The most *replenished* sweet worke of Nature,
That, from the prime creation, ere she framed.

Shakspeare. Richard III. p. 195.

A spiritual body, consisting, as is presumed, of elements changed in their inward qualities, and *replenished* either with the Holy Spirit himself, or with the graces, or virtues, or energies of the Spirit.

Waterland. Works, vol. viii. p. 227. The Sacramental Part of the Eucharist explained.

Ox, or virgin-heifer, wont to browse
The meads of Longovicum, (fattening soil
Replete with clover-grass, and foodful shrub.)

Philips. Cerealia.

When afterwards they cast their thoughts upon the place, it would appear *replete* with the images each in its proper order and situation wherein it had been disposed.

Search. Light of Nature, part i. ch. ix.

As Pringle, to procure a sane secretion,
Purges the *primæ viæ* of *repletion*.

Mason. Epistle to Dr. Shebbeare, p. 417.

REPLEVIN, } Low Lat. *replegiare*: *re*, and
REPLEVY, v. } *plevine*; Fr. *plevir*, to pledge. See
REPLEVY, n. } the Quotation from Blackstone.
REPLEVISABLE. } To reclaim upon security or
pledges given.

Therefore I humbly crave your majestie
It to *replevie*, and my sonne reprove.

Spenser. Faerie Queene, book iv. can. 12.

Such offenders were not *replevisable*.

Hale. History of Pleas of the Crown.

That you're a beast, and turn'd to grass,
Is no strange news, nor ever was,
At least to me, who once, you know,
Did from the pound *replevin* you.

Butler. The Lady's Answer, p. 178.

————— *Replevy* cannot be
From the strong iron grasp of vengeful destiny.

Thomson. Castle of Indolence, ch. ii. p. 463.

By *replevin*; when the tenant *replevies* the distress at such time when his rent is really due.

Blackstone. Commentaries, book iii. ch. x.

REPLEVIN, in Law, is the ordinary mode of regaining possession of goods which have been taken by another under colour of distraining for rent in arrear, and of recovering damages from the distrainer. It is, however, of more extensive application, and may perhaps be resorted to in any case where goods are unjustly taken out of the possession of the owner; but in practice it is seldom adopted unless the goods be taken as a distress.

The mode of proceeding is to apply to the Sheriff, or one of his deputies, and request that the goods in question may be *replevied*. The Sheriff before he *replevies*

the goods is bound to take pledges from the applicant to ensure a return of the goods to the party distraining in case the distress shall be found to be legal; and, in cases of distress for rent, is also bound to take a bond from the applicant and two sufficient sureties in double the value of the goods distrained, and conditioned for prosecuting the *Replevin* suit with effect and without delay, and for returning the goods to the party distraining if a return shall be awarded. The Sheriff is then bound to take possession of the goods, and redeliver them to the applicant. The *Replevin* suit is after this usually removed into one of the superior Courts at Westminster; but whether it be so removed, or whether it remain in the Sheriffs' Court, where the plaint is originally entered, it much resembles a common Action at Law in its subsequent stages. The plaintiff and the defendant in due course of pleading severally set forth the grounds of the complaint and the defence. If the cause is decided in favour of the plaintiff, he recovers damages for the taking and detention of the goods, with costs. If it is decided in favour of the defendant, the judgment depends on the nature of the defence. If he denies the taking of the goods as charged against him, and establishes that defence, he simply recovers his costs as any other defendant. But if he justifies, or, as it is termed, avows the taking of the goods, showing that he took them for some lawful cause, in this case he will be entitled, not only to his costs, but also to have a return of the goods awarded to him. And if he avow for arrears of rent, then he may require the jury to find the value of the goods distrained, and will be entitled to judgment for the value of the goods if it is less than the arrears; or if it equal or exceed the arrears, then for the amount of the arrears, for which arrears and his costs he may have execution against the plaintiff.

If the *Replevin* bond is forfeited, the Sheriff is bound to assign it to the avowant, who may proceed thereon against the sureties. And if the Sheriff take insufficient sureties, he is liable to the avowant to make good the insufficiency.

Another mode of *replevying* is by original Writ issuing out of Chancery, and directed to the Sheriff; but that mode is altogether disused. There are a variety of Statutes from the earliest date regulating and improving the proceedings in *Replevin*, which is a very ancient remedy; and there is a great mass of Law bearing on the subject. The above merely gives an outline of the nature and object of the proceeding.

REPLY, v. } Fr. *repliquer*; It. *replicare*; Sp.
REPLY, n. } *replicar, responsum alternare seu*
REPLYER, } *geminare*, from the Lat. *replicare*.
REPLICATION. } Skinner.

To return answer to answer, or to answer an answer; to speak or write in answer, or in return to something spoken or written.

Ye mote herken if ye can *replie*
Ayenst all this that ye have to him meved.

Chaucer. Prologue to the Legend of Good Women.

My will is this for plat conclusion
Withouten any *replication*,
If that you liketh, take it for the beste.

Id. The Knightes Tale, v. 1847.

What man that in the worlde crieth,
Withouten faile eccho *repleth*,
And what worde that hym lust to sayn,
The same worde she saith agayn.

Gower. Conf. Am. book v. p. 158.

RE- PLEVIN.
—
REPLY.

REPLY. Their wordes were noted and their offers accepted, and the countenaunte made and sworne bytwene Kateryn of Lancastre and the kyng of Castylles sonne, and writynges and publike instrumentes and oblygatory bondes made and concluded, without *reple* or repentaunce.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 150. p. 413.

Good or bad, gan his brother fiers *reply*,
What do I recke, sith that he dide entire?
Or what doth his bad death now satisfy
The greedy hunger of revenging yre.

Spenser. Faerie Queene, book ii. can. 8.

KING. Why 'tis a louing, and a faire *reply*.

Shakspeare. Hamlet, p. 154.

The *replier*, who was a dissolute man, did tax him that, being a private bred man, he would give a question of state.

Bacon. Works, vol. i. p. 545. Apophthegms.

As if both the second and third hypostases were but certain *repliations* (or echoes) of the first original Deity with abatement.

Cudworth. Intellectual System, book i. ch. iv. p. 581.

The plaintiff may plead again, and *reply* to the defendant's plea. The plaintiff in his *replication* may totally traverse the plea.

Blackstone. Commentaries, book iii. ch. xx.

REPOLISH, Fr. *repolir*; *re*, and *polish, q. v.*, Lat. *polire*.

To *polish* again; to brighten, give brightness to again; to refine.

But must we say she's dead? may't not be said,
That as a sundred clock is piecemeal laid,
Not to be lost, but by the maker's hand,
Repolish'd, without error then to stand.

Donne. A Funeral Elegy.

A hundred times consider what you've said:
Polish, repolish, every colour lay,
And sometimes add, but oftener take away.

Dryden. The Art of Poetry.

REPORT, v. } Fr. *rapporter*; It. *riportare*;
REPORT, n. } Lat. *reportare*, to bear or carry
REPORTER, } back, (*re*, and *portare*.) See **PORTER.**
REPORTINGLY. }

To bear or carry back; to relate; to relate any thing said or done; to record or rehearse, any thing said or done; to bear or carry by sound, to resound, to re-echo.

And so befell, that the excellent renoun
Of the emperoures doughter dame Custance
Reported was, with every circumstance,
Unto these Surrien marchants.

Chaucer. The Man of Lawes Tale, v. 4506.

I have and shall, for true or false *report*,
In wrong and right iloved thee all my live.

Id. Troilus and Creseide, book i.

Within vi. dayes after y^e duke of Gloceter was arrestid, he was foude deed in his bedde, beyng the xxiii. daye of February; of whose murdre dyuerse *reportes* ar made, which I passe ouer.

Fabyan. Henry VI. p. 619.

So as the *report* made here of the doctrine of the catholique church vnder the name of papistes, is a very true *reporte*, and for want of grace reproved by thauctor as no true doctrine.

Stephan, Bishop of Wynchester. Expositicon on the Sacraments, p. 25.

So y^a hauing made all things sure for tharmy to passe, he returned agayn both the authour of the acte, and *reporter* of y^e thing done.

Brende. Quintus Curtius, book iii. fol. 32.

It ill beseemes a knight of gentle sort,
Such as ye have him boasted, to beguyle
A simple maide, and worke so hainous tort,
In shame of knighthood, as I largely can *report*.

Spenser. Faerie Queene, book iii. can. 2.

— Fayre sir, how may I weene it trew,
That ye doe tell in such uncerteintee?
Or speake ye of *report*, or did ye see
Just cause of dread, that makes ye doubt so sore?

Id. Ib. book iii. can. 9.

If you speak three words, it will (perhaps) some three times *re-* **REPORT.**
port you the whole three words.

Bacon. Natural History, sec. 249.

REPOSE.

The like eccho upon eccho, but only with two *reports*, hath been observed to be, if you stand between a house and a hill and lure towards the hill.

Id. Ib. sec. 250.

— I will leave my house,
And the discovery of my shame, to fate,
And any censure rather undergo,
Than be the *reporter* of my own disgrace.

Tuke. The Adventures of Five Hours, act iii.

If thou dost loue, my kindenesse shall incite thee
To binde our loues vp in a holy band.
For others say thou dost deserue, and I
Beleeue it better then *reportingly*.

Shakspeare. Much Ado About Nothing, p. 110.

If we do admit them to be true *reporters* of matters of fact, we must also of necessity admit them to be true *reporters*, nay, I say more, infallible *reporters* of our Saviour's doctrine; so as that their declarations of it must for ever conclude all christians.

Sharp. Works, vol. ii. p. 61. Sermon 3.

These *reports* are histories of the several cases, with a short summary of the proceedings, which are preserved at large in the record; the arguments on both sides and the reasons the court gave for its judgment; taken down in short notes by persons present at the determination.

Blackstone. Commentaries. Introduction, sec. 3.

Besides these *reporters*, there are also other authors, to whom great eration and respect is paid by the students of the common law.

Id. Ib.

REPOSE, v. } Fr. *reposer*; It. *riposare*; Sp.
REPOSE, n. } *reposar*; Lat. *reponere, repositum*,
REPOSAL, } (*re*, and *ponere*,) to put or place
REPOSANCE, } again, back again, to replace.
REPOSEDNESS, } To put, place, or lay up; *sc.* in a
REPOSIT, } state of rest, or quiet, or security;
REPOSITION, } to rest; to lodge, to reside, to abide
REPOSITORY. } or settle.

An eye, whose judgment none effect could blinde,
Friendes to allure, and foes to reconcile;
Whose persing looke did represent a minde
With vertue fraught, *reposed*, voyd of gile.

Surrey. Epitaph on Sir T. W.

The second was an holy nunne to chose,
Which would not let me be her chappellane,
Because she knew, she said, I would disclose
Her counsell, if she should her trust in me *repose*.

Spenser. Faerie Queene, book iii. can. 8.

So forth she rode, without *repose* or rest,
Searching all lands and each remotest part,
Following the guydance of her blinded guest,
Till that to the sea-coast at length she her addrest.

Id. Ib. book iii. can. 4.

— He replied,
Thou vnpossessing bastard, dost thou thinke,
If I would stand against thee, would the *reposal*
Of any trust, vertue, or worth in thee
Make thy words faith'd?

Shakspeare. Lear, p. 291.

The devil's cushion, as Gualter cals it, his pillow and chiefe *reposal*.

Burton. Anatomy of Melancholy, part i. sec. 2. p. 85.

— See what sweet
Reposance heaven can beget.

Hall. Poems, p. 92.

With wondrous *reposedness* of mind, and gentle words, Reputation answered.

Tr. of Boccacini, p. 104.

For riches, not of the purse, (which is not here thought of,) but of the minde, what can be expected from that age, which is not capable of observation, carelesse of *reposition*?

Hall. Works, vol. i. sec. 6. p. 642. A Censure of Travell.

Letters can treasure up, and transmit matters of state to posterity, with as much faith, and be as authentick registers, and safe *repositories* of truth as any story whatsoever.

Howell. Letters, p. 6. The Epistle Dedicatory.

REPOSE.

REPRE-
HEND.

Then wonder not to see this soul extend
The bounds, and seek some other self, a friend:
As swelling seas to gentle rivers glide,
To seek *repose*, and empty out the tide.

Dryden. Eleonora.

If others *reposit* their young in holes and dens, and secure themselves also therein, it is because such guard, such security is wanting, their lives being sought either by the hostility of man, or to satisfy the appetite of rapacious creatures.

Derham. Physico-Theology, book iv. ch. xiii. p. 229.

The *reposition* of the luxated shoulder is performed either by the hand, bandage, or force of instruments.

Wiseman. Surgery, vol. ii. book vii. p. 276.

He will call us to account for our memories, how we have employed them, whether we have been careful to treasure up in them such things as might be useful to our lives, or have only made them the *repositories* of things idle, and impertinent and unprofitable.

Sharp. Works, vol. vi. p. 191. *Sermon 10.*

I cannot avoid mentioning here an instance of *repose*, in that faithful and accurate painter of nature, Shakspeare; the short dialogue between Duncan and Banquo, whilst they are approaching the gates of Macbeth's castle.

Reynolds. Works, vol. i. p. 252. *The Eighth Discourse.*

He chose a single family, which, when spread out into a nation or people, was to become the public *repository* of his holy name.

Warburton. The Divine Legation, book ix. ch. v.

REPOSSE'SS, v. } *Re, and possess, q. v.*

REPOSSE'SSION. } To possess again; to have or hold, take or enter into possession again; into the tenure or occupation again.

After whiche peace concludyd, and the sayde Danys auoydyd, the kynge *repossessyd* y^e said cytie.

Fabyan, p. 158.

What meanes is left to helpe me in this plight?
And from that peevish, shooting, hood-wink't elfe,
To *repossesse* my love, my heart, my selfe?

Browne. Britannia's Pastorals, book i.

The news of the death of the K. of Sweden made such impressions upon him, that he died a few days after, having overcome all difficulties, concluding with the Swedes and the governor of Frankendall, and being ready to enter into a *re-possession* of his country.

Howell. Letters, book i. sec. 6. p. 247.

He sees encamp'd a numerous army spread
Beneath th' imperial standard, proudly led
By Constantine, to *repossess* the town,
Which from his rule Bulgaria's powers had won.

Hoole. Orlando Furioso, book xlv. v. 598.

Recall'd to *repossess* his lawful throne
More at his people's seeking than his own,
Another Charles succeeded.

Churchill. Gotham, book iii.

REPREHE'ND, v. } *Fr. reprehendere; It. riprendere; Sp. reprehendir; Lat. reprehendere, (re, pre, hendere, A. S. hent-an, to take hold of, see COMPREHEND,) to hold or take back; to resume, to retain.*

To take again, to hold or stop from going or proceeding, to repress, to check; and, consequentially, (met.) to reprimand, to reprove, to rebuke, to blame.

Thou wert aie woned ech lover *reprehend*
Of thing fro which thou canst not thee defend.

Chaucer. Troilus and Crescide, book i.

For doubteth nothing, mine entention
Nas not to you of *reprehension*
To speake.

Id. Ib.

We say thirdly, that we do it not of an obstinate mynde. For he that defendeth a cause obstinately (whether it be true or false) is euer to be *reprehended*.

Frith. Workes, p. 108. *Of the Sacrament of the Body of Christ.*

There is no kinde of vertue, but hee hath created from living thing, that vseth it for to *reprehende* and prouoke those that despise that vertue.

Vives. Instruction of a Christian Woman, p. 392.

VOL. XXVII.

Hee which was then both *reprehender* of his swearing and witnes of his death, is yet aliue.

Fox. Martyrs, 1558, p. 1907.

To complain in print of the multitude of books seems to me a self-accusing vanity, whilst the querulous *reprehenders* add to the cause of complaint, and transgress themselves in that, which they seem to wish amended.

Glanvil. The Vanity of Dogmatizing. Preface, p. 7.

And, as one carelesse of suspition,
Ne fawnest for the favour of the great;
Ne fearest foolish *reprehension*
Of faulty men, which daunger to thee threat.

Spenser. Sonnet 1.

In which satire, human vices, ignorance, and errors, and all things besides, which are produced from them, in every man, are severely *reprehended*.

Dryden. Juvenal, p. 292. *Dedication.*

Reprehensions may suppress passions when they are weak, but do but incense them whilst they are raging.

Boyle. Works, vol. vi. p. 24. *Against Customary Swearing.*

They shew both the divine knowledge and excellent strain of charity that shined in Christ's reply; in which, by a *reprehensive* shortness, he both clears the man's innocence, and vindicates God's proceedings.

South. Sermon, vol. viii. p. 299.

Xenophanes the Colophonian *reprehensively* admonished the Egyptians after this manner, that if they thought those to be Gods, they should not so lament them, but if they would lament them, they should no longer think them Gods.

Cudworth. Intellectual System, book i. ch. iv. p. 226.

That the religion of the Bramins is highly *reprehensible* every moralist must allow, when he considers that the most unworthy ideas of the Divinity, ideas destructive of morality, naturally arise from idol-worship.

Mickle. Inquiry into the Bramin Philosophy.

The name of profaneness, you will observe, in strict propriety of speech, belongs not only to the flagrant and avowed impiety of the atheist and libertine, but to the conduct of him who, without any thing notoriously *reprehensible* in his morals—any thing to make him shunned and disliked by his neighbours and acquaintances, lives, however, without any habitual fear of God and sense of religion upon his mind.

Horsley. Sermon 21. vol. ii. p. 185.

REPRESE'NT, v.

REPRESE'NTANT,

REPRESE'NTANCE,

REPRESENTA'TION,

REPRESE'NTATIVE, *adj.*

REPRESE'NTATIVE, *n.*

REPRESE'NTATIVELY,

REPRESE'NTER,

REPRESE'NTMENT.

Fr. représenter; It. rappresentare; Sp. representar; Lat. repræsentare, (re, and præsentare,) (re, præ, ens.) to place again; to exhibit as again present or being before.

To state or station, to place before or propose, to

show, hold forth, or exhibit,—the form or colour, the likeness, the image; to be *present* for, to act or appear in the character of, as agent for, performing the functions of, another.

Of her estate she her repented,
As her visage *represented*.

Chaucer. The Romant of the Rose.

Also in good by participacion, and that is cleaped good, for farr fette, and *representatiue* of goodlie goodnesse.

Id. The Testament of Loue, book ii.

When Darius had spoken these wordes, y^e *representacion* of y^e present peril so mased thē al, y^t they were not able to shew their aduice, or to speke a word to y^e matter.

Brende. Quintus Curtius, book v. fol. 126.

For I aunswere to thys, that though the generall counsell doe *represent* the whole vniuersall church, yet neuerthelesse, in very deede, there is not the vniuersall church, but *representatiue*.

Barnes. Workes, p. 255. *What holy Church is.*

And in that place he hath set prices, whō as *representours* of his image vnto men, he would haue to be reputed in the suprem and most high rōume.

Stephan, Bishop of Wynchester. True Obedience, fol. 16.

E

REPRE-
HEND.REPRE-
SENT

REPRE-SENT. Thus, touching images, that they be *representers* of vertue and good example.

Fox. Henry VIII. The Booke of Articles, p. 998.

RE-PRESS.

With thee yet shall he leave, for memory
Of his late puissance, his ymage dead,
That living him in all activity
To thee shall *represent*.

Spenser. Faerie Queene, book iii. can. 3.

If we consider what Numa ordained concerning images, and the *representation* of the gods, it is altogether agreeable unto the doctrine of Pythagoras: who thought that God was neither sensible nor mortall, but invisible, incorruptible, and onely intelligible.

Sir Thomas North. Plutarch. Numa, p. 54.

As the supreme character of the Most High is verity; so what can more become or more magnificently deck his *representants* on earth, than veracity it self?

Reliquiæ Wottonianæ, p. 153.

They affirm foolishly, that the images and likenesses they frame of stone, or of wood, are the *representances* and forms of those who have brought something profitable, by their inventions, to the common use of their living.

Donne. History of the Sept, p. 93.

If kings become open professed idolaters, though private persons may not murder them, and their families, as Jehu; yet the *representative* body, or greater part of their kingdoms, (as many pious divines affirm) may lawfully convent, depose, if not judge them capitally for it.

Prynne. Treachery and Disloyalty, p. 101.

God-like Telemachus, amongst them sat,
Griev'd much in mind; and in his heart begat
All *representment* of his absent sire;
How (come from far-off parts) his spirits would fire
With those proud wooers' sight.

Chapman. Homer. Odyssey, book i. p. 5.

I cannot discern by any help from reading, or learned men, (who have been to me the best and briefest indexes of books) that any nation hath in *representment* of great actions (either by heroicks or dramaticks) digested story into so pleasant and instructive a method as the English by their drama.

Davenant. Preface to Gondibert.

Formerly he was received and adored under the one common character of God, Lord, and Jehovah; not merely as *representative* of God the father, or as invested with his authority, but as strictly and truly God, consubstantial with God the father.

Waterland. Works, vol. i. p. 32. A Defence of some Queries. Query 2.

He acts also contrary to his trust, when he either employs the force, treasure, and offices of the society, to corrupt the *representatives*, and gain them to his purposes; or openly pre-ingles the electors, and prescribes to their choice, such whom he has by solicitations, threats, promises, or otherwise won to his designs; and employs them to bring in such who have promised beforehand what to vote, and what to enact.

Locke. Works, vol. ii. p. 220. Of Civil Government.

As Christ did merit the remission of our sins, and the acceptance of our persons by his passions; so God did consign them to us in his resurrection; it being that formal act of grace, whereby, having sustained the brunt of God's displeasure, he was solemnly re-instated in favour, and we *representatively*, or virtually in him.

Barrow. Works, vol. ii. p. 425. Sermon 30.

In your baptismal immersion you were *representatively* buried with him, that so as Christ was raised from the dead, so you, in conformity thereto, might live a new regenerate life.

Scott. Christian Life, part ii. ch. vii. p. 43.

In so large a state as ours it is therefore very wisely contrived, that the people should do that by their *representatives* which it is impracticable to perform in person; *representatives* chosen by a number of minute and separate districts, wherein all the voters are, or easily may be, distinguished.

Blackstone. Commentaries, vol. i. book i. ch. ii. p. 159.

REPRE'SS, v. } Fr. *reprimer*; It. *reprimere*;
REPRE'SSION, } Sp. *reprimir*; Lat. *reprimere*, re-
REPRE'SSIVE. } press-um, (re, and prem-ere.) See
COMPRESS, DEPRESS, &c.

To *press* back; to push or force back, to restrain; to hold or keep down, to subdue.

And reed Mars, was that time of the yere
So feble, that his malice is him raft,
Repressed hath Uenus his cruell craft.

Chaucer. The Legend of Hypermetre.

And some so full of fury is, and despite,
That it surmounteth his *repression*.

Id. Troilus and Creseide, book iii.

For he whiche sitte aboue the moone,
And all thyng maie spille and spede,
In euery cas, and euery nede,
His good kynge so well addresseth,
That all his fo men he *represseth*.

Gower. Conf. Am. book vii. p. 236.

The madnes of the Welshemen and Scottes (whose often incursions and robberies he well had in his father's daies experimented and assaied) he studied to assuage and *represee*.

Hall. Henry V. fol. 34. The first Yere.

Do such things for the advancement of justice, and for the *repression* and punishment of malefactors, as by the advice of such of the said council as then shall be present with him he shall think meet.

Burnet. Records, vol. ii. part ii. p. 307.

But if thou may with reason yet *represee*
The growing evill, ere it strength have gott,
And thee abandon'd wholly do possesse;
Against it strongly strive.

Spenser. Faerie Queene, book iii. can. 3.

And no doubt, overgrow they would and cover the whole face of the earth, were they not *repressed* and withstood by good husbandrie.

Holland. Plinie, book xvii. ch. xiii.

Believe a friend, with thrice your years increas'd,
And let these youthful passions be *repress'd*.

Dryden. Homer. Iliad, book i.

Ye blind officious ministers of folly,

Could not her charms *repress* your zeal for murder?

Johnson. Irene, act iv. sc. 10.

Mental distress equally *repressive* of the levity of the mind and the wanderings of the imagination to pleasurable objects, is not attended with that disturbance and distraction of the thoughts which are apt to be produced by the pain and debility of sickness.

Horsley. Sermon 37. vol. iii. p. 145.

REPRIE'VE, v. } Fr. *repris*, from the verb *re-*
REPRIE'VE, n. } *prendre*, to take back. See RE-
REPRIE'VAL. } PREHEND, and the Quotation below
from Blackstone.

Therefore I humbly crave your majestie
It to replevie, and my sonne *reprive*.

Spenser. Faerie Queene, book iv. can. 12.

But alas! now he is old,
Bit with hunger, nipt with cold,
What is left him?
Or to succour, or relieve him,
Or from wants oft to *repreve* him.

Browne. The Shepheard's Pipe, ecl. 3.

Lies there no way, my lord, them to relieve,
And for their ransoms two such to retain?
Quoth Suffolk, Come, we'll hazard their *reprieve*,
And share our fortunes.

Drayton. The Battle of Agincourt.

His [the sailor's] sleeps are but *reprievals* of his dangers; and when he wakes, 'tis the next stage to dying.

Overbury. Charact. G. 7.

Even a short repentance, when sincere, gains time, by a *reprieve* from punishment.

Stillingsfleet. Sermon 4. vol. ii. p. 206.

A *reprieve*, from *reprendre*, to take back, is the withdrawing of a sentence for an interval of time, whereby the execution is suspended.

Blackstone. Commentaries, book iv. ch. xxxi.

The Eleusinian mysteries got a *reprieve* till the reign of Theodosius the elder, when they were finally abolished.

Warburton. The Divine Legation, book ii. sec. 4.

RE'PRIMAND, n. } Fr. *reprimande*, from *reprimer*;
RE'PRIMAND, v. } Lat. *re-primere*, to re-
press, q. v.

A repression or restraint, a reprehension, rebuke, reproof.

RE-
PRESS.
—
REPRI-
MAND.

REPRI-MAND. Lord Burghley *reprimanded* the warm proceedings of the heads against him, and told them that "as good and as ancient were of another judgment," and that "they might punish him, but it would be for well-doing."

REPRISE. *Waterland. Works*, vol. ii. p. 280. *Arian Subscription. Supplement.*

And every now and then he [Sir Roger] inquires how such an one's wife or mother, or son, or father do, whom he does not see at church; which is understood as a secret *reprimand* to the person that is absent.

Spectator, No. 112.

The being not only tied, but knit to her people was her aim; and she [Queen Elizabeth] pursued this great point of view on all occasions; the least, as well as the greatest; and even on those where she thought it necessary to refuse or to *reprimand*.

Bolingbroke. Works, vol. ii. p. 258. *Remarks on the History of England.*

REPRINT, v. } *Re*, and *print*, q. v., Lat. *pre-*
REPRINT, n. } *mere*, to press.

To *print* again, sc., letters or characters; to mark or infix again; to re-impress.

Doctor Reinolds, in his preface to his six Theses, and in his overthrow of stage-plays thoroughout. Printed 1599, and now reprinted 1629.

Prynne. Histrio-Mastix, part i. p. 358.

My design in *reprinting* it is, to let the reader see what the comment is which I so frequently refer to.

Waterland. Works, vol. iv. p. 314. *The Athanasian Creed. Appendix.*

The whole business of our redemption is, in short, only to rub over the defaced copy of the creation, to *reprint* God's image upon the soul, and (as it were) to set forth nature in a second and a fairer edition.

South. Sermons, vol. i. p. 79.

REPRISE, v. } Fr. *repris*, from *reprendre*, to
REPRISE, } take back, (see *ante*, **REPRIEVE**,
REPRI'SAL. } **PRISE**, **COMPRISE**, &c.) *reprimand*.

To take back again or in return; to seize in return; to retake, to resume, to restore, to receive, to repay.

And eke also
Pride is the cause of all wo,
That all the worlde ne maie suffise
To stanche of pride the *reprise*.

Gower. Conf. Am. book i.

But humblesse is all other wise,
Whiche most is worth, and no *reprise*
It taketh agein, but softe and faire
If ony thing stant in contraire,
With humble speche it is redressed.

Id. Ib.

For loue is euer of some *reprise*
To hym that woll his loue holde.

Id. Ib. book v.

But they were *repyred* and sent vnto the Tower of London, where they remayned long after, but at the last were deliuered.

Grafton. Edward I. The thirteenth Yere.

Wherefore he now begunne
To challenge her anew, as his owne prize,
Whom formerly he had in battell wonne,
And proffer made by force her to *reprise*.

Spenser. Faerie Queene, book iv. can. 4.

As now ye might *reprise* the armes Sarpedon forfeited,
By forfeit of your rights to him; would you but lend your hands,
And force Patroclus to your Troy?

Chapman. Homer. Iliad, book vii. p. 240.

Your care about your banks infers a fear
Of threatening floods and inundations near;
If so, a just *reprise* would only be
Of what the land usurp'd upon the sea.

Dryden. The Hind and the Panther.

This gentleman being very desirous, as it seems, to make *reprisals* upon me, undertakes to furnish out a whole section of gross misrepresentation made by me in my quotations.

Waterland. Works, vol. iv. ch. iv. p. 83. *A Farther Vindication of Christ's Divinity.*

She that asks
Her dear five hundred friends, contemns them all,
And hates their coming. They (what can they less?)
Make just *reprisals*; and with cringe and shrug,
And bow obsequious, hide their hate of her.

Cowper. The Task, book ii.

In this case letters of marque and *reprisal* (words used as synonymous; and signifying, the latter a taking in return, the former the passing the frontiers in order to such taking) may be obtained, in order to seize the bodies or goods of the subjects of the offending state, until satisfaction be made, wherever they happen to be found.

Blackstone. Commentaries, book i. ch. vii.

REPRIVATE, seems used antithetically to *Re-public*.

Mic. The world is full of vanity; and fond fools
Promise themselves a name from building churches,
Or any thing that tends to the republic;
'Tis the *reprivate* that I study for.

Randolph. The Muse's Looking Glass, act iii. sc. 1.

REPROA'CH, v.

REPROA'CH, n.

REPROA'CHABLE,

REPROA'CHFUL,

REPROA'CHFULLY,

REPROA'CHFULNESS.

Fr. *reprocher*; It. *rimprocciare*; Sp. *reprochar*. Skinner thinks from *re*, and *proche*, *prope*, near; in *proximo*, (i. e.) *cominus increpare*, or, as we say, to put it home. Caseneuve from *reciprocare*. May it not be from A. S. *price-an*, *pungere*, *stimulare*?

To charge with any thing disgraceful, discreditable, shameful, or dishonourable; to revile, to upbraid.

Ne my declared foo wrought me all this *reproche*.

Surrey. Psalm 55.

And I among the rest, which wrote this weary song,
Must nedes alledge in my defence, that thou hast done me wrong.
For if in simple verse I chaunc'd to touch thy name,
And toucht the same without *reproch*, was I therefore to blame?

Gascoigne. The Fruite of Foes.

And more ouer (whiche is moch to be meruayled at) he also prohybyted that any thinge shuld be red or spoken, *reprocheable* or blasphemous to God.

Sir Thomas Elyot. The Governour, book iii. p. 160.

What hathe the people so mutche offended you, that you should either so scornefully and so *reprochefully* reporte of them?

Jewell. The Defence of the Apologie, part i. p. 32.

Others (vse those venomous Germaine rimes to the vpbrading of our nation, and from hence borow their scoffes, and *reprochfull* taunts to the debasing of vs Iselanders.)

Hakluyt. Voyages, &c. vol. i. p. 585. *The True State of Island.*

And this mannes humanitee and curteous behaueour wherewith ye ought to haue been prouoked vnto better waies, ye turne into an occasion of slaundreous *reprochefulness*.

Udall. Luke, ch. vii. fol. 283.

Consenting to the safe-guard of your honour,
I thought your marriage fit: else imputation,
For that he knew you, might *reproach* your life,
And choake your good to come.

Shakspeare. Measure for Measure, fol. 83.

And, ever as she went, her tounge did walke
In fowle *reproch* and termes of vile despight,
Provoking him, by her outrageous talke,
To heape more vengeance on that wretched wight.

Spenser. Faerie Queene, book ii. can. 5.

Full of disdainefull wrath, he fierce uprore
For to revenge that fowle *reprochefull* shame,
And snatching his bright sword began to close
With her on foot, and stoutly forward came.

Id. Ib. book iii. can. 1.

But most of them were tongues of mortall men,
Which spake *reprochfully*, not caring where nor when.

Id. Ib. book vi. can. 12.

The noxious plant, and savage animal,
Which you the earth's *reproch* and blemish call.

Blackmore. Creation, book iii.

Forbear, ye Chiefs! *reproachful* to contend;
Much would you blame, should others thus offend:
And lo! th' approaching steeds your contest end.

Pope. Homer. Iliad, book xxiii.

By the Son of Man, we are to understand our Lord Jesus Christ; and to speak a word against him, will be to talk slightly and *reproachfully* of him.

Sharp. Works, vol. iii. p. 199. *Sermon 11.*

RE-
PROACH.
—
REPRO-
DUCE.

The monarch, sensible of the importance of this fortress, (Mezieres,) and of the danger to which it was exposed, committed the defence of it to the Chevalier Bayard, distinguished among his contemporaries by the appellation of the Knight without fear, and without reproach.

Robertson. *Charles V.* book ii.

RE'PROBATE, v.

RE'PROBATE, adj.

RE'PROBATE, n.

REPROBA'TION,

REPROBA'TIONER,

RE'PROBATER.

See to REPROVE, *infra*:

Lat. *reprobare*,

To prove against, to give, or bear testimony, or witness, pass sentence, against; to disown, to reject, to abandon; to

reprehend, to condemn.

Declare them firste of al to the worlde, to be the *reprobate* veselles of dyshonoure, which of wyfulnessse contemneth my eternall verytie.

Bale. *Image*, part ii. p. 107.

The carnal multitude, the wise mē of this world, the very *reprobates* frō God, all drye without the true faith, dranke vp this filthy water.

Id. *Ib.* p. 43.

I wyll not seke to call the back, no more than the Holy Ghost doth in that place, for y^e laboure were all in vayne, thū beinge a vessell of *reprobacion*.

Id. *Apologie*, fol. 14. Preface.

Not like our sons of zeal, who, to reform
Their hearers, fiercely at the pulpit storm,
And beat the cushion into worse estate,
Than if they did conclude it *reprobate*.

Elegy upon the Author.

How unlikely is it that Justin should own such *reprobates* as those Ebionites were for fellow Christians!

Waterland. *Works*, vol. v. ch. vi. p. 204. *Doctrine of the Trinity*.

To say nothing of Harsnet's sermon at St. Paul's Cross, in 1584, and of Hooker's at the Temple, in the year 1585, both condemning absolute *reprobation*.

Id. *Ib.* vol. ii. p. 377. *Supplement to the Case of Arian Subscription*.

John, Duke of Argyle, the patriotic *reprobater* of French modes.

Noble. *Continuation of Grainger*, vol. iii. p. 490.

I never knew any of the Geneva or Scotch model (which sort of sanctified *reprobationers* we abound with) either use or like this way of preaching in my life; but generally whips and scorpions, wrath and vengeance, fire and brimstone, made both top and bottom, front and rear, first and last, of all their discourses.

South. *Sermon*, vol. iii. p. 431.

And doth he *reprobate*, and will he damn
The use of his own bounty?

Cowper. *The Task*, book v.

They divide this central mansion of the dead into two distinct regions, for the separate lodging of the souls of the righteous and the *reprobate*.

Horsley. *Sermon* 20. vol. ii. p. 158.

REPRODU'CE, v.

REPRODU'CER,

REPRODU'CTION.

Fr. *reproduire*; It. *reproducere*; Lat. *re*, and *producere*, to lead, draw, or bring

forth.

To produce, or bring, or bear forth again; to yield again.

Food that his inborn courage might control,
Extinguish all the father in his soul,
And for his Estian race, and Saxon strain,
Might reproduce some second Richard's reign.

Dryden. *Britannia Rediviva*.

These mighty concussions of Nature, especially that of the universal conflagration, puts an end to all the race of mankind and all living bodies, though in the reintegration of the world after these destructions there is also a *re-production* of mankind, but not by the ordinary method of propagation as now.

Hale. *Origination of Mankind*, ch. ix. sec. 2. p. 217.

The experiment recorded by our author about the *reproduction* of salt-petre, is the best and successfulest I have ever been able to make upon bodies, that require a strong heat to dissipate them.

Boyle. *Works*, vol. iii. p. 61. *Experimental Attempts*.

How a person once annihilated could be reproduced, so as to be the same person which had formerly existed, when no principle of sameness, nothing necessarily permanent, was supposed to enter the original composition, was but ill explained.

Horsley. *Sermon* 34. vol. iii. p. 67.

You understand, to be sure, that I speak of Charles Townshend, officially the *re-producer* of this fatal scheme.

Burke. *Works*, vol. ii. p. 422. *On American Taxation*.

Death was represented as an utter extinction of the whole man; and the evangelical doctrine of a resurrection of the body in an improved state, to receive again its immortal inhabitant, was heightened into the mystery of a *reproduction* of the annihilated person.

Horsley. *Sermon* 34. vol. iii. p. 67.

And though it increases the consumption of the society, it provides a permanent fund for supporting that consumption; the people who consume *re-producing*, with a profit, the whole value of their annual consumption.

Smith. *Wealth of Nations*, vol. ii. book ii. ch. v. p. 129.

The labourers and labouring cattle, therefore, employed in agriculture, not only occasion, like the workmen in manufactures, the *reproduction* of a value equal to their own consumption, or to the capital which employs them, together with its owner's profits, but of a much greater value.

Id. *Ib.* book ii. ch. ii. p. 29.

REPROMISSION, (from *re*, and *promittere*, to promise, *q. v.*) By this word Wiclif renders the Lat. *repromissiones*, (Gr. *ἐπαγγελίας*,) the Modern Version, the *promises*.

But he whos generacioun is not noumbred in hem took tithis of Abraham, and he blesside this Abraham which hadde *repromysiouns*.

Wiclif. *Ebrenis*, ch. vii. p. 110.

REPRO'VE, v.

REPRO'VE, n.

REPRO'VABLE,

REPRO'VAL,

REPRO'VER,

REPROO'F.

Anciently also written *repreve*, *repreef*. Fr. *reprouver*; It. *ripro-vare*; Sp. *reprovar*; Lat. *re-probare*, (*re*, and *probare*, A. S. *prof-ian*, see to PROVE,) to *reprobate*, *q. v.* The Gr. *αποδοκιμαζειν* is,

by the Vulgate, rendered *reprobare*; and this by Wiclif, *reprove*; in Modern Version, *reject*. To *reprove* seems to mean, to *reject*, as not standing *proof* or trial; and, then, generally,

To reject or disallow; to condemn, to blame, to reprehend, to reprimand; (to improve, *q. v.*;) and it is also used as equivalent to—to *disprove*.

Al reson *reproveþ*. such imparfit puple
And hatt þem unstedefast.

Piers Plouhman. *Vision*, p. 57.

But he biheelde hem: and seide, what thanne is this that is wrytun, the stoon which men bildinge *repreuden* this is maad into the heed of the corner?

Wiclif. *Luke*, ch. xx.

Thei knowlechen that thei knowen God, but bi dedis thei denyen whanne thei ben abomynable and unbileefful and *repreuable* to al good werk.

Id. *Filemon*, ch. i.

Thanne Jhesus bigan to seye *repreef* to citees in whiche ful many vertues of him weren don: for thei diden not penaunce.

Id. *Matthew*, ch. xi.

For so the Lord dide to me in the dayes in whiche he biheld to take away my *reprof* among men.

Id. *Luke*, ch. i.

Alas my name
Shall aye be more henceforth in shame,
And I dishonoured and *repreued*,
And neuer more shall be beleued.

Chaucer. *Dream*.

Why speke ye thus? but men ben ever untrewē,
And woman han *represe* of you aye newe.
Ye con non other daliance, I leve,
But speke to us as of untrust and *repreve*.

Id. *The Marchantes Tale*, v. 1078.

Suffer nothing that may be *reprouable*
To thine estate, done in thy region.

Id. *Certain Ballades*, p. 401.

For Juno with hir wordes hote,
This maiden, whiche Eccho was hote,
Reproueth, and saith in this wise.

Gower. *Conf. Am.* book v.

Anone tofore his owne face
Thei haue him vtterly refused,
And with full great *reproue* accused.

Id. *Ib.* book vii.

REPRO-
DUCE.

—
RE-
PROVE.

RE-
PROVE. Unto this manifest and false *reproufe*, (because it toucheth hym,
and not his disciples,) Jesus aunswere veray ientilly: so that he
neither *reproved* the ordinaunce of John, neither playnly condēned
REPTILE. the fastinges of other mē.

Udall. *Matthew*, ch. ix. fol. 40.

And for suche causes and wordes *reprouable* of the Spanyardes,
y^e Portyngales toke this mayster Denyce, bastarde broder to kynge
Ferant, and made hym kynge.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. xlii. p. 133.

Gynecia, to whom the fearful agonies she still lived in made any
small *reproval* sweet, did quickly find her words falling to a better
way of comfort.

Sidney. *Arcadia*, vol. ii. book iii. p. 657.

I may, sometimes, *reprouers'* deedes *reproue*,
And sing a verse, to make them see themselves.

Gascoigne. *The Steele Glas*.

Not suffering the least winckling sleep to start
Into her eye, which th' heart mote have relieved;
But if the least appeared, her eyes she streight *retrieved*.

Spenser. *Faerie Queene*, book v. can. 8.

That sure I weene the hardest hart of stone
Would hardly finde to aggravate her grieve:
For misery craves rather mercy then *retriefe*.

Id. *Ib.* book iii. can. 8.

Bon. Sir, believe me, upon my relation, for what I tell you the
world shall not *reprove*.

Ben Jonson. *Every Man in his Humour*, act iii. sc. 2.

My lord of Suffolke, Buckingham, and Yorke,
Reprove my allegation if you can,
Or else conclude my words effectual.

Shakspeare. *Henry VI. Second Part*, p. 130.

These are such things which if men will stand to defend, possibly
a modest *reprover* may be more ashamed than an impudent offender.

Taylor. *Sermon* 1. part iii. p. 9. *Righteousness Evangelical*.

Reprove of words the too-affected sound.

Dryden. *The Art of Poetry*.

If indeed men had no passions, or had so mortified their passions,
that they were rarely earnest or zealous about any thing; their un-
concernedness for religion, and the things of God, might be the
less *reprovable*.

Sharp. *Works*, vol. i. p. 252. *Sermon* 10.

Who gives his tongue a loose so bold and vain,
Censures my conduct, and *reproves* my reign;
Lifts up his thought against me from the dust,
And tells the world's Creator what is just.

Young. *A Paraphrase on Job*.

In the numerous tribe of polite vices, there are still some higher
in the fashion than others, and therefore capable of a livelier de-
fence, and deserving of a stronger ridicule on the *reprover*.

Warburton. *Works*, vol. x. p. 82. *Sermon* 22.

REPRUNE, to *prune* again, lit. and met.

In mid-way flight imagination tires;
Yet soon *re-prunes* her wing to soar anew.

Young. *The Complaint*. Night 9.

RE'PTILE, *adj.* } Fr. *reptile*; It. *rettile*; Sp.

RE'PTILE, *n.* } *reptilias*; Lat. *reptilis*, that can or

RE'PENT, *adj.* } may creep; and *repent*, Lat. *re-*

pens, present participle of *repere*, to creep.

Creeping, moving slowly or sluggishly.

Reptile is also used met. for one having, or being dis-
tinguished by, the qualities of a creeping, crawling
animal; and that should be treated as such.

He [Burnett, T.] has a great genius, and bravely enlarges the
empire of our narrow speculations, and *repent* spirits, whose contem-
plations extend no further than their sense.

Pepys. *Memoirs*. Evelyn to Mr. Pepys, June 8, 1684.

Wak'd by his warmer ray, the *reptile* young
Come wing'd abroad; by the light air upborn,
Lighter, and full of soul.

Thomson. *Summer*.

It would be the highest folly and arrogance in the *reptile* Man
to imagine that he, by any of his endeavours, could add to the glory
of God, with whom essentially dwells all power and perfection for
evermore.

Warburton. *Works*, vol. ix. p. 146. *Sermon* 7.

An inadvertent step may crush the snail,
That crawls at ev'ning in the public path;
But he that has humanity, forwarn'd,
Will tread aside and let the *reptile* live.

Cowper. *The Task*, book vi.

REPU'BLICK, *n.* }

REPU'BLICAN, *adj.* }

REPU'BLICAN, *n.* }

REPU'BLICANISM.

the common-wealth.

Fr. *republique*; It. *repu-*
blica; Sp. *republica*; Lat.
res-publica, the public state or
condition; the public weal;

The common or *public* wealth, or good; also applied
to a form of government, in which the commonalty ex-
ercise the legislative and executive power, either imme-
diately or by officers by them chosen and appointed; to
the People or State who live under such a form of go-
vernment.

Thus having both such courage and such might,

As to so great a bus'ness did belong,
Neither yet think by their unnatural fight
What the *republic* suffer'd them among.

Drayton. *The Barons' Wars*, book i.

The town and *republick* of St. Marino stands on the top of a very
high and craggy mountain.

Addison. *Italy*, p. 84.

Such a chimerical happiness is not peculiar to *republicans*, for we
find the subjects of the most absolute prince in Europe are as proud
of their monarch as the Lucquese of being subject to none.

Id. *Ib.* p. 233.

His political notions were those of an acrimonious and surly *re-*
publican, for which it is not known that he gave any better reason
than that a popular government was the most frugal; for the trap-
pings of a monarchy would set up an ordinary commonwealth.

Johnson. *Life of Milton*.

Milton's *republicanism* was, I am afraid, founded in an envious
hatred of greatness, and a sullen desire of independence; in petu-
lance impatient of control, and pride disdainful of superiority.

Id. *Ib.*

A *republican* government is that in which the body, or only a
part of the people, is possessed of the supreme power.

Montesquieu. *Spirit of Laws*, book ii. ch. i.

REPU'BLISH, *v.* }

REPU'BLISHER,

REPUBLICA'TION.

Public, the People.

Re, and *publish*, *q. v.*

To *publish* again; to present

again to, lay again before, the

The booke is extant (published by warrant, and *re-published* by
command this present yeare) of the proceedings at that conference,
which will averre all that I say for truth against you here.

Mountague. *Appeale to Caesar*, p. 31.

What now has our rational *republisher* to oppose to this modest
apology for Ismaelism?

Warburton. *Works*, vol. viii. book iii. ch. iii. p. 451. *The Doctrine*
of Grace.

This shews the extreme folly of what hath been asserted by
certain of our unwary friends, and echoed back to us by the enemies
of our holy faith, that the gospel itself is only a *republication* of the
religion of nature.

Id. *The Divine Legation*, book ix. ch. iii.

The *republication* of a former will revokes one of a later date, and
establishes the first again.

Blackstone. *Commentaries*, book ii. ch. xxxii.

REPU'DIATE, *v.* }

REPUDIATION.

repudium, a pudore, *quia fit ob rem pudendam*, or *quia*
renunciatio non fit sine pudore. See Vossius.

To put away, to separate from; to forsake, to reject,
(especially one to whom we are married or wedded.)
See the Quotation from Montesquieu.

Edmond was elder brother to kynge Edward the firste, and for
his deformite *repudiat* and put by from the croune royall.

Hall. *Henry IV. The first Yere*.

By whiche treatie he had the lady deliuered into hys possession,
and after her deliuerance, he refusyng and *repudiatyng* the mari-
age of y^e lady Margaret, daughter to the forsayd kyng of Romanes.

Id. *Henry VII. The third Yere*.

REPTILE.

REPU-
DIATE.

REPU
DIATE.
—
REPUGN.

For this Antiochus *repudiated* his own wyfe called Laodice, mother to Seleuco Callinico and to Antioche Hierax and married Bernicen. Which maryage and *repudiacion* or diuorce from his firste wyfe was the occasion of greate mischief and murther.

Joye. *Exposicion of Daniel*, ch. xi. p. 185.

With this my sword I will maintain, that they are most wicked traitors to their countrey, who out of a simulation of a fond religion, or shew of preposterous caution, shall give contrary advise, neither shall resolve that servitude is to be *repudiated* with greater care by us, then domination is effected by them.

Prynne. *Treachery and Disloyalty*, part iv. p. 62.

His separation from Terentia, whom he *repudiated* not long afterward, was perhaps an affliction to him at this time.

Bolingbroke. *Works*, vol. i. p. 153. *Reflections upon Exile*.

The crime indeed which justifies divorce is too frequent; but the husband is not at liberty, as in ancient times, to *repudiate* the wife of his youth for any lighter cause than an offence on her part against the fundamental principle of the nuptial contract.

Horsley. *Sermon* 40. vol. iii. p. 212.

There is this difference between a divorce and a *repudiation*, that a divorce is made by a mutual consent, occasioned by a mutual antipathy; while a *repudiation* is made by the will, and for the advantage of one of the two parties, independently of the will and advantage of the other.

Montesquieu. *Spirit of Laws*, vol. i. book xv. ch. xv. p. 325.

REPU'GN, v. } Fr. *repugner*; It. *repugnare*;
REPU'GNABLE, } Sp. *repugnar*; Lat. *repugnare*,
REPU'GNANT, } (re, and *pugnare*, to fight.)
REPU'GNANCE, } To fight against, to repel or
REPU'GNANCY, } drive back, to resist, to withstand,
REPU'GNANTLY, } to place or set against, to oppose;
REPU'GNER. } to be contrary to, to contradict, to
be contradictory to, uncomplying with.

For if this counseil either werk is of men it schal be undon, but if it is of God ghe moun not undo hem lest perauenture ghe be foundun to *repugne* God.

Wiclif. *The Dedis of Apostis*, ch. v.

It seemeth (quod I) to *repugnere* and to contrarie greatlie, that God knoweth beforne all thinges, and that there is any fredome or libertie, for if so bee that God looketh all thinges beforne, ne God ne maie not been deceived in no maner.

Chaucer. *Boecius*, book v. *De Consolatione*.

All lawes or custome, or els constitution by vsage, or wryting, contrarien law of kinde, vtterly ben *repugnaunt* and aduersary to our Goddes wil of heuen. *Id.* *The Testament of Loue*, book iii.

And so with these things well considered, it is open at the fulle, that without all maner *repugnaunce*, God beforne wote al maner things been doen by frewill. *Id.* *Ib.*

Of this ensample let al cristen kings hauig sicke victoryes seke out the counsels of the godly lerned trwe prechers of the worde and aftir their doctrine and counsells order their comon policyes and chirches so that their constitucions and actis *repugne* not the gospell of Cryste. Joye. *Exposicion of Daniel*, ch. v. p. 80.

Wherefore it semeth, that it, wherein the one deliteth, is *repugnāt* to the other's nature: and where is any *repugnaunce*, may be none amitie, sens frendeshyp is an entier consent of wylles and desires.

Sir Thomas Elyot. *The Governour*, book ii. p. 134.

For the great power and omnipotencie of God excludeth that *repugnaunce*, whiche mannes reason would deame of Christes departing from this worlde, and placyng his humanitie in the glorie of his father.

Stephan, Bishop of Wynchester. *Explicaciō on the Sacraments*, book i. p. 4.

Item, such goods as were left to be distributed in godlie vses, after the arbitrement of executors, by the wils of the dead, or were not in their wils deputed to anie certeine places or persons named, nor yet were bestowed by the said executors to the foresaid vses, they should collect to the vse and subsidie aforesaid and giue certificat to the see apostolike of the quantitie thereof, excommunicating all *repugnere* and rebellers against the same.

Fox. *Martyrs*, p. 264. *The Pope false of Promise*.

She answ'ed him, well fits this high desire

Thy noble heart, yet cannot I consent

For heau'n's decree, firme, stable and intire,

Thy wish *repugnes*, and 'gainst thy will is bent.

Fairefax. *Godfrey of Boulogne*, book xv. st. 39.

When stubbornly he did *repugne* the truth,
About a certaine question in the law,
Argu'd betwixt the Duke of Yorke and him:
With other vile and ignominious tearmes.

Shakspeare. *Henry VI.* fol. 110.

And the demonstration proving it so exquisitely, with wonderfull reason and facility, as it is not *repugnable*.

Sir Thomas North. *Plutarch*. *Marcellus*, p. 262.

I PLAYER. — His anticke sword

Rebellious to his arme, lyes where it falls,

Repugnant to command.

Shakspeare. *Hamlet*, p. 263.

Those ill counsellors have most unhappily engaged him in such pernicious proiects and frequent *repugnances* of workes and words, as have given both parliament and people a more then colourable if not iust occasion to distrust his maiesties gracious words and promises for the present.

Prynne. *Treachery and Disloyalty*, part ii. p. 40.

To dispute and reason of every severall kind, were an endles peece of worke, and so intricat, as I wot not how a man should rid himselfe out of it, if he were once entred; so *repugnant* and contrarie are the physicians one to another in that argument.

Holland. *Plinie*, vol. ii. book xxiii.

They speak not *repugnantly* thereto.

Sir Thomas Brown. *Vulgar Errours*.

If things in themselves evil, *repugnant* to the principles of humane nature, and those of civil societies, as well as to the precepts of Christianity, are made lawfull only for the carrying on their design, we need not go farther to examine them; for by these fruits we may know them.

Stillington. *Sermon* 2. vol. ii. p. 103.

Plutarch complains heavily of the *repugnances* of the Stoics: and in his tract so intitled, accuses Chrysippus, now, for laughing at the doctrine of a future state of rewards and punishments, as a Mismo, fit only to frighten women and children; and now again, for affirming seriously that, let men laugh as they pleased, the thing was a sober truth.

Warburton. *The Divine Legation*, book iii. sec. 2.

For it is *repugnancy* of objects to what we have ordinarily seen or known that renders them inconceivable, and therefore familiarity may make them easy to our apprehension.

Search. *Light of Nature*, vol. i. part i. ch. xiv. p. 373.

REPULLULATE, "Fr. *repulluler*, to reburgeon or bud out again." Cotgrave. See PULLULATE.

Though tares *repullulate*, there is wheat still left in the field.

Howell. *Voc. For.*

REPU'LSE, v. } Fr. *repousser*; It. *repulsare*.
REPU'LSE, n. } From Lat. *repuls-um*, past partici-
REPU'LSION, } ple of *repellere*. See ante, to REPEL.
REPU'LSIVE. } To drive or beat back; to push
or thrust back; to reject, to refuse.

The Grekes chieftains all irked with the war,
Wherin they wasted had so many yeres,
And oft *repulst* by fatal destinie,
A huge herse made, hye raised like a hill,
By the diuine science of Minerua.

Surrey. *Virgil. Aeneis*, book ii.

He *repulsed* the Polonian king Stepan Batore, with his whole armie of 100,000 men.

Hakluyt. *Voyages, &c.* vol. i. p. 485. *The Russian Conqueror*.

If we truste vpon commendation or vaine glorie at mes handes, we lose our rewarde, and shal appeare one daye before the presence of the almighti most hie God, with emptie vessels lyke the folish virgins, and shal suffer a most greuous *repulse* of the spouse at his coming.

Stephan, Bishop of Wynchester. *Of True Obedience*, fol. 12.

Yet twice they were *repulsed* backe againe,

And twice renforst backe to their ships to fly;

The whiles with blood they all the shore did staine,

And the gray ocean into purple dy.

Spenser. *Faerie Queene*, book ii. can. 10

Then, taught both impudence and wit,

I singled out my foe, us'd all the arts

That love could think upon, and in the end

Found a most absolute *repulse*.

Shirley. *The Merchant's Wife*, act i. sc. 5.

REPUGN
—
RE-
PULSE.

RE-PULSE. Then there is a *repulsion* of the fume, by some higher hill or fabrick that shall overtop the chimney.

Reliquiæ Wottonianæ, p. 38.

REPUTE.

For the *repulsive* hand of Diomed doth not spend
His raging darts there.

Chapman. Homer. Iliad, book xvi. p. 219.

'Tis true, the fervour of his generous heart
Brooks no *repulse*, nor could'st thou soon depart.

Pope. Homer. Odyssey, book xv.

The foe thrice tugg'd, and shook the rooted wood;
Repulsive of his might the weapon stood.

Id. Ib. Iliad, book xxi.

Evil which proceeds not from the will is called a mischief, and may be simply *repelled*; and this *repulsion* is called restraint.

Warburton. Works, vol. vii. book iii. ch. iii. p. 254. *Alliance between Church and State*.

Sir Isaac Newton, who best understood them, declares that they (gravitation and cohesion) are not inherent properties of matter but effects of some external force, which he supposes to be the *repulsion* of ether, acting by different rules in the production of either.

Search. Light of Nature, vol. ii. part ii. ch. xxii.

REPURCHASE, to *purchase* or acquire, gain or win again.

KING. Once more we sit in England's royall throne,
Re-purchase'd with the blood of enemies:
What valiant foe-men, like to autumn's corne,
Haue we mow'd downe in tops of all their pride?

Shakspeare. Henry VI. fol. 172.

REPURIFY, *re*, and *purify*, to *purify*, (Lat. *purus*, Gr. *πῦρ*, fire,) or cleanse, or clear, (*q. d.* by fire,) again.

And which is worse, my soul is now denied
Her transport to the sweet Elysian rest,
The joyful bliss for ghosts *repurified*,
The ever-springing gardens of the bless'd.

Daniel. The Complaint of Rosamond.

Come; when the day takes any winke from night,
Let's to the riuer, and *repurifie*
Thy wedding garments.

Chapman. Homer. Odyssey, book vi. p. 87.

REPUTE, *v.* } Fr. *reputer*; It. *reputare*; Sp. *reputar*; Lat. *reputare*, (*re*, and *put-are*, of unsettled origin, see **IMPUTE**.) to think again, to reconsider; *sc.* as worthy of thought or consideration.
REPUTE, *n.* }
REPUTABLE, }
REPUTABLY, }
REPUTATION, }
REPUTATIVELY, }
REPUTELESS. } To hold or keep in consideration; to esteem or estimate, to account, to regard, to respect.

For which he held his glory and his renown
At no value or *reputation*.

Chaucer. The Pardoner's Tale, v. 12489.

Yet in our myndes we conside what they be made, and do *repute* and esteeme them, and haue them in reuerence accordyng to the same thynges, that they be taken for.

Stephan, Bishop of Winchester. Expositiō on the Sacrament, p. 45.

Many of our kings comming to the crowne without just hereditary title, by the kingdome's, peere's, and people's free election, onely confirmed by subsequent acts of parliament, which was then *reputed* a sufficient right and title.

Prynne. Treachery and Disloyalty, part i. p. 56.

It is not a little worth the memorie, to the commendation of the gentlemen and souldiers herein, who leauing all *reputation* apart, with so great willingnesse and with couragious stomackes, haue themselves almost ouercome in so short a time the difficultie of this so great a labour.

Hakluyt. Voyages, &c. vol. iii. p. 72. *M. Frobisher*.

A miserable estate of ours, a time most worthy bewayleyng, into the which most vnfortunately our deare and holy mother, the church, the spouse of Christ, is fallen, whiche doth nowe so little esteeme the moste precious bloud of her most loueyng spouse, Jesus

Christ: yea, and lyke an inchaunted woman, nothyng regardeth nor *reputeth* of any moment, that most excellent pryce, wherewith she was so exceeding louynglye and dearely redeemed.

Fisher. Penitential Psalms, p. 35.

For now the rebel, thus forborn, grows strong,
Both in his *reputation* and success.

Daniel. History of Civil Wars, book iv.

But this prozer Dionysius, and the rest of these grave and *reputatively* learned, dare undertake for their gravities the headstrong censure of all things.

Chapman. Homer. Odyssey. Epistle Dedicatorie.

Had I so lauish of my presence beene,
So common hackney'd in the eyes of men,
So stale and cheape to vulgar company;
Opinion, that did helpe me to the crowne,
Had still kept loyall to possession,
And left me in *reputelesse* banishment,
A fellow of no marke, nor likelyhood.

Shakspeare. Henry IV. fol. 62.

Thou thought'st it base to build on poore remaines
Of noble bloud, which ranne in others' veines;
As many doe, who beare no flowres, nor fruite,
But shew dead stocks, which haue beene of *repute*.

Beaumont. To Lady Marqu. of Winchester, p. 39.

If you ask Tertullian how Father and Son can be *reputed* one God, he tells you in the chapter before, and in that very passage which the Doctor quotes, that it is by finity of substance, and original.

Waterland. Works, vol. i. p. 58. *A Defence of some Queries. Query 5.*

O father, first for prudence in *repute*,
Tell, with that eloquence so much thy own,
What thou hast heard.

Dryden. Ovid. Metamorphoses, book xi.

They cannot part from them, [their sins,] but they must part from that which is extremely either pleasant, or profitable, or *reputable*, or some way or other conducing to their ease and convenience.

Sharp. Works, vol. iv. p. 315. *Sermon 18.*

To many such worthy magistrates as these, who have thus *reputably* filled the chief seats of power in this great city, I am now addressing my discourse.

Atterbury. Sermon 3. vol. ii. p. 98.

Reputation is the greatest engine, by which those who are possessed of power must make that power serviceable to the ends and uses of government.

Id. Ib. p. 99.

REQUEST, *v.* } Fr. *requeste*, *requerir*; Sp. *re-*
REQUEST, *n.* } *questar*; Lat. *requisitum*, past par-
REQUESTER. } ticipale of *re-quirere*, (*re*, and *querere*,
to ask or seek for,) to seek again for, *sc.* carefully, as a thing needed or valued.

To ask or seek for, to beseech, to entreat, to petition, to sue for, to solicit. See **REQUIRE**.

To be in *request*; to be sought after or desired.

Out of the ground a fury infernal sterte,
From Pluto sent, at *requeste* of Saturne,
For which his hors for fere gan to turne,
And lepte aside, and foundred as he lepe.

Chaucer. The Knightes Tale, v. 2687.

This lorde hath graunted his *requeste*.

Gower. Conf. Am. book ii. p. 56.

Faith is the trust in Christes bloud, and is the gift of God, Ephes. ii. whereunto a man is drawn of the goodnesse of God, and driuen thorow true knowledge of the lawe, and of beholding his deedes in the lust and desire of the members vnto the *request* of the lawe, and with seing his owne dampnation in the glasse of the lawe.

Tyndall. Workes, p. 225. *An Exposition upon Matthew vi.*

And vntill setting of saile aboard the ship, *requesting* him to accepte the same in good part as a testimonie and witnes of their good hearts, zeale and tendernesse towards him and his countrey.

Hakluyt. Voyages, &c. vol. i. p. 288. *Ambassy from Russia*.

And, if he chaunce come when I am abroad,
Sperre the yate fast, for fear of fraude;
Ne for all his worst, nor for his best,
Open the dore at his *request*.

Spenser. The Shepherd's Calendar. May.

REPUTE.

RE-QUEST.

RE-QUEST. The earnestness of the *requester* teacheth the petitioned to be suspicious; and suspicion teaches him how to hold, and fortify.
Junius. Sin Stigmatized, p. 748.

RE-QUIRE.

My ship equipp'd within the neighbouring port
 The prince, departing from the Pylian court,
Requested for his speed.

Pope. Homer. Odyssey, book iv.

REQUICKEN, *re*, and *quicken*, to *quicken* again; to revive, to re-animate.

When by and by the dinne of warre gan pierce
 His readie sence: then straight his doubled spirit
Requickned what in flesh was fatigate,
 And to the battaile came he.

Shakspeare. Coriolanus, fol. 11.

RE'QUIEM, } Lat. *requies*, rest; Lat. of Lower
 REQUI'ETORY. } Ages *requietorium*, a place of rest.
Requiem, a Mass for the dead, the beginning of which is *Requiem æternam*. Du Cange.

Yet in the conclusion (they say) he deliuered kinge Edwine's soule, after he was dead, from hel (I pray God he killed hym not afore) and vanquished all the deuels there by vertue of a *requiem* masse, so bringing him into theyr purgatory.

Bale. Volaries, p. 71.

The doleful Muses thinking now to write
 Sad elegies, their tears confound their sight:
 But him t' Elysium's lasting joys they bring,
 Where winged angels his sad *requiems* sing.

Cowley. The Elegy on Mr. R. Clarke.

The bodies are not only despoiled of all outward funerall ornaments, but digged up out of their *requietories*,

Weever. Fun. Mon. p. 419.

REQUIENIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx nearly equally five-cleft, persisting; keel of the corolla obtuse; petals free; sheath of the stamens cleft on the upper side; style filiform, slightly curved; pod oval, compressed, one-seeded.

Two species, natives of Africa.

REQUI'RE, *v*.

REQUI'RABLE,

REQUI'RER,

REQUI'REMENT,

RE'QUISITE,

RE'QUISITELY,

RE'QUISITENESS,

REQUISITION,

REQUI'SITIVE,

REQUI'SITORY.

Fr. *requerir*, *requis*; It. *richiedere*, *richiesto*, *requisito*; Sp. *requerir*; Lat. *requirere*, (*re*, and *quærere*, to seek or ask for,) to seek again for. See REQUEST.

To seek again for, to ask for, to demand, (*sc.* as necessary or needful, pertaining or belonging to.)

Not only this Grisildis thurgh hire wit
 Coude all the fete of wifly homlinesse,
 But eke whan that the cas *required* it,
 The comune profit coude she redresse.

Chaucer. The Clerkes Tale, v. 8241.

For if his friend through any gate,
 Woll complaine of his pouerte,
 He should not bide so long, till he
 Of his helping him *require*.

Id. The Romant of the Rose.

But whiche is thilke your dereworth power, that is so clere, and so *requirable*?

Id. Boecius, book ii. De Consolatione.

Sayeng, howe it was better for them that they shulde go and *requyre* batayle of their enemyes, rather than they shulde come on them: for they said, they had sene and herde dyuers ensamples of *requyrers* and nat *requyrers*, and euer of fyue four hath obtayned.

Lord Berners. Froissart. Cronycle, vol. ii. ch. xxxii. p. 98.

Wherefore he wylyd the duke to alowe that dede, and if any pardõ were *requysyte* for y^e dede, or any other to be had, that he shulde lyberallye graunte it.

Fabyan. Chronicle, p. 510.

Estsoones forth looked from the highest spire
 The watch, and lowd unto the knights did call,
 To weete what they so rudely did *require*:
 Who gently answered, they entraunce did desire.

Spenser. Faerie Queene, book ii. can. 9.

It contains the certain periods of times, and all circumstances *requirable* in a history to inform.

Hale.

For this justice is but the distributing to every thing according to the *requirements* of its nature.

Glanvil. The Pre-existence of Souls, p. 125.

And yet such wrongs are held meet to be done,

And often for the State thought *requisite*;

As when the public good depends thereon,

When great injustice is esteem'd great right.

Daniel. History of Civil Wars, book v.

Besides the knaue is handsome, young: and hath all those *requisites* in him, that folly and greene mindes looke after.

Shakspeare. Othello, fol. 318.

Provided the same *requisition* be seasonably made, not upon rash and precipitate advice.

Reliquiæ Wottonianæ, p. 533.

That if the Gentiles, whom no law inspir'd,

By nature did what was by law *required*;

They, who the written rule had never known,

Were to themselves both rule and law alone.

Dryden. Religio Laici.

Now and then somewhat of extraordinary, that is any thing of your production, is *requisite* to refresh your character.

Id. Juvenal. Dedication.

Res non parva labore, sed relictâ, was thought by a poet to be one of the *requisites* to a happy life.

Id. Georgics. Dedication.

They who talk of liberty in Britain on any other principles than those of the British constitution, talk impertinently at best, and much charity is *requisite* to believe no worse of them.

Bolingbroke. Works, vol. iii. p. 202. A Dissertation upon Parties.

The art of colouring and the skilful management of light and shadow are essential *requisites* in his confined labours.

Reynolds. Works, vol. i. p. 107. Discourse 4.

Hence then new modes of speaking: if we interrogate, it is the interrogative mode; if we require, it is the *requisitive*.

Hermes, book i. p. 143.

REQUI'TE, *v*.

REQUI'TAL,

REQUI'TEMENT,

REQUI'TER,

REQUI'TING, *n*.

See QUIT, and ACQUIT, (*re*, and *quit*.)

To return, (*sc.* a *quittance*,) to return, *sc.* good or ill, a service or injury, like for like; to repay, to reward, to recompense.

So be it, Troy: and saued by me from scathe,
 Kepe faith with me, and stand to thy behest,
 If I speake truth, and opening thinges of weight
 For graunt of life *requite* thee large amendes.

Surrey. Virgil. Æneis, book ii.

Wherefore he thancked the king withall his harte for his honorable present, promising to *requite* his bounteous liberalitee, by some good tourne that lay in his owne pryuate power to doo.

Arthur Goldyng. Justine, book xxxi. fol. 128.

The erle Douglas sore beyng greued with the losse of his nacion and frendes, entending a *requitement* yf it were possible of the same, by the consente of the gouernour of Scotlande, did gather a hounge armye.

Hall. Henry IV. fol. 18. The first Yere.

Thankfulnesse is a *requiting* of loue for loue, and will for will, shewing to our freendes the like goodnesse that we finde in them.

Wilson. The Arte of Rhetorique, p. 34.

He would not once have moved for the knight;

They him saluted, standing far afore;

Who, well them greeting, humbly did *requight*,

And asked, to what end they clomb that tedious hight.

Spenser. Faerie Queene, book i. can. 11.

Sayd then Sir Scudamour, Sir salvage knight,

Let me this crave, sith first I was defyde,

That first I may that wrong to him *requite*:

And, if I hap to fayle, you shall recure my right

Id. Ib. book iv. can. 6.

RE-QUIRE.

RE-QUIRE.

RE-
QUITE.
—
RE-
SALUTE.

A small *requital* for so great ado,
Is this poor present breath, a smoke soon gone;
Or these dumb stones, erected for our sake:
Which formeless heaps few stormy changes make.
Daniel. History of Civil Wars, book v.

They find they had condemned themselves, when they so readily
passed so severe a sentence upon those husbandmen, who had so
ill *requited* the lord of the vineyard for all the care he had taken
about it, that, instead of sending him the fruits of it, they abuse
his messengers, and at last murder his son.

Stillingfleet. Sermon 8. vol. i. p. 310.

Every receiver is debtor to his benefactor; he owes him all the
good he receives from him; and is always obliged to a thankful
acknowledgement, and whenever he hath opportunity to an equi-
valent *requital*. *Scott. Christian Life, part iii. ch. iv. p. 592.*

RE-REFINE, to *refine* (q. v.) again; to finish or
polish again.

For by my theorems,
Which your polite and terser gallants practise
I *re-refine* the court, and civilize
Their barbarous natures.

Massinger. The Emperor of the East, act i. sc. 2.

RE-REIGN, to *reign*, (q. v.) rule, or govern again.

Those changes notwithstanding, they
A people shall remaine
Vnchased thence, and of that streene
Shall flue at length *re-raigne*.

Warner. Albion's England, book vi. ch. xxxii.

REREMOUSE, A. S. *hrere-mus*, the flitter or flutter
mouse; A. S. *hrer-an, agitare*, to shake.

The *reremouse* or bat, alone of all creatures that flie, bringeth
forth young alive: and none but she of that kind hath wings made
of pannicles or thin skins. *Holland. Plinie, book x. ch. lxi.*

Surely the heart of a *reremouse*, otherwise called a bat, hath an
operation which is adverse not only to them, but to all ants besides.
Id. Ib. book xxix. ch. iv.

RE-RESOLVE, to *resolve* (q. v.) again; to deter-
mine or decide again.

At thirty man suspects himself a fool;
Knows it at forty, and reforms his plan;
At fifty chides his infamous delay,
Pushes his prudent purpose to *resolve*;
In all the magnanimity of thought
Resolves; and *re-resolves*; then dies the same.

Young. The Complaint. Night 1.

RESAIL, to *sail* (q. v.) again, back again; A. S.
seglian.

The Dane intraged *sayled* thence,
And rigged out a fleete,
And did with Brenn, *resayling* home,
At great advantage meete.

Warner. Albion's England, book iii.

And Vortiger his sonne-in-lawe
(Re-kinged) did *resaille*

With Saxon forces: though with fraud
Not force he did preuaile. *Id. Ib. book iv.*

Discharge this duty, and *resail* to Greece,
Safe and triumphant with the golden fleece.

Fawkes. Apollonius Rhodius. Argonautics, book iv.

RESALE, a *sale* again, another *sale*. To *resell* is
not an uncommon word.

Monopolies, and coemption of wares for *resale*, where they are not
restrained, are great meanes to enrich; especially if the party have
intelligence what things are like to come in request, and so store
himself before hand. *Bacon. Essaies. On Riches.*

RESALUTE, Fr. *resaluer*; It. *risalutare*; Sp. *re-
saludar*; Lat. *resalutare, re, salutare*, to wish health
(*salus*) to; to *salute*, q. v. again, or in return.

To wish health to again; to greet again, or return a
greeting or welcome.

And thereafter he saw his unclouded eyes weakly strive to
shine again; thus first *re-saluting* the light, Oh where am I?

Sidney. Pembroke's Arcadia, vol. ii. book iii. p. 599.

VOL. XXVII.

RE-
SALUTE.
—
RESCUE.

Then up she rose fraught with melancholy,
And forth into the lower parts did pas,
Whereas the priests she found full busily
About their holy things for morrow mas;
Whom she *saluting* faire, faire *resaluted* was.

Spenser. Faerie Queene, book v. can. 7.

Ere once the sweet-fac'd boy (now all forlorne)
Came with his pipe to *resalute* the morne.

Browne. Britannia's Pastorals, book i. song 3.

RE'SCAT, v. } Sp. *rescatar, rescata*, to ransom, to
RE'SCAT, n. } rescue, q. v.

We had great trouble in our iourney, for that euery day wee were
taken prisoners, by reason of the great dissension in that kingdome:
and euery morning at our departure we must pay *rescat* foure or
fue pagies a man.

Hakluyt. Voyages, &c. vol. ii. p. 222. M. Cæsar Frederick.

Give me leave to congratulate your happy return from the Levant,
and the great honor you have acquir'd by your gallant comport-
ment in Algier, in *re-escating* so many English slaves.

Howell. Letter 30. book i. sec. 5.

RESCI'ND, n. } Fr. *rescinder*; Lat. *rescindere*, to
RESCI'SSION, } cut off (re, and *scindere*, Gr.
RESCI'SSORY. } *σχίζω*, to cut off.)

To cut or lop off; and, consequently, to destroy; *sc.*
the validity, the force or obligation; to annul, to repeal.

Contrarily, the great gifts of the king are judged void, his unne-
cessary expences are *rescinded*, his superfluous cut off.

Prynne. Treachery and Disloyalty, p. 168. Appendix.

If any man infer upon the words of the prophet following, which
declare this rejection, and, to use the words of the text, *rescission*
of their estate to have been for their idolatry, that by this reason
the governments of all idolatrous nations should be also dissolved,
which is manifestly untrue, in my judgment it followeth not.

Bacon. Works, vol. ii. p. 291. Of an Holy War.

St. Lewis and the rest were constrained to yield to the *rescissory*
petitions of their subjects who complained that the restraint of open
combats occasioned multitudes of hidden murders.

Selden. Duello, ch. iv.

Whence it seems to follow that the same authority that appointed
that, might, if they please, *rescind* or alter it.

Sharp. Works, vol. iv. p. 206. Sermon 12.

So Primrose proposed, but half in jest as he assured me, that the
better and shorter way would be to pass a general act *rescissory*, (as it
was called,) annulling all the parliaments that had been held since
the year 1633, during the whole time of the war, as faulty and de-
fective in their constitution.

Burnet. Own Time, book ii. King Charles II.

We read of no subsequent decree of the apostolical college *rescinding*
the restriction which, by the act of their first assembly, they thought
proper to impose. *Horsley. Sermon 21. vol. ii. p. 217.*

RESCRI'BE, } Fr. *rescrire, rescript*; It. *rescri-
RE'SCRIPT. } vere*; Sp. *rescribir*; Lat. *rescribere*,
to write back, (re, and *scrib-ere*.)

To write back, to write in answer or return.

And the kinge with publyk *rescript* and open recatacion confess-
inge his synne setteth forth the glory of God.

Joye. Exposition of Daniel, ch. vi. p. 94.

Whenever a prince on his being consulted *rescribes* or writes
back *toleramus*, he dispenses with that act otherwise unlawful.

Ayliffe. Parergon.

This is the ground of that notable *rescript* of the emperor
Theodosius to the Roman senate; which proves the Roman empe-
rours to have no right nor power to declare or make lawes, but by
the senate's concurring assent and approbation.

Prynne. Treachery and Disloyalty, part i. p. 4.

When any doubt arose upon the construction of the Roman laws,
the usage was to state the case to the emperor in writing, and
take his opinion upon it. The answers of the emperor were called
his *rescripts*. *Blackstone. Commentaries, sec. 2. Introduction.*

RE'SCUE, v. } Fr. *rescourre, recourir*; It. *res-
RE'SCUE, n. } cuotere*. The Low Lat. *rescussa*,
RE'SCUER, } *rescussio, rescussus, recuperatio*; Fr.
RE'SCUELESS. } *rescousse, quod qui rem recuperat,*
post eum recurat, qui hanc aufert. Du Cange.

RESCUE. To catch, capture, or take again, to retake, to reseize, to deliver from captivity, from danger; to redeliver, to restore to liberty or safety.

RE-SEARCH.

Friend forsooth I thanke thee,
That thou hast liked me to *rescow*.
Chaucer. Of the Cuckow and the Nightingale.

And in the *rescous* of this Palamon
The stronge king Licurge is borne adoun.
Id. The Knightes Tale, v. 2576.

Firste for thy fader Achilles
Whilome full many a daie er this,
Whan I shulde haue fare amis,
Rescouse dyd in my garde,
And kept all myn estate in bele.
Gower. Conf. Am, book iii.

And great richesse with hir nam,
Whan she for loue of Hector cam
To Troie, in *rescous* of the towne.
Id. Ib. book v.

Thē were the sayde foure galeys soone beclepyd w^t y^e Englysshe nauye, and so cruelly assaylyd y^t they were borded or they myght be *rescowyd*.
Fabyan. Chronicle. Edward III. p. 450.

So that in onely kneling and kissing (as saith y^e *reskewer* and kouerer of the Romish foxe) there cā be no idolatry.
Joye. Expositio of Daniel, ch. iii. p. 35.

For a shifte the *rescuers* (which within the cite were readie for all sudden aduentures) were sent to the wals.
Fox. Martyrs, p. 688. Vienna besieged of the Turkes.

Put to your hands, therefore, to *rescue* now
Th' endanger'd State (dear lords) from this disgrace,
And let us in our honour labour how
To bring this scorned land in better case.
Daniel. History of Civil Wars, book vi.

Full litle wanted, but he had him slaine,
And of the battell balefull end had made,
Had not his gentle squire beheld his paine,
And comen to his *reskew* ere his bitter bane,
Spenser. Faerie Queene, book ii. can. 11.

Outstripping so the man-feade horse,
He topled ore his side
The monstrous king, that *rescuesse*
To flying people cride.
Warner. Albion's England, book ii.

What encouragement doth God hereby give to others to repent, when Nineveh was *rescued* from the very brink of destruction by it?
Stillingsfleet. Sermon 4. vol. ii. p. 204.

His fruitless words are lost unheard in air,
Ulysses seeks the ships, and shelters there.
But bold Tydides to the *rescue* goes,
A single warrior 'midst a host of foes.

Pope. Homer. Iliad, book viii.

I have been careful that Theodora should not be made to do any thing that, the great obligations she had to her *rescuer* considered, do intrinch either upon her piety or her virtue, or so much as upon her reservedness.

Boyle. Works, vol. v. p. 257. The Martyrdom of Theodora.

In their way thither they may be *rescued* by the owner, in case the distress was taken without cause, or contrary to law: as if no rent be due; if they were taken upon the highway, or the like; in these cases the tenant may lawfully make *rescue*.

Blackstone. Commentaries, book iii. ch. i.

RESEA'RCH, v. } *Re, and search, q. v.; to search or*
RESEA'RCH, n. } seek again, and again, carefully,
diligently, studiously; to inspect carefully, to examine,
to investigate.

I have been the more desirous to *research*, with some diligence, the several passages of the said journey, and the particular accidents of any moment in their way.

Reliquiæ Wottonianæ, p. 212.

There must go before a main *research*, whether the child that I am to manage be of a good nature or no.

Id. Ib. p. 85.

Nature, the handmaid of God Almighty, doth nothing but with good advice, if we make *researches* into the true reason of things.

Howell. Letters, p. 307

Let me take warning, lesson'd to distill,
And, imitating Heav'n, draw good from ill.
Nor let these great *researches* in my breast
A monument of useless labour rest.

Churchill. Gotham, book iii.

RESEAT, to *seat* again, (A. S. *settān* or *sittān*,) to place in the *seat*.

When he's produc'd, as soon he will among you:
Speak, what will you adventure to *reseat* him
Upon his father's throne?

Dryden. The Spanish Friar, act v.

RESECT, *re*, and *sect*, (Lat. *sec-are*, to cut,) to cut again, to cut off.

I ought reject
No soul from wicked immortalitie,
But give them durance when they are *resect*
From organized corporeitie.

More. Song of the Soul, part ix. book i. ch. ii. st. 46.

RESEDA, in *Botany*, a genus of the class *Dodecandria*, order *Trigynia*, natural order *Resedeaceæ*. Generic character: calyx, one-leaved, four to six parted; petals laciniate; capsule one-celled; seeds reniform.

Fourteen species, natives of Europe and Africa. The most remarkable are, the fragrant Mignonette, *R. odorata*, a native of Egypt and Barbary, and *R. luteola*, a native of England: it is cultivated for its yellow dye.

RESEI'ZE, v. } Fr. *re-saisir*, to seize again; to
RESEI'ZURE. } hold or take hold of again; to re-possess.

In wretched prison long he did remaine,
Till they out-raigned had their utmost date,
And then therein *reseized* was againe.

Spenser. Faerie Queene, book ii. can. 10.

Nauar hath meanes to haue Nauar,
And when shall Gcd so please,
The rightfull heire of Portugale
His empyre shall *re-seaze*.

Warner. Albion's England, book ix. ch. xlviii. p. 612.

I moved to have a *reseizure* of the lands of George More, a relapsed recusant, a fugitive, and a practising traytor.

Bacon. Works, vol. iii. p. 460. Letter to Cecil.

Then the king first found he was circumvented with false reports of the baron's disloyalty, who so willingly restored his castles to him when those stormes were blowne over; though he made but ill use of it, and took occasion thence openly to recede from his oath; whereupon they *reseized* those castles for their safety.

Prynne. Treachery and Disloyalty, part ii. p. 19.

RESE'MBLE, v. } Fr. *resembler*; It. *rassomi-*
RESE'MBLABLE, } *gliare*; Lat. *simulare*, from *si-*
RESE'MBLANT, } *milis*, like; to represent a simi-
RESE'MBLANCE, } larity or likeness.
RESE'MBLER, } To present or possess a likeness,
RESE'MBLINGLY. } like appearances or qualities; to liken, to be like.

Many *resemblances* to her he made; (Spenser;) *i. e.* he did many things representing the *semblance* or likeness of one who loved.

These arrowes that I speake of here,
Were all five on one mannere,
And all were they *resemblable*.

Chaucer. The Romant of the Rose.

But well I wote the speare with euery naile
Thirled my soule by inward *resemblance*,
Which neuer shall out of my remembraunce.

Id. The Lamentation of Mary Magdalene.

Men tellen that the maladie,
Whiche cleped is hydropsie,
Resembled is vnto this vice.

Gower. Conf. Am. book v.

For man of soule reasonable,
Is to an angell *resemblable*.

Id. Ib. p. 15. Prologue.

RE-SEARCH

RE-SEMBLE.

RE-
SEMBLE.
—
RESENT.

For as the philosopher tolde
Of golde and siluer thei ben holde
Two principall extremittees,
To whiche all other by degrees
Of the metalles ben accordant,
And so through kinde *resemblant*.

Gower. Conf. Am. book iv. p. 114.

Of foules there is one,
Whiche hath a face of bloode and bone,
Like to a man in *resemblance*. *Id. Ib. book iii.*

And th' other, al yclad in garments light
Discolour'd like to womanish disguise,
He did *resemble* to his lady bright;
And ever his faint hart much earned at the sight.

Spenser. Faerie Queene, book iii. can. 10.

Then beautie, which was made to represent
The great Creatour's owne *resemblance* bright,
Unto abuse of lawlesse lust was lent,
And made the baite of bestiall delight.

Id. Ib. book iv. can. 8.

His caytive thought durst not so high aspire:
But with soft sighes and lovely *semblaunces*
He ween'd that his affection entire
She should aread; many *resemblaunces*
To her he made, and many kinde remembraunces.

Id. Ib. book iii. can. 7.

And surely it was no delight and pleasure that he sought herein
to content the tooth, but only that he would have the name to eat
the *resemblers* of man's voice.

Holland. Phinix, book x. ch. li.

Good actions still must be maintain'd with good,
As bodies nourish'd with *resembling* food.

Dryden. Astræa Redux.

To do good is to become most like to God. It is that which of
all other qualities gives us the *resemblance* of his nature and per-
fection.

Sharp. Works, vol. i. p. 66. Sermon 3.

Tartar is a body by itself, that has few *resemblers* in the world.

Boyle. Works, vol. i. p. 516. The Sceptical Chymist.

Our creed proclaims him the Creator of heaven and earth; the
angel that holds the book, in the Revelations, describes him *resem-
blingly*.

Id. Ib. vol. ii. dis. 6. sec. 4. p. 402. Occasional Reflections.

RESEMINATE, *re*, and *seminate*, (Lat. *seminare*),
to produce again by seed.

Concerning its [Phoenix] generation, that without all conjunc-
tion it begets and *resemimates* it self, hereby we introduce a vegi-
table production in animals, and unto sensible natures transfer the
propriety of plants.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xii. p. 168.

RESEND, to send back again.

I sent to her
By this same coxcombe that we haue i' th' winde
Tokens and letters, which she did *resend*,
And this is all I haue done.

Shakspeare. All's Well That Ends Well, fol. 244.

RESENT, v. } Fr. *ressentir*; It. *risentirsi*; Sp.
RESENT, } *resentir*; Lat. *re*, and *sentire*, to
RESENTFUL, } feel or think again; and again to
RESENTINGLY, } reflect the mind upon.

RESENTIVE, } To feel sensibly, to have a strong
RESENTIMENT, } sense or feeling of: as now usually
RESENTMENT. } applied, to feel an angry remem-
brance or recollection. See the Quotation from Cogan.

There are many here shrink in their shoulders, and are very
sensible of his departure, and the lady infant *resents* it more than
any; she hath caus'd a mass to be sung every day ever since for
his good voyage: the Spaniards themselves confess there was never
princess so bravely woo'd.

Howell. Letter 25. book i. sec. 3.

In the sensitive part of their natures, the earl [of Essex] was the
worst philosopher, being a great *resenter*, and a weak dissembler
of the least disgrace.

Reliquiæ Wottonianæ, p. 175.

Nor can I secure myself from seeming deficient to him that
more *resentingly* considers the usefulness of that treatise, [enthu-
siasm,] in that I have not added another of superstition.

More. Philosophical Writings. The Preface General.

For though this king might have *resentiment*

And will t' avenge him of this injury,

Yet at that time his state being turbulent, &c.

Daniel. History of Civil Wars, book iv.

Which promptitude is acquired by either the often representa-
tions of the same phantasme to her; or else by a more vivid im-
press of it from its novelty, excellency, mischievousness, or some
such like condition that at once will pierce the soul with an ex-
traordinary *resentment*.

More. The Immortality of the Soul, part iii. p. 107.

The good prince king James was afraid where no fear was, and
bore dishonourably what he might have *resented* safely; nay, what
he ought to have *resented* in any circumstances, and at any hazard.

*Bolingbroke. Works, vol. ii. p. 342. Remarks on the History of
England.*

Honour is that vertue which renders a man upright in all his
dealings, and correspondent to all his obligations; a loyal subject
to his prince, and a true lover of his country, a candid judge of
persons and things, an earnest favourer of whatever is good and
commendable, a faithfull *resenter* and requiter of courtesies.

Barrow. Sermon 4. vol. i. p. 45.

Not but his soul, *resentful* as humane,
Dooms to full vengeance all the offending train.

Pope. Homer. Odyssey, book xvii.

When instant from the keen *resentive* north,
By long oppression by religion rous'd,
The guardian army came.

Thomson. Liberty, part iv.

So it [prayer] includeth that praise which we should yield to
God, implying our due esteem of his most excellent perfections,
most glorious works, most just and wise dispensations of providence
and grace; that thanksgiving whereby we should express an affec-
tionate *resentment* of our obligation to him for the numberless
great benefits we receive from him.

Barrow. Sermon, vol. i. p. 70.

I need take no more pains to purge Empedocles from those two
imputations of corporealism and atheism, since he hath so fully
confuted them himself, in those fragments of his still extant. First,
by expressing such a hearty *resentment* of the excellency of piety,
and the wretchedness and sottishness of atheism in these verses.

Cudworth. Intellectual System, book i. ch. i. p. 25.

Throughout this excellent song the sacred virgin expresseth a
deep sense of her own unworthiness, and upon that account a pro-
found *resentment* of the singular favour of the Almighty bestowed
on her.

Bull. Works, vol. i. p. 86. Sermon 4.

Resentment is a lesser degree of wrath excited by smaller offences
committed against less irritable minds. It is a deep reflective dis-
pleasure against the conduct of the offender.

Cogan. On the Passions, vol. i. p. 117. Anger.

RESERATING, Lat. *reserare*, to open.

There appears no reason, or at least there has been none given,
that I know of, why the *reserating* operation (if I may so speak)
of sublimate should be confined to antimony.

Boyle. Works, vol. iii. p. 79. Of Qualities and Forms.

RESE'ERVE, v. } Fr. *reserver*; It. *reservare*; Sp.
RESE'ERVE, n. } *reservar*; Lat. *reservare*, (*re*, and
RESE'RVANCE, } *servare*), to keep back.

RESERVA'TION, } To keep or hold back, (*sc.* from
RESE'RVATORY, } present and for future use,) to lay
RESE'RVEDLY, } up in store; to keep under re-
RESE'RVEDNESS, } straint; to keep or take out or
RESE'ERVER, } except.

RE'SERVOIR. } *Reserve*, (*met.*) opposed to bold-
ness, openness, or frankness, modesty, caution; a dis-
position not confiding or communicative.

These ben wellis withouten watir, and mystis dryuun with
whyrlynge wyndis, to whiche the thicke myst of derknessis is
reserued.

Wiclif. Petir, ch. ii.

And he *reseruyde* undir derknesse aungelis that kepten not her
prynshood.

Id. Judas, ch. i.

RE
SERVE.
—
RESER-
VOIR.

Howbeit, with very few words he lightly touched it, accidentally by the way passing it over; as meaning of likelihood to keep and *reserve* that to any other place.

Robinson. *More. Utopia. Letter to Buslide.*

We [Edw. R.] are pleased, that the *reservance* of our rights and titles, mentioned in our former articles sent to our said commissioners, be in general words.

Burnet. *Records*, book i. No. 50.

Insomuch that when the duke of Bedford came with the king's letters patent to have the pope's procurations and *reservations* admitted; yet the court of parlement would not agree to the same.

Fox. *Actes*, &c. p. 4.

Why had not we, say they, dy'd with the strong
In foreign fields, in honourable wise,
In just exploits, and noble without wrong,
And by the valiant hand of enemies?
And not thus now *reserved* in our age,
To home-confusion and disordered rage.

Daniel. *History of Civil Wars*, book i.

And though they be outstripp'd by every pen
Reserve them for my love, not for their rhyme,
Exceeded by the height of happier men.

Shakspeare. *Sonnet* 31.

The French is more generous in his proceedings, and not so full of scruples, *reservations*, and jealous as the Spaniard, but deals more frankly, and with a greater confidence and gallantry.

Howell. *Letter* 21. book i. sec. 4.

Her looks not let abroad, (but carefully
Kept in, restrain'd) held their *reservedness*:
Observing none but her own dignity,
And his, to whom she did herself address.

Daniel. *History of Civil Wars*, book viii.

The world is nimble in the anticipating of voices, and for my particular, according to my improvidence in all things else, I am in this likewise no *reserver* of my good will till the last.

Reliquiæ Wottonianæ, p. 370.

I think I could give a tolerable account of the doctor's great *reserve* and caution, in not telling the world, plainly, that he had changed his mind.

Waterland. *Works*, vol. ii. p. 283. *Arian Subscription.*

You two draw up, with all the speed you may,
Our last *reserves*, and yet redeem the day.

Dryden. *The Conquest of Granada*, act iii.

And yet, ev'n then, she cries, the marriage-vow
A mental *reservation* must allow;
And there's a silent bargain still imply'd,
The parties should be pleas'd on either side.

Id. *Juvenal. Satire* 6.

PROSP. Since you will venture,
I charge you bear yourself *reserv'dly* to him,
Let him not dare to touch your naked hand,
But keep at distance from him.

Id. *The Tempest*, act iii.

Where is that ancient seriousness, and *reservedness*, and modesty, that heretofore has been thought not only essential to the spirit of a Christian, but natural to the temper of an Englishman.

Sharp. *Works*, vol. ii. p. 10. *Sermon* 1.

In this same decree, which so remarkably *reserves* the abstinence from blood, the Sabbath is not at all *reserved* as a thing either of necessity or expedience.

Horsley. *Sermon* 22. vol. ii. p. 211.

Then to her children thus, the silence broke,
Without *reserve* she, deeply sighing, spoke.

Cooke. *Hesiod. The Theogony.*

When a landed estate, therefore, is sold with a *reservation* of a perpetual rent, if it is intended that this rent should always be of the same value, it is of importance to the family in whose favour it is reserved, that it should not consist in a particular sum of money.

Smith. *Wealth of Nations*, vol. ix. book i. ch. v. p. 44.

RESERVOIR, Fr. *reservoir*. See ante, RESERVE.

A place where any thing is *reserved*, or kept in store.

Drains from its thirsty bounds the springs of wealth,
His own insatiate *reservoir* to fill.

Thomson. *Liberty*, part v. v. 450.

RESER-
VOIR.
—
RESIDE.

Has not God
Still wrought by means since first He made the world?
And did He not of old employ His means
To drown it? What is His creation less
Than a capacious *reservoir* of means,
Form'd for His use, and ready at His will?

Cowper. *The Task*, book ii. p. 674.

The vast *reservoir*, in seasons of drought (for to the vicissitudes of immoderate rains and drought the climate was liable) supplied the city and the adjacent country with water.

Horsley. *Sermon* 29. vol. ii. p. 372.

RESE'TTLE, } *Re*, and *settle*, (q. v.) diminutive
RESE'TTLEMENT. } of *set*.

To *set*, to put or place, (*sc.* at rest,) again; to compose, to confirm again; to fix or establish again; to sink to rest, (as particles in motion, floating,) to the bottom, to subside, again.

The Winchester book: being a more particular inquisition than had been before of every hide of land within the precincts of his conquest, and how they were holden: whenceforth we may account a full *re-settlement* of lordship and propriety through the realm.

Reliquiæ Wottonianæ, p. 103.

Nor would the return of popery be a proper means, were there any thing wanting of this kind to restore or to *resettle* men in their just rights, but rather to *unsettle* every thing, and to throw us back again into the wildest confusions.

Waterland. *Works*, vol. viii. p. 461. *A Thanksgiving Sermon.*

We may venture, however, to apply this conducting of the queen to the palace of her lord, to some remarkable assistance which the Israelites will receive from the Christian nations of the Gentile race, in their *resettlement* in the holy land.

Horsley. *Sermon* 8. vol. i. p. 170.

RE'SIANT, } Fr. *resseant* or *reseant*; i. e. *resident*,
RE'SIANCE. } q. v.

As for in Myddlesex, I remember none or in the cytye selfe, eyther of *resiauntes* therin, or of resorters thereto, Englyshe men or straungers.

Sir T. More. *Workes*, p. 900. *The Apology.*

That the said prelates and other persons, having the said dignities and promotions spiritual, continually should be abiding and *reseants* upon their said promotions within this realm.

Burnet. *Records*, vol. i. p. 189. *Henry VIII.*

That the emperor's authorized people shall not hereafter repute any Englishman *resiant* in that countrey, to be any factor, seruant, or dealer in the said companies affaires, but such as the agent shall inregister by name, within the offices where custome is entered in all such places of the land where the sayd companie haue residences to traffike.

Hakluyt. *Voyages*, &c. vol. i. p. 473. *M. Jerome Horsey.*

With such an one [a turret] was Thamis beautifide;
That was to weet the famous Troynovant,
In which her kingdome's throne is chiefly *resiant*.

Spenser. *Faerie Queene*, book iv. can. 11.

For God, whosoever he be (if haply there be any other but the very world) and in what part soever *resiant*, all sense he is, all sight, all hearing; hee is all life, all soule, all of himselfe.

Holland. *Plinie*, book ii. ch. vii.

LEN. Now, friends, 'tis left with us, I have already
Dealt, by Umbrenus, with the Allobrogs,
Here *resiant* in Rome.

Ben Jonson. *Ca'tiline*, act iv.

RESI'DE, v.
RE'SIDENT, adj.
RE'SIDENT, n.
RE'SIDENCE,
RE'SIDENCY,
RE'SIDENTSHIP,
RESIDE'NTIARY,
RESIDE'NTIARISHIP,
RESI'DER,
RE'SIDUE,
RESI'DUARY.

Fr. *resider*; It. *risedere*;
Sp. *residir*; Lat. *residere*, *residere*, to sit or set down; to settle.

To *set* down, to settle, to stay, to abide, to continue, to dwell; to settle, sink, or fall to the bottom.

Residue, Lat. *residuum*, quod *residet*, that which remains, stops, or stays; that

which is left; the rest or remainder.

RESIDE.

With þe *resydue* and remenaunt. by þe rode of Lukes
Ich wolle worshupe þer with treuthe all my lyf.
Piers Plouhman. Vision, p. 133.

In the subarbes of a toun, quod he,
Lurking in hernes and in lanes blinde,
Wheras thise robbours and thise theves by kinde
Holden hir privee fereful *residence*.

Chaucer. The Chanones Yemannes Prologue, v. 16193.

His grace [Henry VIII.] therefore willing and minding to revoke
you all by little and little, except you Sir Gregory, being his ambas-
sador there continually *residing*, willeth, that, &c.

Burnet. Records, vol. i. p. 99.

And also the louers met at times, for whē he resorted thidre, at
no place would he be hosted and lodged, but wher as she held
residence.

Bale. English Votaries, part ii. p. 119.

I reckon alwayes that marriage vnperfyght, which hath not
chastyte and clenness *resident*.

Id. Apologie, fol. 64.

The duke, for all that the mater of their cōmyng was pleasaūt
to him, yet he discouered nat to hastily his entente, but sayd, Sirs,
it wyll be very harde to make peace in that place, where as great
hated and warre is *resydent*.

Lord Berners. Froissart. Cronycle, vol. ii. p. 367.

The duke of Yorke passed it ouer lyghtly ynough, for he was euer
lyghtly *resydente* about the kynge and with the duke of Lancastre.

Id. Ib. p. 644.

Last of al came the queere of Pauls, with their *residensaries*, the
bishop of London and the abbots following after in their pontifi-
calibus.

Foxe. Actes, &c. p. 996. King Henry VIII. Abbeyes suppressed.

They [the Neruians] were sauage people and of great valeantness:
often rebuking and finding much fault with the *residew* of the
Belgies, for yeelding theymselues to the people of Rome, and
casting away theyr auncient prowesse.

Arthur Goldyng. Caesar. Commentaries, fol. 53.

I mean she should be courteous, facile, sweet,
Hating that solemne vice of greatnesse, pride;
I meant each softest vertue there should meet,
Fit in that softer bosome to *reside*.

Ben Jonson. Epigram 75. p. 505.

One from the Forrest now approach'd their sight,
Who them did swiftly on the spurr pursue;
One there still *resident*, as day and night,
And known as th' eldest oke which in it grew.

Davenant. Gondibert, book i. can. 2.

Separation: it is wrought by weight, as in the ordinary *residence*
or settlement of liquors.

Bacon. Natural History, sec. 302.

This translavation ought so long to be continued out of one
vessell into another, untill such time as it have done casting any
residence downward; for the sediment that resteth in the bottome
is the best.

Holland. Plinie, book xxxiv. ch. xviii.

Who now remains as blessed in her seat,
As you are with her *residency* bless'd.

Daniel. To the Lady Lucy.

They having in this sort made some small resistance, in the end
turned their backs and fled, and left a great number slain in the
field, the *residue* after the last overthrow forsook their captains, and
fled stragling here and there.

Sir Thomas North. Plutarch. Lives, p. 525.

Far from your Capital my ship *resides*
At Reithrus, and secure at anchor rides;
Where waving groves on airy Neion grow,
Supremely tall, and shade the deeps below.
Thence to revisit your imperial dome,
An old hereditary guest I come.

Pope. Homer. Odyssey, book i.

Suppose, though I disown it, said the Hind,
The certain mansion were not yet assign'd:
The doubtful *residence* no proof can bring
Against the plain existence of the thing.

Dryden. The Hind and the Panther.

Afterwards, in baptism, the same Spirit fixes, as it were, his
dwelling, or *residential* abode, renewing the heart in greater measure.

Waterland. Works, vol. vi. p. 349. Regeneration Stated.

About that time he [John Williams] had several benefices confer'd
upon him, of which the rectory of Waldgrave in Northamptonshire
was one, Dinam and Grafton two more, a *residentialship* in the
church of Lincoln, one or more prebendships therein, and the office
of chaunter.

Wood. Fasti Oxonienses, part i. p. 181.

The prince elector did afterwards kindly invite him [Theodore
Haak] to be his secretary, but he, loving solitude, declined that
employment, as he did the *residentship* at London for the city of
Hamburg.

Id. Athenæ Oxonienses, vol. i. p. 845.

We being persons of considerable estates in the kingdom, and
residers therein.

Swift. Advertisement against Wood.

The ideas of tutelary god and king implied a local *residence*.

Warburton. Works, vol. viii. book i. ch. i. p. 36. Julian.

Assuming, therefore, that every departed soul has its place of
residence it would be reasonable to suppose, if revelation were silent
on the subject, that a common mansion is provided for them all,
their nature being similar.

Horsley. Sermon 20. vol. ii. p. 152.

When all the debts and particular legacies are discharged, the
surplus or *residuum* must be paid to the *residuary* legatee, if any be
appointed by the will.

Blackstone. Commentaries, book ii. ch. xxxii.

RESI'GN, v. } Fr. *resigner*; It. *rassegnare*;
RESI'GN, n. } Sp. *resignar*; Lat. *resignare*, (re,
RESIGNA'TION, } and *signare*.) to undo the sign, or
RESI'GNMENT. } *signet*, or seal; to break the seal;
and, consequentially, to annul or cancel, (sc. the validity
of a sealed instrument,) to surrender or yield up, (sc.
any thing given or granted under sign or seal,) and
hence, generally,

To surrender or yield up; to renounce or abandon,
(to yield or submit.) See the Quotation from Cogan.

For mine estate royall here I *resigne*
Into her honde.

Chaucer. Troilus and Creseide, book i.

They dreden shame, and vices they *resigne*.

Id. Ib. book iii.

All though he had and myght suffyciently haue declared his re-
nouncement by the redyng of an other meane persone, yet he, for
the more suretie of the mater, and for the sayde *resygnacyon* should
haue his full force and strengthe, he therfore redde the scrowle of
resygnacyon hymselfe, in maner and fourme as foloweth.

Fabyan. Chronicle, p. 547. Richard II.

The cardinall, to bring y^e worlde into a foole's paradise, was com-
pelled euē with his owne good will to *resigne* his chauncellorshyp,
and that to whō he listed him selfe.

Tyndall. Workes, p. 374. The Practice of Papistical Prelates.

When all the company prayed him to take charge of the whole
army, and that Scipio himself and Varus both did first give him
place, and willingly *resigned* unto him the honour to command the
whole camp: he answered them, he would not offend the law.

Sir Thomas North. Plutarch. Lives, p. 656.

CHA. I grant it.

For the honor of our sex, nor have you, madam,
By any weakness, forfeited command;
He that succeeds, in justice, was before you,
And you have gain'd more, in a royal brother,
Than you could lose by your *resign* of Epire.

Beaumont and Fletcher. The Coronation, act iv. sc. 1.

Then to the Tow'r (where he remained) went
The duke, with all the peers in company,
To take his offer with his free consent,
And this his *resignation* testify.

Daniel. History of Civil Wars, book ii.

And after, to your issue that suruiues,
A good *resignment* of the goods ye leaue;
With all the honor that your selues receiue
Amongst your people.

Chapman. Homer. Odyssey, book vii.

But so much has your danger, and that spell,
The powerful name of friend, prevail'd above him
To whom I ever owe obedience,
That here I am, by his command to cure ye,
Nay more for ever, by his full *resignment*,
And willingly I ratifie it.

Beaumont and Fletcher. Monsieur Thomas, act iii. sc. 1.

RESIDE.

RESIGN.

RESIGN.

RESIST.

The field of combat fits the young and bold,
The solemn council best becomes the old:
To you the glorious conflict I *resign*,
Let sage advice, the palm of age, be mine.

Pope. *Homer. Iliad*, book iv.

Deaneries and prebends may become void, like a bishoprick, by death, by deprivation, or by *resignation* to either the king or the bishop.

Blackstone. *Commentaries*, book i. ch. ii.

Resignation superadds to patience a submissive disposition, respecting the intelligent cause of our uneasiness. It acknowledges both the power and the right of a superior to afflict.

Cogan. *On the Passions*.

RESI'LE, v. } Fr. *resilir*; Lat. *re-silire*, (*re*, and
RESI'LIENCE, } *salire*, to leap,) to leap back. See
RESI'LIENCY. } ASSAIL.

To leap or start back; to spring back; to retreat quickly.

And if you strike a ball side-long, not full upon the surface, the rebound will be as much the contrary way; whether there be any such *resilience* in echos (that is, whether a man shall hear better, if he stand aside the body repercussing, than if he stand where he speaketh, or any where in a right line between) may be tried.

Bacon. *Natural History*, Cent. iii. sec. 245.

Those who have not seen the strange effects of modes, will never imagine the reception I met with at Paris from men and women of all ranks and stations. The more I *resiled* from their excessive civilities, the more I was loaded with them.

Hume. *Life, by himself*.

And these rules, corrupted by fraud, or debased by credulity, have, by the common *resiliency* of the mind from one extreme to another, incited others to an open contempt of all subsidiary ordinances, all prudential caution, and the whole discipline of regulated piety.

Johnson. *The Rambler*, No. 110.

RE'SIN, } Fr. *resin*, *resineux*. See ROSIN.
RE'SINOUS. }

At the bottom of the retort we had good store of a ponderous and brittle substance, that did not look at all like a metal, but rather like something of a gummous or *resinous* nature being also fusible and inflammable almost like sealing-wax.

Boyle. *Works*, vol. v. p. 69. *Insalubrity, &c. of the Air*.

RESIPISCENCE, Fr. *resipiscence*; Lat. *resipiscencia* from *resipiscere*, (*resipere*, *re*, and *sapere*,) to grow or become sensitive again; to regain or recover the senses. Cotgrave calls it "a second thinking wiser than the first;" it is, consequentially, penitence or repentance.

So powerful is the impression of a divinity in humane nature, that the most erring beleifs are forc'd to discern the utility, and the most perverted lives the necessitie of such a sovereign: who abounds with such benigntie ev'n towards these irritations, that he provides motives respectively proper for the rectifying each of these errors; offering the ingenuous reason and the sensual fear towards their disabuse and *resipiscence*.

Montague. *Devoute Essayes*, Treat. 3. part ii. sec. 2.

RESI'ST, v. } Fr. *resister*; It. *resistere*; Sp.
RESI'STANT, n. } *resistir*; Lat. *resistere*, (*re*, and
RESI'STANCE, } *sistere*,) Gr. *ῥησθαι*, to stand
RESI'STER, } against. See CONSIST, DESIST,
RESI'STIBLE, } &c.
RESISTIBI'LITY, } To stand or stay against; to
RESI'STIVE, } withstand, to set, put, or place
RESI'STLESS. } against, to oppose; to strive or
struggle against, to contend against.

These metales ben of so gret violence,
Our walles may not make hem *resistence*.

Chaucer. *The Chanones Yemannes Tale*, v. 16376.

For whom fortune woll assayle,
There mai be no suche *resistence*.

Gower. *Conf. Am.* book vi.

What can he doo but yeld, that must *resist* aloone?

Surrey. *Ecclesiastes*, ch. iv.

After that worde was broughte vnto the emperours, that Maximus hadde with harde bataylles subdued Gallia and Germania, Gracianus with a great hoost came downe to *resyste* hym.

Fabyan. *Chronicle*, p. 50.

Neuerthesse there is none so perfect in this life that findeth not let and *resistance* by the reason of original sinne, or birth poyson that remaineth in him.

Tyndall. *Workes*, p. 165. *The Obedience of a Christian Man*.

After which towne so yeldyn syr Edmunde of Woodstoke, the kynges brother, than beyng at Burdeaux as ye kynges deputye, made such *resystens* agayn the sayde Charlys de Valoys, that a trewece was takyn for that yere.

Fabyan. *Chronicle*, p. 428.

Such as rebelled against them they tooke as rebels and *resisters* against God his ordinance and christian pietie.

Fox. *Actes*, &c. p. 158. *History of Gregory VII*.

But they then, though no more furious, yet more couragious when they saw no *resister*, went about with pickax.

Sidney. *Arcadia*, vol. i. book ii. p. 360.

Doth not he, that lyueth after such sorte, *resistingly* denie Christ, his mouth sayeth not agaynst him, but hys life doth.

Udall. 1 *Epistle St. John*, ch. ii.

So long he muzed, and so long he lay,

That at the last his wearie sprite opprest

With fleshly weaknesse, which no creature may

Long time *resist*, gave place to kindly rest.

Spenser. *Faerie Queene*, book iv. can. 6.

With noyse whereof the theefe awaking light

Unto the entrance ran; where the bold knight

Encountering him with small *resistence* slew.

Id. *Ib.* book vi. can. 12.

Yea, the Statute of 13 Ed. 1. cap. 38. recites; that such *resistance* of processe out of any of the king's courts (much more then out of the highest court of parliament) redounds much to the dishonour of the king and his crowne; and that such *resisters* shall be imprisoned and fined, because they are disturbers of the king's peace and of his realme.

Prynne. *Treachery and Disloyalty*, part iii. p. 12.

Either therefore our opposites must grant all bishops, priests, ministers, yea, all other magistrates whatsoever, as *irresistible*, uncensurable, undeprivable, uncondemnable, for any crimes whatsoever, as they say kings are, which they dare not do; or else make kings as *resistible*, censurable, deprivable, and lyable to all kindes of punishments, (by their whole kingdom's consent in parliament) as far forth as they, notwithstanding all the former objections, which quite subverts their cause.

Id. *Ib.* p. 121.

Whether the transgression of Eve seducing did not exceed that of Adam seduced, or whether the *resistibility* of his reason did not equivalence the facility of her seduction, we shall refer it unto the schoolman.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. i.

Against when

I'll have an excellent new fucus made,

Resistive 'gainst the sun, the rain, or wind,

Which you shall lay on with a breath, or oil,

As you best like.

Ben Jonson. *Sejanus*, act i. sc. 1.

When to the cave they came, they found it fast;

But Calidore, with huge *resistlesse* might,

The dores assayled, and the locks upbrast.

Spenser. *Faerie Queene*, book vi. can. 12.

All the bodies in the world, pressing a drop of water on all sides, will never be able to overcome the *resistance* it will make, as soft as it is, to their approaching one another, till it be removed out of their way: whereby our idea of solidity is distinguished both from pure space, which is capable neither of *resistance* nor motion, and the ordinary idea of hardness.

Locke. *On Human Understanding*, book ii. ch. iv. sec. 3.

According to the decrees of power in the agent and *resistant*, is an action performed or hindred.

Pearson. *On the Creed*, art. 6.

The name body, being the complex idea of extension and *resistibility* together in the same subject, these two ideas are not exactly one and the same.

Locke.

ABDELM. Fly, fly, before the allurements of her face,

E'er she return with some *resistless* grace,

And with new magick covers all the place.

Dryden. *The Conquest of Granada*, act iii.

RESIST.

RESIST.
—
RE-
SOLVE.

'Tis *resistlessly* plain that the divine writers do not always confine themselves to plain and common grammar, but often express their vigorous sentiments in the language of the figurative construction.
Blackwall. Sacred Classics, vol. i. p. 61.

Because *resistance* is justifiable to the person of the prince when the being of the state is endangered, and the public voice proclaims such *resistance* necessary, they have therefore allowed to every individual the right of determining this expedience, and of employing private force to *resist* even private oppression.
Blackstone. Commentaries, book i. ch. vii.

RESO'LVE, *v.*

RESO'LVE, *n.*

RESO'LVBABLE,

RESO'LUBLE,

RESO'LUBLENESS,

RESO'LVEDLY,

RESO'LVEDNESS,

RESO'LVENT,

RESO'LVER,

RE'SOLUTE, *adj.*

RE'SOLUTE, *n.*

RE'SOLUTELY,

RE'SOLUTENESS,

RESOLU'TION,

RESOLU'TIONER,

RESOLU'TIVE.

Fr. *resouldre*; It. *risolvere*; Sp. *resolver*; Lat. *resolvere*, (*re*, and *solvere*,) to disjoin, to free or deliver. See DISSOLVE, SOLVE, &c.

To disjoin, to separate, (*sc.* the solid, the continuous parts;) to scatter, to disperse; to bring back or reduce to simplicity, to the simple parts or elements; to reduce, to restore; to reduce to a fluid or liquid state; to melt, to loosen; to relax.

To disjoin, to loose, to free from (*met.*) doubt, difficulty, uncertainty, danger; to remove doubt or difficulty, indetermi-

nateness or indecision; to give or present clear, determinate, distinct views, perceptions, opinions; to clear, to determine, to decide, to ascertain, to fix.

Resolute, n. redelivery, repayment; and, as in *Shakspeare, resolute*, determined persons.

Ne no man ne wondreth, whan the weight of the snowe, harded by the cold, is *resolved* by the brennyng heate of Phebus the Soonne, for here seene menne readily the causes.

Chaucer. Boecius, book iv. De Consolatione.

Tigris and Eufates, *resoluen* and springen of o welle in the craggis of the roche of the countrey of Achemenes.

Id. Ib. book v.

I haue giuen *resolute* answer to the first, in the which I persist and shall perseuer for euermore.

Foxe. Actes, &c. Henry VIII. p. 776. Luther's Constancie.

And ye shall enquire of the yearly *resolutes*, deductions, and paiements going forth of the same.

Burnet. Records, vol. ii. book i. p. 214. No. 27.

And so at last (after longe and great deliberation had in the matter) because ther is no better counsaillour, then leasure and tyme, he wold *resoluelic* with his learned and consummate iudgemēt cōfirme it.

Stephan, Bishop of Winchester. True Obedience. Preface, fol. 4.

It liketh me, quod she, to haue heard your question, But lenger time doth aske a *resolution*.

Wyat. Complainte vpon Loue.

Of the whiche wordes the duke made light; and for *resolucion* of answer at that tyme the duke sayde, Cosyn, we knowe welle this that ye haue sayde is trewe.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 123. p. 350.

HAM. Oh, that this too too solid flesh would melt, Thaw, and *resolue* it selfe into a dew.

Shakspeare. Hamlet, fol. 154.

And how his limbs, *resolv'd* through idle leisour, Unto sweete sleepe he may securely lend, In some coole shadow from the scorching heat, The whiles his flock their chawed cuds do eate.

Spenser. Virgil. Gnat.

KIT. No, Thomas, I dare take thy word, But, if thou wilt swear, do as thou think'st good; I am *resolv'd* without it.

Ben Jonson. Every Man in his Humour, act iii. sc. 2.

CAM. Alas, these threats are idle, like the wind, And breed no terror in a guiltless mind.

COUNT F. Nay, thou shalt want no torture, so *resolve*.

Id. The Case is Altered, act iv. sc. 5.

RE-
SOLVE.

I doubt not but the opinionative *resolver* thinks all these easie knowables, and the theories here accounted mysteries are to him revelations.

Glanvil. The Vanity of Dogmatizing. Preface, p. xiii.

Little doe these peremptory *resolvers* know, either the insinuating power of euill, or the treachery of their own heart in receiving it, or the importunities of deceivers in obtruding it.

Hall. Works, vol. i. sec. 14. p. 648. Quo Vadis?

Agis meeting with Aratus by the city of Corinth, even as he was consulting whether he should fight his enemy or not, shewed himself in his counsell then no rash but a *resolute* and valiant man.

Sir Thomas North. Plutarch. Agis and Cleomenes, p. 666.

Now, sir, young Fortinbras, Of vnimproued mettle, hot and full,

Hath in the skirts of Norway, heere and there, Shark'd up a list of landlesse *resolutes*.

Shakspeare. Hamlet, fol. 153.

This most couragious queen, The puissant Danish powers victoriously pursu'd, And *resolutely* here through their thick squadrons hew'd Her way into the north.

Drayton. Poly-olbion, song 12.

BIAN. Sister, I should too much bewray my weakness, To give a *resolution* on a passion I never felt nor fear'd.

Ford. Love's Sacrifice, act i. sc. 1.

The ashes of the void shels only alone without the snails mixed with wax are of a *resolutive* and discutient facultie.

Holland. Plinie, book xxx. ch. viii.

The continuation of these two motions of the earth, the annual and diurnal, upon axes different or not parallel, is *resolvable* into nothing but a final and mental cause, or the *το ειλτιστον*, because it was best it should be so.

Cudworth. Intellectual System, book i. ch. v. p. 684.

Positive precepts, though we are used to consider them merely as prescribed, and to resolve them commonly into the mere will and pleasure of the legislator, yet are always founded upon reasons, known, perhaps, in part to us, but perfectly known to God; and so they are ultimately *resolvable* into infinite wisdom and goodness.

Waterland. Works, vol. v. p. 441. The Nature of the Christian Sacrament.

Wherefore I will now proceed to my third general consideration; which is, that it does not appear that three is precisely and universally the number of the distinct substances or elements, whereunto mixt bodies are *resolvable* by the fire.

Boyle. Works, vol. i. p. 511. The Sceptical Chymist.

Many of them may be wrought on, as we have tried, both by simple water and even by moist air, which argues the *resolubleness* of their constitution.

Id. Ib. vol. iii. p. 338. Temperature of the Subterranean Regions.

Let us make no more vain excuses: let us no longer pretend I know not what difficulties; but let us chearfully and *resolvedly* apply ourselves to the working out our salvation.

Sharp. Works, vol. ii. p. 107. Sermon 5.

But let not our undauntedness appear the effect of sullenness, or fierceness, or of meer *resolvedness*; but let it be so calm and charitable that we may not be suspected to be the martyrs, rather of our glory, or our courage, than of our religion.

Boyle. Works, vol. v. p. 303. The Martyrdom of Theodora.

As to the habit of the body, young people, such as live effeminately, require to be treated with milder *resolvents* than those who live a labouring life.

Wiseman. Surgery, book i. ch. xix.

Opium, (with which unskilful men seldom tamper without danger,) if duly corrected and prepared, proves sometimes a great *resolver*, and commonly a great sudorific.

Boyle. Works, vol. ii. p. 188. Usefulness of Natural Philosophy.

You all the way *resolutely* dispute with me the point of the Son's necessary existence, as much as the other point of the Father's supremacy; you are *resolute* in denying the Son to be one God with the Father.

Waterland. Works, vol. iii. p. 19. Second Vindication of Christ's Divinity.

There is (replies the Roman) so great a difference betwixt the case of a *resolved* soldier, that thinks himself in point of reputation engaged not to retreat, and that of a young lady from whom no *resoluteness*, much less obstinacy, can be expected.

Boyle. Works, vol. v. p. 300. The Martyrdom of Theodora.

RE-
SOLVE.
—
RESORT.

Then teach my soul, to doubt and error prone,
Teach me a *resolution* lik thy own.
Let partial favour, hopes, or interest guide,
By various motives, all the world beside,
To Pompey's, or ambitious Cæsar's side;
Thou, Cato, art my leader.

Rowe. *Lucan. Pharsalia*, book i.

The next scene I must open relates to the church, and the heats raised in it by the public *resolutions*, and the protestation made against them.

Burnet. *Own Time*, vol. i. p. 73.

The *resolutioners* sent up one Sharp, who had been long in England, and was an active and eager man.

Id. *Ib.* p. 77.

RE'SONANT, } Fr. *resonnant*; It. *risonante*;
RE'SONANCE. } Sp. *resonante*. See to RESOUND.

"Resounding, loud recording, sound—reporting, echo-making." Cotgrave.

His volant touch
Instinct through all proportions low and high
Fled and pursu'd transverse the *resonant* fugue.

Milton. *Paradise Lost*, book xi. v. 563.

An antient musician, that was present at what was said, informed me that there were some famous lutes, one or two of which he named to me, that attained not their full seasoning and best *resonance*, till they were about fourscore years old.

Boyle. *Works*, vol. i. p. 450. *Quiescent Solids*.

RESORB, } Lat. *resorbare*, to suck back
RESORBENT, *adj.* } again. See ABSORB.

To suck or sup up again; to swallow or imbibe again.

And when past
Their various trials in their various spheres,
If they continue rational, as made,
Resorbs them all into himself again.

Young. *The Complaint. Night 4*.

For less than this is shocking in a race
Most wretched, but from streams of mutual love;
And uncreated, but for love divine,
And, but for love divine, this moment lost,
By fate *resorb'd*, and sunk in endless night.

Id. *Ib.* Night 3.

Again *resorbent* ocean's wave
Receives the waters, which it gave
From thousand rills with copious currents fraught.

Wodhull.

RESORT, *v.* } Fr. *ressorter*; from *re*, and the
RESORT, *n.* } Lat. *sortiri*, to allot, to hold by
RESORTER, } *lot*; *sors*, lot, the allotment; *sc.*
RESORTING, *n.* } of land, by partition among the
victors; consequently, settlement, abode: and, *resort*,
to return to our *allotted* land, to return home; and, generally,

To return frequently; to recur, or have, or make recurrence or recourse frequently to, to frequent; to repair to, to revisit; to relapse; to result, to spring or issue.

Al I refuse but that I might *resorte*
Unto my loue the well of goodliheed.

Chaucer. *The Lamentation of Mary Magdalene*.

In trouth alway to do you my servise,
As to my lady right, and cheefe *resort*,
With all my witte and all my diligence.

Id. *Troilus and Creseide*, book iii.

But signification was soone made hereof by fyres, (as Cæsar had commaunded before,) and spedye *resort* was made thither frome the bulwarkes.

Arthur Goldyng. *Cæsar. Commentaries*, book ii. fol. 64.

Afterward by the confluence of the neighbours of the places there aboutes, which for couetousnesse of gain brought many things to sell to the straungers, and builded them houses to dwell among them; at lengthe there was such a *resort* of men thither, that it was euen as good as a city.

Id. *Justine*, book xviii. fol. 89.

Juvenal the poet, in his booke called Satyrs, sayth, y^e no wines, that list to content and please sad and honest men, wilbe found or seen at comon plaies, dansings, or other great *resort* of people.

Vives. *The Instruction of a Christian Woman*, p. 147.

As for in Myddlesex, I remember none, or in the cytye selfe, eyther of *resiauntes* therin, or of *resorters* thereto, Englyshe men or straungers.

More. *Works*, ch. xxxv. p. 900. *The Apology*.

Who when he hath with spoiles and cruelty
Ransackt the world, and in the wofull hartes
Of many wretches set his triumphes hye,
Thether *resortes*, and laying his sad dartes
Asyde, with faire Adonis playes his wanton partes.

Spenser. *Faerie Queene*, book iii. can. 7.

A little lowly hermitage it was,
Downe in a dale, hard by a forest's side,
Far from *resort* of people, that did pas
In travell to and froe.

Id. *Ib.* book i. can. 2.

At which their markets were dispos'd, counsels and martiall courts,
And where to th' altars of the gods they made divine *resorts*.

Chapman. *Homer. Iliad*, book xi. p. 157.

But certainly some there are that know the *resorts* and falls of businesse, that cannot sinke into the maine of it: like a house that hath convenient staires and entries but never a faire roome.

Bacon. *Essaie 22. Of Cunning*.

Lys. You may so; 'tis the better for you that your *resorters* stand upon sound legs.

Shakspeare. *Prince of Tyre*, act iv. sc. 6.

We'll in our faces our colours display,
And hallow our yearly *resorting*.

Brome. *Song. The Painter's Entertainment*.

When next the sun his rising light displays,
And gilds the world below with purple rays;
The Queen, Æneas, and the Tyrian Court
Shall to the shady woods, for sylvan game, *resort*.

Dryden. *Virgil. Æneid*, book iv. p. 382.

In fortune's empire blindly thus we go,
And wander after pathless destiny;
Whose dark *resorts* since prudence cannot know,
In vain it would provide for what shall be.

Id. *Annus Mirabilis*.

For the design that was laid for that and all other circumstances of the story, we must have *resort* to the account that is given of it, Numb. xvi.

Stillingfleet. *Sermon 7. vol. i. p. 268*.

Holland lies at a great distance from the seas to which herrings are known principally to *resort*.

Smith. *Wealth of Nations*, vol. ii. book iv. ch. v. p. 334.

RESOUND, *v.* } See ante, RESONANT. Fr. *re-*
RESOUND, *n.* } *sonner*; It. *risonare*; Sp. *re-*
RESOUNDING, *n.* } *sonar*; Lat. *resonare*, (*re*, and
sonare,) to sound or echo, back or again, to re-echo.

To return, to repeat a sound or echo; to report or reverberate a sound; to sound frequently or loudly.

He plained him of the heuen goddes, whiche that were cruell to hym, he wente him to the houses of the hell; and he tempered his blandishinge songes by *resounding* of stringes.

Chaucer. *Boccus*, book iii. *De Consolatione*.

The secrete groues which oft we made *resounde*,
Of pleasaunt playnt, and of our ladies' praise,
Recording oft what grace ech one had founde,
What hope of spede, what drede of long delayes.

Surrey. *Prisoner in Windsor*.

Who when those pittifull outcries he heard
Through all the seas so ruefully *resound*,
His charett swifie in hast he thether steard.

Spenser. *Faerie Queene*, book iii. can. 8.

Moreover, the sound made by reverberation of the aire, which men call *eccho*, is hurtfull unto them; for they feare mightily that *resounding* noise, comming with a double stroke.

Holland. *Plinie*, book xi. ch. xix.

His huge trunke *sounded*, and his armes did *eccho* the *resound*.

Chapman. *Homer. Iliad*, book v. p. 64.

The only noise which rolled through the sky
Were holy echoes that to her did bear
The sweet *resounds* of those rich anthems.

Beaumont. *Psyche*, p. 300.

The *resounding* of the sea upon the shore, and the murmur of winds in the woods without apparent wind, show wind to follow.

Bacon. *Natural History*, sec. 817.

RESORT.
—
RE-
SOUND.

RE-
SOUND.

RE-
SPECT.

Now near the shelves of Circe's shores they run,
(Circe the rich, the daughter of the Sun,)
A dangerous coast; the goddess wastes her days
In joyous songs, the rocks *resound* her lays.
Dryden. Virgil. Æneid, book vii. p. 407.

Through the throng of these astonished spectators the procession
passed by the public streets of Jerusalem to the Temple, where im-
mediately the sacred porticoes *resound* with the continued hosannas
of the multitudes.

Horsley. Sermon 32. vol. ii. p. 48.

RESOU'RCE, } Fr. *resource*, a new source or
RESOU'RCELESS. } spring; *resourdre*, (re, and *sourdre*,)
to spring or rise up again; to abound; and, thus, *resource*,
The spring, well, or fountain-head, of abundance in
need, of aid or succour in distress.

For whatsoever from our hand she [the earth] takes,
Greater or less, a vast return she makes,
Nor am I only pleas'd with that *resource*,
But with her ways, her method, and her force.

Denham. Of Old Age, part iii.

Yet those how feeble, and, indeed, how vain,
You see too well; nor need my words explain.
Vanquish'd without *resource*; laid flat by fate,
Factions within, a foe without the gate.

Dryden. Virgil. Æneid, book xi.

Fear wing'd my flight; and having once transgress'd,
To flee I judg'd my last *resource* and best.

Fawkes. Apollonius Rhodius. Argonautics, book iv.

A poor, unfruitful, and *resourceless* subjection. *Burke.*

RESOW, to sow again.

And (many times) they are forced to *resow* summer-corne, where
they sowed winter-corne. *Bacon. Natural History, sec. 169.*

RESPEAK, to *speak* again, in return or answer; to
answer.

No iocund health that Denmarke drinks to day,
But the great cannon to the clouds shall tell,
And the king's rouse, the heauens shall bruite againe,
Respeaking earthly thunder.

Shakspeare. Hamlet, fol. 154.

RESPE'CT, v } Fr. *respect*; It. *rispettare*, *ri-*
RESPE'CT, n. } *spetto*; Sp. *respetar*, *respeto*;
RESPE'CTABLE, } Lat. *respicere*, (re, and *specere*,)
RESPE'CTABLY, } to look back, to look again.
RESPECTABI'LITY, } To look back again, to regard,
RESPE'CTER, } to keep in view, to hold in view,
RESPE'CTFUL, } or in consideration; sc. as esti-
RESPE'CTFULLY, } mable or honourable; deserving
RESPE'CTION, } consideration or reflection, to feel,
RESPE'CTIVE, } have, offer, or pay regard or
RESPE'CTIVELY, } honour to, to esteem, to honour;
RESPE'CTIVIST, } to regard considerately.
RESPE'CTLESS, } *Respective*; having *respect*, re-
RESPE'CTLESSNESS, } gard, reference, or relation, es-
RESPE'CTUOUS. } pecially, individually; having es-
pecial or particular regard or reference; regardful, con-
siderate; reflective.

No *respect* hauing what was best to done,
Till right anone beholding here and there,
I spied a friend of mine.

Chaucer. The Court of Love.

To whose diligence imminent dangers and difficult attempt
seemed nothing, in *respect* of his willing mind, for the commoditie
of his prince and countrey.

Hakluyt. Voyages, &c. vol. iii. p. 33. M. Frobisher.

In dooing of all which thinges the king hath not beene thus
respectiue, as the pope now sheweth himselfe towards him, but
like a perfect friend hath beene alwaies contented franklie, liberally,
and openly to expone all his study, labour, trauaile, treasure, puis-
saunce.

*Fox. Actes, &c. Henry VIII. p. 980. The King's Message to the
Emperor in defence of his Mariage.*

VOL. XXVII.

RE-
SPECT.

But what haue these our *respectuists* to doe with the Apostle
Paule, seeing they are the whole vniuersall church, by whose
authoritie Paule either standeth or falleth, beeing but a member
onelie and a part of the church.
*Fox. Actes, &c. Henry VIII. p. 1173. The Answer of Martin
Luther to the Pope's Bull.*

For they feared least they should note him for an heretike, whom
they were not able perhaps to conuince either to be erroneous or
offensiue, and therefore they haue found out this aduerbe *respectiue*,
and after numbring of the articles, then come they and say that
some be *respectiue*ly hereticall, some erroneous, and some offensiue.
Id. Ib. p. 1170.

The sayd Christ, Goethou and do likewise, that is, without dif-
ference or *respectiō* of persons.

Tyndall. Workes, p. 78. Parable of Wicked Mammon.

But by that sight Kalander soon judged that his guest was of
no mean calling; and therefore the more *respectfully* entertained
him.

Sidney. Arcadia, vol. i. book i. p. 13.

Which meaner wights, of trust and credit bare,
Not so *respected*, could not look t' effect.

Daniel. History of Civil Wars, book iii.

All my delight on deedes of armes is sett,
To hunt out perilles and adventures hard,
By sea, by land, whereso they may be mett,
Onely for honour and for high regard,
Without *respect* of riches or reward.

Spenser. Faerie Queene, book iii. can. 2.

Yet the huge stroke, which he before intended,
Kept on his course, as he did it direct,
And with such monstrous poise adowne descended,
That seemed nought could him from death protect:
But he it well did ward with wise *respect*.

Id. Ib. book v. can. 12.

What should it be that he *respects* in her,
But I can make *respectiue* in my selfe?

Shakspeare. The Two Gentlemen of Verona, fol. 36.

— Dost thou sleepe? Æacides, am I
Forgotten of thee? Being alive, I found thy memorie
Ever *respectfull*: but now dead, thy dying love abates.
Interre me quickly, enter me in Plutoes iron gates.

Chapman. Homer. Iliad, book xiii. p. 310.

We relieve idle vagrants and counterfeit beggars, but have no
care at all of these really poor men, who are, methinks, to be *re-*
spectfully treated in regard of their quality.

Cowley. Of Avarice. Essay 7.

For standing now alone, he sees his might
Out of the compass of *respective* awe;
And now begins to violate all right,
While no restraining fear at hand he saw.

Daniel. History of Civil Wars, book i.

2 CUR. If it were the basest filth or mud that runs in the
chanuel, I am bound to pledge it *respectively*, sir.

Ben Jonson. Every Man out of his Humour, act iv. sc. 4.

BOB. Shall I? you hear fellow Stephano, learn to know me
more *respectively*; how dost thou think I shall become the stew-
ard's chair, ha?

Beaumont and Fletcher. Lover's Cure, act i. sc. 2.

ROM. He gon in triumph, and Mercutio slaine?
Away to heauen *respectiue* lenitie,
And fire and fury be my conduct now.

Shakspeare. Romeo and Juliet, fol. 65.

Tydides and my selfe (as halfe appall'd
With your remorsefull plaints) would, passing faine
Haue broke our silence; rather then againe
Endure, *respectlesse*, their so mouing cries.

Chapman. Homer. Odyssey, book iv. p. 54.

SIS. Why then I see there is no hope of him;
Some husbands are *respectless* of their wives,
During the time that they are issueless;
But none with infants blest can nourish hate,
But love the mother for the children's sake.

Wilkins. The Miseries of Inforced Marriage, act iii.

This said, he ceas'd: the king of men replies:
Thy years are awful, and thy words are wise.

RE-
SPECT.
—
RESPIRE

But that imperious, that unconquer'd soul,
No laws can limit, no *respect* control.
Pope. *Homer. Iliad*, book i.

Check'd, at last,
By love's *respectful* modesty, he deem'd
The theft profane, if aught profane to love
Can e'er be deem'd.

Thomson. *Summer*.

I charge you all no more foment
This feud, but keep the peace between
Your brethren and your countrymen,
And to those places straight repair,
Where your *respective* dwellings are.

Butler. *Hudibras*, part i. can. 2.

There are three schemes which I may call Catholic, Sabellian, and Arian, one of the three must, in the main, be true. The way to know which is to weigh and consider the difficulties attending each *respectively*, and to balance them one against another.

Waterland. *Works*, vol. i. part ii. p. 162. *A Defence of some Queries. Query 15.*

I thought it pardonable to say nothing by a *respectuous* silence than by idle words.

Boyle. *Works*, vol. vi. p. 44. *Letter to the Countess of Ranelagh.*

She saw the deities approach her dome,
And from her hand dismiss'd the golden comb;
Then rose *respectful*, all with beauty grac'd,
And on rich thrones the great immortals plac'd.

Fawkes. *Apollonius Rhodius. Argonautics*, book iii.

Goodness alone is not sufficient to create respect. For should it be seated in a mind which indicates extreme imbecility, it cannot be deemed *respectable*.

Cogan. *On the Passions*, vol. i. p. 158. *Veneration.*

We know not their number, their situation, nor the member to which they *respectively* belong.

Search. *Light of Nature*, vol. i. ch. iv. part i. p. 66.

RESPERSE, *v.* Lat. *respersus*, past participle of *respergere*, (*re* and *spargere*,) to sprinkle.

To sprinkle, to scatter, to strew.

Hence I hope that they may the rather be invited to love and consider the rare documents of Christianity, which certainly is the great treasure-house of those excellent moral and perfective discourses, which with much pains and greater pleasure we finde *respersed* and thinly scattered in all the Greek and Roman poets, historians, and philosophers.

Taylor. *The Great Exemplar. Preface*, sec. 42.

Take David's psalter, or the other hymns of holy scripture, or any of the prayers which are *respersed* over the Bible.

Id. *Discourse on Extempore Prayer*, sec. 31.

RESPIRE, } Fr. *respirer*; It. *respirare*; Sp.
RESPIRATION, } *respirar*; Lat. *respirare*, (*re*, and
RESPIRABLE, } *spirare*, to breathe, A. S. *spir-ian*.)
RESPIRATORY. } To breathe, to take breath again;
to cease from laborious exertion, (causing excessive breathing;) to pause, to rest.

Then shall the Britons, late dismay'd and weak,
From their long vassalage gin to *respire*,
And on their Paynim foes avenge their wranckled ire.

Spenser. *Faerie Queene*, book iii. can. 3.

Then when againe her *respirations* found
Free passe, (her minde and spirit met) these thoughts her words did sound.

Chapman. *Homer. Iliad*, book xxii. p. 308.

Yet still he heaves, and, struggling with despair,
Shakes all aside, and gains a gulp of air:
A short relief, which but prolongs his pain;
He faints by fits; and then *respires* again.

Dryden. *Ovid. Metamorphoses*, book xii.

The idea of *respiration*, like that of spontaneous motion, is one of those that compose our complex idea of every animal.

Bolingbroke. *Works*, vol. vi. p. 164. *Human Reason. Essay 2.*

Alone the wind from Libya's sands *respires*,
And burns each warrior's breast with secret fires.

Hoole. *Jerusalem Delivered*, book xiii.

The toiling steeds expand the nostril wide,
While ev'ry breath, by *respiration* strong
Forc'd downward, is consolidated soon
Upon their jutting chests.

Cowper. *The Task*, book iv.

RE'SPITE, *n.* } Fr. *respiter*, *respit*; It. *rispetto*.
RE'SPITE, *v.* } Nicot from *respirare*; Menage and
Skinner from *respectus*; *q. d. tempus respiciendi*, a
pause, a cessation, delay.

To pause, cease, delay; to prolong or to prorogue,
to stay, to withhold.

& said, þe Scottes wilde
þre dayes haf *respite*, & þan þe castelle zelde.

R. Brunne, p. 275.

But wold ye vouchen sauf upon seurtee
Two yere or three for to *respiten* me,
Than were I wel.

Chaucer. *The Frankeleines Tale*, v. 11951.

And by this cause he was *respited*

So that the death him was acquitted.

Gower. *Conf. Am.* book i.

And when it is so ferforth come,
That Saul hath hym discomfite,
The god bad make no *respite*,
That he ne shulde hym slea anone.

Id. *Ib.* book vii.

In doying herof he spent ten dayes, not *respityng* hys souldiers
fro their labour so muche as the nyght tyme.

Arthur Goldyng. *Cæsar. Commentaries*, book v. fol. 115.

By and by after, so that there was scarce so much *respit* as to
order and dispose the things they had determined, the ennemyes,
at a watch worde geuen, came running down on al sides.

Id. *Ib.* book iii. p. 67.

Those [lustes] same against the bulwarke of the sight
Did lay strong siege and battailous assault,
Ne once did yield it *respitt* day or night.

Spenser. *Faerie Queene*, book ii. can. 11.

They died every man of them a wicked death, saving this Theodoros, whom fortune *respited* a little while longer, and yet in that time he lived a poor and miserable life, never tarrying long in any one place.

Sir Thomas North. *Plutarch*, p. 829. *Brutus*.

If we may venture to declare more particularly in what sense God might be said to have hardened their hearts, it was, very probably, by forbearing to strike terror into them; by giving them *respit*, and not pursuing them constantly, and without remission.

Waterland. *Works*, vol. vi. p. 121. *Joshua*, x. 12. *Scripture Vindicated*.

The entry therefore on the roll or record is, "that the jury is *respited*, through defect of the jurors, till the first day of the next term, then to appear at Westminster."

Blackstone. *Commentaries*, book ii. ch. xxiii.

RESPLE'NDENT, } Fr. *resplendir*, *resplendis-*
RESPLE'NDENCE, } *sant*; It. *risplendere*; Sp. *re-*
RESPLE'NDENCY, } *splandecer*; Lat. *resplendere*,
RESPLE'NISHING. } (*re*, and *splendere*,) to shine,
to return or remit, a *splendour* or brightness.

Brightly shining, brilliant, refulgent.

O courfin figure *resplendent* with glory.

Chaucer. *The Craft of Lovers*.

The heuyn visible is most pleasauntly garnished with planettes and sterres, *resplendishynge* in the mooste pure firmament of asure colour.

Sir Thomas Elyot. *The Governour*, book iii. p. 162.

And thorowe y^e vertue of thy full myght,
Causest y^e world to be *resplendisshaunt*.

Fabyan. *Chronicle*, part ii. p. 33.

There all within full rich arayd he found,

With royall arras and *resplendent* gold,

And did with store of every thing abound,

That greatest princes' presence might behold.

Spenser. *Faerie Queene*, book i. can. 8.

RE-
SPLEN-
DENT. There hang downe certaine buttons (as it were) like berries round
in a circle, which, with the repercussion and reverberation of the
sun beames, doe shine againe like *resplendent* gold.
Holland. *Plinie*, book *xxi*. ch. *xxv*.

RE-
SPOND.

Son, thou in whom my glory I behold
In full *resplendence*, heir of all my might,
Neerly it now concernes us to be sure
Of our Omnipotence, and with what arms
We mean to hold what anciently we claim
Of Deitie or empire.

Milton. *Paradise Lost*, book *v*. l. 720.

Their beauty and *resplendency* might be conspicuous to the
beholders of them, whether by day or by night.

More. *The Philosophical Cabbala*, ch. *i*.

Automedon and Alcimus prepare
Th' immortal coursers and the radiant car,
(The silver traces sweeping at their side;)
Their fiery mouths *resplendent* bridles ty'd.

Pope. *Homer. Iliad*, book *xix*.

It being nothing but the *resplendency* of his own almighty good-
ness, or his own outstretched rays shining back upon himself.

Scott. *Christian Life*, part *i*. ch. *i*. p. 3.

RESPO'ND, *v*.
RESPO'ND, *n*.
RESPO'NDENT,
RESPO'NDENCE,
RESPO'NSAL, *adj*.
RESPO'NSAL, *n*.
RESPO'NSE,
RESPO'NSIBLE,
RESPONSIB'LITY,
RESPO'NSION,
RESPO'NSIVE,
RESPO'NSORY.

Fr. *respondre*; It. *rispon-*
dente; Sp. *responder*; Lat. *re-*
spondere, (*re*, and *spondere*.)
See SPONSOR, and CORRESPOND.

To answer for, to be answer-
able for; to make a fit or suit-
able return; to suit.

Responsible; answerable or
able to answer; liable, account-
able; or that may be bound or
obliged.

What was his *respons* written, I ne sauh no herd.
R. Brunne, p. 98.

Ye gave me ones a divine *responsaile*,
That I should be the flowre of love in Troy,
Now am I made an vnworthy outwaile,
And al in care translated is my joy.
Chaucer. *The Testament of Creseide*.

They so proceeded into the stalles, there sitting all the masse
time, the company standing in their copes, and singing a solemne
respond in honour of the visitors.

Fox. *Actes*, &c. fol. 1778. *Queene Mary*.

In the entring out of the gate of the citie, as men go vnto
Gothlehem, he did sing this hymne, *Felix namque*. And that
respond being ended, &c.

Id. *Ib*. fol. 585. *Henry V*.

Ego nego, domine doctor, said the *respōdent*. For though the
virgine haue not proued, yet she imagineth, &c.
Tyndall. *Workes*, p. 170. *The Obedience of a Christian Man*.

One was answered at Cambridge when he pressed the *responsall*,
what saye ye to myne argumente—which was not in dede of his
owne makynge.

Stephan, *Bishop of Wynchester. Explication of Transubstan-*
tiation, fol. 132.

Responsions unto the questions. To the first question I say.
Burnet. *Records*, book *iii*. No. 21.

Shew unto the same how ye have received letters from the king's
highness [Henry VIII.] and me, [Wolsey] *responsives* to such as
ye wrote of the dates before rehearsed.

Id. *Ib*. book *ii*. No. 23.

The *responsorie* which is called the *Graduall* (being woont to be
sung at the *steps* going vp) with alleluya, Honorius saith that
Ambrose made them, but pope Gregorie ordained them to be re-
ceiued.

Fox. *Actes*, &c. fol. 1275. *Queene Mary*.

We have known many of them taught to begin to sing, only
when a man would have them: and keepe there *responds* in course
after others, in good concert and harmonie.

Holland. *Plinie*, book *x*. ch. *xxix*

And though to you our good Circassian friend
In termes too bold and feruent oft doth preach,
Yet hold I that for good in warlike feat,
For his great deeds *respond* his speeches great.
Fairefax. *Godfrey of Boulogne*, book *x*.

The joyous birdes, shrouded in chearefull shade,
Their notes unto the voice attempted sweet;
Th' angelicall soft trembling voyces made
To th' instruments diuine *respondence* meet.
Spenser. *Faerie Queene*, book *ii*. can. 12.

Peter alone [before] spred to the winde
The glorious signe of our saluation great,
With easie pace the quire come all behinde,
And hymnes and psalmes in order true repeat,
With sweet *respondence* in harmonious kinde
Their humble song the yeelding aire doth beat.
Fairefax. *Godfrey of Boulogne*, book *xi*.

His rent in fair *respondence* must arise
To double trebles of his one yeare's price.
Hall. *Satire* *i*. book *v*.

By whose words it is cleare that the ancient kings of France
were inferiour in jurisdiction to their whole kingdomes and parlia-
ments, yea censurable by them to deposition or death: yet that
their kings of late are growne absolute monarchs above their king-
domes, nobles, parliaments, and so not *responsible* to nor punish-
able by them for the grossest misdemeanours.

Prynne. *Treachery and Disloyalty. Appendix*, p. 18.

These are the pretty *responsories*, these are the dear antiphonies,
that so bewitched of late our prelates and their chaplains with the
goodly echo they made.

Milton. *Works*, vol. *i*. p. 145. *Areopagitica*.

Let me remind you once again that you forgot the part you
was to bear. Your business was not to oppose, but to *respond*;
not to raise objections against our scheme, but to answer those
which were brought against your own.

Waterland. *Works*, vol. *i*. p. 5. *A Defence of some Queries.*
Query 2.

Instead of answering the difficulty proposed, which was the part
of a *respondent*, you choose to slip it over, and endeavour to put
me upon the defensive; which is by no means fair.

Id. *Ib*. p. 2. *Query 1*.

After some short praiers and *responsals*, the mass-priest begs at
the hands of God this great and blasphemous favor.

Brevint. *Saul and Samuel*, ch. *xiv*. p. 288.

Tertullian takes notice that the *responses* in baptism were then
somewhat larger than the model laid down by Christ, meaning,
than the form of baptism: and he refers the enlargement of the
responses to immemorial custom or tradition.

Waterland. *Works*, vol. *v*. ch. *vi*. p. 161. *Doctrine of the Holy*
Trinity.

He has been pleased to ask, "Is the doctor willing to be *re-*
sponsible, at last, for the nature, quality, and tendency of all his
notions?"

Id. *Ib*. p. 115.

Full swell the woods; their very music wakes,
Mix'd in wild concert with the warbling brooks.
Increas'd, the distant bleatings of the hills
And hollow lows *responsive* from the vales.

Thomson. *Spring*.

The church was conducted in every step, at first by oracular
responses, and afterwards by a long series and continued succession
of prophets.

Warburton. *Works*, vol. *viii*. book *i*. ch. *v*. p. 268. *The Doctrine*
of Grace.

The one is the judicious partition of the legislative authority
between the king and the two houses of parliament; the other, the
responsibility attaching upon the advisers and official servants of
the crown.

Horsley. *Sermon* 44. vol. *iii*. p. 315.

Still would her touch the strain prolong,
And from the rocks, the woods, the vale,
She call'd on Echo still through all the song;
And where her sweetest theme she chose,
A soft *responsive* voice was heard at every close,
And Hope enchanted smil'd, and wav'd her golden hair.

Collins. *Odes. The Passions*.

RE-
SPOND.

REST.

REST, *v.*REST, *n.*

RE'STIF,

RE'STIVE,

RE'STIFNESS,

RE'STIVENESS.

Fr. *rester*; It. *restare*; Sp. *restar*; Lat. *restare*, to stop or stay, to remain. As the Fr. "To remain, superabound, be behind, superfluous, overplus, more than enough." The *rest*; the remainder, the overplus; that which is not contained, or comprised, or included:—other of the same kind or class. See *REST, infra*.

But if thou art named a Jew, and *restist* in the lawe and hast glorie in God, and hast knowe his wille.

Wiclif. *Romayns*, ch. ii.

Neuerthesse God hath written his will, to haue his benefites kept in memorie, to his glorie and our benefite, and namely this benefite of all benefites, wherein only the pith of our salvation resteth.

Tyndall. *Workes*, p. 441. *Signes and Sacramentes*.

But me besprent with teres, my tender son,
And eke my swete Creusa, with the *rest*
Of the houshold, my father gan beseche.

Surrey. *Virgil. Æneis*, book ii.

And would to God we were not like kicking and *resty* horses, more ready to go backward then forward.

Calvin. *Sermon* 4. p. 74.

Now *resteth* nought that needful is to tell.

Fairefax. *Godfrey of Boulogne*, book iv.

Malbecco stopt in great astonishment,
And, with pale eyes fast fixed on the *rest*,
Their counsell crav'd in daunger imminent.

Spenser. *Faerie Queene*, book iii. can. 10.

CORIS. Let him kiss his drum!

I'll save my lips, I *rest* on it.

Massinger. *The Bondman*, act i. sc. 3.

GIO. Despair, or tortures of a thousand hells,

All's one to me; I have set up my *rest*.

Ford. 'Tis *Pity she's a Whore*, act v. sc. 3.

For their right hands they [the musqueteers] shall have *rests* of ashwood, or other tough wood, with iron pikes in the nether end, (to fix in the ground,) and half hoops of iron above, to *rest* the musquet on.

Soldier's *Accidence*, p. 4.

Under whom, they will be much more shy,
And (fearing my voice, wishing thine) grow *restie*, nor go on,
To beare us off?

Chapman. *Homer. Iliad*, book v. p. 68.

Overt and apparent vertues bring forth praise; but there be secret and hidden vertues that bring forth fortune. Certaine deliveries of a man's selfe, which have no name. The Spanish name *desembottura* partly expresseth them: when there be not stonds, nor *restiveness* in a man's nature, but that the wheelles of his minde keep way with the wheelles of his fortune.

Bacon. *Essaye* 40. *Fortune*.

By this the vessel half her course had run,
And as much *rested* till the rising sun.

Dryden. *Ovid. Metamorphoses*, p. 98.

Behind she stood, and by the golden hair
Achilles seiz'd: to him alone confest;
A sable cloud conceal'd her from the *rest*.

Pope. *Homer. Iliad*, book i.

Such an idle, *restive* presence as this is utterly inconsistent with such active perfections.

Scott. *Christian Life*, part ii. ch. iv. p. 238.

He served his country when it was in need of his courage and conduct until he thought it was time to serve himself: but dismounted from the saddle when he found the beast which bore him began to grow *restiff* and ungovernable.

Dryden. *Virgil. Georgics. Dedication*.

And now on Caucasus, with snow o'erspread,
The rising morn her silver radiance shed,
When proud Æta, earlier than the *rest*,
The fencing corslet buckled to his breast.

Fawkes. *Apollonius Rhodius. Argonautics*, book iv.

REST, *v.*REST, *n.*

RE'STFUL,

RE'STFULLY,

RE'STFULNESS,

RE'STLESS,

RE'STLESSLY,

RE'STLESSNESS.

D. *rusten*; Ger. *rasten*; A. S. *restan*, *manere*, *requiescere*, to stay or remain, and, thus, to be or become quiet. See *REST, ante*.
To stay, to put or place in quiet; in peace or tranquillity; in stillness or repose; to be or become, or cause to be or become, quiet, peaceful, tranquil; still; contented; to stop or stay, to repose, to recline; to rely.

þo he added a wule *yrest*, ys armes he gan to caste.

R. Gloucester, p. 308.

þo þis batail was y do, þes Britones attelaste

Nome þe town of Cornboru, and þer inne hadde *reste*

þre dayes and þre nygt.

Id. p. 141.

Mýght he neuer noure [no where] fynd a *restyng* place.

Right vnto Donkastre þe Danes gan him chace.

R. Brunne, p. 16.

Henry is at *reste*, his soule at Christe's wille.

Id. p. 109.

Quah reson *rest* þow a wýle.

Piers Plouhman, p. 64.

Petir turnyde and sigh thilk disciple suyng, whom Iesus louyde, which also *restide* in the souper on his breste, and he seide to him, Lord, who is it that schal bitraie thee?

Wiclif. *John*, ch. xxi.

But mannes sone hath not where he schal *reste* his hed.

Id. *Matthew*, ch. viii.

And ye schal fynde *reste* to youre soulis.

Id. *Ib.* ch. xi.

Thus walke I like a *resteles* caitif.

Chaucer. *The Pardoner's Tale*, v. 12662.

Thène Charlys the vi. of that name, newly crowned kyng of Fraunce, in the ryght of the woman, sent the archebyssshop of Reynes and the marshal of Fraunce into Brytaygne, for to sette an vnyte and *restfull* peas atwene y^e sayd sir John and the laste wyfe of sir Charlys.

Fabyan. *Chronicle*, p. 476.

So (saith he) they liuig *restfully* and in helth vnto extreme age, shall leaue the same maner of lyuyng vnto their successors.

Sir Thomas Elyot. *The Governour*, book iii. p. 213.

This also is vnmynded of wryters outhur for *restfulness* of tyme, or ellys for rudenesse of his dedes, that clerkes lyst nat to spende any tyme in wrytyng of such dedes.

Fabyan. *Chronicle*, p. 17.

So that more and more that cōtre grewe to more *restfulness* and peas.

Id. *Ib.* p. 395.

LAN. Well, well; but for my owne parte, as I haue set vp my *rest* to run awaie, so I will not *rest* till I have run some ground; my maister's a verie Jew; giue him a present? giue him a halter.

Shakspeare. *The Merchant of Venice*, fol. 168.

So forth she rode, without repose or *rest*,

Searching all lands and each remotest part,

Following the guydance of her blinded guest,

Till that to the sea-coast at length she her addrest.

Spenser. *Faerie Queene*, book iii. can. 4.

Avrora, out of *restfull* bed, did from bright Tython rise,

To bring each deathlesse essence light, and use, to mortall eyes.

Chapman. *Homer Iliad*, book vii. p. 142.

With faire attendants then,

The sheets and bedding of the man of men,

Within a cabin of the hollow keele,

Spred, and made soft; that sleepe might sweatly seele

His *restfull* eyes.

Id. *Ib.* *Odyssey*, book xiii. p. 198.

Let not his love, let not his *restlesse* spright,

Be unreveng'd, that calles to you above

From wand'ring Stygian shores, where it doth endlesse move.

Spenser. *Faerie Queene*, book i. can. 4.

Meantime, retir'd to Tyber's flow'ry bounds,

In the cool stream to bathe his glowing wounds,

The wretched father (father now no more)

In sullen sorrow *rested* on the shore.

Pitt. *Virgil. Æneid*, book x.

Guard the more strongly against a common failing, viz. the *resting* in a string of unmeaning words, which really carry in them no certain or no consistent ideas.

Waterland. *Works*, vol. viii. p. 279. *The Sacramental Part of the Eucharist*.

REST.

REST. Nothing makes great men more suspicious of virtue than when we see philosophers become flatterers, and carrying on the *restless* designs of ambition under the pretence of teaching the art of contentment to others.

Stillingfleet. Sermon 3. vol. ii. p. 137.

When the mind casts and turns itself *restlessly* from one thing to another, strains this power of the soul to apprehend, that to judge, another to divide, a fourth to remember; thus tracing out the nice and scarce observable difference of some things, and the real agreement of others; at length it brings all the ends of a long hypothesis together.

The impotent triumphs of the Jews gave an éclat to every movement which the *restless* though determined spirit of Julian was hourly pushing forward.

Warburton. Works, vol. viii. book i. ch. v. p. 90. Julian.

Employment seldom so totally engages us as to fill up all the spaces of our time, but *restlessness*, whimsy, or habit come in to supply the vacancies.

Search. Light of Nature, vol. i. part i. ch. v. p. 90.

These qualities, [our love of novelty, variety, and contrast,] on examination, will be found to refer to a certain activity and *restlessness* which has a pleasure and delight in being exercised and put in motion.

Reynolds. Works, vol. i. p. 247. Discourse 8.

RESTA'GNATE, v. } Lat. *restagnans*, present
RESTA'GNANT, } participle of *restagnare*, (see
RESTAGNA'TION. } **STAGNANT**.) to overflow, as pools or lakes; or as waters stopped or dammed up in a pool. In English,

To be or become *stagnant*; to cease from flowing; to stay or stop the course or motion.

The blood returns thick, and is apt to *restagnate*.

Wiseman. Surgery, book i. ch. xxi.

The nearer we come to the top of the atmosphere, the shorter and lighter is the cylinder of air incumbent upon the *restagnant* mercury.

Boyle. Works, vol. i. p. 151. Spring and Weight of the Air.

It proceedeth from the *restagnation* of gross blood.

Wiseman. Surgery, book i. ch. xiv.

So that the blood being detained in them is not so easily carried up or hindered from *restagnation*.

Id. Ib. book ii. ch. i.

RESTAURATION. See **RESTORE**.

RESTEM, re, and stem, to *stem* or steer the *stem* back again, *sc.* against tide or current.

And now they do *restem*

Their backward course, bearing with frank appearance

Their purposes toward Cyprus.

Shakespeare. Othello, fol. 313.

RESTIARIA, in Botany, a genus of the class *Dioecia*, order *Gynandria*. Generic character: female flower, calyx five-cleft, cup-shaped; corolla none; stigma concave; capsule five-nerved, two-celled, two-valved; seeds many, winged.

One species, *R. cordata*, native of the woods of Cochinchina. Loureiro.

RESTINGUISH, Lat. *restinguere*, to *extinguish*, q.v.

Hence the thirst of languishing souls is *restinguished*, as from the most pure fountains of living water.

Field. Of Contro. (Life, published in 1716,) p. 41.

RESTIO, in Botany, a genus of the class *Dioecia*, order *Triandria*, natural order *Restiaceæ*. Generic character: male flower, an imbricated spike; calyx, six equal glumes; female flower, calyx and corolla as the male; styles, two or three; nut stony, one-celled, one-seeded.

Thirty-seven species, mostly natives of the Southern hemisphere.

RESTIPULATION, Fr. *restipuler*, *restipulation*, a putting in of a pledge or gage. See **STIPULATE.**

A pledge or engagement.

But if the *restipulation* were absolute, and the withdrawing of **RESTIPULATION** this homage upon none but civil grounds, I cannot excuse the good king from a just offence.

Hall. Works, vol. ii. p. 109. Hezekiah and Sennacherib.

**RESTITUTE, } Fr. *restituer*; It. *restituire*; Sp. *restituir*;
RESTITU'TION. } restituir; Lat. *restituere*, (re, and *statuere*,) from *statum*, past participle of *stare*, to stand, to stand, or cause to stand again; to place or put in its place again.**

To replace, to restore; "to render, yield, or give back."

And yf þow wite nevere to wham, ne were þow sholde *restitue*,
Bere hit to þe bishop.

Piers Plouhman. Vision, p. 105.

þat was a reuful *restitution*.

Id. Ib. p. 99.

Raþer have we no reste. til we *restitue*

Our lyf to oure Lord God.

Id. Ib. p. 168.

But lawe of kind is comen to eury nation, as coniunction of man and woman in loue, succession of children in heritance, *restitution* of thinge by strength taken or lent.

Chaucer. The Testament of Loue, book iii.

And that he shulde, in exchawynge his displeasure, make *restitution* of all thinges that he before had takyn from the churche.

Fabyan. Chronicle, ch. 160. p. 152.

From an angelical voice, almost seven hundred years after Christ given to Cadwallader, that *restitution* of the crown to the Britons is promised.

Drayton. Poly-olbion, song 2.

Restituted trade

To every virtue lent his helping stores,
And cheer'd the vales around.

Dyer. The Fleece, book ii.

On a conviction of larceny in particular, the prosecutor shall have *restitution* of his goods, by virtue of the statute 21 Hen. VIII. c. 11.

Blackstone. Commentaries, book iv. ch. xxvii.

RESTO'RE, v.

RESTO'RE, n.

RESTO'RABLE,

RESTO'RAL,

RESTORA'TION,

RESTO'RATIVE, adj.

RESTO'RATIVE, n.

RESTO'REMENT,

RESTO'RER.

Fr. *restaurer*; It. *restaurare*;
Sp. *restaurar*; Lat. *restaurare*,
(re, and obsolete *staurare*),
(from Gr. *σταυρ-ος*, a stake,) to
stake, or to strengthen or se-
cure with stakes; to place in a
state of security again; to re-
instate in strength or security.
Generally,

To re-instate, to replace, to repair, to return; to put or place, to bear or bring, back to a former state or condition; to recover; to review.

Commune rigt, quath Pandulf, we esseth, [ask] and namore,
That thou suerie vpe the bok, clanliche to *restore*
Holi churche that thou hast him binome mid wronge.

R. Gloucester, p. 500.

Robert tille Ingland kam, & bisouht þe kȳng
þo fees he fro him nam, *restore* ageȳn þat þing.

R. Brunne, p. 99.

Asturwarde eftsoones he sette hise hondis on him and he bigan
to se and he was *restorid* so that he saygh clerely ale thingis.

Wiclif. Mark, ch. viii.

Whanne Elie comith he schal firste *restore* alle thingis.

Id. Ib. ch. ix.

And then had God of him compassion,
And him *restored* his regne and his figure.

Chaucer. The Monkes Tale, v. 14163.

For than through the first synne,
Whiche Adam whylom brought vs inne,
There shulden all men be lost;
But Christ *restoreth* thilke lost
And bought it with his flesshe and blood.

Gower Conf. Am. book v.

For all the meates and the spices,
That any Lumbarde couth make,
Ne ben so lustie for to take,
Ne so farforth *restauratife*,
I sey as for myn owne lyfe,
As ben the wordes of hir mouth.

Id. Ib. book vi. p. 192.

RE-
STORE.

And yet phisike of his conserue
Maketh many a *restauracion*
Unto his recreacion.

Gower. *Conf. Am.* book vi.

If I haue taken any mās good from hym, then am I bound to pacifie him either by *restoring* it agayne, or els by other meanes as we two can agree.

Frith. *Workes*, p. 23. *Answers against Rastel's Dialogue.*

Which water and white rine before spoken of are both of a very coole fresh tast, and as pleasing as any thing may be. I haue heard some hold opinion, that it is very *restorative*.

Hakluyt. *Voyages*, &c. vol. iii. p. 537. *Sir Francis Drake.*

Through the knowledge wherof they had perswaded themselves, y^t there should be borne a certayne wonderfull *restorer* of the world.

Udall. *Matthew*, ch. ii. v. i. p. 6.

Infourme her therfore that these thynges sayeth he, which is the first and the last, the maker and redemer, the founder and *restorer* of all creatures.

Bale. *The Image of both Churches*, p. 28.

The Lord (saith Cyprian) dooth vouchsafe in manie of his seruants to foreshew to come the *restauring* of his church, the stable quiet of our health and safeguard.

Fox. *Actes*, &c. p. 62.

But that fierce foster, which late fled away,
Stoutly forth stepping on the further shore,
Him boldly bad his passage there to stay,
Till he had made amends, and full *restore*,
For all the damage which he had him doen afore.

Spenser. *Faerie Queene*, book iii. can. 5.

A great *restorative* it is with meat, and quickly setteth them on foot, who have lien long and been brought low by sicknesse.

Holland. *Plinie*, book xxii. ch. xxiii.

These viands pure;
Their taste no knowledge works, at least of evil,
But life preserves, destroys life's enemy
Hunger, with sweet *restorative* delight.

Milton. *Paradise Regained*, book ii. v. 373.

Poyson I see hath bin his timelesse end:
O churle, drinke all? and left no friendly drop,
To helpe me after, I will kisse thy lips,
Happlie some poyson yet doth hang on them,
To make me die with a *restorative*.

Shakspeare. *Romeo and Juliet*, fol. 78.

There slept th' impartial judge, and strict *restorer*
Of wrong or right, with pain or with reward.

Fletcher. *Christ's Victory and Triumph*, p. 62.

By which relation they might indeed illustrate the destruction of man by the old Serpent, and his *restoremēt* by the blood of Christ.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. i. p. 286.

Less pleasure take brave minds in battle won,
Than in *restoring* such as are undone.

Waller. *Panegyrick on Cromwell*.

I may add, that absurd practice of getting turf without any regularity; whereby great quantities of *restorable* land are made utterly desperate.

Swift. *Works*, vol. x. p. 205. *Letter 7.*

A peculiar respect unto that part of Christian truth which concerns the mercifull intentions of God toward mankind, and the gracious performances of our Saviour in order to the accomplishing them; the promises of pardon to our sins, and *restoral* into God's favour upon the terms propounded in the Gospel, of sincere faith and repentance.

Barrow. *Works*, vol. ii. p. 62. *Sermon 4.*

Now, in the pomp of this atchievement, will I present myself before Madam Laura, with a Behold, Madam, the happy *restauracion* of Benito.

Dryden. *Love in a Nunnery*, act iii. sc. 1.

The opinion said to have been started by Origen was, that wicked men, and even devils, after a certain revolution, should have their release and *restoration*.

Waterland. *Works*, vol. iv. p. 299. *A Commentary on the Athanasian Creed.*

Unless we take care frequently to revive our religion with this spiritual repast and *restorative*, and still to add new fewel to it as the flame decays, it will quickly pine away and expire.

Scott. *Christian Life*, part i. ch. iv. sec. 3. p. 116.

Abraham was the grand *restorer* of true religion before sunk in Chaldæa, (and perhaps in several other places.)

Waterland. *Works*, vol. viii. p. 22. *A Charge to the Clergy of Middlesex.*

Rest,

Man's rich *restorative*.

Young. *The Complaint*. Night 9.

RESTRAIN, v.

RESTRAI'NABLE,

RESTRAI'NEDLY,

RESTRAI'NER,

RESTRAI'NT,

RESTRI'CT, v.

RESTRI'CTION,

RESTRI'CTIVE,

RESTRI'CTIVELY,

RESTRI'NGENT,

RESTRI'NGENCY.

Fr. *restrindre*; Sp. *restrinir*;
Lat. *restringere*, to press or hold back.

To repress, to withhold, to suppress; to hold in, to compress, to confine, to limit.

Yet sette I cas, ye have bothe might and licence for to venge you; I say that ther ben ful many thinges that shuln *restraine* you of vengeance taking, and make you for to suffre.

Chaucer. *The Tale of Melibeus*, p. 115.

There let your pity spred without *restraint*,
For lacke of pity, let not your seruaunt faint.

Id. *The Commandements of Love*.

Of hir estate to knowe plaine,
She wolde hym nothyng els saine.
But of hir name, whiche she feigned,
And other thynges she *restreigned*,
That o worde more she ne tolde.

Gower. *Conf. Am.* book ii.

Thus I alone, where all my fredome grewe,
In prison pine with bondage and *restrainte*.

Surrey. *Prisoner in Windsor*.

Neither shoulde we haue any more wherewith to vexe them with confessions, cases reserued, *restricted*, or amplified for our gaine.

Fox. *Actes*, &c. p. 1173. *Henry VIII.*

For they have not devised one of all those rules of *restrictions*, amplifications, very wittily invented in the small logicals which here our children in every place do learn.

Sir Thomas More. *Utopia*, vol. ii. book ii. ch. vii. p. 88.

For sweetnesse doth allure the weaker sence
So strongly, that unethes it can *refraine*
From that which feeble nature covets faine
But grieve and wrath, that be her enemies
And foes of life, she better can *restraine*.

Spenser. *Faerie Queene*, book ii. can. 6.

Wherein indeed we must not deny a liberty; nor is the hand of the painter more *restrainable* than the pen of the poet.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. xix. p. 318.

That Christ's dying for all is the express doctrine of the Scripture, is elsewhere manifested by the phrases of the greatest latitude, used in this matter, 1. the *world*, which is a word of the widest extent, and although it be sometimes used more *restrainedly*, yet never doth nor can in any reason be interpreted to signifie a far smaller disproportionable part of the world.

Hammond. *Works*, vol. i. ch. xiii. p. 482. *Fundamentals.*

So these two persons were euer *restrayners* and refrayners of the kinges wilfull scope and vnbridled libertie.

Grafton. *Henry VII.* vol. ii. p. 940. *The nineteenth Yere.*

By that which lately hapned, Una saw
That this her knight was feeble, and too faint:
And all his sinewes waxen weake and raw,
Through long emprisonment, and hard constraint,
Which he endured in his late *restraint*.

Spenser. *Faerie Queene*, book i. can. 10.

About that time there was a general *restraint* throughout all Greece, *restraining* all manner of people to bear sail in any vessel or bottom, wherein there were above five persons, except only Jason,

RE-
STORE.
—
RE-
STRAIN.

RE-STRAIN. who was chosen captain of that great ship Argus, and had commission to sail every where, to chase and drive away rovers and pirates, and to scour the seas throughout.

RESULT

Sir Thomas North. Plutarch. Theseus, p. 7.

Men have no power at all to detract from God's owne divine institutions, or to annex any conditions or restrictions to them.

Prynne. Treachery and Disloyalty, part iii. p. 117.

This subject may be considered two ways: 1. absolutely and in its full extent; 2. relatively or restrictively.

Hale. Contemplations, vol. ii. p. 455. Doing as we would be done to.

'Tis true, Juturna mingled in the strife
By my command, to save her brother's life,
At least to try: but, by the Stygian lake,
(The most religious oath the gods can take)
With this restriction, not to bend the bow,
Or toss the spear, or trembling dart to throw.

Dryden. Virgil. Æneid, book xii.

I dressed that wound with the same digestive, mixed with pulv. Galeni, upon dossils with thick pledgits, and some of the same restrictive over that, with such bandage as that part was capable of.

Wiseman. Surgery, vol. ii. book vi. ch. vi. p. 189.

Would you not think that physician mad who, having prescribed a purge, should immediately order you to take *restringents* upon it.

Dryden. An Essay of Dramatic Poesie.

The dyers use this water in reds, and in other colours wanting *restringency*, and in the dying of materials of the slacker textures.

Sir W. Petty. In Sprat's History of Royal Society, p. 293.

The common law of England, indeed, is said to abhor perpetuities, and they are accordingly more *restricted* there than in any other European monarchy; though even England is not altogether without them.

Smith. Wealth of Nations, vol. ii. book iii. ch. ii. p. 157.

If such a one can think that he may, with his conscience unhurt, conform for the sake of lucrative employments, he should never be permitted, on pretence of conscience, to plead the *restrictive* law, in order to evade those which are onerous.

Warburton. Works, vol. vii. book iii. p. 259. Alliance.

RESTRIVE, to *strive* or struggle again.

But when amity was dead, confidence could not live, and who should quit first was the question; which, on neither part, either would perform, and *restriving* again afresh, with a kick and a wrench together, I freed my long captivated weapon.

The Guardian, No. 133.

RESUBJECTION, return to *subjection* or subservience.

Neither is it long since our kind apostate M. Carrier gave us here in England (from bigger men than himselfe) an overture of the likelihood of this liberall dispensation from his holy father of Rome, upon the conditions of our *re-subjection*.

Hall. Works, vol. i. p. 690. The Honour of the Married Clergie, book i. sec. 3.

RESUBLIME, v. } *Re*, and *sublime*, to raise or
RESUBLIMATION. } heighten.

To *sublime* or raise again; to heighten again and again, *sc.* by fire.

Though it be most commonly requisite to *resublime* the sublimate that comes the first time up, that the salt and colcothar may be more exquisitely mixed, yet as far as we can guess by some trials it will not be expedient to *resublime* it above once or (at most) twice.

Boyle. Works, vol. ii. p. 217. Usefulness of Natural Philosophy.

Which is though a known, yet a notable experiment among chymists, mercury sublimate may be deprived of its deadly corrosiveness, and prepared into a medicine inoffensive even to children, by bare *re-sublimations* with fresh mercury.

Id. Ib. part ii. p. 123. Essay 5.

RESULT, v. } *Fr. resullter*; *It. risultare*; *Sp. resultar*; *Lat. result-are*, (*re*, and
RESULTANT, adj. } *saltum*, past participle of *salire*,
RESULTANCE. } to leap,) to leap or jump back; to spring back.

To spring or issue forth, (in return or in consequence,) to arise from, to ensue.

Out of that intermixture of Hebrew and Chaldee *resulted* a third language, call'd to this day the Syriac.

Howell. Letter 60. book ii. p. 382.

RESUME

There is an exact geometrical justice that runs through the universe, and is interwoven in the contexture of things. This is a *result* of that wise and almighty goodness that presides over all things.

Glanvil. Lux Orientalis, ch. xiii. p. 124.

The truth is, that if in these external marks or signatures there be any certainty, it must be taken from that which I call the total *resultance*.

Reliquiæ Wottonianæ, p. 82.

Whom had that ancient seen, who thought souls made
Of harmony, he would at next have said
That harmony was she, and thence infer,
That souls were but *resultances* from her
And did from her into our bodies go.

Donne. Anatomy of the World. The first Anniversary.

Such suppose a Deity that, acting wisely, but necessarily, did contrive the general frame of things in the world; from whence by a series of causes doth unavoidably *result* whatsoever is now done in it.

Cudworth. Intellectual System, book i. ch. i. p. 4.

For why are such voluminous authors read,
The learned labours of the famous dead,
But to prepare the mind for its defence,
By sage *results* and well-digested sense.

Pomfret. To a Friend, p. 319.

By reason of the figure of the *resultant* corpuscles, and their fitness to convene, when dissolved in water, into curiously shaped bodies.

Boyle. Works, vol. iii. p. 530. Virtues of Gems.

Not for it's own sake merely, but for his
Much more who fashion'd it, he gives it praise;
Praise that from earth *resulting*, as it ought,
To earth's acknowledg'd sov'reign finds at once
It's only just proprietor in him.

Cowper. The Task, book v.

And when I weigh this seeming wisdom well,
And prove it in th' infallible *result*
So hollow and so false—I feel my heart
Dissolve in pity, and account the learn'd,
If this be learning, most of all deceiv'd.

Id. Ib. book iii.

RESUME, v. } *Fr. resumer*; *It. resumere*; *Sp. resumir*; *Lat. re-sumere*, (*re*, and
RESUMABLE, } *sum-ere*,) to take up again.

To take back; to take again, *sc.* the same state or position; the same course, to re-enter upon, to recommence.

Excepte he that resigned it, and by the consente of the people eftsones dyd *resume* it.

Sir Thomas Elyot. The Governour, book i. p. 11.

Not so, quoth he, for yet, when time doth serve,
My former shield I may *resume* againe:
To temporize is not from truth to swerve,
Ne for advantage terme to entertaîne.

Spenser. Faerie Queene, book v. can. 11.

This was but an indulgence, and therefore *resumable* by the victor, unless there interviened any capitulation to the contrary.

Hale.

Hence the constitutions, or as they call it, the statutes of Philip the sixth, John the second, Charles the fifth, sixth, eighth, of *resuming* those things which were alienated by their ancestors, (of which *resumptions* there are many instances cited by Hugo Grotius.)

Prynne. Treachery and Disloyalty, p. 167. Appendix.

The same was in the beginning with God. This is *resuming* what had been said before, after a kind of break, to connect it the more closely with the account of the creation.

Waterland. Works, vol. v. ch. vi. p. 181. Doctrine of the Holy Trinity.

Sees not my love, how time *resumes*
The glory which he lent these flowers?

Waller. To a Lady in Retirement.

"A *resumption* of rewards, granted to members of the cortes," was once at least debated, if not enacted.

Bolingbroke. Works, vol. iii. p. 224. A Dissertation upon Parties.

Calmly he heard till Amurath's *resumption*
Rose to his thought, and set his soul on fire.

Johnson. Irene, act ii. sc. 4.

RESU-
PINE
—
RESUSCI-
TATE.

RESUPINE, } It. *risupino*; Lat. *resupinus*, (*re*,
RESUPINATION. } and *supinus*, from *sup-are* or *sip-*
are, (*facere*,) found in the comp. *dis-sipare*, *insipare*,
obsipare,) thrown back, or on the back; lying on the
back.

Our Vitruvius calleth this affection in the eye a *resupination* of
the figure: for which word (being in truth his own, for ought I
know) we are almost as much beholding to him as for the obser-
vation itself. *Reliquiæ Wottonianæ*, p. 62.

Outis, when I have eaten all his friends,
Shall be my last regale;—be that thy boon.
He spake, and downward sway'd, fell *resupine*,
With his huge neck aslant.

Cowper. Odyssey, book ix. v. 429.

RESURPRISE, to *surprise*; to take or catch
suddenly, unexpectedly, again.

The castle of Cadmus was taken and the city of Thebes itself
invested by Phœbidas the Lacedæmonian, insidiously, and in
violation of league: the process of this action drew on a *resurprise*
of the castle by the Thebans, a recovery of the town, and a current
of the war even unto the walls of Sparta.

Bacon. Works, vol. ii. p. 300. *Of a War with Spain*.

RESURRECTION, Fr. *resurgir*, *resurrection*; It.
risurgere, *risurrezzione*; Sp. *resurrecion*; Lat. *resur-*
rectio, from *resurgere*, to rise again; (*surgere*, i. e. *sursum*
regere, or *erigere*, to raise up.)

Rising or raising again.

Alle þei saine þis same, þat gare þei were & boun
To die in Jhesu name with gode deuocioun,
þat for vs suffred schame, & died þorgh passioun.
We trowe it is our frame, his *resurrection*.

R. Brunne, p. 162.

And after hus *resurrection* Redemptor was hus name.
Piers Plouhman. Vision, p. 207.

Thanne in the *resurrection* whanne thei schulen rise agen whos
wyf of these schal she be? *Wiclif. Mark*, ch. xii. p. 32.

That made me rise ere it were day,
And this was now the first morow of Maie,
With dreadful herte, and glad deuocioun
For to been at the *resurrection*
Of this floure, whan that it should vnclose
Again the sunne.

Chaucer. The Legend of Good Women.

And we say, that this Christian *resurrection* of life is the vest-
ing and setting of the souls of good men in their glorious, spiritual,
heavenly, and immortal bodies.

Cudworth. Intellectual System, book i. ch. v. p. 798.

Though he understand the things of religion ever so well, or
believe ever so rightly: though he cry, Lord, Lord: be he ever so
constant and devout in his prayers, or talk ever so much, or so
well, or so earnestly for religion: unless he do good, unless his
actions, and dealings, and behaviour come up to his knowledge, and
his discourse correspond with his outward profession and belief, it
will avail him nothing; he is not the man to whom Jesus Christ
hath promised in the text that he shall come to the *resurrection* of
life.

Paley. Sermon 35. p. 522.

RESURVEY, to *survey*; look over, view again.

If thou survive my well-contended day,
When that churl Death my bones with dust shall cover,
And shalt by fortune once more *resurvey*
These poor rude lines of thy deceased lover.

Shakspeare. Sonnet 32.

RESUSCITATE, } Fr. *resusciter*; It. *risuscitare*;
RESUSCITATION, } Sp. *resuscitar*; Lat. *resuscitare*,
RESUSCITABLE. } (*re*, and *suscitare*, *sursum citare*,
ciere, to move up,) to move, to set, up again.

To set up again, to raise or rouse again, to renew,
to revive.

I beseech thee, O Sonne of God, crucified for vs, and *resuscitated*
Emanuell, gouerne, conserue, and defend thy church.

Fox. Actes, &c. p. 789. *Henry VIII*.

In hope that for the spirite of Christ dwellyng in vs, our mortall
bodyes shal be *resuscitate*, and as we haue in baptisme be buried
with Christ, so we be assured to be parte takers of his *resurrectio*.
Stephan, Bishop of Wynchester. Expositio on the Sacrament, p. 65.

Here we haue a cleare testimoye of the *resuscitation* of the dead
to come where the vngodly shal be punysshed with payns perpe-
tuall and the godly endewed with ioye eternall.

Joye. Expositio of Daniel, p. 8.

If then these playes, and poems haue hatched, haue propagated
idolatrie, and paganisme heretofore; they may likewise *resuscitate*
and foment it now, vnlesse God's grace withhold vs from it.

Prynne. Histrio-Mastix, part i. p. 80.

Then did th' allotted hour of dawning right
First strike our ravish'd sight;
Which malice or which art no more could stay,
Than witches' charms can a retardment bring
To the *resuscitation* of the day,
Or resurrection of the Spring.

Cowley. Ode on his Majesty's Restoration.

The apothecary told the virtuoso that he had really prepared
resuscitable plants a different way from that which others pretended
to.

Boyle. Works, vol. v. p. 605. *Strange Reports*.

To wonder at a thousand insect forms,
These hatch'd and those *resuscitated* worms,
New life ordain'd and brighter scenes to share,
Once prone on earth, now buoyant upon air.

Cowper. Retirement.

It is difficult to *resuscitate* surprise, when familiarity has once
laid the sentiment asleep.

Paley. Natural Theology, ch. xviii. p. 262.

The word "quickened" is often applied to signify, not the *resusci-*
tation of life extinguished, but the preservation and continuance of
life subsisting.

Horsley. Sermon 20. vol. ii. p. 167.

RETAIL, v. } Skinner says from the Fr. *retailer*,
RETAI'L, n. } It. *ritagliare*, to cut into pieces; and,
RETAI'LER. } thus, to sell by *retail* is to sell large
quantities of goods in small parts or pieces. Tooke says,
"To sell by *tale* is to sell by *numeration*, not by weight
or measure, but by the number told; and that *retail*
means—*told over again*." See the Quotation from
Froisart. To *retail*, as now used, is

To sell in small numbers, portions, or quantities; i. e.
either by *numeration*, weight, or measure; to deal out or
dispose of in small portions. See DETAIL.

Ye be at a freer marte than they of Fraunce or Lombardy or
other realmes whither as youre marchaundyse repayreth, for they
be *tayled* and *retayled* agayne two or thre tymes in a yere, and
ye passe by a reasonable ordynaunce sette and assessed vpon your
marchaundyse.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 222. p. 686.

Wheresoeuer they shal happen to sel or barter away any of their
commodities to our subiects, they are to barter or sell by *whole sale*
and not by *retaille*, as by the yard or by the ounce in their houses
or elsewhere, but by the packe, &c.

Hakluyt. Voyages, &c. vol. i. p. 506. *The Emperor's last Priuilege*.

By the which slotnike [one-forty-eighth of a yard] the *retailers*
sell their wares out of their shops, as goldsmiths, grocers, silkesellers,
and such other, like as we doe vse to *retaille* by the ounce.

Id. Ib. p. 256. *John Hasse*.

To whom I will *retaille* my conquest wonne,
And she shall be sole victoresse, Cæsar's Cæsar.

Shakspeare. Richard III. fol. 198.

And so I hope, since first my hopes are gone,
To find in many what I lost in one;
And, like to merchants after some great loss,
Trade by *retail*, that cannot now in gross.

Carew. Songs. The Spark.

The *retailer* pays the States almost the one moiety as much as he
paid for the commodity at first.

Howell. Letter 7. book i. sec. 1. p. 27.

Mons. Barbeyrac understands the nature of evidence too well to
apprehend that the *retailing* a misreport can amount to a proof.

Waterland. Works, vol. v. ch. vii. p. 297. *Doctrine of the Holy*
Trinity

RESUSCI
TATE.

RETAIL.

RETAIL. The keepers of ale-houses pay for a licence to *retail* ale and spirituous liquors.

RETAIN. *Smith. Wealth of Nations*, vol. iii. book v. ch. ii. p. 301.

These, and most other things which are sold by *retail*, the way in which the labouring poor buy all things, are generally fully as cheap, or cheaper, in great towns than in the remoter parts of the country.

Id. Ib. vol. i. book i. ch. viii. p. 100.

The profits of the farmer, of the manufacturer, of the merchant, and *retailer* are all drawn from the price of the goods which the two first produce, and the two last buy and sell.

Id. Ib. vol. ii. book ii. ch. v. p. 127.

RETAIN', v.

RETAI'NER,

RETE'NTION,

RETE'NTIVE, adj.

RETE'NTIVE, n.

RETE'NTIVENESS,

RE'TINUE.

Fr. *retenir*; It. *ritenere*; Sp. *retener*; Lat. *retinere*, to hold back, (re, and *tenere*).

To hold or keep back, to withhold;

to hold back upon; to keep or stay

with; to hold, keep, or pertain to.

Retainer, one who, that which,

retains; the *retaining*: also, one who is *retained* or kept, *sc.* in attendance, in service, or, perhaps, one who keeps or stays, *sc.* in attendance or service; an adherent; one who appertains to; and hence,

Retinue, the attendants or followers; the meny, or many.

þe kýng his *retenanz* alle tille him he drouh
Of Inglis & Normanz, & gadred fólk fer & nere.

R. Brunne, p. 100.

And al þe riche *retýnaunce*. þat roteþ hem on fals lývýnge
Were hýd to þat brudale.

Piers Plouhman. Vision, p. 27.

For the humours ben to ranke and haboundant in the body of man; sometime of infirmitee, for febleness of the vertue of *retentif*, as phisike maketh mention.

Chaucer. The Persones Tale.

He had eke wenches at his *retenue*,
That whether that sire Robert or sire Hue,
Or Jakke, or Raufe, or who so that it were
That lay by hem, they told it in his ere.

Id. The Freres Tale, v. 6875.

For mekenesse in countenaunce, with a manly herte in dedes and in long continuaunce, is the conisance of my liuery, to al my *retinue* deliuered.

Id. The Testament of Loue, book i.

That of hem thre, and her issue
There was so large a *retinue*
Of nacions seuentie and two.

Gower. Conf. Am. book vii.

My loue to scorn, my seruice to *retaine*,
Therein me thought you vsed crueltie.

Wyat. The Louer abused renounceth Love.

And as it is impossible to be *retayned* vnto two diuers lords which are enemies one to the other, so it is impossible to serue God and Mammon.

Tyndall. Workes, p. 233. *On Matthew*, ch. vi.

The same Thomas Cromwell, earl of Essex, hath allured and drawn unto him by *retainours* many of your subjects.

Burnet. Records, vol. i. book iii. No. 16.

For ye shal vnderstande that temporall lordes, in those dayes, kept other maner of houtholdes and other maner of *reteyndour* of houtholde seruantes and other nombre, ferre excedyng y^e the lordes at these dayes done.

Fabyan. Chronicle, p. 626. *Henry VI.*

And cause leaue to be giuen that they may passe, stay, and retorne, and when they please depart, in such sort that, for our loue and contentation, the said worshipfull John Keele, with the ship and mariners, haue no let, hinderance, or *retention*.

Hakluyt. Voyages, &c. vol. v. p. 156. *Passep. of Malta.*

Then, preacing to the pillour, I repeated
The read thereof for guerdon of my paine,
And, taking downe the shield, with me did it *retaine*.

Spenser. Faerie Queene, book iv. can. 10.

Though he had those enforcements of expense,
Both for offence, *retainments*, and defence.

Daniel. History of Civil Wars, book iv. p. 483.

VOL. XXVII.

We will adde to all this, the *retainment* of the same name which the deceased had here, unless there be some special reason to change it; so that their persons will be as punctually distinguisht and circumscribed as any of ours in this life.

More. Immortality of the Soul, book iii. ch. xi.

I haue within this ile bene held for winde
A wondrous time; and can by no meanes find
An end to my *retention*.

Chapman. Homer. Odyssey, book iv. p. 59.

What words (said she) flye your *retentive* pow'rs?
You know, you locke your counsailes in your tow'rs
In my firme bosom; and that I am farre
From those loose frailties.

Id. Ib. book xix. p. 303.

Those secret checks which are raised within itself [the heart] readily conspire with all outward *retentives*.

Hall. Contemplations. Nabal and Abigail.

They cannot want outward *retentives* from sin that live either among friends or enemies.

Id. Ib. Nehemiah.

The great lord Mortimer erected again the round table at Kenelworth, after the ancient order of King Arthur's table, with the *retinue* of an hundred knights and an hundred ladies in his house, for the entertaining of such adventurers as came thither from all parts of Christendom.

Drayton. Mortimer to Isabel. Annotations.

Still Hebron's honour'd, happy soil *retains*
Our royal hero's beauteous, dear remains.

Dryden. Absalom and Achitophel.

Strow'd bibulous above I see the sands,
The pebbly gravel next, the layers then
Of mingled moulds of more *retentive* earths,
The gutter'd rocks and mazy-running clefts.

Thomson. Autumn.

This whole train of suppositions or assertions, brought in as part of the *retinue* to wait upon the argument *a priori*, is little else but a train of error and false reasoning.

Waterland. Works, vol. iv. p. 467. *Vindication of Christ's Divinity*, ch. iii.

By denying that indulgence and undisturbed liberty of conscience to the members of the national church which the *retainers* to every petty conventicle enjoy.

Blackstone. Commentaries, book iv. ch. iv.

He is at all times, therefore, surrounded with a multitude of *retainers* and dependants, who, having no equivalent to give in return for their maintenance, but being fed entirely by his bounty, must obey him, for the same reason that soldiers must obey the prince who pays them.

Smith. Wealth of Nations, vol. ii. book iii. ch. iv. p. 187.

Yet we must needs acknowledge that upon what passes there depend our constitution, our strength, the acuteness of our senses, the quickness of our parts, the *retentiveness* of our memory, much of our passions, desires, and tempers.

Search. Light of Nature, vol. ii. part i. ch. xix. p. 300.

Those "kings' daughters" were already distinguished ladies of the monarch's own court; these virgins are introduced to it by the queen; they follow her as part of her *retinue*, and are introduced as her companions.

Horsley. Sermon 8. vol. i. p. 171.

RETAKE, to take again; to seize again.

They in the end prevailed, that a day should be appointed when the house should be resolved into a committee of the whole house, and the remonstrance be then *retaken* into consideration.

Clarendon. History of the Rebellion, vol. i. book iv. p. 311.

And it is now usual for the court, upon the conviction of a felon, to order (without any writ) immediate restitution of such goods as are brought into court to be made to the several prosecutors. Or else, secondly, without such writ of restitution, the party may peaceably *retake* his goods.

Blackstone. Commentaries, book iv. ch. xxvii.

RETA'LIATE, v.

RETALIA'TION.

Lat. *talio*, from *talis*, such
as. Fr. *retalienne*, requited,
quitted, satisfied, or payed back with the like, Cotgrave;
i. e. with such (*talis*) as had been received.

To return like for like, to quit or requite, to repay (in kind.)

RE-
TALIATE.
—
RETCH.

Not that I shall be mine own officer,
And hate with hate again *retaliate*;
But thou wilt lose the style of conqueror
If I, thy conquest, perish by thy hate.

Donne. *The Prohibition.*

He was so far from countenancing or abetting the wicked conspiracy against Jesus, that he gave a manifest evidence of his justice by *retaliating* upon the principal agent and contriver of it what he thought to have done to Jesus.

Sharp. *Works*, vol. v. p. 31. *Discourse 3.*

To tame our malicious and revengeful passions, it is not enough that we abstain from all unjust *retaliations* of injuries; but we must moreover restrain ourselves even from that lawful displeasure and just resentment which may safely be allowed to a meek and charitable disposition.

Scott. *Christian Life*, part iii. ch. ii. p. 656.

Nature makes us concerned originally with our own pleasures or pains: we feel not, and consequently regard not what happens to other people, until having received hurt from them, and found that our *retaliating* the like prevails upon them to desist from offending us, we thence learn the expedience of exerting ourselves upon such occasions.

Search. *Light of Nature*, vol. i. part ii. ch. xxi. p. 60.

Hence it will be evident that what some have so highly extolled for its equity, the *lex talionis*, or law of *retaliation*, can never be in all cases an adequate or permanent rule of punishment.

Blackstone. *Commentaries*, book iv. ch. i.

Revenge in this case naturally dictates *retaliation*, and that we should impose the like duties and prohibitions upon the importation of some or all of their manufactures into ours. Nations accordingly seldom fail to *retaliate* in this manner.

Smith. *Wealth of Nations*, vol. ii. book iv. ch. ii. p. 258.

RETA'RD, v. } Fr. *ritarder*; It. *retardare*; Sp.
RETARDA'TION, } *retardar*; Lat. *retardare*, (*re*, and
RETA'RDMENT. } *tardus*,) to make or cause to be slow,
to forslow.

To forslow, to delay, to hinder, to impede, to detain,
to postpone, to prolong.

Then, us behoven, yer elde sick accrewes,
Time to forelay, with spels *retarding* it.

Browne. *Yonge Willie and Old Wernock.*

Some years it [the Nile] hath also *retarded*, and came far later then usually it was expected.

Sir Thomas Brown. *Vulgar Errours*, book vi. p. 392.

Experiments in consort touching the putting back or *retardation* of germination.

Bacon. *Natural History*, sec. 413.

That the second enclosed ground be a garden, destined only to the trial of all manner of experiments concerning plants, as their melioration, acceleration, *retardation*.

Cowley. *The College.*

Then did th' allotted hour of dawning right
First strike our ravish'd sight;
Which malice or which art no more could stay,
Than witches' charms can a *retardment* bring
To the resuscitation of the day,
Or resurrection of the Spring.

Id. *On his Majesty's Restoration.*

His phrenzy soon the proud blasphemer felt;
Felt that, without my fertilizing power,
Suns lost their force, and Niles o'erflow'd in vain.
Nought could *retard* me.

Thomson. *Liberty*, part ii.

Metaphysicks not only succeeded physicks and mythology in the manner here observed, and became as great a fund of superstition, but they were carried still farther, and corrupted all real knowledge, as well as *retarded* the progress of it.

Bolingbroke. *Works*, vol. vi. p. 111. *Essay 2. Human Reason.*

RETCH, v. } Also written *reck*, (*q. v.*) i. e. to
RE'TCHLESS, } heed, to care.
RE'TCHLESSLY. }

I rede thee love away to drive,
That maketh the *retch* not of thy live,
The folly more fro day to day
Shall growe, but thou it put away.

Chaucer. *The Romant of the Rose.*

The roote springeth through hot brenning
Into disordinate desiring,
For to kissen and embrace,
And at hir lust them to solace
Of other thing love *retcheth* nought.

Id. *Id.*

Daunceth he merry that is mirthlesse,
Who should *recke* of that is *retchlesse*.

Id. *The Assembly of Fowls.*

And *retchlesse* of hys life, he gan both syghe and grone.

Surrey. *Complaint of a Dying Lover.*

We *retchlesly* discharge our memory of those.

Drayton. *Poly-obion*, song 10.

RETECTION, Lat. *relectus*, past participle of *relegere*, to uncover, to discover, to disclose.

Discovery, disclosure.

A liquor may alter the colour of a body, by freeing it from those things that hindered it from appearing in its genuine colour; and through this may be said to be rather a restoration of a body to its own colour, or a *relection* of its native colour than a change, yet still there intervenes in it a change of the colour which the body appeared to be of before this operation.

Boyle. *Works*, vol. i. ch. iii. p. 685. *Of Colours.*

RETEPORA, in Zoology, a genus of compound *Polypi*.

Generic character. Polypiferous mass stony; porous within, with thick, fragile, flattened expansions, composed of branches, generally free and anastomosing like network: cells of the *polypi* on one side only, at the upper or inner surface of the mass.

Type of the genus, *Millepora reticulata*; Ellis, *Zoophytes*, 138. Inhabits the Mediterranean Sea: one species is common on the coast of Britain.

RETFORD, EAST and WEST, two towns of Nottinghamshire, distinct in jurisdiction, and separated by the intervention of the River Idle; but, from their proximity and their connection by a bridge, virtually forming but one place. *East Retford* is a Borough possessing a handsome pointed Church dedicated to St. Swithin. The Living is a Vicarage in the gift of the Dean and Chapter of York. The other public buildings are Sloswick Hospital for the reception of four poor men, a Free School, Alms-houses for twelve poor women, and a handsome Town-hall, in which, alternately with those of Nottingham, the County Assizes are held, built over the shambles, and occupying too large a portion of the market-place. The malting trade, which formerly used to be considerable, has in a great degree passed to Worksop, and the chief present manufacture is hat-making. The town, however, supports a paper-mill and a mill for candlewicks, and is benefited by the Chesterfield Canal. It returns two Members to Parliament. Population, in 1831, 2491.

West Retford has a Church of pointed architecture dedicated to St. Michael. The Living is a Rectory in the gift of the Corporation. Dorrell's Hospital, built in 1666 and dedicated to the Holy Trinity, supports sixteen poor brethren. Population, in 1831, 593. Distant from Nottingham 30 miles, and from London 144 N. by W.

RE'TIARY, } From the Lat. *rete*, a net. Chaucer
RE'TICLE, } describes "the *reete* of the *Astrolabie*
RE'TICULATE, } to be the zodiake shapen in manner
RE'TIFORM. } of a net."

Reticle, a small net: *retiform*, Fr. *retiforme*, formed or fashioned like a net.

RETCH
—
RE-
TIARY.

RE-TIARY. We will not dispute the pictures of *retinary* spiders and their position in the web.

Sir Thomas Brown. Vulgar Errours, book v. ch. xix.

RETIRE. The intervals of the cavities, rising a little, make a pretty kind of *reticulated* work.

Woodward. On Fossils.

The *retiform* tunicle is whitish, for the better and more true reception of the species of things.

Ray. Of the Creation, part ii. p. 293.

The fruit is about the size and shape of a child's head, and the surface is *reticulated*, not much unlike a truffle.

Cook. Voyages, vol. i. p. 79.

RETIRE, v. Fr. *retirer*; It. *ritirare*; Sp. *retirar*, (*re*, and *tirer*, from the Lat. *trahere*, to draw,) to draw back; to withdraw. See to **RETREAT**.

RETIRE, n. To draw back or withdraw; to move or cause to move backwards; to recede; to withdraw, *sc.* to a place of secrecy, or privacy, or solitude; to secrete, to seclude.

It was greatly for their saueguard, that they *retyred* by lytle and lytle without appearance of any feare.

Brende. Quintus Curtius, book viii. fol. 241.

Richarde Neuell, gentleman, then steward of the houshold, perceiuing his *retire*, came by and by vnto him, and after gentle intertainment demanded of him whether he would speake with my lord or no.

Foxe. Actes, &c. p. 1693. Queene Marie.

The horseme in theyr *retire* slew as many as they coulde come by.

Arthur Goldyng. Caesar. Commentaries, book v. fol. 146.

Against whose forces Henry furnishes

A pow'ful army, and in person went;

But wars with a *retiring* enemy,

With much more travail than with victory.

Daniel. History of Civil Wars, book iv.

Then wherefore dost thou hope he is not shipt?

GRE. That he, our hope, might haue *retyr'd* his power,

And driuen into dispaire an enemies hope,

Who strongly hath set footing in this land.

Shakspeare. Richard II. fol. 31.

A toad-like *retiredness* and closeness of mind.

Sidney. Arcadia, book ii. p. 222.

The willing drumme a lustie marche to sounde,

Whiles ranke *retyrers* gaue their enemies ground.

Gascoigne. The Fruites of Warre, p. 520.

He thus replyde: Now surely, syre, I find,

That all this world's gay shewes, which we admire,

Be but vaine shadows to this safe *retyre*

Of life, which here in lowlinesse ye lead.

Spenser. Faerie Queene, book vi. can. 9.

They, missing the other day's turnings and places of *retire*, were now compelled to fight all on a front in the plain field.

Sir Thomas North. Plutarch. Pyrrhus, p. 341.

She knew the tumult of a large family unfit for the quiet meditations of a prophet: *retiredness* is most meet for the thoughts of a seer.

Hall. Contemplations. Elisha with the Shunamite.

And then with gestures full of grave respect

The duke he to his own apartment led;

To each distinct *retirements* did direct,

And all the wounded he ordain'd to bed.

Davenant. Gondibert, book i. can. 6.

For there groweth firme lande not onely by that which rivers bring in (as the Islands Echinades, which were heaped and raised up by the river Achelous; and so by Nilus the greater part of Ægypt, into which, if we beleue Homer, from the Island Pharos there was a cut by sea of a day and night's sailing:) but also by the *retiring* and going backe of the sea.

Holland. Plinie, book ii. ch. lxxxv.

To them the king: No longer I detain

Your friendly care: *retire*, ye virgin train!

Retire, while from my weary'd limbs I lave

The foul pollution of the briny wave.

Pope. Homer. Odyssey, book vi.

Whereupon *retiring* to the house of a near relation of his, dwelling within the parish of St. Sepulchre in the suburb of London, spent the remainder of his days in great *retiredness* and devotion.

Wood. Athenæ Oxonienses, part i. p. 191.

He was banished into Patmos, a little island in the Archipelago; and, during his *retirement* there, was favoured in a particular manner with revelations from heaven, which he committed to writing, and left behind him for the benefit of the church.

Waterland. Works, vol. ii. p. 1. Christ's Divinity.

RETIRE
—
RE-TOUCH.

RETOLD, i. e. told or narrated again.

Vpon whose dead corpes there was such misuse,

Such beastly, shamelesse transformation,

By those Welshwomen done, as may not be

(Without much shame) *retold* or spoken of.

Shakspeare. Henry IV. First Part, fol. 48.

BLUNT. The circumstance considered, good my lord,

What euer Harry Percie then had said,

To such a person, and in such a place,

At such a time, with all the rest *retold*,

May reasonably dye.

Id. Ib. fol. 51.

RETORT, v. Fr. *retorquer*; It. *ritorcere*; Sp. *retorcer*; Lat. *retorquere*, (*re*, and *torquere*,) to twist back.

RETORT, n. To twist, to writhe, back, to bend or curve back; to turn back or return; to throw or cast back; (*met.*) any thing said.

And then both the devil and man, foreign and intestine, shall have their malices *retorted* upon themselves again.

Burnet. Records, part ii. book iii. A Letter from Dr. Parker.

To this sweet voyce a dainty musique fitted

Its well-tun'd strings, and to her notes consorted,

And while with skilfull voyce the song she ditted,

The blabbing echo had her words *retorted*.

Spenser. Brittain's Ida, can. 2.

I did dislike the cut of a certaine courtier's beard; he sent me word, if I said his beard was not cut well, hee was in the mind it was: this is call'd the *retort* courteous.

Shakspeare. As You Like It, fol. 206.

Episcopius was here caught in his own snare, as bishop Bull justly observes, *retorting* his own concessions upon him with irresistible force.

Waterland. Works, vol. v. p. 204. Doctrine of the Holy Trinity, ch. vi.

Wide wanders, Laodam, thy erring tongue,

The sports of glory to the brave belong,

(*Retorts* Euryalus:) he boasts no claim

Among the great, unlike the sons of fame.

Pope. Homer. Odyssey, book viii.

As for those little *retortings* of my own expressions, of being dull by design, witty in October, shining, excelling, and so forth; they are the common cavils of every witling who has no other method of shewing his parts but by little variations and repetitions of the man's words whom he attacks.

The Tatler, No. 239.

The freethinking politician, who shews from history that this connexion was constant and invariable, is intrapped by the *retortion* of nature and reason, to prove against himself the divinity of that institute he labours to discredit.

Warburton. Works, vol. v. p. 78. The Divine Legation, book v. sec. 2.

Nor is this principle or objection of Solomon's fool less subject to *retortion* than the other.

Id. Ib. vol. x. p. 74. Sermon 21.

RETOSS, to toss, cast, or throw back. See **Toss**.

Toste and retoste, (lyke wherlwynd duste.)

Drant. Horace. Satire 4. book i.

Mean time with sails declin'd

The wandering vessel drove before the wind:

Toss'd and *retoss'd*, aloft, and then below.

Dryden. Cymon and Iphigenia.

All was tempestuous din on ev'ry side,

And all around the roar of war was up,

From rock to rock *retost*, from wood to wood.

Warton. Eclogue 5.

RETOUCH, v. Fr. *retoucher*; It. *ritoccare*; Sp. *retocar*; to touch again.

RE-
TOUCH.

'To touch again, over again, to add new touches; sc. for the sake of improving; finishing more highly.

RE-
TRACT.

He, Mr. Walter Moyle, had also furnished me, according to my request, with all the particular passages in Aristotle and Horace, which are used by them to explain the art of poetry by that of painting; which, if ever I have time to *retouch* this essay, shall be inserted in their places.

Dryden. *Prose Works*, vol. iii. p. 325. *A Parallel of Poetry and Painting*.

When they conceived a subject, they first made a variety of sketches, then a finished drawing of the whole; after that a more correct drawing of every separate part,—heads, hands, feet, and pieces of drapery; they then painted the picture, and after all *retouched* it from the life.

Reynolds. *Works*, vol. i. p. 16. *Discourse 1*.

They are what I apprehend he [Rubens] put into the hands of his scholars, from which they advanced and carried on the great picture which he afterwards *retouched* and finished.

Id. *Ib.* vol. ii. p. 266. *A Journey to Flanders, &c.*

RETRACE, *re*, and *trace*; from *tractus*, past participle of *trahere*, to draw.

To *trace* or draw over again; to *trace* back, to survey, *sc.* the lineaments; generally, to review.

Beneath a neighbouring tree the chief divine
Gaz'd o'er his sire, *retracing* every line,
The ruins of himself! now worn away
With age, yet still majestic in decay!

Pope. *Homer. Odyssey*, book xxiv.

What transport, to *retrace* our boyish plays,
Our easy bliss, when each thing joy supply'd;
The woods, the mountains, and the warbling maze
Of the wild brooks!

Thomson. *Castle of Indolence*, can. 1.

RETRA'CT, *v.*

RETRA'CTABLE,

RETRA'CTATE, *v.*

RETRACTA'TION,

RETRA'CTION,

RETRA'CTIVE.

sc. any thing said or done; to recall, to recant; to revoke.

Wherfore I beseeke you mekeiy for the mercie of God that ye preyre for me, that Crist have mercie of me and foryeve me my giltes (and namely of myn translations and enditinges of worldly vanitees, the which I revoke in my *retractions*.)

Chaucer. *Conclusion of the Persones Tale*.

And euery one wished y^t this tumult were *retracted* and quēched.

Hall. *Henry VII.* fol. 17. *The fourth Yere*.

Thus hauing obtained of him the platforme, the height, the fortification and passages vnto it, and hauing prepared eight good lathers, and raised all the countrey against the Spanyard, that he neither might haue newes, nor succours, nor *retract* on any side, he determined to march forward.

Hakluyt. *Voyages, &c.* vol. iii. p. 358. *M. Dominique de Gourgues*.

Here be emprour and kinges taught to *retract* and call in ayen their vniust lawes.

Joye. *Exposicion of Daniel*, ch. v. fol. 93.

St. Augustine was not ashamed to *retractate*, we might say revoke, many things that had passed him; and doth even glory that he seeth his infirmities.

Translatours of the Bible. *To the Reader*.

The imperiall proclamations in euerie citie were set vp, containing the *retraction* or countermand of those things which against the Christians were before decreed.

Fox. *Actes, &c.* fol. 74.

For it is not to bee doubted but they looked for a glorious victorie and a perpetuall triumph by this man's *retraction*.

Id. *Ib.* fol. 1712. *Queene Marie*.

For that only cause made I a boke of *retractacions*, that my readers mighte wele knowe that myne owne wrytynges did not in all poyntes please me.

Bale. *Apologie*, fol. 43.

The seas into themselves *retract* their flows,
The changing wind from every quarter blows.

Drayton. *Of his Ladie's not coming*.

We could make this use of it, to be a strong *retractive* from any, even our dearest and gainfullest, sins.

Hall. *Remains*, p. 139.

Still as the ground recedes, *retracts* her view
With sharpen'd sight, till she [Alcyone] no longer knew
The much-lov'd face.

Dryden. *Ovid. Metamorphoses*, book viii.

The vice-chancellor (or deputy vice-chancellor) and heads proceeded against him, and forced him at length to sign a feigned *retraction*, which they had drawn up for him.

Waterland. *Works*, vol. ii. p. 376. *Supplement to the Case of Arian Subscription*.

Here storms in hoarse, in frightful murmurs play,
The seat of night, where mists exclude the day.
Before the gates the son of Japhet stands,
Nor from the skies *retracts* his head or hands.

Cooke. *Hesiod. The Theogony*.

Its arms [a cuttle-fish] instead of suckers were furnished with a double row of very sharp talons, which resembled those of a cat; and like them were *retractable* into a sheath of skin, from which they might be thrust at pleasure.

Cook. *Voyages*, book i. ch. vii.

RETRE'AT, *v.*RETRE'AT, *n.*

Also written *retray*, *retrait*, or *retraict*, *retract*. See *ante*, RE-TRACT.

To draw back or withdraw; to move or go back, *sc.* out of the way, out of danger; into security or privacy; to retire.

Er thou make any suche assaies
To loue, and faile vpon thy fete,
Better is to make beaw *retrate*.

Gower. *Conf. Am.* book viii. p. 268.

They were fully determined, and bent to copell hym to *retract* wyth dent of sword.

Hall. *Edward III.* fol. 214. *The tenth Yere*.

And all other hanginges and habylments in the hall and chambre, whereunto the kyng *retrayed* after dynner, and spyces and wyne taken.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 227.

The nations of these women are on the south side of the riuier in the prouinces of Topago, and their chiefest strengths and *retracts* are in the islands situate on the south side of the entrance.

Hakluyt. *Voyages, &c.* vol. iii. p. 638. *Sir Walter Raleigh*.

The Englishmen geuen to couetousnes of spoyle, and desire of rauine, neither chased nor folowed their enemies, but beyng content with their prey and gaine began to *retraite* toward the syege again.

Hall. *Henry VI.* fol. 120. *The tenth Yere*.

The death of these twoe so hardye young men, and of the rest, moued Alexander greatly: yet perceiuing no remedye in y^e matter, caused the *retrait* to be sounded.

Brende. *Quintus Curtius*, fol. 241.

Upon her eyelids many graces sate,
Under the shadow of her even browes,
Working belgardes and amorous *retrate*.

Spenser. *Faerie Queene*, book ii. can. 3.

She is the mighty queene of Faery,
Whose faire *retraitt* I in my shield doe beare.

Id. *Ib.* book ii. can. 9.

So furiously she strooke in her first heat,
Whiles with long fight on foot he breathlesse was,
That she him forced backward to *retrat*,
And yeeld unto her weapon way to pas.

Id. *Ib.* book iv. can. 6.

The earle of Lincolne, deceiued of his hopes of the countries course vnto him, (in which case he would haue temporized,) and seeing the businesse past *retraict*, resolved to make on where the king was, and to giue him battaile.

Bacon. *King Henry VII.* p. 33.

Others more milde
Retreated in a silent valley, sing
With notes angelical to many a harp
Their own heroic deeds and hapless fall
By doom of battel.

Milton. *Paradise Lost*, book ii. v. 546.

RE-
TRACT.
—
RE-
TREAT.

RE-
TREAT.
—
RETRI-
BUTE.

O glorious he, beyond
His daring peers! when the *retreating* horn
Calls them to ghostly halls of grey renown,
With woodland honours grac'd.

Thomson. *Autumn*.

Both thought it was the wisest course
To wave the fight, and mount to horse,
And to secure, by swift *retreating*,
Themselves from danger of worse beating.

Butler. *Hudibras*, part ii. can. 2.

Of all his works, creative bounty burns
With warmest beam; and on your open front
And liberal eye, sits, from his dark *retreat*
Inviting modest want.

Thomson. *Spring*.

RETRENCH, *v.* } Fr. *retrencher*, *re*, and *trencher*,
RETRENCHING, *n.* } or *trancher*, to cut or carve,
RETRENCHMENT. } from *trunc-are*, to cut off.

To cut or lop off, (*sc.* all superfluity or superabundance,) to curtail, to prune or pare away. Also equivalent to—ENTRENCH, *q. v.*

(As if he had meant to suffer like a martyr for the truth) he told us flatly, that he was born in the Low Countreys at Delft. This *retrenched* all farther examination of him; for thereby he was intelligible.

Reliquiæ Wottonianæ, p. 571.

What is natural is reasonable, but what is extravagant and beyond bounds ought to be *retrenched*; and it is a fault not to do it.

Stillingfleet. *Sermon* 3. vol. iii. p. 91.

The ceremonies of the law of Moses in the worship of God were *retrenched*, and a more inward devotion, a more reasonable service were established.

Bolingbroke. *Works*, vol. viii. p. 424. *Fragment*.

I rather wish than expect that you should give yourself the trouble, by transpositions of some and *retrenchments* in others, to link them into a coherent discourse.

Boyle. *Works*, vol. vi. p. 716. *Christian Virtuoso. Advertisement*.

Resign'd
To sad necessity, the cock foregoes
His wonted strut; and, wading at their head
With well-consider'd steps, seems to resent
His alter'd gait and stateliness *retrench'd*.

Cowper. *The Task*, book v.

All ancient books, having been preserved by transcription, were liable, through ignorance, negligence, or fraud, to be corrupted in three different ways, that is to say, by *retrenchings*, additions, and alterations.

Harris. *Philological Inquiries*.

RETRIBUTE, } Fr. *retribuer*; It. *retribuere*;
RETRIBUTION, } Sp. *retribuir*; Lat. *retribuere*, (*re*,
RETRIBUTORY. } and *tribuere*, to give to three, (*tri-*
bus,) to part, to apportion.) See DISTRIBUTE.

To return the part, portion, or allotment; generally, to return, to restore, to requite, to repay, to remunerate.

We maie note and learne. First to consider and learne the righteous *retribution* and wrath of God from heauen vpon all iniquitie and vnrighteous dealing of men.

Fox. *Actes*, &c. fol. 155.

I came to tender you the man you have made,
And like a thankful stream to *retribute*
All you, my ocean, have enrich'd me with.

Beaumont and Fletcher. *The Queen of Corinth*, act iii. sc. 2.

Indeed, she is not dead! but laid to sleepe
In earth, till the last trumpe awake the sheepe
And goates together, whither they must come
To heare their judge and his eternall doome;
To have that finall *retribution*,
Expected with the fleshe's restitution.

Ben Jonson. *Elegie on Lady Digby*.

Such a theism as acknowledges not onely a God or omnipotent understanding being, but also natural justice and morality founded in him and derived from him; nevertheless no liberty from necessity anywhere and therefore no distributive or *retributive* justice in the world.

Cudworth. *Intellectual System. Preface*, p. ii.

Neither is it the pleasure of the Almighty to defer the *retri-*

butory comforts of his mourners till another world; even here he is ready to supply them with abundant consolations.

Hall. *Remains*, p. 183.

But yet in the state of nature one man comes by no absolute or arbitrary power to use a criminal, when he has got him in his hands, according to the passionate heats or boundless extravagancy of his own will, but only to *retribute* to him, as far as calm reason and conscience dictate, what is proportionate to his transgression.

Locke. *Of Civil Government*, ch. ii. sec. 8.

The taxes then given were given by way of *retribution*; which was generally the method in her time.

Bolingbroke. *Works*, vol. ii. p. 268. *Remarks on the History of England*.

If vice receiv'd her *retribution* due

When we were visited, what hope for you?

Cowper. *Expostulation*.

RETRIEVE, *v.* } To *retrive*, Skinner says, is to
RETRIEVER, *n.* } find again. Fr. *retrouver*; It.

RETRIEVABLE. } *ritrovare*, (*re*, and *trouver*, to
find; Ger. *treffen*.) See CONTRIVE.

To find again; to discover, to recover, restore, regain, repair.

For their boundless running on often so confounds the reader that, having once lost himself, [he] must either give off unsatisfied, or uncertainly cast back to *retrieve* the escaped sense, and to find way again into his matter.

Daniel. *Defence of Rhyme*.

But Fame said, Take heed how you lose me, for if you do, you will run a great hazard never to meet me again, there's no *retrieving* of me.

Howell. *Letter* 14. book ii.

We'll have a flight at mortgage, statute, band,
And hard but we'll bring wax to the *retrieve*.

Ben Jonson. *Staple of News*, act iii. sc. 1.

He [Beza] avers solemnly that the reformed had been so far from discarding the eucharistical sacrifice, that they only had most strictly preserved it, or rather *retrieved* it, fixing it upon its true and ancient basis.

Waterland. *Works*, vol. viii. p. 271. *The Sacramental Part of the Eucharist explained*.

With this they all were satisfy'd,
As men are wont o' th' biass'd side,
Applauded the profound dispute,
And grew more gay and resolute,
By having overcome all doubt,
Than if it never had fall'n out;
And, to complete their narrative,
Agreed t' insert this strange *retrieve*.

Butler. *The Elephant in the Moon*.

If you hear who it is to be given to, pray let me know; for I interest myself a little in the history of it, and rather wish somebody may accept it that will *retrieve* the credit of the thing, if it be *retrievable*, or ever had any credit.

Gray. *Letter* 28. To Mr. Mason.

RETROACTIVE, Fr. *retro-actif*.

That which can or may *act* backwards, upon things done in time back or past.

It will be said, perhaps, which has been hinted already, that as the death of Christ had a *retroactive* effect on those that lived and died before they were redeemed, so it may be beneficial to those who never heard of it since.

Bolingbroke. *Works*, vol. viii. p. 133. *Fragments*.

His [lord Molesworth's] motion was not literally adopted; but a bill of pains and penalties was introduced, a *retroactive* statute, to punish the offences which did not exist at the time they were committed.

Gibbon. *Memoirs of his own Life*.

RETROCESSION. See to CEDE. Fr. *retrocéder*;
Sp. *retroceder*.

Motion backwards.

This argument is drawn from the stars' *retrocession*.

More. *On the Soul*, part ii. book iii. ch. iii. sec. 66.

RETROCOPIULATION. See COPULATION.

Copulation or coition backwards.

Now from the nature of this position, there ensueth a necessity of *retrocopulation*.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xvii. p. 186.

RETRI-
BUTE.
—
RETRO-
COPULA-
TION.

RETROD.
RETUND.

RETROD, *trodden* backwards.

The pleasing paths of Venus I *retrod*,
No more a mortal.

Cooper. *Theagenes to Sylvia*.

RE'TROGRADE, *v.*

RE'TROGRADE, *adj.*

RETROGRADE'TION,

RETROGRE'SSION.

Fr. *retrograder*; It. *ritro-gradare*; Sp. *retrogradar*;
Lat. *retro-gradiri*, to step
backwards.

To step or go back, to recede, to retire, to return, to revert; to move reversely.

And if he be in the west side in that condicion, than is he *re-trograde*.
Chaucer. *The Conclusion of the Astrolabie*.

Then and not before the numbers begin to be withdrawn, and the planets to go backward and be *retrograde*.

Holland. *Plinie*, book ii. ch. xvi.

Bring new-defended faith against faith known;

Weary the soul with contrarieties;

Till all religion become *retrograde*,

And that fair 'tire the mask of sin be made.

Daniel. *History of Civil Wars*, book vi.

The starres themselves are thought to returne more speedily in their *retrogradation* than in their direct course forward.

Holland. *Plinie*, book ii. ch. xvii.

And thus we see the account established upon the arise or descent of the stars can be no reasonable rule unto distant nations at all, and by reason of their *retrogression*, but temporary unto any one.

Sir Thomas Brown. *Vulgar Errours*, book vi. ch. iii.

When a parliament, acting against the declared sense of the nation, would have appeared as surprising a phenomenon in the moral world, as a *retrograde* motion of the sun or any other signal deviation of things from their ordinary course in the natural world?

Bolingbroke. *Works*, vol. iii. p. 77. *A Dissertation upon Parties*.

And indeed what satisfactory account can be given of the varying lengths and vicissitudes of days and nights, and the eclipses of the sun and moon, the stations and *retrogradations* observed in planets, and other familiar celestial phenomena.

Boyle. *Works*, vol. iii. p. 429. *The Usefulness of Mathematics to Natural Philosophy*.

Two geomantic figures were display'd

Above his head, a warrior and a maid;

One when direct, and one when *retrograde*.

Dryden. *Palamon and Arcite*, book ii.

RETROMI'NGENT, }

RETROMI'NGENCY. }

Lat. *retro*, and *mingens*,
present participle of *mingere*.

See the Quotations.

Except it be in *retromingents*, and such as couple backward.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xvii.

The last foundation was *retromingency* or pissing backward.

Id. *Ib.* p. 186.

RETRUDE, Lat. *re-trudere*, to thrust back. See INTRUDE.

To thrust, shove, or push back.

The term of latitude is breadthlesse line;

A point the line doth manfully *retrude*

From infinite processe; site doth confine

This point; take site away, it's straight a spark divine.

More. *Of the Soul*, part ii. book ii. can. 2. p. 39.

RETUND, Sp. *retundir*; Lat. *re-tundere*; *re*, and *tundere*, to beat or bruise.

To beat or bruise back; to repel; to beat back, *sc.* the edge, and, consequently, to blunt.

This ignorant and conceited confidence of both may be *retunded* and confuted from hence.

Cudworth. *Intellectual System*, book i. ch. iv. p. 627.

This [the skull] is covered with skin and hair which serve to keep it warm, being naturally a very cold part, and also to quench and dissipate the force of any stroke that shall be dealt it, and *re-tund* the edge of any weapon.

Ray. *Of the Creation*, part ii. p. 269.

RETU'RN, *v.*

RETURN, *n.*

RETU'RNER,

RETU'RNLESS.

Fr. *retourner*; It. *ritornare*; RETURN.

Sp. *retornar*, to turn back.

To turn or cause to turn back, REVEAL.

to turn again; to move, to go or come back or again; to revert; to give back, (in return;) to restore; to remit, to repay; to give back an answer, to reply, to report; to render.

The day approacheth of hir *returning*,

That everich shuld an hundred knyghtes bring,

The bataille to darreine, as I you told.

Chaucer. *The Knightes Tale*, v. 2027.

Sins that disceit is ay *returnable*,

Of very force it is agreable,

That therwithall be done the recompence.

Wyat. *The Abused Louer*.

Moche desyred the duches of Lancastre the *retourne* of y^e duke her husbnde, and to here tydynges what conclusyons were takē.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. li. p. 182.

Five daies there be since he (they say) was slaine,

And foure since Florimell the court forwent,

And vowed never to *retourne* againe

Till him alive or dead she did invent.

Spenser. *Faerie Queene*, book iii. can. 5.

My mother-queene (fam'd for her silver feet)

Told me two fates about my death, in my direction meet:

The one, that if I here remaine, t' assist our victorie,

My safe *retourne* shall neuer liue, my fame shall neuer die:

If my *retourne* obtaine successe, much of my fame decayes,

But death shall linger his approach, and I liue many dayes.

Chapman. *Homer. Iliad*, book ix. p. 124.

But I would neuer credit in you both

Least cause of sorrow; but well knew the troth

Of this thine owne *retourne*: though all thy friends

I knew, as well should make *returnlesse* ends.

Id. *Ib.* *Odyssey*, book xiii. p. 206.

Was it the strength of this tongue, valiant lord,

In that black hour that sav'd you from the sword?

Or was my breast expos'd alone to brave

A thousand swords, a thousand ships to save?

The hopes of your *return*!

Dryden. *Ovid. Metamorphoses*, book xiii.

The chapmen that give highest for this can make most profit by it, and those are the *returners* of our money.

Locke

But if the wand'rer his mistake discern,

Judge his own ways, and sigh for a *return*,

Bewilder'd once, must he bewail his loss

For ever and for ever? No—the cross!

Cooper. *Progress of Errour*.

RETZIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: corolla cylindrical, villous on the outside; stigma two-cleft; capsule two-celled, many seeded.

One species, *R. spicata*, native of the South of Africa.

REVE, A. S. *refa*, *ge-refa*, from *rief-an*, to *reave*. Spelman says, *Exactores, quod mulctas regias, et deliquentium facultates, in fiscum raperent, exigerent, deportarent*.

And per is reson as a *reve*. rewarding treuthe.

Piers Plouhman. *Vision*, p. 54.

The *reve* was a slendre colerike man,

His berd was shave as neighe as ever he can.

Chaucer. *Prologue to the Canterbury Tales*, v. 579.

REVEA'L, *v.*

REVEA'LER,

REVEA'LEMENT,

RE'VELATE, *v.*

REVELA'TION.,

Fr. *reveler*; It. *rivelare*; Sp. *re-*

velar; Lat. *revelare*, (*re*, and *velare*),

to discover, to uncover.

To discover, to disclose, to open;

to show openly or manifestly; to

make known.

Honour and glorie be to him that is myghty to conferme ghou bi my gospel and prechyng of Iesus Crist bi the *reuelacioun* of mysterie holdun stille in tymes euerlastyng.

Wiclif. *Romaynes*, ch. xvi.

REVEAL.

REVEL.

For priestes of the temple tellen this,
That dreames been the *reuelacions*
Of Goddes. and als well they tel iwis,
That they been infernalles illusions.
Chaucer. Troilus and Creseide, book v.

Metodre saith to this matere
As he by *reuelacion*
It had vpon a vision.

Gower. Conf. Am. book viii.

But in conclusion tyme *reueled* truthe and old hyd hatred openly
sprange out.

Hall. Henry VI. p. 152. The twenty-fifth Yere.

The God of Daniel and of his company to be the God of and
aboue all goddis and the lorde of all kingis and *reueler* of all
secretes.
Joye. Expositio of Daniel, ch. iii. p. 41.

He sawe it in fayth and had the day of Christ, that is to say,
all those thinges that shoulde chaunce hym, playnely *reuelated*
vnto him, albeit he were dead many hūdred yeaeres before it were
actually fulfilled and *reuelated* vnto y^e world.

Frith. Workes, p. 109. A Booke of the Sacrament.

That you may be knowē not alonely open lyers and blasphemers
of God and his blessed eternal word, but also of his holy saintes and
fathers, vnto whom hee hath *reuelated* by the Scriptures his veritie.
Barnes. Workes, p. 349. Against Holy Scripture to honour Images.

Earely the morrow next, before that day
His ioyous face did to the world *revele*,
They both uprose and tooke their ready way
Unto the church, their praies to appele.
Spenser. Faerie Queene, book iii. can. 2.

Nought could here be done,
But straight was known as soon as once design'd.
Court, council-chamber, closet, all were won,
To be *revealers* of the prince's mind.
Daniel. History of Civil Wars, book vii.

Though kings still hug suspicion in their bosoms,
They hate the causers; love to hear secrets too,
Yet the *revealers* still fare the worse,
Being either thought guilty of ends or weakness.
Shirley. The Merchant's Wife, act i. sc. 3.

If all or most of the truths declared in the Epistles were to be
received and believed as fundamental articles, what then became
of those Christians who were fallen asleep? as St. Paul witnesses
in his first to the Corinthians many were, before these things in
the Epistles were *revealed* to them.
Locke. Works, vol. ii. p. 539. The Reasonableness of Christianity.

In this state of darkness and error, in reference to the true God,
our Saviour found the world. But the clear *revelation* he brought
with him dissipated this darkness; made the one invisible true
God known to the world: and that with such evidence and energy,
that polytheism and idolatry hath no where been able to withstand
it.
Id. Ib. vol. ii. p. 531.

And this is one reason why he permits so many heinous impieties
to be concealed here on earth, because he intends to dignify that
day with the *revelment* of them.

South. Sermon 13. vol. vii. p. 270.

Divine providence, in compassion to the frailty, the imperfection,
and the blindness of human reason, hath been pleased, at sundry
times and in divers manners, to discover and enforce its laws by
an immediate and direct *revelation*. The doctrines thus delivered
we call the *revealed* or divine law, and they are to be found only in
the Holy Scriptures.

Blackstone. Commentaries. Introduction, sec. 2.

RE'VEL, v. } Fr. *resveiller*, (re, and *veiller*, to
RE'VEL, n. } wake, to watch; Lat. *vigilare*.)
RE'VELLER, } To wake or keep awake; sc. in
RE'VELLING, } feasting, dancing, &c.; to spend the
RE'VELRY. } time joyously, mirthfully, wantonly.

See the Quotation from Locke.

Reveille, an awakening, raising, or rousing from sleep,
sc. by beat of drum or otherwise.

— pe kynge's moder Richard
Ariued at pat *riuale*, brouht him busses pritti
Charged with vitale, with gode men and doubti.
R. Brunne, p. 153.

REVEL.

Ther for ich rede *gow riche. reveles* when *ge maken*
For to solace *goure soules. suche mynstrales* to have.
Piers Plouhman. Vision, p. 115.

For which this noble duk, as he well can,
Comforteth and honoureth every man,
And made *revel* all the longe night,
Unto the strange lordes, as was right.
Chaucer. The Knightes Tale, v. 2719.

This *revell*, full of song, and full of daunce,
Last a fortentight, or little lasse.
Id. The Legend of Philomene

Dancen he coulede so wel and jolily,
That he was cleped Perkin *Revelour*.
Id. The Cokes Tale, v. 4368.

The sweetnesse of hir melodie
Made all mine heart in *reuelrie*.
Id. The Romant of the Rose.

A wif he had of excellent beautee,
And compaignable and *revelous* was she.
Id. The Shipmannes Tale, v. 12933.

The sayd men and womon beyng in *revell* toke no regarde vnto
the sacrament, nor dyd vnto it any honour and reuerence.
Fabyan. Chronicle, p. 390.

When we couple the rich deuill to poore Christ, and to sober
vertue *reuell* and drunkennes; to chast sadnes, dissolute and wanton
pleasures.

Vives. Instruction of a Christian Woman, p. 389.

Turn, Towridge, let us back to the Sabrinian sea,
Where Thetis' handmaids still, in that recoursesful deep,
With those rough gods of sea continual *revells* keep.
Drayton. Poly-olbion, song 1.

— And in the end agreed
That at a masque and common *revelling*
Which was ordain'd, they should perform the deed.
Daniel. History of Civil Wars, book iii.

For that brave sun, the father of the day,
Doth love this earth, the mother of the night,
And like a *reveller* in rich array
Doth dance his galliard in his leman's sight.
Davies. On Dancing.

Lastly, where keep the winds their *revelry*,
Their violent turnings, and wild whirling hays,
But in the air's translucent gallery? *Id. Ib.*

Above the rest our Britain held they dear,
More solemnly they kept their sabbaths here,
And made more spacious rings, and *revel'd* half the year.
Dryden. The Wife of Bath.

To shew the morn her passage to the east,
Now Birtha's dawn, the lover's day, appears!
So soon love beats *revellies* in her breast;
And like the dewy morn she rose in tears.
Davenant. Gondibert, book iii. can. 5.

Through all the world around
Sound a *reveille*, sound, sound,
The warrior god is come.
Dryden. Alexander's Feast. Secular Musque.

Κῆποι, revellings, were among the Greeks, disorderly spending of
the night in feasting with a licentious indulgence to wine, good
cheer, musick, dancing, &c.

Locke. Paraphrase on Galatians, ch. v. note x.

At fall of eve the fairy people throng,
In various game and *revelry*, to pass
The summer night, as village-stories tell.
Thomson. Summer.

— Yonder stars: for other ends they shine,
Than to light *revellers* from shame to shame,
And, thus, be made accomplices in guilt.
Young. The Complaint. Night 9

RE-
VENGE.

REVE'NGE, v.

REVE'NGE, n.

REVE'NGEABLE,

REVE'NGEFUL,

REVE'NGEFULLY,

REVE'NGEFULNESS,

REVE'NGELESS,

REVE'NGEMENT,

REVE'NGINGLY.

Fr. *revenge*; It. *vengiare*,
vindicare; Sp. *vengar*; Lat.
vindicare, *vim dicere*, to de-
nounce violence. See AVENGE,
and VENGEANCE.

To inflict pain, to punish in
retaliation of an injury; to retali-
ate an injury or wrong; to gratify
the desire of punishment for
wrong received; to punish with malignity or malice.

As soone as we knewe of your commynge, we lepte on our horses
and departed to come to serue you, and to ayde to *revenge* the
dethe of our fathers, whome Richarde of Burdeaux hathe caused
to be slayne.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 240. p. 743.

He prayed, therefore, y^t he might alwaies be victoror, and that
the empire of the whole worlde myghte come into his handes, re-
quiringe that hee woulde not neglecte to take *revengeance* of so
foule an act.

Brende. Quintus Curtius, book v. fol. 136.

Likewise as of men, he who so is most like stomacked vnto a
woman, nor lusty couraged, wil remember iniurie longest, and seeke
for vengeance most violently, nor can be content with a meane
revengeance.

Vives. Instruction of a Christian Woman, fol. 256.

At length with few words, for her words were choaked up with
the rising of her *revengeful* heart, she ran down, and with her own
hands saddled a mare of hers.

Sidney. Works, vol. ii. book iii. p. 646. Arcadia.

For they were brought to the king of the country, a tyrant also,
not through suspicion, greediness, or *revengefulness*, as he of
Phrygia, but, as I may term it, of a wanton cruelty.

Id. Ib. vol. i. book ii. p. 229.

But God, which is a iust *reuenger* of all falsehoode and wrongs,
woulde not suffer that wretch long to liue upon earth.

Fox. Actes, &c. fol. 1112. Henry VIII.

They nor none of theyr naciō, as farre as they may lette it, shall
not hurt nor harme any man of y^e couñtre of Flaunders at any tyme
hereafter in *reuēgemēt* of this warre.

Fabyan. Chronicle, p. 526.

Ne ought the praise of prowesse more doth marre
Then fowle *revengeing* rage, and base contentious iarre.

Spenser. Faerie Queene, book ii. can. 2.

So long they fight, and full *revenge* pursue,
That, fainting, each themselves to breathe lette;
And, ofte refreshed, battell oft renewe.

Id. Ib. book i. can. 7.

Revenge is a kind of wilde justice; whiche the more man's
nature runnes to, the more ought law to weed it out. For as for
the first wrong, it doth but offend the law; but the *revenge* of that
wrong putteth the law out of office.

Bacon. Essaies. Of Revenge.

The buzzard, for he doted more
And dared lesse than reason,
Through blind bace loue induring wrong
Revengeable in season.

Warner. Albion's England, book vii.

A thousand ships stuf with *revengeful* fire
To Tenedos the proud Ægean lades,
Whence sprang those high immortal Iliads.

Drayton. The Owl.

Revengefulness is that passion which ariseth from an expectation
or imagination of making him that hath hurt us find his own action
hurtfull to himself, and to acknowledge the same; and this is the
height of *revenge*.

Hobbes. Works, ch. ix. p. 18. Human Nature.

MEN. A guard! a guard! we, full of hearty tears,
For our good father's loss,
(For so we well may call him,
Who did beseech your loves for our succession,
Cannot so lightly over-jump his death,
As leave his woes *revengeless*.)

Marston. The Malcontent, act iv. sc. 3.

Under those bright rayes,
In which heauen's feruour hurles about the dayes;
Must I no more shine his *reuenger* now;
Such as of old, the Iliou overthrow
Witnest my anger.

Chapman. Homer. Odyssey, book xi. p. 174.

With that he drives at them with dreadfull might,
Both in remembrance of his friends late harme,
And in *revenge*ment of his owne despight.

Spenser. Faerie Queene, book iv. can. 4.

I haue belyed a lady,
The princesse of this country; and the ayre on't
Reuengingly enfeebles me, or could this carle,
A very drudge of nature's, have subdu'de me
In my profession?

Shakspeare. Cymbeline, fol. 392.

Repenting England this *revengeful* day
To Philip's manes did an offering bring;
England, which first, by leading them astray,
Hatch'd up rebellion to destroy her king.

Dryden. Annus Mirabilis.

Ev'n he, the king of men, the foremost name
Of all the Greeks, and most renown'd by fame,
The proud *revenger* of another's wife,
Yet by his own adulteress lost his life.

Id. Virgil. Æneid, book xi.

To despair is not only to reject the mercy which God offers, but
to question his truth and sincerity, to slight his patience, to dispa-
rage his goodness, and to look upon him as a most *revengeful* and
implacable being.

Stillingsfleet. Sermon 9. vol. ii. p. 504.

Revenge impatient rose:
He threw his blood-stain'd sword in thunder down,
And, with a withering look,
The war-denouncing trumpet took,
And blew a blast so loud and dread,
Was ne'er prophetic sound so full of woe.

Collins. The Passions.

Revenge is an insatiable desire to sacrifice every consideration of
pity and humanity to the principle of vindictive justice.

Cogan. On the Passions, vol. i. p. 173.

REVENUE, n., Fr. *revenue*, from *revenir*, to come
back, to return.

The rent; the return of gain or profit; the income.

Whereupon it commeth to passe, that vnto this day the whole
island is the king's owne fee simple, and that all the *reuenues*
thereof pertaine vnto him.

Hakluyt. Voyages, &c. vol. i. p. 10. King of Man.

And it is sayde that when king Rufus heard of this aduenturous
deed, he sent for the sayde knight, and gaue him certeyne of his
landes and *reuenues* in Northumberland, and commaunded him
euer afterwarde to be called Perseye, because he had *perced* or
bored out the king's eye.

Grafton. William Rufus. The sixth Yere.

Those hold that, by the lessening our money one-fifth, all people
who are to receive money upon contracts already made will be de-
frauded of twenty per cent. of their due: and thus all men will lose
one-fifth of their settled *reuenues*, and all men that have lent money
one-fifth of their principal and use.

Locke. Works, vol. ii. p. 107. On Raising the Interest, &c.

The king's ordinary *revenue* is such as has either subsisted time
out of mind in the crown, or else it has been granted by parliament,
by way of purchase or exchange for such of the king's inherent
hereditary *reuenues* as were found inconvenient to the subject.

Blackstone. Commentaries, book i. ch. viii.

The *revenue* derived from labour is called wages; that derived
from stock, by the person who manages or employs it, is called
profit.

Smith. Wealth of Nations, vol. i. book i. ch. vi. p. 20.

REVERBERATE, v. } Fr. *reverberer*; It. *river-*
REVERBERATE, adj. } *berer*; Sp. *reverberar*; Lat.
REVERBERATION, } *reverberare*, (re, and verbe-
REVERBERATORY. } rare, to beat,) to beat back.

To beat or strike back; to reject, to repel, sc. the
sound or noise; to re-sound, to re-echo.

And every soun

N'is but of aire *reverberation*.

Chaucer. The Clerkes Tale, v. 7815.

RE-
VENGE.
—
REVER-
BERATE.

REVERBERATE. For the perpendicular beames reflect and *reuerberate* in themselves, so that the heat is doubled, euery beame striking twice, and by vniting are multiplied.
 Hakluyt. *Voyages*, &c. vol. iii. p. 49. *The Temperature of Regions*.

We suppose these great indrafts doe growe and are made by the *reuerberation* and reflection of that same current which, at our comming by Ireland, met and crossed vs.

Id. *Ib.* vol. iii. p. 81. *M. Frobisher*.

Thy yongest daughter do's not loue thee least,
 Nor are those empty-hearted, whose low sounds
Reuerbe no hollownesse.

Shakspeare. King Lear, fol. 284.

The lofty hills, this while attentively that stood,
 As to survey the course of every several flood,
 Set forth such echoing shouts which (euery way so shrill)
 With the *reverberate* sound the spacious air did fill.

Drayton. Poly-olbion, song 9.

Both audibles and visibles will be *reverberate*; as in mirrours,
 and in ecchos.

Bacon. Natural History, sec. 261.

To the reflexion of visibles small glasses suffice, but to the *reuerberation* of audibles are required greater spaces, as hath likewise been said before.

Id. *Ib.* sec. 270.

Moreover, the sound made by *reuerberation* of the aire, which men call *eccho*, is hurtfull unto them; for they feare mightily that resounding noise, comming with a double stroke.

Holland. Plinie, book xi. ch. xix.

Which shadows [in Plato's cave] they concluded to be the only substances and realities, and when they heard the sounds made by those bodies that were betwixt the light and them, or their *reuerberated* ecchos, they imputed them to those shadows which they saw.

Cudworth. Intellectual System, book i. ch. i. p. 19.

Such an aggregate of corpuscles as should, without breaking such frail bodies as glasses, be able in its passage thorough them, that is, in the twinkling of an eye, to melt them; which to do is wont, even in our *reuerberatory* furnaces, to cost the active flames a pretty deal of time.

Boyle. Works, vol. iii. p. 683. *Of the great Efficacy of Effluuiums*.

REVERDURE, *It.* *riverdire*, *Fr.* *reverder*, to flourish or wax green again. *Cotgrave*.

The swete tyme of Marche was come, and the wyndes were appeased, and y^e waters swaged of their rages, and the wodes *reuerdured*.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 159. p. 438.

REVE'RE, *v.* *Fr.* *reuerer*, *reuerencer*; *It.* *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'ERENCE, *v.* *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'ERENCE, *n.* *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'ERENCER, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'EREND, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'ERENT, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 REVERE'NTIAL, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 REVERE'NTIALLY, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 RE'VE'ERENTLY, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.
 REVE'RER, *riverire*; *Sp.* *reverenciar*; *Lat.* *reuereri*, (*re*, and *uereri*; *ve*, *i. e.* *valde*, and *rer*;) to think much and again of; to regard or respect much and again.

ence, worship or adoration,) to worship, to adore, to venerate.

And ich a roos ryght up with þat. and *reverencede* hym fafre.
Piers Plouhman. Vision, p. 228.

Reson *reverentliche*. by for al þe reame
 Prechede and provede. þat þuse pestilences
 Was for pure synne. to punyshe þe puple.

Id. *Ib.* p. 81.

Which in the daies of his fleische offride with greet cry & teeris, preieris, and bisechingis to hym that myghte make him saaf fro deeth, and was herde for his *reuerence*.

Wiclif. Ebrewis, ch. v.

And folien soch folke than that wenen, that thilke thing that is right good, that it is eke right worthy of honor and of *reuerence*.

Chaucer. Boecius, book iii. *De Consolatione*.

And they with humble herte ful buxumly
 Kneling upon hir knees ful *reverently*
 Him thonken all.

Id. *The Clerkes Tale*, v. 7999.

VOL. XXVII.

Upon a tyme and as he drough
 Towarde the woodde, he sigh beside
 The great gastly serpent glide,
 Till that she cam in his presence,
 And in hir kinde *reuerence*
 She hath hym do.

Gower. Conf. Am. book v.

Euery vtwarde *reuerent* behaiour is a token of an inwarde worship and *reuerence* of the same thing where vnto thou knelest.

Joye. Expositio of Daniel, ch. iii. fol. 36.

And albe it that he [Charlis the 8.] refusyd hyr *reuerence*, and sayde that she [Pucelle] erryd in hyr choyse.

Fabyan. Chronicle, ch. viii. Anno 6.

The pope will be called most holy, hys cardinales most *reuerend*, hys byshoppes *reuerend*, hys abbottes and priors most, and other glorious titles haue they that passe master farre.

Frith. Workes, p. 105. *An Antithesis between Christ and the Pope*.

The ancient maner of the Romans from our forefathers hath beene, that in such case, first they purge themselves with water, then for a little they absteyne *reuerendlie*, and so resort to the church.

Fox. Actes, &c. fol. 106.

Wherfore when thou geuest any vtwarde *reuerence* to an image, thou shewest thysel with inwarde worship to *reuerence* y^e same.

Joye. Expositio of Daniel, ch. iii. fol. 36.

Desiring instantly first, second, and third, according to the lawes, letters *reuerentiall* or dimissories, to bee giuen and deliuered vnto mee in this behalfe.

Fox. Actes, &c. fol. 1209. *Edward VI.*

He entertained the two quenes with those vyrgins that were of excellent beautie so *reuerentlye*, as yf they had been his sisters.

Brende. Quintus Curtius, book iii. fol. 45.

There fayrely them receives a gentle squyre,
 Of myld demeanure and rare courtesee,
 Right cleanly clad in comely sad attyre;
 In word and deede that shew'd great modestee,
 And knew his good to all of each degree,
 Hight *Reverence*.

Spenser. Faerie Queene, book i. can. 10.

By then I was half way advanc'd in the room,
 His worship most *rev'rendly* rose.

Cotton. A Voyage to Ireland, can. 2.

A fearful vision doth his soul molest;
 Seeming to see in *rev'rent* form appear
 A fair and goodly woman all distrest;
 Which, with full-weeping eyes and rented hair,
 Wringing her hands, as one that griev'd and pray'd.

Daniel. History of Civil Wars, book i.

Bid yonder man come home to me and dine,
 (Quoth I) bespeak him *reverently* you see;
 Scorn not his habit; little canst thou tell,
 How rich a mind in those mean rags doth dwell.

Drayton. The Legend of Thomas Cromwell.

And they are M. Antonius his precepts, *ἀιδῶ θεῶν*, *revere* the gods, and *ἐν ἀπάσι θεῶς ἐπιπαλῶ*, in every thing implore the aid and assistance of the gods.

Cudworth. Intellectual System, book i. ch. iv. p. 426.

The Greeks in shouts their joint assent declare,
 The priest to *reverence*, and release the fair.

Pope. Homer. Iliad, book i.

About this time, says he, [Polybius,] the Athenians were governed by two men, quite sunk in their affairs; had little or no commerce with the rest of Greece, and were become great *reverencers* of crowned heads.

Swift. Works, vol. iii. ch. ii. p. 31. *Contest and Dissentions in Athens and Rome*.

But when the Fates, in fullness of their rage,
 Spurn the hoar head of unresisting age,
 In dust the *reverend* lineaments deform,
 And pour to dogs the life-blood scarcely warm;
 This, this is misery!

Pope. Homer. Iliad, book xxii.

A *reverential* silence may well become us in so awful a subject, in which imagination has nothing to do, and of which our most refined and elevated thoughts are infinitely unworthy.

Waterland. Works, vol. i. part ii. p. 250. *A Defence of some Queries. Query 23.*

Tho' this action of his driving the buyers and sellers out of the temple [as I said] will not warrant us to do the same, because we

REVERE have not the same authority that he had, yet it will teach us that we ought every one of us to behave ourselves *reverently* in the house of God. *Sharp. Works*, vol. v. p. 254. *Discourse 9.*

RE-VERSE.

When the divine revelations were committed to writing, the Jews were such scrupulous *reverers* of them, that it was the business of the Masorites to number not onely the sections and lines but even the words and letters of the Old Testament,

Government of the Tongue.

They made him an object of terrour more than of awe and *reverence*, and their religion was a system of the rankest superstition; for nothing can be more true than what St. Austin quotes somewhere from Varro, that they who are religious *revere*, and the superstitious fear, God.

Bolingbroke. Works, vol. viii. p. 423. *Fragments.*

He [Plato] made the system of an intellectual world, and, in the respect I am going to mention, as absurdly as many others, but more *reverentially* toward the Supreme Being.

Id. Ib. vol. v. p. 256. *On Human Knowledge. Essay 1.*

When we presume to talk of the Supreme Being, it becomes us to proceed humbly and *reverentially*, with a consciousness that our conceptions are all drawn from experience of what has passed among ourselves; and the same experience may evince that every thing passing with us is by no means applicable to him.

Search. Light of Nature, vol. ii. part iii. ch. xxiv. p. 29.

REVERIE, Fr. *resver*, to *rave*. *Resverie*, a raving, idle talking, dotage, trifling, folly, vain fancy, fond imagination. *Cotgrave.*

See the Quotation from Locke.

But this is an excursion so wilde or so wide, that I am awakened, as it were with a fright, out of this *reverie* or dream.

More. Conjectura Cabbalistica, ch. xi. *Appendix.*

When ideas float in our mind without any reflection or regard of the understanding, it is that which the French call *resvery*; our language has scarce a name for it.

Locke. On Human Understanding, book ii. ch. xix.

Revery and chicane! What, because the queen has a tenderness for men of true religion, therefore she must have the like for men of no religion!

Waterland. Works, vol. vi. p. 292. *A Defence of the Bishop of St. David's.*

A traveller, (says Mr. H.) who describes the religious tenets of any nation, but does not dive into the mysteries of their theology, dishonestly imposes his own *reveries* on the world, and does the greatest injury and violence to letters and the cause of humanity.

Mickle. Inquiry into the Bramin Philosophy.

REVE'RSE, *v.*

REVE'RSEDNESS,

REVE'RSIBLE,

REVE'RSELY,

REVE'RSION,

REVE'RSIONARY,

REVE'RSIONER,

REVE'RT, *v.*

REVE'RT, *n.*

REVE'RTING, *n.*

REVE'RTIVE, *adj.*

Fr. *revertir*; It. *revertire*; Sp. *reverter*; Lat. *revertere*, (*re*, and *vertere*,) to turn back.

To turn back or return; to turn over, to overturn; to turn in a contrary or opposite direction or position; to come or bring back again, to change or alter to the contrary; to repeal. See the Quotation from Blackstone.

To *reverse* and to *revert* differ only in the application.

That pity was to heare the soun,
And the warbles of their throtes,
And the complaint of their notes,
Which from joy cleane was *reversed*.

Chaucer. Dream, p. 392.

But froward fortune and perverse,
When high estates she doth *reverse*,
And maketh hem to tumble doune
Off her whele with sodaine tourne.

Id. Romant of the Rose, v. 5468.

Men moun in olde bookes rede,
Of many a man, more of authoritee
Than ever Caton was, so mote I the,
That all the *revers* sayn of his sentence.

Id. The Nonnes Preestes Tale, v. 14910.

The strength of John they vnderstond,
The grace in which they say they stond,
That doeth the sinfull folke conuert,
And him to Jesu Christ *reuert*.

Chaucer. The Romant of the Rose.

By the path of penaunce yet woll I *reuert*
To the well of grace, mercy there to fetch.

Id. The Remedy of Loue.

Whall shall befall here afterwarde
God wote, for nowe vpon this tide
Men see the worlde on euery side
In sondrie wise so diuersed
That it well nigh stant all *reuersed*.

Gower. Conf. Am. The Prologue.

Fram Troie as he goth home ageine
By ship, he founde the sea diuerse,
With many a windie storme *reuerse*.

Id. Ib. book vi.

Wherby he fyndyng the pore woman to susteyn wronges,
reuersed his iugement, and, according to truth and iustyce, gaue to her that she demanded.

Sir Thomas Elyot. The Governour, book ii. ch. v. fol. 110.

None of them all lacked, insomuch that, after the feast was done, the Apostles by the Lord's commandement gathered together the *reversion*, and therewith fylled twelue baskettes.

Udall. Erasmus. St. Marke, ch. vi. fol. 153.

And so there the *reuercion* of the countie of Bloyes after his discease was selde for the somme of two hundred thousande frankes.

Lord Berners. Froissart. Cronycle, ch. 182. p. 553.

But [he] was deprived of all his dignitie, for some default (I cannot tell what) in his answer; and furthermore, after his *reversion* home, was spoiled also of all that he brought with him.

Fox. Actes, &c. fol. 152.

If thei woulde sende an armye into Gascoyne, the Gascoynes woulde *reuerte* and turne againe to the Englishe part.

Hall. Henry VI. fol. 164. *The thirtieth Yere.*

Where be the batteilles, where the shield and speare,
And all the conquests which them high did reare,
That matter made for famous Poets verse,
And boastfull men so oft abasht to hear?
Beene they all dead, and laide in dolefull herse?
Or doen they only sleepe, and shall again *reverse*?

Spenser. Faerie Queene, book iii. can. 4.

For the faire damzell from the holy herse
Her love-sicke hart to other thoughts did steale;
And that old dame said many an idle verse,
Out of her daughter's hart fond fancies to *reverse*.

Id. Ib. book iii. can. 3.

The king likewise in the *reuersall* of the attainders of his partakers, and, discharging them of all offences incident to his service and succour, had his will; and Acts did passe accordingly.

Bacon. King Henry VII. p. 12.

If the judgement be given by him that hath authority, and it be erroneous, it was at common law *reversible* by writ of error.

Hale. History of Pleas of the Crown, ch. xxvi.

ANT. You have not beene in law (friend Delio)

Nor in prison, nor a suitor at the court,

Nor beg'd the *reversion* of some great man's place.

Webster. The Duchesse of Malfy, act iii. sc. 1.

By which means, and quitting the king of his promised *reversionary* officers and a piece of honest policy, (which I have not time to relate,) he got a grant of it from his majesty.

Reliquiae Wottonianae, p. 26.

For which his faith with her he fast engaged,
And thousand voves from bottome of his hart,
That, all so soone as he by wit or art
Could that atchieve whereto he did aspire,
He unto her would speedily *revert*.

Spenser. Faerie Queene, book iv. can. 6.

This eagle (whose prophecies among the Britons, with the later of Merlin, have been of no less respect than those of Bacis were to the Greeks, or the Sybillines to the Romans) foretold of a *revert ing* of the crown, after the Britons, Saxons, and Normans, to the first again.

Selden. Illustrations of Drayton's Poly-olbion, song 2.

RE-VERSE.

RE-
VERSE.
—
REVER-
SION.

The bending head, deprest
Beneath his helmet, nods upon his breast;
His shield *revers'd* o'er the fallen warrior lies;
And everlasting slumber seals his eyes.

Pope. *Homer. Iliad*, book xiii.

A *reverse* often clears up the passage of an old poet as the poet often serves to unriddle a *reverse*.

Addison. *Works*, vol. iii. p. 27. *On ancient Medals*.

So many candidates there stand for wit,
A place at court is scarce so hard to get;
In vain they crowd each other at the door;
For ev'n *reversions* are all begg'd before.

Dryden. *Epistle* 4.

After his death there were *reversal* letters found among his papers.

Burnet. *Own Times*, ch. ii.

This is properly credible which is not apparent of itself, nor certainly to be collected, either antecedently by its cause, or *reversely* by its effect, and yet though by none of these ways hath the attestation of a truth.

Pearson. *On the Creed*, art. 2.

All things *reverted* to their primitive order and regularity, calm, quiet, and composed.

Waterland. *Works*, vol. viii. p. 458. *A Thanksgiving Sermon*.

Till again
The tide *revertive*, unattracted, leaves
A yellow waste of idle sands behind.

Thomson. *To the Memory of Sir Isaac Newton*.

The expressions therefore of seeking the Lord and delighting in his messenger are ironical, expressing the very *reverse* of that which they seem to affirm.

Horsley. *Sermon* 31. vol. iii. p. 26.

Each court of appeal, in their respective stages, may, upon hearing the matter of law in which the error is assigned, *reverse* or affirm the judgment of the inferior courts, but none of them are final, save only the house of peers, to whose judicial decisions all other tribunals must therefore submit and conform their own. And thus much for the *reversal* or affirmance of judgments at law.

Blackstone. *Commentaries*, book iii. ch. xxv.

He took out of his pocket this letter, for want of a better supply of paper at hand; and on the cover of it, over the direction, which now stands among the notes, intermixed *reversedly* with them, noted from Dr. London's mouth the account which we had to communicate.

Lowth. *Life of Wykeham*, sec. 9.

Sir Edward Coke describes a *reversion* to be the returning of land to the grantor or his heirs after the grant is over.

Blackstone. *Commentaries*, book ii. ch. ii.

A man leaseth lands to another for years, and, after the lessor or *reversioner* entereth, and maketh a feoffment in fee, or for life, of the same lands to a stranger.

Id. *Ib.* vol. ii. book iii. ch. xi.

Fleet through the winding shades in rapid flight
The nymphs, as wing'd with terrour, fly their sight.
Fleet though they fled, the mild *reverted* eye
And dimpling smile their seeming fear deny.

Mickle. *The Lusiad*, book ix. v. 848.

REVERSION, in *Law*, is where a man seised in fee simple or of any other estate in lands, tenements, or hereditaments, grants part of such his estate to another, in which case, upon the determination of the part of the estate so granted, the lands or other property *revert* to the grantor. Thus, if A seised in fee conveys to B for a year, here during the year B is possessed of the land for the term, and A is seised in fee of the residue of the estate expectant on the year, which is called his *Reversion*. A *Reversion* is very like a *Remainder*, the difference being that when the party who creates the particular estate reserves to himself the remnant of the estate expectant on the determination of the particular estate, such remnant is called a *Reversion*; but when by the same conveyance he creates a particular estate and gives the remnant expectant thereon to a third person, then the remnant is called a *Remainder*. Thus if A being seised in fee conveys to B for life, the residue of the estate

expectant on B's death is called a *Reversion*; but if A being seised in fee conveys the land limiting it to B for life, and on B's death then to go to C, in this latter case C's interest is called a *Remainder*. See *REMAINDER*.

REVE'ST, } Fr. *revester*; It. *rivestire*; Sp. *re-*
REVE'STURE, } *vestir*; Lat. *revestire*, to clothe again;
REVE'STRY. } to resume a *vest* or clothing.

To put on a clothing or garment again, an additional garment; to dress or attire again.

Revestry, now called *vestry*, the dressing or attiring room.

The gode man vor drede to church wende anon,
& reuestede him by the auter.

R. Gloucester, p. 537.

Ich sawe þe feld ful of folk. fram ende to þe oþer
And reson *revested*. rýgt as a pope.

Piers Plouhman. *Vision*, p. 81.

Whome Philbert seeing to be *reuested*, came and pluckt his garments from his backe with zeale and vehemencie.

Fox. *Actes*, &c. fol. 836. Henry VIII.

And before the church of our lady the bysshope of Parys was *reuested* with the armes of our Lorde Jesu Christ, with all the colledge, and great nōbre of other of the clergy.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 221.

And where the stole is worne nexte vnto the albe, whan the preest is *reuested* to masse, &c.

Fabyan. *Chronicle*, ch. 221. p. 243.

A gentleman called maister Thomas Hussey of Lincolnshire, which was once an officer in ye duke of Northfolk's house, did come into the *reuestrie* to inquire for one Stoning.

Fox. *Actes*, &c. fol. 1461. *Queene Mary*.

Then they went to the *reuestry*, and opened the chalices, corporas cases, and chrismatory, and viewed all those things.

Id. *Ib.* fol. 1778.

The aultars of this chapell were hanged with riche *reuesture* of clothe of gold of tissue embroudered with pearles.

Hall. Henry VIII. fol. 74. *The twelfth Yere*.

Her nathelesse

Th' enchaunter finding fit for his intents
Did thus *revest*, and deckt with dew habiliments.

Spenser. *Faerie Queene*, book ii. can. 1.

REVICTIION, i. e. a revival.

Wo is me, (that no error may be wanting to this prodigious age,) do we live to see a *reviction* of the old sadducism so long since dead and forgotten.

Hall. *The Great Mystery of Godliness*, sec. 9.

If we suppose our present calculation, the phoenix now in nature will be the sixth from the creation, but, in the middle of its years; and if the rabbines' prophecy succeed, shall conclude its daies, not in its own, but the last and general flames, without all hope of *reviction*.

Sir Thomas Brown. *Vulgar Errours*, book iii. p. 168.

REVI'CTUAL, v. } *Re*, and *victual*, Fr. *victuailles*;
REVI'CTUALLING, n. } It. *vettovagliare*, *vettovaglie*; Sp. *vitualia*; Lat. *victus*, food.

To supply or furnish again with food.

He suffered the erle of Oxenforde to *revitaille* the Mounte.

Leland. *Extractes out of a Cronique*, vol. ii. p. 580.

And the daye that I gaue it vp, it was fournysshed with *vytayles* to haue been kepte seuen yere without any *reuytaylynge*.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 170. p. 481.

All the premisses considered with diuers other things, I determined to furnish the Moonelight with *revictualling* and sufficient men, and to proceede in this action as God should direct me.

Hakluyt. *Voyages*, &c. vol. iii. p. 106. M. John Davis.

REVIE, Fr. *renvier*, to *revy* at play. Cotgrave. "To *vie* was to hazard, to put down a certain sum upon a hand at cards; to *revie* was to cover it with a larger sum, by which the challenged became the challenger,

REVIE. and was to be *revied* in his turn, with a proportionate increase of stake." Gifford. This explains the usage, but does not account for it. See VIE.

REVILE. To *vie* and *revie* are (generally) to challenge and retort, to criminate and recriminate.

WEL. 'Slight, here's a trick *vied* and *revied*.

Ben Jonson. *Every Man in his Humour*, act iv. sc. 1.

L. C. J. Nay, Mr. Sidney, we must not have *vying* and *revying*, I asked you before what you had to say.

State Trials, 35 Charles II. 1683. Algernon Sidney.

REVIE'W, v. } Fr. *revoir*; It. *rivedere*; Sp. *re-*
REVIE'W, n. } *veer*; Lat. *revidere*, to *view* or look
REVIE'WER. } back upon.

To look back, to look at or see again; to inspect or investigate again; to reconsider; to examine carefully, critically.

The plants which, when he went, were growing greene,
Retaine their former liu'ries to be seene,
When he *reviews* them; his expected eye
Preserud their beauty, ready oft to die.

Beaumont. *Of the Prince's Returne*.

Count Gondomar's coming was a great advantage unto me, who hath done me many favours, besides a confirmation of the two sentences of *view* and *review*, and of the execution against the viceroy.

Howell. *Letter* 14. book i. sec. 3.

And back the drooping war-ship comes again,
Dispirited, and thin; her sons asham'd
Thus idly to *review* their native shore;
With not one glory sparkling in their eye,
One triumph on their tongue.

Thomson. *Britannia*.

Who, form'd to dullness from their very youth,
Lies of the day prefer to gospel truth,
Pick up their little knowledge from *reviews*,
And lay out all their stock of faith in news.

Churchill. *The Author*.

Who shall dispute what the *reviewers* say?
Their word's sufficient; and to ask a reason,
In such a state as theirs, is downright treason.

Id. *The Apology*.

REVILE, v. } Fr. *vilener*, *re* and *vile*; *quas*
REVILE, n. } *vilem reputare*. Minshew. *Alicui*
REVILEMENT, } *ut homunculo vili et nullius pretii*
REVILER, } *insultare*. Skinner.
REVILING, n. } To treat, act towards, speak of,
REVILINGLY. } as *vile*, mean, or base; to apply
degrading, debasing, contumelious, or opprobrious
language.

be tentes down he hew, Isaac to *reuite*,
& for non him knew, ashaped he þat while.

R. Brunne, p. 161.

And tolde hem in what degree
His father, and his bretherne bothe,
Whiche as he sayd weren wrothe,
Hym had beaten and *reuided*,
And out of Rome for euer exiled.

Gower. *Conf. Am.* book vii.

Therefore see that thou not once desire vengeance, but remit all vengeance vnto God, as Christ did, which (sayth Peter, 1 Pet. ii.) whē he was *reuided*, *reuided* not again, neyther threatned when he suffered.

Tyndall. *Workes*, p. 93. *The Wicked Mammon*.

Who haue applied themselues to ridde their countrey from dishonor, to auouch the trueth, and to shake off the yoke of railers and *reuilers*.

Hakluyt. *Voyages*, &c. vol. i. p. 553. *The True State of Island*.

Yet they endured all with patience milde,
And unto rest themselves all onely lent,
Regardlesse of that queane so base and vilde
To be uniuistly blam'd and bitterly *reuidde*.

Spenser. *Faerie Queene*, book iv. can. 8.

Yet n'ould she stent
Her bitter rayling and foule *reuilment*.
Spenser. *Faerie Queene*, book ii. can. 4.

Past these *reuiles*; his manlesse rudenesse spurn'd
Diuine Vlysses.
Chapman. *Homer. Odyssey*, book xvii. p. 263.

The gracious Judge without *revile* repli'd:
My voice thou oft hast heard, and hast not fear'd,
But still rejoy'ct, how is it now become
So dreadful to thee?

Milton. *Paradise Lost*, book x. v. 118.

Then thus the prince: To these shall we afford
A fate so pure as by the martial sword?
To these, the nightly prostitutes to shame,
And base *reuilers* of our house and name?

Pope. *Homer. Odyssey*, book ii.

Scoffs and *reuilings* are of the growth of all nations; and consequently neither the Greek poets borrowed from other people their art of railing.

Dryden. *Juvenal. Dedication*.

From long complaints arose this haughty sty
Nor thee alone he glories to *revile*;
But e'en the gods, and I, who ne'er offend,
Oft prove the rancour which he cannot mend.

Lewis. *Statius. Thebaid*, book xi.

REVINCE, Lat. *revincere*, to convince.

Which being done, when he should see his error by manifest and sound testimonies of scriptures *reiuined*, Luther should finde no fauour at his hands.

Fox. *Actes*, &c. fol. 775. *Henry VIII*.

REVIRESCENCE, Lat. *revirescere*, to grow or become verdant or green again; strong again.

Renewal or revival of strength, of youth.

A serpent represented the divine nature, on account of its great vigour and spirit, its long age and *revirescence*.

Warburton. *The Divine Legation*, book iv. sec. 4.

REVISE, v. } Lat. *revis-um*, past participle of *re-*
REVISE, n. } *videre*, to *review*, q. v.
REVISAL, } To look or inspect again, (sc. with
REVISER, } a *view* to correct or amend,) to re-
REVISION. } examine. By the *revise* of Palinurus,
Warner may have meant his *re-appearance*.

Or how Æneas building there the citie Acesta peopled the same with his women and impotent Troians; or of the drowning and *reuisse* of Palinurus, and many occurrents hapning here.

Warner. *Addition to Albion's England*, book ii.

When there is default'd the many whole editions he had nothing for, the charge he was at the sending of his copies before he printed them unto his friends for their animadversions and advices, his sending them sheet by sheet when printed, and surveying the *revises*, and the great number he gave away to his acquaintance, it will appear that the remainder of his income was but a slight matter.

Fell. *Life of Hammond*, p. 20.

Fir'd that the house reject him, 'sdeath! I'll print it
And shame the fools—your interest, sir, with Lintot.
Lintot, dull rogue! will think your price too much:
Not, sir, if you *revise* it, and retouch.

Pope. *Prologue to the Satires*.

The author is to be excused who never, in regard to his eyes, nor other impediments, gives himself the trouble of corrections and *revises*.

Boyle.

The *revisal* of these letters has been a kind of examination of conscience to me; so fairly and faithfully have I set down in them the undisguised state of the mind.

Pope.

The *revisers* of this version, seemingly aware of this impropriety, have put into the margin, Then began, &c.

Pilkington. *Remarks on Scripture*, p. 188.

Sir Joshua Reynolds requested a sight of it, and made an obliging offer of illustrating it by a series of his own notes. This prompted me to *revise* it with all possible accuracy.

Mason. *Preface to Translation of Du Fresnoy*.

REVISE. But, with much general reverence for the opinions of these learned commentators, I am persuaded that the stops have been misplaced in the Hebrew manuscripts, by the Jewish critics, upon the last revision of the text.

REVIVE.

Horsley. Sermon 8. vol. i. p. 168.
REVISIT, Fr. *revisiter*; It. *rivisitare*; Lat. *revisitare*, (*re*, and *visitare*, a frequentative from *videre*, to see.) In Froissart it is equivalent to *revise*; to look back upon; to look over again, to overlook. Generally, To *visit* or come to see again.

Also they saye that ye haue not dilygently *reuisited* nor ouersene the letters patentes, gyuen, accorded, sworne and sealed by Kyng Johan.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 222. p. 691.

Sweltering they run
 To grots, and caves, and the cool umbrage seek
 Of woven arborets, and oft the rills
 Still streaming fresh *revisit*, to allay
 Thirst inextinguishable.

Philips. Cider, book i.

Tell what were the mutual feelings when first you *revisited* your families and friends!—of the child returning to the fond parent's care—of the father receiving back from the grave the joy, the solace of his age—of the husband restored to the wife of his bosom—of the wife, not yet a widow, again embracing her yet living lord!

Horsley. Sermon 39. vol. iii. p. 204.

REVIVE, v.

REVI'VAL,

REVI'VE,

REVI'VING, n.

REVI'VIFY,

REVIVIFICA'TION,

REVIVI'SCENCE,

REVIVI'SCENCY.

renew.

Fr. *revivre*, *revifier*; It. *rivivere*; Sp. *revivir*; Lat. *reviviscere*, to come or cause to come to life again; (*re*, and *vivere*, to live.) To live or cause to live again; to animate, to inspire again or re-animate, re-inspire; to rouse or raise again; to renovate or

And when wee felt the shippe aflote, we rose vp as men *reuiued*, because the sea was calme and smooth water.

Hakluyt. Voyages, &c. vol. ii. p. 240. M. Cæsar Frederick.

Therefore onely cõtrition in the which is made a *reuiuing*, taketh away sinne. Hee hath therefore his *reuiuour* present with him, and dwelling within hym.

Barnes. Epitome of Workes, p. 369. Auricular Confession.

And in her cheekes the vermeill red did shew

Like roses in a bed of lillies shed,

The which ambrosiall odours from them threw,

And gazers' sence with double pleasure fed,

Hable to heale the sicke and to *revive* the ded.

Spenser. Faerie Queene, book ii. can. 3.

The king has now his curious sight suffis'd

With all lost arts, in their *revival* view'd;

Which when restor'd our pride thinks new devis'd;

Fashions of mindes, call'd new when but renew'd.

Davenant. Gondibert, book iii. can. 4.

The inventor of this argument, or rather the *reviver* of that which had been before used by some scholasticks, affirmeth it to be as good a demonstration for the existence of a God, from his idea, as that in geometry for a triangle's having three angles equal to two right is from the idea of a triangle.

Cudworth. Intellectual System, book i. ch. v. p. 721.

And now for a litle space grace hath bene shewed from the Lord our God, in causing a remnant to escape, and in giuing vs a nayle in his holy place, that our God may light our eyes, and give vs a litle *reuiuing* in our seruitude.

Ezra, ch. ix. v. 8.

So corn in fields, and in the garden flow'rs,

Revive, and raise themselves with moderate showers.

Waller. Instructions to a Painter.

Nor will the *revival* of Arianism be ever looked upon as one of those exigencies of the times that shall make it expedient to part with our creeds.

Waterland. Works, vol. iv. p. 304. On the Athanasian Creed.

That the gross matter which they saw laid in the grave and turn to corruption, or burnt into ashes and blown away by the air, should ever be raised or collected again and *revivified*; of this the most speculative among them had no conception.

Stuckhouse. Appar. to his History of the Bible, p. xii.

This noise we found to be a more constant circumstance of this experiment, than the *revivification* of part of the mercury contained in the sublimate.

Boyle. Works, vol. iii. p. 79. Of Qualities and Forms.

To which, [salts or sulphurs,] by this means, when the quicksilver is driven from them in the *revivification*, it is probable that very many of them stick.

Id. Ib. vol. i. part iv. p. 645. Of Mercury.

Neither will the life of the soul alone continuing amount to the *reviviscence* of the whole man.

Pearson. On the Creed, art. 2.

The same articles of religion, with some alterations, in the *reviviscency* of the reformation, in the day of Queen Elizabeth, were again ratified by the authority of the queen and of the clergy.

Id. No Necessity of reforming the Church of England, p. 20.

It is clear that if, upon judgment to be hanged by the neck till he is dead, the criminal be not thoroughly killed, but *revives*, the sheriff must hang him again.

Blackstone. Commentaries, book iv. ch. xxxii.

There may be also a bill of *revivor*, when the suit is abated by the death of any of the parties; in order to set the proceedings again in motion, without which they remain at a stand.

Id. Ib. book iii. ch. xxvii.

These meditations will put us on our guard against those gross corruptions of the Christian doctrine which the caprice and vanity of this licentious age have *revived* rather than produced.

Horsley. Sermon 30. vol. iii. p. 3.

REUK, the *Glossary* says—a man.

Wat a wake *reuk* quap repentaunce. rape the to shrýfte.

Piers Plouhman. Vision, p. 110.

That he þat knowep cleregie. can sonner a rýse

Out of sýnne and be saf.

Id. Ib. p. 235.

RE-UNITE,

RE-UNI'TION,

RE-U'NION.

Fr. *re-unir*; It. *riunire*; Sp. *re-unir*, to unite or join into one again. To conjoin again; to rejoin; to be or cause to be at one again. (See ATONE.) To restore again to concord or agreement.

The young tendrons or springs of the wilde olive, being boiled and laid too with honey, do rejoyne and *reunite* the skin of the head which was departed from the bones of the skull.

Holland. Plinie, book xxiii. ch. iv.

After which the duke, by the queen-mother's mediation, is reconciled to the king; who, for feare of his power, by an edict of *re-union*, admits no religion but the popish, promiseth never to make peace, &c.

Prynne. Sovereigne Power. Appendix, p. 39.

We conclude, therefore, that the Christian mystery of the resurrection of life consisteth not in the soul's being *reunited* to these vile rags of mortality, these gross bodies of ours, (such as now they are,) but in having them changed into the likeness of Christ's glorious body, and in this mortal's putting on immortality.

Cudworth. Intellectual System, book i. ch. v. p. 799.

For even in such experiments it appears that when the form of a natural body is abolished, and its parts violently scattered by the bare *re-union* of some parts after the former manner, the very same matter destroyed was before made of may, without addition of other bodies, be brought again to constitute a body of the like nature with the former, though not of equal bulk.

Boyle. Works, vol. iii. p. 61. The Redintegration of Bodies.

I believe the immortality of the soul; I believe the resurrection of the body, and its *reunion* with the soul.

Knatchbull. On the New Testament Translation, p. 93.

A patriot king will not despair of reconciling and *reuniting* his subjects to himself and to one another.

Bolingbroke. Works, vol. iv. p. 291. Of a Patriot King.

REVIVE.

RE-

UNITE.

RE-
UNITE.
—
REVOLT.

Proclamation is made by a voice issuing from the throne,—“The marriage of the Lamb is come, and his wife hath made herself ready,” i. e. hath prepared herself, by penitence and reformation, to be reunited to him. *Horsley. Sermon 6. vol. i. p. 103.*

REVOICED, called, spoke, back again; recalled.

And to the winds the waters hoarsely call,
And echo back again revoiced all.

Fletcher. Christ's Triumph on Earth, p. 71.

REVO'KE, v. } Fr. *revoquer*; It. *rivocare*; Sp.
REVO'KE, n. } *revocar*; Lat. *revocare*, (*re*, and
REVO'KEMENT, } *vocare*,) to call back; to recall; to
RE'VOCABLE, } repeal.
RE'VOCATE, } To recall, to repeal; to counter-
REVOCA'TION. } mand; to restrain.

If your holiness did grant us [Henry VIII.] all those things justly, ye did unjustly *revoke* them; and if by good and truth the same was granted, they were not made frustrate nor annihilate without fraud; so as if there were no deceit nor fraud in the *revocation*, then how wrongfully and subtilly have been done those things that have been done! *Burnet. Records, vol. i. book ii. No. 42. p. 169.*

Some remedy should be found for these evils, either by the consent and agreement of rich men's wives, which with their example shoulde *revoke* other againe vnto better minds.

Vives. The Instruction of a Christian Woman, ch. viii. p. 300.

To the which question, of one assent, they sayde, that if the same iudgement were now to be gotten, the same justices and sergeants aforesayde would not giue the same, because it seemed to them that the same iudgement is *revocable* and is erroneous in every part. *Grafton. Richard II. vol. i. part ii. p. 354. The tenth Yere.*

Which it coulde not bee attained at the pope's handes, vnlesse the king would recompence and requite the same by *reuocating* of such statutes as were made and enacted here in the high court of parliament, for the surety of succession and stablishment of the realme. *Fox. Actes, &c. Henry VIII. fol. 980.*

Meaning by this exile to appease the furious rage of the outrageous people, and that pacified, to *reuocate* him to his olde estate, as the queene's chefe friend and counsailer. *Grafton. Henry VI. vol. i. part ii. p. 609. The twenty-eighth Yere.*

So well he did his busie paines apply,
That the faint spright he did *revoke* againe
To her fraile mansion of mortality.

Spenser. Faerie Queene, book vi. can. 3.

Don Julian apprehending the meaning, got letters of *revocation* and came back to Spain, where he so comply'd with the king that he became his favorite.

Howell. Letter 32. book i. sec. 3. p. 157.

Let it be nois'd
That, through our intercession, this *reuokement*
And pardon comes.

Shakspeare. Henry VIII. fol. 208.

Though the grant be *revocable*, in this case, upon the person's returning to his old sins, yet it is a real and a present grant; like as the lord, in the gospel, really forgave his servant all his debt, but *revoked* the grant upon that servant's new misbehaviour. *Waterland. Works, vol. v. p. 423. Upon Dr. Clark's Exposition.*

We should very nicely and curiously examine our consciences, those faithful records and registers of our actions, and wherever we find the least item of an uncanceled guilt, immediately cross it out by a hearty sorrow for and moral *revocation* of it.

Scott. Christian Life, part i. ch. iv. p. 141.

But hold—the fates *revoke* their first decree,
And Œdipus revives alone in thee.

Lewis. Statius. Thebaid, book ii.

A devise by writing may be also *revoked* by burning, cancelling, tearing, or obliterating thereof by the deviser, or in his presence and with his consent.

Blackstone. Commentaries, book xxxii. ch. xxiii.

REVO'LT, v. } Fr. *revolter*; It. *rivoltare*; from
REVO'LT, n. } *revolutum*, past participle of *revolvere*,
REVO'LT, n. } to roll, to turn back.

To turn or cause to turn back; to repel or drive back; to reject or cast back; to turn back or away from, sc. obedience, allegiance, to rebel; to desert, to forsake.

He made al such feare him, as before were *revolted*, and regarded him little. *Brende. Quintus Curtius, book ii. fol. 11.*

For they had not lost the battaile at such tyme as the messengers were dispatched that brought the newes of their *revolt*. *Id. Ib. book vii. p. 184.*

Eumenes, therefore, gettinge the vpper hande in two pitched fieldes together, vpheld and maintained his side for a while, whiche was not a litle empaired by the *revoltinge* of his adherentes.

Arthur Goldyng. Justine, book xiii. fol. 72.

The king, in this mean time, (I know not how,)
Was drawn into some actions forth the land,
T' appease the Irish, that *revolted* now.

Daniel. History of Civil Wars, book i.

— The Romaines
Must, or for Britaines flay vs or receiue vs
For barbarous and vnnaturall *revolts*
During their vse, and slay vs after.

Shakspeare. Cymbeline, fol. 391.

— As a thunderbolt
Perceth the yielding ayre, and doth displace
The soring clouds into sad shoures ymolt;
So to her yold the flames, and did their force *revolt*.
Spenser. Faerie Queene, book iii. can. 11.

'Tis in their wills, their mercies, or revenges,
And these *revolts* in you shew mere rebellions.
Beaumont and Fletcher. The Island Princess, act v. sc. 1.

Of indignation at those practical *revolters* that, having begun in the spirit, will needs end in the flesh; that having made a shew of godlinesse, deny the power of it in their lives.

Hall. Works, vol. ii. p. 441. St. Paul's Combat.

What mercy soever may abide well meaning ignorance, let the wilful *revolter* make account of damnation.

Id. Ib. Sermon on Galatians, v. 1.

Those blessings may all be forfeited, or finally lost, if a person *revolts* from God, either for a time or for ever; and then such person is no longer in a regenerate state, or a state of sonship, with respect to any saving effects; but still God's original grant of adoption or sonship in baptism stands in full force, to take place as often as any such *revolters* shall return, and not otherwise. *Waterland. Works, vol. vi. p. 348. Regeneration stated and explained.*

In the simplicity of my heart [I] would needs try if I could make the deists believe too. I found it was this that most *revolted* him. *Warburton. Works, vol. xi. p. 340. On several Occasional Reflections, part i.*

But sin marr'd all; and the *revolt* of man,
That source of evils not exhausted yet,
Was punish'd with *revolt* of his from him.
Cowper. The Task, book vi. p. 701.

REVO'LV, v. } Fr. *revolver*; It. *rivolvere*;
REVO'LVENCY, } Sp. *revolver*; Lat. *revolvere*, (*re*,
REVO'LVING, n. } and *volvere*, to roll, A. S. *wealop-*
REVO'LUBLE, } *ian, circumferri*, to be borne or
REVOL'UTION, } carried round; see EVOLVE, IN-
REVOL'UTIONARY, } VOLVE,) to roll back.
REVOL'UTIONIST. }

To roll or turn back; to roll, turn, carry, or bear round, or in a circle; (met.) to turn over in the mind, to consider, to contemplate.

Revolution, (met.) a turning back or away, sc. from the regular, course or progression; and hence, an entire change, sc. in the form of government, or in some especial department.

Myne owne yearthly ladie, (quod I tho) and yet remember to your worthinesse how long sithen by many *revolving* of yeres, &c. *Chaucer. The Testament of Loue, book i.*

But the daye naturell, that is to sayne, 24 houres, is the *revolu-*
cion of the equinoctiall, with as moche partye of the zodiake, as the sonne of his proper mowinge passethe in the meane while. *Id. The Conclusions of the Astrolabie.*

The cause of your dreame in your slepe was this, you being kinge *revolved* in mynde as ye laye in bedde what was to come after. *Joye. Exposition of Daniel, ch. ii. fol. 26.*

And after in *revolving* diuers bokes, serchyng in diuers libraries, and also speakyng with diuers sages of diuers realmes, finally founde this tretise in Florence.

The Golden Boke. The Prologue, p. 11.

I remember, on a day, I *revolved* the registers in the capitol, I red a right meruailous thyng.

Id. p. 486.

They vnderstanding verie well the *revolutions* of the time, and their appointed courses.

Brende. Quintus Curtius, book iv. fol. 79.

Ere he to gentle sleepe his eyes will lay,
His thoughts *revolve* the actions of the day,
What houres from me with dull neglect haue runne.

Beaumont. Ausonius. Idyll. 16.

Us then, to whom the thrice three yeere
Hath fild his *revolvable* orbe, since our arrivall here,
I blame not, to wish home much more.

Chapman. Homer. Iliad, book ii. p. 22.

Nay, but the terme, sayd he, is limited,
That in this thraldome Britons shall abide;
And the iust *revolution* measured
That they as straungers shal be notifide.

Spenser. Faerie Queene, book iii. can. 3.

A little before he had said the word was divine substance; and he here speaks of the godhead being communicated or imparted to the Son, and *revolving* again to the Father as the head or fountain.

Waterland. Works, vol. iii. p. 458. A Second Defence of some Queries. Query 27.

Heaven has to all allotted, soon or late,
Some lucky *revolution* of their fate.

Dryden. Absalom and Achitophel.

From above and behind each eye arises an elegant yellowish white crest, *revolved* backward as a ram's horn.

Cook. Voyage to the Pacific, book iv. ch. vii.

She dreads
An instant's pause, and lives but while she moves.
Its own *revolvency* upholds the world.

Couper. The Task, book i.

That this *revolution* was performed in the same space of time in the beginning of the world as now, I would not over confidently affirm.

Horsley. Sermon 23. vol. ii. p. 228.

In truth, it were easy to find causes of his extraordinary success in the political principles of the times in which he first arose, independent of any uncommon talents of his own, principally in the *revolutionary* phrensy, the spirit of treason and revolt, which prevailed in the countries that were the first prey of his unprincipled ambition.

Id. Sermon 29. p. 407.

It will, perhaps, be said, and with some reason, that in this instance, at least, the writer has followed those alarmists who, on any men of learning belonging to that country being mentioned, immediately ally them to the *revolutionists*, without regard to difference of opinion, or distance of time.

Smith. Life, p. xxiv.

REVOMIT, Fr. *revomir*; Lat. *revomere*, to vomit or throw forth, back again. See EVOMIT, VOMIT.

To throw forth, cast forth, eject back again.

Plato compareth lawes to pillis, medecyns or pocions, which if ye syke bodye *reuomite*, there is no helth to be looked fore.

Joye. Exposition of Daniel, fol. 87.

They poure the wine downe the throate without more adoe, that they might cast it vp againe and so take more in the place, vomiting and *revomiting* twice or thrice together that which they haue drunke.

Hakewill. Apologie, book iv. sec. 3. p. 365.

REVULSIVE, v. } Fr. *revulsion*; Lat. *revulsio*,
REVULSION, } from *revulsus*, past participle of *re-*
REVULSIVE. } *vellere*, (re, and *vellere*, to tear.)

To tear back; to tear, pluck, or pull away.

Revulsion is also "the drawing or forcing of humours from one part of the body into an other." Cotgrave.

There is a fifth way, stanching of blood, also in use, to let blood in an adverse part, for a *revulsion*.

Bacon. Natural History, Cent. i. sec. 66.

In his sicknesses, if they were not so violent to make the recollection of thoughts impossible, he never intermitted study, but rather re-inforc'd it then as the most appropriate *revulsive* and diversion of pain.

Fell. Life of Hammond, p. xvi.

The plethora evacuated, you may endeavour *revulsion* to the contrary parts by friction, cupping, fontanels, &c.

Wiseman. Surgery, book i. ch. xix.

There she fix'd,
Then suddenly *revuls'd* the brazen point,
Rending him as she pull'd.

Cowper. Homer. Iliad, book v.

The new produce and the new capital which has been created, if one may say so, by the colony trade, maintain in Great Britain a greater quantity of productive labour than what can have been thrown out of employment by the *revulsion* of capital from other trades of which the returns are more frequent.

Smith. Wealth of Nations, vol. ii. book iv. ch. vii. p. 464.

RE'WAH, or RE'VA', formerly a separate territory, but now a district of the Province of Allah-ábád, forming, however, a distinct Principality, the Sovereign of which is subject to Great Britain. It is bounded on the North by Mirzá-púr, on the East by Bundél-k'hand, on the South by the Són river, on the East by Góndwánah and the district of Mirzá-púr, in the Province of Allah-ábád. It is for the most part a high table-land terminating on its Northern side by an abrupt precipice of sand-stone rock rising almost perpendicularly for 200 or 300 feet from a sloping base, and appearing from the plains like a scarp'd line of fortified heights. The table-land is very level and highly cultivated, though the labourers are in a wretched condition. Réwah is watered by a great number of streams tributaries to the Tóns and the Són, the latter of which crosses it, and the former is, in part, its Eastern boundary. In the rainy season, these streams are precipitated over the Northern barrier with a large volume of water, and so nearly at a right angle as to be perceptible only by their spray within the distance of a few yards. The force of these streams has formed deep ravines with wall-like precipices on each side, in some places for the distance of seven or eight miles, adding greatly to the wildness and grandeur of the scenery. The falls of the Tóns, Béhar, (or Bahír,) and Maháná are the most remarkable. The Béhar* descends in one unbroken fall 360 feet; but the cataract of the Tóns, one mile and a half West of the Béhar, though falling only 200 feet, is the grandest of all, from its extraordinary volume and a succession of rapids above the fall. Its breadth at the end of September appeared to be about 60 feet, and its depth at the margin not less than eight. The fall of the Maháná, the height of which is 310 feet, is at Kentí, about 15 miles East of that of the Béhar. It is difficult to approach these cataracts except from above; and so lately has this Country been accessible, in consequence of the anarchy which prevailed, that the existence of these magnificent cataracts was not known till 1813, though the furthest of them is only 70 miles from Allah-ábád. This well-protected tract formerly belonged to the territory called B'háttá, and was never completely conquered by the Moghuls, though annexed by a Fermán of Aúreng-zéb to the Súbah of Allah-ábád.† It was included in the British territory in 1813, on application from the Rájá, who could not control his great feudatories, or prevent them from harbouring banditti, to the ruin of

† No claim of this sort having been made by Akbar, it is not named in the *Ayini Akbari*, or Register of his dominions, drawn up by his Grand Vezir Abú-l Fazl.

- REWAH. his own subjects and the great injury of his neighbours. His Capital Révá, on the banks of the Bichá-nadí, in 24° 32' N. and 81° 18' E., has a large stone castle containing his Palace, and the town is of a considerable size. His annual payment to the British Government is 40,000 rúpíyahs, (£4000,) so that his revenue may be estimated at 350,000 rúpíyahs. The principal towns are, 1. Máó, East North-East of Réwah about 40 miles; a walled town, the chief seat of the Sing'hrání Tribe, who occupy 400 or 500 villages, and are subject to five Chiefs. 2. Rái-púr, North-East from Réwah 12 or 14 miles, another walled town, near which there are some remarkable ruins. 3. Rám-nagar, near the Són, on the South-Eastern boundary, is a considerable frontier town, the second in the Rájá of Réwah's dominions; Mukund-púr and Daúrí are also populous places; and Chur'hat, on the Són, is governed by its own Ráo or Chief subordinate to Réwah.
- Mánik-púr, (Mánikya-pura, ruby-town,) the last division of the Province of Allah-ábád, being on the North-East side of the Jamuná, adjoining to the territories of the King of Aúd'h, has been ceded to him, and now forms a part of his dominions. In the time of Akbar it contained fourteen mahalls or pergunahs, (districts or townships,) measured 666,222 big'hahs and five bis-wahs, (41,515 acres,) and yielded a revenue of 3,39,16,527 dāms, (£84,700,) with suyúrghál (feudal lands) producing 24,46,173 dāms (£2117.) Of the towns mentioned in the *Ayini Akbari*, (ii. 204.) the following are the most considerable: Mánik-púr, the Capital, Rái Bareílí, Dalmaó, Saláún, Jelál-púr or Bilk'har, Nasir-ábád, and Jáyis. Great part of this district lies between the Ganges and the Saí rivers, and its soil is level, and, though sandy, fertile, but ill cultivated. Mánik-púr, whence it receives its name, is on the bank of the Ganges, in 25° 46' N. and 81° 26' E. It had a brick fort, and paid 67,37,729 dāms (£16,845.) Rái Bareílí on the Saí, which had also a fort and was rated at 36,50,984 dāms, (£9127,) is in 26° 16' N. and 81° 6' E. Dal-máó, on the Ganges, in 26° 6' N. and 80° 58' E., is now almost deserted, though formerly very flourishing, being much ornamented by Rájá Tikáyah Rái, who was born there. It has several handsome Pagodas and g'háts (stairs to the river) and a fort of considerable size. It was rated at 36,26,067 dāms (£9065) in the time of Akbar. Saláún, Salún, or Salóna, (*salavana*, salted, seasoned,) about 20 miles South-East of Rái Bareílí, had a fort, and was rated at 27,17,391 dāms (£6794) at the close of the XVIth Century. Jelál-púr, or Bilk'har, which at that time had a brick fort and paid 39,13,017 dāms, (£9782,) is East by South of Mánik-púr about 30 miles. Nasir-ábád, rated at 25,82,079 dāms, (£6455,) and Jáyis at 14,24,737 dāms, (£3562,) lie near each other between the Saí and the Gumatí, about 15 miles East of Rái Bareílí. Pertáb-gar'h (Pratápa gad'ha) and Médni-gáng, near the Saí, to the North-East of Mánik-púr about 30 miles, are modern towns of considerable size.
- Bundél-k'hand, another Serkár of the Súbah of Allah-ábád, is now a part of the British territory, and in addition to the short notice of it already given (xix. 78.) the following particulars from more recent and accurate authorities may be added. 1. Bundel-k'hand (*i. e.* the land of the Bundélas) proper comprises all the tract between the Sind'h and the Désán, a tributary to the Bétwá; (Vétravati;) but the conquered Countries Eastward of the Désán are usually comprehended under the name of Bundél-k'hand, and in that sense REWAH. its boundaries are those already given, as it extends from 24° to 26° 30' N. and 75° to 81° 30' E., measuring 165 British miles in length and 232 in breadth, (*As. Trans.* i. 259.) and containing an area of 23,817 square miles, with a population of 2,400,000 souls. It is divided by the Kén river into two nearly equal parts, the Eastern and Western, each subdivided into pergunahs and t'hánahs. This river rises near Mohár, in 23° 53' N. and 80° 8' E., passes Northwards through the Bandar hills, forming a cataract near Pipariya, and with a very winding course, first Westwards and finally to the East of North, joins the Jamuná at Chilátará in 80° 25' E., having received in its way the waters of the Patiní, Bíramí, Sonár, Mírhásiyá, and several smaller streams. At Sing'hórá, the augmented streams fall over the rocky barrier and force their way through the Panná and Bind'hyáchal (Vind'hyáchal) ranges of hills to the plains below, after a course of 230 miles. It is well stocked with fish, and abounds with very beautiful pebbles. The Désán, (or D'hósán,) next in size to the Kén, rises in the Vind'hya mountains, not very far to South-West of Ságar, and passing between it and Rahatgar'h, by D'hámóní and Gerár, falls into the Bétwá near Chandwár, after a course of 220 miles, having been joined by the Kátén, U'r Saprár, Larkhaíri, and several smaller streams. The Bétwá, (Vétavá, or Bétwantí, from Vétravati, *i. e.* rushy,) which belongs more to Málavá than Bundél-k'hand, rises near B'hópál, in 23° 15' N. and 77° 26' E., passes through the Vind'hyáchal chain 10 miles South of Chandéri, and after receiving the U'r Jámuní, Désán, and Bíramí falls into the Jamuná below Amír-púr, (Hammír,) after a course of 330 miles. The Póhájaj, Ranj, Paísuní, and B'hágí are smaller streams peculiar to Bundel-k'hand. Of the many reservoirs, the most astonishing ones are those West of the D'hósán. The Nandanwára and Arjál-ságar are striking examples of simplicity in contrivance, and extent of labour in the construction of these vast receptacles, without which the greater part of the soil would be wholly unproductive.
- The mountains run in parallel ranges, forming, as is usual in mountainous Countries, an ascent to succeeding terraces of more elevated levels; and therefore called g'hát, (ascent, declivity, defile.) The first is the Bind'hyáchal, (Vind'hyáchal, *i. e.* the immovable barrier,) running from Késó-gar'h North of Sé-undah on the Sind'h, and, taking a wide sweep by Narwar, Chandéri, Ráj-gar'h, Ajay-gar'h, and Kálanjar crossing the boundary of the Bundélas just beyond Bar-gar'h, (in 25° 10' N. and 81° 25' E.) and passing by Vind'hyavásiní and Tára-púr till they approach the Ganges at Siráj-gar'há, and again at Ráj-mahall. Near the Jamuná, the greatest height of this range is 300 feet, at Kalyángar'h* it is 800, and at its greatest elevation 2000 feet. The second is the Panná range, Punnah, about 10 miles distant, with a nearly parallel course. The third is the Bandér range, which has the form of an acute spherical triangle, the apex of which is near Nágaund, in 24° 36' N. and 80° 34' E. This, which is the highest range, describes nearly the same curve as those below it, and gives rise to the Kén and Patiní rivers. The Kaímúr hills (in Berár called T'hamiya, Kymoor and afterwards Vind'hya) run parallel to these ranges, hills, but are included in Bundél-k'hand. The table-land of

* Kishn-gar'h near Kalyán-púr?

REWAH. Gar'há Mandala, Soháj-púr, Sargújá, and Jash-púr, above this fourth and last range, is evidently the culminating level, from its giving rise to so many and such vast streams flowing in opposite directions, as for example, the Són, the Nerbadá, the Vén-Gangá, the Mahá-nadí, and Bráhmañí. There are no forests, but an excess of brushwood, fit only for fuel in the lowlands: such as jujubes, (bér, *Zizyphus jujuba*,) (karandá, *Carissa carandas*,) ákand, (*Asclepias gigantea*;) but bambús and diminutive timber, such as teak (*ságwan*, *Teka tectona*) and tenged, (*Diospyros melanoxylon*,) and drugs, such as the catechu (k'háir or k'hádíra, *Mimosa catechu*) and chirónjí nut, (*Chironjia sapida*,) are abundant. The diamond mines of Panná, so well known, are on the first terrace below or in the Panná range, from the river Kén to the Chilánadí, a distance of about 20 miles, beyond which no diamonds are found. The whole plain is covered with a red or dark brown gravel* from 3 to 12 feet deep, and resting on a bed of white granular quartzose rock of the same nature as the white limestone marked with black spots, usual in this range of hills.

Diamond
mines.

The diamonds are intermixed with pebbles, but never united to them, and vary from the size of a pea to that of a filbert, but the latter are very rare. The workmen believe them to be generated in the soil, and continually search the same spots again. Three-fourths of the value of the smallest is the recompense they receive. (*Edinb. Phil. Jour.* i. 53.) Such was the case in 1814; but the mines are now nearly exhausted, (*As. Trans.* i. 277.) and the stones, which are of the table or flat kind, are rarely found perfect. On the opposite or Western side of the Kén are the iron mines where the ore is found very near the surface, and the metal, after the first process, is sold for 1 rupiyah and 12 ánáś (3s. 6d.) the man (or món = 80 pounds avoirdupois.) The miners are usually Gónds, or other hill-tribes.

Manufac-
tures.

At Gáráutá and Kótrá, they manufacture coarse cloths stained red with an extract from the ál. (*Morinda citrifolia*.) Sugar-candy and paper are made at Kálpí, carpets at J'hánsí, sacking in great quantities at Ch'hat-trapúr and on the banks of the Bétwah. In the valleys the soil is a black loam, and when well watered very productive; on the hills, karkar or calcareous tufa prevails; and in times of dearth, the fruit of the mahwá (mad'húca, *Bassia latifolia*) is almost the only sustenance of the peasantry: when eked out by the pounded bark of the katbal (kat'h-bél? *Feronia elephantum*) it becomes deleterious. The ruins at Máhóbá, Kajrau near Ráj-nagar, at Máľhan above Jód'hpúr, and Sars-wágar'h near Sáliya, the subterraneous cavern called Gópít gódávalí, the cataracts already mentioned, and the celebrated fortresses of Kálinjar and Ajay-gar'h, are all deserving of notice. The only places of peculiar sanctity are Chittra-kót, where Ráma stopped on his way to Láríká; the Jáina Temples at Sénáwal and Kandal-púr, and at Panná, the shrine of Prán-nát'h, (*i. e.* Lord of Life,) a Musulmán Reformer styled Sáhíbjí, (his worship,) who lived in the middle of the last century and wrote a book entitled *Kulzum*, (the Red Sea,) professing to be the revelation given to Mehedí, whose return is expected by the Shí'ís, and whom this person pretended to be.

* The diamonds in the mines of Malavali, in the Serkár of Mustafá-nagar, or Kónda-pillí, are mixed with "roundish stones of deep red ochre of iron and whitish fat quartz."—*Edinb. Phil. Jour.* iii. 72.

REWAKE, *i. e.* to waken, or awaken again.

She oft him kist, and shortly for to sain,
Him to *rewaken* she did all her pain.

Chaucer. *Troilus and Creseide*, book iii.

REWARD, *n.*

REWA'RD, *v.*

REWA'RDABLE,

REWA'RDABLENESS,

REWA'RDER.

See REGUERDON; Fr. *reguerdonner*. Fr. *regarder*, (*re*, and *garder*, to keep,) to keep in view; A. S. *ward-ian*, to look at or to direct the view. See

Tooke, vol. i. p. 409

To look again at, to remember, to reconsider; to look at, as deserving favour or punishment; and, thus, to remunerate, to recompense, to repay, to requite, accordingly.

For riche *rewardons* to Roberd gan loute.

R. Brunne, p. 96.

þan com þe emperour bifore kýng Richard,
þat I did dishonour, sir, haf it to no *reward*.

Id. p. 163.

Rewardynge him þ^r for his rechelesnesse. ryght to þe day of dome.

Piers Plouhman. *Vision*, p. 205.

Thanne Reson rod forth. and tok *reward* of no man

And dude as conscience kened.

Id. Ib. p. 66.

Demyng the repreef of Crist more richessis than the tresouris of Egipcians, for he biheelde in to the *rewardynge*.

Wiclif. *Ebrewis*, ch. xi.

For it bihoueth that a man comynge to God bileue that he is, and that he is *rewardere* to men that seken hym.

Id. Ib.

Take *rewarde* of (*i. e.* pay regard to, or look again at) thyn owne valewe, that thou ne be to foule to thy selfe.

Chaucer. *The Persones Tale*.

And yet of danger cometh no blame

In *reward* (*i. e.* in regard) of my doughter shame.

Id. *Romant of the Rose*.

This shuld a rigtwise lord haue in his thought,

And nat be like tirauntes of Lombardy,

That han no *rewarde* [*i. e.* regard] but at tyranny.

Id. *Legende of Good Women*.

Wherfore God himselte toke *reward* to the thynges, and theron suche punyshment let fal.

Id. *Testament of Loue*, book ii.

Thou seruest a full noble lord,

That maketh thee thrall for thy *reward*,

Which aye reneweth thy tourment,

With folly so he hath thee blent.

Id. *The Romant of the Rose*.

For right as lawe punisheth brekers of preceptes, and the contrary doers of the writen constitucions; right so ayenward, law *rewardeth* and yeueth mede to hem that law strenghten.

Id. *The Testament of Loue*, book iii.

But while he hath o daie to liue,

He wol nothyng *rewarde* ageyne,

He grutcheth for to gyue a greyne.

Gower. *Conf. Am.* book v.

Neuertheles euery man shall receaue according to his labour; if he preach much, the more shall be his *reward*; if he preach litle thereafter shall he be *rewarded*.

Frith. *Workes*, fol. 43. *Answeres to Syr Thomas More*.

We also tell them that the best worke that any man woorketh with God's helpe and grace, is not yet *rewardable* with heauen of the nature or goodnesse of the worke it selfe.

More. *Workes*, fol. 363. *Tindale's Preface. The Answer*.

Albe it he sayth the firste doers or gyuers lose nat theyr *rewarde*, for theyr wyll and entent is full euenly payسد in a balaunce before hym, that is the *rewarder* of all good.

Fabyan. *Chronicle*, ch. 170. fol. 164.

Yet not escaped from the dew *reward*

Of his bad deedes.

Spenser. *Faerie Queene*, book iii. can. 5.

— Ah! noble knyght, what worthy meede

Can wretched lady, quitt from wofull state,

Yield you in lieu of this your gracious deed?

Your vertue selfe her owne *reward* shall breed,

Even immortall prayse and glory wyde.

Id. Ib. book iii. can. 12.

RE-
WARD.
—
RHA-
GIUM.

And it is certain, the action that is but indifferent, and without reward, if done only upon our own choice, is an act of duty and of religion, and *rewardable* by the grace and favour of God, if done in obedience to the command of our superiors.

Taylor. *Holy Living*, sec. 2. *Of Obedience*.

What can be the praise or *rewardableness* of doing that which a man cannot chuse but do?

Goodman. *Winter Evening Conf.* p. 2.

But this religious fear is not a fear of God as a meer arbitrary omnipotent Being, much less as hurtful and mischievous (which could not be disjoined from hatred;) but an awful regard of him as of one who is essentially just, and as well a punisher of vice and wickedness, as a *rewarder* of vertue.

Cudworth. *Intellectual System*, book i. ch. v. p. 660.

Which good and evil, pleasure or pain, attending our observance, or breach of the law, by the decree of the law-maker, is what we call *reward* and punishment.

Locke. *On Human Understanding*, book ii. ch. xxvii.

That the victory of our reason might thro' the difficulty of it be rendered more glorious and *rewardable*, God hath furnished its antagonist, our sense, with the weapons of worldly temptation to assault and oppose it.

Scott. *Christian Life*, part ii. ch. iv. p. 271.

Where listless spirites, withouten care or pain,
In idle plesaunce spend their jocund days,
Nor heed *rewardful* toil, nor seeken praise.

Thomson. *Castle of Indolence*.

Death, the deliverer, who rescues man!
Death, the *rewarder*, who the rescued crowns!

Young. *The Complaint*. Night 4.

REWORD, to *word* again, or repeat in the same words.

It is not madnesse
That I haue vttered; bring me to the test
And I the matter will *re-word*; which madnesse
Would gamboll from.

Shakspeare. *Hamlet*, fol. 271.

REWRITE, to *write* again, over again.

Write, and *re-write*, blot out, and write again,
And for its swiftnesse ne'er applaud your pen.

Young. *Epistle 2. To Mr. Pope*.

RHABDOMANCY, Gr. *ῥαβδομαντεία*; *ῥάβδος*, a rod, and *μαντεία*, prophecy. See the Quotation.

As for the divination or *decision from the staff*, it is an augurial relique, and the practise thereof is accused by God himself: My people ask counsel of their stocks, and their *staff* declareth unto them. Of this kind of *rhabdomancy* was that practised by Nabuchodonosor in that Caldean miscellany, delivered by Ezekiel.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. xxii.

RHAGADIOLUS, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: calyx an imbricated cup; receptacle naked; seeds arched, spreading; down none.

Three species, natives of the South of France, Spain, and Peru.

RHAGIO, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrected, approximating, three-jointed, the basal joint cylindric, second cup-shaped, third conic, with a bristle at the tip; *palpi* exserted, pilose, with the second joint elongate; *ocelli* three, vertical; wings two, divaricating.

Type of the genus, *Musca scolopacea*, Linnæus; Meigen, *Europ. Zweif.* vol. ii. p. 89. pl. xv. fig. 10—21. Twenty-four species, of which about nine have been found in England.

RHAGIUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* setaceous, shorter than the body, the basal joint stout, second small, somewhat nodose, third longer than the fourth, which is shorter

than the fifth, the latter being longer than the third, the remaining joints of nearly equal length, about as long as the fourth, *palpi* four, with the terminal joint thickened, short, obconic, truncate; *labium* with divaricating, slender laciniae; head large, with a tumour behind the eyes, the latter rounded; *thorax* constricted within the base and apex, the lateral margins with an acute spine; *elytra* broad, with the shoulders considerably elevated; legs moderate; *femora* rather stout; *tarsi* tetramerous.

Type of the genus, *R. indigator*; Fabricius, *Entom. Syst.* vol. iii. p. 313. Panzer, *Faun. Ins. Germ. Init.* lxxxii. fig. 5. About twenty species, of which three are occasionally found in England, frequenting the old stumps of decayed trees.

RHAGODIA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Chenopodææ*. Generic character: calyx inferior, deeply five-cleft: corolla none; berry depressed, surrounded by the persisting calyx, seed solitary, orbicular, depressed; occasionally some of the flowers are unisexual.

Seven species, natives of New South Wales.

RHAMNUS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Rhamneæ*. Generic character: calyx bell-shaped, four to five-cleft; stamens opposite to the scaly petals, inserted into the calyx; stigma one, two, or four-cleft; berry three or four-seeded.

Fifty-two species, mostly natives of the Northern hemisphere. *R. cartharticus*, the Buckthorn, and *R. frangula* are natives of England.

RHAMPHOMYIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrected, three-jointed, the basal joint cylindric, the second cup-shaped, third conic, compressed, furnished at the apex with a two-jointed style; *proboscis* exserted, perpendicular, or inflexed, slender; wings two, incumbent, parallel, without any transverse nervure at the apex.

Type of the genus, *Empis marginata*; Fabricius, *Entom. Syst.* vol. iv. p. 403; Meigen, *Zweif. Eur.* vol. iii. pl. xxiii. fig. 1—4. About forty European species, of which more than half have been discovered in Britain.

RHAMPHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, not geniculated, eleven-jointed, inserted beneath the eyes in the sinciput, slender, the two basal joints, especially the second, thicker than the following, the five next nearly globose, the remainder closely united, and forming an oval acute club; head produced in front into an elongate inflexed rostrum, which is closely applied to the breast, and depressed; eyes large, rounded, united on the forehead; *thorax* short, with the sides rounded, the base and apex truncate; *elytra* obovate, truncate anteriorly, with the apex slightly rounded; legs moderate; *femora* unarmed, and considerably incrassated, especially the posterior, which are formed for leaping; *tarsi* tetramerous.

Type of the genus, *Curculio pulicarius*, Herbst; Clairville, *Ent. Helv.* vol. i. p. 104. pl. xii. One species, found in Europe, and not uncommonly in England on the birch and willow.

RHANTERIUM, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Compositæ*. Generic character: calyx cylindrical, imbricated; receptacle chaffy, down composed of four to six bristles, plumose at the apex; seeds without down.

One species, *R. suaveolens*, native of Tunis.

RHA-
GIUM.

RHAN-
TERIUM.

RHA-
PHIUM.

RHEA.

RHAPHIUM, in *Zoology*, a genus of *Dipterous* insects. *Generic character.* *Antennæ* porrect, approximating, three-articulate, the terminal joint elongate and compressed in the male; the apex furnished with a two-jointed style; eyes distinct; wings two, incumbent, parallel.

Type of the genus, *R. longicornis*; Meigen, *Zweif. Ins.* vol. iv. p. 28. pl. xxxiv. fig. 1—5. About a dozen species, of which about half have been found in England.

RHAPIS, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Palmæ*. *Generic character:* calyx three-cleft, minute; corolla deeply three-cleft, deciduous; filaments awl-shaped; anthers two-lobed; germen three-lobed; seed-vessel a berry, with one large osseous seed.

Three species, noble, fan-leaved Palms, natives of Carolina and China.

RHA'PSODY, } Fr. *rapsodie*; It. *rapsodia*; Lat.

RHAPSO'DICAL, } *rapsodia*; Gr. *ῥαψωδία*, *contextura*

RHA'PSODIST. } *carminum*, (from *ῥάπτειν*, *suere*, to sow, and *ὦδῆ*, a song;) said to have been originally applied to the songs of Homer, connected and collected into an entire Poem. *Rapsodie*, a joining of diverse verses together. Bullokar. An improper collection or confused heaping up of many sentences. Minshew.

Lardner has a note of considerable length and of much learning (on Herodotus, lib. v. 67.) on the etymology of this word. He gives preference to the source which we have adopted over another which derives the term from *ῥάβδος*, a laurel branch, which the Poet, while chanting his *ὦδῆ*, is supposed to have held in his hand.

'Tis hard to speake things common, properly;
And thou maist better bring a *rhapsody*
Of Homer's forth in acts, then of thine owne,
First publish things unspoken and unknowne.

Ben Jonson. Horace. *Art of Poetrie*.

They are all in the English tongue, and by the generality of scholars are looked upon to be rather *rhapsodical* and confus'd, than any way polite or concise, yet for antiquaries, critics, and sometimes for divines, they are useful.

Wood. *Athenæ Oxonienses*, vol. ii. p. 439.

In these lines the writings of the Provençal poets are principally alluded to, in which simplicity is generally sacrificed to the *rhapsodies* of romantic love.

Langhorne on Collins. *Ode to Simplicity*.

Select ballads in the old Scottish dialect, most of them of the first-rate merit, are also interspersed among those of our ancient English minstrels; and the artless productions of these old *rhapsodists* are occasionally confronted with specimens of the composition of contemporary poets of a higher class; of those who had all the advantages of learning in the times in which they lived, and who wrote for fame and for posterity.

Percy. *Reliques*. Preface, p. xiv.

RHEA, Briss. *Nandu*, Vieill. In *Zoology*, a genus of animals belonging to the family *Pressirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak straight, short, and depressed, its point obtuse; tongue thick and short; nostrils in the middle of the beak, and lateral; plumage decomposed; wings short, unfit for flight, and the bastard wing terminating in a spur; tail not distinct, but the rump conical and rounded; legs fleshy and feathered at their upper part; three toes in front.

By Linnæus this genus was included among the *Ostriches*, and both Latham and Temminck have placed it with the *Emeus*; but it differs so remarkably from both of these that it is fairly entitled to be placed alone. From the *Ostriches* it is distinguished by having three instead of two toes, and from the *Emeus* by the length of the wing, as in the latter the wings are merely rudi-

mental, whilst in the *Nandu* the several parts of the wing are perfectly formed, although not largely developed. There is but a single species known, viz.

R. Americana, Lath.; *Struthio Rhea*, Lin.; *le Nandu*, Vieill.; *American Emeu*, Lath.; *American Nandu*.

About four feet nine inches in height; upper and back part of the head blackish, and from the nape a black stripe passes down the neck to its junction with the trunk, where it expands and forms a collar surrounding its whole circumference; the other parts of the head and neck white; general colour of the plumage of the body white, except on the back, where it is leaden; shoulders and scapulars ashy, as are also the alar quills, except the primaries, which are white at their roots and blackish in the middle; legs flesh-coloured. The female differs only in being somewhat smaller and in having the neck band not quite so broad, which, however, would scarcely be noticed if the birds were not seen together. It is found only in South America, and is principally met with in the neighbourhood of the Lake Nahuelguapi, in the valleys of the Andes; it is also found in the cold regions of the Cordilleras, in Brazil and Patagonia, but it is never met with in the warmer districts, as Guiana. Great confusion has arisen as to the nomenclature of this bird: in some places it is called *Nandu* and *Chari*; Molina says that in Chili it is called *Cheuque*; the Spaniards of South America name it *Avestruz* or *Ostrich*, and the Portuguese of Brazil know it as the *Ema*. Pairing time is in July; and the cry of the male calling to his mate can be heard at a considerable distance, and resembles the lowing of a Heifer. The female begins to lay towards the end of August from forty to sixty eggs on the ground in a careless manner, but some authors say in a shallow, natural hole, lined with straw, but uncovered, so that the eggs may be seen a long way off. It is doubtful also whether the number of eggs just noted is the produce of a single or of several hens. The eggs are well tasted, and each large enough to hold a quart of fluid; their surface is smooth; their colour white tinged with yellow, and they are rather pointed at the ends. The young begin to be hatched about the early part of November; and the mother's call resembles that of the human whistle. They are very voracious, taking whatever is offered, even pieces of iron; but their favourite food is flies, which they catch with great dexterity. They have no defence except their feet, with which they strike when disturbed. They do not fly, as the wing bones are small and the feathers too weak and flexible to afford a possibility of raising their body from the ground, but they run with great speed, and assist themselves by spreading their wings to the wind, and dropping one or the other as they turn themselves about on their course. When undisturbed, their walk is slow and majestic, carrying the head and neck upright and the back rounded; but in making their escape from their enemies, their speed is so great that they outstrip the fleetest dogs and horses, and when surprised are caught only with the *lasso*. Much caution, however, is required in approaching them, even when hampered in the cord, as they kick so violently as to break even stones. The Indians use their larger feathers for making parasols, bags, and other ornaments.

See Linnæi *Systema Naturæ* a Gmelin; Vieillot, *Galerie des Oiseaux*; Molina, *History of Chili*; Latham, *General History of Birds*.

RHEEDIA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Guttiferæ*.

RHEA.

RHEE-
DIA.

RHEE-
DIA. Generic character: calyx none; corolla, petals four;
stigma funnel-shaped; berry ovate, one-celled, three-
seeded.

RHE-
TOR.

One species, *R. lateriflora*, native of Martinique.

RHE'TOR,

RHETO'RICAL,

RHETO'RICALLY,

RHETO'RICATE,

RHETORICA'TION,

RHETORI'CIAN, *adj.*

RHETORI'CIAN, *n.*

RHE'TORICK,

RHE'TORIZE.

Fr. *rheteur, rhetoriquer, rhe-*
toriser; It. *retore*; Lat. *rhe-*
tor, a speaker, Gr. *ρήτωρ*, from
ῥέειν, dicere, to speak.

A *rhetorician*, literally, is a
speaker; hence, one who stu-
dies, practises, teaches speak-
ing, as an Art. See the Quota-
tions from Wilson and Blair;

and also RHETORIC, in our 1st Division.

Thyng þat al þe worlde wot. wherefore sholdest þow spare
To rehercen hit by *retoryk*.

Piers Plouhman. *Vision*, p. 203.

It muste ben a *rethor* excellent,
That coude his colours longing for that art,
If he shuld hire descriven any part.

Chaucer. *The Squires Tale*, v. 10292.

And with *rhetorike* come forthe musyke, a damosell of oure house,
that singeth nowe lighter modes or prolacions and now heauier.

Id. *Boecius. De Consolatione*, book ii.

With boke in hand, than come Mercurivs,
Right eloquent and ful of *rethorie*,
With polite termes and delicious,
With penne and inke to report al redie.

Id. *The Testament of Creseide*.

For thilke schole of eloquence
Belongeth not to my science,
Upon the forme of *rhetorike*
My wordes for to peinte and pike.

Gower. *Conf. Am.* book viii.

Rhetorique is an arte to set forth by vtterance of words, matter
at large, or, (as Cicero doth say,) it is learned, or rather an arti-
ficial declaration of the mynd, in the handling of any cause called
in contention, that may through reason largely be discussed.

Wilson. *The Arte of Rhetorique*, p. 1.

Then he maketh the dead men's soules by a *rhetoricall* proso-
popœa, to speake out of purgatory pinfolde.

Fox. *Actes, &c. Henry VIII.* fol. 927.

My lorde hath *rhetoricallye* begunne his proposicion to winne his
auditory.

Bale. *Yet a Course*, fol. 44. b.

Whose cause, I pray you, sir, if envie shall stirre up any wrong-
full accusation, defend with your mightie *rhetorike* and other your
rath gifts of learning, as you can.

Spenser. *Epistle to Maister Harvey*, p. 19.

Eyes are vocal, tears have tongues,
And there be words not made with lungs;
Sententious showers, O let them fall!
Their cadence is *rhetorical*.

Crashaw. *On the Death of a Gentleman*.

Hierom informe us; that those who are accustomed to *rhetoricall*
stage-plays, to sweet polished orations and poems, despise the
plaine common phrase and humble stile of the Scriptures as base
and sordid.

Prynne. *Histrio-Mastix*, part i. fol. 541.

Much more must stage-plays (wherein the quintessence, the
confluence of all obscenity is pithily contracted, emphatically ex-
pressed, elegantly adorned, *rhetorically* pronounced) be more pre-
valently powerfull to draw men on to these grosse lecherous sinnes.

Id. *Ib.* fol. 385.

Certainly such *rhetorications* as this cannot be intended for any
but such as are of the very weakest capacity.

More. *Immortality of the Soul*, book i. ch. x.

As no less was that before his book against the Brownists, to
write a letter to a prosopopœia, a certain *rhetoriz'd* woman whom
he calls mother, and complains of some that laid whoredom to her
charge.

Milton. *Works*, vol. i. p. 106. *An Apology for Smectymnus*.

I do not heighten or *rhetoricate* at all in these particulars.
Waterland. Works, vol. ii. p. 49. *Christ's Divinity. Sermon 3.*

Neither of them intended to extenuate the guilt of heresy at all,
but to magnify another kind of guilt, as still greater according to
their way of reasoning, or rather *rhetorizing*.

Waterland. Works, vol. v. p. 357. *Addenda to the Doctrine of the*
Holy Trinity.

Boldly presum'd, with *rhetorician* pride,
To hold of any question either side.

Blackmore. *Creation*, book iii.

The convictive evidence and rapid progress of the Gospel had so
shaken and disconcerted learned pride, that the next age saw a
torrent of believers pour into the church, from the schools of their
rhetors, the colleges of their philosophers, and the cloisters of their
priests.

Warburton. *Works*, vol. viii. p. xx. *Introduction to Julian*.

Like quicksilver, the *rhet'ric* they display
Shines as it runs, but grasp'd at slips away.

Cowper. *Progress of Errour*, p. 611.

The power of eloquence having, after the days of Pericles, be-
come an object of greater consequence than ever, this gave birth to
a set of men till then unknown, called *rhetoricians*, and sometimes
sophists, who arose in multitudes during the Peloponnesian war;
such as Protagoras, Prodicus, Thrasymus, and one who was more
eminent than all the rest, Gorgias of Leontium. The sophists
joined to their art of *rhetoric* a subtle logic, and were generally a
sort of metaphysical sceptics.

Blair. *Lecture 25.* vol. ii.

RHEUM,

RHEUMA'TICK,

RHEU'MATISM,

RHEU'MY.

Fr. *reume, rheume*; It. *reuma*;

Sp. *reuma*; Lat. of Lower Ages,

rheuma; Gr. *ῥέυμα*, from *ῥέειν*, to

flow.

See the Quotations from Pliny.

Reumes and moistures do increase, than meates and drinkes na-
turally very hot, wold be moderatly vsed.

Sir Thomas Elyot. *Castel of Helth*, book ii. ch. xxiv.

Also it is singular against the sharpe and eager flux of fleam
which the Greekes call *rheumes*.

Holland. *Plinie*, book xxii. ch. xxv.

Some prescribe for to cut the root thereof into thin roundles, and
to keepe them enfiled up, or hanging by a string, and then to seeth
them; for to be eaten against the flux of humours which the
Greeks name *rheumatisms*.

Id. *Ib.* book xxii. ch. xviii.

Moreover, it is thought to bee singular good for the aquosities
gathered within the bodie, and the diseases caused thereby, as
dropsies, &c., for the headach, for *rheumaticke* ulcers also.

Id. *Ib.* book xx. ch. xx.

Here finds he on oak *rheum*-purging polypode.

Drayton. *Poly-olbion*, song 13.

If I were feeble, *rheumatic*, or cold,
These were true signs that I were waxed old.

Id. *Henry to Rosamond*.

What, is Brutus sicke?

And will he steale out of his wholesome bed
To dare the vile contagion of the night?
And tempt the *rheumy* and vnpurged ayre
To adde vnto his sicknesse?

Shakspeare. *Julius Cæsar*, fol. 116.

The throttling quinsy 'tis my star appoints,
And *rheumatism*s ascend to rack the joints.

Dryden. *Palamon and Arcite*.

The South he loos'd, who night and horrors brings;
And fogs are shaken from his flaggy wings.
From his divided beard two streams he pours;
His head and *rheumy* eyes distil in showers.

Id. *Ovid. Metamorphoses*, book i.

RHEUM, in Botany, a genus of the class *Ennean-*
dria, order *Trigynia*, natural order *Polygoneæ*. Generic
character: calyx none; corolla six-cleft, persisting; seed
one, triangular.

Eight species, natives of the Northern parts of Eu-
rope and Asia. The useful medicine Rhubarb is the root
of *R. palmatum*, a native of Bucharica. *R. rhapsodicum*

RHE-
TOR.

RHEUM

RHEUM. and *undulatum* are frequently cultivated in gardens; their large leaf stalks contain oxalic acid.

RHINE.

RHEXIA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx pitcher-shaped, four or five-cleft; corolla, petals four, oblique, inserted into the calyx; anthers declining; capsules bristly; receptacle rather crescent-shaped; seeds numerous.

Twenty-nine species, natives of North and South America and the West Indies.

RHIGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* somewhat geniculated, twelve-jointed, elongate, moderate; the *funiculus* seven-jointed, the joints nearly equal, club oblong-ovate, four-articulate; head produced in front into a short, very much thickened rostrum, the apex of which is deeply notched; eyes ovate, depressed; *thorax* lobate behind the eyes, half the width of the elytra, somewhat cylindric; *elytra* ample, with the shoulders elevated and angulated, prominent; body short; wings two; legs rather long and stout, anterior approximating at the base; *femora* unarmed; anterior *tibiæ* armed within, the apex armed with a short, acute tooth; *tarsi* tetramerous.

Type of the genus, *Curculio tribuloides*, Pallas; Schön. *Disp. Meth. Curc.* 82. About a dozen species, inhabitants of various parts, chiefly tropical.

RHINA, from the Greek *ῥίς*, a nose, Schneid. In *Zoology*, a genus of animals belonging to the family *Plagiostomes*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Body wide and armed with spines; muzzle wide, short, and rounded; mouth wide and transverse; teeth tubercular; gill apertures beneath; tail long, very thick at its base, fleshy, and furnished with two dorsal and a caudal fin; pectoral fins very near the ventral.

The animals forming this genus were separated from the *Rajæ* of Linnæus, by Schneider, in consequence of the great thickness of their tail, which resembles that of the Sharks; in this respect *Rhinobates* is also similar, but distinguished by its sharp muzzle, and by the pectoral being far apart from the ventral fins.

R. Ancylostomus, Schneid. About twenty-one inches in length, and three and a half in breadth, including the pectoral fins; head large and flat, with deep temporal pits; jaws curving, and teeth tubercular; eyes wide apart, and the orbits spiny; from near the muzzle and passing back between the eyes a double row of spines, which terminate above the temporal pits; upon the back there are five rows of spines, that of the middle composed of the largest, and the outer pair of the smallest and shortest; first dorsal fin deep and opposite the ventrals; caudal having two lobes, of which the upper is the larger; pectorals narrow; the root of the tail is as thick as the hind part of the body; general colour dusky olive tinged with yellow, becoming lighter on the sides,

and marked with large white spots; irides red. Is found on the Coromandel coast.

R. Sinensis, Schneid.; *Raie Chinoise*, Lacep. Body rather oval; behind each eye there are three spines, many more upon the back, and two rows on the tail, the terminal fin of which is bilobed; upper part of the body yellowish-brown, under part white. Sonnini considers that this is the Ray mentioned by Carreri and other navigators as growing to a great size in the Japanese seas, and the skin of which is highly valued for making sword scabbards. Lacepede took his figure from a Chinese drawing; and Cuvier thinks that in its form it rather resembles the *Torpedos* than the *Rhinæ*.

See Bloch, *Ichthyologia a Schneider*; Lacepede, *Histoire des Poissons*.

RHINA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, geniculated, nine-jointed, moderate; *funiculus* six-jointed, club elongate, cylindric, the apex compressed and rather solid, and acute; head produced in front into an elongate, porrect, rounded rostrum, unequal above, and reflexed on each side at the apex; eyes very large, oblong; *thorax* somewhat ovate, a little convex; *elytra* elongate, cylindric, convex; legs, especially the anterior, elongate, remote; *femora* simple, compressed; *tibiæ* furnished with spines within, and a large claw at the apex; *tarsi* tetramerous.

Type of the genus, *R. barbirostris*; Latreille, *Gen. Crust. et Ins.* vol. ii. p. 269; Drury, *Illust.* vol. ii. pl. xxxiv. fig. 2. g. Inhabits Africa.

RHINANTHUS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Rhinanthaceæ*. Generic character: calyx four-cleft, ventricose; corolla ringent, superior lip usually compressed; capsule two-celled, obtuse, compressed.

Ten species, natives of Europe, the East Indies, and Africa. *R. Crista-galli*, the Yellow Rattle, is a native of England.

RHINASTUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, geniculated, twelve-jointed, rather short and slender; *funiculus* seven-jointed, the two basal joints rather long and obconic, remainder short, truncate at the apex; club small, ovate, four-jointed, the articulations closely united; head elongated, produced in front into a long, robust, curved, and angulated rostrum, which is a little inflexed; eyes very remote, lateral small, rather prominent; *thorax* transverse, bisinuated at the base, with the sides flattened, narrow towards the apex; *sternum* mucronated; *scutellum* rounded; *elytra* somewhat cordate, flattened, the margin costated; legs elongate, anterior longest, distinct at the base, slender; *femora* slightly clavate, dentate; *tibiæ* compressed, four anterior curved towards the apex, and angulated within; posterior armed with a perpendicular tooth; *tarsi* broad, tetramerous.

Type of the genus, *R. pertusus*, Dalman; Schön. *Disp. Meth.* p. 262. Two species, natives of South America.

R H I N E.

RHINE, UPPER, a Department in the North-Eastern extremity of France, and constituting its frontier towards Germany and Swisserland, is bounded on the North by the Department of the Lower Rhine; on the East by the river

Rhine; on the South-East by Swisserland; on the South-West by the Department of the Doube; and on the West by those of the Upper Saone and the Vosges. Its outline presents an irregular pentagon, of which the two longer

RHINA.

RHINE.

RHINE. sides are the Eastern and Western; and it derives its name of *Upper* in contradistinction to its sister Alsacian Department of the *Lower* Rhine, from its comparative proximity to the source of the noble stream which forms its Eastern limit.

Surface
of the
Country.

Two-fifths of the Department are occupied by a large plain, which inclines gradually from the Eastern base of the Vosges to the Rhine; and on the Southern extremity, the small hills, which form the connecting branch between the former range and the Jura, give the soil an inclination towards the same river on the one side, and on the other a descent in the contrary direction. Thus the Southern portion of the territory belongs to the basin of the Saone, whilst its Northern, and by far largest part, is comprised in that of the Rhine. Those summits, crowned with gloomy forests, which, together with the river, constitute the natural boundaries of the Department, belong to the two chains of the Jura and the Vosges. The first throws out a few branches only on its Southern confines; and the highest summit among these, that of Chasseraie, is 1618 metres 7 dec. above the level of the sea. This portion of the chain is called the Lower Jura, and presents no other remarkable valleys than those traversed by the Ill and the Largue. As to the chain of the Vosges, a prolongation of which bounds the Upper Rhine on the West, it runs in a direction from West to East a distance of twenty-five leagues, beginning at Langres, and terminating near Belfort. At the latter place it takes a Northern direction, and loses itself in the plain of Trèves, and in the Ardennes. Its most elevated summits lie within the Department, and, from the paraboloidal form which they commonly affect, they are termed balloons (*belchen*.) In general they rise gradually, and the loftiest are separated from the plains by intermediate elevations of small hills. The greatest height known (for several important summits remain as yet unmeasured) is that of the Balloon of Guebwiller or Soultz, which reaches to 1433·4 metres. The chief valleys formed by the Vosges in the Upper Rhine are those of Liepvre or St. Marie aux Mines, in the bottom of which is the town which gives the valley the second of these names; of Ribeauvillé, enlivened by numerous manufactories; of Poutroye and Orbey, sterile but picturesque; of Munster, which is divided above the town into two branches, the great and the little valley; of Florival, (*Blumenthal*,) likewise divided into two, the *exterior*, or valley of Guebwiller, and the *interior*, or valley of Murbach, so named from a celebrated Abbey that formerly stood there; of Soultzmatt, noted for its mineral waters; and of St. Amarin or of Thann, containing the most extensive manufacturing establishments of the Department, and which, taking a Northern direction, embraces the valley of Lauch or Lautenbach, that of Massevaux, from the extremity of which rises the Balloon of Alsace, a height of 1074 metres, and lastly, that of Giromagny, celebrated for its mineral wealth.

Soil.

The soil of this Department may be classed into four principal regions: those of the Ill, the Rhine, the Jura, and the Vosges. Its arable lands sometimes commence at the summit of the mountains, upwards of 3000 feet above the level of the sea, and succeed in general to thick forests. First come the plantations of chestnuts, then the vineyards, and, lastly, the corn lands, which slope gently towards the Rhine. The vast plain which occupies two-fifths of the Department, and which comprises the two first-named regions, may be divided into

three distinct parts, according to the different nature of the soil. Between the Rhine and the Ill its substratum consists of stones, in some parts covered with sand, and in others with a thin layer of clay. Between the Ill and the range of high ground is a stiff and productive soil, varying from one to nearly three feet in thickness; and along the rivers and adjoining the marshes is found a black and very tenacious deposit on a gravel bottom, which produces a vigorous vegetation. In the vicinity of the high lands, however, the soil is generally clay on a calcareous bottom. All the smaller hills likewise are calcareous. Generally speaking, the quality of the cultivated lands is very various; in some parts they are of a blackish-yellow, in others of a brownish-grey, but usually good and fertile. The base of the soil is pebble, gravel, and sand, and is generally covered by a layer of vegetable earth, running from nineteen inches to upwards of three feet in thickness. The most fertile and most important of the four regions is undoubtedly that which is enclosed between the Ill and the Vosges. That district, formerly called *Sundgau*, approaches the preceding in productiveness; the lands between the Ill and Rhine, along the forest of Hardt, yield but little, and good meadows are seldom met with here on account of the overflowings of the latter river; the remainder of the *Sundgau*, from Belfort to Cernay, which ranges along the mountains, presents a spongy soil, little fitted for arable, and covered with numerous woods and ponds. The plain of Cernay, which is about 1000 hectares in extent, and which previously to the Revolution fatigued the eye with the monotony of its sand and marshes, has been in great part redeemed, and now furnishes some excellent grazing ground.

The surface of the Department is divided as follows: **Divisions** in royal forests, forests held in common, and those belonging to individuals, respectively, 24,016,18 hectares, 93,044,18 hectares, and 34,617,00 hectares; in arable land and gardens, 138,038,00 hectares; in vineyards, 11,190,00 hectares; in meadow, 50,290,00 hectares; in pasturage, 30,915,00; in high and cross roads, canals, and rivers, 10,154,64 hectares; in waste lands, houses, and public buildings, &c., 392,257,00 hectares. Thus we find that almost eight-twentieths of the total superficies are occupied by forests of various kinds; seven-twentieths by arable land and gardens; four-twentieths by meadows and pasturage; and the last twentieth by vineyards, roads, &c. The sum total of the territorial product of the Department is estimated at 19,196,000 francs, or 36 francs 19 cents each individual.

The rent of the land is generally paid in kind for Rent, &c. arable land and vineyards; and in money for meadows. Grazing ground, or dairies, (*fromageries*.) are likewise generally leased at a money rent, but are sometimes paid for in produce. The rent of arable land is commonly fixed at a third, that of vineyards at one-half, of the produce; and in the farms let at a third, the meadow attached to them is thrown in. The farmer takes two-thirds of the produce, and furnishes only two-thirds of the seed. The value of land varies of course according to the quality of the soil; in the neighbourhood of Colmar an acre of arable land is worth from 1000 to 1500 francs.

Out of the 138,000 hectares of arable land in the Agricultural Department, little more than 100,000 are in cultivation, through a deficiency of manure; and this fact alone is demonstrative that agriculture here is far from being well understood. Great improvements have, however,

RHINE. taken place within the last thirty years. Wastes have been cleared; large artificial meadows formed; and various manures, as well as a better system of cropping, has been introduced. Still the spirit of routine, which so powerfully influences the farmer, presents many obstacles to the progress of improvement. The plough, with wheels in front and drawn by horses or oxen, according to the locality, is used in the clayey corn country of the region of the Ill. The system of cropping prevalent throughout the Department is the triennial; being wheat the first year, rye the second, and in the third clover, potatoes, beet-root, &c. But in some Cantons the system of alternate cropping has been introduced. Wheat is the principal agricultural product throughout Alsace, and the kind usually sown at the fall is the un-bearded. Experience has proved that the best course for this grain is after tobacco, since it then yields a seventh more than after any other preparatory crop; but the government monopoly of this article prevents the extension of the practice. The land undergoes four ploughings for wheat, which is usually sown from the 20th of September to about the 15th of October, in the proportion of from two to three hectolitres to the hectare. Harvest-time begins from the 25th of July to the 15th of August; and the mean return of the arable land of the whole Department is twelve hectolitres the hectare. Rye is sown, after two or three ploughings, about the 15th of September, and is harvested eight or ten days sooner than wheat. It forms the chief food of the lower classes, and is therefore, together with potatoes, the sole object of cultivation in the lands termed *kritter*, which are assigned to the poor in each Commune. Barley and maize succeed almost every where; but oats are cultivated in the region of the Jura only, and not one-seventh of the consumption is raised. Maize also is grown for green food; and it is computed that a hectare laid down for this purpose is equal to a hectare and a half laid down with lucerne. The latter is very productive here; sainfoin is only grown in some parts of the Department; rape-seed, flax, and hemp are much cultivated; and the Jerusalem artichoke is peculiar to the region of the Rhine, yielding 300 hectolitres to nine hectolitres of seed the hectare. The return of the harvest for the year 1832 was, computed in hectolitres, wheat, 435,328; meslin, 107,819; rye, 172,390; barley, 345,975; buck-wheat, 5,453; maize and millet, 3,398; oats, 154,005; pulse of various kinds, 12,820; other small grains, 10,288; potatoes, 1,640,000; making a total of 2,887,476 hectolitres.

Vineyards. The vine has long constituted an important element in the agricultural industry of the Department. The entire extent of the hills situated on the Western slope of the Vosges, and exposed to the sun all the day long, is covered with vineyards, which produce wines held in much estimation. The vineyards which extend into the plain to the environs of Colmar, and on some hills rising above Mulhausen, yield more abundantly, but the wines are of inferior quality. In 1823 the average produce of the vintage was estimated at 308,000 hectolitres in the Arrondissement of Colmar; at 52,500 in that of Altkirch, and in that of Belfort at 26,500, making a total of 387,000 hectolitres. The vineyards of the Department are divided amongst 36,266 proprietors.

Distilled liquors. Brandy is chiefly distilled by the proprietors themselves from the husks of the grape after pressing, and the lees of the wine. *Kirchen-wasser* is manufactured in considerable quantity; and a species of liqueur is

RHINE. distilled from plums of every kind for home use, and known under the name of *quetschen*. The annual distillation of spirits amounts to 3926 hectolitres, and is the product of 1780 stills; the quantity of beer made to 92,380 hectolitres; and that of vinegar to 2642 hectolitres.

The grazing grounds on the slopes of the hills yield a delicate aromatic grass, which gives a fine flavour to the flesh of the sheep and cattle pastured there. That furnished by the meadows in the plain is of a coarser kind; and, as these are flooded during Winter, acquires a bitter, marshy taste. Artificial meadows have increased considerably within the last twenty years, and with them have been introduced better systems of manuring. The quantity of fodder produced by the Department is estimated at 7,156,680 myriagrammes.

The breeding of cattle is still badly understood, but every encouragement is given to it, both by the general and local government, prizes being annually distributed for this purpose. The total number of horses is about 28,815, of which 3140 are brood mares and 3120 colts. The breed is small, with large heads and slight limbs. Horned cattle too are in general diminutive here, but importations from Switzerland serve to improve and keep up the stock, which would otherwise rapidly degenerate. Their number is computed to be 72,895. Although the soil of the Department is very favourable to the breeding of sheep, yet few branches of rural economy are more neglected. The breed is small, and the wool indifferent. Their number is about 56,391, of which 719 are merinos, and 8584 a cross betwixt them and the native stock. Goats are reared on the mountains to the number of about 10,000; and the swine, which are partly fattened in the woods, are estimated at a total of 42,365. Asses are for the most part confined to the vineyards on the Vosges, and their number is not much above 1000. The rearing of poultry is much neglected, and game is scarce. Among the latter are found the stag, wild boar, wild goat, hare, moor-cock, pheasant, &c. The fisheries are leased out; the rivers, lakes, and ponds furnishing an abundance of excellent fish, as sturgeon, salmon, lamprey, eel, carp, pike, cray-fish, &c. The produce of a preserve of about an acre in extent is valued at from 80 to 120 francs.

The bees, reared on the hills, yield a delicious honey, but the length of the Winters is unfavourable to this rural speculation. Attempts are now making to introduce the silkworm, but it is not probable that they will be attended with much success.

The Department of the Upper Rhine comprehends the Political divisions. ancient territories of Upper Alsace, the Sundgau, and the petty Republic of Mulhausen; and is now divided into three Arrondissements, those of Colmar, Altkirch, and Belfort. The two Arrondissements of Délemont and Porentrui, which belonged to it under the Republic and the Empire, and added nearly one-third to its extent, were severed from it by the Treaties of 1815. Its superficial area is estimated at 392,257 hectares, or 194 square leagues; but this is only an approximation, the government survey not being yet completed. Its greatest length from North to South is 19 leagues, and its extreme breadth from East to West 12 leagues. The Department is partitioned into 29 Cantons and 489 Communes. In the Arrondissement of Colmar, which has an area of 160,093 hectares, are 13 Cantons, 139 Communes, and 189,589 inhabitants; in that of Altkirch, the area is 105,412 hectares, the Cantons 7, Communes 159, and

RHINE.
Population.

population 118,513; whilst the Arrondissement of Belfort, with an area of 126,752 hectares, has 6 Cantons, 191 Communes, and 116,156 inhabitants. Thus Colmar, which comprises five-twelfths of the territory, contains three-sevenths of the whole population; Altkirch, with three-twelfths, has two-sevenths of the population; and the remaining two-sevenths are spread over the four-twelfths of the territory occupied by the Arrondissement of Belfort. Out of the 489 Communes, 113 have each a population exceeding 1000, 61 of which are in the Arrondissement of Colmar, and 26 in each of the two others; and 31 out of these 113 Communes may be reputed towns, as they severally possess a population of above 2000 souls. Examining still further, we find that 13 of these 31 or principal Communes possess from 2000 to 3000 inhabitants; 3 of them, to wit, Munster, Orbey, and Soultz, from 4000 to 5000; Belfort contains upwards of 5000; Ribeauvillé, beyond 6000; St. Marie aux Mines, beyond 9000; Mulhausen, above 13,000; and, lastly, Colmar, upwards of 15,000. The population of the towns, compared with that of the country, is as 1 to 4.

Magistrates.

The local government is administered by a Prefect, who sits at Colmar, and by two Sub-Prefects, who preside in the two other Arrondissements. A Secretary-General and a Prefectural Council, composed of three members, complete the administration. The judiciary consists of a *Cour Royale*; three *Tribunaux de Première Instance*; three *Tribunaux de Commerce*; and Courts of Elders at Mulhausen and Thann, for the arbitration of differences betwixt masters and workmen. Each Canton has a justice of the peace.

Military contingent.

The Department returns five deputies, who are chosen by about 1500 electors.

The National guard presents an effective body of 62,214 men, with a reserve, not called out, of 16,144 citizens, and 317 artillery-men, 1524 sappers and miners, and 391 horse. The gendarmerie of the Department forms part of the 22d legion, and consists of 161 men. In the general military division of the Kingdom, the Upper Rhine belongs to the fifth division, which comprehends Alsace, and the head-quarters of which are at Strasburg. The contingent required for the royal army in 1831 was 1107 men; the recruiting station is at Colmar. Since the raising of Huningen, in 1816, Belfort and Neuf-Brisach, both fortified by Vauban, are the only strong places in the Department.

Mines.

Many mines which were formerly very productive are now abandoned; still this branch of industry is carried to a considerable extent, and it is probable that several of the ancient silver mines might be reopened with advantage. At St. Marie aux Mines, seventeen workmen are still employed in the lead-mine of Surlatte, the only one of the numerous veins now open. The mineral is a sulphuretted lead, which yields an ounce of silver to the ancient quintal. There is a rail-road here. The iron-mines of the Department are numerous and rich. According to a calculation made in 1828, the amount of iron produced at the foundries in pig-iron, castings, &c. was 3,719,110 kilogrammes; the coal consumed was estimated at 159,581 quint. metr.; and the charcoal at 125,320 hectol. The number of workmen was 610. The quantity of bar-iron yearly produced in the forges of the Department is estimated at 2,952,000 kil.; of wrought iron at 1,337,430 kil.; the consumption of charcoal at 396,500 hectol.; and of coal or coke at 22,200 quint. metr. The workmen amount

to about 200. There is a wire-drawing mill, which employs 100 workmen, and manufactures annually 320,000 kil.; a manufactory of steel, where about 20,000 kil. are yearly produced; and there are brass and copper works at Oberbruck, in which the quantity manufactured, both sheet and wire, amounts to 200,000 kil. These last-mentioned works give employment to a hundred hands, and consume, one year with another, 600,000 quint. metr. of coal, and 2000 hectol. of charcoal.

Coal is scarce in the Department, and is obliged to be imported. The few pits opened occupy only 59 men; but of such paramount importance is this mineral justly considered, that an Association has been formed, and is in active operation, to explore the country for its discovery. Turf-pits are extremely numerous in the Department.

Quarries of granite, excellent freestone, and various marbles abound, particularly along the Vosges. In 1828 the produce of the limestone quarries of the Department was 2,147,800 kil. for manure, and 1,542,000 kil. for building. That of the quarries of silicious freestone was 156,140 met. cub.; of calcareous freestone 4846 met. cub.; and of porphyry and granite 3400 met. cub. The number of workmen employed was 486. In the same year the total number of individuals occupied in the various employments connected with minerals or metals was estimated at 4009.

The manufactures of the Department form a much more important branch of industry than the mines. The various manufacturing establishments lie between the Ill and the Vosges, and extend from its Northern to its Southern limit. The cotton manufacture, which is the principal, employs a total of 51,842 hands; 10,242 of these are engaged in spinning, 30,352 in weaving, and the remainder in the manufacture of printed calicos. There are 49 cotton-mills, and the number of spindles is 466,363: these consume 4,146,643 kil. of raw material, and produce 3,699,001 kil. The number of hand-loom is 21,65, of power-loom 426, and of pieces manufactured, muslins, calicos, ginghams, bandanas, &c. 718,010. There are 27 manufactories of printed calicos, which produce 527,935 pieces of goods yearly; and in addition to the above, the produce of 16 cotton mills, situated in the neighbouring Departments, is for the most part consumed in the manufactories of the Upper Rhine. The annual value of the cotton manufactured is 74,000,000 francs. The quantity of woollen cloths manufactured yearly amounts to 3737 pieces of fine, and 2285 pieces of coarser cloth, each piece containing 15 ells. Among the other manufactures carried on here are those of ribbons, caps, and stockings, silk, writing-paper and hanging-paper, occupying, respectively, 128, 347, 210, 300, and 200 workmen. The bleaching and dyeing establishments, which are 10 in number, give employment to 434 hands. There are several manufactories of watch-springs: those at Beaucourt employ 900 workmen who produce annually 144,000 dozen of springs. From 1000 to 1200 hands are likewise occupied in the manufacture of wooden screws, (*vis à bois*), and similar articles, most of which are used in the royal navy.

The principal exports of the Department are wine, hemp, flax, oil made from the colza, (*Brassica arvensis*), cheese, brandy, vinegar, timber, fruit-trees, hardware of every kind, watches, watch wheels and springs, pottery, china ware, calicos, cottons, leather, &c.

The chief imports are cattle, corn, hops, wine, bran-

RHINE.

Manufactures and commerce.

RHINE. dies, and fine liqueurs from the interior of the Kingdom, olive oil, silks, fine linens, furs, fine cloths, coal, salt, and colonial produce, &c. Its carrying trade was formerly considerable, but is now limited to the merchandise coming by sea or from the interior.

Education
and litera-
ture.

The public Colleges and Schools depend upon the University of Strasburg, where only degrees can be taken. In 1833 there were six Communal Colleges in the Department, *viz.*, those of Colmar, Altkirch, Belfort, Thau, Mulhausen, and Rouffach; and in the same year 420 out of the 489 Communes possessed primary schools, affording education to 48,140 children in winter, and 18,411 in summer. The principal scientific Society is that of Mulhausen, from whose labours has emanated the admirable *Statistique du Haut Rhin*. There is a Bible Society at Colmar; and there are thirteen printing-presses in the Department. At Mulhausen is the extensive lithographic establishment of M. Engelmann, the introducer of the Art into France.

Religion.

The Upper Rhine is comprised in the Bishopric of Strasburg, and the number of Roman Catholic Clergy, exclusive of the Vicar-General, who resides at Colmar, is 420. The Lutheran Clergy is composed of 26 Pastors; the Reformed of 10; and the Jews of the Department have 20 Rabbis, who are paid by the State. In 1824, the population was thus divided: Roman Catholics, 318,922; Protestants, 38,480; Anabaptists, 924; Jews, 11,241.

Roads and
inland na-
vigation.

There are seven royal roads and fourteen departmental; all of which, however, need improvement. The vicinal or parish roads, especially, are in wretched condition. Of the rivers, the navigation of the Rhine is confined to the descent from Bâle to Strasburg: the Ill is navigable from Ladhof, near Colmar, to its junction with the Rhine. A few other rivers, as the Lauch, the Béhine, and the Fecht, are partially navigable, but to an inconsiderable extent. The only canal worthy of notice is the important Junction Canal between the Rhine and Rhone, which traverses the Department from South to North, from Fèche-le-Pré to Artzenheim, passing through Mulhausen, and thence to Strasburg.

Geology,
mineralo-
gy, and mi-
neral
springs.

The base and most elevated summits of the Vosges are of primitive formation, being chiefly granite and gneiss. The loftiest points consist of the former, which is often porphyroidal, and abounds most towards the Northern limit. The gneiss is generally met with in the valleys. Besides these two rocks, schistus, primitive limestone, and porphyry are occasionally found. The transition formation, which bounds the chain of the Vosges, is chiefly composed of *phyllade*, quartz, limestone, and porphyry; the first of these alone being stratified. The secondary formations begin at the foot of the Vosges, and form the base of the hills which occupy the Southern portion of the Departments. They consist of coal, red sandstone, variegated marls, oolites, &c., are in general distinctly stratified, and some furnish abundant fossil remains of molluscæ and polypi. These in some places, as at the foot of the Vosges and at Winkel, are covered by the argillaceous and calcareous tertiary formations, which are in their turn partially covered by the alluvial soil that forms the plain of the Upper Rhine, and a part both of the heights and valleys of the Southern plain. This formation is composed of diluvial and alluvial soils with turf; in the first, boulder-stones are met with; the second consists of clays, more or less argillaceous or marly, and of clays and sands sometimes agglutinated into a friable sand-

stone; lignites are found in it in abundance; the turf, which is the most modern portion of the alluvial soil, is met with in more than forty Communes of the Department. The alluvial soil is usually covered by vegetable earth alone; and in the plain it seems almost always to rest on the diluvial.

The minerals not previously mentioned are rock-crystal, calcareous spar, stalactites, gypsum, slate, jasper, agate, the pebble of the Rhine, of which imitations of diamond are made, steatites, potters' earth, manganese, &c.

There are many mineral springs in the Department, but only three of any consequence; those of Sultzbach, Sultzmatt, and Wattwiller. The first two are acidulous, the last is saline.

The government expenses of the Department, in the Finance-year 1831, amounted to 8,000,000 francs; the revenue, arising from taxes direct and indirect, customs, sale of crown wood, lotteries, &c., gave in the same year a clear return of 8,980,873 fr. 94 c. The municipal and communal revenues of the Department are 3,561,737 fr., the expenses of the same 3,184,810 fr.

Colmar, (*Columbaria* or *Colmaria*), the ancient Capital of Upper Alsace, is now the chief town of the Department, and is agreeably situated in a fertile plain about a league from the Vosges. It is in general well built; and its numerous manufacturing establishments, which will soon form a new town, are fed by the river Lauch, which runs through it, and the canal of Fecht. Its chief buildings are the ancient Cathedral, dedicated to St. Martin, and built by William of Marbourg, an architect who died in 1363; the Law Courts; the Mansion of the Prefect; the Guildhall; the College, containing the Public Library, and several Pictures painted on wood, by Martin Schoen, Albert Durer, and Grünwal; the Asylum for the Deaf and Dumb; the Civil and Military Hospitals; the Theatre; the Monastery of the Augustins, now a prison; that of the Dominicans occupied by the Gendarmerie; and their Church, which is now the Corn-hall. The only Square worthy of mention is that before the Cathedral, where is held a weekly market, frequented by the inhabitants of more than fifty villages around. Four fairs are annually held here. Its manufactures are those of cloth, cottons, plain and printed paper, leather, and cotton-yarn. Its trade consists in grain, wines, spices, drugs, caps and stockings, silks and ribbons. Population, 15,442. East longitude 7° 32' 26", North latitude 48° 14' 44".

The principal town, however, in point of commercial enterprise is *Mulhausen* or *Mulhouse*, which, in 1805, hardly contained 6000 inhabitants, and whose population, exclusively of about 7000 workmen employed in the town, but who reside beyond the walls, now amounts to upwards of 15,000 souls. In 1828, it possessed thirteen woollen and cotton manufactories, eleven of cloth, seventeen of muslin, seventeen of printed calico, and several leather-works and extensive founderies. It is seated on an island formed by the Ill and the canal of Neuf-Brisach; its streets are for the most part regular; and among its public buildings may be mentioned the Town-house and the Reformed Church.

Belfort rises at the foot of a rock seated at the base of the Vosges, and crowned by an old castle, named Bel-Fort, from its commanding position. Hence the name of the town, which is a manifest corruption, though now sanctioned by usage. It was fortified by Vauban; and the Savoureuse, which waters the walls,

RHINE.

Chief
towns.
Colmar.

Mulhausen.

RHINE. turns a great many mills. Its streets are broad and straight, and the barracks well built and large. The environs are fertile, and yield excellent pasturage. There are several iron-works in the vicinity, as well as cotton manufactories, tanneries, and founderies, both in the town and its immediate neighbourhood. East longitude $6^{\circ} 57'$, North latitude $47^{\circ} 38'$.

RHINE, LOWER, a Department of France to the North of the preceding, is formed out of the Northern portion of the ancient Province of Alsace, with some parts of German Lorraine. It constitutes the extreme limit of France on the East, where the Rhine separates it from Germany, and on the North, where it confines with the Rhenish Bavaria, or Palatinate; on the South it is bounded by the Department of the Upper Rhine, and on the West by those of the Moselle, the Meurthe, and the Vosges. The extreme length of the Lower Rhine from North to South, from Marckolsheim to Wissemburg, is about 110 kilom., or 24 common French leagues; and its extreme width, taken East and West, from Seltz to Harskirchen, is 83 kilom., or 18 leagues. Its least width, between the Ban de la Roche and the Rhine, is about 35 kilom. Its superficies may be estimated at 443,400 hectares, or 224 square leagues.

Mountains. The entire Western portion of the Department is covered by the chain of the Vosges, which is here from two to six leagues in breadth; the easiest pass is that of Saverne. These mountains are less lofty than in the Upper Rhine, but preserve the same paraboloidal form. The highest summit of that part of the chain appertaining to the Lower Rhine is 1095 metres above the level of the sea; and the others vary from 900 to between 300 and 400 metres. From October to April or May these summits are covered with snow; and this phenomenon is particularly observable on the Schneeberg, (Snow-mountain,) which is exactly 900 metres above the sea level, and whose top is crested with snow all the year round. There is this great difference between the Alps, the Pyrenees, and the Vosges, that the latter are covered with vegetation up to their loftiest summits, and never present the naked rocks which crown the former. They almost invariably terminate in rounded plateaux; and, viewed from the plain, present a screen garlanded with festoons, and not those bristly peaks that in the Alps and Pyrenees strike from a distance the eye of the beholder. These, with other well-marked characters, seem to claim for the Vosges a place as a distinct class of mountains, in preference to the general opinion that they are merely a prolongation of the Swiss Alps.

Valleys The mountains of the Lower Rhine are intersected by many delightful valleys; the principal of which, springing from the centre of the chain of the Vosges, open directly into the plain, running either parallel with the chain, or obliquely, or perpendicularly to it, without inclining to any particular direction. Among them the following, taken from North to South, are especially worthy of mention: the valley of Villé, a branch of the vale of Liepvre, belonging to the Upper Rhine; those of Andlau; of Barr; of Klingenthal, noted both for its beauty and its manufacture of arms; of Bruche, watered by the river of the same name; of Kronthal, containing extensive quarries; of Barental; Neiderbronn with its mineral waters; Jägerthal with its founderies and forges; and, lastly, the valley of Katzenthal, near Lembach, which contains mines.

Rivers. The plain which slopes Eastward from the Vosges to the left bank of the Rhine is cut by a great number of

RHINE. streams which run from the mountains of the Jura, and principally from the Vosges, to empty themselves into the Rhine. This noble river receives the waters of upwards of seventeen tributaries within the Department, fifteen of which rise in the Vosges. Two or three rivers, of which the Saar is the chief, flow from the Western slope of the above chain, and, passing for some short space through the Department, carry their waters to the Moselle. In addition to these rivers, more than 300 rivulets intersect the country in every direction, but there are no lakes.

The Department abounds in waterfalls: the most celebrated is that of Nideck, in the valley of Schirmeck, a league from Oberhaslach, which precipitates itself from the summit of a rock above a hundred feet high.

Professor Hammer has divided the soils of the Lower Rhine into five classes: 1. the *gravelly*, extends along the Rhine and the Ill, rising sometimes to the surface, often covered with a layer of vegetable earth, and of but moderate fertility: 2. the *marshy*, consists of extensive low bottoms, and is met with in some Cantons along the Rhine and Ill; it is composed of a gravel, covered with vegetable earth, and yielding tolerably when drained and secured from inundations: 3. the *marly*, of which the first hills of the Vosges, from the Bruche to Landau, chiefly consist; it is easily cultivated, and forms the most fertile part of the Department: 4. the *calcareo-argillaceous*, which runs laterally with the preceding the whole length of the Vosges, and forms the second line of hills. It is found beyond the Vosges, in the Cantons of Saar-Union, Harskirch, and Diemerengen, is as fertile as the *marly* soil, but of more laborious cultivation: 5. the *sandy*, comprising that which is formed from the detritus of the granitic rocks, prevails in that portion of the Department lying among the Vosges, and at their gorges, especially towards the North. It intersects or covers the *marly* soil in the Cantons of Haguenau, Bischwiller, Lauterbourg, Candel, and Landau. This is the most ungrateful of all the soils.

According to a calculation made in 1806, and which has not since been revised, the territory of the Department was divided in hectares and ares as follows: Communes with gardens and orchards 15,246,13 hec.; arable land 178,049,19 hec.; meadow 54,895,04 hec.; vineyards 14,805,26 hec.; pasture 27,897,47 hec.; marsh 275,61 hec.; quarries 57,94 hec.; uncultivated lands 5,120,36 hec.; forest 202,203,00 hec.; making a total of 498,550,00 hec. Many changes have, however, taken place since this epoch, at which the Department was more extensive than at present. For instance, the amount of forest land is now reduced to 149,513 hec. thus divided: in royal forests 56,723 hec.; in communal 73,758 hec.; and in forests belonging to individuals 19,032 hec.

Arthur Young, who wrote at the commencement of the Revolution, says, that this Department presented "one of the finest agricultural scenes in France, and to be rivalled by Flanders alone, which, however, surpasses it." Most of the estates are cultivated by the proprietors; and when farms are leased, it is generally for a period of nine years, and sometimes for eighteen, twenty-seven, and even fifty. The rent here is seldom paid in kind. The general system of cropping is, in the strong lands, wheat for the first year; barley, oats, or beans the second; and in the third, clover, potatoes, tobacco, &c.; the ground is then manured, and the same course is repeated without intermission. The produce of the

RHINE. sandy soils is, for the first year, hemp, potatoes, poppies; for the second, rye, meslin, and rapeseed; and barley or madder for the third, when manure is thrown in, and the system recommences. Madder, however, occupies the ground for two years.

Much attention is paid to manures, to which the great fertility of the Lower Rhine is chiefly owing; and in the North of the Department, particularly in the Arrondissement of Wissemburg, the land is improved by the parking of sheep. Spade husbandry is employed in many Cantons to prepare the ground for hemp and other seeds with perpendicular roots. Horses alone are used for the plough.

Almost every species of grain, vegetable, and fruit is grown in the Department. Thirteen or fourteen varieties of corn are cultivated, and also maize and millet; the latter two ripen with difficulty. Among the roots, potatoes take the first rank, and the Jerusalem artichoke, which perpetuates itself, comes next. Tobacco is grown to the yearly amount of 100,000 metric quintals: madder is raised in considerable quantities, and is found to improve the soil. Hemp is much grown, with some flax. The poppy is cultivated in many Cantons; and the colza and rape seed grow alike in the valleys and the mountains. Hops are of recent introduction.

Of the meadows, the best are those in the valleys and on the lesser hills. Irrigation is but little practised, notwithstanding the great facilities afforded by the water-courses of the Department. The best lands yield two crops a year, the first being carried in June, and the second in September. In the plain, the hay is saved in barns; on the hills, it is occasionally stacked. The produce of a hectare of the best meadows is about fifty quintals for the first, and thirty for the after-crop. Clover is usually laid down for artificial meadow, and is commonly sown with summer wheat; lucerne is less generally cultivated. Beet-root, the Swedish turnip, &c. are raised for cattle. A considerable extent of pasture ground has been converted into arable, but there still exist large tracts along the Rhine and on the mountains.

Horses.

Although the rearing of cattle might be made a source of great profit to the Department, yet, comparatively speaking, it receives but little attention. The horses reared in the plain are a tall, fine breed, well calculated both for agriculture and the army. The Cantons of Oberhausbergen and of Erstein are particularly distinguished in this respect. Every attention is paid by the local government, by the supplying of stallions from the Royal studs, and by the distribution of prizes, to introduce crosses that may improve the breed in speed and action, since the graziers here are accustomed to look rather to the size and weight of the animal, than to other more serviceable qualities. The breeding of horned cattle is still less understood, and more neglected. Sheep are but in small number in the Department; goats, and especially swine, are abundant and profitable.

Most of the vineyards of the Lower Rhine lie on the slopes of the hills; but there are some in the plain, especially in the Southern Cantons.

Mines.

There are upwards of 60 iron mines in the Lower Rhine, 28 of which alone are now worked. Their yearly produce, according to a document published in 1824, is as follows: 78,000 metrical quintals of ore, which yield 20,500 met. quint. of cast iron, half of which quantity is converted into bar iron. The total estimated value is 650,000 francs; and the number of workmen employed, directly and indirectly, in the mines and the

various iron-works dependent on them, is 650. The iron-works of the Department belong to one family, the Dietrichs, and are at considerable distances from each other; but the common centre of these establishments is at Niederbronn. Altogether, there are four blast-furnaces, (*hauts-fourneaux*), ten refineries, four forge-hammers, (*martinets*), one foundery and rolling-house, and one wire-drawing mill.

There is a mine of petroleum at Bechelbronn, in the Arrondissement of Wissemburg, which, in 1824, occupied 70 workmen, and supplied 700 met. quint. of petroleum, or to the value of 52,000 fr.

At Lobsann, in the same Arrondissement, is a mine of maltha, which likewise yields a bituminous clay and lignite. Its annual produce amounted to 500 met. quint. of bituminous mastic, and 70 met. quint. of maltha, worth together 12,000 fr. In the same year in which the above calculation was made, 1824, there were obtained 5500 met. quint. of alum, and 6000 met. quint. of vitriol, of the united value of 360,000 fr., from the mine of lignite at Bouxwiller, in the Arrondissement of Saverne. This mine, and the works attached to it, occupied about 250 workmen.

The chief coal mine in the Department is at Lalaye, in the Arrondissement of Schelestadt. Its yearly produce was computed to be 2300 met. quint. of coal, valued at 6000 fr. Altogether, the mines of various minerals worked in the Lower Rhine gave employment, in 1824, to 1015 hands, and yielded produce worth 1,110,800 fr. In this estimate the numerous quarries of gypsum, limestone, freestone, and slate, together with the gravel-pits of the Department, are not included.

The produce of the turf-pits, in 1832, amounted to 21,130 stères; the mean price of the stère taken at the pit was 2 fr.

The principal manufactures are those of steel, fire-arms, swords and bayonets, brewers' and dyers' vats, and coppers, edge-tools, machinery, hinges for swing-gates, mathematical, surgical, and physical instruments, cotton, calico, cambric-muslin, tobacco, native sugar, madder, cloth, starch, drugs, printing-ink, paper, with tanneries, &c. The Arrondissement of Strasburg is the chief seat of manufacturing activity; in that of Schelestadt there is scarcely any. The mortar and cannon foundery at Strasburg, the manufactory of swords and bayonets at Klingenthal, and that of fire-arms at Mutzig, which can supply about 40,000 stand of arms the year, are superintended by officers belonging to the artillery. The types cast by Levrault at Strasburg are in great estimation at home and abroad; and the carriages of various kinds manufactured in the same town are in high repute both for durability and elegance. The musical instruments made here are likewise in much repute. To the above list may be added, manufactures of soap, candles, glass, pottery, cables and cordage, packing cloths, playing cards, straw hats, ribbons, gloves, buttons, with numerous dyeing and bleaching establishments.

The topographical situation of the Department of the Lower Rhine, and particularly that of the town of Strasburg, lying as they do between France, Germany, and Switzerland, and their position seconded by the navigation of the Rhine, ought to secure them a considerable transport trade. The transfer of the line of custom-houses from the Vosges to the frontier, in 1793, however, struck it a deadly blow; and although in 1819 the trade was apparently thrown open on the Swiss frontier, it is burdened with restrictions that amount to a prohibition.

RHINE

Manufactures and commerce.

RHINE. The trade in tobacco too is monopolized by Government, and the law passed in 1816, which restricts the importation of colonial produce to the sea-ports, has almost destroyed this once important branch of commerce.

The amount of merchandise entered inwards, in 1832, was 110,182 kil. at Lauterburg, and 233,490 kil. at Strasburg; outwards, at Wissemburg 837 kil., and at Strasburg 368,599 kil.

From the account which has been given of the manufactures of the Department, the nature of its exports may be clearly inferred. The principal imports are oats, hops, wines, brandy, fine liqueurs, olive oil, silks, printed calicos, hats, gloves, cotton, cotton stockings and caps, colonial produce, hemp, timber, gold, silver, lead, tin, coal, wool, watches, jewellery, prints, maps, Gruyère and Munster cheese, &c.

The internal trade of the Department is considerable, and is kept alive by yearly fairs held in all its towns and principal villages; and in most of the Communes are weekly markets.

Inland navigation. The Rhine, Ill, and indeed most of the rivers of the Department, are more or less navigable. The common load of the largest boats which ply on the two first-mentioned rivers is from 300 to 600 met. quint. The decay in commerce, *viâ* the Rhine, is shown by the following comparison of the customs at Strasburg in the years 1807 and 1825. In the first-named year the number of quintals entered inwards was 48,031; outwards 101,111; in the second there were entered inwards 17,976; outwards 26,668 met. quint.

The chief canals are the Grand Junction Canal between the Rhine and Rhone, mentioned in our account of the preceding Department; the Canal of La Bruche, formed by Vauban to expedite the transport of materials for the fortifications of Strasburg; and the Canal of the Rhine, which connects this river with the Ill.

Seven royal and twenty-seven departmental roads traverse the Department, the united lengths of which amount to 964,843 met.

Territorial division. The Department of the Lower Rhine is divided into four Arrondissements, which are again subdivided as follows:—

Arrondissements.	Cantons.	Communes.	Hectares.
Saverne	7	165	108,313
Schelestadt	8	114	120,250
Strasburg	12	161	131,400
Wissemburg	6	102	74,972
	<u>33</u>	<u>542</u>	<u>434,935</u>

The difference between the total superficies of the Department, which has been already stated at 443,400 hec., and the extent of the four Arrondissements, as given in the above Table, proceeds probably from the omission in the latter of the surface occupied by the rivers. It must be observed that, previously to 1815, the Department comprised four Cantons, containing eighty-five Communes, more than at present; which, by the Treaty made in that year, were ceded to the King of Bavaria.

The population was estimated by the census of 1831 at 540,213 inhabitants, of which number the Arrondissement of Saverne contained 108,112; that of Schelestadt 131,295; of Strasburg 205,029; of Wissemburg 95,777. Thus the first of these Arrondissements, the superficies of which is equal to a quarter of the whole extent of the Department, contains the fifth of its popu-

RHINE. lation; the second, equal to the two-sevenths, embraces nearly a quarter of the population; the next Arrondissement, containing almost a third of the superficial extent of the Department, includes three-eighths of its population; and the last, with about a sixth of the extent, has also about a sixth of the inhabitants. The number of the Communes being 542, would give as the mean term about 960 inhabitants to each Commune, but the population is actually divided as follows: 197 Communes with a population below 500 souls; 201 with a population of from 500 to 1000; 101 with a population of from 1000 to 2000; 25 with from 2000 to 3000; 8 with from 3000 to 4000; 4, namely, Barr, Brumath, Wasselonne, and Obernai, with from 4000 to 5000; 2, Bischwiller and Saverne, with from 5000 to 6000; 1, Wissemburg, with upwards of 6000; 2, Haguenau and Schelestadt, with upwards of 9000; and, lastly, Strasburg, with 49,712 inhabitants. Generally speaking, the number of those who inhabit the towns is to that of those who live in the country as 1 to 4.

The administration of the Department is confided to a **Local government.** Prefect, assisted by a Council of five, one of whom fills the office of Secretary-General to the Prefecture, and by three Sous-Prefects. The Communes are presided over by Mayors; and where the population is considerable, Assistants (*adjoints*) are appointed according to its extent. The Mayor of Strasburg has four assistants. The labours of these functionaries are assisted by Commissaries of Police, who are subordinate to them. The police of the country (*police rurale*) is especially confided to the *gardes champêtres* and the Gendarmerie. Each Commune ought to have one of the former at the least.

The General Council of the Department is composed of thirty members; and each Sous-Prefect is assisted by a Council, consisting of as many members as there are Cantons in his Arrondissement.

The two Departments of the Rhine are under the jurisdiction of one *Cour Royale*, which sits at Colmar. Each of these Departments has a Court of Assizes, which sits every three months; and the four Arrondissements of the Lower Rhine have each a *Tribunal de Première Instance*. There is likewise a Court for the trial of commercial questions at Strasburg, which is the only one in the Department; and each Canton has its Justice of Peace.

This Department belongs to the fifth military division of the Kingdom, and contains eight fortified towns, *viz.*, Strasburg, the citadel of Strasburg, Schelestadt, Haguenau, Wissemburg, Lauterburg, La Petite Pierre, and Lichtemburg.

At the end of 1832 there were on the lists of the national guard in actual service, 68,092 men; and on those of the reserve, 22,491. The communal national guard amounted to 38,740 foot; the infantry of the Cantons (*infanterie cantonnale*) to 26,645 men; the artillerymen to 922; the sappers or firemen (*sapeurs-pompier*s) to 373; and the cavalry to 1412.

The contingent furnished by this Department to the Royal army, in the levy of 80,000 men, was fixed at 1517.

The Department is divided into six Electoral Arrondissements, each naming a deputy; and the number of electors is about 1800.

The Lower Rhine, like the Upper, forms part of the **Religion.** Diocese of Strasburg, which is dependent on the Archbishopric of Besançon. The Bishop of Strasburg is assisted by three Vicars-General; and the Chapter of Strasburg is composed of nine titular Canons, forty one

RHINE. Honorary Canons, and a Judge, with a Clerk or Registrar. There are within the Department 7 Benefices of the first rank, 35 of the second, 273 Chapels of ease, and 85 Vicarships. The Confession of Augsburg has a Consistory-General at Strasburg, which extends to the two Departments of the Rhine, and to those of the Saone, the Upper Saone, the Doubs, the Meurthe, the Vosges, and the Moselle. The number of local Consistories in the Lower Rhine amounts to twenty-one. The Reformed worship has two Consistorial Churches, the chief seats of which are at Strasburg and Bischwiller. The first named of these has the duty done by nine Pastors, and numbers eight Parishes with ten Chapels of ease. The duties of the last are performed by six Pastors; and it is divided into five Parishes and ten Chapels of ease. The Jews have a Consistorial Synagogue at Strasburg, composed of a Grand Rabbi and four lay members. The Anabaptists have no organized Clergy, but hold their meetings at private houses, where the elders officiate.

Education. The University or Academy of Strasburg has long been held in high repute, and, next to Paris, greater advantages and facilities for education are presented by this town than by any other in the French dominions. Five Faculties are professed in this University, viz., Theology, (according to the Confession of Augsburg,) Law, Medicine, the Sciences, and Letters; the various departments of which are taught by about forty Professors. There are also at Strasburg a Roman Catholic and a Protestant seminary devoted to the preparation of youth for holy orders in these respective Faiths, and a Royal College, on the same plan as the other Royal Colleges throughout France. The Gymnasium at Strasburg is the oldest literary establishment in the town, and is frequented by about 400 pupils. It is a kind of Protestant seminary. The Normal School, established at Strasbourg in 1810 for the instruction of masters for the Primary Schools, contains usually from 100 to 125 young men.

According to the returns made in 1833, the number of Primary Schools in the Arrondissement of Strasburg was 249; to wit: 160 Roman Catholic, 81 Protestant, 4 for the Reformed, and 4 for the Jewish persuasions. In the Arrondissement of Schelestadt there were 108 boys' and 37 girls' Schools, frequented by 8634 boys and 7897 girls. In the Arrondissement of Wissemburg there were 153 Schools, namely, 82 Roman Catholic, 67 Protestant, and 4 Jewish. These 153 Schools were frequented by 16,150 pupils. In the Arrondissement of Saverne, there were at the same date 201 Primary Schools.

There are seventeen Hospitals in the Department, which possess together a yearly revenue of 837,400 fr., and generally contain about 1500 patients. Besides these there are various *Bureaux de Charité* and *Bureaux de Bienfaisance*, together with several charitable Societies supported by voluntary contribution.

Two newspapers are published in the Department; the *Journal du Haut et du Bas-Rhin*, and the *Courier du Bas-Rhin*.

Expendi-
ture.

According to the returns of 1833, the receipts of the Department were 14,336,474 fr., and the expenses 30,548,219 fr., leaving a deficiency to be made good by Government of 16,211,745 fr. This large sum, annually distributed in the Department, must contribute greatly to encourage its agriculture, manufactures, and commerce. Its position on the frontier doubtless gives

rise to this surplusage drawn from Government; the principal expense in its budget appertaining to the war department.

The revenues of the Communes amounted to 2,882,364 fr. ordinary, and 2,300,888 fr. extraordinary; their disbursements were estimated at 2,515,295 fr. ordinary, and 1,796,005 fr. extraordinary.

Strasburg is a strongly fortified town, agreeably situated on the Ill, not far from its confluence with the Rhine, in the midst of a fertile plain as remarkable for the superior husbandry it exhibits, and the beautiful country-houses with which it is studded, as for the multitude of manufactories of every kind which attest the industry of its inhabitants. Seven gates form so many entrances to this city, which is begirt with fortifications, and whose citadel was constructed after the plans of Vauban. Strasburg is of a semicircular form, and is intersected by canals, the bridges over which are mostly of wood. The wooden bridge thrown across the Rhine is 3900 feet in length, and is connected in the middle of the river by an island, on which is a strong fort. The streets, with the exception of the main one, and a few others, are narrow; and the houses, of a soft, red stone, are, as is usual in German towns, lofty, and built in a very solid manner. Among the buildings of which Strasburg boasts, its Gothic Cathedral is justly pre-eminent. The lofty but light steeple of this graceful edifice rises to the height of 436 feet. This is ascended by a staircase consisting of 635 steps. The clock which decorates its interior, and was made in 1571, represents the motions of the constellations and the planetary system, and is reputed to be the most complicated piece of machinery in France. After the Cathedral, the Royal Castle, at present the residence of the Bishop, is the finest edifice. The Court of Justice, the Town-house, the Prefect's Palace, and the New Theatre, are likewise in every way worthy of so important a town. The Church of St. Thomas is distinguished by the mausoleum of Marshal Saxe, the work of Pigal, and the two most beautiful public walks of this city are decorated by obelisks erected in honour of Kleber and Desaix. Strasburg not only holds a high place among the manufacturing towns of France, but is also advantageously distinguished in a literary point of view. As a place of instruction, it rivals the most celebrated in Germany. The Protestant Academy is conducted in an admirable manner; each Faculty has a separate library. The other establishments for education are the Royal and Military Colleges, the Artillery School, the Central School of the Department, the Schools of Anatomy, Practical Chemistry, and Pharmacy; and among the literary and scientific Societies may be enumerated that of Agricultural Science and Arts of the Lower Rhine, besides two Public Libraries, the Physical and Natural History Cabinets, the Cabinets of Antiquities and Mechanics, and a Botanic Garden, where lectures on Botany are regularly given. The manner in which the charitable institutions are managed here is highly creditable to the directors; and the prison discipline, adopted about twelve years ago, may be cited as a model.

Strasburg is the *Argentoratum* of Ptolemy; and the derivation of this word from a Celtic root proves its existence prior to the Roman conquest. It became an important fortress in the time of Drusus, and was even then celebrated for its manufactures of arms and armour. From its being much frequented as a station between

Chief
towns.
Strasburg.

RHINE. Gaul and Germany, it acquired, in the Vth Century, the name of *Strata-Burgus*, and hence the origin of its present name.

RHINO-BATUS.

All the towns in its immediate vicinity are distinguished for some particular branch of industry; those carried on at Strasburg are manufactures of common cloths, lace, cutlery, skins, artificial flowers, vermilion, hats, paper hangings, &c.; and its exports consist of corn, beef, wine and spirits, linen, flax, blankets, carpets, hardware, cotton, tobacco, and leather. It lies in $7^{\circ} 54' 51''$ East longitude, and $48^{\circ} 34' 56''$ North latitude.

Schelestadt.

Schelestadt was formerly the third in importance of the ten free and Imperial Cities of Alsace. It is of high antiquity, having been long the principal seat of the *Tribocci*. Under the Carolingian dynasty it was frequently the seat of the Court; and its decline may date from the Xth Century. It began to recover its importance in the course of the XIIIth Century; and in the reign of Louis XIV. it was strongly fortified by Vauban. Since the union of Alsace with France its population has been more than doubled. The celebrated reformer, Martin Bucer, was born here; and it was in this town that the present mode of varnishing porcelain was invented. In its neighbourhood is the village of *Klingenthal*, noted

for its Royal Armoury, where swords are said to be manufactured rivalling those of Damascus.

Wissemburg, situated on the Lauter, derives its chief importance from its position on the Northern frontier; and its fortifications have been celebrated in the annals of war from the reign of Louis XIV. to the year 1815. In the year 1793, in particular, it was the scene of several severe conflicts between the republican forces and those of the allies. Manufactures of linen, porcelain, and leather are carried on here; and since the incorporation of Alsace with France the population has quadrupled.

Saverne lies near the base of the Vosges, at the extremity of the chain. It is well built, and the heights around it are covered with vineyards. It possesses a College, and in its environs is a considerable manufactory of the coarser hardwares. The hill that bears its name rises on the West; whilst to the South-West are described the ruins of *Haut-Barr*, a castle founded in the XIIIth Century.

Haut-Rhin, par P. A. Dufour; *Bas-Rhin*, par M. Guadet, published in the *Description Géographique, Statistique, et Topographique des Départements de la France et de ses Colonies*.

RHINO-BATUS.

Wissemburg.

Saverne.

RHINGIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, nutant, three-jointed, the second joint lenticular, furnished at the base above with a naked seta; eyes moderate; *hypostome* somewhat compressed, elongate, and conic below; wings two, incumbent, parallel.

Type of the genus, *Conops rostrata*, Linnæus; Meizen, *Zweif Ins.* vol. iii. p. 257. pl. 29. fig. 21—27. Three species, natives of Europe, two of which occur in England.

RHINO-BATUS, from the Greek *ῥίς*, a nose, and *βαῖς*, a ray, Schn. In *Zoology*, a genus of animals belonging to the family *Plagiostomes*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Body oblong; muzzle pointed; mouth wide and transverse; teeth tubercular; tail long, very thick at its base, almost conical, and furnished with two dorsal and a terminal caudal fin.

The name of this genus is derived from a Greek word, which would seem to indicate a hybrid between the Rays and Angelfish. They connect the Rays with the Sharks by their thick tail and the two dorsal and one caudal fin existing on that organ, whilst the form of their body and pectoral fins resembles that of the Rays, from which, however, they are distinguished by the pointed form of their muzzle, and the lesser breadth of their body.

In some species the first dorsal is opposite the ventral fins, as in

R. Lævis, Schneid. Which is about seventeen inches long; body smooth; orbits armed with spines, as is also the ridge of the back to the second dorsal fin; and on either side, opposite the pectorals, are two rows of smaller spines; teeth of hexagonal form, and disposed in five rows; caudal fin bilobed; general colour brownish, becoming lighter at the sides, and spotted with black and white; head and fins reddish. Is found near Tranquebar. According to the Missionary John's account, this fish sometimes attains the length of seven feet.

R. Djidsensis, Schneid.; *Raj. Djids.* Forsk. About two ells long and three-quarters broad; the spines at the beginning of the back placed in three, but subsequently in a single row; dorsal fin opposite the ventrals; caudal fin two-lobed; general colour of the body ashy, marked with white oval spots on the back and the tips of the pectorals, and behind the vent with dusky and white bands. It is found in the Red Sea. Cuvier thinks that this and the preceding are probably the same species.

In others, the dorsal fin is much behind the ventrals, as in

R. Rhinobatus, Schneid.; *Raj. Rhinob.* Lin. About five feet in length; the body scarcely a foot wide, and the pectoral fins about fifteen inches; body granular and rough, with a single row of tubercles on the ridge of the spine, some of which are sharp and others granular; caudal fin lancet-shaped; upper part of the body dusky, under reddish-white. Is found on the Coromandel coast, in the Red Sea, and is also common in the Bay of Naples, and in the Adriatic. At Genes and Venice it is called *Squatrolino*. It was known to the Ancients as the *Squatro Raia*, from its being supposed to be a mule between the Ray and the Angelfish. Cuvier considers *R. Thoun*, Lacep., and *R. Halavi*, Forsk., as mere varieties of this species.

R. Suttwarah, Russ. Fifteen inches in length; extending from the pointed snout are two diverging rows of prickles, and similar prickles are set thickly between the eyes and on the sides; a row of spinous tubercles pass along the ridge of the back as far as the second dorsal fin, interspersed with small prickles and smooth tubercles; caudal fin oblique and entire. Is found on the Coromandel coast.

R. Electricus, Schneid. About twenty-one inches in length; general form of the body and tail that of a lute, hence it is called by the Portuguese *Pixe viola*; along the edge of the back is a single row of spines like little

RHINO- tubercles; terminal caudal fin lancet-shaped; ventral
BATUS. near the pectoral fins; skin of the body smooth; upper
RHINO- surface light brown, spotted with dusky, and dotted with
CEROS. bluish-white; under surface white in front, and flesh-
 colour mingled with white behind. This fish is caught
 during the wet season in the Bibiribi river in Brazil;
 its flesh is not eaten; but Marcgrave mentions that the
 fishers say, if it be eaten, the persons feeding on it be-
 come half stupid for three hours, and then recover with-
 out assistance. It gives a slight shock like electricity,
 causing a crackling in the joints if the limb is touched
 with one hand; and if taken hold of in the middle, pro-
 duces a general tremor of the limbs.

R. Granulatus, Cuv. Is another species, the skin of
 which is granular, like shagreen.

See Bloch, *Ichthyologia a Schneider*; Forskael, *De-
 scriptiones Animalium, &c. in Itinere Orientali*; Russel,
Fishes of the Coromandel Coast; Marcgrave, *Historia
 Rerum Naturalium Brasilæ*.

RHINOBATUS, in *Zoology*, a genus of *Coleopterous*
 insects.

Generic character. *Antennæ* geniculated, clavate,
 twelve-jointed, short, moderately stout, placed towards
 the apex of the rostrum; the two basal joints of the fun-
 iculus slightly elongate, obconic, the remainder short,
 somewhat nodose, the last being broadest; club elongate-
 ovate, slightly acute; head produced in front into a

rather slendered or little bent rostrum, which is longer than
 the thorax, this last is conic, with the base very much
 bisinuated; the outer produced opposite to the scutellum;
elytra broad, ovate, slightly convex, obtuse; *scutellum*
 minute; legs rather stout; *femora* thickened, unarmed;
tibiæ with a minute hook at the tip, within; *tarsi* te-
 tramerous.

Type of the genus, *Curculio planus*, Fabricius; *Cur-
 ebeneus*, Donovan, *Britt. Ins.* vol. xv. pl. 549. fig. 2. A
 native of Europe and of Britain.

RHINOCEROS, Fr. *rhinoceros*; It. *rinoceronte*;
 Sp. *rinoceronte*; Lat. *rhinoceros*; Gr. *ῥινόκερως*, from
ῥίον, the nose, and *κέρας*, a horn.

See the Quotation from Pliny.

For there is no beast but hath his enemy; as the cony the polcat,
 a sheepe the wolfe, the elephant the *rhinoceros*; and so of other
 beasts the like.

Hakluyt. Voyages, &c. vol. iii. p. 519. *M. John Hawkins.*

In the same solemnities of Pompey, as many times else, was
 shewed a *rhinoceros*, with one horne and no more, and the same is
 in his snout or muzzle.

Holland. Plinie, book viii. ch. xx.

On high-rai'd decks the haughty Belgians ride,
 Beneath whose shade our humble frigates go;
 Such port the elephant bears, and so defy'd
 By the *rhinoceros* her unequal foe.

Dryden. Annus Mirabilis.

RHINOCEROS.

RHINOCEROS, from the Greek, as above, Lin.
Rhinoceros, Pen. In *Zoology*, a genus of animals be-
 longing to the family *Multungula*, order *Pachydermata*,
 class *Mammalia*.

Generic character. Incisive teeth either deficient or
 two in each jaw, or four in each jaw; no cuspid teeth;
 molar seven on a side in each jaw, compound and tuber-
 cular, and when the crowns are worn, the surface of the
 upper teeth exhibits scattered and slightly prominent
 ridges, that of the lower small double crescents, and on
 the hindmost triple crescents; muzzle elongated, and
 the upper lip lengthened and movable; upon the nose
 are placed one or two solid horns; eyes small and high
 up; ears much shorter than the head, with funnel-shaped
 bases; body covered with thick, tough skin, sparingly
 beset with hairs; tail short; feet three-toed, their joints
 enveloped in the skin as far as the nails, which are short,
 rounded, upright, and face forwards.

The animals forming this genus are of heavy pro-
 portions, and two of them are next in size to the Ele-
 phant. Their neck is very short, and the body stands
 higher on the limbs than in either Elephant or Hippopo-
 tamus, although the belly is large and pendent; the tail
 is short, and not reaching so low even as the hocks.
 The skin is very thick and tough, resembling that of
 the Elephant, and sparingly covered with hair. It ex-
 hibits some remarkable folds, as if divided into distinct
 pieces; these are principally noticed behind the head,
 upon the shoulders, and the rump; in those species in
 which the skin is loose they are seen beneath the neck
 and across the upper part of the limbs, but where it is
 more close the folds of the shoulder and the rump are
 merely indicated on the sides. The head is small in
 proportion to the animal's size, and of a triangular form.
 The aperture of the mouth small, and the upper lip pen-

dent, terminating in a point, and very movable, so as to
 render it a prehensile organ, which the animal employs in
 cropping the branches of trees or shrubs. The number
 of incisive teeth varies; in some species there are none,
 in others two in each jaw, in which case they are of very
 large size; in some there are four in each jaw, and when
 this occurs, the middle two in the upper are very large,
 and are supported on their outer side by a very small
 one, whilst on the contrary, in the lower jaw, the middle
 two are much smaller than the outer teeth; the sixth and
 seventh molars are the largest, and the others diminish
 in size as they pass forwards.

The most remarkable character, however, of this genus
 is the horn or horns upon its nose; they are not deci-
 duous, nor have they any bony core, but are supported
 merely upon a projecting knob or process of the nose
 bones, which is received into a corresponding hollow at
 the base of the horn. Its structure consists of coarse
 hairs matted together with horny substance; these coarse
 hairs are placed parallel to each other; their extreme
 points on the lower half, and especially on the hind part
 of the front horn and on the greater part of the hind
 one, project in many places, rendering the surface irre-
 gular, and in some parts giving it a rough feel like that
 of a brush; the upper part of the horn, on the contrary,
 is smooth and plain like that of Oxen. The length of
 the horn varies in different species; where there are two
 the anterior is always the longer.

This genus is found only in very warm climates in
 the Old World, and not unfrequently where Elephants
 are met with. They prefer marshy districts, probably on
 account of the toughness of their hide, and are fond of
 wallowing in the mire like Pigs. They feed on the
 leaves and branches of trees, and especially on a shrub
 called the Rhinoceros bush, *Stæbe Rhinocerotis*; also upon

RHINO- CEROS. the roots of plants, (particularly the stinking *Stapelia*, which has an insipid but cool and watery taste,) which it probably roots up with its nose. Sparrman's relation, on the authority of the Hottentots, that the African species uses the second horn for grubbing up roots, is not probable, if, as there can be little doubt, the first horn is incapable of being turned aside, although he is disposed to believe that assertion also. These animals are of a morose disposition and extremely shy; formerly they were not uncommon in the marshes near Cape Town, but as civilization has advanced they have retired into less frequented districts. They are liable to the attacks of the larger animals of the Cat kind, and it is said also contend with the Elephant; they defend themselves with their horn, and endeavour to rip up the belly of their enemy. They must be divided into two sections.

a. With one horn.

R. Indicus, Cuv.; *Rhin. Unicornis*, Lin.; *Indian Rhinoceros*. Nine feet six inches in length, and four feet eight inches in height. The head triangular, but shortened, and, as it were, truncated in front; upper lip pointed; from the forehead in front of the ear commences a fold of the skin, which passes down a little behind the lower jaw. The skin very thick, tubercular, and nearly bare, forming large folds, the bottom of which are flesh-coloured and very soft; on the neck are two of these folds, the first of which, four inches deep, forms a kind of collar beneath the neck, and the second descends in front of the shoulders, and joins with a longitudinal fold which begins near the wither; one very large fold envelopes the whole upper part of the trunk, commencing behind the shoulder and extending down to the armpit, where it becomes transverse, and a second completes the covering of the trunk towards the rump, thicker on the sides than at the upper part, and passing a little forward on the flanks where it terminates; another fold covers the front of the thigh and the outer surface of the leg; and upon either side of the root of the tail is another which is connected with a piece by the side of the vent, joining below with the covering of the leg. The ears and tail are furnished with a few stiff, smooth bristles, and a small number of woolly hairs are scattered over different parts of the body. The general colour of the animal is deep grey tinged with violet. It is a native of India, and lives in shady forests in the neighbourhood of rivers and marshy places. It grunts like a Hog; and after nine months' gestation brings one young at a birth, which is about three feet in length, and has a callosity indicating the situation of the future horn. Its flesh is eaten, and every part, even to the dung, is esteemed medicinal; the horn especially is in great repute as an antidote against poison, and cups made of it are considered to possess the same virtues.

Pennant considers it to be the *Unicorn* of Scripture, and the Indian Ass, *ὁ Ἰνδικὸς ὄνος* of Aristotle, although that author speaks of it as having only single hoofs as well as a single horn; for, on reference to *Ælian*, book iv. ch. lii., the Indian Ass is there mentioned as having a horn on its forehead which, used as a drinking cup, possesses the same marvellous power, as an antidote against poison and as a curative against disease, ascribed to the horns of the Rhinoceros.

These animals were occasionally exhibited in ancient Rome. Pliny, in his *Natural History*, book viii. ch. xx.,

says, "At the same Games (those of Pompey the Great) was exhibited a Rhinoceros with one horn on its nose, such as I have often seen." But Dion Cassius, in his *History of Rome*, states, they were not exhibited till some time after, viz., at Augustus Cæsar's triumph over Cleopatra; he says, "Many wild beasts also and other animals, and among them the Rhinoceros and Hippopotamus, were then first seen and slain at Rome." Strabo also in his *Geography*, book xvii., when speaking of Arabia, says, "This Country also produces the most powerful Leopards and *Rhinoceroses*, which, as Artemidorus says, are scarcely exceeded in length by the Elephant; and one he saw at Alexandria was almost as tall. But the one which I saw was not of a boxwood colour, but like the Elephant. Its size was that of a Bull, and in shape it resembled a Hog, especially the snout, except the nose, because upon it is a curved horn, the hardest of all bones; this it uses as an organ of offence as the Boar uses its tusks. It has two callosities like the folds of a Dragon, which surround the body from the back to the belly; one inclines towards the crest, and the other towards the loins. What I have related I have myself seen." Of the Rhinoceroses which have appeared in more recent times in Europe, the *first* was sent to Emanuel, King of Portugal, in 1512, and by him forwarded to the Pope; on the voyage, however, it is stated that the animal from some cause became violently irritated and drove in the sides of the vessel; the *second* was brought to England in 1685; the *third* in 1739, and the *fourth* in 1741, were paraded over the greater part of Europe; the *fifth* lived in the Menagerie at Versailles from 1771 to 1793; the *sixth*, sent over for the Emperor of Germany, died in London in 1800; the *seventh* was exhibited in Paris about 1817; two were brought to London in the Spring of 1834, one of which is still in the Gardens of the Zoological Society: and all these were of this species with a single horn.

R. Sondaicus, G. Cuv.; *Javanese Rhinoceros*. It does not appear to be yet ascertained what the actual size of the adult of this species is. The first described, viz., that sent by M. Diard and Duvancel to the French Museum, was a female, the length of which was only five feet five inches and a half, and its height three feet. The second, described by Dr. Horsfield, was nine feet long and four feet three inches high, at the time he saw it, but in four years subsequent it had attained the height of five feet and seven inches. It has a single horn. The head is of a triangular form, and much attenuated to the muzzle; the upper lip is very much lengthened, and the sides of the head marked with protuberances similar to those on the body, but there are no roughnesses or folds. The body is of a lengthened form, and the legs elevated in proportion. The folds less rough or prominent than in the preceding species, those of the neck comparatively smaller, and the posterior fold, which has an oblique direction towards the spine, is less extended. The thick covering of the body is divided on its surface into small tubercles or many-sided plates, having a few short, bristly hairs rising from a depression in their centre. The ears are edged with a row of long, stiff, close-set bristles, and the under surface of the tail throughout its whole length is similarly bristled. This species is found only in Java, where it is known by the name of *Warak*; but in the Western parts of the island and by the Malays it is called *Badak*. It is not confined to any particular district, although most numerous on the Western side of the island, but ranges from the level

RHINO- CEROS.

RHINO-
CEROS.

of the sea to the summits of mountains of great elevation, but it prefers high situations. They are gregarious in many parts, where the vegetation is luxuriant and at a distance from human habitations. Its retreats are discovered by deeply excavated passages which it forms along the declivities of mountains, and which, says Dr. Horsfield, are occasionally of great depth and extent. It is not unfrequently met with in the wilds by both Europeans and natives, but no instance is mentioned of its showing any disposition to make an attack. Its manners are comparatively mild, probably because, from its being the largest animal in the island, it is not liable to be roused by contentions with the Elephant, as in many parts of India. A young animal of this species was brought to the Residence at Magellan in 1815 or 1816; it soon became domesticated, and allowed itself to be carried in a kind of cart to the Capital of Surakarta, where it was kept in a large area bounded by a ditch three feet in width, at the entrance to the palace; and although harassed by the visits of the populace it never showed either uneasiness or anger. Branches of trees, shrubs, and twining plants were provided for its food, from which it preferred a species of *Cissus* and the small twigs of a native fig-tree; but plantains were its favourite food. It required large quantities of water; and when not feeding, or undisturbed, it commonly placed itself in the large hollows made by its own weight in the soft earth of its boundary. As it increased in size, the width of the ditch was insufficient to confine it, and it would sally out and destroy the plantations of fruit trees and vegetables by which the habitations of the natives are surrounded; but it showed no inclination to injure any one, and was as readily driven back to its inclosure as a Buffalo.

b. With two Horns.

R. Africanus, Cuv.; *R. Bicornis*, Lin.; *le Rhinoceros d'Afrique*, Buff.; *le R. Bicorne*, Camper.; *African Rhinoceros*. About the size of the Indian species, being eleven feet and six inches long, and seven feet high. It has no incisive teeth. The skin is very thick, scabrous, and knotty, but without any perceptible folds, and is almost entirely free from hair, except some black ones an inch in length on the edges of the ears, a few between the horns, and some around as well as beneath and at the tip of the tail. The colour of the skin is ashy, except in the groin, where it is less thick, nearly smooth, and flesh-coloured. It is distinguished from the Indian species by the absence of incisive teeth; by its second horn, which is of small size, conical, and compressed; and by its skin not having any folds. It is a native of Africa, and was formerly found in the neighbourhood of the Cape of Good Hope, but, as civilization has advanced, it has retired into more sequestered districts, and is now but rarely met with. It feeds on the boughs of trees, which it bites into small pieces, also on succulent plants, especially the stinking *Stapelia*, and a species of *Stæbe* called *S. Rhinocerotis*. The smallness and sunken state of its eyes are considered to render its vision indistinct, but, if such be the case, it is amply compensated by the acuteness of its organs of scent and hearing: "at the least noise, therefore, more than usual," says Sparrman, "this creature, taking up the alarm and pricking up its ears, stands clapping with them and listening. Above all things one must take care, even when one is at a great distance, not to get to

VOL. XXVII.

the windward of it; for in that case it seldom fails directly to follow the scent and attack the object of its pursuit." Whatever it meets with in its course, men, oxen, or waggons, it overturns and tramples, but it holds on its way and does not return to the attack. The Hottentot hunters formerly used to steal on it whilst asleep and give it several wounds at once, after which they followed its track for some days till, exhausted by loss of blood, it dropped down and died. But at other times they used two or three poisoned darts, which materially shortened the length of their pursuit. According to Burchell's account, however, they now shoot them with ball; but their smell is so keen that, even at a great distance, they scent the approach of man, and at the first suspicion betake themselves to flight. It is, therefore, only by coming up to them against the wind that they can be got at within musket-shot; but this must be done with the greatest caution, as their hearing is so acute that the least noise in the bushes disturbs and puts them to flight. Sometimes, however, when thus disturbed, they become enraged and assail their pursuer, running directly at him; this attack the hunter, if cool avoids by slipping aside, and gains time to reload his musket whilst the animal turns, which it does slowly and with difficulty, and gets sight of him again. Its flesh is eaten, and, Burchell says, is excellent, and has much the taste of beef. Of its skin the Hottentots make their shamboks or whips, which are strips of three or more feet in length, rounded to the thickness of a man's finger and tapering towards the top; this manufacture is not peculiar to the Cape, but is well known in North Africa, and forms an article of trade under the name of *Corbage*. Cups are made from the horns. This, or at least one species of the two-horned Rhinoceroses, was known to the Romans; one example of it is figured on the famous Prænestine pavement, and another on a coin of Domitian. Pausanias, in his *Description of Greece*, mentions it twice; in the Vth book he says, "the Æthiopian oxen have horns on the nose;" and in the IXth book, "I have also seen the Æthiopian oxen, which are called *Rhinoceroses*, from their having one horn at the extremity of the nose, and a little higher up a second, which, however, is not so large; but on the skull they have no horns." And Cosmas Ægyptius, who visited Æthiopia during the reign of Justinian, mentions in the second volume that the species there found have the same number of horns. That it was exhibited at Rome in the Games can hardly be doubted, as Martial, in his twenty-second Epigram, speaks of it as *Rhinoceros cornu gemino*.

*Namque gravem gemino cornu sic extulit ursum,
Jactat, ut impositus taurus in astra pilas.*

And Dion Cassius, lib. ii., says, that Augustus Cæsar exhibited a Rhinoceros (most probably of this species) in his triumph over Cleopatra.

R. Simus, Burchell; *Flat-nosed Rhinoceros*. Rather more than eleven feet in length, and the tail twenty-five inches; it is said, by Burchell, to differ from the African species already described in the truncated and expanded form of the nose and upper lip; the skin is entirely devoid of hair and has not any folds. According to the same writer, the Negroes and Hottentots consider the two animals as distinct, and apply to them different names; besides which, they say this species feeds only on grass, whilst the others eat the branches of trees and bushes. It is found in the interior of Southern Africa, and was first found about the 26th degree of latitude,

M

CEROS.
—
RHI-
NODES.

in the vast plains which during the greater part of the year are arid. It every day frequents the springs, not merely to drink, but also to roll itself in the clay, so as to defend its skin against the scorching heat of the sun. Cuvier does not consider this a distinct species.

R. Sumatrensis, Cuv.; *Sumatran Rhinoceros*, Bell. Seven feet four inches in length and four feet in height. The head is proportionally longer in this than in any other species. Dr. Bell states that it has but two incisive teeth in each jaw; this, however, Sir S. Raffles says is incorrect, as it has two smaller ones in each jaw, placed one on the outer side of each large tooth; they very soon, however, drop out, and hence has arisen Dr. Bell's mistake. The skin is neither divided into plates, as in the Indian species, although there are some folds on the neck, shoulders, and haunches, nor is it so thick, but it is still harsh and black, and covered with coarse, short fur of the same colour. The ears are small, pointed, and edged with short black hairs. The first horn is nine inches long, arched backwards, and connected by a ridge with the base of the second, which is four inches in length, of a pyramidal shape, and placed just before and between the eyes. The female differs only in having shorter horns, and in the skin folds being less distinct. It is a native of Sumatra, but is not bold, as one of large size has been seen to run away from a single wild dog.

Of this genus four fossil species have been discovered, which are distinct from any of those now known to exist.

R. Tichorhinus, Pall.; *Le Rhinoceros de Sibérie*, Cuv.; *Siberian Rhinoceros*. Its size was much greater than that of the African species; its head very long, and sup-

porting two very long horns, the first of which rested on a large bony vault formed by the junction of the bones of the nose, which were supported below by a bony plate, a structure not exhibited in any living species; and it had no incisive teeth in either jaw. Its bones are very common in Siberia, and are found mingled with those of the *Elephas Primigenius*; but they have also been met with at Chatham, in various parts of Germany, and also in France. A whole animal, however, with the skin and all the soft parts, was found, in the year 1771, frozen in the mud on the banks of the river Wiluji, which empties itself into the Lena, and it was covered with thick fur, especially about the legs.

R. Leptorhinus, Cuv.; *Slender-nosed Rhinoceros*. About the size of the African Rhinoceros; its nose furnished with two horns; the muzzle much more slender, and nasal bones more delicate than in the African. It is found in the valley of the Arno.

R. Minimus, Cuv.; *Smallest Rhinoceros*. About the size of a Hog, and having incisive teeth in both jaws. It was found, in 1821, at Saint Laurent, near the town of Moissac, in France.

R. Incisivus, Cuv.; *Incisive Rhinoceros*. Its size equal to that of the Siberian species, but distinguished from it by having incisive teeth. Specimens of its teeth were first found in Germany.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier, *Règne Animal*, and *Ossements Fossiles*; Sparrman, *Voyage to the Cape of Good Hope*; Pennant, *History of Quadrupeds*; Horsfield, *Zoological Researches*; Burchell, *Travels in Southern Africa*.

RHINO-
CEROS.
—
RHINO-
LOPHUS.

RHINOCYLLUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* very short, thick, twelve-jointed, articulations transverse, somewhat perfoliated, and a little constricted, gradually increasing in stoutness to the apex, club ovate, four-articulate, the articulations closely united; head produced in front into a short, thick, angulated, deflexed rostrum; eyes ovate, narrowed beneath; *thorax* somewhat conic, deeply bisinuated behind; *scutellum* very minute; *elytra* oblong, nearly linear, convex, each rounded at the base; legs stout; *tibiæ* armed within at the apex into a minute hook; *tarsi* tetramerous, the penultimate joint bilobed.

Type of the genus, *Curculio thaumaturgus*, Rossi, &c. A very numerous genus; one species of which (the type) inhabits England, and another, *R. antidontalgicus*, has been the subject of a large quarto, by an Italian physician, in which its virtues as a remedy for the toothache are set forth to a marvellous extent.

RHINODES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* not geniculated; twelve-jointed, arising from the middle of the rostrum, curved, the basal joint elongate-clavate, the second short, robust, obconic, the third smaller, the five following robust, somewhat cup-shaped, gradually thickening to the club, which is four-articulate, elongate-ovate, and acuminate; head produced in front into a nearly straight, cylindric, shortish rostrum; eyes large, approximating; *thorax* somewhat truncate behind; *elytra* nearly cylindric, convex, a little truncate in front; legs moderate; *femora*

simple, slightly toothed; *tibiæ* with a minute hook at the apex within; *tarsi* tetramerous.

Type of the genus, *Curculio pruni*, Linnæus. Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 164. Three species, of which two are British, and frequent cherry and plum trees.

RHINOLOPHUS, from the Greek *ῥίς*, a nose, and *λόφος*, a crest, Geoffr.; *Horseshoe Bat*, Pen. In *Zoology*, a genus of animals belonging to the family *Cheiroptera*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth, two in the upper jaw; in the movable intermaxillary bone frequently deciduous, and four in the lower jaw, short and trifid; cuspid teeth long, conical, and distinct; molar five on a side in each jaw, or five on a side in the upper and six in the lower jaw, the anterior false and one or two pointed; the others pointed and tritorial; muzzle obtuse; nose furnished with a very complicated membranaceous apparatus, that part of it in front of the nostrils always assuming a horseshoe form, that behind varying in figure according to the species, and the nostrils themselves being funnel-shaped; auricles large, simple, and unprovided with opercles; body furnished with digital, lumbar, and anal membranes, which are not covered with hair; upon the breast two teats furnished with milk tubes, and upon the pubes two warts without milk tubes; the joint of the first finger is single, short, and rudimentary, the others have but two joints; tail contained in the anal membrane, and generally not extending beyond it.

This genus belongs to the Insectivorous tribe of Bats,

RHINO-
LOPHUS.

on account of its first finger or index having only a single joint or phalanx. It is one of the most remarkable kind of Bats, and is at the slightest glance distinguished by the great size of its ears, and by the complication of its nasal apparatus. But that which distinguishes it from all other genera of its family is the existence upon the pubes of a pair of warty teats, besides the true teats upon the breast. These, according to Kuhl's observation, are deficient in the first year of the animal's life, in the second are extremely small, and only in the third year acquire their proper size; but, though connected with reproduction, he has never been able to find any lactiferous glands near them. The auricles are very simple, consisting merely of a large gristle, but without any opercule as in the other Insectivorous Bats, which renders them deaf at pleasure, by shutting up the auditory passage; and hence it is that, during daytime, they bury themselves in the deepest holes and most private recesses. The imperfection of this organ is, however, fully compensated by the remarkable development of the nose. Its external cartilages or gristles are disposed and folded so as to form a funnel, which may more easily catch and conduct the scent to the interior of the nose; the nostrils themselves have a circular or oval form, and are placed at the bottom of the funnel, the expanded upper part of which is bounded in front and on the sides by a fold or folds of membrane which assume the form of a horseshoe, whence is derived the English name of the genus; posteriorly it is bounded by one or two membranes which assume various forms, hereafter to be noticed. This disposition, although found in others of the same family, is most fully developed in this genus. The thickness of the lips arises from the numerous muscular fibres which lie close together and run in different directions. They remain during daytime in the deepest holes, and come out only at night in search of insects.

a. With the upper nasal membrane erect and spear-shaped.

R. Unihastatus, Geoffr.; *Vespertilio Ferrum Equinum*, Lin.; *le Grand Fer à cheval*, Daubent.; *le Chauve Souris fer à cheval*, Buff; *Horseshoe Bat*, Pen; *Single-speared Horseshoe Bat*. Rather more than two and a half inches long from the muzzle to the vent; extent of the wings fourteen inches; head not quite an inch in length and ears three-quarters of an inch long, pointed, upright, and inclining outwards, their margins sinuous horns, and their lower edge notched; anterior upper nasal membrane in shape resembling the body of a violin; posterior large and in form of a spear-head, and folded on either side at its base so as to resemble small vases; fur very soft, of a reddish-cinereous colour above, and yellowish-ash beneath; wing membranes blackish. Is a native of Europe.

R. Bihastatus, Geoffr.; *le petit Fer à cheval*, Daubent.; *Double-speared Horseshoe Bat*. About three-eighths less than the last species, from which it is distinguished by having both the upper nasal membranes spear-shaped, and by the edges of the ears being more sinuous and more deeply indented at their base; fur soft, of an ashy-red colour, tinged with yellowish on the under parts. Is a native of Europe, and common in England.

R. Tridens, Geoffr.; *Trident Horseshoe Bat*. Two inches in length and the tail ten lines more, but remark-

able for one-third of its length extending beyond the interfemoral membrane; upper nasal membrane single and bearing three points like a trident; ears much wider than in the preceding species and more open in front, owing to a band of skin which connects them with the forehead. It is a native of Egypt, and was discovered by Geoffroy in tombs and caves.

R. Affinis, Horsf.; *Yellowish-brown Horseshoe Bat*. Expanse of the wings about twelve inches; upper nasal membrane erect, spear-shaped, its sides and the broad membrane below plicated; cartilaginous septum of the nose hooked; auricles patulous, their outer edge sinuous, and a very large accessory lobe at their base; general colour above yellowish tinged with brown, and yellowish beneath, but of a deeper shade on the throat and chest. Native of Java.

R. Minor, Horsf.; *Lesser Horseshoe Bat*. Expanse of the wings nine inches; upper nasal membrane erect, spear-shaped; nasal septum hooked; auricles large, erect, their outer edge indented, and at their base a very large accessory lobe; tail shorter than the legs. General colour above leaden with a fulvous tinge, and beneath hoary. Native of Java.

b. With the upper nasal membrane stretched transversely.

R. Diadema, Geoffr.; *Crowned Horseshoe Bat*. About four inches in length; the superior nasal membrane is three times wider than its height, and forms a second horseshoe behind the nostrils, and thus the two together form a kind of crown about the nasal organs; auricles slightly indented on the outer edge near the tip; tail as long as the legs; the interfemoral membrane convex; the fur is of a bright ferruginous or almost golden colour. It is a native of the Isle of Timor.

R. Commersonii, Geoffr.; *Commerson's Horseshoe Bat*. Rather less than the last species, but very closely allied to it, and its superior nasal membrane a third less in width; tail not equalling half the length of the legs, and the interfemoral membrane concave. Native of the Isle of Madagascar.

R. Nobilis, Horsf.; *Noble Horseshoe Bat*. About the same size as the Crowned species; extent of the wings nineteen and a half inches; it has the same kind of nasal membrane, and similar habit and proportion of parts, but it differs remarkably in colour, being brown above and varied with grey beneath; the sides of the breast and the body underneath, together with the marks on the back above and beneath the scapula, are light grey inclining to white, with a dusky silvery lustre; the wing membranes pure brown with a tawny glossing; the fur is very long and silky, and has a very delicate down at its base, so that it is very soft. Is a native of Java and is rare. The sombreness of its colours proves that Geoffroy's observation, that they become more bright as the Countries they inhabit approach the equinoctial line, is not correct in all instances, at least neither as relates to this nor *R. Minor*.

R. Larvatus, Horsf.; *Masked Horseshoe Bat*. Three inches in length from the extremity of the nose to the root of the tail, but the head is attached to the neck so nearly at a right angle that, together with the curve of the neck, half an inch of its actual length is lost; extent of the wings fourteen inches; tail one inch long; upper nasal membrane projecting forward like a shelf, and having a slight transversely projecting ridge in the

RHINO-
LOPHUS.

RHINO-
LOPHUS.

middle; lateral membrane composed of three parallel folds, of which the outer is the shortest; the nostrils vertical, and each having a distinct, ovate, funnel-like form; base of the auricles very broad, and not having the involution of one or other of its sides, as in the other species; anterior edge curved, posterior slightly indented and inclining backwards; the fur is very long, close, and silky, very soft, closely investing the body above and below, but becoming thicker beneath; its colour is deep brown with a golden tinge above, and deepening towards the hind parts; beneath the colour is light golden strongly tinged with grey; the wing membranes are blackish-brown glossed with yellow. Native of Java.

R. Vulgaris, Horsf.; *Common Horseshoe Bat*. Extent of the wings twelve inches and a half; upper nasal membrane simple; auricles patulous, excised on their outer edge, and having an involuted hairy lobule on each side of the base; tail rather longer than the legs. General colour brownish above and hoary beneath. Native of Java.

R. Deformis, Horsf.; *Deformed Horseshoe Bat*. Expanse of the wings twelve inches; skull long and compressed; face lengthened and flat; transverse nasal membrane simple; auricles large, approximate, erect, their outer edge but little hollowed, and their base widened by a lobule inclining upwards. Native of Java.

R. Clivus, Cretzschm.; *Ridge-nosed Horseshoe Bat*. Two and a half inches in length from the muzzle to the vent; wings ten inches; length of the tail an inch; auricles two-thirds of an inch long and somewhat hollowed on their outer margin; external olfactory apparatus furnished with regularly elevated ridges; nostrils in a hollow surrounded by the horseshoe membrane, followed by a transverse concave ridge looking forwards; posterior membrane spear-shaped; general colour brown tinged with ash; alar membranes also brown. It lives in holes in walls and rocks, and is a native of Africa.

c. *With upper nasal membrane transverse and a pouch on the forehead.*

R. Speoris, Geoffr.; *Vespertilio Speoris*, Schn.; *le Rhinolophe Cruménifère*, Per. and Les.; *Pouched Horseshoe Bat*. Rather larger than *R. Bihastatus*; like the last section it has the upper nasal membrane transverse, of a concave form below with a middle point; behind this upon the forehead is a small pouch, of which the interior is bare and terminates in a blind extremity; its orifice is marked by a kind of little pad, and can be closed by a sphincter muscle; when the eyelids are closed it gives the animal the appearance of a cyclops. Geoffroy did not find any thing contained in it, and is at a loss to make out its use; he asks, however, whether it may secrete any scent by which insects might be attracted towards the animal? It would seem more probable, however, that it has some connection with the genitals, and that it serves the purpose of the so called tearpits on the cheeks of some animals. Its ears are patulous, somewhat rounded at their tips, the outer edge hollowed, and each side of the base furnished with a lobule inclining inwards. Its colour is bright ferruginous. Is a native of the Island of Timor.

Lichtenstein has mentioned another species of this genus which he calls

R. Capensis; its length is three and a half inches, and

the tail an inch more; the expanse of the wings twelve inches; the body sooty-coloured above and brownish beneath; but of what Country it is a native is unknown.

See Geoffroy in *Annales du Museum*, vol. xx.; Horsfield, *Zoological Researches*; Fischer, *Synopsis Mammalium*.

RHINOMACER, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* curved, long, inserted in the middle of the rostrum, eleven-jointed, the basal joint slightly robust and a little elongate, the second shorter, subnodose, the six following slightly elongate and obconic, the remainder forming a loose, slender club; head produced into a longish rostrum, the base of which is narrowed and rounded, the apex dilated; head transverse; eyes large, prominent; *thorax* oblong, somewhat cylindric; *elytra* rather soft, elongate, sub-linear, moderately convex, the apex of each rounded; legs slender, unarmed; *femora* slightly incrassated; *tibiæ* rounded, anterior a little curved; *tarsi* rather long, tetramerous.

Type of the genus, *R. Attelaboides*, Fabricius; Stephens, *Britt. Ent.*, (*Mandibulata*), vol. iv. p. 207. pl. xxi. fig. 3. A native of Europe and of Scotland.

RHINONCUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, geniculated, twelve-jointed, rather short, slender; *funiculus* seven-jointed, its basal joint incrassated and elongate, the two following also elongate, subclavate, the remainder stout, subnodose, club ovate, acuminate; head produced in front into a short, stout rostrum, which is inserted during repose into a groove in the breast; head rather depressed; eyes prominent; *thorax* a little coarctate in front; *scutellum* minute; *elytra* shorter than the abdomen; legs moderate; *femora* simple; *tibiæ* truncate at the apex and curved; *tarsi* tetramerous, furnished at the tip with two claws.

Type of the genus, *Curculio pericarpus*, Linnæus; Stephens, *Britt. Ent.*, (*Mandibulata*), vol. iv. p. 40. About twenty European species, of which twelve are found in Britain, frequenting plants.

RHINOPOMA, from the Greek, *ῥίς*, a nose, and *πῶμα*, an opercule, Geoffr. In *Zoology*, a genus of animals belonging to the family *Cheiroptera*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth in the upper jaw, two small ones apart from each other, in the lower four; two moderate-sized cuspid in each jaw; molar four on a side in the upper and five in the lower jaw, the anterior of these false, the others pointed and tritorial; nose long, conical, cut square at its tip, and furnished with a small leaf-like cartilage; nostrils narrow, transverse, and guarded with a small lobe like an opercule; forehead broad and concave; auricles large, connected together, inclining on the face, and furnished with an outer lobe or opercule; interfemoral membrane narrow, square, and enveloping only the base of the tail. There are but two species of this genus known, and they have the same habits as our Bats.

R. Microphyllus, Geoffr.; *Vespertilio Microph.*, Brunn. Two inches in length; the tail an inch more; auricles nearly half an inch long; expanse of wings seven inches and a third. It is remarkable for the large size of its nasal cavities, which cause a great enlargement of the maxillary bones, and for the opercules, by which it is capable of closing its nostrils; these it continually

RHINO-
LOPHUS.RHINO-
POMA.

RHINOPOMA. moves, expanding and contracting them so frequently that no trace of their aperture can be observed; fur long, woolly, and of a greyish-ash colour. They are found in the lowest chambers of the Pyramids near Cairo.

R. Carolinense, Geoffr. Two inches in length; the tail an inch and a half more; expanse of the wings eight inches; auricles of moderate size, rather triangular, and further apart from each other than the last species; membrane of the wings and body dusky. Is a native of Carolina, but it is not fully ascertained whether confined to that State.

See Desmarest, *Mammalogie*.

RHINOSTOMA, in *Zoology*, a genus of *Acalepha*.

Generic character. Body gelatinous, free, orbicular, transparent, with a peduncle more or less truncated below; no tentacula at the circumference; four cavities in the lower disc.

Type of the genus, *R. cyanea*; Cuvier, *Règne Animal*, vol. iv. p. 57. Found in the Tropical Ocean.

RHINUSA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, ten-jointed, short, rather stout; *funiculus* five-jointed, its two basal joints obconic, the remainder transverse; club four-jointed, ovate; head produced in front into a free, slightly bent rostrum, the apex of which is usually narrowed; eyes small; *thorax* transverse, narrowed in front; *elytra* somewhat depressed, a little quadrate, not covering the apex of the abdomen; legs short; anterior *tibiæ* with a minute hook at the tip; *tarsi* tetramerous.

Type of the genus, *Curculio Antirrhini*, Paykull; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iv. p. 14. Four species, of which three inhabit Britain, frequenting flowers in grassy plains.

RHIPIDIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, fourteen-jointed, first joint cylindric, second and third cup-shaped, remainder globose, remote, and bipectinated in the males; *palpi* exserted, incurved, cylindric, four-jointed, the articulations nearly equal; *ocelli* wanting; wings two, incumbent, parallel; legs long, slender, simple.

Type of the genus, *R. maculata*; Meigen, *Europ. Zweif. Insect.* vol. i. pl. v. fig. 9-11. One species, found in Europe and in England, not very common in this Country.

RHIPISALIS, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*, natural order *Cacti*. *Generic character:* calyx superior, three or four-parted, very short; teeth acuminate, membranaceous; berry one-celled, pellucid.

A genus divided from *Cactus*, Lin., containing three species, natives of the East and West Indies.

RHIZOBOLUS, in *Botany*, a genus of the class *Polyandria*, order *Tetragnynia*, natural order *Sapindi*. *Generic character:* calyx five-cleft; corolla, petals five, ovate, fleshy, inserted below the segments of the calyx; filaments very numerous, longer than the corolla; germen four-angled, superior; nuts four, one-celled, one-seeded.

Two species, *R. butyrosus* and *R. tuberculosus*, both natives of Guiana. The nuts of the latter are the well-known Suwarrow nuts.

RHIZOPHORA, in *Botany*, a genus of the class *Dodecandria*, order *Monogynia*, natural order *Rhizophoræ*. *Generic character:* calyx four-parted; corolla four-parted, stigmas two; seed one, very long, with a fleshy base.

Ten species, natives of the East and West Indies; they are very remarkably small trees, growing on the shores in the Tropical Countries, where they form thickets. *R. mangle* is generally known by the name of Mangrove.

RHIZOPHYZA, in *Zoology*, a genus of *Acalepha*.

Generic character. Body gelatinous, free, transparent, vertical, elongated, terminated above by an air-vessel; and with tentacula along the stem, some of which are conical, the others filiform.

Type of the genus, *R. filiformis*; Lamarck, *Syst. Anim. sans Vert.* vol. ii. p. 478. Found in the Mediterranean Sea.

RHODE ISLAND, the smallest State in the North American Union, lies between 41° 19' and 42° North latitude, and between 71° 5' and 71° 55' West longitude. It is bounded on the North and East by Massachusetts, on the South by the Atlantic Ocean, and on the West by Connecticut. Its mean length from North to South is 47 miles, its mean breadth 29, and its area 1360 square miles, or 870,400 acres.

Compared with its limited extent, the surface of this State is extremely diversified, and is divided into three natural sections, of which the first, situated to the West of Narraganset Bay, forms a generally hilly parallelogram; the second is composed of the beautiful islands, Rhode Island, Prudence, and Conanicut, with a few smaller ones, all lying in the above-mentioned bay; and the third section is a small irregular slip, lying along Massachusetts, and East from Narraganset. The soil, generally speaking, is better adapted to grazing than to tillage. A large proportion of the Western and North-Western part of the State has a thin and lean soil; but the islands and the country bordering on Narraganset Bay are very fertile, and are celebrated for their fine cattle, their numerous flocks of sheep, and the abundance and excellence of their butter and cheese. The soil here consists, for the most part, of a deep, rich loam, with a very small proportion of sand or gravel; in the other districts it is much interspersed with rocks and stones. Cider is made for exportation; sufficient corn, wheat excepted, is usually raised for home consumption; and vegetables of every kind are produced in abundance. Owing to its maritime situation, and the mildness of the Winter, the pasture, especially in Hancock and Washington Counties, is of an excellent quality; and neat cattle have grown to the weight of sixteen and even eighteen hundred pounds. The number of sheep reared upon the island amounts to about 30,000; and the Narraganset tract produces a breed of racing-horses remarkable for speed and vigour.

Volney observes, that "were he to select the most favourable spot in America as the place of his abode, his choice would fall upon the Southern point of Rhode Island;" and Mr. Cooper states, "that in point of climate and productions, as well as of appearance, Rhode Island is, perhaps, the most similar to Great Britain of any State in the Union. The Winters are somewhat longer, and more severe; the Summers, perhaps, a little warmer; but it resembles Great Britain in some measure in the defects of the climate, being, from its situation, subject to a moister atmosphere than many of the other States." The Spring commences about the first of March; and the Summer heats are greatest in June, July, and August, but they are seldom oppressive; the fall weather in September and October is delightful. "The Winters," say the authors of the large *American Atlas*, published at Philadelphia in 1827,

RHIZOPHORA.
RHODE ISLAND.

Surface
and soil.

Climate.

RHODE ISLAND.

"have been for the last ten years very irregular and unsteady from December to April, with occasionally very cold days, both early and late in the season." Throughout the year, the air is pure and wholesome, especially in the Narraganset tract, where no destructive disease has ever been known to prevail.

Civil divisions and population.

The State is divided into Counties and Townships, as follows:

Counties.	Townships.	Population 1820.	Population 1830.	County Towns.	Population 1830.
Providence .	10	35,786	47,014	Providence	16,832
Newport . . .	7	15,771	16,534	Newport	8,010
Washington	7	15,687	15,414	South Kingston	3,663
Kent	4	10,228	12,784	East Greenwich	1,591
Bristol	3	5,637	5,466	Bristol	3,054
		83,109	97,212		

There are still to be found in the State about 400 of the aborigines of the Narraganset Tribe. They claim a right to 3000 acres of land. The number of slaves, according to the census of 1830, was only 14.

Chief towns. Providence.

Providence, the largest place and only city in the State, is situated at the head of the tide-waters of Narraganset Bay, about 30 miles from the Atlantic Ocean. It is built on both sides of what is usually termed Providence river, which is an arm of the Bay reaching to the mouth of Morshasuck river, at the upper part of the city, its two sections being connected by two bridges, of which one is 90 feet in width. Vessels of nine hundred tons burthen can come to the wharfs.

The buildings are chiefly of wood, uniformly painted white; though there are many of granite and brick. Some of the dwelling-houses are spacious and elegant, and the situation of those on the high ground to the East is remarkably beautiful. The chief public buildings are the State-house, of brick; the Arcade, of granite; 14 houses of public worship; the Halls of Brown University; the Dexter Asylum for the Poor; the Friends' Boarding-school; five public School-houses; and several large manufacturing establishments. Besides the President, the University has three Professors and two Tutors, and the number of students amounts to about 114. The College Library contains upwards of 6000 volumes; and the philosophical apparatus belonging to this Institution is very extensive. There are also three other Libraries within the walls belonging to Literary Societies, which present an aggregate of 6000 volumes. The public Schools consist of five Grammar Schools, five Primary Schools, and one African School. They originated with the Mechanics' and Manufacturers' Association. Providence was early a place of much commercial enterprise; but the principal source of its prosperity has been the cotton manufacture, which was introduced about 25 years ago, and has increased with astonishing rapidity. It contains 4 cotton manufactories, 2 moved by steam and 2 by water-power, comprising 11,194 spindles and 244 looms, giving direct employment to 352 persons, and indirectly to 739 others. They consume annually 434,971 pounds of cotton, spin 382,875 pounds of yarn, and weave 1,458,000 yards of cloth, mostly of the finest and most valuable quality, to the estimated value of 247,860 dollars. The yearly wages paid at these factories average about 45,801 dollars, and the gross amount of capital employed is calculated at 327,489 dollars. There are also three extensive bleacheries, several iron and brass-foundries, with machine-manufactories, establishments for working in tin, sheet-iron, copper, and dyehouses, &c. Besides these,

there is an extensive manufacture of leather, boots and shoes, soap and candles, glass, cabinet furniture, hats, and sundry other articles. There is a comb-factory here, which annually consumes 4000 dollars' worth of stock, and manufactures combs to the value of 9500 dollars; and there are twenty-seven jewellers' and goldsmiths' shops, employing a capital of 100,200 dollars, 282 persons, and manufacturing goods to the value of 228,253 dollars. The capitalists of Providence have also an amount equal to two millions of dollars invested in cotton, woollen, and other manufactories, in other towns both of this and the adjoining States, agencies of which are established within the city. The imports, in 1831, amounted to 457,717 dollars; the exports, domestic 199,193 dollars, foreign 130,441 dollars, total, 329,634 dollars. The amount of shipping registered is 12,362 tons; enrolled, 4788 tons. There are 4 Insurance Companies, with an aggregate capital of 360,000 dollars; 15 Banks, with an aggregate capital of 4,502,800 dollars; a branch Bank of the United States Bank; and the Saving's Bank, capital 100,000 dollars. There are ten papers published here, two of which are daily. Providence contained, in 1832, a population of 20,000 souls, and is therefore, in this respect, the second town in New England.

Pawtuxet Village, finely situated on the river of the same name, at the falls, four miles South of Providence, is one of the most flourishing manufacturing villages in the United States. Population, in 1830, 1458.

Bristol lies on the East side of Narraganset Bay, 15 miles South South-East of Providence. This town suffered greatly during the American War, but is now in a very flourishing state, and carries on a very considerable trade. It has a commodious harbour. Vegetables and garden stuff of every kind, with a variety of provisions, are raised here in great abundance for exportation.

Newport is beautifully situated on the South-Western end of the island of Rhode Island, five miles from the sea, and 30 South of Providence. The town stretches North and South, gradually ascending East from the water, and is noted for the salubrity of its climate and beauty of situation, being the place of fashionable resort from the Southern and Middle States during the warmest months. It contains a State-house, a Gaol, several Banks and Insurance-offices, a valuable Public Library, and places of public worship for most of the religious denominations found in New England. Newport was formerly more populous, commercial, and flourishing than at present; but it has not recovered the injury it sustained during the Revolutionary War. At present it maintains some trade with the East Indies, Europe, and Cuba; but the most important branch of its commerce is the coasting trade with the Middle and Southern States. In 1819 the amount of shipping owned here was 10,951 tons. The fisheries are very valuable; and it is supposed to be superior to any other town in America for the variety and excellence of its fresh fish.

The principal street is more than a mile long, and the houses present an antique appearance. Its harbour, which spreads Westward before the town, is deservedly celebrated as one of the finest in the world, being capable of holding the largest fleet in perfect safety, and possessing a safe and easy entrance. The town is defended by three forts: Fort Green, to the North; Fort Adams, to the South-West; and Fort Wolcott, on Goat Island, in front of the town.

There are several islands in Narraganset Bay, Islands.

RHODE ISLAND.

RHODE ISLAND.

Government.

the chief of which is Rhode Island, whence the name of this State, 15 miles long by 5 in its greatest breadth. It has an area of about 52 square miles, and includes three Townships, Newport, Portsmouth, and Middleton. Its climate and soil are delightful; the Summers are remarkably pleasant, and the Winters milder than on the Continent. It is a noted resort for invalids from the Southern States, and from its general superiority has acquired the name of the Eden of America. Conanicut is a beautiful island to the West of the former, is seven miles long by one in breadth, and the pasture it yields is very favourable to the growth of cattle and sheep. Prudence Island lies North-East of Conanicut, and is about six miles in length by one in breadth. Block Island, or Manasses, which constitutes the Township of New Shoreham, is seven miles long, four broad, and has an area of about 20 square miles. It lies 13 miles to the South of Charlestown, and 15 South-West from Point Judith. The inhabitants derive their chief support from the fisheries, and the island is famous for cattle and sheep, butter and cheese. There are several other smaller islands interspersed throughout the gulf.

Bays.

Narraganset Bay divides the State into two parts, and communicates with the ocean, between Point Judith on the West, and Point Seaconet on the East. It is about 30 miles long and 15 broad, and embraces, as we have seen, several considerable islands. The entrance of the bay is 16 miles across; its North-East arm is called Mount Hope Bay, the North-West arm Greenwich Bay, and the Northern arm Providence Bay. The principal rivers which fall into it are, Providence river from the North, and Taunton river from the North-East. The Commissioners appointed to examine the coast of the United States in 1817 were of opinion that this bay presented the best site for a naval depôt in the Union, North of Chesapeake Bay. It is accessible from the sea at all seasons of the year, affords capacious harbours, can be entered from the ocean in a few hours' sail, and is not susceptible of a continued blockade, nor obstructed by ice.

The settlement of this State was commenced at Providence, in 1636, by the celebrated Roger Williams, a Minister who was banished from Massachusetts on account of his religious opinions; and in 1638 the settlement of the island of Rhode Island was begun by William Coddington, John Clarke, and others. In 1643 Mr. Williams went to England, and obtained in 1644 a Charter, by which the settlement of Rhode Island and Providence Plantations were united under one government, and which continued in force till 1663, when a new Charter was granted by Charles II., which has ever since formed the basis of the government, this being the only State in the Union that is without a written Constitution.

The legislative power is vested in a General Assembly, consisting of a Senate and a House of Representatives. The former consists of ten members, who are elected annually in April; the latter is composed of seventy-two members, six from Newport, four from each of the towns of Providence, Portsmouth, and Warwick, and two from each of the other towns in the State; and they are elected twice a year, in April and August. The executive power is vested in a Governor, who is chosen annually in April. A Lieutenant-Governor is likewise elected, on whom the executive duties devolve in case of the office of Governor being vacated. The Ge-

neral Assembly meets four times a year; and each of the Senators and Representatives receives 1.50 dollars a-day during Session. The judiciary power is vested in a Supreme Court, and the Judges are appointed annually by the General Assembly. There are Courts of Common Pleas established in the several Counties, the Judges of which have no salary, but are paid by entries.

The following summary of the Treasurer's Report embraces the six months between October 25, 1828, and April 29, 1829.

RHODE ISLAND.

Receipt and expenditure.

	Dollars.	Cents.
Balance in the Treasury, October 1828	11,731	16
Receipts the last six months, except for } Free Schools	8,795	92
	20,527	08
Expenditures	11,673	03
Balance in the Treasury to new account	8,854	05
	20,527	08

In the returns of the Banks made to the General Assembly, October 1829, the total number amounted to forty-seven. The capital stock paid in was calculated at 6,098,307 dollars; the bills in circulation at 675,305 dollars 50 cents; and the specie at 342,165 dollars 74 cents. In the returns of 1833, the total of the Banks was 51; the capital stock paid in 7,438,148 dollars; the bills in circulation 1,264,394 dollars 03 cents; and the specie 403,696 dollars 59 cents. The revenue of the State, which is sufficient for the expenses of the Government, is derived from the following sources, viz., taxes on banks, pedlers, lottery grants, sale of lottery tickets, licences to sell spirits, auctions, bank bonuses, courts, civil commissions, and dividends on stocks. There has been no State tax since 1825.

In the "Statement of the Commerce of each State and Territory, commencing on the 1st day of October, 1827, and ending on the 30th day of September, 1828," given in the *American Almanac for 1830*, we find the following estimate of the trade of Rhode Island. *Value of merchandise imported*: in American vessels, 1,127,347 dollars; in foreign vessels, 879 dollars; total, 1,128,226 dollars. *Value of merchandise exported*: domestic produce, 541,675 dollars; foreign produce, 180,491 dollars; total 722,166 dollars.

The Baptists in this State have 16 Churches, 12 Ministers, 2600 communicants; the Methodists, 10 Preachers and 1200 members; the Congregationalists, 10 Churches, 10 Ministers, and 1000 communicants; the Unitarians, 2 Societies and 2 Ministers; the Sabbatarians, about 1000 communicants; the Six-Principle Baptists, about 8 Churches and about 800 communicants; the Friends are very numerous; and there are some Universalists, and one Roman Catholic Church.

General education has, till within a few years, been much neglected in Rhode Island. In 1828 the Legislature appropriated 10,000 dollars annually for the support of public Schools, with authority to each town to raise by tax double the amount of its proportion of that sum. All the towns availed themselves of this appropriation. The number of towns in the State is 31; the number of public Schools in 1831 was 323; scholars taught in them 17,034; money expended upon them, 21,490 dollars, of which the sum of 11,490 dollars was raised by the towns, and 10,000 dollars drawn from the School fund. Brown University has been already mentioned; a large Hall, in addition to it, will

RHODE ISLAND. soon be completed. There are several Academies and good private Schools in different places.

RHODES. The number of newspapers published in Rhode Island in 1775 was two; (the *Newport Mercury* and *Providence Gazette*;) in 1810, seven; in 1824, fourteen; and in

1834, sixteen. There are besides one or two Literary Journals. RHODE ISLAND.

Warden, *History of the United States*; *American Atlas*, by Carey and Lea, Philadelphia; *American Almanac*. RHODES.

RHODES.

- Name. RHODES, which derives its name (*Ῥόδος*) from its abundance of roses, and is, as Dr. E. D. Clarke testifies, (iii. 278.) "a truly delightful spot," was, according to Meletius, (iii. 223.) the most celebrated of all the Asiatic islands in the *Ægean Sea* on account of its many advantages, but especially for the mildness and healthiness of its climate. It appears to be a part of the chain of Mount Phœnix in Caria, which terminates in Cape Cynos-sema, (Dog's Tomb,) or Onu gnathos, (Ass's Jaw,) now Alepû, (Fox Cape,) and runs parallel with the Northern extremity of the island, the terminating point of which lies in $36^{\circ} 26' N.$ and $28^{\circ} 15' E.$ The Southernmost Cape is in $35^{\circ} 53' N.$ and $27^{\circ} 44' E.$ The whole forms an irregular ellipse, measuring about 33 geographical miles from North to South, and 20 in its widest part from East to West, having a circumference of 920 stadii, (Strabo, xiv. p. 655.) or 115 miles. Its interior is rugged and mountainous, whence the "*Rhodos aspera*" of Statius. (*Silv.* i. l. 104.) It contains, however, many fertile valleys, and its soil, though generally sandy, is, when well cultivated, very productive of fruit and herbs of all kinds, except grain, which is not raised in sufficient quantities for the consumption of its inhabitants. The pomegranate, as appears from its coins, was anciently the symbol of the island, and was introduced probably by the Phœnicians, its first occupants.
- Position. Its raisins, wine, saffron, fish, isinglass, and verdigrise were in great repute. (Plin. *Nat. Hist.* xviii. 71. xxxiv. 26.) Its Capital, together with the island, still called Rhodes, (*Ῥόδος* by the Greeks, and Rodós by the Turks, is placed on a declivity forming a crescent at the head of a bay sheltered by its Northernmost point, and lies in $36^{\circ} 26' 53'' N.$ and $28^{\circ} 14' 14'' E.$ of Greenwich. (*Connois. des Tems*, 1823, p. 320.) This city was formed in the Peloponnesian War (B. C. 408) by a junction of the Capitals of the three States into which the island had been previously divided, (Aristides, *Rhodiaca*, tom. ii. 348. Diod. Sic. xiii. 75.) and its architect was Hippodamus of Miletus, who built the Piræus at Athens. (Strabo, xiv. p. 654.) The magnitude of its double harbour, the beauty of its streets and public buildings, its splendid assemblage of works by the finest artists, and excellent laws and institutions, united in giving Rhodes a claim to the epithet of illustrious, (*claram Rhodon*;) applied to it by Horace. (*Od.* i. 71.) A figure of Jalysus, and a Satyr by Protogenes, with the statues in the Gymnasium and in the Temple of Bacchus, were among its remarkable pieces of sculpture; but the most famous of all, was the Colossus of Apollo, or the Sun, to whom the island was dedicated, of which some account has been already given. After the island was taken by the Knights Hospitallers of St. John of Jerusalem in 1310, and its Capital became the seat of their Order, it received all the strengthening and embellishment which that powerful and wealthy association could give; and it is consequently, to this day, one of the best fortified and best built cities in the Turkish Empire. A venerable moated castle, finely illustrating the military architecture of the Middle Ages, the street city of the Knights, the Cathedral with its richly sculptured doors of sycamore and innumerable escutcheons, bearing the arms of almost all the ancient families in Europe, were still existing in 1801, to bear testimony to the magnificence and dignity of the Order, and are probably at the present time much in the same condition; for the Turks, excepting in time of war and insurrection, seldom destroy the works of their predecessors. Of its two ports, that called Darkah, which faces the East, is gradually filling up through the negligence of the Turks. (Savary, p. 81.) The other, which affords a good shelter against the Westerly winds prevalent during nine months out of the twelve, is much exposed to the North and North-West. Near St. George's gate, which opens to the sea, there is, suspended by a large chain, the head of a monstrous serpent,* long the terror of the neighbourhood, and at last gallantly slain by Dieudonné de Gozon, the twenty-seventh Grand Master of the Order, whose chivalrous and heroic exploit is recorded in an inscription near the relic, dated A. D. 1349, and has, in modern times, been immortalized by Schiller's well-known ballad† and the spirited outlines of Retzsch. Three or four miles South-West of the present Capital, on a hill near the modern village of Trianda, (*Τριάνδα*, i. e. 30.) are the ruins of the ancient city called Eski Rodós by the Turks, and Palæa Rhódos, or Philérimo (*Φιλέρημον*) by the Greeks, said also to be the place where the Knights of St. John first established themselves. (Van Egmont and Heymann, *Travels*, i. 271—278.) This is perhaps the site of Jalysus, (Colonel Leake's Map,) which seems to be so placed by Ptolemy; (*Geog.* v. 2. p. 121.) but other geographers remove Jalysus to Cape St. George, the North-Western extremity of the island, in $36^{\circ} 22' 50'' N.$ and $27^{\circ} 56' 44'' E.$ (*Conn. des Tems*, 1823,) some miles South-West of Trianda. As Jalysus was the nearest of the three original cities to Rhodes, its inhabitants probably removed thither in the greatest numbers, and it was already reduced to the state of a village (*κώμη*) in the time of Strabo; (xiv. p. 655.) and on a mountain near it was Achaia, the Phœnician fortress, by the Greeks distinctively called Ochyrōma. This seems to be the Palæa Rhódos of the modern inhabitants. (Van Egmont and Heymann, *Trav.* i. 271. 278.) Savary, (p. 88.) indeed, and Meletius, (*Geogr.* ii. 16. tom. iii. p. 224.) speak as if its site could no longer be ascertained; but Meletius seems never to have visited Rhodes, and Savary‡ is not to be trusted on points of archæology.
- Produce. Trianda.
- Capital city Eski Rodos.
- Rhodes. Jalysus.
- Colossus. Achaia, or Ochyrōma.

* Probably that of an ox or buffalo, for it is said to be nearly of the same shape and size, and to have horns. (Dapper, p. 11; Cezy is probably his authority.)

† *Der Drachenkampf*.

‡ His summary of the ancient History of Rhodes (*Lett.* xii. p.

RHODES. The promontory called Panòs, (Πανὸς, "the Beacon," or "sacred to Pan,") about 10 miles South-West of Jalysus, was perhaps the termination of the tract called Thoantium, (Strabo, *loc. cit.*) opposite to Chalcia (now Chalké*) and Limonia,† now Limenià, (Λειμενιά, Melet. iii. 22.) small islands belonging to the group called Sporades. The shore here forms a large bay terminated to the South-West by Mylantia, (Μυλαντία,) now Capo di Camiro, or Kandura, in 36° 7' 35" N. and 27° 41' 24" E. (*Conn. des Tems.*) a little to the West of the town bearing that name, (Κάμειρος or Κάμυροι,) one of the three original Dorian cities, and the birthplace of the Poet Pisander. (Suidas.) From Mylantia the coast bends South-Eastwards to its Southern extremity, called Cape Tranquillo by the Italian navigators, perhaps the Mnasyrium of Strabo, a little to the South and East of which is Cordylusa, (Plin. v. 36.) now St. Catharine's Island. Another bay is here formed by the shore which turns to the North-East. Upon it lies Uxilicò, (Ὀ'Εξηλιακὸς) probably the Ixia of Strabo, and Ixus of Artemidorus. (Steph. Byzant. v. 'Ικλαί.) From Capo di San Giovanni, at the Southern extremity of this bay, the coast again recedes, and forms a gulf called Phycus, from a river‡ of the same name, (now Candura or Gandura,) rising from a source called Inessa, being the largest stream in the island, but not navigable. (Dapper from Porcacchi.) Cape Lindo, the Easternmost point of Rhodes, is the Northern boundary of this gulf. At the distance of a gunshot from it, there is a high rocky islet. (Dapper, *Rhodos*, p. 3.) The shore, here much broken, forms several bights or inlets, on one of which, about two miles to the West of the cape, is the village of Lindos, on the site of the ancient city so named, once the metropolis of the island, and 20 or 25 miles distant from the present Capital. A Temple of Minerva, ascribed to Danaus, (B. C. 1485,) and another sacred to Hercules, adorned with a picture by Parrhasius, celebrated for their beauty and sanctity, attracted crowds of strangers to Lindos, the birthplace of Cleobulus, one of the Seven Sages of Greece. (Diod. Sic. v. 28. Athen. xii. 543.) This city stood on a hill looking towards Egypt, and overhanging the sea, as the remains of a large castle and extensive ruins still show. The modern town is on the beach below, and its harbour, which has a depth of 10 or 12 fathoms, affords a secure shelter against the South-Western gales prevalent in Winter. (Savary, p. 89. Dapper, p. 5, 6.) Inscriptions found there (Clarke, iii. 282.) prove that it is on the ancient site, and not two centuries ago it was celebrated for the wealth of its merchants and the excellence of its boats. (*De fraeyeste van Turkye*, says Dapper, *ibid.*) The highest peak of the central chain of mountains is Atabyris, or Artabyrius,§ (now Artámyra,

Atabyris.
Artamita.

48—78) is deservedly praised by Dr. E. D. Clarke; (iii. 279.) but that candid and intelligent writer does not seem to have been aware that all Savary's learning was stolen from Meursius, who has exhausted this subject in his Treatise entitled *Rhodus*. (*Opera*, tom. iii. p. 715.)

* Karki in Dr. Cramer's Map; that learned writer having unfortunately neglected to give the modern names accurately.

† Also called Teutlusa, (i. e. Beet-island,) from Teuthlos, the *Beta Cicla* or mangel-wurzel. (Hemsterhuis, *ad Lucian*, i. 314.)

‡ Meletius (ii. 16. tom. iii. p. 224.) mentions 'this river, but gives no authority for it. Dr. Cramer thinks that Phycus in Caria has been erroneously transferred to Rhodes, but marks the river in his Map.

§ Confounded by Dapper with Philéremon, or Palæa Rhodos, but Atabyris, as we learn from Strabo, (§ 12.) was South of Lindos and near Camirus; Philéremon is, according to Dapper himself, only two miles from the Capital. (*Een halve Duytsche myle van de stad Rhodus*, p. 4.)

VOL. XXVII.

Artémitta, or Monte di San Stefano,) on the summit of RHODES. which was the shrine of the Atabyrian Jove. (Pindar, *Olymp.* vii. 160.) The North-Eastern shore between Lindos and Rhodes forms three bays, one of which, between Capes Paradi and Teuda,* affords an insecure roadstead. (Sonnini, i. 158.)

This island has received many different names and Names. epithets; as Ophiusa, from its many snakes; Æthria from the purity of its atmosphere; Trinacria, from its three promontories; Telchīnis, from its early occupants the Telchīnes; Atabyria, from its highest mountain; Macaria, from its delightful climate and fertility; Asteria, Corymbia, Præessa, Stadia, and Oloessa, from more remote and less certain causes. (Plin. v. 31.) The Telchīnes, accused of dealing in magic, doubtless on account of their superiority in knowledge, and said to be the first workers in iron and brass, are supposed to be the same people as the Curètes. They came into Rhodes from Crete and Cyprus, and were probably a Phœnician colony. But the Poets (Pindar, *Olymp.* vii. 23.) make the first inhabitants of Rhodes Heliadæ, or children of the Sun and Venus; the eldest of whom, Cercāphus, had three sons, Camirus, Lindus, and Jalysus, the founders of the three towns which bore their names respectively, and were, till the Peloponnesian War, the Capitals of three independent States. (Pindar, *Olymp.* vii. 135—137.) The inhabitants of those towns were Dorians, descendants of the colonists established in the island (B. C. 1220) by Tlepōlēmus, son of Hercules, as we learn from Homer, (*Iliad*, B. 653. 668.) who flourished only 300 years after them. The Rhodians appear to have been scarcely ever overpowered by any of their neighbours, and their boldness and success in maritime enterprise are proved by their many and early colonies: Gela and Agrigentum, in Sicily; Parthenope (Naples) and Salapia, in Italy; Rhoda, (Rosas,) in Spain. In the Peloponnesian War they were dependent upon Athens, till released or withdrawn from her influence by the Spartans. (B. C. 412.) About half a century later their island formed an independent State possessing a powerful navy; and their resistance, when besieged by Demetrius Poliorcētes, (B. C. 304,) reflects the highest honour on their resolution and patriotism. Their contest with Antigonos, the father of Demetrius, terminated (B. C. 304) in a peace on very favourable terms, and the Rhodians were considered by the Romans as powerful auxiliaries in their wars against Philip and Antiochus, (B. C. 215—188,) and consequently received from the Senate a great increase of territory. (B. C. 138. Liv. xxxviii. 39.) Their bold and successful repulse of Mithridates (B. C. 88) is a sufficient proof of their power at the close of another century; but their opposition to the Republican General C. Cassius, after the death of Cæsar, (B. C. 41,) was fatal to the shadow of independence which they retained, and in the reign of Vespasian (A. D. 74) Rhodes was declared to be a Roman Province. On the division of the Empire (A. D. 364) this island was naturally subject to the Eastern Emperor, and, though occasionally invaded and plundered by the Saracens, it continued to form a part of their territory till ceded to the Order of St. John of Jerusalem by Andronicus the Elder, A. D. 1310. In the possession of that Order it remained till it was surrendered to Soleimán the Magnificent, on the 1st of January, 1523. Its

* These capes rest on Sonnini's authority, and do not appear in his Map, which, as is too often the case, does not correspond with the text for which it was drawn.

N

RHODES. change of masters, in the period intervening between A. D. 653, when it was taken by Mōáwiyah, and its final cession to the Hospitallers, (A. D. 1310,) seems to have been as follows: it was restored to the Empire by the Saracens on the peace made by Constans, (A. D. 658,) and continued to form a part of the Cibyrrhæote Theme, which embraced the South-Western part of Asia Minor, in the Xth Century. (Constant. Porphyrog. *de Them. ap. Banduri*, i. 44. tom. i. 16.) Its fate, on the division of the Byzantine Empire by the Franks in A. D. 1204, does not appear to have been distinctly recorded, but it was probably assigned to the master of the adjoining continent, and was ceded, at least in name, to the Knights Hospitallers, by Andronicus the Elder, as mentioned above. Under the protection of that gallant and wealthy community, the Island of Rhodes for more than two centuries enjoyed a degree of prosperity it had not before attained subsequently to the loss of its independence.

Naval
power.

While forming a separate commonwealth, though it never took the lead among the Maritime States of Greece, it was considered as a power of considerable importance, on account of its large and well-appointed navy, and the wisdom of its civil institutions. Strabo, who flourished early in the Ist Century of our Era, after extolling the harbours, streets, walls, and arsenals of Rhodes, adds, (xiv. p. 52. § 5.) "It is deserving of admiration both for the wisdom of its laws, and the care with which the business in every department is administered, especially in the navy, by means of which this Republic was long very powerful by sea, and was enabled to repress piracy, and to gain the esteem of the Romans, and of such Sovereigns as were friendly to them and to the Greeks." The attention of the Rhodians to their navy, every part of which was superintended with unwearied care and vigilance, is also justly commended by other ancient writers; and their maritime code, which, from its acknowledged excellence, was adopted by the Roman Emperors, and may be said to be in some measure still in force, is an imperishable monument of their wisdom and patriotism. Rarely, indeed, does History present a more instructive lesson than in the testimony which she bears to the causes which gave birth to the long-continued prosperity and independence of the Rhodians; the picture of so diminutive a State, distinguished by its munificent patronage of the Arts, but still more by its widely scattered colonies, —enriched by its extensive navigation, and treating on terms of equality, if not of rivalry, with its most powerful neighbours,—will be suspected of exaggeration and partiality, till a thorough investigation has ascertained its truth. But when it is found that a scrupulous regard for their engagements, a constant zeal for the public welfare, a peculiar love of order and decency, with an unwearied attention to their duties, public and private, were the qualities to which the Rhodians owed their reputation and success, it will be allowed that they have bequeathed to after ages, and especially to commercial States, a still more valuable legacy than even that code which was admired and commended by the ablest lawyers, (Cicero, *pro Lege Manil.* 18. Godefroy, *de Imperio Maris*, ii. 8.) and adopted by the greatest Sovereigns (Julius Cæsar, Augustus, Vespasian, Trajan, and Antoninus, *Biblioth. Juris.* c. 2. § 9. Grotius, *ad Justinian.* p. 117.) of the ancient world.

Peræa.

The coast of Caria, called Peræa, *i. e.* "overagainst," from its being opposite to Rhodes, was for upwards of two centuries subject to that island. Extending from

Cynos-séma (Alepù, or Fox Cape*) to the Gulf of RHODES. Glaucus, (Makré, or Long Gulf,) along the deeply indented shore of a vast bay which measures about 45 nautical miles from point to point, it not only added a considerable extent of productive territory to the Rhodian dominions, but several large towns, and some of the most capacious and secure harbours on the Southern coast of Asia Minor. Its towns and harbours were as follows: 1. Loryma, (Porto de Cavaglieri, or Hoplo-théké,) on the Western side of the excellent harbour of Cressa, the Ædimus of Constantine Porphyrogennetus, as its ruins still extant testify. It was little more than 20 miles distant from Rhodes, and an Episcopal See under the Metropolitan of Stauropōlis. It stood at the foot of Mount Phœnix, a branch of the lofty ridge which here skirts the coast without interruption as far as Caunus. (Strabo, xiv. p. 652.) Elæüssia (Barba-Nikolò, Daddy Nicol) is a small island near Loryma, and just opposite to the castle called Phœnix, on the ridge of the mountain.

The promontory Posidium, (Paridium or Pandion, now Capo di Marmarizza,) to the North-East of Loryma, was at the entrance of a vast and secure harbour, in which the whole British fleet lay at anchor for more than a month previous to the descent upon Egypt in 1800. At the head of the bay was the little town of Physcus. (Marmaritza, or Mermericheh, Gallicized into Marmarice.) The small island of Rhodussa (Kará āghāj, *i. e.* black tree) was near the cape which forms the Eastern extremity of the port of Physcus, and the Western of Panormus. (Gulf of Kará āghāj.) Psilis (Kóyunjī, *i. e.* Shepherd) was a small town near the mouth of the Calbis, (Kóyunjī sú,) a considerable stream from the North, and navigable for some distance. (Strabo, xiv. p. 651.) A few miles to the East of the Calbis was Caunus, the Capital of Peræa, and one of the most ancient cities in Asia Minor. Its inhabitants, believed by Herodotus (*i. 172.*) to be indigenous, had many peculiar customs. Its harbour appears from Thucydides to have been much frequented, as being very conveniently placed. (Thucyd. viii. 39. 42. 57.) It was probably near marshes, being very unhealthy, as we learn from the sarcastic reply of Stratonicus, "How could I be supposed to call a town sickly where I see even dead men walking." (Strabo, xiv. p. 651.) In the time of the Lower Empire it was called Acalea. (*Geograph. Sacra*, p. 248.) The fort of Imbrus was on a peak above the town. (Strabo, *loc. cit.*) The place now on, or near, its site is called Keuñjigiz† or Keuñjik, (*i. e.* little village,) about four miles South-East of the mouth of the Calbis. Seven miles further on, to the East of Caunus, was the mouth of the Axon, into which the Indus, rising in the Cibyratæan mountains, falls. (Liv. xxxviii. 14. Plin. v. 28.) Eight or nine miles to the South-East of it is Cape Pedalium or Artemisium, from a sanctuary sacred to Diana, (Strabo, xiv. p. 651) now Cape Bokomádion. (Leake, *As. Min.* 224.) It forms the Western extremity of the Gulf of Glaucus, (Makrí,) on the Western shore of which was Crya or Cryassus, near which there were five small islands. (Plin. *Nat. Hist.* v. 35.) On the North-Eastern side of this gulf was Dædala, the last town in the Peræa. Being on the confines of Lycia, it was in

* Called by the Turks Tekir or Tekúr Burnú, *i. e.* Cape Prince.

† Strangely transformed into Kaiguez and Kheugez by Dr. Cramer's authorities. (*As. Min.* ii. 195.) Mr. Hamilton's *Conjek* is much nearer to the original word. It follows Távas in Hájjí Khalífah's list of the Kádflíks of Munteshá. (*Jehán-numá*, p. 638.)

RHOM-
BUS.

RHODIOLA, in *Botany*, a genus of the class *Dioecia*, order *Octandria*, natural order *Semperviva*. Generic character: male flower, calyx four-parted; corolla, petals four; female flower, nectaries four; pistils four; capsules four.

One species, *R. rosea*, native of the Alps; the root, when growing in its native situation, has a powerful smell of roses, which it loses when cultivated.

RHODODENDRON, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Ericææ*. Generic character: calyx five-parted, rather funnel-shaped, and slightly oblique, stamens declining; capsule five-celled.

A well-known genus of fine flowering shrubs, natives of the Northern hemisphere, especially North America; they are hardy, and flower abundantly if planted in peat earth.

RHODORA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Ericææ*. Generic character: calyx five-toothed; corolla, petals three; stamens declining; capsule five-celled.

A genus allied to *Rhododendron*, containing one species, *R. Canadensis*, native of Canada.

RHOMB, { Fr. *rhombe*; It. *rombo*; Sp. *rombo*; Lat. *rhombus*; Gr. *ῥόμβος*, (ἀπὸ τοῦ ρεμβέειν, *in gyrum circumagi*, to be driven round in a circle,) a reel or whirl. Also

A figure having equal sides and unequal angles.

The equal inclinations of the sides (which make the right angle) are stronger than the *rhombe* or losenge, or any other irregular square.

Reliquiæ Wottonianæ, p. 15.

See how in warlike muster they appear,

In rhombs and wedges, and half-moons, and wings.

Milton. Paradise Regained, book ii. l. 307.

With as much ease I'll evince clear and clean

That the crosse lines of a *rhomboides*.

That from their meeting to all angles presse.

Be of one length, though one from earth to heaven

Would reach, and that the other were much lesse

Than a small digit of the lowest of seven,

So as she 'pears to us, yet I could prove them even.

More. On the Soul, part ii. book i. can. 2. v. 57.

The amianthus regularly figured of parallel threads, as in the pile of velvet; the selenites, of parallel plates, as in a deck of cards; and they are of a *rhombick* figure; talk of such as are *rhomboid*, with many other diversities.

Grew. Cosmologia Sacra, book i. ch. iii. p. 14.

RHOMBUS, from the Greek *ῥόμβος*, a *rhomb*, to which geometrical figure these fish have a resemblance, Cuv. *Turbot*; Ray, Pen. In *Zoology*, a genus of animals belonging to the family *Pleuronectes*, order *Malacopterygii subbrachiales*, class *Pisces*.

Generic character. Eyes mostly on the left side; delicate teeth on the jaws and in the pharynx; body compressed, deep vertically, of a more or less rhomboidal form and unsymmetrical; dorsal fin commencing near the edge of the upper jaw and extending nearly to the tail; anal fin commencing almost immediately behind the ventrals, and nearly reaching the tail.

This genus, which formed part of the Linnæan *Pleuronectes*, till separated from it by Cuvier, is distinguished

from the *Soles* by not having the mouth twisted to one side, and from the *Flounders* by the great length of their dorsal fin. All of them are predaceous, feeding upon small fish, crustaceous and molluscos animals. They are divided into two sections from the position of their eyes and the form of their tail.

a. With the eyes closely approximated and separated only by a slight ridge; the tail rounded.

R. Maximus, Cuv.; *Pleuronectes Max.* Lin.; *le Turbot*, Lacep.; *Turbot*, Pen. Of very square form, being nearly as deep as it is long; sometimes measures five or six feet in length; and Rondelet mentions having seen some as much as five or six ells. On our own coast they are not unfrequently taken weighing twenty pounds, and occasionally even thirty. Both surfaces are covered with small scales, but the left or upper is irregularly studded with little tubercles terminating in short points; this surface is marbled with brown and yellow, and the under is white; the lateral line, after forming a curve on the fore part, equally divides the body into two; eyes large, with brown irides and green pupils; fins yellowish, spotted, and dotted with black. The Turbot is common in the Northern, Baltic, and Mediterranean Seas; it is very cunning when seeking its prey, and buries itself in the mud at the estuaries of rivers or lakes emptying themselves into the sea, to which resort multitudes of small fish and other marine animals. The Turbot is much esteemed on account of its high flavour, and has acquired among our neighbours the French the name of *Faisan d'eau* or *Faisan de la mer*. The Romans held it in great estimation, and it is frequently mentioned by their satirists, Horace, Juvenal, &c., as being a favourite with the gourmands of their time.

Turbots are generally caught with hook and line, as they live in deep water, and it is only by chance that they stray into wears or staked nets. The fishery, as conducted on the Northern coast of England, is carried on in the following manner. Each person is furnished with three lines, and each of these have attached to them, by twisted horsehairs of twenty-seven inches long and six feet two inches apart, two hundred and eighty hooks. Three persons always go out together in one cobble, and the nine lines, being joined and used as one line, are nearly three miles long, and furnished with two thousand five hundred and twenty hooks. An anchor, consisting of a perforated stone and a buoy of leather or cork, is attached at each end of the whole length, and at the extremity of every third single line, so that there are in all four anchors and as many buoys. The lines are laid across the current, and the tides upon our coast running each way about six hours are so rapid that the fishers can only shoot and haul up their lines at the turn of tide, consequently the lines are always on the ground for six hours. The bait considered best is fresh Herrings cut to a proper size, and which are caught at all seasons of the year off this coast; and next to them Lamperns, which are much used by the Dutch in this fishery; small

RHOM-
BUS.

Haddocks cut in pieces, Sandworms, Mussels, Limpets, and even Bullock's liver, are also used. But the larger fish are always taken more readily by a small fish attached to the hook, and therefore the bait is made sufficiently small for them to swallow. For the coast fishery the *cobble* is used, which measures twenty feet and six inches in length, by five in width, is rowed with three pairs of oars, and fitted with sails to be used when the wind serves; its burthen is about one ton. But for the deep sea fishery, as for instance the Dogger Bank, a *five-men boat* is used, which is forty feet long by fifteen in breadth, of twenty-five tons burthen, and managed by six men and a boy, one of the former being employed as cook, and having no immediate concern with the fishing. In the Spring they go off, carrying with them two cobbles, and when they arrive on the ground the boat is anchored and these are put out; but each man is here furnished with double the number of lines, and, instead of waiting the change of tide, is constantly hauling one and shooting the other set of lines. It has been computed that the number of Turbots brought annually to the London markets alone may be valued at £30,000 sterling.

R. Barbatus, Cuv.; *Pleur. Rhombus*, Lin.; *la Barbue*, Lacep.; *Pearl*, Pen. In form and dimensions very similar to the Turbot, but is distinguished from it by not having any spiny tubercles, and by its small oblong scales being very soft, hence it has been called by Rondelet *Pleur. Lævis*. The upper surface is marbled with deep brown and yellow, the under is white; lateral line as in the last species; fins marbled with brown, yellow, and white; a few of the front rays of the dorsal fin are partially free and have their tips divided like whip-lashes; pupils black, with white irides. It is very commonly found throughout the North and Mediterranean Seas, and frequently brought to the London markets; but it is not so well flavoured as the Turbot. A fish of this kind was caught in the Adriatic in the reign of the Emperor Domitian, which measured twenty ells in length and was a foot thick. It has been immortalized by Juvenal, who, in his fourth *Satire*, gives an account of the meeting of the Senate by the tyrant's order to determine upon what should be done with this

spatium admirabile Rhombi.—l. xxxix.

R. Punctatus, Cuv.; *Pleur. Punct.* Bloch; *le Tar-geur*, Duham.; *Smeardab*, Pen. About eighteen inches in length and of similar form to the preceding, from both which it is distinguished by its rough scales, and from the latter in not having the anterior rays of its dorsal fin split at their tips. The upper surface is ashy-grey in the middle, and brown at the edges; the under white marked with five large dusky spots; fins grey, their rays broad and covered with scales; both body and fins are marked with round and oval blackish spots. It is found on the Cornish coast, but is not much valued; but at Copenhagen, to which it is brought from the Danish coast, it is in good repute for the table. Cuvier thinks that Risso's *Pleuronectes Unimaculatus* is a variety in sex of this species.

R. Cardina, Cuv.; *le Cardine ou Calemande*, Duham.; *Whiff*, Pen. Is of an oblong form, measuring eighteen inches in length by seven wide, and has some resemblance to the Halibut. It is covered with large rough scales, and has the lateral line very much curved at its origin, and after making a sharp angle runs straight on to the tail. The upper surface is ashy-brown marked

with white and blackish spots; the under white tinged with red. It is caught in the British Channel.

R. Triocellatus, Cuv.; *Pleur. Trioc.* Schn.; *Triocellated Turbot*. About five and a half inches long; its upper surface very dark, and sometimes obscurely spotted with brown; it has also three spots on the tail placed in a trigonal form with the base in front, formed by two which are round and black with a white spot in the centre, and encircled with a dusky white rim; the third spot, which forms the tip, is situated on the lateral line, of a triangular form, black, dotted, and encircled with white; fins spotted with black. It is found on the Malabar coast, and called by the natives *Nooree Nalaka*.

R. Maculosus, Cuv.; *Spotted Turbot*. About eight inches long and four in width; body of a roundish oval form, much compressed, and its edge carinated; upper surface greenish, marked with large brown spots; under surface bluish-white; edges of the fins margined with dusky, dorsal and anal sometimes spotted. It is also found on the Malabar coast, and known to the natives by the same name.

R. Boscii, Cuv.; *Pleur. Boscii*, Risso; *Bosc's Turbot*. About sixteen inches; body of an oblong oval form, and covered with large scales; upper surface ashy-grey, under whitish; hinder part of the dorsal fin marked with four spots, the anterior two of which are dusky, and the posterior black and iridescent; the anal fin has also two brown and two black spots upon it; eyes very large, and the irides amethyst-green. It is caught off the coast of Nice in April, July, and August.

P. Aramaca, Cuv.; *Aramaca*, Marcgrave; *Stone-coloured Turbot*. Its shape resembles that of the Dab; its upper surface is stone-coloured and the under white. It is found on the Brazilian coast.

R. Aquosus, Cuv.; *Pleur. Aquos.* Mitchell; *Watery Turbot*. From nine to eleven inches in length, and from five to eight inches wide; its body semitransparent, and hence the specific name applied to it; upper surface brown intermingled with blackish-brown spots; sometimes there is a white spot on the root of the upper pectoral fin, and the head, back, and fins marked with silvery specks resembling flakes of mica; edges of the first dorsal rays and the ventral fins white; fins generally varied with oblong spots. Is found in the bays and inlets along the coast of New York, nestling and wintering in the mud.

R. Arnoglossus, Cuv.; *Pleur. Arnogl.* Schneid.; *Smooth Sole*, Pen.; *Pellucid Turbot*. Only a few inches long, and extremely thin and almost transparent, and is covered with very delicate scales, which easily fall off, and justify the specific name applied to it by Pennant; it is of a white colour. It is found, though rarely, on the Cornish coast, where it is called the *Lantern Fish*, and it is also taken in the Mediterranean.

R. Candidissimus, Risso; *Pleur. Diaphanus*, Schneid.; *Whitest Turbot*. Is still smaller than the last species; it is very transparent and white, and its dorsal and anal fins are marked with a row of far separated red spots. It is also found in the Mediterranean.

b. *With the eyes very far separated by a concavity, the upper set far back; on the upper surface near the base of the maxillaries is a small hook-like process, and sometimes a second by the lower orbit.*

R. Podas, Cuv.; *Pleur. Pod.* Laroche; *Podas Turbot*. Eight inches in length; of an oval form,

RHOM-
BUS.

RHOM-
BUS.
RHONE. very wide at the fore part, and much flatter than the Turbot; mouth very small; upper surface brown spotted with numerous indistinct white eyes; under surface white; caudal fin rounded. Is common at Majorca and Ivica, where it is called *Podas*. By Rondelet it has been described under the name *Rhomboides*; and it is also the same as *Pleuronectes Argus* and *Mancus* of Risso.

R. Argus, Cuv.; *Pleur. Arg.* Bloch; *Argus Turbot*. From one to two feet long; upper surface spotted with light yellow, and each spot dotted with brown points edged with light blue, and forming sometimes entire circles, sometimes two or three segments, between which are small blue spots and deep brown dots; near the tail is one large brown spot; under surface ash-coloured; membrane connecting the rays of the fins, which are brown, yellowish, and both spotted with blue; pupils blue, with brown and white irides. This beautiful fish is found on the Southern coasts of America, and on those of the Isles of the Pacific; during Winter it remains at the bottom of the sea, but in Spring approaches the estuaries of rivers. It is considered good eating, and is known in the Brazils by the name of *Aramaca*.

R. Mancus, Cuv.; *Pleur. Manc.* Broussonet; *Sickle-finned Turbot*. Is distinguished from the other species by the unequal length of its pectoral fins, the left being of a sickle-like shape, and its upper rays extending back about three-fourths the length of the body, whilst the right is of an oblong oval form, and very short. The upper surface of the body and fins are ashy, marked with black specks and irregular greenish-white spots, the smaller of which are not larger than mustard seeds, whilst the larger are about half an inch in diameter; under surface greenish-white, marked with dusky, round spots; this side of the fins is unspotted. It is found in the South Seas, and called *Pathi-maure* by the natives of Ulieta. Schneider considers it only a variety of his *Pleuronectes Lunatus*, which Cuvier holds as really the same species as *R. Argus*.

See Linnæi *Systema Naturæ* a Gmelin; Bloch, *Histoire des Poissons*; Bloch, *Ichthyologia* a Schneider; Russell, *History of Indian Fishes*; Cuvier, *Règne Animal*; Risso, *Ichthyologie de Nice*; Mitchell, *On the Fishes of New York*, in the *Transactions of the Philosophical Society of New York*.

RHONE.

R H O N E.

Boundaries.
&c.

RHONE, a Department in the South-East of France, is formed of parts of the former Provinces of Lyonnais and Beaujolais, deriving its name from the fine river which flows through it. It is bounded on the North by the Department of the Saône and Loire, on the East by those of the Ain and Isère, on the South by the latter and by the Department of the Loire, and on the West by the Departments of the Loire, of the Puy de Dôme, and of Allier. Its superficial extent is 141 geographical square leagues, with a population of 416,575 individuals. The relative extent of its roads and inland navigation to each square league, calculated in metres, is 1362 of the former and 863 of the latter. Its woods cover 12,000 hectares, and its vineyards 13,800. The revenue of the land is estimated at 21,353,000 francs, and the mean annual value of each hectare at 39 francs. "If there is any Department in France," observes M. Malte-Brun, "which may be said to prove the superiority of manufacturing over agricultural industry, it is certainly the Department of the Rhone. The soil, intersected by hills and valleys, is not very fruitful; it does not yield one half of the grain or timber required for the consumption. But if the harvests are scanty, the vineyards are productive, and the vines of an excellent quality; the best are those of Côte Rôtie and Condrieux. Artificial meadows afford pasture to numerous herds of oxen and flocks of sheep and goats. The deficiency of corn is not to be attributed to the negligence of the husbandman, who appears to derive from his fields all the profit they can supply. It is to its manufactures we must attribute the flourishing state of the country; for, with the exception of the Department of Nord, there is none containing so great a population relatively to the surface, the mean number of its inhabitants on every square league being 2954." Vegetation is slow and backward here, owing to the variableness of the temperature. Potatoes are universally cultivated, and form the chief food of the country people. Its principal mi-

neral productions, on which the commercial wealth of the Department mainly depends, are iron, copper, lead, coal, marble, and freestone.

The chief towns are *Lyons*, or *Lyon*, according to the Lyons. French mode of spelling it, next to Paris, the most important city of France in industry, commerce, wealth, and population. Its situation is extremely rich and picturesque. The two large rivers, between which it lies, the hills to the West covered with gardens and vineyards interspersed with houses, the varied scenes presented on either bank of the Saône, and the Alps closing the perspective to the East, together with its magnificent quays, combine to render it one of the most striking cities in Europe. Its two fine streams, the Rhone and the Saône, the communications opened by which are the main source of its prosperity, contribute by the remarkable contrast they offer to add to the effect of this *coup-d'œil*. The former, rapid, impetuous, and foaming with sullen roar along its sterile banks, seems, says the poetic Malte-Brun, "emblematic of war and Civil discord;" while the latter, "an emblem of peace," offers, by its placid current and numerous harbours, every facility to the calm pursuits of commerce. A strong resemblance has been noticed in the scenery of this peaceful stream, particularly towards Isle Barbe, about four miles from Lyons, to that in many parts of Devonshire, and especially to the banks of the Ex, near Exeter. The streets run in straight lines along the banks of these noble rivers, but they are, for the most part, ill paved, narrow, and dirty; and so negligent are the inhabitants in point of cleanliness, that in the fifty-six Squares of a town possessing so many just claims to admiration, rubbish and filth may be seen heaped round sumptuous monuments. The Lyonnese, indeed, plead guilty to the filthiness of their town, but point by way of extenuation to the beauty of its edifices. Numerous bridges supply the requisite communications between the two banks of the Saône and those of the Rhone; of which the handsomest are the *Pont de Tilsit*,

RHONE. over the former, and the *Pont des Cordeliers* over the latter.

"The best internal view of Lyons," writes an agreeable traveller, "is from the South end of the *Pont de Vienne*. From this point the Saône, which is broader than the Trent at Newark, is seen flowing in wavy lines to the right and left for almost the whole length of the city, with high stone houses on either bank. The walk from the *Pont de Tilsit* to *Pont de la Guillotière* affords the next best view of the city. The way leads through a magnificent square, called *Place Belle-Cour*, two sides of which are new, and were erected by Buonaparte. The East side, which is the worst built, is screened from the view by a promenade under trees. In the centre rose the majestic equestrian statue of Louis XIV. between two superb fountains, and facing them were two groups in bronze, representing the Rhone and the Saône. The statue and the fountains were destroyed after the siege. From the centre of *Pont Guillotière* are seen the public buildings situated on its Southern bank, noble houses on both sides, and a fine avenue with a dilapidated bridge; the extensive quay, the rocks above the town, the church of the Chartreux, and the palaces, houses, and cottages, which are dispersed to the right and left of the North side of the city." The best panoramic view of the city is that afforded the spectator from the terrace of the Church on the summit of the hill of Fourvières. The entire town lies mapped out at his feet, and beyond may be seen the islands of the Rhone, the extensive plains of Dauphiné, backed by the hills of Chartreux and Chamberry, and in the distance, if the day be clear, the Alps and the majestic Mont Blanc.

Antiquaries are at variance concerning the origin of this city. There are two principal systems, each violently supported by its respective admirers: of which the first attributes the foundation of the town to Munatius Plancus, the Lieutenant of Cæsar, and friend of Horace and Cicero, to serve as a retreat to the inhabitants of Vienna, driven out by the Allobroges; and the other, founded on a passage of Plutarch, maintains that, long before this era, a town had been erected here by two Greek Princes, Momorus and Atepomorus. Each of these opinions, however, may be reconciled with the other, if we suppose the petty settlement of the Greeks to have become, at a later period, the seat of the Roman colony. If the origin of Lyons be uncertain, the etymology of its Latin name, *Lugdunum*, or *Lugudunum*, is not less so; some antiquaries deriving it from the Celtic, and others from the Latin. Augustus resided here for three years; and from that period it became the metropolis of one of the four Provinces into which he divided Gaul, the headquarters of the legions, and the emporium of the sixty commercial towns which conjointly erected here a magnificent Temple in honour of this Emperor. In this Temple stood the altar at which Caligula played his "fantastic tricks;" and to which allusion is made in the well-known line of Juvenal, *Aut Lugdunensem rhetor dicturus ad aram*. The sole remains of this once famous pile are four granite columns which support the cupola of the Church of Enay, built on its site; and several stones, one of which bears three female figures in relief. This town formed the point of departure of the four great roads opened by Agrippa pursuant to the order of Augustus. The first extended to the Alps, the second to the Rhine, and the remaining two, respectively, to the Atlantic and the Mediterranean. The Emperor Claudius, who was born here, took a lively

interest in its prosperity, and obtained from the Senate its admittance to the rank of a Roman colony; and part of his speech on this occasion is still preserved, engraven on two splendid tables of bronze, which would appear to have been a testimony of the gratitude of his townsmen. Its prosperity met with a sudden and severe check in the reign of Nero. In a single night it was levelled to the ground by fire; but this Emperor, from some motive which is unknown, contributed largely to its restoration, and it soon rose quickly from its ashes. In gratitude for this kindness, *Lugdunum* maintained his cause in the contest with Galba, with a fidelity which, Tacitus observes, nothing could shake. Another severe reverse befell it in the reign of Severus, who, having defeated Albinus in a battle fought near the city, gave it up to pillage for having afforded shelter to his discomfited rival. The persecution set on foot by this Monarch raged here with great fury, and 19,000 individuals, with their Bishop, the celebrated Irenæus, are stated to have fallen victims. Like the rest of Gaul, it suffered from the anarchy which convulsed the latter days of the Roman Empire; and was a prey to the barbarism which preceded and accompanied the first centuries of the Frank dominion. The Burgundians, issuing from the heart of Germany, made it the Capital of a Kingdom which they founded, and which lasted upwards of a hundred years. It was subsequently merged in the conquests of Clovis and his descendants, under whose sway it continued from the VIth to the Xth Century; although, during this period, it suffered from various inroads of the Goths and Saracens. About the year 984, Lyons would appear to have become almost an Ecclesiastical State, it having been for more than two centuries dependent upon its Archbishops rather than the Crown. But in the year 1245, in consequence of disputes which arose betwixt the municipal officers appointed by the Archbishop and the citizens, the French Monarchs took advantage of these misunderstandings to interpose their authority, and Lyons finally submitted to their jurisdiction in the reign of Philip the Fair. The troubles which desolated Italy, in the XIIth and XVth Centuries, enriched Lyons with the wealth and industry of the fugitives. The Pazzi, forced to succumb to the Medici, withdrew hither from Florence, with many of their partisans; and in the time of Francis I., the Genoese laid the foundation of those silk manufactures which have since raised it to so high a rank in a commercial point of view. From this period may be dated the epoch of its prosperity. In 1565, it was surprised by the Calvinists, and was, indeed, frequently ravaged during the Civil wars of the Reformation and the League. But these horrors were slight compared with those which this unfortunate city underwent during the sanguinary epoch of the Revolution. Having risen against the Terrorists, Lyons, although destitute of fortifications, withstood for upwards of two months a besieging force of 60,000 men. A capitulation was not effected until the town was bombarded, and the besieged had suffered all the horrors of famine. The guillotine was erected *en permanence* by Collot d'Herbois and Couthon; but its operations being too slow to satisfy their vindictive impatience, recourse was had to batteries of cannon, which mowed down with grape-shot whole hecatombs of their Countrymen. Pursuant to a decree previously passed by the Convention, "that the city of Lyons be destroyed, and its name effaced from the map of the Republic," the principal edifices, with great part of the town were

RHONE. demolished, and the poor portion that was left received, in insulting mockery, the name of *Ville Affranchie*. To complete this barbarous triumph, a column was erected amidst the ruins of the fallen city, bearing the inscription, "Lyons made war on liberty—Lyons is no more." It should not be forgotten that the immediate author of these atrocities was Fouché, afterwards Duke of Otranto! In 1814, this town was the theatre of several severe contests between the French and the allies.

The remains of antiquity with which Lyons and its vicinity abound, render this town an object of considerable interest to the antiquary. The Palace of the Emperors rose on the hill of St. Just, where the Monastery of Antiquailles, so called, probably, from the number of medals and other antiquities dug up when laying its foundations, was subsequently built; and on the same height was erected an Amphitheatre, the remains of which are still visible in the gardens round the Convent of the Minims. The most important work of antiquity constructed here, and of which there yet exist considerable remains to attest its magnificence, was the great Aqueduct, which brought to Lyons the waters of the small river Furaut from a distance of seven leagues. It began near the town of St. Etienne in the forest, and terminated at the gate of St. Irenée. To effect this great undertaking, considerable difficulties had to be surmounted from the inequality of the level. Many hills were to be cut through and valleys to be crossed. Several of the arches thrown across the latter, and of prodigious height, may be seen in a state of excellent preservation near the hill of Fourvières itself, and in the villages of St. Foy and Champonost. The honour of this work is ascribed to Marcus Antoninus; although from no other authority than his long residence in this part of Gaul, and the custom of the time to employ the legionary soldiers in similar undertakings. Vestiges of other aqueducts are likewise discernible. Among the reservoirs destined to receive their waters, discovered in various parts of the town, the most important is that situated in the vineyard of the Ursulines of St. Just. This, which is almost entire, is composed of a triple row of vaults, and is 45 feet long by 44 feet in width; its wall is 3 feet thick. Another reservoir, 100 feet long, 12 wide, and 15 feet high, lies in the enclosure of the Antiquailles. The red colour of its hard and well-polished cement had led to at one time a false supposition that this was a reservoir for wine. It is in this quarter that the principal Roman antiquities are found; and here have been dug up a great quantity of medals, coins, vases, lachrymatories, sepulchral lamps, and figures both in marble and bronze. The two bronze tablets containing the speech of Claudius, which are now deposited in the Museum, were discovered in 1528 in the hill of Croix-Rousse, which bounds the city to the North. Several mosaics of great beauty, and in excellent preservation, have been met with at various times. The most precious of these relics exhibits an ancient chariot-race, in which the contention and movement which characterised the Circus are portrayed with admirable spirit. It was discovered in 1806; and an elaborate description of it has been published by M. Artaud.

The Place Belle-Cour and the Square of Terreaux form the principal of the fifty-six Squares of Lyons. The former has been already noticed; but we may add, that it was here the Pretor of old pronounced his decrees and that its ancient name was Bella Curia. The

chief objects in the latter are the Abbey of St. Peter, now converted into a museum and a place of meeting for various literary societies, and the Hôtel de Ville. This last building, one of the finest of the kind in Europe, and which is commonly ranked next to that of Amsterdam, was begun in 1647, rendered fit for business in 1651, and completed in 1655. It was erected from the designs and under the superintendence of Simon Maupin, an architect of the town. The façade fronts the Square Terreaux, and its wings run backwards forming two courts, which are joined by terraces supported upon arches. There is considerable beauty, with not a few incongruities and specimens of false taste, in its details; but considered as a whole, it is an edifice honourable alike to the town and to the architect. Of the Churches, that of St. John, now the Metropolitan Church, is a fine specimen of Gothic architecture, and its portal, which was completed in the reign of Louis XI., is rich and florid. The Church of St. Irenée, erected over the tombs of the martyrs St. Epipoy and St. Alexander, and in the vault of whose subterraneous chapel is a collection of bones stated to be those of the 19,000 martyrs, is one of the most ancient in the city. There are many other Churches, ancient and modern, well worthy of note; among which may be particularized the church of St. Bonaventura, a large Gothic building, erected in the Middle Ages, and that of Fourvières, of modern date, built on the site of the *Forum Trajani*, likewise called *Forum Veneris*, of which there are still some remains. The Palace of the Archbishops was built in the reign of Louis XIII.; but additions having been made to it at various times, and in various styles, it is remarkable rather for its vast size than its architecture: from its situation on the banks of the river, it commands an extensive and beautiful view. But of all the buildings, public or individual, which enrich Lyons, the Hôtel de Dieu, designed by Soufflot, and reared on the quay of the Rhone, is at once the most magnificent edifice and the noblest monument of public charity in France. It presents a simple façade of Ionic columns, with a quadrangular dome over the central pavilion, enriched with devices emblematic of its destination. On the ceiling of the cupola is the representation of the crocodile said to have been found in the Rhone about a century ago. Thirteen thousand patients are annually received here; and it contains 1000 iron bedsteads. The regulations of the hospital, and the practical treatment of the objects of the charity, reflect the highest credit on its governors. In the hospital of La Charité, 1400 children are yearly admitted, and quadruple this number are educated and maintained. It is under the same administration as the preceding, and its revenue is estimated at 400,000 francs. Lyons has two theatres; of which the greater is also from the designs of the celebrated Soufflot, and is capable of containing 2000 persons.

Next to Paris, Lyons possesses the greatest number of flourishing literary establishments of any city in France. Its public Library, contained in the Royal College, formerly the Convent of the Trinity, presents a catalogue of 120,000 volumes and 800 manuscripts, in various languages. One of the two most magnificent copies in existence of *The Antiquities of Herculaneum* was presented to this library by Joachim Murat, King of Naples. The Museum of Lyons is one of the richest in antiquities, and the most interesting in Europe. Beside the cabinet of antiquities,

RHONE.

RHONE. which is especially rich in medals, there is in the great gallery an extensive collection of fine Paintings. M. Artaud, the celebrated antiquary and director of this Museum, has published an account of its contents. There are at present in Lyons a Society of Agriculture and Natural History, another of Medicine, and a third of Pharmacy; a Linnæan Society, and a Royal Academy of Sciences, Arts, and Belles Lettres. Of the Schools and places of education may be mentioned one of Rural Economy and the Veterinary Art, another of Arts and Trades, and a third of Drawing; public lectures are likewise delivered on Natural History, Chemistry, Geometry, and Physics. A highly interesting account of the Schools of Art is given in the evidence of Mr. Bowring to the Select Committee of the House of Commons which two years since sat upon the silk trade. He states, that attached to the principal School of Arts are an Anatomical School, a School for the study of the Living Form, a School of Architectural Design, a Botanical School, with a garden belonging to it, a School of Landscape and the Exhibition of Art in its wider bearings, and lastly, what may be termed a School of the application of Machinery to Art, "which takes possession of all that which the boy has invented or produced, and teaches him how it is to be transferred to the silk manufacture." The instruction at this school is gratuitous, its chief expenses being defrayed by the Municipality. It is by this course of careful instruction that Lyons maintains so decided a superiority in the production of patterns. The young men who distinguish themselves at these schools are certain of employment as designers, at salaries varying from 1000 to 4000, and sometimes 6000 francs; but "from the moment," says Mr. Bowring, "a young man's reputation is worth 3000 francs, his fame is established, and he has the offer of a partnership; and this is the history of a great many of the most prosperous manufacturers of Lyons."

In 1788, Lyons, with a population of 180,000 individuals, contained 18,000 looms, which consumed annually 12,000 quintals of raw material. At present the population of the town, strictly speaking, is 150,000; but comprising the Faubourgs of Vaize, Croix-Rousse, and Guillotière, and the quarters of Serin and St. Clair, it may be estimated at 186,000 souls. The looms, now in full employ, are stated in the last edition of Malte-Brun's *Précis* to amount to 25,000; and 80,000 persons are said to be occupied, directly or indirectly, in the manufactures of the town. Its revenue is given in the budget at 5,000,000 francs. In addition to its silks, drugs and liqueurs form important items in its commerce, and a commission-trade to a considerable amount is carried on here. Numerous steam-boats navigate the Saône as far as Chalons, and the Rhone to Arles. A communication by means of a rail-road, between

Lyons and the enterprising town of St. Etienne, is in active progress. Its length will be 65,865 metres; and from the nature of the ground whose difficulties have been triumphed over, as well as the increased facility afforded to the trade between the two towns, it is in every respect a most important work.

Among the individuals of consequence, either from their rank or talents, born at Lyons, the chief are, the Emperors Germanicus, Claudius, Marcus-Aurelius, Caracalla, Geta, the poetical Bishop Sidonius Apollinarius, Pierre Valdo the reformer, Philibert de l'Orme the architect of the Tuilleries, the celebrated statuarys Coustou and Coysevox, Jussieu the botanist, the travellers Poivre and Sonnerat, Morellet and Rozier, the former distinguished by his writings on political economy, and the latter by his agricultural researches; Patrin the naturalist, Fleurieu the celebrated Minister of Marine, Marshal Suchet, and the notorious Camille Jordan.

It may not be uninteresting to mention that Jacquard, the French Arkwright, and inventor of the machine for weaving figured silks, is lately dead, a poor man, at the advanced age of eighty-two. It is to him that Lyons may be said to owe its commercial existence, since for the last century this town produced plain silks only, in which branch of the trade Switzerland, as well as England, can not only successfully compete with but can undersell the French.

It lies in East longitude 4° 49' 24", and in North latitude 45° 45' 48".

Ville-Franche, the chief town of the Arrondissement Ville-Franche, to which it gives its name, consists chiefly of one spacious street above a mile in length. There are large manufactories of cloth and dimities in the vicinity of this town. The hills around are covered with vineyards; and those parts of the district which border the Saône and the little river Morgou are singularly rich and fertile.

Tarare, on the high road from Lyons to Paris, and lying at the foot of the mountain of the same name, is celebrated for its manufactures of muslin and *broderies*, or embroidered works. The latter are the most ancient in France, and afford occupation to upwards of 50,000 hands in the different Cantons around. There are in this town, whose population scarcely amounts to 7000 souls, 65 manufactories of muslin and 25 of *broderies*.

The little stream of Tardine, which supplies its water-power, often causes much damage by overflowing its banks.

RHONE, MOUTHS OF THE, (*Bouches du Rhône*,) a Department in the South of France, derives its name from the different embouchures of the celebrated river which flows on its Western border. It is formed out of parts of the ancient Dioceses of Arles, Aix, and Marseilles, and is bounded on the North by the

Durance, which separates it from the Department of Vaucluse; on the East by the Department of the Var; on the South by the Mediterranean; and on the West by the Rhone, which separates it from the Department of the Gard. It embraces a superficies of 601,960 hectares, or 256 geographical square leagues, contains

RHONE.
—
RHONE,
MOUTHS
OF THE.

RHONE, 61,711 houses, has a population of 1225 souls to each square league, and a territorial revenue of 23,588,000 francs. Its forests occupy 41,000 hectares; 26,500 are laid down in vineyards; the high roads take up in length 953 metres, and the water communications 625 metres to each square league: the average product of the land is 26 francs 77 cents the hectare. The land-tax amounts to 1,521,223 francs; the door and window-tax to 519,800, and the remaining taxes amount to 645,600 francs.

This Department is agricultural as well as commercial, but does not produce sufficient corn for its own consumption. Being a hilly country, it is more adapted to pasture than arable, and horses and sheep are reared here in considerable numbers. Much attention is paid to the breeding of the silkworm; and tobacco, with the kermes, form staple products. There are 29 potteries, 4 glass-houses, numerous lime-kilns, and a large brass foundry, in the Department; with manufactories of olive-oil, soda, essences, perfumes, cutlery, caps for the Eastern market, and in particular, of coral and Naples soap: that of the latter is the most considerable in Europe.

The principal towns are *Marseilles, Aix, Arles, and Tarascon*, of which *Aix* and *Arles* have been separately noticed.

Marseilles. *Marseilles*, the chief town of the Department, lies partly on the side of a hill, and partly in a plain. It is one of the largest and most beautiful seaports of France, is situated at the extremity of a gulf at the mouth of the Rhone, and is covered and defended by numerous islands. *Marseilles* was founded 600 years B.C., by the Phoceans, Greek colonists from Phoea, on the Western coast of Asia Minor. About 123 years before the Christian Era, these settlers were obliged to call in the Romans to their aid against the neighbouring Gauls, and it was not long before they had to look up to their new allies as their masters. When *Massilia* refused to declare itself for either side during the Civil war between Pompey and Cæsar, the latter attacked and took the city after a vigorous defence, but treated it with the utmost clemency. The Roman writers bear the most explicit testimony to the power and high state of civilization of its inhabitants. Tacitus terms it a "School of Morals and Science;" and Cicero says that Greece herself must give precedence to *Massilia*. The testimony of the latter must, however, be taken with some allowance, since it was given in the heat of one of his pleadings for a friend. Yet it is certain that its Academy almost rivalled that of Athens, and won for it the title of *Magistra Studiorum*. In the year 473 it fell under the power of the Barbarians, was annexed to the crown by Clotaire, son of Clovis, and was subsequently erected into a separate sovereignty under the government of Viscounts. It was wholly destroyed by the Saracens, but rose again, shook off the yoke of the Viscounts, fell under that of the Counts of Provence, but was finally reunited to the French Crown by Louis XII., in 1482.

Marseilles, which had enthusiastically declared itself in favour of the Revolution, fell a sacrifice to its noble resistance to the tyranny of the Jacobins; and tumultuous massacre and the guillotine deluged its streets with blood. The sapient Proconsuls, sent to the city by the National Convention, procured a Decree to the following effect: "Rebellious *Marseilles* has no longer a name;" but seeing that they were obliged to speak

of it, it acquired, in contradiction to their notable decree, the appellation of "The City without a name."

The environs of *Marseilles* are worthy of a rich, populous, and commercial town, being covered with vineyards, gardens, and country-houses. The approach to it from the land side is through a spacious avenue lined with trees and well-built houses; a rich landscape opens to the left, and on the right is the long and picturesque roadstead with its numerous ships, the Isles of If, Pomégue, and Ratonneau, and the Mediterranean in the distance. This beautiful city would enjoy the finest climate in the world, were it not for the breath of the impetuous *Mistral*; to the severity of which some physiologists have ascribed the sternness and promptitude to ire which form the alloy in the frank and kindly character of its inhabitants. The swarms of gnats and midges with which it is infested also form a terrible scourge to the stranger, although apparently unfelt by the native. It is divided into the Old and New Town; of which the former, lying on a hill to the East of the harbour, is traversed by three long, but narrow and crooked streets, which are crossed by smaller ones. This division is chiefly inhabited by the fishermen and the poorer classes. The New Town constitutes two-thirds of the whole; its streets are wide and straight, and some of them well paved for foot-passengers; and the houses, several of which bear marks of the chisel of the celebrated Sculptor Puget, are elegant and regularly built. The two principal streets are those of Beauvau and La Canebiere; and the finest Squares are, the Place Castelane, the Place St. Ferreol, the Place de la Comédie, and the Place de Moutiers. The most celebrated edifice is the Hôtel de Ville, or Town-hall, built by Puget; its façade is ornamented with bas-reliefs, and is surmounted by the arms of France, the beautiful execution of which is said to have excited the admiration of Bernini. The Exchange is more remarkable for the scene of bustle it presents, and the signal for its opening and closing, namely, the beat of a drum, than for its architecture. The Cathedral is the most ancient in France, and the Arsenal was once reputed the finest in the Kingdom. The Theatre, which faces a new and beautiful street, is a handsome building, and its hall in particular is much admired; it has an annual revenue of 300,000 francs. Among other monuments deserving of notice may be mentioned the column, raised in 1802, to the memory of the physicians who braved the Plague in order to assist the sick in 1720, which swept off more than 60,000 individuals; the fountain with the column raised to Homer by the descendants of the Phoceans; and the famous bas-relief of the Plague, by Puget, in the Consigné. The strong castle of If, on an islet of the same name, is conjectured to stand on the site of an ancient Temple of Diana. The Museum ranks next in importance to that of Paris, and is particularly rich in Christian monuments. It is contained in the ancient Convent of the Bernardines, the body of which building, with its courts and gardens, is devoted to the Lyceum, whilst the remainder is occupied by the Museum, the School of Design, and the Public Library, which contains 60,000 volumes. Here are held the meetings of the Academy, and of other Literary associations. Among the Greek antiquities in the Museum, the most interesting are a sun-dial, a round and a triangular altar, the tombs of one Telesphorus and his wife, that of Glaucias, and a tomb representing the last farewell of a warrior. The Roman monuments comprise

**RHONE,
MOUTHS
OF THE.**

RHONE, several sarcophagi with inscriptions; an Isis of basalt, a marble chair, and a tragic masque.

Marseilles boasts of five Hospitals. The *Hôtel Dieu*, for the sick and wounded, receives on an average 350 patients; the *Charité*, for old men, children, and incurables, 700; *Saint Lazare*, for lunatics, 100; the *Maternité*, for nurses, children in arms, and being likewise a lying-in hospital, 900; and the *Hôpital St. Joseph*, for prostitutes, 50: making a total of 2100.

Among the numerous and important Literary and Scientific establishments of this fine city may be particularized the Royal College, the Royal School of Navigation, the Secondary School of Medicine, the Musical Academy, that of Industry and Commerce, the Athenæum, where lectures are given by distinguished Professors in every branch of Science, the Royal Academy of Sciences, Belles Lettres, and Arts, the Medical Society, the Statistical Society, (the first which was formed in France,) the Royal Marine Observatory, and the Botanic Garden.

The harbour is in the centre of the city, is defended by several strong fortifications, and forms a basin 525 fathoms in length, by about 150 in breadth. Its depth of water varies from 12 to 24 feet; and dredging machines are constantly at work to prevent the harbour from being filled up with mud. It will not admit the largest class of ships, but is one of the best and safest ports in the world for moderate-sized merchantmen, of which it will receive above 1000, affording every facility for their speedy lading and unlading. A new port, named Dieudonné, (God-given,) has been recently formed in the roadstead between the fortified islets of Ratonneau and Pomégue. Here ships of the line may find secure anchorage, and vessels may lie in quarantine.

The Lazaretto, which lies to the North of the city, is one of the best in Europe; and there is an Hospital on Ratonneau Island for individuals whose health is dubious.

"The trade of Marseilles," writes M'Culloch, "is not only increasing rapidly, but is already very extensive. She is the grand emporium of the commerce between France and the Countries bordering on the Mediterranean. To the Levant she exports colonial products, light woollens, silks, &c. To Italy the exports consist of all kinds of colonial produce, woollens, linens, liqueurs, oil, hardware, and lead. The exports to England consist of silks, brandy, madder, wines, verdigrise, brimstone, soap, oil, preserved fruits, gloves, ribbons, shawls, capers, anchovies, sirups, essences, perfumery, &c. The principal imports are, wheat from the Black Sea and the coast of Africa, sugar and coffee, cotton, indigo, fish, pepper, iron, lead, dye-woods, hides, &c." For the following Tables we are indebted to the same writer.

Customs' Duties collected at Marseilles during each of the five Years ending with 1832.

Years.	Francs.	Years.	Francs.
1828	24,315,130	1831 ...	25,813,063
1829	23,914,247	1832 ...	30,678,584
1830	25,899,394		

In 1831 there arrived at Marseilles

	Ships.	Tons.
French ships from foreign Countries	866	82,612
„ from French colonies..	86	20,469
„ coasters	3,329	176,353
„ from the fishery	43	1,851
Foreign vessels	1,407	185,941
Total	5,731	467,226

The population of Marseilles may be estimated at about 125,000. It lies in 43° 17' 49" North latitude and 5° 22½' East longitude.

In the West of the Department is the Isle of La Camargue, formed by the sea and two of the arms of the Rhone. It embraces a superficies of 72 square leagues, or 142,451 hectares; of which one-sixth is composed of lands of good quality, another sixth of marshes and stagnant waters, and the remainder of salt pastures and barrens; and it contains nine villages with many country-houses, and nearly 350 farms or *mas*, the proprietors of which rear annually 40,000 sheep, 3000 horned cattle, and as many horses. Here too is the royal sheep-walk, called L'Armillière.

The Department abounds in antiquities, most of which, however, have been described in our accounts of Arles and Aix. In the environs of St. Remy, the birth-place of Nostradamus, are seen a Triumphal Arch raised in honour of Claudius Drusus Nero, and a Mausoleum 50 feet high dedicated to Sextus Lucius Marcus, in the finest preservation. The two monuments point out the site of the ancient *Glanum*.

Tarascon is a small town agreeably situated on the left bank of the Rhone, which separates it from Beaucaire. It is commanded by an old castle, kept in a state of tolerable repair, once a country-seat of the Counts of Provence, but which has long been used as a prison. Population 1519.

Statistique des Bouches du Rhône, par M. de Ville-neuve; Malte-Brun; Bottin, *Almanach du Commerce*; M'Culloch, *Dictionary of Commerce*.

RHOPALA, in Botany, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Proteaceæ*. Generic character: calyx none; corolla, petals four, recurved at the apex; stamens inserted into the middle of each petal; nectary of four glands; stigma club-shaped; capsule one-celled; seeds two, winged at each end.

Ten species, mostly natives of South America.

RHOPALUM, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* inserted below the middle of the face, towards the mouth, elbowed, the basal joint elongate, cylindric, the remainder filiform, the second joint shorter than the third; *palpi* robust; mandibles elongate, narrow, bidentate at the apex; *labium* elongate; head large, narrower than the thorax; the latter globose-ovate; wings four, anterior with a large marginal areolet, and a single submarginal one; *abdomen* with the basal segment slightly pear-shaped, and forming an abrupt knot at its base; legs robust, simple; *tibiæ* spinose.

Type of the genus, *Crabro rufiventris*, Panzer, *Faun. Ins. Germ. Init.* pl. lxxii. fig. 12. About five species, of which three are found in Britain, not very abundantly.

RHUBARB, } Fr. *rhubarb*; It. *rabarbaro*;
RHABARBARATE. } Sp. *ruybarbo*; Lat. *rhabarbarum*.
See *Rha*, in Vossius.

And for my parte, beinge of a cholerike humour myxte with fleume, many yeres continually in cruditie, I neuer found any thinge better than fyne *reubarbe*, chewed with raysons of corens.

Sir Thomas Elyot. *Castel of Helth*, book iv. ch. i.

The salt humours must be evacuated by the sennate, *rhabarbarate*, and sweet manna purgers, with acids added, or the purging waters.

Floyer. *On the Humours*.

RHUS, in Botany, a genus of the class *Pentandria*, order *Trigynia*, natural order *Anacardiaceæ*. Generic

RHONE.
MOUTHS
OF THE.

RHUS.

La Ca-
margue.

Tarascon.

RHUS. character: calyx five-parted; corolla, petals five; berry one-seeded.

RHYME. More than forty species, mostly natives of the Tropics, but some are found in North America and the South of Europe: they are generally large trees, abounding in a resinous, poisonous juice. *R. coriaria* produces the Sumach of Commerce.

RHYACIONIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* rather long and slender, more robust and very pubescent in the males; *palpi* two, short, slender, approximating in form of a beak, ascending, densely clothed with short scales, leaving the terminal joint, which is acute, exposed; *maxillæ* very short; head small, with a loose tuft of scales on the front; eyes large, globose; *thorax* globose, not crested; wings entire, anterior rather elongate-triangular, with the hinder margin obliquely truncate, disc black, with round darker scales, and a very oblique, toothed, white band, sometimes broken into spots, rather before the middle; posterior wings small, ovate, faintly waved on the margin; *cilia* stout; body rather slender, short, with a very small tuft at the apex.

Type of the genus, *Phalæna* (*Tortrix*) *Hastiana*, Linnæus; Hübner, pl. xxix. fig. 186; Stephens, *Illust. Britt. Ent.* (*Haustellata*), vol. iv. p. 180. One species only, a native of Europe and of England, but very rare in this Country.

RHYME, Fr. *rimer*, to rhyme; to write or speak in meter; It. *rimare*; Sp. *rimar*; all, says Skinner, from the Lat. *rhythmus*; Gr. ῥυθμος, *numerus*, *modus*. In A. S. *rim-cræft*, *ge-rim-cræft*, is the craft or art of numbering: *ge-riman*, *riman*, *hriman*, *numerare*; Ger. *reimen*; D. *riimen*; Sw. *rima*. Wachter and Ihre consider *rhyme* or *rime* to be of Northern origin, and to have been applied to the termination of verses or parts of verses, with words or syllables of similar sounds, by Northern Poets, long before the practice of *rhyming* was known by the more Southern Poets. The word appears in the Northern Languages to have been applied generally to *numerous* or *metrical writing*, as the Gr. ῥυθμος was; and thence the French and Italian. *Rhyme* is found equivalent to *rhythm*, q. v., but is more commonly used to denote—

Verses terminating with similar sounds: also, verse or poetry in general.

Tooke has adopted the A. S. *hrim-an*.

pat reuthe is to rede. opere in *ryme* shewe.

Piers Plouhman. *Vision*, p. 151.

He hath betraied folkes many a time;
Of his falsenesse it dulleth me to *rime*.

Chaucer. *The Chanones Yemannes Tale*, v. 16490.

Wel can the wise poet of Florence,
That highte Dant, speken of this sentence!
Lo, in swiche maner *rime* is Dantes tale.

Id. *The Wif of Bathes Tale*, v. 6637.

But all the holle progenie
Of goddes in that ilke tyme
To longe it were for to *ryme*.

Gower. *Conf. Am.* book v.

Surelie to follow rather the Gothes in *ryming* than the Greekes in trew versifying, were even to eate acornes with swyne, when we may freely eate wheate bread amonges men.

Ascham. *Works*, p. 327. *The Scholemaster*.

These writers have not left behind them such filthy and reprochful stuffe as that base *rimer*.

Hakluyt. *Voyages*, &c. vol. i. p. 552. *The True State of Island*.

Railing *rhymes* were sow'd
Among the vulgar, to prepare his fall
With more applause, and good consent of all.

Daniel. *History of Civil Wars*, book ii.

With that a ioyous fellowship issewd
Of minstrales making goodly meriment,
With wanton bardes, and *rymers* impudent.

Spenser. *Faerie Queene*, book iii. can. 12.

Too popular is tragic poesie,
Straining his tip-toes for a farthing fee,
And doth beside on *rhymeless* numbers tread,
Unbid iambs flow from careless head.

Hall. *Satire* 4. book

Methought I fear'd, lest the horse-hoofed well
His native banks did proudly over-swell
In some late discontent, thence to ensue
Such wondrous rabblements of *rhymesters* new.

Id. *Ib.* 2. book i.

My lord Roscommon was more impartial; no man ever *rhymed* truer and evener than he; yet he is so just as to confess, that it is but a trifle, and to wish the tyrant dethroned, and blank verse set up in its room.

Waller. *Preface to his Poems*.

Had the chronicler spoken of been mentioned as a poet or *rhymers*, I should have readily concluded that this is the man, and this the chronicle.

Waterland. *Works*, vol. x. p. 238. *Letter to Mr. Lewis*.

For what can be more absurd, said Minim, than that part of a play should be *rhymed*, and part written in blank verse.

Johnson. *The Idler*, No. 60.

There is, even, a Latin song in *rime* extant in print, which was made upon a great victory obtain'd by king Clothair the second over the Saxons, in the year 622, and serves to support the above opinion, that the vulgar poets of that period had already adopted the art of *rimeing* from the hymns of the church.

Ritson. *Metrical Romances*, vol. i. p. xviii.

Virtue indeed meets many a *rhyming* friend,
And many a compliment politely penn'd.

Cowper. *Table Talk*.

RHYNCHÆA, from the Greek ῥύγχος, *a beak*, Cuv. In *Zoology*, a genus of animals belonging to the family *Longirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak strongly compressed, much longer than the head, expanded and bent towards the tip; mandibles of equal length and slightly curved, the upper grooved throughout its whole length, the lower only at its point; nostrils lateral, linear, and pierced completely through; secondary quills as long as the primaries, of which the first three are of nearly equal length; tarsus longer than the middle toe, naked and reticulated; front toes unconnected; hind toe articulated on the tarsus above the others.

This genus has been separated by Cuvier and Temminck from the Woodcocks in consequence of the curving of the tip of the beak and the absence of the single groove which runs along it in the Woodcocks. Their colours are very bright, and they are peculiarly characterised by the eyed spots upon the alar and caudal quill feathers. Much difference of opinion exists as to the number of species included in this genus; Vieillot and Lesson divide them into four, whilst, on the other hand, Temminck and Cuvier include all four under one, and consider the variety of plumage as merely dependent on age.

R. Capensis, Cuv.; *Scolopax Capensis*, Gmel.; *le Bécassine de Madagascar*, Buff.; *Cape Snipe*, Lath. About ten inches in length; head and neck ferruginous; above each eye is a white streak surmounted with a black one; lower part of the neck surrounded with a black collar; back blackish festooned with grey; under parts white; the ferruginous, grey, and blackish of the wing-coverts are marked with numerous, small, close-set

RHYME.

RHYN-
CHÆA.

RHYN-CHÆA. undulations; the middle quills of the wings and the caudal quills are striped transversely with bands of these several colours separated by three or four rows of oval, light ferruginous spots encircled with black, and the primaries are crossed with alternate black and ferruginous bands. This is considered by Temminck and Cuvier to be the adult plumage, but Vieillot and Lesson hold it for a distinct species, and name it *R. Madagascariensis*. The specimen described by Vieillot as *R. Variegata*, and by Lesson as *R. Sinensis*, Temminck says, is the young bird; it has the upper parts of the head brown mingled with black, and marked on the top with a longitudinal ferruginous stripe; before and behind the eye is a ferruginous spot, and the remainder of the head and neck are a mixture of grey and pale brown, the front of the neck being streaked longitudinally, and the collar transversely; upper part of the body and wings delicately mottled and spotted with bluish-grey, brown, ferruginous, and black; primary quills blackish, and marked with an oval, cream-coloured spot; caudal quills blue, grey, and blackish, varied with three or four round, orange spots encircled with black; under parts white. The intermediate plumage between these is that which Lesson calls *R. Africana*, the *Bécassine du Cap de Bonne Espérance* of Buffon, and at this time the top of the head is marked with ferruginous, on each side of which are two grey, and below them two white streaks, which include the eye and pass backwards; at the bottom of the neck is a narrow black zone; a bluish-grey, varied with small, black wavings, forms the ground of the mantle, which crosses a white stripe extending from the shoulder to the rump. Lesson also includes the *Rallus Benghalensis* as a distinct species, under the name of *R. Benghalensis*, but Cuvier and Temminck think it the same as the adult of this species already described. No satisfactory geographical history of this bird is given, but, from the confused accounts, there can be little doubt it is a native of the Cape, and, perhaps, also of India and China.

Cuvier, however, mentions another distinct species as being described in Ferussac's *Bulletin des Sciences* by the name of *R. Hilarea*.

See Cuvier, *Règne Animal*; Temminck, *Manuel des Oiseaux*; Buffon, *Histoire des Oiseaux*.

RHYNCHITES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* straight, eleven-jointed, the three terminal joints remote, forming a somewhat perfoliated club, of which the last joint is mostly ovate; head elongate, not narrowed behind, inserted into the thorax by a thick neck, and produced in front into an elongate, filiform, or depressed rostrum, the apex of which is dilated; eyes lateral, more or less prominent; *thorax* cylindric-conic, sometimes with acute lateral spines in one sex; *elytra* slightly convex, sometimes pubescent, each rounded at the apex; the shoulders obtusely angulated; apex of the abdomen exposed, rounded; legs robust, anterior pair approximating; *femora* clavate, unarmed; *tibiæ* rounded, simple; *tarsi* tetramerous, the penultimate joint bilobed.

Type of the genus, *R. populi Auctorum*. A numerous and beautiful genus, of which about twenty species are found in Britain. See Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iv. p. 198.

RHYNCHOLUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elbowed, short, slightly

thickened, situate in the middle of the rostrum; *funiculus* seven-jointed, the basal joint large, obconic, remainder short, somewhat perfoliated; club minute, indistinctly jointed; head produced in front into a short, linear, cylindric rostrum, nearly as wide as the head itself; eyes lateral, rounded, moderately prominent; *thorax* oblong, convex; *elytra* elongate, convex, somewhat cylindric; body cylindric, hard, furnished with wings, and generally of small stature; legs moderate; *femora* clavate, unarmed; *tarsi* tetramerous, the penultimate joint generally broad and bilobed.

Type of the genus, *Cossonus chloropus*, Gyllenhal, *Ins. Sue.* vol. iii. p. 259. One species, which occurs, though rarely, beneath the bark of elms, near the metropolis; it is also found in other parts of Europe.

RHYNCHOSIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. *Generic character*: calyx two-lipped; superior lip broad, inferior lip three-cleft; middle segment long; corolla, standard ovate, ascending; wings oblong, shorter than the standard; keel rhomboidal, with a long beak; pod membranaceous, two-seeded.

One species, *R. volubilis*, native of China. Loureiro.

RHYNCHOSPORA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Cyperaceæ*. *Generic character*: glumes chaffy, the lower ones empty; corolla none; seed one, crowned with the hard, permanent style; base of the style broad as the seed.

Three species, natives of New South Wales.

RHYNCOBELLA, from the Greek *ῥύγχος*, a beak, Schneid. In *Zoology*, a genus of animals belonging to the family *Scomberoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Upper lip elongated into a pointed beak; spines of the first dorsal fin unconnected by membrane, as are also the first two of the anal fin; ventrals deficient; body serpentiform.

The animals composing this genus are distinguished from the genus *Ophidium*, from which they were separated by Lacepede under the name of *Macrogathus*, and also by Schneider with the name here used, not only because they live in fresh instead of salt water, but also on account of the great difference in the form of the upper lip, which in this genus is lengthened into a kind of bill or proboscis, and enables them easily to grope among the mud in search of the worms on which they principally feed. Cuvier has divided them into two sections, from the greater or less length of this organ, but with scarcely sufficient reason. If division were necessary, it would be preferable to arrange them into sections distinguishable by the presence or absence of teeth. All of them are eaten and much esteemed.

R. Orientalis, Schneid.; *Ophidium Aculeatum*, Bloch; *le Macrogathe Aiguilloné*, Lacep. Rather more than three feet in length; body compressed; head narrower than it; the proboscis of the upper lip hollowed beneath and divided by numerous transverse plaits, with a central longitudinal one crossing them, an apparatus which resembles the adhering organ of the Remora; mouth toothless, but the palate rough; back reddish-brown, sides silvery, and belly white; eyes small, with white irides and black pupils; pectoral fins short, violet-coloured, and marked with brown in their centre, dorsal fin marbled with ferruginous and brown, and having two black spots enclosed in yellow rings upon it; the number of these spots, however, varies, sometimes there is but one, and at other times they are entirely wanting;

RHYN-CHOLUS.

RHYN-COB-DELLA.

RHYN-
COB-
DELLA.RHYN-
COPS.

anal fin reddish edged with black. It is found at Ceylon.

R. Aral, Schneid. From eight to ten inches long; head and back dusky, the latter becoming lighter on the sides; belly whitish; dorsal fin bluish, and marked with four round, black spots enclosed in rings of yellow, which are bounded with brown margins; the hind part of this fin is dusky and marked with one vertical and two transverse yellow bands; caudal fin striped alternately with brown and yellow. Found in the rivers at Tranquebar.

R. Polyacantha, Schneid.; *le Macrog. armé*, Lacep. About eighteen inches long; the beak is shorter than in the first species, and not more than half its length extends beyond the lower lip; it has no platings, but the jaws are well furnished with numerous rows of very small teeth; the gape is wide, which also distinguishes it from the other species, in which it is narrow; near each eye is a small spine, and upon each gill flap are three others; the colour of the body is varied, and the fins are bluish. It is found at Tranquebar.

R. Pancalus, Schneid.; *Macrog. Panc.* Hamilton. From four to six inches long; jaws armed with fine teeth; back green, belly white, sides marked with many black and small white spots; hind part of the back fin, the anal and caudal fins brownish, marked with numerous black dots ranged in transverse stripes. Is found in the tanks on the banks of the Ganges.

R. Haleppensis, Schneid.; *Mastacembalus*, 402, Gro-nov. In this species the jaws are of equal length, but rather sharp-pointed, have broad, fleshy lips, and are armed with teeth, but the gape is narrow; spines corresponding to the first dorsal fin commencing immediately behind the head; first two spines of the anal fin free; upper parts marked white and ferruginous, becoming deeper on the head and back; belly whitish; dorsal fin sometimes marked with ferruginous spots. It is caught in the river Coic near Aleppo, and is called *Simack il Inglese*.

See Bloch, *Ichthyologia a* Schneider; Lacepede, *Histoire des Poissons*; Hamilton, formerly Buchanan, *Fishes of the Ganges*.

RHYNCOPHORUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elbowed, placed towards the base of the rostrum; *funiculus* six-jointed; club two-jointed, short or elongate, compressed, truncate, the terminal joint spongy; head produced in front into an elongate, rounded rostrum, which is thickened before the insertion of the *antennæ*; eyes oblong; *thorax* somewhat ovate, marked in front as if bearing a collar, rounded behind, flattish above; *elytra* flat, not covering the apex of the abdomen, which is acutely prominent; legs generally shortish; *tarsi* spongy beneath, with the penultimate joint heart-shaped, but not distinctly bilobed.

Type of the genus, *Calandra palmarum* Auctorum. There are numerous species, forming two divisions of the genus, distinguished by the length of the club of the *antennæ*, and mostly natives of tropical regions.

RHYNCOPS, from the Greek *ρύγχος*, a beak, and *κόπτω*, to cut, Lin.; *Cutwater*, Catesby. In *Zoology*, a genus of animals belonging to the family *Longipennes*, order *Palmipedes*, class *Aves*.

Generic character. Beak long, straight, and much compressed; upper mandible much shorter than the lower, and becoming rather pointed towards the tip,

which is slightly truncated, its sides closely approximated, so as to leave only a groove in which the lower is received; lower mandible much truncated, its sides or branches only distinct close to the base, but otherwise closely approximated and forming a single plate, which is sharp beneath like a knife-blade; nostrils longitudinal, narrow, concave, patulous, and near the base in the edges of the mandible; wings very long, the second quill feather much the longest; tarsi naked and reticulated, and longer than the middle toe, which is connected to the others by webs slightly hollowed in the centre; hind toe articulated to the tarsus, and its tip just touching the ground.

This genus exhibits one of the most remarkable forms of beak in the whole class of birds. The lower mandible has its two sides so closely approximated at a very short distance from its base as to give it the appearance of the blade of a knife or razor, with this difference, however, that its lower edge is sharp, which enables it to cut through the surface of the water whilst skimming along without impediment to its flight. Its upper edge, when the beak is closed, is received into a groove formed by the sides of the upper mandible in the same way as the blade of a razor is shut between its shells, as has been well observed by Vieillot, or somewhat like a pair of scissors, and hence its French name *bec en ciseaux*. The pointed form of the upper mandible has also its use, in not offering any resistance whilst the bill is in the act of being shut. They live on sand-banks and in salt-marshes, are found usually in parties of fifteen or twenty pairs, and make their nest by forming slight hollows in the sand at no great distance apart. They walk badly, and do not swim much, but are continually on the wing, skimming over the surface of shallow water near the shore where the fry of fishes and shrimps resort; hence has arisen the name of *Skimmer* applied to them by Pennant. They move along with a slow, flapping flight, and with extended wings and bended neck, dip the lower mandible, the mouth being at the same time open, and plough along the surface of the water for the purpose of taking their food, which they capture with as much ease as Swallows take their insect prey. From their thus cutting through the water with their bill they were called by the American Spaniards *Rayador*, or cutters, and hence probably originated Catesby's name, *Cutwater*. The natives of Paraguay call them *Hatiguazu*, from observing that they are constantly among the Terns or Sea Swallows, which are named *Hati* in their language. The cry of the Cutwater is very harsh, and may be expressed by the syllable *gaa*. They are found both in America and Africa.

R. Nigra, Lin.; *le Bec en Ciseaux*, Buff.; *Black Cutwater*. Nineteen inches in length; breadth three feet and eight inches when the wings are expanded; upper mandible three and a half, and under mandible four and a half inches long, both scarlet, tinged with orange and tipped with black; upper part of the head, neck, back, and scapulars deep black, as are also the wings, excepting the secondary quills, the inner vanes of which are white as well as their tips; forehead, cheeks, throat, and under parts white; tail feathers black, broadly edged with white, their coverts white on the outer sides, and black in the middle; legs and feet bright scarlet. The female is distinguished by being about three inches shorter than the male, but the colour and marking of her plumage is the same excepting the tail, which is white-shafted and broadly centred with

RHYN-
COPS.

RHYN-
COPS.

RHY-
PHUS.

black. It is found on both sides of the American Continent, and in both hemispheres; Wilson enumerates it among the birds visiting the United States, and Lesson mentions it as being very common on the Chilian coast, where it is called *Piscator*, or the fisher. It makes its appearance in New Jersey early in May, and continues there till the beginning of September, when it migrates. It prefers low sand-banks above the reach of the tide, and dry flat sands in front of the sea. Here they collect in parties of fifteen or twenty pairs, and form their nests, which consist only of a slight hollow in the sand, a few yards distant from each other. In this nest are deposited three oval white eggs, marked with large, round, brownish-black spots, intermingled with other smaller and paler black marks. The female sits only during night, and in stormy weather; but both parent birds tend the young with great care for many weeks after they are hatched, as they are long before capable of flying. Their cry is harsh and screaming; their flight slow and flapping; and as they skim along they frequently dip, with steady expanded wings and bended neck, their lower mandible into the sea, and plough along it with open mouth to catch their food. Their numbers on the coast of Chili are so great, that, together with Gulls and other sea birds, they form thick flocks, like long, black, and floating scarfs, which obscure the sky from the river Penco to the Island of Quiriquina, a distance of twelve miles, as Lesson states he himself has witnessed. And the same author also verifies the statement of their feeding on the animals of bivalve shells, which had been previously denied. He states that "the sandy marshes of Penco are filled with *Macrae*, which the ebbing tide leaves nearly dry, and that the Cutwater, being well aware of this circumstance, places itself on the watch near these mollusca, and, waiting till the animal opens its valves, darts its lower mandible between them, and, raising the shell, strikes it frequently upon the strand till it has cut through the ligament, and then swallows the animal without further difficulty."

R. Flavirostris, Vieill.; *Yellow-beaked Cutwater*. About sixteen inches in length; beak yellowish; forehead, throat, back of the neck, tips of the wing-coverts, and secondary quills white; caudal quills grey within and white without and beneath; remainder of the plumage grey tinged with brown; legs yellow. Is a native of Africa, and found upon the Senegal river.

R. Cinerascens and *R. Brevirostris* are also described by Spix in his *Novæ Species Avium Brasiliensium*.

See Linnæi *Systema Naturæ* a Gmelin; Vieillot, *Galerie des Oiseaux*; Catesby, *Natural History of Carolina*, &c.; Wilson, *American Ornithology*.

RHYNCOTHECA, in *Botany*, a genus of the class *Polyandria*, order *Pentagynia*, natural order *Geraniaceæ*. Generic character: calyx five-leaved; corolla none; stamens ten; style short; stigma long, thick, diverging; capsule five-celled, bursting on the under side; seeds slightly keeled; receptacle columnar, five-angled.

One species, *R. spinosa*, native of Peru.

RHYPHUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, awl-shaped, sixteen-jointed, the two basal joints distinct; *palpi* exserted, incurved, four-jointed, articulations unequal, the second clavate; *ocelli* three, equal; wings two, parallel, incumbent; legs unequal, the anterior pair shortest.

Type of the genus, *Tipula fenestralis*, Scopoli, *Ent.*

Carn. p. 322; Reaumur, *Ins.* vol. v. pl. iv. fig. 3—10. Several closely allied species, of which four or five are found in Britain; the larva of one species feeds in houses on damp, decayed linen, &c.

RHYSSA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, porrect, of moderate length, consisting of numerous articulations; head short, transverse; eyes ovate, or a little kidney-shaped; *thorax* somewhat convex-cylindric; *prothorax* with raised transverse lines; *metathorax* for the most part longitudinally grooved; *scutellum* more or less convex and somewhat quadrate; wings ample, cellule three-angular; *abdomen* long, smooth, glossy, sessile, the intermediate segments broader than long, the terminal ones cleft beneath in the females, which sex is furnished with a very long ovipositor; legs elongate, especially the posterior pair.

Type of the genus, *Ichneumon persuasorius*, Linnæus, *Syst. Nat.* vol. ii. p. 932. An extensive genus, of which only one species, the type, has yet been discovered in England; it occurs in fir plantations, and appears to be parasitic upon *Sirices*.

RHYTHM, } Lat. *rhythmus*; Gr. ῥυθμος.

RHYTHMICAL. } Numerical proportion or harmony.

Some part fell in *rithm*, and that, God wots, full rude also.

Burnet. *Records*, No. 21. vol. ii. p. 394. Sir T. More to Cromwell.

The term figurate, which we now employ to distinguish florid from more simple melody, was used to denote that which was simply *rhythmical* or accentual.

Mason. *On Church Music*, p. 28.

Rhythm differs from *metre*, inasmuch as *rhythm* is proportion, applied to any motion whatever: *metre* is proportion, applied to the motion of words spoken.—No English word expresses *rhythm* better than the word *time*.

Harris. *Philological Inquiries*, p. 67, 69.

RHYTIDERES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elbowed, rather short and stoutish, scape clavate, not reaching to the eyes; *funiculus* with the basal joints obconic and longish, third to sixth short, nodose, the last thickened and clavate; club four-jointed, oblong, acuminate; head produced in front into an elongate, rounded rostrum, which is grooved above and a little thickened at the tip; eyes oblong, depressed; *thorax* oblong-quadrate, somewhat rounded, with a lobe behind each eye; *elytra* oblong-ovate, the two emarginate at the base, the shoulders obtusely angulated; legs moderate, anterior pair approximating; *femora* somewhat clavate, unarmed; *tibiæ* rounded, with a horizontal hook at the tip; *tarsi* narrowed, compressed, ciliated, tetramerous.

Type of the genus, *Curculio plicatus*, Olivier; Schönherr, *Disp. Meth. Curcu.* p. 150. One species only known.

RHYTIRRHINUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elbowed, moderate, rather slender; scape clavate, reaching to the eyes; *funiculus* with its basal joint clavate, second obconic, third to sixth lenticular, seventh thickened, and somewhat turbinated; club four-jointed, oblong-ovate, acuminate; head produced in front into a rather long and thickish rostrum, which is slightly angulated, grooved above, unequal, and a little bent; eyes ovate, incurved; *thorax* somewhat rounded, produced in the middle in front, with a proximate lobe on each side behind the eyes; *elytra* somewhat ovate, the base slightly notched within,

RHY-
PHUS.
—
RHYTIR-
RHINUS.

RHYTIR. unequal; legs rather short and stout, anterior approximating at the base; *femora* somewhat linear, incurved; *tibiæ* straight, with a minute hook at the tip; *tarsi* narrow, setose, four-articulate.

RIANT.

Type of the genus, *Curculio inæqualis*, Fabricius; Schönherr, *Disp. Meth. Curcu.* p. 163. Several species, natives of the Cape of Good Hope, &c.

RHYTIS, in *Botany*, a genus of the class *Polygamia*, order, *Dioecia*. Generic character: hermaphrodite flower, calyx three to six-parted; corolla none; stamens three; stigmas three; berry three-seeded: female flower, calyx many-parted; corolla none; stigmas three; berry three-seeded.

One species, *R. fruticosa*, native of Cochinchina. Loureiro.

RHYZOBIOUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* elongate, pilose, the basal joint large, robust, second somewhat cylindric, shorter and more robust than the third, which is longer than the fourth, both of which are slender, the three following short, somewhat nodose, the remainder forming an elongate, slender club; *palpi* short; mandibles acute, and entire at the apex; head small, rounded; eyes oblong; *thorax* short, convex, the hinder margin closely applied to the base of the elytra, the latter convex; body pubescent; legs simple; *femora* slender; *tibiæ* slightly compressed; *tarsi* short, trimerous.

Type of the genus, *Nitidula litura*, Fabricius; Stephens, *Illust. Britt. Ent. (Mandibulata.)* vol. iv. p. 396. One species, common at the roots of grass throughout Britain, and not unfrequent in other parts of Europe.

RHYZOPERTHA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, clavate; the club three-jointed, the articulations somewhat laciniate; head small, deeply inserted in the thorax, the latter very convex, rough in part; body cylindric; *elytra* elongate, entire; *tibiæ* serrated; *tarsi* tetramerous.

Type of the genus, *Sinodendron pusillum*, Fabricius; Stephens, *Illust. Britt. Ent. (Mandibulata.)* vol. iii. p. 354. Two species, both of which have been taken in Britain, in foreign roots, consequently not truly indigenous.

RHYZOPHAGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, much shorter than the thorax; the basal joint large, clubbed, the second considerably smaller, truncate; third obconic, with the base narrower, the six following very short, coarctate, rather thickening exteriorly, the tenth very large, rounded, pilose, with an obscure rudiment of another joint at the tip; *palpi* four, very short, filiform; head exserted, suddenly contracted before the insertion of the antennæ; eyes small, globose; *thorax* somewhat quadrate, its lateral margins entire; body linear-elongate; *elytra* truncate; legs rather short; *tibiæ* broad at the apex; *tarsi* four, anterior pentamerous, two posterior tetramerous.

Type of the genus, *Lyctus ferrugineus*, Paykull; Stephens, *Illust. Britt. Ent. (Mandibulata.)* vol. iii. p. 19. About a dozen species, nearly all of which are found in Britain, beneath the bark of decaying trees, &c.

RIANT, Fr. *riant*, from *rîre*; Lat. *ridere*.

Laughing, geering, fleering. Cotgrave.

This melancholy kind of greatness, though it be certainly the

highest, ought not to be studied in all sorts of edifices, where yet grandeur must be drawn from the other sources; with a strict caution, however, against any thing light and *riant*.

Burke. *On the Sublime and Beautiful*, sec. 15. p. 2.

RIANT.

RIBALD.

RIB, { A. S. *rib*, *ribbe*; Ger. *ribbe*, *ripp*; D. *ribbe*; **RIB.** } Sw. *ref*, *refben*. Wachter derives from *reif*, *incurvus*, *pars corporis inflexa*. It may be from the A. S. *rypp-an*, to *rip*, to reave, which, in Swedish, is *ref-wa*, or *rif-wa*, whence their *ref*, *ref-ben*. The Gr. *δοῦπα*, *trabs*, from *ἐόρυ*, *ramus decerptus*, is rendered by Chapman *rib*. And a *rib* seems to be, any thing *ripped* or torn asunder; and, hence, are so called

The bones which extend separately or asunder from the back-bone; the split boards with which the sides of a ship are covered or strengthened; certain parts of a leaf or stalk; a strip; a shred.

So þat ribbes þre
þe geant brek of Corineus, as me myzte þer yse.
R. Gloucester, p. 22.

Which masse he willed to be reared hye
Toward the skies, and *ribbed* all with oke.
Surrey. Virgil. *Æneis*, book ii.

And my good L. though the skornful doe mocke me for a time,
yet in the end I hope to geue them all a *rib* of roste for their
paines. Gascoigne. *The Steele Glas*.

In whiche wrestlynge y^e geaut brake a *rybbe* in y^e syde of Cor-
neus. Fabyan. *Chronicle*, ch. iv. p. 10.

Thirdly, in setting on your feather, whether it is pared or drawn
with a thicke *rybbe*, or a thinne *rybbe*, (the *rybbe* is the hard quill
which divideth the feather.)

Ascham. *Works*, p. 145. *The Schole of Shootinge*.

For otherwise *ribbed* they [the leaves] be and full of veins.
Holland. *Plinie*, book xxv. ch. x.

Is't like that lead containes her? 'twere damnation
To thinke so base a thought, it were too grose
To *rib* her searecloath in the obscure graue.
Shakspeare. *The Merchant of Venice*, p. 171.

Then did Vlysses mount on *rib*, perforce,
Like to a rider of a running horse,
To stay himselfe a time, while he might shift
His drenched weeds, that were Calypso's gift.
Chapman. *Homer. Odyssey*, book v. p. 81.

Long and capacious as a shipwright forme
Some bark's broad bottom to out-ride the storms,
So large he built the raft: then *ribb'd* it strong
From space to space, and nail'd the planks along.
Id. *Id.* book v.

That done, he rises, humbly bows,
And gives thanks for the princely blows;
Departs not meanly proud, and boasting
Of his magnificent *rib-roasting*
Butler. *Hudibras*, part ii. ch. i.

But rude at first, and not with easy slope
Receding wide, they press'd against the *ribs*,
And bruise'd the side. Cowper. *The Task*, book i.

RI'BALD, { Fr. *ribaude*; It. *ribaldo*; D. *ra-*
RI'BALD, { *baud*; Low Lat. *ribaldus*. Skinner
RI'BALDISH, { thinks from *re*, and Fr. *baud*; It.
RI'BALDOUS, { *baldo*, bold; q. d. *valde audax*, i. e.
RI'BALDOUSLY, { *impudens*. Ihre, the Suio-Goth. *ri-*
RI'BALDRY, { *balder*, from the Isl. *hrid*, *pugna*, and
RI'BALDROUS. } *balldr*, *audax*. Junius from the
Gr. *ῥαβδάλειν*, *tumultuari*. A *ribaude* seems to have
been a robber, (A. S. *rypere*,) *rapper* or *reaver*; (see to
reave;) and thence any profligate character was so called.
And *ribaldry*, all sorts of profligacy and indecency.
Chaucer's *ribaude*, (*Romant of the Rose*,) whom Mr. Tyrr-
whitt calls "a poor labourer," "though to *robbe* he dis-

RIBALD. daineth," yet "in the tavern all dispendeth," (sc.) his earnings and his time: this disdain of robbery appears to be a peculiarity to the many of whom the Poet is especially speaking; and consequently it may be inferred, the common practice or occupation of the class was rapine. Cotgrave describes a *ribaude* to be "a rogue, ruffian, rascal, scoundrel, varlet, filthy fellow." And it is to filthiness, obscenity, low and vulgar scurrility, that the word *ribaldry* is now usually applied.

Have reuthe of alle þuse *rybaudes*. þat repenten hem sore.
Piers Plouhman. Vision, p. 118.

On fastyng daies by fore none. ich fedde me whit ale
Ought of reson a mong *rybaudes*. here *rybaudrye* to buyre.
Id. Ib. p. 109.

A wise man saied, as we may seen,
Is no man wretched but he it ween,
Be he king, knight, or *ribaude*,
And many a *ribaude* is merrie and baude,
That swinketh, and beareth both day and night,
Many a burthen of great might.
Chaucer. The Romant of the Rose, v. 5673.

And not to wander liche a dulled asse,
Ragged and torne, disguised in array,
Ribaud in speech, or out of measure passe,
Thy bound exceeding, thinke on this alway.

Id. The Court of Loue.

Nay, let him tell us of no *ribaudrie*.
Tell us som moral thing, that we mow lere
Som wit, and thanne wol we gladly here.
Id. The Pardoner's Prologue, v. 12195.

A great drinker of wine, and in his furious droonkenesse most like a mad man, a *ribaude*, an adulterer.
Fox. Actes, &c. fol. 74.

Thou shalt promise mee to refuse all lewd and wilde company, all swearing and *ribaldry* talke, and if euer I knowe thee to plaie one 12 pence, at either dice or cardes, then I will shewe this thy bill vnto my maister.
Id. Ib. fol. 1850. Queen Marie.

Thys chaptyer he spendeth al vpon *rybaudrye* raylyng, so shamefull and abhominable, that I weene for verye shame and offendyng of honest mennes eares, it were better bourne it then reherse it.

Sir Thomas More. Workes, p. 704. Against Tindale.

Euerye wel ordered regiō hath by plaine lawes prohibited and forboden suche *ribaldous* behavoure.

Id. Ib. p. 621.

To laugh them to scorne, to mock, to iest, to check, to chide, to brawle, and *ribaldously* to raile, calling the apish, puiish.
Id. Ib. p. 366. On Tindale's Preface.

In stead thereof scoffing scurrilitie,
And scornfull folly with contempt is crept,
Rolling in rhymes of shamelesse *ribaudrie*
Without regard, or due decorum kept.

Spenser. The Teares of the Muses.

Others may talke of mirth, as a thing they have heard of, or vainly fancied; onely the Christian feelles it; and in comparison thereof scorneth the idle, *ribaldish*, and scurrilous mirth of the prophane.

Hall. Works, vol. i. sec. 23. p. 84. Heaven upon Earth.

Hence was that brand, which Seneca stamped vpon all scurrilous persons, which I would such Christians whose tongues are tipt, and hearts delighted with *ribaldous* songs and jests, would seriously apply unto their consciences.

Prynne. Histrio-Mastix, part i. p. 65.

Our stage-playes are fraught with many *ribaldous* passages, many witty obscenities.

Id. Ib. p. 515.

This first step made, within a trice,
The truly docile animal
(Young minds too soon are skill'd in vice!)
In *ribaldry* was clerical.

Cooper. Ver-Vert, ch. iii.

RIBAND, n. } Fr. *ruben, rubenner*. Menage de-
RIBAND, v. } rives from *rubeus*, red, because the
RIBBON. } more beautiful ribbons are of that
colour. Skinner thinks the French borrowed their word

from us, and that *riband* is *re* and *bind*, or *bende, vinculum replicatum, fascia replicata, vel quod replicari potest*; a folded or redoubled bandage. Lye suggests *rib* and *band*, a band with which the ribs were girded; perhaps a *ript, stript band*, as if *ript* or torn from a broader substance.

A band or fillet of silk, satin, &c.

It is a slowe may nat forbear,
Ragges *ribanded* with gold to weare,
For also well woll loue be sette
Under ragges as rich rotchette.

Chaucer. The Romant of the Rose.

One that, by teaching great Madonnas to foot it, has miraculously purchast a *ribanded* wastecote, and four clean pair of socks.
Beaumont and Fletcher. The Fair Maid of the Inn, act iii. sc. 1.

Before that castle was an open plaine,
And in the midst thereof a pillar placed;
On which this shield, of many sought in vaine,
The shield of Love, whose guerdon me hath graced,
Was hang'd on high with golden ribbands laced.

Spenser. Faerie Queene, book iv. can. 10.

Their *riband-wreathed* wiues brought fruit and cakes.
Chapman. Homer. Odyssey, book iv. p. 63.

See, Britain, see thy Walpole shine from far,
His azure ribbon, and his radiant star.

Young. The Instalment.

RIBES, in Botany, a genus of the class *Pentandria*, order *Monogynia*, natural order *Grossulaceæ*. Generic character: corolla, petals five, which, with the stamens, are inserted into the calyx; style two-cleft; berry many-seeded, inferior.

A numerous genus of shrubs, natives chiefly of the temperate parts of Europe, Asia, and America. There are two natural divisions of the species, one containing the Gooseberries, the other the Currants. The cultivated Gooseberries are varieties of either *R. grossularia*, the Rough Gooseberry, or *R. uva crisa*, the Smooth Gooseberry. *R. rubrum*, the Red Currant, of which the White Currant is a variety, *R. petraeum*, Rock Currant, *R. alpinum*, *R. spicatum*, and *R. nigrum*, the Black Currant, are natives of England. It is remarkable that none of the English species are found in North America, and the North-American species will not produce fruit in England.

RIBIBE, or } A musical instrument. Why put for
RE'BECK. } an old woman, unless, perhaps, from
its shrillness, Mr. Tyrrwhitt cannot guess. See REBECK.

A *rybibour* and a ratoner. a raker and hus knave.

Piers Plouhman. Vision, p. 106.

And so befell, that ones on a day
This sompnour, waiting ever on his pray,
Rode forth to sompne a widewe, an olde *ribibe*,
Feining a case, for he wold han a bribe.

Chaucer. The Freres Tale, v. 6895.

And playen songes on a smal *ribible*.

Id. The Miller's Tale, v. 3332.

RICE, Fr. *riz*; It. *riso*; Sp. *arroz*; Lat. *oryza*; Gr. *ὀρυζα*. The word is said (Martinius) to be Arabic, and to have its name from its constringent or binding qualities, which are indeed ascribed to it from very early times.

As for us Italians (to say a truth) we set most store by *rice*, whereof (being husked and cleansed) we make grotes, like for all the world to those which other men besides doe make of barley husked. The leaves verily that this graine *rice* doth beare, be pulpos and fleshie, resembling porret or leekes, but that they be broader: the stem groweth a cubit high, the flower is of purple colour, and the root round like a jem or pearle.

Holland. Plinie, book xviii. ch. vii.

I judge the same hath (of certain) an excellent spirit of nourishment of *rise*, made into a creame; for *rise* is in Turkey, and other

RIBAND.
RICE.

RICE. countries of the East, most fed upon; but it must be thoroughly boyled in respect of the hardness of it: and also because otherwise it bindeth the body too much.

Bacon. Natural History, sec. 49.

A rice field produces a much greater quantity of food than the most fertile corn field. Two crops in the year, from thirty to sixty bushels each, are said to be the ordinary produce of an acre.

Smith. Wealth of Nations, vol. i. book i. ch. xi. p. 220.

RICH, adj. Fr. *riche*; It. *ricco*; Sp. *rico*; Ger. *reich*; D. *ryk*; Sw. *rik*; A. S. *ric*, *richen*, from the Gothic *ric-jan*, *con-gerere, colligere*, to collect, to draw together. See **ENRICH, RICHES**.
RICH, v. A collection, accumulation, or heap, a great quantity, a number, *sc.* of money or coin, lands, cattle; (met. any moral or mental qualities or possessions;) plenty, abundance, wealth; opulence, fruitfulness, fertility; costliness, preciousness.

And þer nas of olde house in þe lond non,
 þat he ne amendeðe mýd som lond, oþer mýd býldýnge,
 Oþer mýd boc, oþer rýche cloþ, oþer oþer rýche þýnge.
R. Gloucester, p. 271.

For ich am myd my son on ech half by set,
 And gef ich hem may ouer come þoru gou þe bet,
 Ich gou myd me at holde, and in grete richesse gou do
 Of gýftes, and of ehatews, and of londes al so.
Id. p. 113.

So þat sorwes in Engeland were wel monýfolde.
 þe kýng & oþer rýchemen wel lute þerof tolde.
Id. p. 378.

Mýkelle was þe richesse, þei purueied hir passage.
R. Brunne, p. 30.

þe abbey of Rumeýe he feffed richely,
 With rentes fulle gode & kirkes of pris.
Id. p. 35.

For mý sister Aleýse, þat is now forsaken,
 For on of mor richesse of Nauer þou has taken.
Id. p. 155.

— Mede ýs ý married more for hure mechel richesse
 þan for holýnesse oþ hendenes. oþ for hýe kýnde.
Piers Plouhman. Vision, p. 28.

On alle hure fýve fýngres. rýcheliche ýrýnged
 And þer on rede rubies. and oþ rýche stones.
Id. lb. p. 24.

That he ghyue to ghou afir the richnessis of his glorie vertu to
 be strengthid bi his spyryt. *Wiclif. Effesies, ch. iii.*

The stone was hard of adamaunt,
 Whereof they made the foundemaunt,
 The toure was round made in compas,
 In all this world no richer was.
Chaucer. The Romant of the Rose.

— A newe markisessse
 He with him brought, in swiche pomp and richesse,
 That never was ther seen with mannes eye
 So noble array in al West Lumbardie.
Id. The Clerkes Tale, v. 8818.

Thise presents ben ful richelich yfette,
 This is to sain, the swerd and the mirrour.
Id. The Squieres Tale, v. 10480.

Till that when the body deye;
 And than he shall be riched so,
 That it maie faile neuermo.
Gower. Conf. Am. book iv. p. 112.

And he, whiche riche was enough
 This daie, to morowe had nought.
Id. lb. book iii. p. 91.

LEAR. Of all these bounds even from this line to this
 With shadowie forrests, and with champains rich'd
 With plenteous riuers, and wide-skirted meades,
 We make thee lady.
Shakspeare. Lear, fol. 283.

I cannot call riches better than the baggage of virtue; the Ro-
 man word is better, *impedimenta*. For as the baggage is to an
 army, so is riches to virtue.

Bacon. Essaies. Of Riches, ch. xxxv.

VOL. XXVII.

In her the richness of all heavenly grace
 In chiefe degree are heaped up on hye.
Spenser. Faerie Queene, book ii. can. 2.

— Then her men tooke land;
 And first, brought forth Vlysses' bed, and all
 That richly furnisht it; he still in thrall
 Of all-subduing sleepe.
Chapman. Homer. Odyssey, book xiii. p. 199.

Bring forth that British vale, and be it ne'er so rare,
 But Catmus with that vale for richness shall compare.
Drayton. Poly-olbion, book xxiv.

The first thing that is given in charge to all those that are rich
 in this world is, that they be not highminded, *μη υψηλοφρονειν*, that
 they do not think too well of themselves for being rich, and take
 occasion from thence to despise others that are in meaner circum-
 stances than they.

Sharp. Works, vol. i. p. 91. Sermon 4.

That for which either God approves us, or wise men esteem us,
 or we can speak peace and content to ourselves, is not any thing
 without us, any thing that fortune hath given to us; but something
 that we may more truly call our own; something that we were
 neither born with, nor could any body hinder us of, nor can be taken
 from us; that is to say, the riches of our minds, our virtuous and
 commendable qualities.
Id. lb. p. 92.

With the greater part of rich people the chief enjoyment of riches
 consists in the parade of riches, which, in their eye, is never so
 complete as when they appear to possess those decisive marks of
 opulence which nobody can possess but themselves.

Smith. Wealth of Nations, vol. i. book i. ch. xi. p. 238.

Columbus turned his view towards their minerals; and in the
 richness of the productions of this third kingdom, he flattered
 himself he had found a full compensation for the insignificance of
 those of the other two (animals or vegetables.)
Id. lb. vol. ii. book iv. ch. vii. p. 393.

RICHARDIA, in *Botany*, a genus of the class *Her-
 andria*, order *Monogynia*, natural order *Rubiaceæ*. Ge-
 neric character: calyx superior, six-parted, persisting;
 corolla funnel-shaped, six-cleft; stigma three-lobed; fruit
 three-parted; seeds five, truncated.

Two species, natives of South America.

RICHERIA, in *Botany*, a genus of the class *Pen-
 tandria*, order *Monogynia*, natural order *Euphorbiæ*.
 Generic character: calyx one-leaved, persisting, four or
 five-cleft; corolla, petals four or five; nectary, four or
 five glands at the base of the imperfect germen; capsule
 three-celled, six-valved; seeds solitary, pulpy.

One species, *R. grandis*, a large tree, native of Mont-
 serrat.

RICHMOND, a Borough and Market Town in the
 North Riding of the County of York, built on the side
 of a steep and very picturesque hill above the river Swale.
 Alan, Earl of Bretany, a nephew of the Conqueror, re-
 ceived a Grant of the forfeited estates of Edwin Earl of
 Mercia, among which were the Earldom and district
 called Richmondshire, as a reward for his valour as
 Commander of the Rear in the Battle of Hastings. The
 Castle which he built is now in ruins. Henry VII. was
 Earl of Richmond when he ascended the throne. The
 Dukedom, created by Henry VIII. for a natural son
 who died without issue, was conferred by Charles II.
 on his natural son Charles Lenox. The Parish is a
 Rectory in the Patronage of the Crown. The town
 has two Churches, one of which is Collegiate, is paved,
 and, for the most part, well built of freestone. The
 river is crossed by a stone bridge. The trade is chiefly
 in corn and lead, and a little in the coarse woollen
 stocking manufacture. There are annual horse-races
 near the town. Population, in 1821, 3546, in 1831,
 3900. Distant from London 234 N.W., from Ripon
 25, from York 44 miles. The Borough returns two
 Members to Parliament.

RICH.
RICH-
MOND.

RICI-
NULA.
—
RID.

RICINULA, in *Zoology*, a genus of *Trachelipodous Mollusca*.

Generic character. Shell ovate, generally tubercular or spinous externally; aperture longitudinal, with a short recurvate canal, terminated by an oblique notch directed backward; *columella* with unequal teeth; the inner side of the right lip frequently narrowing the aperture.

Type of the genus, *R. horrida*, Lamarck; Bonani, pl. iii. fig. 173. Inhabits the Indian Ocean.

RICINUS, in *Botany*, a genus of the class *Monoecia*, order *Monadelphia*, natural order *Euphorbiaceæ*. *Generic character*: male flower, calyx five-parted; stamens numerous: female flower, calyx three-parted; styles three, two-cleft; capsules usually spiny, three-celled, three-seeded.

Ten species, natives of the East and West Indies and Africa. *R. communis*, the Palma Christi, is the plant which produces the castor oil; it is a native of both the East and West Indies.

RICK, or } *D. rok*; Sw. *roek*; "A. S. *hrec*, a reeke
REEK. } or *rick*, a stack, a heap," Somner; from
ricjan, to rake, collect, heap together. See RICH, *ante*.

A heap (of hay, corn, &c.) *raked* or collected together.

And with their sharp sithes of conning al mowen and made thereof great *rekes* and noble, ful of al plenties to fed me and many another.
Chaucer. *The Testament of Loue*, book i.

A crop so plenteous as the land to load,
O'ercome the crowded barns, and lodge on *ricks* abroad.
Dryden. *Virgil. Georgics*, book ii. v. 748.

RI'CKETS, } A disease, says Skinner, among
RI'CKETY. } infants, the existence of which he declares to be new in his time, and then wholly unknown to the rest of the world; he would derive it from Ger. *recken*, to reach, to stretch, to extend, because in this disease the apophyses (natural prominences) of the bones stretch forth and swell out.

Insomuch that I have sometimes observed with wonder, that an excellent person (whom I need not name to you) cures the *rickets* generally in children of several ages and complexions, without having hitherto failed (as she professes) in any one, by prescribing no other remedy than the single use of the above described colotharine flowers, which I presented her with.
Boyle. *Works*, vol. ii. p. 245. *Usefulness of Natural Philosophy*.

Whence multitudes of reverend men and critics
Have got a kind of intellectual *rickets*,
And, by th' immoderate excess of study,
Have found the sickly head t' outgrow the body.
Butler. *Upon Human Learning*.

But even in a young animal, when the solids are too lax, (the case of *rickety* children,) the diet ought to be astringent.
Arbuthnot. *On the Nature of Aliments*, prop. vii. p. 37.

So crude and *rickety* notions, enfeebled by restraint, when permitted to be drawn out and examined, may, by the reform of their obliquities, and the correction of their virulency, at length acquire health and proportion.

Warburton. *Works*, vol. i. p. 145. *Dedication to Freethinkers*.

RICOTIA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*. *Generic character*: leaves of the calyx bag-shaped, coloured; pod at maturity one-celled, oblong, compressed, valves flat.

Two species, natives of Egypt and China.

RID, v. } A. S. *hridd-an*. "Ahreddan, to set
RI'DDANCE. } free, to bring or rid out of, to draw or pull out. *Ariddan*, *repellere*, to put or rid away." Somner.

To free or set free, to deliver; to clear, to set or get quit of; to disencumber, to disembarass; to drive away or remove.

But after thou be once in loue, then art thou not in thine owne power, but vnder it, neither thou canst not rid thee therof when thou wouldest.

Hyrde. *Vives. The Instruction of a Christian Woman*, fol. 160.

Being caryed from the banket halfe deade, he was tormented with so intollerable paine, that he desired to haue a sworde to ridde hym selfe out of it wythall.

Arthur Goldyng. *Justine*, book xii. fol. 65.

Right glad was Calepine to be so rid
Of his young charge whereof he skilled nought.
Spenser. *Faerie Queene*, book vi. can. 4.

Yet having cause to do as now he doth,
To mitigate the envy of his blood.
Thought best to lose a friend to rid a foe,
And such a one as now he doubted so.
Daniel. *History of Civil Wars*, book i.

You haue no children, butchers! if you had,
The thought of them would haue stirr'd vp remorse!
But if you euer chance to haue a childe,
Looke in his youth to haue him so cut off,
As, deathsmen! you haue rid this sweet yong prince!
Shakspeare. *Henry VI. Third Part*, fol. 171.

Else surely death should be no punishment,
As the great iudge at first did it ordaine,
But rather riddance from long languishment.
Spenser. *Daphnaida*.

Haz. A fair riddance;
We have enough o' the tribe; I am sorry I cannot
Furnish her expedition with a pair
Of my own garters.

Anonymous. *The Gamester*, act v.

Such persons as would feed, and desire to be corpulent, or to keepe their bodies soluble, and have the riddance of their bellie at commaund, shall doe well to drinke often at their repast.
Holland. *Plinie*, book xxiii. ch. i.

He likes your house, your housemaid, and your pay,
Reduce his wages, or get rid of her,
Tom quits you with, "Your most obedient, sir."
Cowper. *Truth*.

Aware, that what is base
No polish can make sterling; and that vice,
Though well perfum'd and elegantly dress'd,
Like an unburied carcase trick'd with flow'rs,
Is but a garnish'd nuisance, fitter far
For cleanly riddance, than for fair attire.
Id. *The Task*, book vi.

RI'DDLE, v. } See *ante*, RADDLE.
RI'DDLE, n. } A riddle or raddle; any thing
RI'DDLER, } made of twisted or writhed sticks or
RI'DDLINGLY. } twigs, wire, &c.

To riddle; to twist, to wreathe, to involve. Also to use a riddle or raddle; to shake or otherwise pass through a riddle; to sift.

In Spenser, *riddling* skill, met. skill in things riddled; consequently, in solving or interpreting them. A riddle, (met.) any thing twisted, writhed, involved, or perplexed; any thing perplexing or puzzling.

And the Lord seide to Symound, Symound, lo Satanas hath axid you that he schude ridle as whete.
Wiclif. *Luk*, ch. xxii.

And now (as it wer by a mysticall ryddel or a darke figure) they professed that ineffable Trinitie of the Father, and the Sonne, and the Holy Gost.
Udall. *St. Matthew*, ch. ii. fol. 8.

Jesus speakyng these thynges dyd not as than at large expounde and declare the darke ryddel and similitude.
Id. *Ib.* ch. xiii. fol. 59.

The tale our gossip Redcap told before,
You so well riddled, that there can no more
Be said of it.
Drayton. *The Moon-Calf*.

RID.
—
RIDDLE

RIDDLE.

RIDE.

And, as she lookt about, she did behold
How over that same dore was likewise writ,
Be bolde, be bolde, and every where, be bold;
That much she muz'd, yet could not construe it
By any *ridling* skill or commune wit.
Spenser. Faerie Queene, book iii. can. 11.

Robin Goodfellow, he that sweeps the hearth and the house clean,
riddles for the country maides, and does all their other drudgery,
while they are at hot-cockles.

Ben Jonson. Love Restored.

The same are shred and minced so small, as they may passe
through a sieve or a *riddle*.

Holland. Plinie, book xvi. ch. xi.

Oft purposes, oft *riddles*, he devys'd,
And thousands like which flow'd in his braine,
With which he fed her fancy, and entys'd
To take to his new love and leave her old despys'd.
Spenser. Faerie Queene, book iii. can. 10.

Riddle me, *riddle* me, what is it? The magistracys in Venice
(except such as are rather of ornament than of power) are all an-
nual, or at most biennial. No man, &c.

Harrington. The Oceana, book i. ch. xii.

HEAR. I would go drunk
A thousand times to bed, rather than dream
Of any of their *riddlemys* *riddlemies*.

Brome. A Jovial Crew, act i.

Though like the pestilence and old fashion'd love,
Riddlingly it catch men, and doth remove
Never, till it be starv'd out, yet their state
Is poor, disarm'd like papists, not worth hate.

Donne. Satire 2.

Why all this frantic pain
To construe what his clearest words contain,
And make a *riddle* what he made so plain?

Dryden. The Hind and the Panther.

Perhaps, the *riddling* visions of the night
With contrarieties delude our sight;
And when fair scenes of pleasure they disclose,
Pain they foretel, and sure ensuing woes.

Rowe. Lucan. Pharsalia, book vii.

LADY R. Oh, fate! I fear thee still. Thou *riddler*, speak
Direct and clear; else I will reach thy soul.

Home. Douglas, act iii. sc. 2.

RIDE, v. } A. S. *rid-an*; D. *ryden*; Ger. *reiten*;
RIDE, n. } Sw. *rida*. Junius would derive from
RIDER, n. } *ῥεῖδ-ειν, ingruere*; it is, perhaps, from
RIDING, n. } *hrad-ian*, to hasten, to move hastily,
quickly, speedily. See RATHER. It is, by usage,

To convey or carry, on a horse or other animal, or in
any sort of carriage; to sit upon such animal or in such
carriage, whether the motion be slow or fast; to convey
or carry; be conveyed, carried, supported, or sustained.

An ewe men mýd hým he nom, & þuder ward gan yde.
Hys men pleýde bý þe weý, & spradde aboute wyde.

R. Gloucester, p. 288.

þe ferþ day of Septembre, in þe heruest tide,
At Donkastre mot men se manyon to batale ride.

R. Brunne, p. 17.

Fayne were to folwen hem, and faste ryden after.

Piers Plouhman. Vision.

Short was his gowne, with sleeves long and wide,
Wel coude he sitte on hors, and fayre ride.

Chaucer. Prologue to the Canterbury Tales, v. 93.

With fresshe thynges, and with glade
The noble towne was all behonged,
And euery wight was sore alonged
To see this lustie ladie ride.

Gower. Conf Am. book vi.

Lyke as the brake within the rider's hand
Doth straine the horse, nye woode with grief of paine.

Wyatt. A Comparison of the Louer's Paines.

Beyond the garden *ridings* were cut out, each answering the
angles of the lodge.

Sidney. Arcadia, book i.

She tooke her horrid stand
Vpon Vlysses huge blacke barke, that did at anchor ride
Amidst the fleet.

Chapman. Homer. Iliad, book xi. p. 142.

And drawne it was (that wonder is to tell)
Of two grym lyons, taken from the wood
In which their powre all others did excell,
Now made forget their former cruell mood,
T' obey their rider's hest, as seemed good.

Spenser. Faerie Queene, book iv. can. 3.

So Zancle to th' Italian earth was ty'd,
And men once walk'd where ships at anchor ride.

Dryden. Ovid. Metamorphoses, book xv.

The riders rode abreast, and one his shield,
His lance of cornel-wood another held;
The third his bow, and glorious to behold,
The costly quiver, all of burnish'd gold.

Id. Palamon and Arcite.

The rider quits his seat, in hopes to gain
On foot his safety, but he hopes in vain.

Hoole. Orlando Furioso, book xvi.

RIDGE, n. } A. S. *hric, hricg, hryge*; D. *rugge*;
RIDGE, v. } Ger. *ruck*; Sw. *rygg*; from A. S.
RIDGY. } *hræc-an*; D. and Ger. *ruck-en*; Sw.

rycka; to reach, to extend; or, as Wachter suggests,
to expand, *ob longitudinem et latitudinem ejus*; per-
haps merely on account of the length; reaching from
the neck to the break or breech of the legs. Ridge is
usually applied to

An extended line, raised from or standing above the
adjoining surface; as the ridge of a mountain, a ridge
of land, the ridge of a roo, the ridge of the nose.

The same ridge of the hyll, which went from the further side of
the marris almost to the camp of hys enemyes, was parted from
theyr sayd camp wyth a mean valley.

Arthur Goldyng. Cæsar. Commentaries, book viii. fol. 249.

As the ploughman first setteth forth his plough, and then tilleth
his land, and breaketh it in furrowes, and sometimes *ridgeth* it up

Latimer. Sermon 4. fol. 17.

So loud the echoes cry'd, that they were heard to shriek
To Furnesse ridged front.

Drayton. Poly-olbion, song 27.

Sometimes
(In quite oppos'de Capriccios) he climes
The hardest rocks, and highest: euery way
Running their ridges.

Chapman. Homer. To Pan.

It draweth downe by urine the corrupt bloud in the reins and
loins, lying cluttered about the ridge-bone.

Holland. Plinie, book xxii. ch. xxi.

The winds were hush'd, the billows scarcely curl'd,
And a dead silence still'd the watery world;
When lifted on a ridgy wave he 'spies
The land at distance, and with sharpen'd eyes.

Pope. Homer. Odyssey, book v.

Rocks rich in gems, and mountains big with mines,
That on the high equator ridgy rise,
Whence many a bursting stream auriferous plays.

Thomson. Summer, p. 426.

The line that forms a ridge of the nose is beautiful when it is
straight.

Reynolds. The Idler, No. 82.

RIDGEL, } "A rig, rigel, rigil, or rigsie, is a
RIDGELING. } male (horse or other animal) who has
escaped with a partial castration, because some portion
of his testicle was covered, and so hidden from the
operator's view." Tooke, vol. ii. p. 225.

PEN. A pox of yonder old rigel,

The captain, the old captain.

Beaumont and Fletcher. Woman Pleas'd, act ii. sc. 6.

O Tityrus, tend my herd, and see them fed;
To morning pastures, evening waters led;
And 'ware the Libyan ridgel's butting head.

Dryden. Virgil. Pastoral 9.

RIDE.

RIDGE.

RIDGEL.
—
RIDI-
CULE.

O Tityrus, tend them well, and see them fed
In pastures fresh, and to their watering led;
And 'ware the *ridgling* with his budding head.
Dryden. Theocritus. Idyl. 3.

RIDICULE, *n.* } Fr. adj. *ridicule*; It. *ridicolo*;
RIDICULE, *v.* } Sp. *ridiculo*; Lat. *ridiculus*,
RIDICULER, } (from *rid-ere*, to laugh, see
RIDICULIZE, *f.* } DERIDE,) causing or deserving
RIDICULOUS, } laughter.
RIDICULOUSLY, } That which causes or excites
RIDICULOUSNESS. } to laughter; which deserves
laughter; which excites or exposes to mockery, jeering,
or raillery.

So was the comming and assaulting of their enemies to the people
and common souldiers but a trifle, to the king but a *ridicule*.
Fox. Actes, &c. fol. 132.

This ceremoniall order and exposition of theirs, as it is of their
owne fond inuention, without any ground or example of the scrip-
tures of God, so minde I to leaue it still vnto themselves, with
other their apish toies and *ridicules*, as thinges worthy to be laught
at.
Id. Ib. fol. 747. Henry VIII.

A subtile enemye was it (sayth Giraldus) that prouided hym so
ridiculouse and obprobriouse a falle.
Bale. English Volaries, part ii. fol. 137.

Speciallie if he had seene those great rabbines the doctors laden
with so manie badges or cognisances of wisdom, so foolishlie
and *ridiculouse* seeking holes and corners to hide themselves in.
Fox. Actes, &c. fol. 1102. Henry VIII.

My heart still trembling, lest the false alarmes
That words oft strike vp, should *ridiculize* me.
Chapman. Homer. Odyssey, book xxiii. p. 356.

Forthwith a hideous gabble rises loud
Among the builders; each to other calls
Not understood, till hoarse, and all in rage,
As mockt they storm; great laughter was in heav'n
And looking down, to see the hubbub strange
And hear the din; thus was the building left
Ridiculous, and the work Confusion nam'd.
Milton. Paradise Lost, book xii. v. 56.

According to that hypothesis it would follow, that every the
smallest and most contemptible animal, that could see the sun, had
a higher degree of entity and perfection in it than the sun itself;
a thing *ridiculously* absurd.

Cudworth. Intellectual System, book i. ch. v. p. 856.

If every religionist would look upon extraneous religions with
the same venerable candour and awfull sobriety that he does upon
his own, he might rather finde them worthy to be pitied for their
falseness then laughed at for their *ridiculousness*.

More. Appendix against Atheism, ch. ix. p. 168.

Truth, 'tis suppos'd, may bear all lights; and one of those prin-
cipal lights or natural mediums by which things are to be view'd,
in order to a thorow recognition, is *ridicule* itself, or that manner of
proof by which we discern whatever is liable to just raillery in
any subject
Shaftesbury. On Wit and Humour, sec. 1.

They endeavour to *ridicule* and banter all humane as well as
divine accomplishments; all virtue and government of a man's
self, all learning and knowledge, all wisdom and honour, and every
thing for which a man can justly be commended or be esteemed
more excellent than a beast.

Clarke. The Evidences of Natural and Revealed Religion, p. 165.

They are generally *ridiculers* of all that is truly excellent.
Id. Ib.

But the conclusion of that parable doth sufficiently shew the
vanity and *ridiculousness* of this trusting in our riches; for a mes-
sage comes to him from God, Thou fool, this night, &c.
Sharp. Works, vol. i. p. 92. Sermon 4.

I've known the young, who *ridicul'd* his rage,

Love's humblest vassals when oppress'd with age.
Grainger. Tibullus, book i. Elegy 5.

Ridicule having, from the hands of a skilful disputant, the same
effect in barbarous minds with the new invented darts of Marius,
which, though so weak as to break in the throw, and pierce no
farther than the surface, yet sticking there, they more intangle
and incommode the combatant than those arms which fly stronger
and strike deeper.

Warburton. Works, vol. i. p. 148. Dedication to the Freethinkers.

Kircher, bewildered as he was, had yet some ground for his
rambles. He fairly followed antiquity; unluckily indeed for him,
it was proved the *ignis fatuus* of antiquity, so he was *ridiculously*
misled.

Warburton. Works, vol. iv. p. 211. The Divine Legation, book iv. sec. 4.

RIDING, *i. e. trithing, q. v.* See the Quotation.

Where a county is divided into *three* of these intermediate juris-
dictions, they are called *trithings*. These *trithings* still subsist in
the large county of York, where by an easy corruption they are de-
nominated *ridings*; the north, the east, and the west *riding*.

Blackstone. Commentaries, vol. i. p. 117. Introduction, sec. 4.

RIDO'TTO, *n.* } It. *ridotto*; past participle, re-
RIDO'TTO, *v.* } duced, (*reductum*), withdrawn, re-
tured; and hence, the noun; a place of retirement, a
retreat. Florio calls it

"A home, a lodging, a withdrawing place; other
place where good companie do meet;" it is also the
company or assembly.

There the sweet graces kept their court,
The nymphs, the fauns, and dryads play'd,
Thither the muses would resort,
Apollo lov'd the sylvan shade,
The gods and heroes own'd a passion
For wives and daughters of the swains,
And heroines, whilst 'twas the fashion,
Ridotto'd on the rural plains.

Cooper. The Retreat of Aristippus.

How then must four long months be worn away? Four months,
in which there will be no routs, no shows, no *ridottos*; in which
visits must be regulated by the weather, and assemblies will de-
pend upon the moon!

The Rambler, No. 124.

RIFE, *adj.* } D. *ryf*; Sw. *rij*; A. S. *rif*; lar-
RIFELY, } *gus, copiosus, abundans, frequens*;
RIFENESS. } large. copious, abundant, frequent; it
may be from the A. S. *rip-an*, to reap; the harvest,
crop, or produce *reaped*, and hence, consequentially,
Copious, abundant, plentiful; frequent, prevalent,
predominant.

þe Saxones in heore power þo heo were so *riue*,
Sene kynges heo maden in Engelonde, and seþen bute fyue.
R. Gloucester, p. 4.

To Richere þat was erle, men told it fulle *rif*.
R. Brunne, p. 68.

Philyp of Macedony the kyng
Two sonnes had by his wife,
Whose fame yet in Grece is *rife*.
Gower. Conf. Am. book ii.

These astronomers thinke, where Mars doth raigne,
That all debate and discorde must be *rife*.
Gascoigne. The Fruites of Warre.

That even the hate of synnes; that groo
Within thy wicked walls so *ryfe*,
For to breake forthe, did conuert soo
That terror colde it not represe.
Surrey. Against London.

Happy! who can abstaine, when rancor *rife*
Kindles revenge, and threats his rusty knife.
Spenser. Faerie Queene, book ii. can. 5.

Witness the world, wherein is nothing *rifer*,
Than miseries unken'd before they come.
Daniel. The Complaint of Rosamond.

But ah! unwise and witlesse Colin Cloute,
That kydst the hidden kindes of many a weede,
Yet kydst not ene to cure thy sore heart-roote,
Whose ranckling wound as yet does *rifely* bleede.
Spenser. Shepherd's Calendar. December.

The *rifeness* of their familiar excommunications may have
taught them to seek for a spotlesnesse above; and if their furious
censures had left but one man in their church, yet that one man
would have need to excommunicate the greater halfe of himselfe,
the old man in his owne bosome.

Hall. Works, vol. ii. p. 368. The Beauty, &c. of the Church.

RIDI-
CULE.
—
RIFE.

RIFE. It is heedlessness that makes this sin [swearing and cursing] so very rife. *Sharp. Works*, vol. iv. p. 316. *Sermon 18.*

RIFT. I have not time nor words to lament the visible decay of religion and piety owing to those heats and animosities so rife amongst us: the whole nation feels it, and every good man mourns in secret for it. *Waterland. Works*, vol. ix. p. 19. *Sermon 1.*

RIFF-RAFF, from A. S. *ef-an, reaf-ian*, to rive or tear away.

A torn, tattered, ragged set (of persons or things.)

Ne costom no seruise of þing þat he forgaþ
þat noither he no hise suld chalange *rif no raf.*

R. Brunne, p. 111.

Kyng Richard it wan & tille his sister it gaf
þe Sarazins ilk man he slouh alle *rif & raf.*

Id. p. 151.

In necessity they eat a thousand *rifraffes*, even to the swallowing down of coales, and putting sand into the pottage that they make with this meal.

Hakluyt. Voyages, &c. vol. iii. p. 306. *The Description of Florida.*

Long it were to make rehersall of all this *rifraffe*, and almost infinite. *Fox. Actes, &c.* fol. 536. *Henry V.*

There's legions now of beggars on the earth
That their original did spring from kings;
And many monarchs now, whose fathers were
The *riff-raff* of their age.

Anonymous. Lord Cromwell, act i. sc. 1.

RI'FLE, v. } Fr. *rifler*, D. *rüffelen*, to reave or
RI'FLE, n. } bereave.

RI'FLER, } To reave, to ransack, to spoil, to pil-
RI'FLING, n. } lage, to rob, to plunder; to seize or take
away.

Ich aros and *rifled* here males.

Piers Plouhman. Vision, p. 99.

And thus the sooth for to telle,
He *rifeleth* both boke and belle.

Gower. Conf. Am. book v.

The whiche company when they were landyd i Fraunce, and harde that y^e Frēshe lordis were i treatye of a peace, and no man to them gaue wagys as they tofore were promysed, fell vpō a towne callyd (Bellin), and it *ryffled*.

Fabyan. Chronicle, fol. 563.

Murders commonly they did none, except it were by the prouocation of such as resisted them in their *rifelynges* and spoyles.

Grafton. Richard I. The second Yere.

Parting both with cloak and coat, if any please to be the *rifler*.
Milton. Doctrine and Discipline of Divorce.

From purple violets and the teile they bring
Their gather'd sweets, and *rifle* all the spring.

Addison. Virgil. Georgic 4.

On the grave of Augusta these garlands be plac'd,

We'll *rifle* the spring of its earliest bloom,
And there shall the cowslip and primrose be cast,
And the new-blossom'd thorn shall whiten her tomb.

Goldsmith. Threnodia Augustalis.

On the 17th of January (1781) the Americans were discovered posted at a place called Cowpens, near an open wood, and drawn up in two lines; the first of which consisted of militia only, the second of continental infantry and Virginia *riflemen*.

Belsham. History of Great Britain.

RIFT, n. } *Rived, riv'd, rift*, past participle of the
RIFT, v. } verb to rive; A. S. *ref-an, reafian*, to
reave or rive; tear away or asunder.

A tear, rent, or breach; a breach, a disruption, a fissure, or cleft.

Then shalt thou goe the dore before,
If thou mayest finde any shore,
Or hole, or *reft*, whatever it were.

Chaucer. The Romant of the Rose.

Thy water to keep the wiseman doth teach,
That thou in no wise let it haue issue
At a narrow *rifte*.

Id. The Remedy of Loue.

Hem nedeth not a *riffe* to stake,
Till thei Pentapolim haue take.

Gower. Conf. Am. book viii.

When lucky gale of winde
All thy puft sailes shall fill, looke well about,
Take in a *rift*.

Surrey. Praise of Meane and Constant Estate.

With groundd axe cutte him in twaine,
And *rifed* him throughtoute.

Drant. Horace, book i. p. 138. *Satire 1.*

And, thinking of those braunches greene to frame
A girlond for her dainty forehead fit,
He pluckt a bough; out of whose *rifte* there came
Smal drops of gory blood, that trickled down the same.

Spenser. Faerie Queene, book i. can. 2.

Then Il'd shrieke, that euen your eares
Should *rift* to heare me.

Shakspeare. The Winter's Tale, fol. 299.

She did confine thee,
By help of her more potent ministers,
(In her unmitigable rage) into a cloven pine,
Within whose *rift* imprison'd, thou didst painfully
Remain a dozen years. *Dryden. The Tempest*, act i.

Scarce a sickly straggling flower
Decks the rough castle's *rifed* tower.

Warton. Ode 10.

Yet frequent now, at midnight's solemn hour,
The *rifed* mounds their yawning cells unfold,
And forth the monarchs stalk with sovereign power,
In pageant robes, and wreath'd with sheeny gold,
And on their twilight tombs aerial council hold.

Collins. On the Superstitions of Scotland

RIG, i. e. ridge, q. v.; "A. S. *rig*, dorsum, a back of a man or beast; also a ridge."

Rig-ban, the back-bone. *Somner.*

There þe poure presseþ by fore. whit a pak at hus *rygge*.
Piers Plouhman. Vision, p. 263.

The shrieve tho unfetterid
Him righte sone anon,
And sentin aftir a gode leche
To hele his *riggē* bon.

Chaucer. The Cokes Tale of Gamelyn

For when he was arrayde then gan he firste be wrothe
For his womb lokid out and his *rigg* both.

Id. The Marchantes Second Tale.

A litil above the girdil
The *riggin* bone to brast.

Id. The Cokes Tale of Gamelyn.

RIG, v. } A. S. *wrigg-an*, to cover.
RI'GGING, n. } To cover, to clothe, to dress.

Where the Troyans fast
Fell to their worke, from the shore vnstock
High *rigged* ships.

Surrey. Virgil. Æneis, book iv.

So at last they concluded to go to Rochell as they dyd, and there to take the se; there they *rygged* an xviii. vessels.

Lord Berners. Froissart. Cronycle, vol. ii. ch. xlvi. fol. 158.

And after they had restyd theym ii. dayes, and preparyd for the *ryggynge* of their ordenaunce, they assaulted the cytie xiiii. dayes continually.

Fabyan. Chronicle, p. 408.

The body of your strength, your noble heart
From ever yielding to dishonest ends,
Rig'd round about with vertue, that no breaches,
No subtil minds may meet ye.

Beaumont and Fletcher. Monsieur Thomas, act ii. sc. 1

I should offer wrong
To her mind's fortitude, should I but ask
How she can brook the rough high-going sea,
Over whose foamy back our ship, well *rigg'd*
With hope and strong assurance, must transport us.

Massinger. The Renegado, act v. sc. 3.

With stays and cordage last he *rigg'd* the ship,
And, roll'd on levers, lanch'd her in the deep.

Pope. Homer. Odyssey, book v.

RIFT.

RIG.

RIG.
RIGHT.

That done, bears up to th' prize, and views each limb,
To know her by her *rigging* and her trimm.
Dryden. Prologue to the Conquest of Granada, part ii.

RIG, } Perhaps as *rogue* is one who has co-
RIGGISH. } vered, cloaked, or concealed purposes, of
thievery or deceit, so *rig* is one who has cloaked or dis-
guised purposes of wantonness; hence, *rig*,
A wanton; and *riggish*, wanton, lewd.
A *rig*, (Cowper,) a gamesome, a knave's trick.

GAM. Nay, fy on thee, thou rampe, thou *ryg*, with al that take
thy part.

Anonymous. Gammer Gurton's Needle, act iii. sc. 3.

For vildest things
Become themselves in her, that the holy priests
Blesse her, when she is *riggish*.

Shakspeare. Antony and Cleopatra, fol. 347.

The wanton gesticulations of a virgin in a wild assembly of gal-
lants warmed with wine, could be no other than *riggish*, and un-
maidenly.

*Hall. Works, vol. ii. p. 118. Contemplations. John Baptist be-
headed.*

Away went Gilpin, neck or nought;
Away went hat and wig;
He little dreamt, when he set out,
Of running such a *rig*.

Cowper. John Gilpin.

RIGHT, *adv.*

RIGHT, *n.*

RIGHT, *v.*

RIGHTEN,

RIGHTWISE,

RIGHTEOUS,

RIGHTWISELY,

RIGHTEOUSLY,

RIGHTWISENESS,

RIGHTEOUSNESS,

RIGHTFUL,

RIGHTFULLY,

RIGHTFULNESS,

RIGHTLY,

RIGHTNESS.

Lat. *rect-us*; It. *ritto*; D.
and Ger. *recht*; Sw. *rätt*; A. S.
riht; Goth. *raiht*, *garaiht*; in
Sp. *derecho*; Fr. *droit*.

Right, adj. ruled, ordered,
commanded, just; agreeable or
conformable, suitable or adapted,
becoming or convenient, fit, pro-
per, or consistent; *sc.* to or ac-
cording to the will, purpose, or
design of the *rector* or *ruler*; of
the *rule* or order; with the good or
well-being intended or designed.
See Quotation from Hooker.

Right, n. that which is ruled, or-
dered, commanded, just; justice.

Righteous, (eous corrupted from wise, wis, wus) A. S.
right-wis; *rightly*, wise; just, pious. Lye.

Right implies a *rector* or *ruler*; over man as a cre-
ated being; God or the laws of God, his creator;—over
man as a member of a particular state or society; the
law of the land or of the society, according or consist-
ent with those of God.

Right, also, always implies a correlative *duty*; if
there be no such *duty*, the *right* or *rule* is a mere un-
authorized order or command. See JUST, and LAW.

Com Edward, Eilred sonne, out of Normundie,
& Hardeknoute's broþer on his moder side,

Right heyre of þe lond, þorgh grace þat may betide.

R. Brunne, p. 56.

þise were mayntenours, to sustene þe coroun
& *rightfulle* gouernours þe folk in feld & toun.

Id. p. 146.

Rygt so quap þe raton.

Piers Ploughman. Vision, p. 9.

So hit fareþ quap þe frere. by *ryghtful* mannes fallýnge.

Id. lb. p. 168.

For *richtfulliche* reson. sholde ruele gow alle.

Id. lb. p. 15.

þer *ryghtfulnesse* rewarde þe *ryght* as men deserveþ.

Id. lb. p. 76.

Ich may do mercy of my *ryghtwisnesse*.

Id. lb. p. 362.

The Lord seide to my Lord, sitte thou on my *right* half til that
I put thin enemyes a stool of thi feet. RIGHT.

Wiclif. Luk, ch. xx.

The Lorde sayde vnto my Lorde, syt thou on my *right* hande,
tyll I make thyne enemyes thy fute stole.

Bible, Anno 1551.

And this is antichrist of whom ye herden, that he cometh, and
rigt now he is in the world.

Wiclif. 1 Jon, ch. liii.

& be ghe fastned in the will of Crist, and whiche been hool and
sooth and chast and *rightwys*.

Id. Landicensis.

And I seye to you that but for your *rightwisnesse* be more plen-
tuous thanne of scribis and farisees, ye schul not entre in to the
kyngdom of hevenes.

Id. Matthew, ch. v.

For I saye vnto you, excepte your *ryghteousnes* excede the *ryght-
eousnes* of the scribes and pharyses, ye can not entre into the king-
dō of heaue.

Bible, Anno 1551.

But go ye and lerneth what it is: I wole mersy and not sacri-
fice, for I cam not to clepe *rightfull* men, but synful men.

Wiclif. Matthew, ch. ix.

Goo and learne what y^t meaneth: I haue pleasure in mercye,
and not in offerige. For I am not come to cal the *righteous*, but
the synners to repentaunce.

Bible, Anno 1551.

But Petir and Ioon answeriden and seiden to hem, if it be *right-
ful* in the sight of God to heere ghou rather than God, deme ghe.

Wiclif. The Dedis of Apostis, ch. iv.

But Peter and John answered vnto them and sayde: whether it
be *right* in the syght of God, to obeye you moare than God, iudge
ye.

Bible, Anno 1551.

But Ihesus answerid and seide to him suffer now, for thus it
fallith to us to fulfille al *rightfulnesse*: thanne Ion suffride him.

Wiclif. Matthew, ch. iii.

Jesus answered and sayde to him: Let it be so nowe. For thus
it becōmeth vs to fulfil all *righteousnes*.

Bible, Anno 1551.

And a moughte schal deuoure hem so as wolle, but myn helthe
schal be withoute ende, and *rightfulnesse* into generacions of ge-
neracions.

Wiclif. Advent, p. 155.

And anon hise eeris weren opened and the bond of his tunge
was unbounden and he spak *rightly*.

Id. Mark, ch. vii.

For slain is man *right* as another beest,
And dwelleth eke in prison, and arrest,
And hath siknesse, and gret adversite,
And oftentimes gilteles, parde.

Chaucer. The Knightes Tale, v. 1311.

But let the justice beware that he do it (*i. e.* dampneth him that
is culpable to the deth) *rightfully*, and that he do it not for delit
to spill blood, but for keping *rightwisnesse*.

Id. The Persones Tale.

I hold and beleve, that God, which that is ful of justice and of
rightwisnesse, hath suffered this betide, by just cause resonable.

Id. The Tale of Melibeus.

Nor in no wise ne foule not the trace
Of her that here is named *rightwisely*,
Which by reason me seemeth in this case,
May be called, La belle Dame sans Mercy.

Id. La belle Dame sans Mercie.

But nathelesse I trow that she
Was faire sometime, and fresh to se,
When she was in her *rightfull* age.

Id. The Romant of the Rose.

And if there were of my degree
In all this place suche a knight,
That wold seyne, it was no *right*,
I wold it with my body proue;
And thervpon he cast his gloue.

Gower. Conf. Am. book iii.

Yeue and departe thyn almesse,
Do mercy forth with *rightwisenes*.

Id. lb. book i.

In a cronike I rede thus
Of the *rightfull* Lycurgus,
Whiche of Athenes prince was.

Id. lb. book vii.

RIGHT. The pope contrarie vnto all conscience and agaynst all the doctrine of Christ, which sayth my kyngdome is not of this world, (John xviii.) hath vsurped the *right* of the emperour.
Tyndall. Workes, p. 114. *The Obedience of a Christian Man.*

Such verilie, if any be, cannot *rightwiselie* claim to be Peter's successors, no more then the night may claime to be successour of the day.
Fox. Actes, &c. fol. 1023. *Henry VIII.*

Considering Alexander *rightously*, wee must impute all his vertues to his owne nature, and hys vyces eyther to hys youth, or to the greatnes of hys fortune.

Brende. Quintus Curtius, book x. fol. 302.

Euen for that he willett the godly to aknowledge their synnes and so to take from them the cōfidence in their own *rightwisenes*.
Joye. Exposition of Daniel, ch i. fol. 18.

A virtuous man without any respect, whether the grief be less or more, is never to do that which he cannot assure himself is allowable before the everliving *rightfulness*.
Sidney. Works, vol. ii. book iv. p. 759. *Arcadia.*

They that are vnder Moses' lawe bee *ryghtfully* called bond-servantes, because thei depend vpon diuerse rules prescribed vnto them, and rather for feare then for loue dooe the thing that is appointed them.
Udall. St. John, ch. xv. fol. 493.

AMINT. You that can know to wrong, should know how Men must *right* themselves.

Beaumont and Fletcher. The Maid's Tragedy, act iii.

Get you to your rest,
You shall be *righted*. *Id. Philaster*, act ii. sc. 1.

And God, not we, hath plagu'd thy bloody deed.

Qu. So iust is God, to *right* the innocent.
Shakspeare. Richard III. fol. 178.

Th' other againe
Is my kinsman, whom the king hath wrong'd,
Whom conscience and my kindred bids to *right*.
Id. Richard II. fol. 31.

Goodnesse in actions is like vnto *straitnesse*; wherefore that which is done well we terme *right*, for as the straight way is most acceptable to him that trauaileth, because by it he commeth soonest to his journeyes end: so in action, that which doth lye the euenest between us and the end wee desire, must needes bee the fittest for our use.

Hooker. Ecclesiasticall Politie, book i. sec. 8.

Although there be, according to the opinion of some verie great and iudicious men, a kinde of naturall *right* in the noble, wise, and vertuous, to gouerne them which are of seruile disposition; neuertheless for manifestation of this their *right*, and men's more peaceable contentment on both sides, the assent of them who are to bee gouerned seemeth necessary.
Id. Ib. sec. 10.

So as they had deviz'd, sir Artegall
Him clad in th' armour of a Pagan knight,
And taking with him, as his vanquisht thrall,
That damzell, led her to the Souldan's *right*.

Spenser. Faerie Queene, book v. can. 8.

Learn to do well, seek judgement, relieve (or *righten*) the oppressed, judge the fatherlesse, plead for the widow.

Isaiah, ch. ii. ver. 17.

He that was pious and just was reckoned a *righteous* man. Godlinesse and integrity was call'd and counted *righteousnesse*. And in their old Saxon English, *righteous* was *right-wise*, and *righteousnesse* was originally *right-wisenesse*. 'Tis the fear of God that is the beginning of wisdom; and all that seek it have a good understanding.
Feltham. Resolve 48.

Or hast thou, Lord, of good men's cause no heed?
Or doth thy iustice sleepe and silent lye?
What booteth then the good and *righteous* deed,
If goodnesse find no grace, nor *righteousness* no meed?

Spenser. Faerie Queene, book iii. can. 11.

The difference of the which operations from the roote whereof they spring, maketh it needful to put two kinds likewise of sanctifying *righteousnesse*, habituall and actuall. Habitual, that holinesse wherewith our soules are inwardly indued, the same instant, when first wee beginne to be the temples of the Holy Ghost. Actuall, that holinesse which afterwards beautifieth all the parts and actions of our life; the holinesse for the which Enoch, Job, Zacharie, Elizabeth, and other saints, are in the scriptures so highly commended.
Hooker. Of Justification, &c. sec. 2.

Nor was without example in those days;
Wherein (as in all ages) states do take
The side of public peace, to counterpaize
The weight of wrong, which time may *rightful* make.
Daniel. History of Civil Wars, book vii.

Vouchsafe ye then, whom onely it concernes,
To me those secret causes to display;
For none but you, or who of you it learnes,
Can *rightfully* aread so dolefull lay.

Spenser. The Teares of the Muses.

And blaze her fair bright beauty unto man,
As if she were enamour'd of his ways;
And knew not weakness, nor could *rightly* scan
To what defects his hum'rous breath obeys?

Daniel. Musophilus.

We either make a *right* judgement of our duty, or we make a wrong one. In the former case, we call our judgement a *right* conscience, in the latter we call it an erroneous conscience.

Sharp. Works, vol. ii. p. 191. *A Discourse of Conscience.*

This is the *righteousness* that I aspire after, that I may know Christ, not only by a notional belief of his doctrines, or profession of his religion, but by a spiritual experimental knowledge of him, such a knowledge that transforms me into his spirit and temper; and that I may know the power of his resurrection, i. e. that I may experience in myself all the good effects that his resurrection has a power to work in me; that I may feel the virtue and efficacy of it, in my daily dying to sin, and rising again to a new, holy, and heavenly life.
Id. Ib. vol. i. p. 299. *Sermon 12.*

The apostle's reasoning, so far, will run thus:—"Who being essentially God, as Son of God, knew that he was *rightfully* and naturally equal with God, and could not be said to usurp or arrogate respect to what was his own."

Waterland. Works, vol. ii. p. 97. *Equality of Christ with the Father.*

Copernicus, who *rightly* did condemn
This eldest system, form'd a wiser scheme;
In which he leaves the sun at rest, and rolls
The orb terrestrial on its proper poles.

Blackmore. Creation, book ii.

So that it necessarily comes to pass, that what promotes the publick happiness, or happiness upon the whole, is agreeable to the fitness of things, to nature, to reason, and to truth; and such (as will appear by and by) is the divine character, that what promotes the general happiness is required by the will of God; and what has all the above properties must needes be *right*; for *right* means no more than conformity to the rule we go by, whatever that rule be.
Paley. Moral Philosophy, book ii. ch. i.

When a man asks his *right*, he asks only that which it is ordered he shall have. A *right* conduct is, that which is ordered. A *right* reckoning is, that which is ordered. A *right* line is, that which is ordered or directed, (not a random extension) but the shortest between two points. The *right* road is, that ordered or directed to be pursued (for the object you have in view.) To do *right* is, to do that which is ordered to be done. To be in the *right* is, to be in such situation or circumstances as are ordered. To have *right* or law on one's side is, to have in one's favour that which is ordered or laid down. A *right* and just action is, such a one as is ordered and commanded.
Tooke, vol. ii. p. 9.

Mansions once
Knew their own masters; and laborious hinds,
Who had surviv'd the father, serv'd the son.
Now the legitimate and *rightful* lord
Is but a transient guest, newly arriv'd,
As soon to be supplanted.

Cowper. The Task, book iii.

RIGID,
RIGIDLY,
RIGIDNESS,
RIGOUR,
RIGOROUS,
RIGOROUSLY,
RIGOROUSNESS.

austere.

Fr. *rigide*, *rigueur*; It. *rigido*,
rigore; Sp. *rigido*, *rigor*; Lat. *rigidus*, *rigor*, from Lat. *rigere*; Gr. *ρίγ-ειν*, to stiffen or be stiff (with cold.)

Stiff, unbending, or inflexible;
and, consequently, severe, harsh,

The stormes are past, these cloudes are overblowne,
And humble chere great *rigour* hath repress.

Surrey. Bonum est &c.

RIGHT.

RIGID.

RIGID. Who would think that an assembly which a little before had spoken vnto their prince with such fiercenes and *rigour*, could haue beene so sodeinly appaled for feare.

Brende. Quintus Curtius, book x. fol. 295.

For whan I come there, I shall fynde and se daylye before me sir Olyuer of Clyssone, whom I can nat loue nor neuer dyde. nor he me (who shall attempte me with *rygorous* wordes.)

Lord Berners. Froissart. Cronycle, ch. 130. fol. 369.

I am derided, suspected, accused, and condemned, yea, more than that, I am *rigorouslie* reiected when I proffer amendes for my harme.

Gascoigne. The Steele Glas.

But the *rigorousnes* of the tempest was such, and the force of the yce so great, that they burst and spoyled the foresaid prouision.

Hakluyt. Voyages, &c. vol. iii. p. 41. M. Frobisher.

In which prison there were some which would not eate fleshe, nor drinke wine. Now the same Attalus was taught of God, that he should admonish those prisoners of their *rigorousnesse*, which Attalus did.

Latimer. Sermons, fol. 263.

Though you sometimes proclaime me too severe,
Rigid, and harsh, which is a drug austere,
In friendship, I confesse; but, deare friend, heare.

Ben Jonson. Epistle to a Friend.

————— To have seen you only
And to have touch'd that fortune-making hand,
Will with delight weigh down all tortures that
A flinty hangman's rage could execute,
Or *rigid* tyranny command with pleasure.

Massinger. The Renegado, act ii. sc. 4.

Which severe observation of nature by the one in her commonest, and by the other in her absolutest forms, must needs produce in both a kind of *rigidity*, and consequently more naturalness than gracefulness.

Reliquiæ Wottonianæ, p. 56.

————— Therewith upon his crest
With *rigor* so outrageous he smitt,
That a large share it hew'd out of the rest,
And glauncing downe his shield from blame him fairly blest.

Spenser. Faerie Queene, book i. can. 2.

Their steeds doe stagger, and amazed stand;
And eke themselves, too rudely *rigorous*,
Astonied with the stroke of their owne hand,
Doe backe rebutte, and each to other yealdeth land.

Id. Ib.

And rather for your owne causes beyng our christened subiectes, we would ye were perswaded then vanquished, taught then ouer-thrown, quietly pacified then *rigorously* persecuted.

Grafton. Edward VI. The third Yere.

Wide-stretching from the Hall, in whose kind haunt
The hospitable genius lingers still,
To where the broken landscape, by degrees,
Ascending, roughens into *rigid* hills.

Thomson. Spring.

In case of lighter injuries, the law of mercy requires us wholly to remit and forgive them; and not *rigidly* to exact the hurt of the offender for such trifling offences, as do no great hurt either to our selves or others.

Scott. Christian Life, part iii. ch. ii. p. 627.

Be not too *rigidly* censorious,
A string may jar in the best master's hand,
And the most skilful archer miss his aim.

Roscommon. Horace. Art of Poetry.

Plotinus *rigidly* and superstitiously adheres to Plato's text here.

Cudworth. Intellectual System, book i. ch. iv. p. 585.

If I am in the right, and my brother in the wrong, to be sure it is my happiness, and, perhaps, 'tis only his misery; and what an unmerciful part it is for me to damn or censure, or *rigorously* treat him, merely because it is his lot to be miserable and mine to be happy!

Scott. Christian Life, part iii. ch. i. p. 515.

The crown of manhood is a winter-joy;
An evergreen, that stands the northern blast,
And blossoms in the *rigour* of our fate.

Young. The Complaint. Night 9.

Capitation taxes are levied at little expense; and, where they are *rigorously* exacted, afford a very sure revenue to the state.

Smith. Wealth of Nations, vol. iii. book v. ch. ii. p. 328.

RIGMAROLE. Whether *rigmarole* and *ragman-rolle* be the same word or not, seems still a matter of doubt. The origin of both remains unaccounted for. See Jamieson, in *v. Ragman Role*.

**RIGMA-
ROLE.**
RIM.

I have troubled Tindall once or twyse here afore, and himsele while he laboured to winde oute, hathe so messhed and entangled himsele therein, that he hath in the hadling of that one matter alone, vtterly destroyed the foundation of all the heresies that they haue in all theyr whole *raggemans rolle*.

Sir Thomas More. Workes, fol. 653. Against Tindall.

For by Jupiter and his high majesty,
I dyd what I coulde to scarpe out the scrolles,
Apollo to rase out of her *ragman rolles*.

Skelton. The Crowne of Laurell.

Also the king (then being within age) granted to release the Scottes of all their homage and fealtie which vnto the realme of England by their charter ensealed they were bound; as also their indenture which was called the *ragman role*, wherein was specified the foresaid homage and fealtie to the king and crowne of England, by the said king of Scots, nobles, and prelates, to be made, hauing all their seales annexed to the same.

Fox. Actes, &c. fol. 345. Edward III.

RIGOL, a circle, say the Commentators; and Mr. Malone produces a passage from Nash's *Lenten Stuff*, in which the word is written "*ringol*," with the addition, or "*ringed circle*."

This sleepe is sounde indeede; this is a sleepe,
That from this golden *rigoll* hath diuorc'd
So many English kings.

Shakspeare. Henry IV. fol. 94.

About the mourning and congeal'd face
Of that black blood, a watery *rigol* goes.

Id. Rape of Lucrece.

RILL, n. } See *ante*, **RAIL**. Skinner from the
RILL, v. } Lat. *rivulus*. Lye from the D. *rivole*.
RILLLET. } *Rivulus*,

A small spring or brook, a small, gentle stream.

Whence climbing to the cliffs herself she firmly sets
The bourns, the brooks, the becks, the *rills*, the rivulets,
Exactly to derive. *Drayton. Poly-olbion, song 1.*

But whilst th' industrious muse thus labours to relate
Those *rilllets* that attend proud Tamer and her state.

Id. Ib.

The water which in one poole hath abiding
Is not so sweet as *rilles* ever gliding.

Browne. Britannia's Pastorals, book ii. song 3

Apollo, mighty king! let Envy,
Ill-judging and verbose, from Lethe's lake
Draw tuns unmeasurable; while thy favour
Administers to my ambitious thirst
The wholesome draught from Aganippe's spring
Genuine, and with soft murmurs gently *rilling*
Adown the mountains where thy daughters haunt.

Prior. Callimachus. Hymn 2.

Axius, that swells with all his neighbouring *rills*,
And wide around the floating region fills.

Pope. Homer. Iliad, book ii.

From me the true believer shall receive the living water; not in scanty draughts fetched with toil from this penurious *rill*, but in a well perpetually springing up within him.

Horsley. Sermon 32. vol. iii. p. 41.

RIM, A. S. *rima, ora, margo, labrum*. Sæ-rima, *ora maritima*, the sea-coast or shore: Somner. Skinner says, the inner rim of the belly is the *peritonæum*, q. d. *Margo seu ora ventris (i. e.) intestinorum quæ, instar fasciæ vel institæ, obvolvit*. Tooke calls it the utmost extent in breadth of any thing, from the A. S. *rym-an*, to extend. See **ROOM**.

The extreme part or edge, the border, that which surrounds or envelopes.

RIM.

RIND.

Which ascendyng vp into the head, and touchyng the *ryme*, wherein the brayne is wrapped, causeth head ache, trembling of the members, duskyshnes of the sight, and many other sycknesses.
Sir Thomas Elyot. Castel of Helth, book iii. ch. i. fol. 52.

The lance his target tooke,
Which could not interrupt the blow, that through it cleerly strooke,
And in his bellies *rimme* was sheath'd, beneath his girdle-stead.
Chapman. Homer. Iliad, book v. p. 74.

Pist. Moy shall not serve, I will have forty moyes;
For I will fetch thy *rymme* out at thy throat,
In droppes of crimson blood.

Shakspeare. Henry V. fol. 87.

It is a singular countrepoyson, resisting the venome of serpents, even as the *rim* of the paunch, which is called in Latine *centipellio*.
Holland. Plinie, book xxviii. ch. ix.

Struck through the belly's *rim*, the warrior lies
Supine, and shades eternal veil his eyes.

Pope. Homer. Iliad, book xiv.

RIME, Lat. *rima*, a hole or chink.

Though birds have no epiglottis, yet can they so contract the *rim* or chink of their larinx as to prevent the admission of wet or dry ingested; either wherof getting in occasioneth a cough, until it be ejected.

Sir Thomas Brown. Vulgar Errours, book iv. ch. viii. p. 250.

RIME, } A. S. *hrim*; D. *rüm, rüpe*; Ger. *reif*;
RIMY. } Sw. *rim*.

See the Quotation from Grew.

In a hoar frost, that which we call a *rime* is a multitude of quadrangular prismes exactly figured, but piled without any order, one over another.

Grew. Cosmo. Sacra, book i. ch. iii. sec. 33.

Breathing upon a glass giveth a dew; and in *rime* frosts you shall find drops of dew upon the inside of glass windows.

Bacon. Natural History.

The air is now cold, hot, dry, or moist; and then thin, thick, foggy, *rimy*, or poisonous.

Harvey.

RI'MPLE, v. } The words *rimple* and *ripple* ap-
RI'MPLING, n. } pear to be the same, with the mere
RI'PPLE, n. } omission of *m* in the latter. A. S.
RI'PPLE, v. } *hrympelle*; D. *rompelen*; *rugare*,
RI'PPLING, n. } to wrinkle or form into wrinkles or
small uneven lines. See RUMPLE, CRIMPLE.

To roughen or *ruffle* slightly; to move, to run (applied to water) with an uneven surface.

And yet moreouer worst of all,
There is set to keepe, foule her befall,
A *rimpled* vecke ferre ronne in rage,
Frowning and yellow in her visage,
Which in await lieth day and night,
That none of him may haue a sight.

Chaucer. The Romant of the Rose.

The skin was tense, also *rimpled* and blistered.

Wiseman. Surgery.

Left the Keswick road, and turned to the left through shady lanes along the vale of Eeman, which runs rapidly on near the way, *rippling* over the stones.

Gray. Works, vol. ii. p. 258. Letter to Beattie.

Reached shore through a most turbulent *rippling*, occasioned by the fierce current of the tides between the islands and the coast.

Pennant. Tour in Scotland.

This, together with the indraught of the lagoon, and of the shoals before it, causeth strong *rippings* and whirlpools.

Cook. Voyages, &c. vol. v. book ii. ch. ix. p. 378.

Throughout the lanes she glides at evening's close,
And softly lulls her infant to repose;
Then sits and gazes, but with viewless look,
As gilds the moon the *rimpling* of the brook.

Crabbe. Parish Register, part i.

RIND, n. A. S. *rind, rinde, hrind*; Ger. *rinde*.
Wachter suggests the Ger. *reinen*; A. S. *hrin-an, tan- gere, ut sit quasi margo arboris*, or from *reinen*; *adhæ- rere, quasi aliquid arbori adhærescens*. Junius the Gr.
VOL. XXVII.

pivos. It is more probably from A. S. *wreon, wryon*, to cover, to protect.

The bark, peel, husk, or skin; the outward coat or covering of trees, fruits, &c.

The prince after þe fest sone his leue toke,
With jolif men of gest toward þe North he schoke,
To chace kýng Robýn, where he myght him fynde,
þat slouh þe gode Comýn, destroe him rote & rýnde.

R. Brunne, p. 333.

So bitter teares wept not as I find
The wofull Mirra, through the barke and *rind*.

Chaucer. Troilus and Creseide, book iv.

The *rýndes* of oranges taken in a lyttel quantitie do comfort the stomake, where it disgesteth, specially condite with sugar, and taken fastyng in a smalle quantitie,

Sir Thomas Elyot. Castel of Helth, book ii. fol. 28.

Next within this hard shell (of the cochos nut) is a white *rine* resembling in shewe very much euen as any thing may do to the white of an egge when it is hard boyled.

Hakluyt. Voyages, &c. vol. iii. p. 537. Sir F. Drake.

Him haply slumbering on the Norway foam
The pilot of some small night-founder'd skiff,
Deeming some island, oft, as seamen tell,
With fixed anchor in his scaly *rind*
Moors by his side under the lee.

Milton. Paradise Lost, book i. v. 208.

The savorie pulp they chew, and in the *rinde*
Still as they thirsted scoop the brimming stream.

Id. Ib. book iv. v. 335.

But that God, with whom we have to do, sees through all dawb- ings and fucuses of hypocrisy; and can easily discern a rotten core through the most beautiful *rind* that can be distended over it.

Scott. Christian Life, part iii. ch. iv. p. 685.

As when the stock and grafted twig combin'd
Shoot up the same, and wear a common *rind*.

Addison. Ovid. Metamorphoses, book iv.

RING, v.

RING, n.

RI'NGER,

RI'NGING, n.

A. S. *ring-an, hringan*; D. *ringhen*;
Sw. *ringa; pulsare*, to beat. Lye suggests
from *ring, annulus*, as applied to a me-
tallic instrument of music of that circular
form, and which, when beaten, returned *argutum ac streperum sonum*.

To beat or strike, (a metallic substance,) to produce sound; to sound or cause to sound, as metal when beaten or struck; generally, to sound, to resound; to keep up a constant or repeated sound.

Sholde no *ryngýnge* do me rýse. tyl ich were rýpe to dýne.
Piers Ploukman. Vision, p. 110.

I heard in the next bush beside
A nightingale so lustely sing,
That with her clere voice she made *ring*
Through all the greene woode wide.

Chaucer. Of the Cuckow and the Nightingale.

But I ley something
Is no more to pley then who so shoke a *ryng*
Ther no man is wythyn the *ryngyng* to answere.

The Marchantes Second Tale.

Item. That no minister do counterfeit the popish mass, in kiss- ing the Lord's board, &c., *ringing* of the sacryng bell, or setting any light upon the Lord's board.

Burnet. Records, vol. ii. part ii. book i. p. 287.

Whether it being height infinite, and therefore the sound of so huge a frame, whiles it is whirled about, and never resteth in that revolution, cannot be heard with our eares, I cannot so easily re- solve and pronounce; no more I assure you, than I may vouch the *ringing* of the starres that are driven about therewith, and roll with all their owne spheres.

Holland. Plinie, book i. ch. iii.

And oftentimes great grones, and grievous stownds,
When too huge toile and labour them constraines;
And oftentimes loud strokes and *ringing* sowndes
From under that deepe rock most horribly rebowndes.

Spenser. Faerie Queene, book iii. can. 3.

Like a *ring* without a finger,
Or a bell without a *ringer*.

Beaumont. A Sonnet.

RING.

The touch, I have heard, gives almost as good evidence as the sight, and the *ringing* of a medal is, I know, a very common experiment. Addison. Works, vol. iii. p. 145. Dialogue 3.

The whole seems to amount to a little more than the *ringing* of changes upon the word necessity, as shall be seen presently. Waterland. Works, vol. iv. ch. ii. p. 429. The Existence of a First Cause.

RING, v. } A. S. *hrincg*; D. *ringh*, *rinck*; Ger. RING, n. } *ring*; Sw. *ring*. Skinner knows not RINGLET. } whether from the Ger. *lencken*, *contorque*; it is more probably from the A. S. *wring-an*, to *wring*, to wreath. Wachter says, a *ring*, *proprie est omne id, quod per declinationem lineæ rectæ in se redit*.

A round or circular line or course; any thing forming a round, circle, or orbit.

A body of persons, formed into a *ring* or circle, the better to hear their leader or other person presiding or addressing them; and hence, *ringleader*, leader of a number of persons assembled or associated for a common purpose.

Edward did smyte round peny, halfpeny, ferthyng,
þe croice passed þe bounde of alle þorghout þe rýng.
R. Brunne, p. 238.

On alle hure fyve fynngres. rycheliche *ýrýnged*
And þer on rede rubies. and oþr riche stones.
Piers Plouhman. Vision, p. 24.

The vertue of this *ring*, if ye wol here,
Is this, that if hire list it for to were
Upon hire thombe, or in hire purse it bere,
Ther is no foule that fleeth under heven,
That she ne shal wel understand his steven,
And know his mening openly and plaine.
Chaucer. The Squires Tale, v. 10461.

Judge infernall, Minos, of Crete king,
Now commeth thy lot, thou commest on the *ring*.
Id. Legend of Ariadne, v. 2.

The vi. day whē his speche was gon, he tooke a *ringe* of his
finger, and deliuered it to Perdicas.

Arthur Goldyng. Justine, book xii. fol. 66.

He caused it to be proclaymed that they shoulde forsake theyr
baggage, and cast themselues in a *ring*.

Id. Cesar. Commentaries, book v. fol. 129.

In the number of whome may rightly be accompted, and no
lesse recommended to the studious Christen reader, these three
learned fathers of blessed memory, whom the printer of this booke
hath diligently collected, and in one volume togethir, inclosed the
workes I meane of William Tyndall, John Frith, and Robert Barnes,
chief *ringleaders* in these latter tymes of thys church of England.

Tyndall. Workes, p. 1. Preface by Foxe.

But when he sawe that the chiefe *ringleader* and master of mis-
chiefe was one of the fiue, he then was vehement to execute his
purpose.

Hakluyt. Voyages, &c. vol. iii. part ii. p. 106. M. John Davis.

Right so from you all goodly vertues well
Into the rest which round about you *ring*,
Faire lords and ladies which about you dwell,
And doe adorne your court where courtesies excell.

Spenser. Faerie Queene, book vi.

SOM. How now, Sir William, whether were you sent?

LU. Whether my lord, from bought and sold Lord Talbot,
Who, *ring'd* about with bold aduersitie,
Cries out for noble Yorke and Somerset,
To beate assayling death from his weake regions.

Shakspeare. Henry VI. fol. 112.

And I will kisse thy detestable bones,
And put my eyeballs in thy vaultie browes,
And *ring* these fingers with thy household wormes.

Id. John, fol. 12.

— Were Pharamond
As truly valiant, as I feel him cold,
And *ring'd* among the choicest of his friends,
Such as would blush to talk such serious follies,
Or back such bellied commendations,
And from this present, spight of all these bugs,
You should hear further from me.

Beaumont and Fletcher. Philaster, act i. sc. 1.

And when the moon doth once appear,
We'll trace the lower grounds,
When fairies in their *ringlets* there
Do dance their nightly rounds.

Drayton. The Quest of Cynthia.

And he removed that day the he-goats that were *ring-straked* and
spotted, and all the she-goats that were speckled and spotted.
Genesis, ch. xxx. v. 35.

Thou royal *ring-tail*, fit to fly at nothing
But poor men's poultry, and have every boy
Beat thee from that too with his bread and butter.

Beaumont and Fletcher. Philaster, act v. sc. 1.

Take the green branches of an olive and burne them, there will
distill and drop from the wood a certaine juice or liquor, which
healeth *ringworms*, tettato, and shingles.

Holland. Plinie, book xxiii. ch. iii.

Others were for abolishing
That tool of matrimony, a *ring*,
With which th' unsanctify'd bridegroom
Is marry'd only to a thumb;
(As wise as *ringing* of a pig,
That us'd to break up ground, and dig.)

Butler. Hudibras, part iii. can. 2

Such wavy *ringlets* o'er his shoulders flow!

Pope. Homer. Odyssey, book iv.

If I the prize, if me you seek to wife,
Hear the conditions, and commence the strife;
Who first Ulysses' wondrous bow shall bend,
And through twelve *ringlets* the fleet arrow send,
Him will I follow, and forsake my home,
For him forsake this lov'd, this wealthy dome.

Id. Ib. book xxi.

Anaximander had the honour (if it may be so called) to be
named, as being the most ancient of all those atheistical physio-
logers, and the *ringleader* of them.

Cudworth. Intellectual System, book i. ch. iii. p. 126.

Their tawny beards uncomb'd, and sweeping long,
Adown their knees in shaggy *ringlets* hung.

Mickle. The Lusiad, book iv.

Say, mid that grove, in lovelorn state,
While yon poor *ringdove* mourns her mate,
Is all that meets the shepherd's ear,
Inspir'd by anguish and despair.

Mason. Ode 7.

The workmen, accordingly, very seldom derive any advantage
from the violence of those tumultuous combinations which, partly
from the interposition of the civil magistrate, partly from the su-
perior steadiness of the masters, partly from the necessity which
the greater part of the workmen are under of submitting for the
sake of present subsistence, generally end in nothing but the pu-
nishment or ruin of the *ringleaders*.

Smith. Wealth of Nations, vol. i. book i. ch. viii. p. 91.

RINOREA, in Botany, a genus of the class *Pentan-*
dria, order *Monogynia*, natural order *Berberides*. Ge-
neric character: calyx inferior, five-cleft; corolla, petals
ten, ovate, oblong, the five inner ones small; filaments
inserted at the base of the outer petals.

One species, *R. Guianensis*, native of Guiana.

RINSE, v. } Fr. *reinser*; Skinner derives from RINSING, n. } the (Goth. *hrains*,) A. S., D., and Ger. *rein*; Sw. *reen*, *purus*, *mundus a sordibus purgatus*; and this word is probably the A. S. *rein*, *ren*, *rægn*, *rain*, from *renian*, *rinnan*, *pluere*, *defluere*.

To cleanse any thing by passing water or other liquid
through it, or by passing any thing through water or
other liquid; to soak in and press out, water, &c.

And let the priest *rinse* his hands, least any parcels of the bodie
or bloud be left behind in his fingers or in the chalice.

Fox. Actes, &c. fol. 1273. Queene Mary.

For so may chance (and seene it is not seelde)
His owne companions can contriue a meane,
To cutte his throate and *rinse* his budgets cleane.

Gascoigne. The Fruites of Warre.

RING.
—
RINSE.

RINSE.
—
RIOT.

He tooke a most unvalued bowle, in which none dranke but he,
Nor he, but to the deities, nor any deitie,
But Jove himselfe was serv'd with that; and that he first did clense
With sulphure, then with fluences of sweetest water *rense*.
Chapman. Homer. Iliad, book xvi. p. 223.

By which meanes they became better scoured, and looked fairer
and brighter a hundred times, than if they had been *rinsed* and
washed in water; and yet no part of their substance, but the filth
only, was burnt away.

Holland. Plinie, book xix. ch. i.

RI'OT, *v.*
RI'OT, *n.*
RI'OTER,
RI'OTISE, *n.*
RI'OTOUS,
RI'OTOUSLY,
RI'OTIOUSNESS.

Fr. *riote, riotter*; It. *riotta, riot-
tare*, which is by some derived
from the Lat. *riza*. It is undoubt-
edly the same word as *rout*, dif-
ferently written, and with some
difference also in the application.
Generally,

A disorderly, tumultuous excess, of mirth, licentious-
ness, luxury; any indulgence of the passions. See
Rout. Law-writers distinguish thus: *a route* should
be a speciall kinde of unlawfull assembly; *a riot* the
disorderly fact committed generally by an unlawfull as-
sembly.

git gos kȳng Robȳn forth in his *rioterie*.

R. Brunne, p. 338.

Mercury loveth wisdom and science,
And Venus loveth *riot* and dispence.

Chaucer. The Wif of Bathes Prologue, v. 6281.

Thise *riotours* three, of which I tell,
Long erst or prime rong of any bell,
Were set hem in a tavern for to drinke.

Id. The Pardoner's Tale, v. 12525.

And of swiche woman Soloman sayth, that a man were better
dwell in a desert than with a woman that is *riotous*.

Id. The Tale of Melibeus, p. 109.

In the meane season he and his companions spent their time in
robbing and *rioting*.

Hakluyt. Voyages, &c. vol. i. p. 11. K. of Man.

And for y^e kynge myght not so hastily furnysse hym of his
soldyours, he therefore sent vnto the erle of Neuers, by whose
meanys, as to the kynge, was shewed how this *ryet* begā, cōmaund-
vuge him y^t he shulde se this *ryet* appeased.

Fabyan. Chronicle, vol. ii. ch. 235. p. 272.

This mā, before y^e deth of his fader, applyed hym vnto all vyce
and insolency, and drewe vnto hym all *ryottours* and wylde deys-
posed persones.

Id. Ib. vol. ii. ch. 236. p. 577.

By the aduyces of theym many good ordenaūcis and statutys
were made to oppresse the *ryottouse* and other myscheuys that at
those dayes were vsed.

Id. Ib. p. 419.

And he sayth also, if we would consider what excellence and
dignity is in the nature of man, we should understand how great
shame it is to wast it away *riotously*, and to leade the life delicately
and deliciously

Vives. Instruction of a Christian Woman, p. 75.

Those that haue theyr blynde darkenes yet styll, haue maruaile
at this so great a chaungeing of myndes and lyfe in you, and
thynke scorne that their *riotousnes* is condemned by your temperate
fare.

Udall. 1 St. Peter, ch. iv. fol. 12.

To the intent they might spend their first yeares not in *riotous-
nesse*, but in labor and trauel.

Arthur Goldyng. Justine, book iii. fol. 22.

— Or that begun in Lent

By Wyat and his friends, the marriage to prevent,
That Mary did intend with Philip King of Spain;
Since these but *riots* were.

Drayton. Poly-olbion, song 22.

Which stately manner when as they did see,
The image of superfluous *riotize*,
Exceeding much the state of meane degree,
They greatly wondred whence so sumptuous guize
Might be maintayn'd, and each gan diversely devise.

Spenser. Faerie Queene, book iii. can. 1.

In such things therefore did Lucullus lavishly and *riotously*
spend his goods, like spoils gotten of slaves and barbarous people.

Sir Thomas North. Plutarch, p. 446. Lucullus.

Had these men lived in those good pagan days wherein they
might have *rioted* with devotion, sacrificed to the gods in drunken
bowls, and worshipp'd in the arms of a strumpet, no men would
have been more religious than they.

Scott. Christian Life, part ii. ch. iii. p. 210.

If you take to this kind of reasoning (which is really not reason-
ing, but running *riot* with fancy and imagination) about matters
infinitely surpassing human comprehension, you will make lament-
able work of it.

*Waterland. Works, vol. i. p. 210. A Defence of some Queries.
Query 19.*

A *riot* is where three or more actually do an unlawful act of vio-
lence, either with or without a common cause or quarrel; as if
they beat a man, or hunt and kill game in another's park, chase,
warren, or liberty; or do any other unlawful act with force and
violence; or even do a lawful act, as removing a nuisance, in a
violent and tumultuous manner.

Blackstone. Commentaries, book iv. ch. ii.

The same day (6 June, 1780) attempts were made by the *rioters*
on the Bank and Pay-Office; but these, being strongly guarded,
happily escaped that destruction which must have involved the
whole nation in irreparable distress and ruin.

Belsham. History of Great Britain, vol. vii. p. 22.

Then to the greedy *riotous* embrace

Resign each hidden charm with dearest grace.

Mickle. The Lusiad, book ix.

Riot, in *Law*, is described to be a tumultuous dis-
turbance of the peace by three persons or more assem-
bling together of their own authority, with an intent
mutually to assist one another against any who shall
oppose them in the execution of some enterprise of a
private nature, and afterwards actually executing the
same in a violent and turbulent manner, to the terror of
the King's subjects. It is not essential to a *Riot* that
the act done should in itself be unlawful; for whether
the act be the beating of a man when the occasion does
not justify such treatment, or the removing a nuisance
which, if it be done peaceably, is lawful, yet the parties
are equally guilty of a *Riot* if they carry their purpose
into execution with violence and in a manner calculated
to excite alarm.

The definition of a *Riot* is confined to enterprises of a
private nature, because, if the enterprise be of a public
nature, such as to redress public grievances, to reform
Religion, or to resist the King's troops when sent to
keep the peace, the offence may become an overt act of
Treason. It is difficult to draw a line so as to show
precisely where *Rioting* ends and *Treason* begins, and
the decision of each case, as it arises, must depend upon
its own circumstances. In the greater bulk of cases no
doubt can arise.

Riots bear a strong resemblance to *routs* and *unlawful
assemblies*. An *unlawful assembly* is, when three or
more assemble to do an unlawful act in a forcible man-
ner, and part without doing it, or making any motion
towards it. A *rout* is, where three or more persons,
assembled together as before, take some steps to carry
their purpose into execution, but part without effecting
it. The three offences are merely gradations of the
same kind of offence. If the offenders, having met,
separate without doing any thing, it is an unlawful as-
sembly; if they take some steps towards completing the
act, it is a *rout*; and if they actually do the act for which
they assembled, it is a *Riot*. In all three cases the meet-
ing must consist of more than three, and must be attended
with demonstrations of violence calculated to excite alarm.

Assemblies at wakes or other festival occasions, and
meetings for the exercise of common sports and diver-

RIOT.

sions, however noisy and tumultuous they may be, yet do not amount to a Riot, so long as the noise and tumult arises from and is confined to the simple prosecution of the original purpose for which the meeting came together. If, however, persons go armed to the assembly with intent to resist with force any interference with the intended sport, the meeting assumes an illegal character. For there are few occasions when the Law will permit persons to take the Law into their own hands, and scarcely any where it is allowable for numbers to meet with a view of enforcing a legal right with a strong hand. Great respect is shown to a man's own dwelling-house, which is said to be his castle; and therefore a man is permitted to assemble his friends in order to resist an unlawful entry, which he expects that some other party will attempt to make in his house; but if the aggression is expected in his close, in this case he must rely on the protection of the Law, and the assembling of his friends to resist with force would be unlawful. These doctrines, it must be remembered, are handed down from an early period in our History, when deeds of violence and terror were far more frequent even among the higher classes of Society than they now are amongst the lower orders; but they are founded on this just principle, namely, that however much it may be desired by the parties concerned, especially when their passions are excited, to rely on the courage of themselves and their partisans for their defence, yet it is for the well-being of the rest of the community that the quarrel should be decided in a peaceful manner by the Law, which may be done without endangering the public peace, or giving rise to feuds and animosities, which will ever be ready to break out afresh when occasion offers.

Riots, routs, and unlawful assemblies, at Common Law, are misdemeanours, punishable by fine and imprisonment.

When the unlawful assembly consists of twelve persons or more, the Legislature has provided summary means for the protection of the Public. The Statute, 1 Geo. I. stat. 2. c. 5, commonly called the *Riot Act*, provides that when such an assembly shall unlawfully remain together for the space of one hour after proclamation made, the offenders shall be guilty of felony, and suffer death as felons. The proclamation may be made by any one or more Justice of the Peace, by the Sheriff of the County or his Under Sheriff, by the Mayor, Bailiff or Bailiffs, or other head officer or Justice of the Peace of any city or town corporate, and it is in the following form, or to the like effect:—

“Our Sovereign Lord the King chargeth and commandeth all persons, being assembled, immediately to disperse themselves, and peaceably to depart to their habitations or to their lawful business, upon the pains contained in the Act made in the first year of King George, for preventing tumults and riotous assemblies.

“God save the King.”

If the assembly does not disperse within the hour, the Act then authorizes that it may be dispersed and the offenders apprehended. And the peace officers, and all aiding them, are indemnified against any death or damage which they may occasion in the execution of this duty. This Statute is founded upon earlier Statutes which expired at the death of Queen Elizabeth, and had been suffered to lie dormant until the accession of George I., when the dangers apprehended from assemblies of the friends of the Pretender caused the

enactment of the Riot Act. If the assembly proceeds to acts of open violence, the Magistrates are not bound to wait the expiration of the hour, because it is their duty, and the duty of all peace officers and others in their aid, to prevent actual breaches of the peace, even though the Riot Act has not been read.

The riotous demolition of churches, buildings, and machinery has been the occasion of various Statutes, which are now repealed, and their provisions consolidated in 7 and 8 Geo. IV. c. 30. sec. 8., by which the offence is made felony punishable with death; and by c. 31, the Hundred is made liable for the damage done. But the parties injured, or their servants, must, *within seven days* after the commission of the offence, go before a Justice of the Peace and be examined on oath, and become bound by recognisance to prosecute the offenders when apprehended; and if these conditions are not complied with, the Hundred is discharged.

The Jewish multitude, if I conjecture aright, was ripe to rise, had he declared himself the temporal Messiah which they expected.
Horsley. Sermon 24. vol. ii. p. 267.

But had the Portuguese, Dutch, and English waited for such theoretical ripeness for trade, they had never yet set one foot in India.
Mickle. History of the Portuguese Empire in Asia.

RIPIDIUS, in Zoology, a genus of Coleopterous insects.

Generic character. Antennæ short, stout, the two basal joints most robust, wedge-shaped, third with a stout process on one side as long as the antennæ, fourth and remainder each producing an elongate flattened ray, gradually decreasing in length so as to form (altogether) a truncate cone; palpi four, with terminal joint elongate, cylindric, somewhat truncate; head exerted; eyes extremely large, occupying above five-sixths of the head, and united above, (as in many *Diptera*;) thorax transverse, rough, rounded in front, the base wider, with the angles acute; elytra very short, about one-fifth the length of the abdomen, dilated externally at the base, attenuated at the apex: abdomen slightly narrowed towards the tip, the last obtuse; wings ample; legs slender, anterior approximating, intermediate rather distant, with very long coxæ; femora all slightly thickened in the middle; tibiæ simple, somewhat cylindric; tarsi heteromorous, inserted at the tip of the tibiæ, and broad at the base so as to appear continuous with the tibiæ, subcylindric, but gradually attenuated to the apex; claws dilated at the base beneath.

Type of the genus, *R. flabellatus*; *R. anceps*, Stephens, *Illust. Britt. Ent. (Mandibulata.)* vol. v. p. 427. Taken in London, but probably an imported species.

RIPIPHORUS, in Zoology, a genus of Coleopterous insects.

Generic character. Antennæ remote, bipectinated in the males, uniserrated or branched in the females; the basal joint stout, elongate, the second small, third obconic, its inner edge and that of all the following produced into a tooth or branch, as above indicated, the terminal joint being simple; palpi four, awl-shaped, with the terminal joint obconic; mentum ovate; labrum elongate; head small; eyes entire; thorax produced in the middle behind; scutellum wanting; body compressed, arched, narrowed behind; elytra abbreviated, acuminate, and gaping at the apex; wings longer than the elytra, the tip exposed; legs elongate, simple; tibiæ with short spurs; tarsi heteromorous, with the joints entire.

Type of the genus, *Mordella paradoxa*, Linnæus; Stephens, *Illust. Britt. Ent. (Mandibulata.)* vol. v. p. 51. A numerous and remarkable genus, of which the type

occurs in Britain, in some years rather abundantly, its larvæ subsisting upon those of the common wasp. (*Vespa vulgaris*.)

RIPOGONUM, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Similaceæ*. Generic character: corolla six-parted, small; anthers long, four-sided, almost sessile; berry globular, two-seeded; seeds hemispherical.

One species, *R. scandens*, native of Australia.

RIPON, a Borough and Market Town in the West Riding of the County of York, is built between the river Ure and a small streamlet, the Skell. The former is crossed by a handsome stone bridge of seventeen arches, and there are five other bridges within a mile of the town. The town is very irregularly built, and contains only one open spot, the Market Place, in the centre of which is erected an Obelisk commemorating John Aislabie, Esq., of Studley, who filled the post of Chancellor of the Exchequer during part of the reign of George I., and represented the Borough in Parliament for threescore years. The town was once much celebrated for its manufacture of spurs, and "Ripon rowels" became proverbially expressive of fidelity. At present its little trade is confined to woollens and cottons. Near the Minster is a Barrow called Ellshaw, or Alice Hill, the origin and destination of which mound have furnished as much conjecture, and remain involved in as deep obscurity, as those of any of its numerous brethren. Ripon, no doubt, is of great antiquity; but nothing is known of its foundation. A Monastery is mentioned to have existed in it as early as 661; but the afterwards celebrated structure was probably commenced in 678, by Wilfrid, Archbishop of York, in whose memory an annual Feast is still celebrated, commencing on the Saturday after Lammas day, and whose name is preserved in a Crypt, "St. Wilfrid's Needle," a narrow passage leading to a chapel under the great tower. The Scots destroyed the town in the reign of Edward II., and the Church lay in ruins till it was re-edified by the bounty of William of Melton, Archbishop of York, under Edward III. The Collegiate Church, as regulated by James I., and as it existed, (previously to the Ecclesiastical Reform Act,) is formed of a Dean, Subdean, and six Prebendaries. The King nominates to the Deanery; the Subdean is chosen by the Dean from the Prebendaries; and the Dean and Chapter present three persons to the Archbishop of York, who collates one of them to any vacant Prebend. The Church is cruciform, and exhibits many varieties of pointed architecture, having been commenced in 1331 and not finished till 1494. Each of the two Western towers and the central tower is 110 feet high. Till 1660 they were surmounted with wooden steeples rising 120 feet higher; but the central steeple having then been blown down, the others were removed to avoid similar danger. The entire length of the fabric is 270 feet; the extreme breadth of the nave, including the side aisles, 87; a Library above the Chapter House contains a few books curious from their antiquity; and great sums have of late years been expended in various judicious restorations.

Ripon is approached by a navigable canal, and has a Public Market. Distant from London 222 miles; from Boroughbridge six N. W. Population of the Borough, in 1821, 4563; in 1831, 5080. The Borough returns two Members to Parliament. The environs are very agreeable. Studley Royal, one of the finest seats in England, containing the ruins of Fountain Abbey,

stands about three miles S. W. from the town. Newby Hall, the seat of Lord Grantham, is about four miles in an opposite direction.

RIPPLE. See *ante*, RIMPLE.

RIQUERIA, in *Botany*, a genus of the class *Tetrandria*, order *Tetragynia*. Generic character: calyx threefold; corolla, petals four, concave; filaments compressed; capsule four-celled, crowned by the style.

One species, *R. Avenia*, native of Peru.

For in the *risynge* agen to lyf, neither thei schulen wedde neither schulen be weddid, but thei ben as the aungelis of God in hevene.

Id. *Ib.* ch. xxii.

And if a man in honour *rise*,
Or by his wit, or by his prowess,
Of that hath she [Enuie] great heauinesse.

Chaucer. *The Romant of the Rose*.

Whan that the firste cocke hath crowe, anon
Up *rist* this joly lover Absolon,
And him arayeth gay, at point devise.

Id. *The Milleres Tale*, v. 3513.

He spake thereof so folilie,
That he awaked Jelousie,
Which all afraied in his *rising*,
When that he heard iangling.

Id. *The Romant of the Rose*.

With that he hasted him to *rise*
Anone and sent after the wise.

Gower. *Conf. Am.* book vi.

Would not the barbarous deeds have been believed
Of Marius and Sylla, by our children,
Without this fact had *risse* forth greater for them?

Ben Jonson. *Catiline*, act iii. sc. 2.

Men have *rise*
From a more cheap nobility to empires,
From dark originals, and sordid blood,
Nay some that had no fathers, sons of the earth,
And flying people, have aspir'd to kingdoms,
Made nations tremble, and have practis'd frowns
To awe the world.

Beaumont and Fletcher. *The Coronation*, act iv. sc. 1.

Ovr ship now past the streights of th' ocean flood;
She plow'd the broad sea's billowes, and made good
The ile *Ææ*, where the pallace stands
Of th' early *riser*, with the rosie hands,
Actiue Aurora.

Chapman. *Homer. Odyssey*, book xii. p. 179.

Were he not constant to his daily race,
He would not, by alternate shade and light,
Produce the needful change of day and night:
Nor would the various seasons of the year,
By turns revolving, *rise* and disappear.

Blackmore. *Creation*, book iv. p. 363.

My chief design was not so much to perform the office of a meer historian, as to take *risers*, from the several circumstances I should relate, to convey unperceivedly into the minds of those young persons of quality, for whom I wrote, sentiments of true piety and vertue.

RIPON.
RISE.

RISE.

RISSE.

But if doom'd,
In powerless humble fortune, to repress
These ardent risings of the kindling soul;
Then, ev'n superior to ambition, we
Would learn the private virtues how to glide
Through shades and plains, along the smoothest stream
Of rural life.
Thomson. *Winter*.

It is not their nominal price only, but their real price, which rises in the progress of improvement. The rise of their nominal price is the effect, not of any degradation of the value of silver, but of the rise in their real price.

Smith. *Wealth of Nations*, vol. i. book i. ch. xi. p. 301.

RI/SIBLE, } Fr. *risible*; It. *risibile*; Sp. *risible*;
RISIB/LITY. } Lat. *ridere*, to laugh. See RIDICULE.
That may be laughed at; laughable; and also that
can or may laugh.

We are in a merry world, laughing is our business; as if because it has been made the definition of man, that he is *risible*, his manhood consisteth in nothing else.

Government of the Tongue.

How comes lowness of style and the familiarity of words to be so much the propriety of satyr, that without them a poet can be no more a satyr, than without *risibility* he can be a man.

Dryden. *Juvenal*. *Dedication*.

A few wild blunders, and *risible* absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance in contempt; but useful diligence will at last prevail, and there never can be wanting some who distinguish desert.

Johnson. *Preface to his Dictionary*.

RISK, or
RISQUE, v. } Fr. *risque*; It. *rischio*; Sp. *ries-*
RISK, n. } go. Menage exhibits some curious
RISKER, } attempts at Etymology from various
RISQUING, n. } writers. The true origin seems to
be the A. S. *hrisc-ian*, *vibrare*, *va-*
cillare, to brandish, to quiver, to shake; and, thus,

To set upon a chance; to set at hazard, to hazard, to emperil, to endanger.

Besides the dead intervals of ceasing profit, which happen to money more than land, there is another reason why the profit and income of money let out should be a little higher than that of land; and that is, because money out at interest runs a greater *risque* than land does.

Locke. *Works*, vol. ii. p. 32. *On lowering the Interest*.

Possibly it may be allowed, as a reasonable proposal, that it [interest] should be within such bounds as should not, on the one side, quite eat up the merchant's and tradesman's profit, and discourage their industry; nor, on the other hand, so low, as should hinder men from *risking* their money in other men's hands.

Id. *Ib*.

He, therefore, wisely cast about
All ways he could t'observe and smoke
What courses other *riskers* took,
And to the utmost do his best
To save himself, and hang the rest.

Butler. *Hudibras*, part iii. can. 2.

How often, whether wrong or right,
Must he in jest or earnest fight,
Risking for those both life and limb,
Who would not *risk* one groat for him.

Churchill. *The Duellist*, book iii.

His art [Sculpture] was so much set on overcoming this difficulty that he [Bernini] was for ever attempting it, though by that attempt he *risked* every thing that was valuable in the art.

Reynolds. *Works*, vol. ii. p. 27. *The tenth Discourse*.

RIVALSHIP. rivers; *quia ut agricolæ, rivum ha-*
bentes communem, de usu aquæ, sæpius contendunt, ita
hi certent de eadem amasiâ. Vossius. Generally,

A contender, striver, competitor for the same object
with another, one who emulates. It is used by Shak-
speare for one who has the same duty to perform; a
comrade.

Hath in any, but in her, love-fellowship maintained friendship
between *rivals*, and beauty taught the beholders chastity?

Sidney. *Works*, vol. i. book i. p. 4. *Arcadia*.

'Tis true he was *rival'd* by a strong and subtil faction, which
cared and consulted for his ruin, as a foundation they must build
upon.

Reliquiæ Wottonianæ, p. 188.

In Cupid's school I never read those books,
Whose lectures oft we practise in our looks,
Nor ever did suspicious *rival* eye
Yet lie in wait my favours to espy.

Drayton. *The Lady Geraldine to Surrey*.

If you do meet Horatio and
Marcellus, the *riuals* of my watch, bid them make hast.

Shakspeare. *Hamlet*, fol. 152.

EROS. Cæsar hauing made vse of him in the warres 'gainst Pom-
pey, presently denied him *riuality*, would not let him partake in
the glory of the action.

Id. *Antony and Cleopatra*, fol. 353.

For not the craft of *rivalship* (though more
Than states, wise *rivals* study interest)
Can make him leave his friend, till he restore
Some cold discretion to his burning breast.

Davenant. *Gondibert*, book iii. can. 6.

Amid the long withdrawing vale,
Awakes the *rival'd* nightingale.

Thomson. *Hymn on Solitude*.

We may certainly infer from them, that they absolutely exclude
all *rival* or anti-gods, set up in opposition to God the Father; con-
sequently all idols, and all the gods of the heathen nations.

Waterland. *Works*, vol. ii. p. 85. *Sermon* 4.

Johannes Duns, surnamed Scotus, and dignified with the title
of Doctor Subtilis, was considerable enough to support a kind of
rivalship against Thomas Aquinas, and to be founder of a new sect
or division among the schoolmen.

Id. *Ib.* vol. iv. p. 404. *A Dissertation on the Existence of a first Cause*.

The artificers and manufacturers of such mercantile states, there-
fore, would immediately be *rivalled* in the market of those landed
nations, and soon after undersold and justled out of it altogether.

Smith. *Wealth of Nations*, vol. iii. book iv. ch. x. p. 43.

Rivalship and emulation render excellency, even in mean profes-
sions, an object of ambition, and frequently occasion the very great-
est exertions.

Smith. *Wealth of Nations*, vol. iii. book v. ch. i. p. 169.

RIVE, *v.* } See ante, REAVE, and RIFT.
RIVER. } To tear, to rend asunder; to split
asunder.

Loke, whan that he is set, thou right anon
Arise, as though thou woldest with him play;
And I shal *rive* him thurgh the sides tway,
While that thou stroglest with him as in game,
And with thy dagger loke thou do the same.

Chaucer. *The Pardoner's Tale*, v. 12760.

And whan she might her time well asprie,
Upon the fire of sacrifice she start,
And with his sword she *rofe* her to the herte.

Id. *The Legend of Dido*.

The strokes wherof so shaken, crushed and *riued* y^e walles, that
within fewe daies, the cytie was dispoyled of all her toures and out-
warde defences.

Hall. *Henry VI.* fol. 92. *The third Yere*.

They both encounter in the middle plaine,
And their sharp speares doe both together smite
Amid their shields with so huge might and maine,
That seem'd their soules they would have *ryven* quight
Out of their breasts with furious despight.

Spenser. *Faerie Queene*, book v. can. 10.

Like as the lightning brond from *riuen* skie,
Throwne out by angry Jove in his vengeance,
With dreadfull force falles on some steeple hie.

Id. *Ib.* book iv. can. 6.

Æneas, his contracted body bends
And o'er him high the *riuen* targe extends,
Sees, through its parting plates, the upper air,
And at his back perceives the quivering spear.

Pope. *Homer. Iliad*, book xx.

Where waving wide,
Thick pines with darkening umbrage hide
The rugged vaults, and *riuen* tow'rs
Of that proud castle's painted bow'rs.

Warton. *Ode* 11.

RIVEL, *v.* } To *ruffle*, into wrinkles; to
RIVEL, *n.* } wrinkle; to wither into wrinkles;
RIVELLING, *n.* } to *shrivel*, *q. v.*

He salte pe ken, our lond to bren, and werre bigynne,
þou getes no þing, but þi *riuelyng*, to hang þer inne.

R. Brunne, p. 282.

Men loue ghe ghoure wyues as Crist louyde the chirche, and
ghaf hymself for it to mak it hooli, and clenside it with the
waisschyng of watir in the word of lyf to ghyue the chyrche glo-
rious to hymself that it hadde no wem ne *ryueling* or ony such
thing, but that it be hooly and undefouled.

Wiclif. *Effesies*, ch. v.

Beggars with these hoodes wide,
And high shoes knopped with dagges,
That frouncen like a quale pipe,
Or bootes *riueling* as a gipe. (Frock or cassock.)

Chaucer. *The Romant of the Rose*, v. 7214.

My chekes thinne, and all my face
With elde I might see deface.
So *riueled*, and so wo besein,
That there was no thinge full ne pleyn.

Gower. *Conf. Am.* book viii.

The widow may for all thy paine disburse:
A *riuel'd* skinne, a stinking breath, what than?
A tothelesse mouth shall doe thy lippes no harme;
The gold is good.

Wyat. *How to use the Court*.

The leaves be somewhat longer and thicker, with long cuts or
lines wrinkled and *riueled* throughout.

Holland. *Plinie*, book xiii. ch. xxi.

It wanteth the due parching and ripening against the sunne:
and by that means commeth short of the *riuels* and blacknesse that
the outlandish pepper hath.

Id. *Ib.* book xii. ch. vii.

RIVAL.
—
RIVEL.

RIVEL.

RIVET.

She calls her barren jade,
Base quean, and *rivel'd* witch, and wish'd she could be made
But worthy of her hate.

Drayton. *Poly-olbion*, song 3.

Then droop'd the fading flowers (their beauty fled),
And clos'd their sickly eyes, and hung the head,
And, *rivel'd* up with heat, lay dying in their bed.

Dryden. *The Flower and the Leaf*.

Praise from the *rivel'd* lips of toothless, bald
Decrepitude, and in the looks of lean
And craving poverty, and in the bow
Respectful of the smutch'd artificer,
Is oft too welcome, and may much disturb
The bias of the purpose.

Cowper. *The Task*, book ii.

RIVER, *n.* } Fr. *riviere*; It. *riviera*; Sp. *rio*;
RIVERET, } Lat. *rivus*, from the Gr. *peiv*, to flow.
RIVULET. } A flood or flowing course, a current,
a stream, of water; a river—implies a spring or well,
whence its waters issue.

Gret plente heo fonde of fissch, as heo wente, by þe weye,
Of wodes and *riuers* as is in þe contrey.

R. Gloucester, p. 21.

The brode *river* sometime wexeth drey.
The grete tounes see we wane and wende.

Chaucer. *The Knightes Tale*, v. 3026.

Tyll she came there the launde was,
Through whiche there ran a great *riuere*,
It thought her fayre.

Gower. *Conf. Am.* book iv.

But from our hermit here the muse we must enforce,
And zealously proceed in our intended course;
How Arden of her rills and *riverets* doth dispose.

Drayton. *Poly-olbion*, song 13.

The shades, like ample shields, defend me from the sun,
Through which me to refresh the gentle *rivulets* run.

Id. *The Muses' Elysium*. *Nymphal* 6.

The water every whit as clear and wholesome as if it darted
from the breasts of a marble nymph, or the urn of a *river-god*.

Cowley. *Of Greatness*. *Essay* 6.

These *riverets* or furrows thus devised and conveighed, the La-
tins expresse by the name of *Corrugis*: a word, as I take it, derived
à *Corrivando*, i. of drawing many springs and *rills* together into one
head and channell.

Holland. *Plinie*, book xxxiii. ch. iv.

The same river Nilus bringeth foorth another beast called hip-
popotamus, i. a *river-horse*.

Id. *Ib.* book viii. ch. xxv.

See, how some noble *river's* swelling tide,
Augmented by the mountains' melting snows,
Breaks from its banks, and o'er the region flows!

Blackmore. *Creation*, book ii. p. 351.

Every good, every desirable thing is in God in full perfection,
and all the excellencies we admire in this world, all the charming
things that here attract our hearts, are all of them but so many
rivulets derived from the inexhausted ocean of his perfections, but
thin and scanty and imperfect emanations from his infinite fulness.

Sharp. *Works*, vol. iv. p. 144. *Sermon* 8.

Where silver *rivulets* play through flowery meads,
And woodbines give their sweets, and limes their shades.

Young. *Love of Fame*. *Satire* 5.

Three or four of the creatures here described are Egyptian: the
two last are notoriously so; they are the *river-horse* and the croco-
dile, those celebrated inhabitants of the Nile.

Id. *Notes on the Paraphrase of Job*.

RIVET, *v.* } Fr. *river*; It. *rivadire*; Sp. *rivetear*;
RIVET. } Cotgrave explains the Fr. *river*, to rivet
or clench, to fasten or clench back the point of a nail,
&c., also to thrust the clothes of a bed in at the sides.
Minshew says that *rivets* (in armory) are the joints by
which arms are fitted and fastened to the body. Me-
nage derives from *gyrare*. Duchat from the Ger. *rei-
ben*, to rub. To *rivet* seems to mean,

To fasten or secure by a return, perhaps by *beating
back*; (Fr. *rebattre*, It. *ribattere*;) to clench, to fasten
firmly; to give a last or finishing stroke.

VOL. XXVII.

Ouer his *riuuet* he had a garment of white cloth of gold with a
redde crosse.

Hall. *Henry VIII.* fol. 25.

My niece Hester is absolutely reclaimed from those foolish im-
pressions which she had taken, God's name be ever blessed for it;
and it is none of the least ends of my going to *rivet* that business.

Reliquiæ Wottonianæ, p. 568.

Some sharp their swords, some right their morions set,
Their greaves and pouldrons others *rivet* fast.

Drayton. *The Barons' Wars*, book ii.

And then (forsooth) the faint defects of age
Must be the scene of myrth, to cough, and spit,
And with a palsie fumbling on his gorget,
Shake in and out the *riuuet*: and at this sport
Sir Valour dies; cries, O, enough, Patroclus.

Shakspeare. *Troilus and Cressida*, fol. 82.

That there can be no such thing as true happiness, separate from
the love of God and the love of our neighbour. It is a firm unal-
terable maxim, *riveted* in the very frame and constitution of things.

Waterland. *Works*, vol. ix. p. 53. *Sermon* 3.

In golden armour glorious to behold;
The *rivets* of their arms were nail'd with gold.

Dryden. *The Flower and the Leaf*.

I could be ever happy in thy sight,
Toil with thee all the day, and through the night
Toil on from watch to watch, bidding my eye,
Fast *rivetted* on science, sleep defy.

Churchill. *Gotham*, book iii.

Every useful habit, which the earlier parts of his education
might have had some tendency to form in him, instead of being
rivetted and confirmed, is almost necessarily either weakened or
effaced.

Smith. *Wealth of Nations*, vol. iii. book v. ch. i. p. 184.

RIVINA, in *Botany*, a genus of the class *Tetran-
dria*, order *Monogynia*, natural order *Phytolacceæ*. Ge-
neric character: calyx none; corolla, petals four, per-
sisting; berry one-seeded; seed lentiform, scabrous.

Seven species, natives of South America and Mada-
gascar.

RIZOA, in *Botany*, a genus of the class *Didynamia*,
order *Gymnospermia*. Generic character: calyx tubular,
striated, five-toothed, teeth equal; tube of the corolla
long, two-lipped, the superior lip three-cleft, inferior
two-cleft; stamens inserted at the base of the corolla;
stigmas two, setaceous, diverging; seeds ovate.

One species, *R. ovatifolia*, native of Chili.

ROAD, } Fr. *rade*, a road, an open harbour for
ROA'DER. } shipping. Road (*via equestris*, Skinner)
was

Also anciently written *rode*, the past participle of to
ride, *q. v.*; any place *ridden* over. *Rode* is used by old
authors as we now use *inroad*, incursion, invasion.

Where as these men of armes be,
Sometyme ouer the great sea,
So that by londe, and eke by ship,
He mote trauaile for worshyp,
And make many hastie *rodes*.

Gower. *Conf. Am.* book iv.

By meanes hereof it came to passe that they cowlde not raunge
verye farre abroad, nor with their ease make *rodes* agaynste their
neyghbours.

Arthur Goldyng. *Cæsar*. *Commentaries*, book i. fol. 3.

Often times also they wold make *rodes* in the night, and assault
the castles of our camp.

Id. *Ib.* book viii. fol. 261.

By the way as we rowed we saw boates passing betwixt the
roaders and the shore, and men in their shirtes swimming and
wading to shoare.

Hakluyt. *Voyages*, &c. vol. ii. p. 161. *The Hon. Erle of Cumb.*

MAR. 'Tis a toil, sir;

Like *riding* in one *rode* perpetually,

It offers no variety.

Beaumont and Fletcher. *Love's Pilgrimage*, act ii. sc. 3.

R

RIVET.

ROAD.

ROAD.

ROAN.

And with express condition also that the Athenians should make no *rodes* into Pharnabazus' dominions, to hurt or spoil any of his.
Sir Thomas North. Plutarch, p. 179. Alcibiades.

There having cast out his anchor, and *riding at rode*, he put a messenger on the shoar, and sent him unto the city to his wife.
Id. lb. p. 554. Pompeius.

But how coursly the stoicks philosophize, when they are once turned out of their *rode-way* of moral sentences, any one but moderately skilled in nature and metaphysicks may easily discern.
More. The Immortality of the Soul, book iii. ch. xiii. p. 228.

In fair Arisbe's walls (his native place)
 He held his seat: a friend to human race.
 Fast by the *road*, his ever-open door
 Oblig'd the wealthy, and reliev'd the poor.

Pope. Homer. Iliad, book vi.

It is not more than fifty years ago that some of the counties in the neighbourhood of London petitioned the parliament against the extension of the turnpike *roads* into the remoter counties.

Smith. Wealth of Nations, vol. i. book i. ch. xi. p. 203.

We often meet with the word *roadstead* in Voyages, and I suppose it is still a common term with all seafaring men.

Tooke. Diversions of Purley, vol. i. p. 438.

ROAM, *v.* } Skinner says, perhaps from *room*;
 ROAM, *n.* } It, as *room* also, is from the A. S. *rym-*
 ROA'MER, } *an*; D. *ruymen*; *viam aperire, am-*
 ROA'MING, *n.* } *pliare, dilatare*, to extend, to expand,
 to amplify.

To move over, wander over an extent of space, to range or rove about or abroad.

Hii aligte with drawe suerd, with matis mani on.
 & with many an hard stroc *rumede* hor wey anon.

R. Gloucester, p. 536.

Sipen in Angleseie did set his pauilloun
 Romand in his weie, cried pes in ilk a toun.

R. Brunne, p. 264.

By þe rode quap repentaunce. þow *romest* toward hevene
 By so þat hit be in þyn herte, as ich hure þy tonge.

Piers Plouhman. Vision, p. 104.

Tho come hire other frendes many on,
 And in the alleyes *romed* up and down.

Chaucer. The Frankeleines Tale, v. 11324.

This sorweful prisoner, this Palamon,
 Geth in his chambre *roming* to and fro,
 And to himselfe complaining of his wo.

Id. The Knightes Tale, v. 1072.

This passed forth, till now this other daie
 It fell that I come *roming* all alone
 Into his chambre, and founde how that he laie
 Upon his bedde.

Id. Troilus and Creseide, book ii.

He *romed* round about the desert, to find out some unknown way that might bring him to the next sea-port.

Sidney. Works, vol. ii. book iii. p. 638. Arcadia.

These *roaming* up and down to seek some settling room,
 First like a deluge fell upon Illyricum.

Drayton. Poly-olbion, song 8.

[These are] the ravings and *roamings* of a busy fancy.

More. Mystery of Godliness, p. 282.

There, through the prison of unbounded wilds,
 Barr'd by the hand of nature from escape,
 Wide *roams* the Russian exile.

Thomson. Winter.

Where'er I *roam*, whatever realms to see,
 My heart, untravell'd, fondly turns to thee:
 Still to my brother turns with ceaseless pain,
 And drags at each remove a length'ning chain.

Goldsmith. The Traveller.

The boundless space, through which these rovers take
 Their restless *roam*, suggests the sister thought
 Of boundless time.

Young. The Complaint. Night 9.

ROAN, Fr. *rouen, rouan, roan*; It. *roano, ruano*;
 Sp. *ruano*; *ravus color equorum*, and, according to

Scaliger, from the Lat. *ravus*, yellowish, or of a colour between yellow and grey. Menage and Skinner. The word is not confined by usage to this colour.

ROAN.

ROAR.

O how it yern'd my heart, when I beheld
 In London streets that coronation day,
 When Bullingbrooke rode on *roane* Barbary,
 That horse that thou so often hast bestrid,
 That horse that I so carefully haue drest.

Shakspeare. Richard II. fol. 44.

How shall I answer hue and cry,
 For a *roan*-gelding, twelve hands high,
 All spurr'd and switch'd, a lock on's hoof,
 A sorrel mane?

Butler. Hudibras, part ii. can. 2.

ROAR, *v.* } A. S. *rar-an*; D. *reeren*; Fr. *reer*;
 ROAR, } applied to the loud noise made by the
 ROA'RER, } lion or other beast; to any similar
 ROA'RING, *n.* } noise or sound. Generally, to any
 loud noise or cry of animals, the wind, the sea, &c.

And he criede with a greet voice as a lioun whanne he *rorith*.

Wiclif. Apocalips, ch. x.

Be ye sobre and wake ye, for youre aduersarie the deucl as a
rorynge lioun goith aboute seching whom he schal deuoure.

Id. Petir, ch. v.

Emong all this, to romblen gan the heven,
 The thunder *rorod* with a grisly steven;
 Doun come the rain.

Chaucer. The Legend of Good Women.

And up he yaf a *roring* and a cry,
 As doth the mother whan the child shal die;
 "Out! helpe! alas! harow!" he gan to cry.

Id. The Marchantes Tale, v. 10238.

Why nill I bring all Troie vpon a *roore*?

Id. Troilus and Creseide, book v. v. 115.

This Polypheme a geant was,
 And whan he sawe the sooth cas,
 How Galathe him hath forsake,
 And Acis to hir loue take,
 His herte maie it not forbear,
 That he ne *roreth* as a beare.

Gower. Conf. Am. book ii.

He perceiuing his enemies dayly to increase vpon him, and all the countries about to be in a *rore*, making fires and singing songs, &c.

Fox. Actes, &c. fol. 656. King Edward IV.

Whose [the ryuer of Martia] head springing out of the top of an high mountayn, and falling downe vpon a rocke beneth, made muche noyse and *rorynge*.

Brende. Quintus Curtius, book iii. fol. 18.

Thereat he *rored* for exceeding paine,
 That, to have heard, great horror would have bred.

Spenser. Faerie Queene, book i. can. 8.

Be not affrighted when ye hear the *roar*
 Of the wide waters when they charge the shore.

Drayton. Noah's Flood.

Fearful and high it blazes; help, good people.
 Gov. Pox o' their paper houses, how they smother!
 They light like candles, how the *rore* still rises!

Beaumont and Fletcher. The Island Princess, act i. sc. 2.

GAZ. My master's ware!—We are undone!—O strange! a lady to turn *roarer*, and break glasses!

Massinger. The Renegado, act i. sc. 3.

GIL. You are not mad upon the sudden now.

FRA. No, Gill. I have been mad these five hours:

I'll sell my mill, and buy a *roring*.

Beaumont and Fletcher. The Maid in the Mill, act iii. sc. 1.

The same ocean, entring (as we wil shew) into many armes and creekes, keepeth a *roaring* against the other gulfes and seas within the earth, and so neer commeth unto them, that the Arabian gulf is not from the Ægyptian sea above 115 miles.

Holland. Plinie, book ii. ch. lxxviii.

So roll the billows to th' Icarian shore,
 From east and south when winds begin to *roar*,
 Burst their dark mansions in the clouds, and sweep
 The whitening surface of the ruffled deep.

Pope. Homer. Iliad, book ii.

ROAR.

ROB.

Who can number the groans and the plaints, the *roarings* and the howlings, the curses and imprecations, which, out of the anguish of their souls, they do continually belch out against God, against themselves, and against all the world!

Sharp. *Works*, vol. vi. p. 196. Sermon 10.

The *roarer* is an enemy rather terrible than dangerous. He has no other qualification for a champion of controversy than a hardened front and a strong voice.

Rambler, No. 144.

ROAST, *v.* } Fr. *rost*, *roster*; It. *arrostire*. Lye
ROAST, *n.* } and Somner have *ge-rost-od*. The
Ger. *rost* (Wachter) is *crates*, a grate, and *rosten*, (*torrere*,) to heat or dress by fire upon a grate; he observes that the Gr. *τερεειν*, is to dry, to burn, and *ταρσος*, a grate, and that hence, by metathesis, *rost* and *rosten* may have been formed. To *roast* (in culinary usage) is

To dress or cook meat, vegetables, fruits, by placing them to a fire; meat commonly being suspended and turned; then, generally, to *roast* is to heat, to burn, to parch; met. to heat or place in a hot situation; to jeer, to banter.

To rule the *roast*; *sc.* as king of the feast, orderer, purveyor, president; or may it not be to rule the *roost*, an expression of which every poultry-yard would supply an explanation? See the Quotation from Jewell, in *v. Roost*.

pe comon of pe oste bouht pam hors flesch,
Or mules or assis *roste*, or haf bien mete lesse.

R. Brunne, p. 175.

He coude *roste*, and sethe, and broile, and frie.

Chaucer. *Prologue to the Canterbury Tales*, v. 319.

And so sitteth downe by his fire, and vpon the hard ground
roseth as it were his wearie sides thus daintily stuffed.

Hakluyt. *Voyages*, &c. vol. i. p. 250. Richard Chancellor.

Who home strait led
A five-yeares-old male oxe; feld, slewe, and flead:
Gather'd about him; cut him vp with art;
Spitted and *roasted*; and his euery part
Diuided orderly.

Chapman. *Homer. Odyssey*, book xix. p. 301.

Suffolk, the new-made duke that rules the *rost*,
Hath giuen the dutchy of Aniou and Mayne
Vnto the poore king Reignier.

Shakspeare. *Henry VI. Second Part*, fol. 121.

The rest
Was broil'd and *roasted* for the future feast.

Dryden. *Ovid. Metamorphoses*, p. 103.

On holy days an egg, or two at most;
But her ambition never reach'd to *roast*.

Id. *The Cock and the Fox*.

ROB, *v.* } Fr. *rober*; It. *rubare*; Sp. *robar*; D.
R'OBBER, } *rooven*; Ger. *rauben*; A. S. *reaf-an*,
RO'BBERY. } *ryppan*; Goth. *raub-jan*, to *reave*, to
rip, to *rob*; to tear away to take away, with force or
violence. (See the Quotation from Blackstone.) Ge-
nerally, to take away.

To take away, to deprive of, to plunder, to despoil.

pe kyng made hym wroþ ynow and no wonder yt was
þat strange men in hys owne londe dude hym such trespas
þat a sailede ys lond and to *robbery* drowe
And *robbede* yes bestes and his gam, and hys men slowe.

R. Gloucester, p. 16.

And so þe schrewe *robbores* hadde here wille at stonde.

Id. p. 94.

Justyn & Godemunde, of Danmark dukes riche,
Aryued in Southfolk & brent Ipsewiche;
Men & woman slouh, & *robbed* porgh þe lond.

R. Brunne, p. 38.

It sais of þam þis sawe,
þat þei dred no þing God, no gemed euenhed of lawe,
Bot felawes vnto þefes to *robbores* of ilk cuntre.

Id. p. 65.

Poverté myght passe with oute peril of *robbyng*.

Piers Plouhman. *Vision*, p. 270.

And Ihesus biheeld, and seide, a man cam doun fro Ierusalem
into Ierico: and fel among theuys, and thei *robbeden* hym, and
woundiden hym, and wenten away: and lefte the man half alyue.

Wiclif. *Luk*, ch. x.

The strong, the feeble overgothe,
But I that weare my simple clothe,
Robbe both *robbed*, and *robbores*,
And guile guiling, and guilours.

Chaucer. *The Romant of the Rose*.

And hir in bothe his armis hent,
And put his honde toward the cofre,
Where to *robbe* he made a profre.

Gower. *Conf. Am.* book v

My father your exemplar is

In loue's cause of *robberie*,

I haue it right well vnderstonde.

Id. *ib.*

These two were twinnes, and twixt them two did share

The heritage of all celestiaall grace;

That all the rest it seem'd they *robbed* bare

Of bounty, and of beautie, and all vertues rare.

Spenser. *Faerie Queene*, book iii. can. 6

Each place abounding with fowle injuries,

And fil'd with treasure rackt with *robberies*.

Id. *Mother Hubbard's Tale*.

Bold Amycus from the *robbed* vestry brings

The chalices of heaven, and holy things

Of precious weight.

Dryden. *Ovid. Metamorphoses*, book xii.

Larceny from the person is either by privately stealing, or by
open and violent assault, which is usually called *robbery*.

Blackstone. *Commentaries*, book iv. ch. xvii.

ROBBERY, in *Law*, is the felonious taking from the
person of another goods or money, effected by open
violence or putting him in bodily fear. It is a greater
offence than privately stealing from the person, as by
the picking of pockets, which latter offence is only
punishable with transportation, while robbery is punish-
able with death. It is a species of larceny. See LARCENY.

ROB, It. *robbo*; Fr. *rob*; the juice of black whortle-
berries preserved; Cotgrave. The word is said to be
from the Arabic verb *raba* or *rubaba*, *concinnare*, *colli-
gere*. See Menage.

The infusion and decoction, prepared as before, being evapo-
rated to a thicker consistence, according to the several degrees of
thickness, passeth into a jelly defrutum, *sapa rob* extract, which
contains all the virtues of the infusion or decoction, freed onely from
some of the watery parts.

Arbuthnot. *Nature of Aliments*, p. 57.

ROBE, *v.* } Fr. *robbe*; It. *roba*; Sp. *ropa*; Low

ROBE, *n.* } Lat. *roba*, *rauba*. In A. S. *hrif* is *venter*,
the belly, and *reaf* is *vestimentum*, a clothing or cover-
ing. In Ger. *raub* is *vestimentum*, and *reif*, *venter*;
the application of *hrif*, *reif*, to the trunk of the body
may be because it is *rived* or severed by the lower limbs,
and of *reaf*, and *raub*, to the clothing, because used to
cover the trunk of the body. See BREECHES. A *robe*
is now

A vestment or clothing thrown over other garments;
and usually applied to those worn on ceremonious occa-
sions.

Hure *robe* was rýccher. þan ich rede couthe.

Piers Plouhman. *Vision*, p. 24.

Thus *robed* in russett. ich romede a boutē

Al a somer seson.

Id. *ib.* p. 166.

Largesse had on a *robe* fresh

Of riche purple.

Chaucer. *The Romant of the Rose*, p. 180.

And you shall knowe the cause wherefore these *robes* are worne,
And why I goe outlandishe lyke, yet being Englishe borne.

Gascoigne. *Flowers*.

ROBE. What Christian soldier is there that will not be touched with a religious emulation, to see an order of Jesus, or of St. Francis, or of St. Augustine, do such service, for enlarging the Christian borders; and an order of St. Jago, or St. Michael, or St. George, only to robe, and feast, and perform rites and observances?
Bacon. Works, vol. ii. p. 284. Of an Holy War.

LEAR. I'll see their trial first: bring in the evidence.
 Thou robed man of justice, take thy place;
 And thou, his yoke-fellow of equity,
 Bench by his side.

Shakspeare. King Lear, act. iii. sc. 6.

So, as she bad, that witch they disaraid,
 And rob'd of roiall robes, and purple pall,
 And ornaments that richly were displaid;
 Ne spared they to strip her naked all.

Spenser. Faerie Queene, book i. can. 8.

In auncient time, all the images and statues erected to the honour of any men were in their gownes and robes.

Holland. Plinie, book xxxiv. ch. v.

When rosy morning call'd them from their rest,
 Ulysses rob'd him in the cloak and vest.

Pope. Homer. Odyssey, book v.

With heavy heart deplores that luckless hour,
 When idly first, ambitious of the town,
 She left her wheel and robes of country brown.

Goldsmith. The Deserted Village.

ROBERGIA, in *Botany*, a genus of the class *Decandria*, order *Pentagynia*, natural order *Terebintaceæ*. Generic character: calyx inferior, deeply five-cleft, permanent; corolla, petals five, the length of the calyx; filaments inserted into the receptacle; drupe convex on one side, slightly hollowed on the other; nut one-celled. One species, *R. frutescens*, native of Guiana.

ROBERTIA, in *Botany*, a genus of the class *Syn-genesia*, order *Æqualis*, natural order *Compositæ*. Generic character: involucre many-leaved, equal; receptacle scaly; down feathery; hairs slightly membranous at the base.

One species, *R. taraxacoides*, native of Corsica.

RO'BIN, } The redbreast; Low Lat. *rubecula*;
RO'BINET. } a rube-dine *pectoris*, from the redness of his breast. A bird familiarly called Robin; as other animals are called Tom, Jack, &c.

And robyn red breste
 He shal be the preest
 The requiem masse to syng.

Skelton. The Boke of Philip Sparow.

— The nightingale, of birds most choice,
 To do her best shall strain her voice;
 And to this bird, to make a set,
 The mavis, merl, and robinet.

Drayton. The Muses' Elysium. Nymphal 8.

ROBINIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx small, bell-shaped, four-cleft; standard of the corolla round, spreading, reflexed; wings furnished with a short appendage; stamens in two bundles; pod long, one-celled, many-seeded.

A genus of elegant shrubs, natives of both hemispheres; several are indigenous in Siberia. *R. hispida*, well-known in gardens by the name of Rose Acacia, is a native of North America.

ROBINSONIA, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*. Generic character: calyx five-toothed; corolla, petals five; berry striated, two-celled; cells one-seeded; seeds villose.

One species, *R. melianthifolia*, native of Guiana.

ROBU'ST,
ROBU'STIOUS,
ROBU'STIOUSLY,
ROBU'STIOUSNESS,
ROBU'STNESS.

Fr. *robuste*; It. and Sp. *robusto*; Lat. *robustus*; strong, firm, (from *robur*, strength. See **CORROBORATE**.)
 Strong, hale, hearty, of confirmed strength or vigour; of rude strength; vigorous, rudely vigorous.

The duke of Yorke had fastened his chaine between these two strong and robustious pillars.

Hall. Henry VI. fol. 168.

After they had rush'd in, he being newly awak'd, and staring upon them, and thinking to defend himself, a robust boisterous rogue knockt him down, and so the rest fell upon him, and strangled him with much ado.

Howell. Letter 22. book i. sec. 3. p. 143.

Why fell I not from that my all-arm'd horse,
 On which I rode before the gates of Gaunt,
 Before the Belgic and Burgonian force,
 There challenging their countrie's combatant;
 Cast from my seat in some robustious course,
 That they of me the victory might vaunt?

Drayton. The Barons' Wars, book vi.

Indeed the multitude commend writers as they do fencers or wrestlers, who, if they come in robustiously, and put for it with a deal of violence, are received for the braver fellows.

Ben Jonson. Discoveries.

That robustiousness of body, and puissance of person, which is the only fruit of strength.

Sir E. Sandys. State of Religion, sig. S. 2.

Survey the warlike horse! didst thou invest
 With thunder his robust distended chest?

Young. Paraphrase of Job.

This proceeded rather from the robustness of the bladder, that was able to resist the weight of a taller pillar of water, than from the non-gravitation of water in the upper part of the tube on that in the lower.

Boyle. Works, vol. iii. p. 620. Hydrostatical Discourse.

— No works indeed,
 That ask robust, tough sinews, bred to toil,
 Servile employ! but such as may amuse,
 Not tire, demanding rather skill than force.

Cowper. The Task, book iii.

ROCHEA, in *Botany*, a genus of the class *Pentandria*, order *Pentagynia*, natural order *Crassulaceæ*. Generic character: calyx five-cleft; corolla tubular, deeply five-cleft; stamens alternate with the segments of the corolla; five scales at the base of the germen; capsules five.

A genus divided from *Crassula*, containing three species, shrubs, with fleshy leaves, natives of the South of Africa.

ROCHEFORTIA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*. Generic character: calyx five-parted; corolla funnel-shaped, throat open; fruit two-celled, many-seeded.

Two species, natives of the island of Jamaica.

ROCHESTER, a City in the County of Kent, on the Eastern bank of the river Medway, which here is upwards of 600 feet in width, and deep enough to carry ships of any burden. The Watling Street of the Romans passed directly through the City, which is generally believed to be identical with *Durobrevis*. It was incorporated by Henry II., and is situated in a pleasant valley surrounded by hills, except on the side which is bounded by the Medway. The City is connected with Strood on the opposite bank of the river by an ancient stone bridge erected in the XIVth Century, but of late years greatly improved. Immediately after the bridge is passed, the first object which attracts attention are the remains of the Castle on the right hand. Antiquaries have referred its foundation to the Conquest. It stands

ROBUST.
ROCHESTER.

ROCHES-TER. on a small quadrangular eminence embracing a square, each side of which measures 300 feet, within walls 7 feet in thickness, 20 in height. In the South-Eastern angle is the majestic shell of the Keep, nearly perfect. The base is about 70 feet square, the height 104 feet, and the walls are 12 feet thick. Adjoining the Eastern angle is a smaller tower, about two-thirds the height of the greater, and about 28 feet square.

The summit of the great tower may still be reached by a stair in the North-Eastern angle, which communicated with the rooms on each of the three floors. The interior is divided by a strong partition wall, 5 feet in thickness, into two nearly equal apartments, 46 feet by 21, and varying in height; those on the basement being 13 feet, on the second story 20, on the third 32, on the fourth 16. They communicate with each other by open arches on each floor. This central wall contained a well 2 feet 9 inches in diameter. The tenons of the floors were removed in the reign of James I.

The most ancient parts of the Cathedral, the Western doorway, and the lower division of the nave, are attributed to Gundulph, second Bishop after the Conquest, in the XIth Century. The tower rising from the centre is 136 feet high. On the North side of the Cathedral is a very massive tower, also attributed to Gundulph, and once supposed to have been designed by him for a Treasury or Muniment Room, an entrance having been constructed by a flight of steps, rising from an arch which connected its roof with that of the Church; but later observation has proved that a doorway below is coeval with the original building, which probably therefore was then intended to be a Bell Tower. The Chapter consists of a Dean and six Prebendaries. The foundation of the See is traced to Ethelbert, in the VIIth Century. St. Andrew is the Patron Saint. Dimensions of the Cathedral from East to West 306 feet; nave, from West door to the steps of the choir, 150 feet; choir 156; length of West transept 122 feet; of East transept 90, breadth of nave 33 feet; of the nave and side aisles together 75; width of West front 81 feet. This is distinguished by a most beautiful entrance.

Of the four Churches once belonging to Rochester, St. Nicholas, St. Margaret, St. Clement, and St. Mary, only the first two now remain. The charitable establishments of the City are St. Catherine's Hospital, founded by private benevolence in the XIVth Century, rebuilt in 1717, and now affording an asylum and a certain allowance to twelve poor persons; a Grammar School, founded by Henry VIII., and endowed with exhibitions to the Universities; an Almshouse, founded by Mr. Richard Watts in the reign of Elizabeth, to afford one night's lodging and entertainment, and a gratuity of fourpence, to each of six poor travellers, "not being rogues or proctors;" (probably, *procuratores*, itinerant Priests;) the estate left for this purpose now exceeds £1000 a-year, and is applied to the diminution of poor-rates; and a Free School, founded in 1701 by Sir Joseph Williamson, who thrice represented the City in Parliament. A respectable brick-built Town-hall and a Clock-house, erected by Sir Cloudesley Shovel, are the other public structures; the Episcopal Palace is at Bromley. Rochester returns two Members to Parliament. Distant from London 30 miles, S. E., from Maidstone 9, from Canterbury 26, N. W. Population, in 1831, 9831.

ROCK,
RO'CKLESS,
RO'CKY,
RO'CKINESS.

Fr. *roc, roche, rocher*; It. *rocca*; Sp. *roca*, from *ρῶξ*, a cleft, or *ρηγνῆμι*, to break; Skinner. But Tooke considers *rock* to be the past participle *rog, rock*, from *wrig-an*, to cover, and so called, because covered or hidden, *sc.* by water; though afterwards from similarity of appearance, when left uncovered by the secession of the waters, masses of a like substance upon the coast, or upon land, received the same name; and *rock*, met.

A sure hold, a solid foundation, a security, defence, protection. See *Rock*, *infra*.

So þat he was al to raced pecemel in a stonde,
Eche lym from oþer, among þe *roches*, er he com to gronde.
R. Gloucester, p. 22.

And what sowne is it like, quod he?
Peter, lyke the beating of the see,
Quod I, against the *rockes* halow,
Whan tempests done her shippes swallow.
Chaucer. The House of Fame, book iii.

Er thei to londe might approche,
The ship to claus vpon a *roche*,
And all goth downe in to the depe.
Gower. Conf. Am. book viii.

The firste of these legates or messengers was Simon, whose name he chaunged, and called hym Cephas; the which word implieth as much as this Latine name Petrus, y^e is to saie, a *rocke* or a stone.
Udall. St. Marke, ch. iv. fol. 134.

Till in his flight he gan descrie the top
And the stepe flankes of *rocky* Atlas hill,
That with his crowne sustains the welkin vp.
Surrey. Virgil. Æneis, book iv.

Because the same was a *rockesure* waie to make al obediente people hate the ghospell, and to prouoke the rulers and magistrates to suppress it.

Udall. Erasmus, vol. i. p. xxxi. *Dedication to Queene Katherine*.

As when a ship, that flies fayre under sayle,
An hidden *rocke* escaped hath unwares,
That lay in waite her wrack for to bewaile;
The mariner yet halfe amazed stares
At perill past, and yet in doubt ne dares
To ioy at his foolhappie oversight.
Spenser. Faerie Queene, book i. can. 6.

But all of diamond perfect pure and clene
It framed was, one massy entire mould,
Hew'n out of adamant *rocke* with engines keene,
That point of speare it never percen could.
Id. Ib. book i. can. 7.

May not a thousand dangers sleep
In the smooth bosome of this deep?
No, 'tis so *rocklesse*, and so cleare,
That the rich bottom does appeare
Pav'd all with precious things, nor torne
From shipwrackt vessels, but there borne.
Beaumont. Of Loving at First Sight.

The sov'reign castle of the *rocky* isle,
Wherein Penelope the princess lay,
Shone with a thousand lamps, which did exile
The shadows dark, and turn'd the night to day.
Davies. On Dancing.

Backe againe I bore,
And swom till I was falne vpon a flood,
Whose shores, me thought, on good aduantage stood,
For my receipt, *rock-free*, and fenc't from wind.
Chapman. Homer. Odyssey, book vii. p. 106.

I'm clear by nature, as a *rockless* stream,
But they dig through the gravel of my heart,
And raise the mud of passions up to cloud me.
Dryden. The Duke of Guise, act iii. sc. 1.

My heart's so plain,
That men on every passing through may look,
Like fishes gliding in a christal brook;
When troubled most, it does the bottom show.
'Tis weedless all above, and *rockless* all below.
Id. The Conquest of Granada, act iv. sc. 1.

ROCK.

What could I do, alas! encompass'd round
With steepy mountains and a rocky ground?
Hoole. Orlando Furioso, book ii. p. 50.

This genial intercourse, and mutual aid,
Cheers what were else a universal shade,
Calls nature from her ivy-mantled den,
And softens human rock-work into men.

Cowper. Charity.

ROCK, *n.* } See ROCK, *ante*.

ROCK, *v.* } A rock (*rog, rok*) is, the parts, covered by the wood, of the machine which spinsters use. *Rocket*, the diminutive of *rock*, part of the dress of a Bishop, or, as formerly, of women; or that with which a person is covered. See *Tooke. Rockett* (in *Froissart*) appears to have been a spear with its point or head covered, to prevent injury, as the point of a fencing foil now is; a firework with the powder closely covered.

To rock, *rook, rouk, or ruck*, to cover, to lie covered, to lie close; to take shelter.

Rooky, in *Shakspeare*, seems to be merely *rooking*, *i. e.* covering, protecting, sheltering.

To *rook* appears also to signify, to play the *rogue*, (see *ROGUE*,) to practise *roguery*; and, consequentially, to cheat, to rob, to plunder.

For there nis no cloth sitteth bette
On damosell than doth *rokette*;
A woman well more fetise is
In *rokette* than in cote, ywis.
The white *rokette*, riddleed faire,
Betokeneth that full debonaire
And swete was she that it bere.

Chaucer. The Romant of the Rose.

His casule, chimer, and *rochet*, were all to be rent and torne from his back.
Fox. Actes, &c. fol. 207. Henry II.

For if the Gospell were taught without checke, in a whyle shoulde nothinge remayne of that generation, neyther myter nor *rochette*, shauen croune nor anoyntyng.

Bale. The Image of both Churches, part ii. p. 67.

These homicides all
That in a wayte lye to murder men.
O false murderer, *rucking* in thy den!

Chaucer. The Nonnes Preestes Tale, v. 15162.

What is mankynde more unto you yholde
Than is the shepe that *rouketh* in the folde?

Id. The Knightes Tale, v. 1310.

Now ryse, my dere brother *Troilus*,
For certes it non honour is to the
To wepe, and in thy bed to *rouken* thus.

Id. Troilus and Creseide, book v. p. 409.

But now thei *rucken* in her nest,
And resten, as hem liketh beste
In all the swetnes of delices.

Gower. Conf. Am. book iv.

Haue lazie wings, be euer leane,
In sullen corners *ruke*,
When thou art seene be thought a signe
To folke of euill lucke.

Warner. Albion's England, book vii.

And on the Mōday next after, the sayd lx. knightes to be in the same place redy to iuste, and to abyde all cōmers curtesly to ron with *rockettes*.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 173. p. 511.

We shall be at saynt Ingylbartes, in the marches of Calays, the twenty day of the moneth of May nexte commyng, and there contynewe thyrty dayes complete, the Fridayes onely excepte, and to deliuer all maner of knyghtes and squyers, gentlemen, straungers of any maner of nacyon, whatsoeuer they be, that wyll come thyder, for the breakyng of fyue speares, outhur sharp or *rockettes* at their pleasure.

Id. Ib. ch. 162. p. 448.

The owle shriek'd at thy birth, an euill signe;
The night-crow cry'de, aboding lucklesse time;
Dogs howl'd, an hiddeous tempest shook down trees;
The rauen *rook'd* her on the chimnies top,
And chatt'ring pies in dismall discords sung.

Shakspeare. Henry VI. fol. 171.

All noises else,
At bonfires, *rockets*, fireworks, with the shoutes
That cry that gladnesse, which their hearts would pray,
Had they but grace of thinking, at these routes,
On th' often comming of this holy-day.

Ben Jonson. Underwoods. To the King.

Each prest adorn'd was in a surplesse white,
The bishops dond their albes and copes of state,
Aboue their *rockets* button'd faire before,
And miters on their heads, like crownes they wore.

Fairefax. Godfrey of Boulogne, book xi. st. 4.

Alcides ne'er more fit for war's stern shock,
Than when with woman spinning at the *rock*.

Drayton. Queen Catherine to Owen Tudor.

Light thickens,
And the crow makes wing to th' *rookie* wood.

Shakspeare. Macbeth, fol. 141.

Then on the *rock* a scanty measure place
Of vital flax, and turn'd the wheel apace.

Dryden. Ovid. Metamorphoses, book viii.

WILL. In the gaming-house, where I found most of the town-wits; the prose-wits playing, and the verse-wits *rooking*.

Id. An Evening Love, act iii. sc. 2.

How any one's being put into a mixed herd of unruly boys, and there learning to wrangle at trap, or *rook* at spanfarthing, fits him for civil conversation or business, I do not see.

Locke. On Education, sec. 70.

ROCK, *v.* } Fr. *rocquer un enfant*, to rock a
RO'CKER, } child. Skinner and Junius think from
RO'CKING, *n.* } the Ger. *rucken*; Sw. *rucka, rugga*,
cedere, movere, motilare, to move, to set in motion.
(A. S. *ræcan*, to reach.)

To move, to set in motion; and further, to move to and fro, backwards and forwards; and, consequentially, to lull to rest.

Al so hemselve. suffren muche hunger
And wo in wint tyme. with wakyng a nyghtes
To ryse to þe ruel. (reel) to *rocke* þe cradel. &c.

Piers Plouhman. Vision, p. 151.

The cradel at hire beddes feet was sette,
To *rocken*, and to yeve the child to souke.

Chaucer. The Reves Tale, v. 4154.

And finally to *rocke* vs a sleepe with all, he sayth, that he shall neuer speede well that will seeke in the Scripture whether our prelates teach vs a true fayth, though ten preach ech contrary to other in one day.

Tyndall. Workes, p. 287. Aunsweere to Maister More.

He took her in his arms, and *rocking* her to and fro, In faith, mistress, said he, it is high time for you to bid us good night for ever, since others can possess your place in your own time.

Sidney. Works, vol. ii. book iii. p. 642. Arcadia.

Midwiues, *rockers*, nurses, with the cradle and all, were prepared and in a readines.

Fox. Actes, &c. fol. 1450. Queene Mary.

Then faire-helm'd Hector turn'd to Troy, an (as he trode the field) The black bul's hide, that at his backe he wore about his shield, (In the extreme circumference) was with his gate so *rockt*, That (being large) it (both at once) his necke and ankles knockt.

Chapman. Homer. Iliad, book vi. p. 85.

In like manner to procure sleepe, by lying in some pretie bed that may be *rocked* to and fro, is oftentimes good for a man's health.

Holland. Plinie, book xxviii. ch. iv.

At every gate
The thronging populace with hasty strides
Press furious, and, too eager of escape,
Obstruct the easy way; the *rocking* town
Supplants their footsteps.

Philip. Cider, book i. p. 387.

ROCK.

ROCK.
—
RODO-
MONT.

His fellow, who the narrow bed had kept,
Was weary, and without a *rock*er slept!
Supine he snor'd.

Dryden. *The Cock and the Fox*.

The trembling altar his appearance spoke;
The marble floor and glittering ceiling shook;
The doors were *rock'd*; the statue seem'd to nod,
And all the fabric own'd the present god.

Id. Ovid. *Metamorphoses*, book xv.

Every part of a tree will not do for this purpose, [rook's nest,] as some branches may not be sufficiently strong; and still others may be too much exposed to the *rockings* of the wind.

Goldsmith. *History of the Earth*, vol. iii. ch. ii. p. 154.

ROD, D. *roede*; Ger. *rutt*, *reis*; Sw. *ris*. Wachter derives from *rys-en*, *surgere*, *quia surgit ex arbore, et crescendo erigitur*. See RISSE, RUSH, and REED.

A shoot rising or springing, (from a tree.) A long, thin shoot or twig: a long stick, used as an emblem of authority; long, slender twigs, collected into a bundle; a long stick to measure with.

For ye shall see ladies stond,
Ech with a great *rod* in hond,
Clad in black with visage white
Ready each other for to smite.

Chaucer. *Dream*.

For that shall I alwaie beseche
Unto the mighty Cupido,
That he so mochel wolde do
(So as he is of loue a god)
To smite hem with the same *rod*,
With whiche I am of loue smiten.

Gower. *Conf. Am.* book iii.

I have authoritye geuen vnto me by Christ to punishe rebellions and such as are vnrewlye with the *rodde* of correccion.

Udall. 1 *Corinthians*, ch. iv. fol. 14.

And by his very strength my line so far doth stretch,
As draws my floating cork down to the very ground,
And wresting of my *rod* doth make my boat turn round.

Drayton. *The Muses' Elysium*. *Nymphal* 6.

When he [Octavius] saw that the king Antiochus made no hast to give him his dispatch presently, but said he would make him an answer another day, (he) made no more adoe, but, with a wand or *rod* that he had in his hand, drew a circle about the king, and compelled him perforce to give him his answer before he stirred his foot without that compasse.

Holland. *Plinie*, book xxxiv. ch. vi.

Princes do find so great conveniency, ease, and security in their government by law, that the sence of that will keep them far better within the compass of laws than the people's holding a *rod* over them, which the best princes are like to suffer the most by, and bad will but grow desperate by it.

Stillingfleet. *Sermon* 7. vol. i. p. 290.

Feeling, but as a monarch ought to feel,
Not for myself, but them, I'll kiss the *rod*,
And, having own'd the justice of my God,
Myself with firmness to the ruin give,
And die with those for whom I wish'd to live.

Churchill. *Gotham*, book ii.

RO'DOMONT, } Fr. *rhodomontade*; from Ro-
RODOMONTA'DE, } domont, one of Boyardo's and
RODOMONTA'DO. } Ariosto's fighting men.

A blusterer, a boaster.

He had thought to have ben the leader
Had the match gone on,
And triumpht our whole nation
In his *rodomont* fashion.

Ben Jonson. *The Masque of Owles*.

I was a little
Mov'd in my nature, to hear his *rodomontados*, and
Make a monster of his mistress.

Beaumont and Fletcher. *The Coronation*, act iii. sc. 1.

The duke of Epemon, in a kind of a *rodomontado* way, desir'd leave of the king to block up Rochel, and in six weeks he would undertake to deliver her to his hands; but I believe he reckons without his host.

Howell. *Letter* 24. book i. sec. 2.

If we have no reason for it, all these glorious words, generous, brave, &c., are nothing but empty flash and mere *rhodomontado*.

Scott. *Christian Life*, part ii. ch. iii. p. 228.

St. Jude argues with the *rodomonts* of his time, out of the story of the archangels and the devil's contest about the body of Moses.

Boyle. *Works*, vol. ii. p. 274. *The Style of the Holy Scriptures*.

ROE, (of a fish.) The *roan* or *roes* of fishes, *ova piscium*, Ger. *roggen*, D. *rogger*, Skinner derives from Lat. *renes*, the reins. Wachter from the Gr. *ῥόγ-αν*, *tu-mere*, to swell.

BEN. Here comes Romeo, here comes Romeo.

MER. Without his *roe*, like a dried hering. O flesh, flesh, how art thou fishified!

Shakspeare. *Romeo and Juliet*, fol. 61.

ROE, } A. S. *raa*; D. *ree*; Ger. *reh*; Sw.
ROE'BUCK. } *rae*. Ihre thinks it so called from its colour, (sc. *roan*, q. v. between a yellow and grey,) and adds that the turtle-dove is in the Goth. called *hrava-dubo*, and, as he conjectures, on the same account.

Alas! quod John, Alein, for Christes pein
Lay down the swerd, and I shal min alsua,
I is ful wight, God wate, as is a *ra*.

Chaucer. *The Reves Tale*, v. 4083.

The *roe's* much swiftnes doth no more avail,
Nor help him now, than if he were a snail.

Drayton. *Noah's Flood*.

A harmless *roe*buck gave the rustling sounds;
Lo, from the thicket swift as thee he bounds.

Mickle. *The Lusiad*, book ix.

ROELLA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Campanulaceæ*. Generic character: corolla funnel-shaped, with deep stamiferous valves; stigma two-cleft; capsule two-celled, cylindrical, inferior.

Five species, natives of Africa.

ROEMERIA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Papaveraceæ*. Generic character: calyx two-leaved; corolla, petals four; capsule elongated, two, three, or four-valved, valves bursting from the apex to the base; seeds kidney-shaped, destitute of a glandular crest.

Three species, natives of Europe and Asia. Decandolle places *Chelidonium hybridum* (Eng. Bot. 201.) in this genus.

ROGATION, Fr. *rogation*; It. *rogazione*; Sp. *rogacione*; Lat. *rogatio*, from *rogare*, to ask, to beg. See the Quotation from Hooker.

I wishe, M. Bilney, that you would but once search and fet out the first origine of these *rogation* daies.

Fox. *Actes*, &c. fol. 914. *Henry VIII*.

As things inuented to one purpose are by vse easily conuerted to more, it grew that supplications with this solemnitie for the appeasing of God's wrath, and the auerting of publique euils, were of the Greeke church termed Litanies,—*Rogations* of the Latine.

Hooker. *Ecclesiasticall Politie*, book v. sec. 41.

ROGUE, n.

ROGUE, v.

RO'GUERY,

RO'GUESHIP,

RO'GUISH,

RO'GUISHLY,

RO'GUISHNESS,

RO'GUY.

Skinner and Junius mention, among other Etymologies that have been suggested, the A. S. *wreg-an*, to accuse. Tooke considers it to be (according to the usual change of the characteristic) the past tense, and, therefore, past participle of the A. S. verb *wreg-an*, to *wrine*, to *wrie*, to cover, to cloak; and the meaning, covered, cloaked, to be the most aptly applied to the character designated by the term.

One who has *covered*, cloaked, concealed, secret designs or purposes; insidious, treacherous designs; a dishonest person; very early applied to vagrants or

RODO-
MONT.
—
ROGUE.

ROGUE. vagabonds, beggars or mendicants, from their common dishonesty; also, applied to a playful knave, an arch fellow; to one who practises insinuating or ingratiating artifices.

For if hee be but once so taken idely *roguing*, hee may punish him more lightly, as with stockes, or such like.

Spenser. Works, vol. viii. p. 499. *View of the State of Ireland*.

And to these may be added another sort of like loose fellows, which doe passe up and downe amongst gentlemen by the name of jesters, but are (indeed) notable *rogues*, and partakers not onely of many stealthes, by setting forth other men's goods to be stolne, but also privy to many traitorous practices and common carriers of newes, with desire whereof you would wonder how much the Irish are fed.

Id. Ib. p. 399.

Wherefore, to compass his intent, he fell in friendship with Glaucia and one Staturinus, two of the most bold, most desperate, and most harebrained young men that were in all Rome, who had all the rabblement of *rogues* and beggars, and such tumultuous people, at their commandment.

Sir Thomas North. Plutarch, p. 361. *Caius Marius*.

To live in one land is captivity,
To run all countries a wild *roguery*.

Donne. Elegy 3.

THO. This was thy *roguing*,
For thou wert ever whispering; fye upon thee.

Beaumont and Fletcher. Monsieur Thomas, act iii. sc. 1.

But and the outsides offend your *rogueships*, look o' the lining,
'tis silk.

Dekkar. The Honest Whore, act i. sc. 1.

JU. Never was a man so miserably undone,
I would lose a limb to see their *rogueships* totter.

Beaumont and Fletcher. The Night Walker, act iii.

Though the persons by whom it is used be of better note then the former *roguish* sort, which you reckoned, yet the fault (me thinks) is no lesse worthy of a marshall.

Spenser. Works, vol. viii. p. 404. *View of the State of Ireland*.

O my dull pate here!
If I had open'd this when it was given me,
This *roguy* box.

Beaumont and Fletcher. The Pilgrim, act iii. sc. 1.

MEM. I say, who art thou?

EUMEN. Why, 'tis the princess, sir.

MEM. The devil, sir,

'Tis some *roguey* thing.

Id. The Mad Lover, act iv. sc. 1.

I tell thee there is nothing
(It may be thy case, Tranio, therefore hear me)
Under the sun (reckon the mass of follies
Crept into th' world with man) so desperate,
So mad, so senceless, poor and base, so wretched,
Roguy, and scurvy.

Id. The Woman's Prize, act iii. sc. 1.

His heir *roguishly* wasteth all.

Grainker. On Eccles. p. 303.

Besides all these, there were a sort of wights,
I think my author calls them Teckelites,
Such hearty *rogues* against the king and laws,
That favour'd ev'n a foreign rebel's cause.

Dryden. Epilogue to Constantine the Great.

A flam more senseless than the *roguery*
Of old aurspicy and augury,
That out of garbages of cattle
Presag'd th' events of truce or battle.

Butler. Hudibras, part ii. can. 3.

Cur'd of her splenetic and sullen fits,
To such a peer my willing soul submits,
And to such virtue is more proud to yield,
Than 'gainst ten titled *rogues* to keep the field.

Churchill. The Candidate.

From aromatic shrubs the *roguish* gale
Steals young perfumes, and wafts them through the vale.

Id. The Prophecy of Famine.

ROIL. Chaucer writes the verb, to roll, reile, and,

according to Junius, *roile*; and the application of the noun by Udall and Gascoigne seems to be, to lazy, unwieldy, *rolling* corpulence.

But sure that horse which tyreth like a *roile*,
And lothes the grieve of his forgalded sides,
Is better much than is the hairbrainde colte
Which headlong runnes and for no bridle bydes,
But hunte for sinne in euey hit and holte.

Gascoigne. The Complaint of Phylomene.

Nulla in tam magno est corpore mica salis, There is not one crumme or droppe of good facion in all that great *royle's* bodye.

Udall. Flowres for Latine Speaking, fol. 69.

ROIST, v. } Fr. *rustre*; a ruffin, *royster*, hackster,
ROI'STER, n. } swaggerer; saucy, paultry, scurvy fel-
ROI'STER, v. } low; Cotgrave. The Fr. *rustaud*,

which may be the same word, is explained by Cotgrave to be a clown, a boor, a rude, unmannerly clown; and is derived by Vergy (see Menage) from the Lat. *rusticus*. *Roist* seems more probably to descend from *hrecos-an*, *raesan*, to rush, *ruere*, *irruere*, *impetum facere*; and to be applied, generally, to unruly violence.

To act with unruly violence, riotously, blusteringly; turbulently, licentiously.

There was not to be seene in his house any courtlie *roisting* or idlenesse; no pompe at all, no dishonest word, no swearing could there be heard.

Fox. Actes, &c. fol. 1368.

These *roysters* tooke from him all that they could finde, leauing nothing behinde them, insomuch as they tooke awaie the very hose from his legs, for all that he could doe.

Id. Ib. fol. 805. *Henry VIII.*

I haue a *roisting* challenge sent amongst
The dull and factious nobles of the Greekes
Will strike amazement to their drowsie spirits.

Shakspeare. Troilus and Cressida, fol. 87.

Then *royster* doyster in his oylie tearmes,
Cutts, thrusts, and foines at whomesoeuer he meets.

Anonymous. The Returne from Parnassus, act i. sc. 2.

But all his [Edmond Campian] searching in London availing not, he did at length, upon some intimation received, go into Berks, where with his attendants making great enquiries, did with much ado find him out (disguised like a *royster*, as 'tis said) in the house of Edw. Yates, Esq. at Lyford.

Wood. Athenæ Oxonienses, p. 207.

His [Churchyards] heels being equally restless with his head, he went to the royal court, laid aside his books, and for a time, so long as his money lasted, became a *royster*.

Id. Ib. p. 317.

ROLANDRA, in Botany, a genus of the class *Syn- genesia*, order *Segregata*, natural order *Compositæ*. Generic character: calyx two-valved, one-flowered; corolla hermaphrodite, florets collected into a dense head, interspersed with scales; down almost obsolete; apex of the seeds furnished with a toothed membrane.

A genus allied to *Echinops*, containing one species, *R. argentea*, native of the East Indies.

ROLL, v. } Fr. *roule*, *rouler*; It. *rotolare*; Sp.
ROLL, n. } *arollar*; D. *rollen*; Ger. *rollen*; Sw.
Ro'LLER, } *rulla*; Low Lat. *rotula*, *rotulare*, from
Ro'LLING. } Lat. *rota*, a wheel.

To wheel or turn round or about, to turn over, to move or turn upon its own axis; to revolve, to involve, or enfold, to enwrap; to move in *rolling* masses; to make circuitous movements.

And than wold he upon his Bible seke
That ilke proverbe of Ecclesiaste,
Wher he commandeth, and forbedeth faste,
Man shal not suffer his wif go *roule* aboute.

Chaucer. The Wif of Bathes Prologue, v. 6232.

ROIL.
ROLL.

ROLL.
—
RO-
MANCE.

This yongest, which that wente to the toun,
Ful oft in herte he rolleth up and doun
The beautee of thise florens newe and bright.
Chaucer. The Pardoner's Tale, v. 12771.

And the fletyng streme that reileth downe diuersly from high
mountaignes is arrested and resisted ofte tyme by the encountring
of a stone that is departed and fallen from some rocke.
Id. Boecius, book i. met. 7.

The childe laie bathende in hir bloode
Out rolled from the mother barme.
Gower. Conf. Am. book iii.

Comming out of the water, she rowleth herselfe into a yellow
cloth of fourteene braces long.
Hakluyt. Voyages, &c. vol. ii. p. 220. M. Cæsar Frederick.

Also the shippes doe roule very much in the harbour, by reason
in foule weather the sea will bee mightily growen.
Id. Ib. vol. iii. p. 552. The State of the West Indian Townes.

If I should be ruled by the rolle which reciteth the ports that
send barons to the Parliament, I must then adde to these, Hastings
and Hyde.
Id. Ib. vol. i. p. 17. The Cinque Ports.

In the which rolle was conteyned dyuerse artycles agayne y^e
mayre and rulers of the cytie of Lodon, and that by theym the
comynaltie of the cytie was greuously taskyd and wrongyd.
Fabyan. Chronicle, p. 339.

This punishment was geuen vnto him, that he should beare vp a
great stone vnto the top of an hill, and as often as it rolled downe,
to featte it vp againe, but he could neuer cause it to lie, but that
it rolled downe to the hilles foote againe immediately.
Udall. Flowres, fol. 109.

Whom when on ground she groveling saw to rowle,
She ran in hast his life to have bereft;
But, ere she could him reach, the sinfull sowle
Having his carrion corse quite sencelesse left
Was fled to hell.
Spenser. Faerie Queene, book iv. can. 7.

These signes haue markt me extraordinarie,
And all the courses of my life doe shew
I am not in the roll of common men.
Shakspeare. Henry IV. fol. 60.

CÆSAR. Cleopatra,
Not what you haue reseru'd, nor what acknowledg'd,
Put we i' th' roll of conquest.
Id. Antony and Cleopatra, fol. 366.

Well, when the said seed is gotten, and the plot of ground laid
even and smooth, with cylinders or rollers, it must be sowne of a
good thicknesse in the moneth of Aprill.
Holland. Plinie, book xvii. ch. x.

How abject, how inglorious, 'tis to lie
Groveling in dust and darkness, when on high
Empires immense, and rolling worlds of light,
To range their heavenly scenes, the muse invite!
Blackmore. Creation, book i.

Then thus Ulysses! Happy king, whose name
The brightest shines in all the rolls of fame!
In subjects happy! with surprise I gaze!
Thy praise was just; their skill transcends thy praise.
Pope. Homer. Odyssey, book viii.

Still they write on, and like great authors shew;
But 'tis as rowlers in wet gardens grow
Heavy with dirt, and gathering as they go.
Dryden. The Conquest of Granada. Prologue.

Pope is always smooth, uniform, and gentle. Dryden's page is
a natural field, rising into inequalities, and diversified by the va-
ried exuberance of abundant vegetation; Pope's is a velvet lawn,
shaven by the scythe, and levelled by the roller.
Johnson. Life of Pope.

Mark well the rollings of her flaming eye;
And tread on tiptoe, if you dare draw nigh.
Young. Love of Fame. Satire 6.

ROMA'NCE, n. } For the origin of the term see
ROMA'NCER, } the Quotation from Percy; and
ROMA'NTICK, } for its application, that from Rit-
ROMA'NTICAL. } son. As the old romances were
VOL. XXVII.

remarkable for the extravagance of their fictions, ro-
mance became applied to
Any wild, extravagant story, or invention of the ima-
gination.

Sir Henry, Daud sonne, he romance sais so here,
His dedis were more to mone, þan sex he best þer were.
R. Brunne, p. 118.

Whan Philip tille Acres cam, litelle was his dede,
he romance sais grete sham, who so þat pas wille rede.
he romancer it sais, R. did mak a pele. *Id. p. 157.*

Men speken of romaunces of pris,
Of Hornchild, and of Ipotis,
Of Bevis, and sire Guy,
Of sire Libeux, and Pleindamour,
But sire Thopas, he bereth the flour
Of real chevalrie.
Chaucer. The Rime of Sire Thopas, v. 13925.

The god of love than charged me
Anon, as ye shall here and see,
Word by word, by right emprise,
So as the romaunt shall devise.
Id. The Romant of the Rose.

And eke in otherwise also,
Full oft tyme it falleth so,
Myn ere with a good pitance,
Is fed, of redinge of romance,
Of Idoyne, and of Amadas,
That whilome were in my cas.
Gower. Conf. Am. book vi.

Such forces met not, nor so wide a camp,
When Agrican with all his Northern powers
Besieg'd Albracca, as romances tell.
Milton. Paradise Regained, book iii. v. 36.

I speak especially of that imagination which is most free, such
as we use in romantick inventions, or such as accompany the more
severe meditations and disquisitions in philosophy, or any other
intellectual entertainments.

More. The Immortality of the Soul, book ii. ch. xi. p. 106.

But whosoever had the least sagacity in him could not but per-
ceive that this theology of Epicurus was but romantical.

Cudworth. Intellectual System, book i. ch. ii. p. 60.

I cannot but look on an indifferency of mind, as to the good or
evil things of this life, as a meer romantick fancy of such who
would be thought to be much wiser than they ever were, or could be.
Stillingsfleet. Sermon 3. vol. iii. p. 91.

The Latin tongue, as is observed by an ingenious writer, ceased
to be spoken in France about the ninth century, and was succeeded
by what was called the romance tongue, a mixture of the language
of the Franks and bad Latin. As the songs of chivalry became the
most popular compositions in that language, they were emphatically
called romans or romants, though this name was at first given to
any piece of poetry.

Percy. Reliques, vol. iii. p. xxi. On the Ancient Metrical Romances.

If what is called a metrical romance, in its most extensive ac-
ception, be properly defined a fabulous narrative or fictitious
recital in verse, more or less marvellous or probable, it may be
fairly concluded that this species of composition was known at a
very early period to the Greeks, and, in process of time, adopted
from them by the Romans.

Ritson. Romances, vol. i. Dissertation.

The fictions of the Arabs were adopted by the Trobadours and
first Gothic romancers.

Mickle. The Lusiad, book ix.

Yet thus it is; nor otherwise can be;
So far from aught romantic, what I sing.
Bliss has no being, virtue has no strength,
But from the prospect of immortal life.

Young. The Complaint. Night 8.

RO'MANIZE, v. } Romanist; a professor of the
RO'MANISM, } Roman Catholic religion.
RO'MANIST, } To romanize, to adopt, to follow
RO'MISH, } Roman or Latin words or idioms
RO'MIST. } of speech; Roman (Catholic)

Yet, if your English *romanized* hearts,
'Gainst nature's custome swell with foule defame,
Brandish your stings, and cast your vtmost darts
Against the greatnesse of her glorious name,
Yet shall it lue to your eternall shame.

Mirroure for Magistrates. England's Eliza.

Besides these, manie other greeuances the said *Romanists* doo
inflict and infer. *Fox. Actes, &c. fol. 241.*

Thus Papists have the common faith (and I wish to God they
had no more) and their own proper *Romanism*, to the very same or
like purpose as the Jews have the law and the prophets, and the
Talmud of their rabbies.

Brevint. Of the New Waies to Salvation, p. 5.

Bulls or letters of election only serve in the *Romish* Church.

Ayliffe.

For as the *Romists* hold fast the distinction of mortal and venial
sins, so the Pharisees, with the same result, distinguish'd of the

divine precepts and commandments, that some were great, that is,
necessary to be observed, and some small, that is, such as did not
bind the conscience with so strict an obligation, but that the viola-
tion of them might, with a very fair comportment with the divine
justice, be dispensed with.

South. Sermon 5. vol. vii. p. 110.

The *Romanists* pretend that there was, and is, and shall be
always, an infallibility lodged in the Christian church.

Sharp. Works, vol. vi. p. 21. Sermon 1.

ROMANZOWIA, in *Botany*, a genus of the class
Pentandria, order *Pentagynia*, natural order *Droseraceæ*.
Generic character: corolla five-leaved, joined at the
base; the stamens inserted into a tube; capsule two-
valved, two-celled, many-seeded.

A genus allied to *Saxifraga*, containing one species,
R. Unalaschcensis, native of the Island of Unalaschka.

R O M E.

Under this head, a description of the dominions of the
Pope, or States of the Church, may be conveniently given.

The States of the Church (*Stati Pontefici*) are
bounded on the North by Venetian Lombardy, a de-
pendency of the Austrian Empire, and by the Gulf of
Venice; on the East by the latter gulf and the King-
dom of the Two Sicilies; on the South by the same
Kingdom for a small space, and then by the Mediterrane-
an and the Grand Duchy of Tuscany; and on the
West by this Duchy and the Duchy of Modena. By
the acquisition of the Ferrarese their Eastern portion
shoots a large branch Northwards as far as the Po, and
confining on one side with Tuscany and Lombardy,
and on the other with Naples, they thus form a central
band extending entirely across the country, and separat-
ing the North from the South of Italy. The Apennines
pass entirely through them, and divide the States into
two unequal plains, of which the Western, containing
the City of Rome, is the most extensive; the Eastern,
which comprises the Bolognese and the March of An-
cona, is much narrower, being closely hemmed in be-
tween the Apennines and the Adriatic, but it is more fer-
tile and better cultivated.

Since 1832 the dominions of the Pope have been
divided into twenty-one Provinces, of which that of
Rome is styled *Comarca*, that of Loretto *Commissa-
riato*, and those of Bologna, Ferrara, Ravenna, Forli,
Urbino and Pesaro, and Velletri are denominated *Lega-
zioni*, from their administration being intrusted to a
Legate. The remaining Provinces are termed *Delega-
zioni*, from their having a delegate at the head of the
Government. The Delegation of Benevento is enclosed
within the Intendancy of Principato-Ultra, in the King-
dom of Naples; and the territory of Ponte-Corvo,
which forms part of the Delegation of Frosinone, is
wedged in the Terra di Lavoro, another division of the
same Kingdom. The following Table exhibits the Ter-
ritorial divisions of the Papal States, with their principal
towns.

Provinces.	Capitals and Principal Towns.
Comarca of Rome.....	Roma; Tivoli, Albano, Castel- Gandolfo, Frascati, Subiaco, Palestrina.
Legation of Velletri.....	Velletri; Terracina, Sezze, Cori.
Delegation of Frosinone.....	Frosinone; Alatri, Ponte-Corvo, Veroli, Anagni.
Delegation of Benevento.....	Benevento; S. Leucio.
Delegation of Civita Vecchia..	Civita Vecchia; Tolfa, Corneto, Allumiere.

Provinces.

Capitals and Principal Towns.

Delegation of Viterbo.....	Viterbo; Montefiascone, Ronci- glione, Civita-Castellana, Nepi.
Delegation of Orvieto.....	Orvieto; Acquapendente, Bogna- rea.
Delegation of Rieti.....	Rieti; Poggio-Mirtelo, Magliano.
Delegation of Spoleto.....	Spoleto; Narvi, Terni, Amelia, Norcia, Pie-di-Luco.
Delegation of Perugia.....	Perugia; Foligno, Nocera, Assisi, Città di Castello, Città della Pieve, Todi.
Delegation of Camerino.....	Camerino.
Delegation of Macerata.....	Macerata; Fabriano, Recanati.
Delegation of Fermo.....	Fermo; Porto di Fermo.
Delegation of Ascoli.....	Ascoli; Montalto, Ripatransone.
Commissariat of Loreto.....	Loreto.
Delegation of Ancona.....	Ancona; Iesi, Osimo.
Legation of Urbino and Pesaro	Urbino; Pesaro, Fano, Fossom- brone, Cagli, Gubbio, Siniga- glia, San-Leo.
Legation of Forli.....	Forli; Cesena, Rimini, Savignano, Cesenatico.
Legation of Ravenna.....	Ravenna; Imola, Cervia, Faenza, Castel-Bolognese.
Legation of Bologna.....	Bologna; Cento, Forte-Urbano, Medicina.
Legation of Ferrara.....	Ferrara; Comacchio, Lugo, Bag- na-Cavallo, Ponte di Lagoscuro.

The superficial area of the Papal territory is com-
puted at 13,000 square Italian miles of 60 to a degree.

Previously to the appearance of Count de Tournon's
admirable Work, *Etudes Statistiques sur Rome*, our in-
formation with respect to the Civil and social condition of
the modern Romans, their laws, industry, and commerce,
was exceedingly imperfect. This excellent and intelli-
gent man was appointed Governor of the Department of
Rome when the French took possession of the Country,
and he has confined his statistical researches to this re-
gion, which embraced all Latium, Sabina, and part of
Etruria. But since this is the most interesting and im-
portant part of the States of the Church, even in their
present integral condition, and includes the whole coun-
try from the rivers Nera and Velino to the sea, while it
extends lengthwise from the frontiers of Tuscany to
those of Naples, a more minute description of this por-
tion of the Papal dominions is imperative on the geo-
grapher, and may counterbalance the unsatisfactory
knowledge possessed of the rest.

It is commonly, but erroneously, supposed that the
whole Province of Rome is unhealthy and uncultivated.
A distinction, however, and a most important one, is to

ROME. be made between the *Maremma*, or low lands, and the high calcareous region formed by the secondary chains of the Umbrian and Sabine Apennines. The latter extends on the side of Tivoli and Palestrina to within a few miles of Rome, and enjoys a very healthy atmosphere. The *Maremma*, which consist of a volcanic soil, covered in many parts by alluvial deposits and by the decomposition of rank vegetable matter, stretch like a broad belt along the coast of the Mediterranean to a depth inland seldom exceeding, and on several points falling considerably short of, 25 miles. All, however, is not desolation even here. Two extensive volcanic ridges of high hills, the Cimino to the North and Mounts Albanus and Algidus towards the South-East, intersect this fatal belt in its breadth, and, soaring above the pestilential plains, are covered with a luxuriant vegetation, refreshed by numerous streams, and inhabited by an industrious, healthy population. The towns of Viterbo, Ronciglione, Vetralla, Caprarola, Vignanello, Bassano di Sutri, and Oriolo, surrounded by well-cultivated districts, are seated on the slopes or in the valleys of the Cimino: on the Alban Mount are the delightful residences of Frascati, Albano, Castel-Gandolfo, Gensano, and Marino; and on the opposite slope is the town of Velletri. Even among the deadly flats of the *Maremma* there are spots, such as La Tolfa with its *al-lumiere* or alum mines, which, from some advantage of elevation or other local accident, enjoy immunity from the scourge of the *malaria*.

The whole surface of the Department of Rome, or of that portion of the existing Papal States the extent and boundaries of which we have previously pointed out, is stated by M. Tournon to be about 6000 square miles. Of these the healthy portions, where constant cultivation is practised, occupy 4600; while the unwholesome plains, subject to the *grande culture*, or unequal alternation of crops, pasture, and fallows, fill up the remaining 1400. The following is the *cadastro* or survey of the different soils capable of production in this territory, as taken by the able engineer Marini, Marquis of Vacone.

	Rubbj.
Arable land, capable of producing corn..	242,000
Permanent pastures, meadows, hay fields	162,000
Vineyards	14,600
Orchards and gardens	1,400
Forests, chestnut plantations, copses....	170,000
	590,000

A Roman rubbio is equal to about four English acres, so that the entire cultivable land in the Province amounts to 2,360,000 acres. Of the 242,000 rubbj of arable land, 82,000 lie in the healthy districts, and the remainder are in the low lands. Agriculture is well understood, and the system pursued is that best adapted to the exigences of the climate. "We see clearly," writes M. Tournon, "that wherever the inhabitants can live without fear in the midst of their lands, they pursue assiduously a varied and intelligent system of cultivation, and it is only where the *malaria* forces them away from their properties during four months of the year, that they have adopted the unequal alternation of tillage and pastures. This principle ought to be borne in mind by those who would judge of this Country and its people dispassionately and without prejudice." The low-lying lands are sown for crops every fourth or fifth year, with the exception of a few superior soils, which are alter-

nately laid down in crops and fallows. During the intervening years they spontaneously produce grass of the most luxuriant growth, and support the vast herds of cattle which form the staple of the Country. In these plains there are about 100,000 head of cattle, 4000 buffaloes, and 700,000 sheep. The preference given to the *pastorizia* or grazing system results from its surer, though lower, profit; being attended with comparatively little trouble or risk, and favoured by the easy migration of the cattle to the mountains during the dry season. The farmers who rent these immense estates are termed *mercanti di campagna*, and are at once farmers, merchants, and bankers. They reside for the most part at Rome, where they have their counting-houses, and give employment to numerous clerks, agents, bailiffs, &c. The smallest of these farmers requires an advance of about £1800, and the largest of £15,000 or £18,000.

It is calculated that about 20,000 labourers come down annually from the mountains and disperse themselves over the farms of the *Maremma*. The first migration is in October, when they make their appearance in bands of about a hundred, under the guidance of a leader, who contracts for their services with the agent of the farm. At the beginning of June a new reinforcement is required for the harvest, which must be completed by the middle of July, after which period no one dare remain. Their usual fare is *polenta*, or Indian corn flour, boiled with water and salt into a sort of pudding, with the occasional addition of skimmed milk and cheese. In harvest-time they are better fed, and have a plentiful allowance of wine and water.

The climate of the Papal territory is so closely connected with the state of its agriculture, that the consideration of the one naturally leads to that of the other. The great questions which have divided the scientific world on this point are, whether the pernicious effects commonly attributed to the air of the City and of the Campagna arise from it exclusively, or from adventitious causes depending on the want of proper cultivation of the soil, and admitting of correction by a judicious system of draining and planting, with other precautionary measures. A Milanese Professor, Moscati, believed that he had detected the base of the noxious vapours, exhaled from the rice-grounds of notoriously unhealthy districts, in a mucous substance which floated on the surface of the fluid obtained by condensing such vapours. Brocchi instituted a similar experiment at Rome, passing four nights in the month of September at the Basilica of S. Lorenzo, which is outside the walls, and one of the most unhealthy spots in the vicinity of the City. He did not obtain the same results as Moscati, but candidly acknowledges that his experiments are not conclusive; since "is it not well known that there are elements which baffle the researches of chemistry, and that, for instance, we cannot by analysis discover any difference between the atmosphere of a crowded theatre and that of the best ventilated apartment?" The opinion of this eminent individual was, that the noxious quality of the air depends entirely on the unalterable features of the Campagna, and that no agricultural methods can ever entirely extirpate it, but that the evil may be mitigated by recurring to the practice of the Ancients in wearing woollen clothes next the skin; he also conceived that chlorine may be successfully used as a preservative or a remedy. According to a late German writer, Mr. Bunsen, the truth does not lie exclusively on either side: the Roman fever appears to differ in degree only from

ROME.

Climate.

ROME.

that of the West Indies, where it has been observed that heavy rains render marshy grounds healthy, while they have the contrary effect on districts that were previously dry, though no putrefaction of animal or vegetable matter could have taken place. Hence it has been inferred, that the moisture which remains in the ground after its crust has become dry, under the heat of a Southern climate, engenders a noxious atmosphere; and that, consequently, the malaria arises neither from the gases emitted by decayed matter nor from stagnant waters. These various causes, however, Mr. Bunsen thinks may probably be combined with the want of free ventilation and the action of stifling and relaxing winds, which increase the moisture of the air and of the grounds; and this peculiar humidity of the Roman atmosphere may, he conceives, account for the extraordinary differences of temperature between places in the sun and in the shade, which expose the stranger to the most dangerous alternations of heat and cold. This general result, that the source of disease is the vicinity not of water but of the ground, or of trees injudiciously planted, is borne out by the singular variations observed in the salubrity of different houses in the same street, and of different stories in the same house. However, plantations so situated as to intercept noxious effluvia only would seem to be of decided utility. The Count de Tournon enters at some length into the causes of the malaria. He observes that the unhealthy region is of volcanic formation, containing a vast number of hydro-sulphurous or hydro-carbonic springs; that from out a thousand places emanations of carbonic gas or azote issue; and he supposes that the volcanic strata, acted upon by the rays of the sun, emit quantities of deleterious gas which affect the vital principles of the human frame, and, being assisted by the chillness of the night, may give rise to attacks of fever. Still he believes this to be a co-operating, and not the sole cause, and that the infection proceeds partly from the nature of the soil and of the climate, and partly from the stagnant waters and the decomposition of vegetable matter. An interesting Paper on this subject will be found in the Number of the *Nuovo Giornale de' Letterati* for November 1832, being an account of a series of experiments made by MM. Savi and Passerini, Professors of Natural History and Chemistry in the University of Pisa, on the noxious qualities of the *chara*; plants abounding in the marshes, which exhale a fetid smell similar to that of the marshes themselves. From repeated observations, and the most elaborate analyses, these gentlemen have arrived at the conclusion that the *puterine* or fetid principle of the genus *chara* is, if not the only and general cause of the malaria, one of the most powerful causes at least of its production in Italy. There are no valid grounds for the common supposition that an unfavourable change has taken place in the climate of Rome, as well as in that of the surrounding country, since the time of the Ancients. The Campagna, if distributed into small portions cultivated by independent proprietors, and with due precautions as to the plan of building and the kind of diet and of dress, might be again rendered safely habitable. The history of its depopulation proves this fact. Even the Pontine Marshes could once boast their thirty-three flourishing towns. Strabo expressly states that, with the exception of some marshy spots near the coast, the plain of Latium was a healthy tract; and the memorable expression of Pliny, *Latifundia perdidere Italiam*, reveals the process by which the

population was exterminated and the country rendered a

ROME.

pernicious desert. It is generally and erroneously supposed that these life-destroying districts are confined to the Papal States; but the malaria neither stops Northward on the Tuscan frontiers, nor Southward on those of Naples. In fact, the *Maremma* of Tuscany is as extensive, as solitary, and as unwholesome as that of Rome. "Is it fair, then," asks M. Tournon, "to throw the blame exclusively on the Papal Government, or on the laziness of the Roman population? But the reason may be, that no traveller gives himself the trouble to go out of the beaten track in order to visit the *Maremma* of Grosseto, and the valleys of the Ombrone and the Cecina, whilst the Roman low lands, on the contrary, happen to lie straight in the way of every tourist; they border the high road to Rome, and he can observe them at his ease from the windows of his carriage."

Even the deadly Pontine Marshes have been partly recovered from the water, and in the very middle of them rises Mount Circello, with the village of Santa Felicità. Of the 40,000 acres totally or partially drained here, 7000 are capable of tillage, and the rest is fit for rice, Indian corn, or meadows, besides copse and forests.

The geognostical features of Rome and its vicinity Geology. have been investigated by Breislak, Leopold von Buch, and more particularly by Brocchi. Their conclusions may be resolved into three classes: proofs of inundation, marine and fluvial, and of volcanic agency. The traces of the sea that once covered the site of Rome are most conspicuous in the formation of the hills on the right of the river; in Monte Mario, whose summit is covered with sea shells; and in the remains found in the sandstone and marl of the Vatican. The Janiculus exhibits similar reliquiae. The effects of volcanic action are most discernible on the opposite side of the river. The hills here are mainly formed of vast masses of tufa, which Brocchi distinguishes into two species, both of igneous origin, but different in composition and texture: *tufa litoide*, probably the *lapis quadratus*, used by the Romans for paving, and the material of the *Cloaca Maxima*, and of the inner part of the substructions of the *Tabularium*; it constitutes the bulk of the Capitoline hill; 2. *tufa granulare*, a light and very friable substance, so called from the coarse, ill-compacted grains of which it is composed, and including small lumps of dark grey lava. This tufa, which has arisen from the disintegration of the porous pumice-like lava, termed by the Italians *lapillo*, is more widely diffused than the lithoidal tufa, and forms the main mass of the Pincio, the Quirinal, the Viminal, and the Palatine. On the heights to the right of the river it overlies the marine formation; and the same strata appear on the top of the Janiculus, and extend to the summit of Monte Mario. The only instance of a similar superposition, on the left side of the river, discovered by Brocchi, was under the Tarpeian rock, where the granular tufa, which is covered by the lithoidal, rests on a mass of sand and clay. Brocchi supposes this last to be a marine formation, the continuation of which on the right bank of the Tiber he concludes to be the real basis of the seven hills. Fluvial deposits, which abound in organic remains, are met with high above the level of the river. They occur on the Esquiline at the height of one hundred and forty feet, resting on a bed of tufa. The *travertino* is the most important and interesting of these

ROME. deposits, and is particularly conspicuous on the hills of the left bank. It rests on the Aventine on alluvial sand, which itself covers the volcanic tufa of the same hill. A more singular phenomenon still is observable on the Pincio, as well as in the tract between that hill and the Ponte Molle, where the tufa is found incumbent on vertical beds of *travertino*.

The above facts lead to the following general conclusions. The hills on the right bank of the Tiber formed by marine agency, and which are the oldest basis of the Roman soil, belong to an extensive tertiary formation, which, beginning in the territory of Lucca, stretches with few interruptions along the Western coast of Italy as far as Reggio in Calabria. The detritus of the older rocks, which constitute the sandstone and conglomerate of the Janiculus and the adjoining ridges, was carried down by the sea from the neighbouring Apennines, and the inequalities thus produced determined the course of the Tiber. The products of volcanic agency invariably overlay this formation, and therefore undoubtedly appertain to a later period. Rome itself is seated between the extinct craters of the Monti Cimini on the North, and those of the Alban range on the South, the two most important points in that volcanic line which has been traced, without any interruption, from Tuscany to Campania. It is agreed that the Roman tufa owes its present appearance to the action of water, but whether to that of the sea or of the river is contested. Brocchi's opinion is, that the old tufa was either thrown up from submarine volcanoes or else received and carried along by the sea; and he imagines that the tufa, which is now either superimposed on *travertino* or encloses fresh-water reliquæ, is no longer in its original state, but that, having been decomposed and removed from its primary site by the same streams which brought down the elements of the *travertino*, it was subsequently cemented by chemical agency. Therefore he distinguishes the latter by the name *tufa ricomposto*, though it is by its position alone that this is distinguishable from what he terms *tufa originale*.

Finally, there are distinct traces in the last of these three formations, that there was a period of repose during which the Tiber must have formed a lake on the site of Rome more than one hundred and thirty feet higher than its present surface. That this again must have been interrupted by a state of violent agitation seems attested by the numerous large masses of conglomerate which rest at considerable heights on the *travertino*; but to pursue this subject further, and to inquire into the manner and period of such change, would be to enter the boundless field of speculative geology.

The States are traversed by the Tiber, and bathed at their Northern extremity by the Po. Its remaining rivers are of very limited extent; all of them belong either to the basin of the Mediterranean or to that of the Adriatic.

Rivers.

The Mediterranean receives the Tiber, (*Tevere*), which rises in Tuscany from the Eastern slope of the Apennines, and waters with its affluents the largest portion of the Papal territory, lying to the South of the principal chain of the above mountains. It flows in a South-Western direction, and its length is about 210 English miles. The sacred river of ancient Rome, to preserve the purity of whose waters a magistrate was specially created by Augustus, is the common sewer of the modern City. Its water is now drunk in a few Convents only, but so long maintained its reputation for

its sweetness and health-giving qualities, that Paul III. invariably carried a supply of it with him on his longest journeys, and Clement VII. did the same, by order of his physician, when he repaired to Marseilles to celebrate the marriage of his niece, Catherine de Medicis, with the brother of the Dauphin, afterwards Henry II. It cannot boast of even a single quay, and is so shoal that the sorry steam-boat which plies between Rome and Fiumicino, a distance of about 16 miles, is generally five hours in making the passage. Indeed, without the buffaloes that are put to it, it would be likely to ground till the next rainy season should swell the river. The velocity of its current may be estimated by the fact that it "deposits its coarser gravel at a distance of 30 miles, and the finer at 12, above the City, and thenceforward to its mouth is only charged with the fine yellowish sand from which it has derived its constant epithet." Its Eastern and natural embouchure, indeed its only one before the channel of Fiumicino was dug by order of Claudius, is picturesque; and this celebrated stream, when near its termination, where it is divided and extended by the *Isola Sacra*, may, by a poetical mind, be still invested with something of its ancient majesty, and not deemed utterly unworthy of the verses of Virgil:

*Hunc inter fluvio Tiberinus amæno,
Vorticibus rapidis, et multâ flavus arena
In mare prorumpit.*

Its chief affluent to the right is the Ghiana, which is swollen by the Paglia: on the left its principal affluents are the Topio or Topino, which passes through Foligno and receives the Chiascio and the Timia; the Nera, which bathes Terni and Narni, and is swollen by the Corno and the Velino—the latter passes through Rieti; and lastly by the Teverone, which bathes Tivoli. The Tiber in its course passes through or near the following towns: Castello, Todi, Oste, San Giubileo, Rome, Porto, and Ostia.

The Marta, which, issuing from the lake of Bolsena, bathes Toscanella and Corneto, and the Fiora, which rises in Tuscany and passes through Montalto, likewise empty themselves into the Mediterranean.

The Adriatic Sea receives the Po, two branches of which, the Po di Primaro and the Po di Volano, water the Ferrarese, and consequently belong to the Papal States. The Po di Volano passes through Ferrara; the Po di Primaro has for its affluents the Reno, passing through Vergato; the Savena, through Bologna; the Silaro, through Castel-San-Pietro; the Santerno, through Imola; and the Senio, through Castel-Bolognese.

The remaining streams are the Amone, the Savio, Marecchia, Metauro, Esino, Musone, Potenza, Chienti, and Tronto, which are mountain torrents descending from the Apennines, and watering all that portion of the Papal territory which lies to the North of their principal chain. The above streams pass respectively through the following towns, before throwing themselves into the Adriatic: Faenza, Cesena, Rimini, Urbania, Iesi, San Severino, Tolentino, and Ascoli.

M. Tournon, in treating of the physical state of the Population. Roman Province, divides its population into four races. The first, inhabiting the Mounts Albani and the Volscian territory, are tall with regular features, large dark eyes, haughty yet not unpleasing countenance, and vigorous but flexible limbs. 2. A race not so tall as the former, who are considered by M. Tournon to be the

ROME.

ROME.

descendants of the fierce Hernici, are found among the steep, arid mountains of Alatri and Veroli. Their features are regular but wild in their expression, a characteristic which is increased by their eyebrows meeting together: they are strong and hardy. 3. The inhabitants of the Sabine hills, who have a milder expression of countenance, and thick curly hair. 4. The district around Corneto and North of Mount Cimino produces the handsomest men in the whole Province, being a tall, elegantly-formed race, with regular features and a pleasing mildness of expression: they reminded M. Tournon of the old Hetrusci. The City of Rome and its surrounding plains are occupied by a mixed population, seemingly, of all the races in Europe; and although the Transteverini are generally fine men, the marks of that ancient descent, on which they pride themselves, are very equivocal. Female beauty is very general at Rome. "The Roman ladies," writes Forsyth, "are more indebted to nature than the men. Their general style of beauty is large, like the Juno; and their forms, though luxuriant, are so perfect in proportion, that a critic is driven to their feet before he can find a defect."

The following Table is extracted from the *Saggio di Statistica degli Stati Pontefici* of M. Gabriele Calindri.

Population of the Papal States, including the Legations, 2,592,329, thus classified according to their Civil state.

Single men, adults	239,177
Single women, ditto	234,145
Married of both sexes	913,586
Widowers	43,616
Widows	34,126
Male children	521,185
Female ditto	553,012
Monks or regular Clergy	10,598
Priests or secular ditto	34,600
Nuns	8,284
	2,592,329

Of the above 1,176,178 are landed proprietors, farmers, or labourers, with their families; 691,803 tradespeople or mechanics; 24,908 follow the liberal professions; 21,508 are soldiers or seamen; 53,432 belong to the Clergy of both sexes; and 217,638 are infants.

Government.

The Papal Government is of a very peculiar and complicated nature. The Pope unites in his own person three different offices: first, that of Supreme Pontiff or Head of the Catholic Church and Hierarchy; second, that of Bishop of Rome; third, that of temporal Sovereign of the Roman or Papal States. He is assisted in both his spiritual and temporal capacities by the Consistory or Council of Cardinals; but the immediate administration of the one is confided to different persons from that of the other. The Ministers of the Pontiff, in his spiritual capacity, are first, the Cardinal Great Penitentiary, who decides on cases of conscience; second, the Cardinal Sommista, who presides over the Apostolic Chancery; third, the Cardinal Pro-Datario, who, assisted by numerous officers, decides all questions concerning the temporalities of the Clergy, as well as those relating to dispensations, &c.; but since the suppression or secularization of most of the Church temporalities by the Catholic States, this office has lost much of its importance; fourth, the Cardinal Segretario de' Brevi,

who expedites the briefs *ad Principes*, to foreign Sovereigns, and is charged with the correspondence of the Pope on Ecclesiastical matters; fifth, the Pope's Auditor, (*Uditor Santissimo*), before whom every matter of importance is laid for him to report thereon, and who is officially supposed to be the intimate adviser and confidant of the Pope.

The Pope's authority, as Bishop of Rome, is exercised by the Cardinal Vicar, who has his own tribunal and officers. There is likewise the Congregation *Della Visita Apostolica*, which administers legacies and trusts belonging to this jurisdiction.

The Papal Monarchy is elective, and the power of the Sovereign unlimited. The two principal Ministers of the Pope, as temporal Sovereign, are the Cardinal Secretary of State and the Cardinal Camerlengo. The former is Minister both of foreign affairs and of the home department; he is the representative of his Sovereign, is appointed to office by him, and resigns it when he dies. The Camerlengo is the Minister of Finance, and holds office for life. On the death of a Pope he governs in the name of the Apostolic Chamber, until the Cardinals are assembled in Conclave, when the Government is administered till the election of a new Pope by three Cardinals, who assume office by turns, one day each. The Camerlengo presides at the Court of the Apostolic Chamber, which constitutes a Board of Treasury, and has under him the Treasurer-General, who has the management of the budget, and the administration of the State property and establishment. This last-mentioned office is one of great importance, and is generally filled by men of abilities.

The Governor of Rome is under the authority of the Secretary of State, but is vested with great discretionary powers concerning the police of the City and its district, and can condemn to imprisonment and hard labour. He goes out accompanied by a guard.

The principal business of the internal government is transacted by Boards, (*Congregazioni*), such as La Sacra Consulta, which superintends the political and Civil administration of the Provinces; the Apostolic Chamber, already mentioned, and which (though in its abstract or general sense it is a fictitious denomination, implying the State or Fisc) is a real active body, generally designated in writing by the initials A. C.; and the Buon Governo, &c. The latter is a very remarkable institution under an absolute government, being independent of Ministers: its peculiar functions will be noticed hereafter. We have, at the beginning of this article, described the division of the Papal States into Legations and Delegations. The former are usually administered by Cardinals, the latter by simple Prelates; and these Governors are appointed by the Sacra Consulta. The Legate, or Delegate, is the head of the political administration of his Province. He is assisted by a Council, composed of the Gonfaloniere and two Elders of the town in which he resides. His Assessor, who is a lawyer, acts as Judge in Civil matters for the chief town of the Province, and in each of the other towns the respective Governors exercise judicial power both in Civil and criminal affairs of minor importance. In each Province there is a magistrate called *Pretore*, who judges Civil suits in the first instance, and from whom there lies an appeal to the Court of the *Rota* at Rome, and the Court of Appeal at Bologna: likewise there is in each Province a Criminal Court, composed of the Delegate and four Assessors, which receives appeals

ROME.

ROME.

from the sentences of the Governors of the towns. Lastly, there are two high Criminal Courts for the whole State, the *Sacra Consulta* at Rome, and the Court of Appeal at Bologna. The proceedings in all Criminal Courts are carried on with closed doors, thus reverting to the baneful system which had been abolished by the French. The accused may be defended by the *Avvocato de' Poveri*, who is paid by the State, or may choose his own counsel. The fiscal attorney is the public prosecutor. Every species of torture was abolished by Pius VII. The Judges are appointed by the Sovereign, and are required to be above thirty years of age, and to have practised at the bar at least five years; their character must be unblemished and above suspicion. They are bound to state clearly their grounds of proceeding, the nature of the offence, and to award no other penalty than that fixed by the law.

In each Diocese is an Ecclesiastical Court depending on the Bishop or Archbishop; and there are nine commercial tribunals in the various ports and principal trading towns in the Papal States, in which the French commercial code is followed.

Communal Councils have for Ages existed in all the towns, and in the rural Communes likewise, enjoying extensive powers; and this institution was confirmed and remodelled by Pope Leo XII., in October 1824. Each town or village has a Council consisting of 48, 36, 24, or 18 members, according to its population, to which are referred all affairs of local interest. These councillors are chosen equally from the *notâbles*, or chief landed proprietors, and from the citizens and farmers. The office is for life, and the Council self-elective. A head magistrate, called the *Gonfaloniere*, together with six Elders in large towns, and four or two only in smaller towns or villages, are elected by the Council; and these Elders must be chosen in equal proportions from the two classes of which the Councils are composed. Their choice is laid before the Governor of the Province for his approbation, and the *Gonfaloniere* is renewed every year; the Elders remain in two years. These Communal Councils appoint to all local offices; pay the local police, the schoolmaster, and the apothecary and surgeon; and assess the rates. The Budget (*Tabella*) for the ensuing year is prepared by the *Gonfaloniere* and Elders, submitted to the approval of the Council, and then laid before the Governor of the Province, who forwards it for ratification to the *Congregation del Buon Governo*. This Board, to which we have before alluded, is expressly devoted to the superintendence of the Communal administrations, and often takes their part against the pretensions of Government. It is presided by a Cardinal Prefect, and composed of Cardinals and Prelates. When the *Tabella* has received the sanction of this Board it is returned to the Commune, and published at the beginning of the year, having then the force of law. All sales, leases, and contracts, made for the service of the community, are by public auction.

The Papal administration has been considerably modernized of late years; feudality has been abolished in nearly every essential point; and the admission of laymen to official employments, though not to the higher offices, has been greatly extended.

There are in the Papal State 8 Archbishops, 58 Bishops, and 13 Abbots. The numbers of the Clergy in the City of Rome, in the year 1831, were 1432 secular Priests, 1904 Monks and Friars, and 1375 Nuns. We have no authentic statement of the number of the Clergy in the whole State.

The military force consists of 8000 infantry, besides two Swiss regiments of two battalions each, one regiment of dragoons, one of artillery, and 2300 carabineers who do the police and patrol duty. There are also four provincial battalions, who are a sort of embodied militia. The expense of the military department is about £470,000 per annum.

The revenue is in a great measure conjectural, from the want of official statements. M. Balbi, in a communication to the *Bulletin Universel*, states it to have amounted, in 1818, to £1,720,000: of which there was derived from the land-tax £400,000, from the customs £300,000, monopolies £190,000, registers, &c. £200,000, lottery £135,000. At present, the same writer estimates it at only £1,237,000, burdened with a debt of £24,700,000.

A very remarkable fact in the system of the Papal revenue is the equal distribution of the direct taxation, of which the Clergy and Nobility have always borne their shares like the humble villagers, and in proportion to their respective properties; exemptions and privileges, which in other Countries have engendered so much hostility against the favoured classes, have been for Ages unknown to Papal Rome. "The yearly sum," Count Tournon proceeds to observe, "allotted to the Pope for his household and privy purse, I found to be only 127,000 dollars; a very modest sum for a Sovereign Prince."

In the Roman States South of the Apennines, Rome Education. and Perugia are the only two Cities where Sciences and Literature are cultivated. In the former there are two great establishments for the higher departments of education: the University called *La Sapienza*, from the inscription over its entrance, *Initium sapientiæ timor Dei*, and the Gregorian or Roman College. The actual organization of *La Sapienza* was framed by Leo XII., who increased the salaries of the Professors, and it is now composed of a Chancellorship, held by a Cardinal, a Rectorship, and five Colleges; namely, of Theology, Law, Medicine, Philosophy, and Philology. These Colleges are subdivided into about forty-two Professorships. The Roman College has about twenty Professors. These Institutions have revenues of their own, and are also partly supported by Government. Students attend the Lectures gratis, or on payment of a very trifling annual fee. The Classics, with the Humanities, Rhetoric, and Logic, constitute the courses usually followed by those not intended for the learned professions: the Mathematical, Physical, and Natural Sciences are rather neglected.

Although the system of mutual instruction is interdicted, primary or elementary instruction is afforded with a liberality such as few Countries can boast of. In Rome alone, there are sixty District Schools, (*regionalie*), the teachers in which are laymen, and in which about 2000 children of both sexes receive instruction, some gratis, and others for a payment of about two francs per month. There are seven Parochial Schools, entirely gratuitous, and admitting 500 pupils; and several of the Monastic Orders, the *Scolopii*, (*Scholarum Piarum*), the *Ignorantelli*, the *Filippini*, &c. devote themselves to the instruction of youth. These Orders open classes, gratis, for a certain number of boys, to whom they teach writing and arithmetic. Altogether, about three-fourths of the children are congregated in these various schools.

In the country towns and villages there are masters

ROME.

ROME. paid by the municipal fund, who teach reading, writing, and arithmetic.

Rome.

The City lies about 17 miles from the sea, on the left bank of the Tiber, which, flowing from North to South, is joined just before it reaches the City by the *Anio*, (*Teverone*.) The latter river takes its rise between two of those several ridges which, in this part of Italy, run parallel to each other on the Western side of the great chain of the Apennines. It flows at first from South-East to North-West; but when it has thus completed half its course, meeting with a line of hills (the *Mons Lucretilis*) which run at right angles with it, it suddenly turns the outer ridge of its previous valley—the mountain country of the *Hernici*—and deflects to the West, having Mount *Lucretilis* on its right. The abutment of this line of hills, now called the *Monti Libretti*, is the *Mons Sacer*, which lies in the angle formed by the junction of the *Anio* and the *Tiber*; and at a short distance from the Sacred Mount, yet apparently a continuation of the same chain of rising ground, the last steps before it sinks into the level waste stretching seaward, is the small cluster of hills South of the *Anio*, and close to the Eastern bank of the *Tiber*, on which Rome was built. In its course through the City, a tract of a little more than two miles in length, the *Tiber* makes three great bends of nearly equal compass. It first approaches *Monte Pincio*, receding from the hills on its right bank, the *Monti Mario* and *Vaticano*, which together make a semicircular sweep enclosing with the elbow of the river the Vatican Field, a level about a mile long, terminated towards the South by the Northern foot of the *Janiculus*. The bay contained between the second bend of the river and the hills on the left, which at the same time make a slight turn in the opposite direction, is the *Campus Martius*, the site of the greater part of the modern City. It is bounded to the South by the approach of the river towards the foot of the Capitol. The long straight ridge of the *Janiculus*, running from North to South, forms the chord of the third arc, which encloses the district of *Trastevere*. This tract is connected by a narrow strip with the Vatican Field, and ends towards the South, where the *Janiculus* again meets the river. Of the seven hills on the left bank, four, the Capitoline, Palatine, Aventine, and Cælius, are insulated heights; the three others, the Quirinal, Viminal, and Esquiline, are promontories jutting out towards the *Tiber*, which form one long range, and are separated from each other only by narrow gorges running up into it. This common range, which in many points ends very abruptly on the side of the river, sinks, by an extremely gentle slope, into the plain which stretches from it to the foot of the Apennines. The sides of these hills were steep, and two in particular, the Capitoline and the Palatine, were bold and precipitous: they stood close to the river's edge, and the natural strength of the former justified its selection as the citadel of Rome.

Westward of the Hernican ridge, and in a valley parallel to that of the *Anio*, rises the river *Trerus*, (*Sacco*), which runs in an opposite direction to the former stream, flowing South-East to its junction with the *Liris*, (*Gargigliano*.) The outer ridge of this valley is the last and lowest of these parallel ranges which slope terrace-like from the Apennines; and after following for about 30 miles the same general direction to the South-East, it turns to the South and sweeps round striking the sea at Terracina.

“When this range is viewed from the hills of Rome,

it seems like a gigantic mound enclosing the plain from which it rises abruptly. It is not unlike the line of the Grampians as they are seen from Stirling Castle. Between this mountain range and the sea is spread out the low country of Latium, or the Campagna of Rome; a low country, indeed, compared with the lofty terrace which looks down upon it, but rising in long, grassy swells and flat ridges, which terminate not unfrequently in rocky and precipitous declivities. Upon these natural fastnesses were built the citadels of the many little towns of Latium. The face of the Campagna is intersected also by many small and sluggish streams, winding along in deep channels under steep and broken banks, beautifully fringed with copse-wood and broom. But in the midst of the low lands, in the Northern quarter of Latium, there stands out, at a little distance from the mountain-range, a sort of island cluster of hills; a mass of high ground, beautifully varied within itself with deep valleys and pointed summits, and steep ridges overhanging its sequestered tarns. These are the hills of *Alba*. Upon the highest peak of the group, looking down upon all the expanse of Latium, stood the Temple of *Jupiter Latiaris*. Immediately below, and scarcely finding space to stand on from the steepness of the mountain side, the long town of *Alba* in old time stretched itself, as on a terrace, with the waters of the Alban lake beneath it. The basin of the lake is the crater of an extinct volcano. Further to the North the Romans could descry from their walls a ridge running under the highest summit of the Alban Mount, and seeming like a raised way between it and the more distant points of the Alban hills. This ridge was the edge of a green mountain plain; and this high plain was *Algidus*, where the *Æqui*, in the height of their power, used to pitch their camp in the summer months, and whence they commanded a view of all the Roman low lands to which their descents were to be directed for plunder and ravage. Beneath the ridge of *Algidus*, on the top of the lower and nearer line of the Alban hills, stood the citadel of *Tusculum*, the stronghold of the most faithful allies of the banished Tarquin, and subsequently of the youthful Republic. Further to the North-East, on the last low insulated point of the ridge, the Romans might behold the towers of *Labicum*. Beneath *Tusculum* and *Labicum* lay the lake *Regillus*, which poetical tradition made the scene of the last and deadly struggle with the exiled tyrant. Still further to the North and East is the mountain range which directs the course of the *Anio*, with the towns of *Tibur* and *Præneste* (*Tivoli* and *Palestrina*) crowning its nearest projecting eminences; while, far beyond, the eye glances to the lofty Apennines, which, during more than six months of the year, are white with snow. On the opposite side, towards the sea, the level of the Campagna is broken by no perceptible elevation; and the low straight line of the distant coast melts into the scarcely more level surface of the Mediterranean, which can be distinguished from the land only by the brighter light reflected from its waters. Looking from the Capitol to the Tuscan side of the *Tiber*, the view is immediately bounded by the level line of the long hill of the *Janiculus*.

“Such is the site of Rome, and such is the country which surrounds it,—the narrow field of its early struggles and conquests. The great features of nature must have existed in the earliest Ages as we see them now; and Imagination can easily put aside all that the

ROME.

ROME. hand of Art has added or altered." (*History of Rome, in the Library of Useful Knowledge.*)

All traditions agree in recognising the Palatine as the site of the original Rome. It was protected partly by its natural steepness, and partly by the swamps or stagnant pools which long covered the deepest parts of the valleys that separated the Seven Hills. As its population increased, dwellings would spring up round the foot of the hill; and this enlargement of the original compass seems to be what Tacitus understands by the *Pomerium* of Romulus, (*Ann.* xii. 24.)—"a suburb, a borough," says Niebuhr, "round about the city, scantily fortified with a wall and a narrow ditch, as the Chronicles tell of the *Borghi* round Florence." The circle described by Tacitus is not perfectly continuous. It ran from the *Forum Boarium* through the valley of the Circus; then from the *Septizonium* to below the Baths of Trajan; thence, finally, perhaps, along the *Via Sacra* to the *Forum*: between the Eastern boundary of the latter and the opposite edge of the *Velabrum*, a break occurs, which deficiency was first explained by the conjecture of Niebuhr that the ground omitted must, before the building of the sewers, have been a pool or morass, where it was neither needful nor possible to carry a wall. Referring to the elaborate Work of Niebuhr for the probable steps by which the similar settlements on the adjoining hills became gradually absorbed by that on the Palatine, it is sufficient to mark that in the festival of the *Septimontium* was preserved the memory of a time when the Capitoline, Quirinal, and Viminal hills were not yet incorporated with Rome. The City then consisted of seven districts, each of which had its own holidays and sacrifices, even in the Age of Tiberius: *Palatium*; *Velia*, a low ridge stretching from the South-East foot of the Palatine toward the *Carinæ*; *Cermalus* and *Fagutal*, plains swelling out at the base of the same mount; *Mons Cælius*, originally, perhaps, the chief settlement of the *Luceres*; and, lastly, *Oppius* and *Cispinus*, the two summits of the Esquiline. This was the extent enclosed by the wall of Servius. Even the Aventine was never included in the sacred *Pomerium*, after it became really a part of the City. The local division of the City by Servius Tullius into four Regions, is connected by Varro with another into twenty-seven smaller Districts, and it is conjectured by Mr. Bunsen that the fourteen Regions of Augustus were determined by this old parochial subdivision.

"There are three ancient Romes," justly observes Forsyth, "substantially distinct; the City which the Gauls destroyed, that which Nero burned, and that which he and his successors rebuilt." With the Tarquins began the architectural grandeur of Rome. Servius had indeed reared his rude walls and mounds, but to the Etrurian magnificence of the former were owing the Circus, the Capitol, and the stupendous Sewers, the principal of which, the *Cloaca Maxima*, still remains. In the system of national aggrandizement diligently pursued by the Republic originated the grand Military Roads; and almost at the same time were commenced the celebrated Aqueducts. Solidity and a simple but true grandeur were the leading features of the works of this period: the few Tombs and Temples which can still be assigned to it attest similar manly taste. But the meanness of the streets and private buildings, occasioned by hasty re-edification after the invasion of the Gauls, continued to form a striking contrast with the magnificence of the public edifices until Nero's fire, when the

new plans laid down and enforced by strict police regulations gave the City a symmetry and general stateliness before unknown. With the wealth of the East daily pouring into the lap of Rome came the craving after a style colossal and extravagant. Yet if we deride the splendid absurdity of Nero's *Domus Aurea*, and deplore in too many instances the false taste which buried beauty under a load of ornament, we nevertheless stand awe-struck before the mighty *Coliseum*, and admire the crowded richness of the Arch of Titus. For three hundred years, Forums, Porticos, *Thermæ*, Triumphal Arches, and Mausoleums drained the public treasures and swelled the Imperial pride. With Constantine, and the establishment of Christianity, was introduced a new style of architecture, on the model, and often with the very materials, of the ancient Basilicæ. At length a happier era arrived. "The end of the thirty years' schism," says an anonymous writer, "by which Rome became the fixed seat of an undivided spiritual monarchy, and was enriched by the overflowings of the streams that were continually poured from all parts of Europe into the Papal treasury, was the beginning of a new period of prosperity and splendour to the City. Since that epoch the attention of the Popes has, with little interruption, been actively directed to the reparation and embellishment of their Capital."

"Proceeding from the *Forum*," says Mr. Wood, in a passage which we must quote without curtailment, "in the direction of the *Via Sacra*, you leave on the left the Temple of Antoninus and Faustina, (a,) that of Romulus and Remus, (b,) and other fragments without a name. Afterwards, also on the left, is the Temple of Peace, (c,) and you pass through the Arch of Titus, (d,) both monuments of the destruction of Jerusalem; beyond are the Temples of Venus and Rome, (e,) and at the distance of a few steps the vast extent of the *Coliseum*. These objects burst upon the eye almost at one view, and demand or rather extort attention. Whether this building was a Temple or that a Curia may be questioned, but you cannot for a moment doubt that each is a Roman work, and the ruin of some magnificent edifice. Afterwards you may ascend the Palatine and pass over the extensive remains of the Palace of the Cæsars, with its long vaults and terraces, whose half domes and solid piers attest the grandeur of their ancient construction. But the views from the Palatine are no less striking than those within its walls. Below is the Temple of Romulus; (f;) further to the left that of Vesta; (g;) between these is the Arch of Janus; (h;) the Temple of Castor and Pollux was in the immediate vicinity, and in another place that of Apollo. All these names, and almost every inch of ground, are disputed by the Roman antiquaries; but about such dissensions Imagination does not trouble herself. The form of the ground is still seen in the *Circus Maximus*, but the buildings are gone. The Aventine rises above all the other objects, crowned with Convents and Churches composed of the spoils of the Temples which once adorned it. To the left of this mount is an enormous mass of building which once contained the Baths of Caracalla; the lower story is supposed to be filled up, the upper is uncovered, and the vast piers and solid piles of masonry are sufficient to develop the whole plan of the central building. Nearer, but still more to the left, are the Arch of Constantine and the *Coliseum*, of which you here trace the form and see the whole extent. Turning again to the North, and retracing the *Via Sacra*, you fix your eye on the bold elevation of the

ROME.

ROME. Capitol, and figure to yourself what it must have appeared when all its Temples were entire, each surrounded by stately colonnades, and the whole crowned with the splendid fane of *Jupiter Capitolinus*."

Aqueducts. For nearly four centuries and a half after the building of Rome, its inhabitants had no water except what the Tiber and the natural springs supplied. Appius Claudius built the first Aqueduct A. U. C. 442; and in all there were about eleven ancient Aqueducts, of which the dilapidated arches of the Marcian and Claudian present the only continuous remains. Two were on the Western side of the river; the rest stretched over the Campagna, and approached each other near the *Porta Prænestina*. Close to this gate may be distinctly traced the channels of the *Aqua Marcia*, (i,) of the *Aqua Tepula*, (k,) and of the *Aqua Julia*: (k:) the last was brought to the City by Marcus Agrippa, and named in honour of Julius Cæsar. The two upper water-courses, supposed to be the *Julia* and the *Tepula*, are formed of brick and rubble; the third, or *Aqua Marcia*, is of square blocks of peperino, and the supporting pier is also of that construction. Abundant remains of Aqueducts, whose long branches form conspicuous objects, wind in every direction over the extensive level of Latium, but their number, their mutilated state, and the manner in which they intersect each other, render it a task of almost insuperable difficulty to trace them, or to assign to each the arches that belong to it. The *Aqua Claudia* (l) was 50, the *Aqua Marcia* 62 miles long; and their lofty arches still rank among the most magnificent monuments of the power of Rome.

The modern City, like the ancient, is abundantly supplied with water. The best of these modern waters is that brought by Sixtus V. to the *Fontana di Termini*; the next is the *Acqua Vergine*, (m,) which was reconducted to the *Fontana di Trevi* by Nicolas V.: this is the only ancient water that flows to Rome. Paul V. conveyed a stream over the *Janiculus* to the *Fontana Paolina*; but its water is so unwholesome that its use is prohibited.

Pantheon. The Pantheon, (r,) the most beautiful and best preserved of all the monuments of ancient Rome, is sunk in the dirtiest part of the modern City. The square before it, the *Piazza della Rotonda*, is a vegetable market exhaling disgusting odours, and covered with filth and foul puddles. In this "obscene hole" stands the pre-eminently beautiful fabric of Agrippa. Its noble yet simple portico, a never-failing theme of admiration to the architect, is supported by sixteen columns of red granite, about forty-two English feet in height; their bases and capitals are of white Pentelic marble. The marble doorway corresponds, both internally and externally, with the architecture of the portico, and not with that of the Pantheon itself: the opening is about nineteen feet wide and thirty-eight high, but within this are pilasters of bronze which form the actual doorway. On these hang magnificent doors, also of bronze, and over them is a grating of the same metal. It seems generally agreed that the Rotonda is of earlier erection than the Portico, which was subsequently added to convert it into a Temple. The received conjecture as to its original destination is, that it was built for a *Caldarium*, or at least as some adjunct to the Public Baths of Agrippa. The popular belief, that it was dedicated to all the Gods of antiquity, is unsupported by any proof, and is directly opposed by the testimony of Livy, who states that it was dedicated to Jupiter the Avenger. Its majestic interior

still preserves great part of its ancient coating of marble, principally the *giallo antico*, "the most beautiful of all coloured marbles for the purposes of architecture," and by a skilful disposition it appears much larger than it really is. The pavement of granite and porphyry is the most beautiful that has been spared by the ravages of time, or rather of man. The sculptured silver that embossed its roof, the statues that filled its niches, the columns of Syracusan bronze that sustained its attic, the plates of gilded bronze that covered the roof, and the massy bronze beams of its portico, with numerous other gorgeous ornaments, have disappeared before the cupidity of Barbarians, of Popes, and of Emperors. Yet "its beauty is of that sort, which, while the fabric stands, time has no power to destroy."

The Tomb of the Scipios, (n,) the most ancient and one of the most honoured mausoleums of Republican Rome, stands on the Appian Way, and its discovery, in 1780, forms an era in archaeological history. Two sepulchral inscriptions, the one found two centuries before this event, and called the Barberini marble because it is preserved in the Barberini collection, the other discovered fifty years later, had pointed out the true site of the tomb; but the antiquaries, sticking to the letter of a passage in Cicero, persisted in selecting another spot, until the true sepulchre of the Cornelian family was ascertained by the accidental circumstance of a man digging in his vineyard to make a cellar. A remarkable sarcophagus, now in the Vatican, and several inscriptions, put the matter out of all doubt. It would seem, previously to its conversion into a tomb, to have been a quarry of puzzolana, or of tufo; its ancient entrance, which is nearly all the original masonry left, is formed by an arch of peperino adorned with half columns; additions of the style of later periods are clearly indicated. This entrance had been completely blocked up by the falling in of the earth. The original inscriptions have been removed to the Vatican, and copies are put in their place; and the very bones of the Scipios have been carried off.

The Tomb of Cecilia Metella, the chef-d'œuvre of all sepulchral monuments, and which served as a model for the Imperial mausoleum, was reared in her honour by her husband Crassus. It consists of a round tower formed of immense blocks of Tiburtine stone, fixed together without cement, and resting on a square basement, the greater part of which is sunk beneath the soil. The walls are twenty-four feet thick. There are seen on a bas-relief a trophy and part of a figure of Victory, who is writing on a buckler the exploits, it may be conjectured, of Metellus, conqueror of Crete, and father of Cecilia Metella, as well as the less brilliant deeds of Crassus. Its Doric marble frieze is ornamented with sculptured rams' heads, festooned with garlands of flowers; but these are commonly supposed to be the heads of oxen, the Tomb being vulgarly called *Capo di Bove*. This name, however, arises from the circumstance of the Gaetani family, whose emblem was an ox's head, having converted the tomb into a fortress. The remains of the Castle, which they added to it, are still visible. Uggeri assigns eighty-seven French feet to the whole diameter of the tomb, and only twenty feet to the circular chamber.

For several miles along the Appian Way, and on each side, there are considerable remains of Tombs, which for the most part are merely indistinct masses of rubble; but fragments of white marble are scattered around in

ROME.

ROME. sufficient quantity to show that a large proportion of the Tombs must have been covered with this material.

Temple of Rediculus.

The elegant little building, named the Temple of Rediculus, was erected, says Festus Pompeius, on the spot on which Hannibal struck his camp to retreat from Rome, *a diis injecto metu recessit*. Livy deposes to the fact, but assigns the opposite side of the road as the site of the Temple. Whatever may be the origin of this building, it is of very correct design and finished execution. Its back, which is ornamented by pilasters, is the most conspicuous part: they are of the Corinthian Order, of brick, with their capitals cut out of the same material. It has windows, and there are evident traces of a portico towards the streamlet which waters the valley.

In the same valley, which is called the Caffarelli, and nearer the road, are what have been named the Egerian Grotts. The grotto, or rather the *Nymphæum*, was, perhaps, originally formed by nature in the side of the hill, but enlarged and made regular by Art, and the soft rock was every where covered with brick and reticulated work. It is a long and deep recess or gallery, with a vaulted roof, and niches at the sides for statues. At the top is a mutilated marble statue, probably of a River God. The vault and walls are thickly covered with the beautiful *Adiantum Capillus Veneris*; the supply of water is small, but in quality, if the enthusiasm of its modern votaries deceive them not, it excels every fount or stream hitherto accessible to mortal lips.

We have already given many separate notices of the leading antiquities of Rome. Thus an account of the COLISEUM (o) will be found under the head AMPHITHEATRE. The FORUM ROMANUM, (p,) and each other FORUM, with all the wonders in their vicinities, under FORUM. BASILICA, BRIDGE, CIRCUS, CLOACA MAXIMA (q) and OBELISK, contain information as to the several objects to which they relate; and especially the first nine Chapters of Part I. in the *Essay on ARCHITECTURE*, form a running Commentary on Ancient Roman Buildings; as much of Part IV. in the same *Essay* illustrates the modern style.

The modern City.

The Capital of the States of the Church, and residence of the Pope, is about 15 miles in its actual circumference. It forms nearly an oblong square, the four angles of which, however, project out of the right line, as well as the centre of the two principal sides which face the North and South. The Tiber divides the City into two unequal parts; the larger, lying on its left bank, is Rome, properly so called; the other bears the name of the *Leonine City*, or *Trastevere*. The ground now inhabited lies almost wholly to the North of the ancient City; since the Capitol formed the Northern limit of the latter, and the same building may be almost regarded as the Southern boundary of the modern City. In fact, nearly the entire extent to the South of the Capitol is occupied by gardens, vineyards, and even tilled land. Great part of Rome now stands on the ancient *Campus Martius*.

The present division of the City is into fourteen *rioni*, or quarters, which, however, have no connection, historically or otherwise, with the fourteen Augustan Regions. Twelve was the prevailing number in the Civil constitution of the Christian City. The quarter of *Trastevere* was long considered a distinct town, and it was not until the latter half of the XIVth Century that it was included as a thirteenth *rione*. The *Leonine City*, which now constitutes the *Rione del Borgo*, was added

to the rest by Sixtus V. It had been previously kept apart by the jealousy of the Popes, as their peculiar domain, the inhabitants of which had no claim to the franchise of Roman citizens. But when the Municipal Government became absolutely dependent on the Papal Court, the distinction was without value either way, and accordingly the *Leonine City* was annexed to Rome by Sixtus as the fourteenth *rione*.

It is remarkable that the old distinction between *Montani* and *Pagani*, which originated in the ancient *Septimontium*, is kept up to this day by the inhabitants of the first *rione*, *Di Monti*, which includes the Quirinal, Viminal, and Esquiline, with the intermediate valleys. They form a community marked by a peculiar dialect and manners, and are designated by the name of *Montigiani*, while they themselves, like the People of *Trastevere*, nickname the other Romans *Piani*. Another singularity, noticed by Niebuhr, is, that the People still unconsciously acknowledge the ancient Rome of Servius to be the true City; "the vine-dresser or gardener about the Lateran or Santa Bibiena says, he is going to Rome, or coming from it, just as much as he that lives without the walls of Aurelian."

The soil is much higher now than it used to be of old; the Tarpeian rock does not exceed at present twenty-five or thirty feet in height; and the pavement of a small Church built at the base of the Palatine hill is exactly on a level with the dome of an ancient Temple, erected on the spot where Romulus and Remus were supposed to have been suckled by a wolf. It was necessary to remove the soil to the depth of twenty feet, in order to discover the base of Trajan's Pillar. More than half the pedestal of Constantine's Triumphal Arch was covered with earth. The fine Egyptian Obelisk loaded with hieroglyphics, and cut by order of Rameses thirteen centuries before the Christian Era, was covered with sixteen feet of earth amidst the ruins of the *Circus Maximus*, before it was transported by Sixtus V. to the Square of St. John Lateran. In the Arch of Septimius Severus, the soil reached to above half the height of its principal gate.

It is a common, and assuredly a pleasing error, to associate the ideas of loftiness and grandeur with our notions of the hills of the Eternal City. Nevertheless, even originally, their elevation could have been by no means commanding; and raised as the surface of their valleys now is above the ancient level, by the ruins of the successive edifices which form the very dust of Rome, their dwarfish appearance awakes disappointment in the heart of many a classical pilgrim.

Leaving to the antiquary the numerous *questiones vexatæ* connected with the walls and gates of Rome, we shall confine ourselves to a rapid survey of the present line, or, as they are usually termed, of the walls of Aurelian and Honorius. The *Porta del Popolo*, (1,) which is the first seen by the traveller approaching from the North, is partly modern, partly ancient, and is said to have been rebuilt by Vignola, from a design by Michel Angelo. It stands on or near the site of the *Porta Flaminia*. Proceeding to the right, the wall forms the support of the Pincian hill, and here is the *Muro Torto*, a huge square mass constructed like the wall of rubble-work, with a facing of reticulated tufo: the *Porta Pinciana* (2) is now shut up. Beyond are curtains and towers of more modern work. The *Porta Pia* (3) was opened by Pius IV. in 1561, and built from designs by Michel Angelo, but it is unfinished. Between this

ROME. and the *Porta San Lorenzo* (4) is the site of the ancient Prætorian Camp, (5,) the figure of which is still distinctly traceable. From the latter gate the walls continue to be of brick, with many towers, up to the angle of the *Porta Maggiore*. (6.) This, the finest of all the gates, seems to have been originally an arch of the Aqueduct of Claudius, restored by Vespasian and Titus. It is constructed of large blocks of travertine, joined together without cement, and supported by Ionic pillars. Hence for some distance the wall appears to have been made up of an ancient Aqueduct, by closing the arches. Near the *Porta San Giovanni* (7) some reticulated work occurs; this gate is the great entrance from Naples. After this, the walls are of very shabby brick-work, propt up by buttresses of different dates. The gates next in succession are the *Porta Latina*, (8,) which is shut, and the *Porta San Sebastiano*, (9,) which stands about a mile in front of the ancient *Porta Capena*, the outlet to the Appian Way. About a hundred yards from this gate was discovered the first Roman milestone. Continuing to the *Porta San Paolo*, (10,) traces of more recent fortifications are observable; beyond this, towards *Monte Testaccio*, (11,) the walls present internally a series of open arches.

Rome has at present sixteen gates, including the four of the *Leonine City*, several of which, however, are walled up. It must likewise be borne in mind, that in consequence of the extension of the walls all the gates of Rome are now removed, more or less, beyond their ancient situations.

Entering Rome by the *Porta del Popolo*, and proceeding through the beautiful piazza (12) of the same name, the visitor perceives three principal streets striking off from the latter. They are perfectly straight, and are distinguished both by their length and the beauty of the houses. The central one, called the *Strada del Corso*, is the most frequented and the longest, traversing almost the whole of the modern City on the left bank of the river, and terminating in the *Piazza di Venezia*. It is in this magnificent street that the races are held during the Carnival, and it forms the fashionable evening drive. The right-hand street is the *Strada di Ripetta*, which leads to the quay of the same name on the Tiber; the other, the *Strada di Babuino*, branches off to the left, and ends in the *Piazza di Spagna*. The streets, *Julia*, *Lungara*, and *Condotti*, likewise deserve mention. On the whole, modern Rome, notwithstanding the splendour of many separate edifices, can hardly be called a fine city. Its streets are covered with a reticular pavement, very annoying to the pedestrian, and, though wider than those of Paris, are narrower than those of London. The houses are of stone, coated with a kind of stucco; but the dirt, which is almost as crying a sin here as in Lisbon, detracts much from their appearance. The most agreeable features of the modern City are its numerous Squares, ornamented with obelisks, columns, or fountains, and its Villas—those “*ocelli Italiae*”: its most splendid structures are its Churches, and the “paragon” of these is St. Peter’s, for a brief description of which miracle of Art we must refer to the *Treatise on ARCHITECTURE*, part iv. p. 380.

Rome contains no less than three hundred and sixty-four Churches. The most celebrated of these, next to St. Peter’s, is that of St. John Lateran, (13,) built, as the tradition says, by Constantine on the spot on which he was baptized; and which, as being the peculiar Cure of the Pope, ranks above all the other Churches of the

Catholic world, *Urbis et orbis mater et caput*. Amongst numerous ornaments the Corsini Chapel stands conspicuous for the lavish magnificence yet chasteness of its decorations. It is built in the form of a Greek cross, its walls lined with ancient marbles, its frieze of sculptured bronze, its dome emblazoned with gilding, its pavement inlaid with polished marble, and its altars resplendent with precious stones. Under a handsome portico, built for its reception, is the *Scala Santa*, brought by St. Helena from Palestine, and reputed to be the staircase of Pilate’s house. It is to be ascended only on the knees; and on account of the numerous votaries who perform this ceremony, it has several times been found necessary to renew the thick planks with which the original steps, twenty-eight in number, are carefully protected. The Baptistery is an isolated building, of octagonal form, which seems to have borrowed the descent of its font from the ancient bath, and which has served as the model of all other Roman Catholic Baptisteries.

The most valuable objects, however, in the Church, are four ancient columns of gilt bronze, which support the altar of the Sacrament. It is said that they are the columns made by order of Augustus from the *rostra* of the ships taken in the Battle of Actium; and although this assertion wants proof, they are unquestionably ancient, and probably the only antique columns of bronze in the world.

St. John Lateran is one of the Seven Basilicæ which possess the privilege of granting six thousand years’ indulgence to the Penitent who shall visit in one day their shrines and altars. The others are St. Peter’s, Santa Maria Maggiore, S. Paolo fuore le murà, Santa Croce in Gierusalemme, S. Sebastiano, and S. Lorenzo fuore le murà.

Santa Maria Maggiore (14) stands on the highest of the two summits of the Esquiline hill; it owes its chief beauty to the thirty-six Ionic columns which line the nave, and which are supposed to have belonged to the Temple of Juno Lucina. Here are the chapel and tomb of the ambitious Sixtus V. The mosaics above the columns of the nave are the workmanship of the Vth Century, and were executed by order of Sixtus III., the friend of St. Augustin.

S. Paolo fuore le murà, which in point of size ranked next to St. Peter’s, was almost entirely destroyed by fire in 1823, and is now rebuilding. The number and beauty of the majestic columns that adorned its interior were unequalled by any edifice of the kind. Of these there were one hundred and twenty, of the rarest marble and granite, the spoils of some of the noblest buildings of antiquity, and not more than forty have escaped the action of the flames.

Santa Croce in Gierusalemme (15) was erected by Saint Helena on the ruins of the gardens of Heliogabalus. Among other marvels, a third of the *real* cross is deposited here. In this Church there are eight magnificent ancient columns of Oriental granite; and two of those which support the canopy of the altar are of that very rare marble, termed *Occhio di Pavone*. A beautiful memorial of that love of study which distinguished women of high rank in the XVth Century, is preserved in the Library of the Church; being a fair copy of the *De Senectute* of Cicero, in the handwriting of Hippolyta Sforza, daughter of Francesco, Duke of Milan, and wife of Alphonso, King of Naples. It is enriched by notes and reflections of her own.

ROME.

The Basilica of *S. Sebastiano* was rebuilt in 1611, by the Cardinal Scipio Borghese. Its celebrated catacombs, formed in the quarries of *puzzolana* which supplied the ancient Romans with sand, mortar, &c., although now partly walled up, still extend six miles under ground. They have been explored to a distance of above 15 miles. The cavities for the dead are hollowed out horizontally in the soft rock, in three or four tiers, one above another. Few of these are large enough to admit a man's body, and notwithstanding the legend of the martyred Christians buried here, no less, say the Ecclesiastical records, than fourteen Popes, and 170,000 meaner martyrs, it seems certain that children (whose bodies were never burned) were buried in these *Puticuli*, long before the name of Christian was known. Every vestige of a bone, however, has long since disappeared to grace the *reliquaires* of the devout.

The last of the seven Basilicæ, *San Lorenzo fuori le mura*, is characterised by its two pulpits, which are in fact real tribunes. This Church, in which Pope Honorius XIV. crowned Pierre de Courtenay, Count of Auxerre, Emperor of Constantinople, is chiefly frequented by the *contadini* who supply the markets at Rome, and service is therefore performed before sunrise. Among the frescoes on the portico, which are of the Greco-Italian school, and represent the martyrdom of the Saint, and some subjects taken from the life of Honorius, may be noticed that which portrays the demons contending for the soul of St. Michael, and weighing his actions in imitation of Jupiter in the *Iliad*! Immediately on the right of the door, on entering, is a beautiful antique sarcophagus with a bas-relief representing a Roman marriage. In the interior are ten magnificent ancient columns of Pavonazzetta marble, nearly sunk to the top of their shafts below the pavement; their capitals are Corinthian. On the right, as you walk up the nave, is an Ionic column, with a frog and a lizard sculptured on the capital, declared by the unanimous voices of Winkelman and all succeeding critics to be the very column which, according to Pliny, was so marked by the Spartan architects, Battocus and Saurus, to perpetuate their names.

It would be manifestly impossible, in a general sketch like the present, to give even a synoptical view of the Churches which crowd this Ecclesiastical City, much less to enter into a detail of their architecture and internal decorations. We shall therefore confine ourselves to a summary of the style which is their common characteristic, and then rapidly enumerate the names of those most worthy of note.

"The most common arrangement of the Churches," says Mr. Wood, "is that of a nave with three arches on each side, opening into chapels; or in the more magnificent ones, with side aisles and chapels beyond them. In the centre is a dome resting on four piers. There is one arch in the length of each tribune, four arches, or five, instead of three, in the nave, and sometimes one or two smaller ones besides the three larger. The order is always Corinthian, and the nave a continued vault, springing, not from the top of the cornice, but from an attic, or continued pedestal above it. The windows are generally groined into this vault, but sometimes the pedestal is cut to make room for them, and they are partly in the vault, and partly in the upright, which is displeasing. The principal arches opening into the nave sometimes reach to the architrave of the principal order, and sometimes fall considerably short of it. In the latter case they have a gallery, or a panel,

or, perhaps, something like a window over them, but the arrangement is much more beautiful when these arches are carried up to the full height of the opening, and the key-stone seems to contribute to the support of the entablature. This connects them with the principal order, with which otherwise they have not sufficient union. When the parts are well proportioned, it is impossible to refuse our tribute of admiration to these Churches; and if indeed it may be said with truth that there is not one good front to any Church in Rome, yet internally they surpass beyond all comparison those of every other City."

The Churches of *Jesus* and *St. Ignatius* are, after St. Peter's, pre-eminent for their riches. The altar of the former is the most gorgeous in Rome; the latter possesses a much admired work by Le Gros, the apotheosis of St. Lewis Gonzaga. *St. Pietro in Vincoli*, (16,) considered the most ancient Church in the City, boasts of the mausoleum of Julius II., the work of Michel Angelo, where sits his celebrated figure of Moses "frowning with the terrific eyebrows of Olympian Jove." The *Carthusian Church* was designed by the same great man when he was eighty-eight years of age, and is formed out of the principal hall of the vast Thermæ of Diocletian: here are the tombs of Carlo Maratti and Salvator Rosa, and in the centre of the spacious cloisters is a fountain near whose margin are four cypresses planted by the hand of the mighty architect. *S. Pietro in Montorio* (17) contains Sebastian del Piombo's fine picture of the Flagellations of Christ. *S. Bibiana* is adorned with Bernini's best work, the statue of the Saint, which has extorted the praise of even the fastidious Forsyth. To the above list may be added *S. Martino de' Monti*, (18,) which communicates by subterranean passages with the Baths of Trajan, and *S. Maria in Araceli*, most gratuitously supposed to replace the Temple of the Feretrian Jove.

Palace is a term of dubious import at Rome, many Palaces, houses being dignified by the name which would not be tenanted by an English tradesman of the middling class. Even those justly denominated Palaces, and there are many such, are seldom remarkable for their architecture, and are mostly disfigured by dirt, besides being deficient in Libraries, Music-rooms, Baths, and other appendages of refinement and luxury. The Patricians of Rome have fallen from their high estate. We are told that it is no uncommon thing for an Italian Nobleman to go up into the attics of his own Palace himself, and to let the principal rooms to lodgers. A few families, as the Doria, the Borghesi, and the Colonnese, still retain revenues sufficient to support their hereditary dignity; and galleries of statuary and painting, with collections of antiques, still adorn many a spacious edifice, in spite of the French invasion, and of the poverty of the *Nobili*.

Passing for the present over the Vatican, our list of Palaces will begin with the Modern Capitol, or *Campidoglio*, (19,) which, with its twin galleries of painting and sculpture on either side of its Piazza, and the Senator's Palace in front, is from the designs of Michel Angelo. Nevertheless its architecture deserves but little praise. Its Museum contains, amongst other fine specimens of sculpture, the Osiris and Isis brought from the Canopus of Adrian's villa, the seated statue of Agrippina, and the dying Gladiator. In the centre of the Piazza stands the bronze equestrian statue of Marcus Aurelius, on seeing which Michel Angelo is said to have exclaimed, *Cammina!* (Go on then!) That side of the Piazza, in which

ROME.

ROME. is the gallery of paintings, is the *Palazzo de' Conservatori*; officers whose duty seems somewhat analogous to that of the ancient Ediles. The *Palazzo della Cancelleria* (20) is one of the best of Bramante's works; the Library of the *Ghigi* Palace is rich in manuscripts and fine editions, and is at present under the care of the antiquary Fea; the *Barberini* Palace ranks among the first in Rome for its rich hoards of sculpture and painting, and its Library counts 50,000 volumes and precious manuscripts; the *Borghese* Palace is of immense size, and its galleries contain "the greatest number of fine pictures, and the fewest bad, of any in Rome,"—the specimens of *Domenichino*, *Albano*, and *Titian*, are exquisite; the *Doria* Palace is almost equally rich, though in other masters; that of *Colonna* boasts the finest gallery, though not the best pictures, in this City of the Arts; the *Braschi* and *Ruspoli* are distinguished by their magnificent staircases; the *Farnese* Palace (21) is remarkable for the beauty of its architecture; and the Palace of Prince di Canino is stored with rich collections, to which he is daily adding, and more particularly with Etruscan antiquities. A few names, out of more than thirty that remain deserving mention, must complete our catalogue: such are the Palaces *Corsini*, *Aldobrandi*, *Mattei*, *Spada*, *Pamfili*, *Rondanini*, *Strozzi*, *Torlonia*, &c.

Vatican.

The *Vatican*, reared on the mount of the same name, and immediately adjoining St. Peter's, is the principal residence of the Supreme Pontiff. Its extent is almost incredible. The lowest computation gives the number of its apartments at 4422. Its early history is lost in remote antiquity. Charlemagne resided here in the year 800; and the irregular mass of buildings of which this vast Palace is composed, has been the work of a series of Popes. The rooms, afterwards adorned by the pencil of Raphael, were added to it by Nicholas V.; it owes the triple portico to Leo X.; and Pius VI. completed the structure by the addition of the *Museo Pio Clementino*. The genius of ancient and modern times, and the wealth of a mighty hierarchy, have combined to render its walls the depository of the most marvellous productions of man. The Sistine Chapel, immortalized by the Last Judgment of Michel Angelo; the *Camere* of Raphael, painted by himself and pupils, and containing, among numerous other splendid designs, that perfect performance, the School of Athens; among the antiques, the Apollo, the Laocoon, the Meleager; the Perseus, and the Pugilists of Canova, the only modern statues as yet admitted; in the picture gallery, the Transfiguration of Raphael, and the Communion of St. Jerome by Domenichino; in the Library, 80,000 volumes and 24,000 manuscripts, treasures without price, to which has recently been added the collection of works of Art formed by Count Cicognara, and extending to more than 4800 articles; the bare enumeration of these may give some idea of the intrinsic wealth of the Vatican, but none of its bewildering extent and prodigality of magnificence. The length of the Museum of Statues alone is computed to be a mile; that of the Library, nearly 1000 feet; and there is not a spot that does not display some rare or costly deposit. "Its ceilings richly painted in fresco, its pictured pavements of ancient mosaic, its magnificent gates of bronze, its polished columns of ancient porphyry, its endless accumulation of Grecian marbles, Egyptian granites, and Oriental alabasters, its amazing treasures of sculpture, its interminable succession of lengthening galleries

and marble halls with their majestic columns and murmuring fountains, far surpass even the dreams of Eastern magnificence."

The *Quirinal* Palace, otherwise termed *Monte Cavallo*, from the colossal statues of Castor and Pollux which stand in the Piazza (22) before it, is now the chosen seat in which the Conclaves are held. In its Chapel is an Annunciation by Guido; and in one of the rooms is the plaster of the beautiful frieze in bas-relief of the Triumph of Alexander, modelled for Napoleon by Thorwaldsen. Its gardens are extensive, but deformed by puerile devices, and absurd *Giocchi d'Acqua*.

The *Castle of St. Angelo*, (23,) the fortress and state-prison of Rome, is constructed from the remains of the celebrated Mausoleum (24) erected by the Emperor Adrian. This is of circular form, about 219 feet in diameter, and rests on a square base composed of massy blocks of peperino, in which are wrought various sepulchral passages and chambers designed for the dead. It seems to have been converted into a fortress during the siege of Rome by the Goths in 537, and to have sustained much injury by the destruction of its statues and other ornaments. Constantine had removed its column to assist in the building of *S. Paolo*; and during the fierce dissensions of the Middle Ages it must have sustained still further dilapidations. In the annals of that period, it takes the name indifferently of the Tower of Crescentius, or of the House of Theodoric. The superstructure of brick, which crowns the ancient building, was added during the Pontificate of Alexander VI.; and Urban VIII. surrounded the whole with a ditch, and a rampart with bastions. It received its present name from the Angel beheld on its summit by Gregory the Great, as he crossed the bridge to offer up prayers for the deliverance of his people from a pestilence. Hence the brazen statue which still crowns the castle.

Among the Palaces of Rome which bear the name of Villas. Villas from their being regarded as country-houses, although nearly all are within the precincts of the City, may be cited the *Villa Borghese*, or *Pinciana*, (a a,) which has recently been much enlarged; and so inexhaustible is Italy in works of Art that its celebrated Museum, purchased by Napoleon and now in Paris, has been since replaced in the short course of three years: the *Villa Albani* holds, perhaps, the first rank among these storehouses of the precious remains of antiquity, and from its rich collections Winkelman derived much of his critical lore: the *Villa Ludovisi*, which is the only one shut to the stranger, has been much enriched by the late excavations of its wealthy proprietor; the *Villa Aldobrandini* which deserves its other title of *Belvedere*, from its beautiful prospect of sea and mountains; and which gave its name to the famous antique painting called the *Nozzi Aldobrandini*, now in the Vatican: the *Villa Medici*, (25,) so renowned for its Venus and other master-pieces now adorning the gallery at Florence, is at present the residence of the young artists who are yearly sent at the expense of the French Government to study at Rome. To this list may be subjoined the Villas *Farnese*, *Piombino*, *Mattei*, *Farnesina*, *Massimi*, *Gius-tiani*, *Casali*, *Doria*, *Barberini*, &c.

The Roman villas display a decided superiority over the residences of similar nature in the rest of Europe. The taste of the Ancients seems in this particular to have been transmitted to their descendants. Their villas unite elegance with simplicity. Lofty hedges and groves of laurel shelter them from the rigour of Winter, and

ROME.

ROME. preserve a perpetual verdure. The larger are embosomed in the midst of woods, meadows, and pasturage, all but parks; and around all cluster plantations of the orange and lemon with their sweet perfume. Nearly all are open to the Public, and might inscribe on their gates the inscription engraved on the pedestal of an ancient statue in the *Borghese* park, ITO QUO VOLES, PETITO QUE CUPIS, ABITO QUANDO VOLES. EXTERIS MAGIS HEC PARANTUR QUAM HERO.

Piazzas.

There are not less than 46 Piazzas, large, open spaces, sometimes beautiful, but frequently filthy, in Rome. Those of St. Peter's (26) and of Monte Cavallo (22) have been already incidentally mentioned. The *Piazza Navona*, (27,) the largest market-place in the City, may give some idea of its civic administration. It contains an obelisk of granite, colossal statues, four fountains, and not a shed to shelter the market people from the sun or the rain. The *Piazza d'Espagna*, (28,) adorned by the Palace of the Spanish Ambassador, by the fountain *Baraccia*, and the magnificent flight of steps which conducts to the Church of the *Trinità de' Monti*, is filled with hotels, and is the great resort of visitors to Rome. The *Piazza Colonna* (29) takes its name from the column "of rosso antico, about three feet high, called, impudently enough, the *Columna Bellica*," and said to have stood before the Temple of Bellona; the *Piazza del Popolo* (12) has been previously noticed as the first which attracts the stranger's attention on entering from the North.

Fountains.

The fountains of Rome are among its best ornaments. Some are beautiful; one or two grand. Of the last class are those which play before the front of St. Peter's, and the *Fontana Paolina*. Modern Rome is chiefly supplied with water from the fountain of Trevi, the ancient *Acqua Vergine*. The *Fontana di Termini*, that in the *Piazza Barberini*, the fountains in the *Piazza Navona*, and the graceful little fountain of the *Tartaruche*, are but a few others, named at random, from the numbers which pour their unceasing flow of waters on every side.

Charities.

The chapter on charitable and benevolent institutions, in M. Tournon's elaborate Work, affords one of the most favourable aspects of modern Rome. At the period of the French invasion, the number of individuals sheltered in them amounted to about 3500, and their income gave a total of 1,181,400 francs. Our information as to their present state is defective; but the Hospital of S. Michel alone provides for 700 persons, and, independently of the aged of both sexes supported in this noble edifice, it contains Schools of Design and of the useful Arts for the gratuitous instruction of poor children. In the Palace of St. John Lateran are two large fever hospitals, which recently have been put on an improved footing; here too is the establishment of *Les Sœurs Grises*, founded by Leo XII. The *Monte di Pietà*, established in 1539 to lend money on pledges at a moderate interest for considerable sums, while the poor paid none, was an institution once common to every Italian city; its original object, however, is now in a great measure lost sight of.

Literary Institutions.

Having already mentioned the principal foundations for education, as well as the chief Libraries and Museums, we shall confine our notice under this head to a very brief enumeration of the learned Societies which abound in this their natural seat. The Academy of the *Arcadi* is one of the most ancient in Europe; that of the *Nuovi Lincei* is chiefly devoted to Natural History,

but directs its attention to other branches of Science, and has an Observatory attached to it; the Theological Academy of the Roman University; the *Pontificia Accademia Romana d'Archeologia*, the object of which is the illustration of ancient monuments, and the rectification of popular errors on those already known. Of late years there has been founded the *Institute of Archaeological Correspondence*, divided into sections, corresponding with the respective Countries which furnish the most fertile fields for such studies: this is one of the most extensive and useful learned associations hitherto established. The Academy of S. Luc is at the head of the Roman Schools of Art, and is worthily supported by ten Professors, who lecture on Painting, Sculpture, theoretical and practical Architecture, Perspective, &c. Among other Societies may be particularized the *Tiberina*, the *Latina*, the *Filarmonica*, the *Filodrammatica-Romana*.

We may observe that the ancient and nugatory Academies of poetasters and pedants, the titles and labours of which were equally ridiculous, are sinking into oblivion, and that the practical Societies, one of the distinguishing features of the present Age, are beginning to find their way into Italy.

The drama is at a very low ebb in every respect. "Rome has the worst Opera in Italy, but the best sacred music in the world." The *Argentina* (30) is the summer theatre; that of the *Valle*, (31,) the winter. Generally speaking, actors, dancers, plays, music, scenery, and dresses are all equally indifferent. The most amusing spectacle is the *Burattini*, acting puppets which are admirably managed. Little *pièces de circonstance*, satirizing the manners and follies of the day, are produced here with much humour and tact; nor are its conductors less happy in the busy incidents and showy spectacle of melodramas and classical burlettas.

In the third book of M. Tournon's Work will be found ample details on the commerce and manufactures of Rome. He observes that most travellers have limited the industry of the Romans to the manufacture of beads, rosaries, agni dei, relics, and indulgences. Manufactures, however, of common linen cloth, of woollens which employ 2000 workmen, of silk, leather, and paper, iron founderies and forges, common potteries, &c., exist at Rome and in the country round. There were, in 1813, 682 factories and workshops at Rome. The Arts of Engraving, Mosaic, Scagliola, besides Sculpture and Painting, form a very essential branch of Roman industry. The Roman Printing-Office, founded in 1467 by Sweynheim and Pannartz, whence issued so many beautiful editions in the XVIth Century, as the Homer, and the Latin Bible superintended by Aldus, must not be passed over unmentioned, although it is now fallen from its pristine activity.

Any notice of Rome would be incomplete which did not include a description of the quarter of the Jews. Gloomy and filthy, "it exhibits," says a modern traveller, "a multitude of *Parias*, crowded into shops." Its population amounts to 3500 souls, and, were the rest of Rome peopled in proportion, the City would contain 500,000 human beings. This barbarous custom of penning up fellow-creatures, so repugnant to the mild doctrines of the Gospel, has not even the poor sanction of antiquity, since it dates no further back than the Pontificate of Paul IV., about the middle of the XVIth Century. The *Ghetto* forms a species of *Commune*, and takes the name of *Università*; its rectors have the title of *Cacam*. An annual sum of 7000

ROME.

Dramatic amusements.

Manufactures.

Lo Ghetto.

ROME crowns is levied on 109 of the wealthiest families of the community, and is devoted to the expenses of their worship, to schools, physicians, and above all to the relief of the poor.

It is remarkable that this collection of narrow dens, rather than of houses, bordering on the Tiber, and certainly looking the seat of infection, is the reverse of unhealthy.

The following heights of some of the principal buildings in or near Rome are taken from Sir W. Gell's recent Work. They are given in French feet.

	Feet.	In.
Summit of the Tomb of Cecilia Metella . .	228	8
Cross of S. Bonaventura, on the Palatine .	197	6
Tower of the Capitol	290	6
St. Alessio, on the Aventine	243	7
Villa Torlonia, now Manescotti, on the Janiculum	335	9
Top of Villa on Monte Mario	440	0
Santa Maria Maggiore	368	3
Quirinal Palace	293	5
Villa Medici	245	2
Trinità dei Monti	260	3
Summit of the Coliseum	219	0
St. Peter's	497	5

The last observation of the latitude of St. Peter's, by Calandrelli, gives $41^{\circ} 54' 8'' 5'''$.

In our description of the remaining towns of the Papal States we shall adopt the plan pursued by M. Balbi of choosing those most worthy of note as common centres, in a given circle around which places of minor consequence, yet deserving mention, may be conveniently classified. Thus in a circle of 18 miles round Rome we may particularize *Tivoli*, the ancient and poetic *Tibur*, ennobled by high associations, and abounding in natural beauties. Here were the chosen seats of Catullus, Propertius, Mæcenas, Augustus, perhaps of Horace, but certainly of many of the greatest, as well as of the most noble, of ancient Rome; and here, too, Zenobia lingered in obscure captivity. The Cascades, so well described by Gray in his Letters; the ruins of the Temple of the Sibyl; the innumerable relics of villas whose names, whether right or wrong, bear a magic charm with them; the imposing extent of the ruins of Adrian's country-seat, where yet can be pointed out the sites of the *Lyceum*, *Academy*, *Prytaneum*, *Pæcile*, of the *Canopus*, and of other imitations of the most famous buildings of Egypt, Syria, and Greece, clustered into one precinct, and now lost among thick olive groves, and overhung with wild creeping plants, all conjure up the time when Tivoli was indeed *superbum Tibur*. "The hill," Forsyth truly and happily observes, "is all over picture. But, alas! the modern town is all meanness and misery." Its manufactories of oil, gunpowder, and paper harmonize badly with the glorious scenery and impressive memorials around. It is a Bishop's See, and has a population of about 6000 souls. "The Government have recently undertaken," writes Sir W. Gell, "at an enormous expense, to cut two tunnels, in the form of Gothic arches, in the hard limestone rock of Mount Catillus. They are to begin about 100 yards above the old fall of Bernini, and are to conduct the Anio to a spot in the mountain, on the bank opposite to the Temple, at about 100 yards beyond the Temple, and nearly on a level with it, whence it will fall with a tremendous flood into the old bed of the river, so as not in future to risk the undermining

of the rock." The tunnels are to be about 50 feet wide, and during the cutting, which has been already executed, there have been discovered numerous sepulchres, "with a very considerable quantity of *opus reticulatum* supporting the Via Valeria, and also an ancient bridge, two arches of which remain above Bernini's fall." Sir W. Gell supposes the Anio at Tivoli to have originally formed a lake under the Temple, entirely submerging the grotto of Neptune; but that the dam, supporting the pool between the Sibyl and Vopiscus, having been swept away by a flood, the fall was consequently divided into two, one above the other below the Temple, and that thus the grotto was left nearly dry. *Velletri* is a mean-looking town, but distinguished by the beauty of its women, and by some fine buildings. The marble staircase of the *Lancellotti* Palace, erected by the elder *Lunghi*, is cited as peculiarly magnificent; and in the Church of *S. Maria dell' Orto* is a picture of the "Virgin and infant Jesus" by *Rositi*, an artist of the XVIth Century, worthy the traveller's attention. Bishop's See; population 10,000. *Albano* is the most fashionable summer retreat (*villeggiatura*) in the neighbourhood of Rome. At each extremity of the town are the remains of a Mausoleum, the one of which takes the name of the Tomb of Ascanius, the other that of the Tomb of the Horatii and Curiatii. Bishop's See; population 2400. A fine avenue of evergreen oaks leads hence to the town of *Castel-Gandolfo*, which lies on the shores of the Alban lake. The great *Emissarium*, or outlet of the lake, a tunnel a mile and a half in length, originally carried through the mountain to let off the waters which had risen so high as to threaten the whole plain of Latium with inundation, still answers its original purpose, after a lapse of more than 2000 years, as if built only yesterday. Traces of the *Nymphæum* of Domitian are found a little further, on the cool margin of the lake; and there are many vestiges of the tyrant's villa scattered among the extensive grounds of the *Barberini* villa on the hill above. In this town is the only summer residence which the Pope possesses. *Frascati* is situated midway up a mountain's side, in the midst of a delicious country, and lies directly below the ruins of the ancient *Tusculum*. It is crowded with villas, embosomed in beautiful woods of arbutus, ilex, cypress, and stone-pine, and is esteemed very healthy. Some remains, popularly said to be those of Cicero's villa, are shown here. Excavations to a considerable extent have been undertaken by Lucien Buonaparte amongst the ruins of *Tusculum*; and an ancient street, or road, with its fountain at the corner, has already repaid his researches. Bishop's See; population 4000. *Subiaco* is much resorted to by artists on account of its picturesque situation, its woods, lake, grottos, rocks, waterfalls, and ruined castle. Here are some remains of Nero's splendid villa. Population 2000. *Ostia*. The road from Rome to this deserted town is, perhaps, of all the ancient *viæ*, that whose direction has been least changed. After passing the inn of *Malafede*, the traveller comes upon a scene of the poetic history of Rome, of the last six books of the *Æneid*. But all is sterile and unpicturesque. The wood, immortalized by the pathetic episode of the death of Nisus and Euryalus, is a dreary thicket, tenanted by the buffalo and wild boar. Sorry, however, as the view may be to the antiquary, or poetic enthusiast, it is an enchanted region to the sportsman. During the Summer *Ostia* may contain about ten persons, exclusive of the convicts, with their guard, who are employed in the ma-

ROME. manufacture of salt; when the season of the *malaria* is over, its population rises to about 100. The ruins of the ancient flourishing seaport lie about a quarter of a mile from the new town. Some walls, pilasters, and steps of the Theatre, with the ruins of a Temple, are still remaining; and the semicircular form of the ancient town, stretching round the little bay formed by the Tiber, may be distinctly traced. The *Isola Sacra*, in which was formerly celebrated the festival of Castor and Pollux, under the superintendence of the Prefect of Rome, and of a Consul, contains some noble remains of the mole. The sea is now three miles from its ancient harbour.

Viterbo is a clean, well-built town, says Valery; dirty, and with streets deep in mire, says Miss Waldie; agreeably situated at the foot of a mountain, and surrounded by gardens, vineyards, and country-houses belonging to the Roman Nobility. Its principal buildings are the Communal Palace, in which is the Cabinet of Antiquities formed in 1821 by the Academy *degli Ardenti*, one of the most ancient in Italy; and the Gothic Cathedral, which contains paintings by Benefial, Romanelli, Albert Durer, and Carlo Maratti. In the Church of the Franciscan Friars is one of the most esteemed productions of Sebastian del Piombo, "La Pietà." The mountain, at the foot of which the town stands, is the Ciminus, on the Northern side of which Fabius gained his decisive victory over the Etruscans. (*Livy*, lib. ix. dec. 1.) "It still preserves something of its sylvan character, being covered with wild broom and brushwood, amongst which tower some noble chestnut trees and dark-spreading stone-pines." Bishop's See; population 13,000. About two miles from the town is the famous *Bulicame*, a small lake of hot sulphureous water, which boils furiously and incessantly, throwing up a thick white vapour: its rivulet flows from it just as in the time of Dante—

*Quale del Bulicame esce 'l ruscello
Che parton poi tra lor le peccatrici.*

Inf. can. xiv. 79.

In a circle of 26 miles round *Viterbo* are the towns of *Montefiasco*, *Orvieto*, *Todi*, *Terni*, *Amelia*, *Narni*, *Otricoli*, *Magliano*, *Civita-Castellana*, *Baccano*, *Nepi*, *Ronciglione*, *Civita-Vecchia*, *Tolfa*, *Corneto*, *Piano di Voce*, *Ponte-Bodio*, *Montalto*, *Toscanella*, *Canino*, *Bolsena*, *Bracciano*, and *Aquapendente*, almost all of which, if not Bishops' Sees, give their names to their respective Dioceses, and are worthy of notice on various accounts; but our limits will only permit us to particularize the following. *Orvieto*, generally noted for its excellent white wine, is likewise distinguished for its Cathedral, one of the most ancient, rich, and curious monuments of Art in Italy. It was founded in 1290, and built from the designs of a Siennese architect, Laurent Maitani. The grand frescos on wood in one of its Chapels, that of the Madonna of San Brizio, are the work of Luc Signorelli, and were painted by him in 1499, when he was nearly sixty years of age: the Last Judgment, which displays remarkable taste, expression, and anatomical skill, is supposed to have suggested to Michel Angelo, who diligently studied it, the paintings of the Sistine Chapel; and Canova is said to have borrowed the idea of his Cupid and Psyche from two of the figures that are awakening to life. Population 8000. *Terni* is celebrated for its waterfall, formed by the fall of the Velino into the Nera, and which derives its name, *delle Marmore*, from the stalactites with which its rocks are encrusted. Population 5000. *Narni* and

VOL. XXVII.

Nepi are distinguished by their fine aqueducts,—the former, too, boasts an antiquity superior to that of Rome, and its bridge, called *Sanguinazio*, is of Roman construction; *Ronciglione* has a manufactory of paper, and iron-works; *Baccano*, a rich mine of sulphur; *Montefiascone* is renowned for its wine; and *Bolsena* and *Bracciano* derive celebrity from their lovely lakes. *Civita-Vecchia* is one of the two seaports of the Papal States, is fortified, and contains an arsenal. Its chief exports are puzzolana, and alum procured from the rich mines of the neighbouring town of *Tolfa* Bishop's See: population about 8000. *Corneto*, *Piano di Voce*, *Ponte-Bodio*, *Montalto*, and *Canino* are insignificant villages, which, however, have recently acquired notoriety from the discovery of the *Necropoles*, or burying-places of the ancient Etrurian Cities of *Tarquini*, *Corioli*, *Volsinii*, and *Graviscæ*. The excavations carried on in that of the first of these towns have been attended with the richest harvest. There have been discovered here upwards of 500 hypogea: among the numerous interesting objects dug out are a sculptured buckler, more than three feet in diameter, richly ornamented with figures of men and animals; fragments of a car; a large number of vases; plates of gold over bronze, being pieces of armour; gold ornaments; small idols in a bluish earth, exactly resembling those found in such multitudes in the Egyptian catacombs. Several of the tombs contained paintings, in good preservation, representing funeral games and feasts, some of which are extremely beautiful; a few are illustrated by inscriptions. MM. Fossati and Manzi, encouraged by the treasures which thus rewarded the researches of the Prince of Canino, have since discovered the *thermæ* of *Tarquini*, some beautiful mosaics, and three Etruscan Temples with their respective sanctuaries. Tombs of larger size have been found in the *Necropoles* of *Corioli*, *Volsinii*, and *Graviscæ*, together with numerous painted vases; but no paintings.

Perugia, lying on a mountain, with its citadel formerly inhabited by the Popes, and its fortifications of San-Gallo, the *fossés* of which, now filled up, have been converted into the public walk, is a picturesque looking town; and its somewhat wild appearance is not unsuitable to the character of ferocity attributed to its ancient inhabitants. Its University ranks next to those of Rome and Bologna, having between 300 and 400 pupils; attached to it are a Botanic Garden, Mineralogical and Archæological cabinets, the latter rich in Etruscan inscriptions and vases, (vide Inghirami, *Monumenti Etruschi*, tom. vi., and the publications of Vermiglioli and Micali,) and a well-chosen collection of medals. In the same building is the Gallery of Paintings, works of the School of Perugia chronologically arranged, belonging to the Academy of Fine Arts. Of its hundred and thirty Churches and Monasteries, the Benedictine Convent is one of the richest Ecclesiastical establishments in the Roman State, and the Cathedral of San Lorenzo is a bold Gothic edifice, enriched by Baroccio's celebrated "Taking down from the Cross," and by a Library of valuable manuscripts. In the public Palace, the residence of the Delegate, a secret chamber was discovered about twenty years ago containing public records belonging to the palmy days of Perugia; and from this source M. Vermiglioli is supposed to have derived the sumptuary laws of the town in the XIVth Century, published by him, and highly valuable as illustrative of the Perugian dialect. The Public Library contains

U

ROME. about 30,000 volumes, and is rich in editions of the XVth Century, as well as in manuscripts. This town has a Theatre, and carries on some manufactures of silk. Population, estimated by Balbi, in 1826, at 30,000; by Valery, at a later period, at not more than 14,000.

In a circle of 20 miles round Perugia, we meet with *Gubbio*, *Nocera*, *Assisi*, *Foligno*, *Trevi*, and *Todi*, all Bishops' Sees. *Foligno*, which is of importance from its trade and manufactures of cloth, paper, &c., suffered severely from an earthquake, in January 1832, which laid many of its buildings in ruins. Its majestic Cathedral was fortunately spared. Population about 9000. *Gubbio* carries on some trade, and contains a collection of antiquities, among which may be specified the famous *Eugubine Tables*, an Etruscan monument, the deciphering of which tasked the antiquarian lore of Lanzi. Population about 4000. In the lake of Perugia, the *Thrasymenus* of antiquity, is the beautiful little island *Isola Maggiore*. ANCONA has been given in its alphabetical order. Of the towns lying within a circle of 20 miles around, we shall only specify *Sinigaglia*, which derives its consequence from its annual fair, held in July, and which is the largest in Italy. Population about 8000. *Macerata*, having a University and several literary establishments. Population about 12,000. *Loretto*, the goal of many a pilgrim, still boasts its celebrated sanctuary of *Santa Casa*, in that magnificent Temple which was once thought to excel all others in wealth, and whose altars are still "richly dight." Population 8000.

Rimini lies near the embouchure of the *Marecchia*, which, from the retiring of the sea, forms but a small harbour for fishing-boats. A beautiful bridge of white marble, built under Augustus and Tiberius, unites the ancient *Flaminian* and *Æmilian* Ways; and, together with the Arch of Augustus reared by the grateful inhabitants in acknowledgment of his benefits in repairing these celebrated roads, still forms one of the finest ornaments of the City. The streets are well built and handsome, many of the piazzas adorned with fountains, and among its Churches may be distinguished that of *S. Francesco*, the chef-d'œuvre of Battista Alberti, the restorer of modern architecture. It was built in the XVth Century, under the auspices of Sigismondo Pandolfo Malatesta, Lord of Rimini, the warrior friend of the poets and philosophers of the day; and here are assembled the tombs of himself, of his captains, of his literary friends, and of many of his princely descendants. The fortress erected by him, and which commands the town, is now converted into a prison. Rimini has a Public Library of about 30,000 volumes; the manuscripts chiefly relate to the history of the town, with the exception of a papyrus which has been illustrated by Marini, and a few classical ones. A few miles from the town is the Castle of *S. Leo*, where *Cagliostro* died in confinement. Bishop's See; population above 15,000.

Drawing a circle of 26 miles round Rimini, we find included in it the following towns: *Cesenatico*, *Cervia*, *Ravenna*, *Forlì*, *Forlimpopoli*, *Cesena*, *Savignano*, *San Angelo in Vado*, *Urbano*, *Urbino*, *Fossombrone*, *Fano*, *Pesaro*, and the petty Republic of *San Marino*, which has been noticed in its alphabetical order. These towns are either Bishops' Sees, or give titles to their respective Dioceses. Our limited space will only admit of our particularizing *Cervia*, which is important by its extensive salt-works; population 4000. *Forlì*, a large new-looking town, with its houses uniformly painted

of a stone-colour, and on whose ramparts, between the gate of *Cesena* and that of *Ravenna*, *Catherine Sforza*, "nobly immodest, and less a woman than the leader of a party," proved by silent gesture to the revolvers, who threatened to slay her son before her face, that they had no power over her future issue. A rather brisk trade is carried on here; population 16,000. *Cesena* is chiefly remarkable for the beauty of its environs; population 12,000. *Urbino* is an Archbishop's See, and boasts an University; population about 7000. *Fano* contains a celebrated Theatre, built by *Torelli*, supposed to be the oldest of the large modern theatres; population 15,000. *Pesaro* is adorned with numerous handsome public buildings, among which may be specified the Palace of the former Dukes of Urbino, whose Court in the XVth Century vied with the most renowned of Italy in its patronage of Literature and the Arts. It was taken as his model by *Castiglione*, who fixed upon it as the scene of his elegant Work *Il Cortegiano*; and was celebrated by *Ariosto* as the asylum of the Muses. Here too *Tasso*, summoned by the beautiful Princess *Lucrezia d'Este*, read his pastoral of *Aminta*; the house in which he dwelt is still shown; population about 12,000. These two last-named towns are both small seaports in the Gulf of Venice. The port of *Fano* is formed by the ancient *Metaurus*; that of *Pesaro*, by the *Foglia*. The small stream which runs by *Savignano*, under a Roman bridge of the Consular Era, is now universally recognised as the *Rubicon*. At some distance below the town it joins the *Pisatello*, and falls with it into the sea. The bed of the stream is still covered with the red pebbles, from which *Lucan* gave it the epithet of *Puniceus*; and the pavement of its bridge is laid down with stone of the same colour.

RAVENNA is reserved for a separate notice. BOLOGNA, FERRARA, BENEVENTO, COMACCHIO, CAMERINO, and FERMO have been described in their alphabetical order.

Of the remaining towns in the Papal States, *Terracina*, *Spoletto*, and *Rieti* still claim attention. The first of these, the ancient *Anxur*, lies at the Southern extremity of the Pontine Marshes, and is a most unhealthy spot. It contains several remains of antiquity, amongst which the solid ruins of the ancient port and mole, and those of *Theodoric's Palace*, are the most interesting. They likewise show how greatly *Anxur* extended, on both sides, beyond *Terracina*. "Pius VI.," says *Forsyth*, "has left here a grand succession of works, in his road, canal, bridges, and inns on the marshes, his palace, public offices, wharfs, and granaries;" but as the Pontiff was more intent upon ostentatious display than upon following up the best means of attaining his professed object, the desiccation of the marshes, no great amount of good has accrued from his expensive labours. *Terracina* is the frontier town between Rome and Naples; population about 4000. *Spoletto*, chief town of the Delegation to which it gives its name, bears many memorials of its Lombard Dukes, more especially its Aqueduct, and the bridge which conveys it over the *Maroggia*. In its citadel may be observed some traces of Cyclopean walls. The remains of several Temples attest its ancient magnificence; and the *Porta d'Annibale*, a Roman work of the time of *Theodoric*, bears witness to the brave resistance offered by this town to the Carthaginian invader. Of its modern buildings, the Cathedral is an interesting monument of the revival of Art; it is adorned with frescos by the hand of the elder *Lippi*; Bishop's See; population about 7000.

ROME.
ROME
LIA.

The valley of *Spoleto* is characterised by its picturesque beauty. *Rieti*, renowned in the time of the Romans for the productiveness of its territory, is a town of some trade, and contains several handsome buildings. It has a *Lyceum*. The ancient *Via Salaria* passes through it; and some remains of antiquity have recently been discovered here. Bishop's See; population about 12,000.

ROME
LIA.

ROMELIA.

Name.

RUM-ILÍ, (the Roman territory,) slightly altered by the modern Greeks and Italians into Romelia, is the name given by the Turks to the greater portion of their dominions in Europe; but, by European geographers, it is generally restricted to the Thrace and Macedonia of the Ancients, including the Kingdom of Bulgaria, established in the Middle Ages. From the Byzantine Greeks, who called a large extent of territory on each side of the Capital Romania, (Constantin. Porphyrog. *De adm. Imp.* p. 21. 128,) the Arabs borrowed the phrase *Biládu-r-rúm*, the land of Rome, of which Rúm-ílí is the equivalent in Turkish. Turks, Slavonians, and Italians, the various nations who inhabit or frequent these wild regions, give a different name to almost every mountain, river, and town, and as the Slavonian nations use different letters of the Roman alphabet to express the same sound, the confusion becomes almost irremediable. As the conquests of the Turks extended, it was necessary to make some subdivisions of their territory, they therefore called the country to the East of the Bosphorus Anatóli, (from the Greek *Ἀνατολή*,) "the East," and that to the West of that strait, Rúm-ílí, the Land of Rome. Hence, in the flourishing period of their Empire, that portion of it which is in Europe was subdivided into the dominion of the Tátár Khán, or the Crimea, with the contiguous districts; the Principalities of Boghdán (Moldavia) and Vlák, (Vallakhia,) and the four Páshálik or Beglerbegliks of Budún, (Buda,) Temeshvár, Bósnah, and Rúm-ílí.

Mountains.

The natural divisions of this extensive tract of country are clearly marked by the different branches diverging from the culminating chain of mountains which undulates from the Southern part of Croatia, in 44° N. and 17° E., to the promontory in the Black Sea, called Emíneh Burún, in 42° 41' N. and 27° 57' E. The central portion of this chain, in 42° N., and stretching from 21° to 23° E., consists of the Scardus, Orbélus, and Scomius of the Ancients, Skierdo, Aropnitza, and Argentaro* of the Moderns. Shár-tágh and Sharta are Turkish and Albanian corruptions of the first, Gliubotin the substitute for the second, and Egrísú dágh (Crooked-river Mountain) the Turkish name of the third. From the North-Western side of this chain spring the Unna and Verbách,† which, taking a North-Eastern direction, fall into the Sava, or Sau, and form the Eastern and Western boundaries of Croatia. Further Eastwards the Bósnah from Mount Plánina (a continua-

tion of the same ridge) traverses the middle of the territory called Bósnah ílí, or Bosnia, of which the Eastern boundary is formed by the Drino, the Stolatz, (table,) and Chemerni (Zemerni?) mountains, and the river Ibar at its junction with the Morava. The Southern boundary of Bósnah is the Raska* chain, a continuation of the Western branch of Hæmus. To the South and South-East of Croatia and Bosnia is *Hertzevovina*, (i. e. the Duchy, called *Hersek* by the Turks,) separated from the little State of *Monte Negro* by Mount Oleshintzi, or Piesiori, an offset of Hæmus running South-West to the Adriatic. Along the coast, a narrow strip of territory belongs to *Ragusa* and the *Bocche di Cattaro*. (Mouths of Cattaro.) *Hertzevovina* is traversed by the Narenta, and *Monte Negro* is separated by the river Moraka and lake of Scútari or Zenta from *Albania*.

A very lofty and precipitous chain of mountains, diverging in a Southerly direction from Scardus, (Skierdo, or Scard,) the Shár tágh of the Turks, (Sharra, i. e. "saw," in Albanian, see Thunmann, p. 221.) and connected by Vitzi, or Bora, (Dhbore, i. e. "snow," in Albanian, see Rora. Thunmann, p. 236.) and Grammos, with Méztzóvo,† or Pindus, separates Albania from Macedonia, not now forming a separate territory, to the South of which the Cerceesian and Cambunian ridges, connected with Olympus by Mount Titarus, now Volutzá,‡ or Voluchá, (Βολυτζά,) form the natural separation between it and *Thessaly*, nearly coinciding with the Turkish jurisdiction of *Tirhálah*, called by the Greeks *Trikkala*. The North-Eastern boundary of Macedonia is the Nestus, called by the Turks Kará-sú, (Black Water,) which runs into the Archipelago with a course almost due South from the point where Despót tágh (Rhodopé) diverges to the South-East from Emíneh tágh. (Hæmus.) The latter of those mountains is the Northern boundary of Macedon and Southern of *Servia*, which to the East is separated from *Bulgaria* by the river Sukava, a tributary to the Nissava, and by the Sulkava. Timok which runs into the Danube above Viddín. The latter river and the Black Sea are the Northern and Eastern boundaries of *Bulgaria*, (Mæsia,) which to the South is separated by the Emíneh Balkán (Hæmus) from Thrace, called Romania in the Xth Century. The Grecian States South of Mount Othrys, (Dhilakhá, or the

Rivers.
Verbacz.
Verbass.
Save.
Bosna.

* The geography of this tract, which is very imperfectly known, is rendered still more intricate by the diversity of names given to the same place.

† Or Voetzatz. (Votsvách,) said to bring down gold-dust. (Von Engel, *Ungern*. iii. 167.)

* Rachka, in Mr. J. Arrowsmith's Map. Its South-Eastern extremity is called Jámús, i. e. buffalo, a Turkish name.

† Can the Smokobo of the Diffusion Society's Map be meant for Metsobo? The name is properly Μετζίβου τὰ βουνά, (Μετζίβου, p. 244.) the mountains of Méztzóvo, derived from Μετζίβουον, according to Anthimus Gazé, (Meletius, ii. 234,) but more probably from the Slavonian 'méch', a signal or landmark.

‡ *Volutana ipsi vocant.* Liv. xlv. 2.

ROME-
LIA.
Gura.

Mountains of Gura,* from Acarnania to Attica, are all comprehended under the name of *Livadhià*, (*Λειβαδία*), anciently *Λεβαδία* and *Λεβαδία*, (*Γεωγρ. Νεωτ. p. 193.*) separated by the Isthmus of Corinth from the *Morea*, (*ὁ Μωρέας*), perhaps, says Meletius, (ii. 367.) so named from its many mulberry trees, (*Μωρέας*), but Peloponnesus, (*ἡ Πελοπόννησος*), its ancient name, is still commonly used by the Greeks, and will probably supplant its barbarous and ambiguous substitute.

Having thus marked the great natural and the corresponding artificial divisions into which the Páshálik of Rum-ílí and Bósnah have been, and are still, in a great degree, distributed, their subdivisions into Kádílik or jurisdictions may be subjoined, further details respecting several of which will be found under the heads of ALBANIA, BULGARIA, CROATIA, CORINTH, &c., in the preceding parts of this Work.

The number of Sanjaks or Military Districts into which Róm-ílí has been divided has varied at different periods: the following Table gives them as existing in the latter half of the XVIIth Century, together with the corresponding names used in the Middle Ages, and by the ancient geographers.

I. Rumelia.

I. Iyyáletí Róm-ílí.

Sanjaks or Livás (i.e. Standards.)

1. Silistirah (Silistra).....	Bulgaria... Mœsia Inferior.
2. Nígebólí	
3. Viddín	
4. Sôfiyah	
Istánból† (a district of itself)	Romelia ... Thracia.
5. Vízah	
6. Kirk kilíseh. (The forty Churches).....	
Edreneh, or Edirneh. (Adrianople)	
7. Chirmen.....	 Macedonia.
8. Gallipoli, (Gelibólí,) including Sirúz (Serres).....	
9. Seláník	
10. Kostendil, or Gostendil ..	
11. Uskúb	Libadia... {Thessalia. Hellas, or Græcia Propria.
12. Monástír, or Tóli	
13. Tirhálah (Tríkkala)	
14. Egríbóz (E'vripos, or Negro-ponte)	
15. Mórah	Morea..... Peloponnesus.
16. Aíneh-bakhtí (Lepanto) ..	
17. Karlí líf	
18. Yánninah (Joannina)	
19. Delbino	Albania, or Arnáúd líf. } Aulon. Illyria.
20. Ilbisán, or Elbisán	
21. Avlónah (Valónah)	
22. Okhrí (O'khrida)	
23. Dúkagín	Scodra.
24. Uskudár (Scútari)	
25. Perserín (Prisrendi)	
26. Veljeterín (Velshetrín, or Usiterna)	
27. Alájah hisár (Krushevatz) ..	Serf viláyetí, } Mœsia Superior. or Servia.
28. Semenderah (Semendria) ..	

* Dhlakhá, (Meletius, ii. p. 437.) or Dhelekhá, (*Γεωγρ. Νεωτ. p. 204.*) which, as the authors of that Work, Daniel and Gregory, were Thessalotes, ought to be right: but it is wrong, says Anthimus Gazé, in his note on Meletius, for Othrys is now called *Βουνά της Γούρας*: perhaps it should be *Ζαγούρας*, Za-gora, "beside the mountain," a common Slavonian name.

† The Arabic word Iyyálet is equivalent to Páshálik in Turkish; so also Livá and Sanjak, (a standard or ensign.)

‡ Changed in modern times, by some fanatic, into Islámból, which may, perhaps, by a forced interpretation, be rendered "Seek or find Islám," not the "City of Islám," as some writers have erroneously stated.

II. Iyyáletí Bósnah.

ROME-
LIA.

1. Izvórník.....	Bosnia Illyria.	Pannonia.
2. Bányah lúkah		
3. Bosnah Serái, or Yení Bázár ..

5. Róhisah	Dalmatia.... } Dalmatia.	
6. Rahovíjah		
7. Kirkah.....		
8. Kínín (Knin)		
9. Kílís (Clissa)	Herzegovina.	
10. Hersek.....		
11. Khírovát Viláyetí	Croatia. Liburnia.	

1. Silistirah.

1. Silistirah, (Silistra, Silistria, or Dristra, supposed Silistria by some to be Dorostorum, or Durostolum,) on the Southern or right bank of the Danube, in 44° 10' N. and 27° 15' E., is situate in a plain, and considered as one of the strongest towns on the Northern frontier. It has a small Castle, five Mosques, and two Baths, (hammáms,) is the Capital of the Sanjak bearing its name, and is a Metropolitan See in the Greek Church. Subject to it are the following Kádílik:

1. Akhyóli, (*Ἀγχίαλος*), North-East of Búrgház, a Ahioglu. Greek metropolitan city, remarkable on account of its Ahioli. saline springs, salterns, and fine scenery. 2. Dúz-kasrí, Tuskastri. (Russó-kastro,) West of Búrgház, taken by Sultan Murád A. D. 1368, and frequented on account of its hot springs. 3. Aídós, (*Ἄετός*), North of Dúz-kasrí. 4. Karín- Aidos. ábád, West of Aídós. 5. Rás-ghrád, or Hezárgad, Karnabat. South-East of Rus-chúk. 6. Gul-ghrád, on a rocky Rasgrad. promontory near Kavarnah. 7. Hirsóvah, (or Hir- Gulgrad. shóvah,) on the Danube, North-East of Silistria. Hirchova. 8. Parávadí, South-East of Shumlá and West of Várnah. Pravadi. 9. Shumná, commonly called Shumlá, the celebrated Shumla. key to the passage of Balkán, (Hæmus,) nearly due South of Silistria and West of Várnah. 10. Kíliyá, in Kilia. 45° 28' N., very near the mouth of the Danube. 11. Ak-kirmán. (White Fort.)*

The following remarkable places are also found in this Sanjak:

Misivrí, (*Μεσημβρία*), Mesembria, on a tongue of Missivri. land running out into the Black Sea, North-East of Misivri. Akhyóli. (Anchialé.) Várnah, (Odessus?) in 43° 18' Varna. N. and 27° 57' E., in the tract called Dóbrújah (Do- Dobrudza. brudzia in some Maps) by the Tátárs, is a Metropolitan See and well fortified, on a deep bay of the Black Sea, having a good harbour, about half way between Mesembria and Mangalia. Near it, the celebrated defeat of Ladislaus, King of Hungary, took place. (A. D. 1444.) Ekerneh, to the North-East of Várnah, and near Gul-ghrád, is called Kávarena by Greeks, and is the ancient Kawarna. Caria, or the port of the Carians. Sári-saltik is a place Sari Saltik. of pilgrimage in its neighbourhood. Mankaliyá, (*Μανγ- Mangalia. κάλλια*), Kustenjah, (Chiustenza,†) between which and Kustendji. the Danube are the remains of Trajan's wall, and Kará Caraker-kirmán, (Black Fort,) are the chief ports on the coast man. between Kávarena and the mouths of the Danube.

Bábá tagh, (Father's Mount,) in 44° 55' N. N. E. of Babadag. Kará kirmán, midway between the Danube and the Black Sea, on a lagoon named from it, and at the foot of Balkán, is a large town founded by Yildirim Bá-yazid, (Bajazet,) as an outpost to guard the neighbouring pass between the hills and morasses. Its inhabit-

* At the mouth of the Dniestr, and now belonging to Russia.

† *Κωνσταντία*, from Constantia: named from a sister of Constantine the Great, and on the site of Tornii. (Id.)

ROME-LIA. ants suffer, as does the adjoining country, from the want of fresh water. The town has one fountain supplied by a spring three miles off. *I'sákchí gechidí*, (*I'sákchí's Ferry*), about 17 miles West of *Ismá'il*, is the easiest passage across the Danube. *Ismá'il*, properly *Ismá'il gechidí* (*Ismá'el's Ferry*), is a strong fortress at the celebrated passage over the Danube.* *Parávadí*, West by South of *Várnah* about 25 miles, is a small town in a defile not half a mile wide, between two perpendicular cliffs, to which iron rings are said to be riveted, near the summit on which are the ruins of an ancient castle.

Szumla. *Shumlá*, more properly *Shumná*, in $43^{\circ} 17' N.$ and $27^{\circ} E.$, near almost the only road across Mount *Balkán*, and perhaps not unjustly deemed impregnable, capitulated to *Khañru-d-dín Páshá*, Grand Vezír of *Murád I.*, A. H. 789. (A. D. 1387.) The position of the town, on a hill surrounded by fertile valleys well supplied with water, makes it as agreeable an abode as *Bábá tágh* is the reverse: the latter is therefore now almost deserted. (Von Hammer, *Rumili*, p. 31.) *Hájí O'ghlí Bázár*, (*Pilgrim's Son-Market*), commonly called *Bázárjik*, (*Little Market*), about 30 miles North by West of *Várnah*, and *Karah ágháj*, (*Black Tree*), about 15 miles North by East of *Bázárjik*, are also Capitals of districts in the same Sanják. About 15 miles due West of *Karah ágháj*, and 10 or 12 South of the Danube, are Great and Little *Kañárjeh*, at the latter of which the Treaty between Russia and the Porte was concluded in 1774, (Von Hammer, *Gesch. des Osman. Reichs*, viii. 445.) which may be said to have annihilated the power of the Turks in Europe, if not in Asia.

Buyuk and Kutchuk. Kainardji. Below *Silistria* the course of the Danube (called by the Turks *Túnah*, pronounced *Dunáh*, or *Donáh*, from the German *Donau*) is nearly East by North as far as *Rissova*, or *Rassova*, (*Rás-óvah*?) near the confluence of the *Músá-Beg*, whence it takes a North-Eastern direction till it reaches *Sátik keñ dereh*. From thence to *Hirshóva*, (*Hirszowa*), opposite to which it receives the *Yalomnitza*, its course is North by West. From that point to *Machín* (*Maczin*) and *Ibráíl* (*Brañlov*, *Προβλα-βον*, a Metropolitan See, according to *Meletius*, ii. 69.) it takes a direction North by East, makes an elbow in passing on to *Galátz*, or *Galách*,† a few miles beyond which it receives the *Pruth*, and, turning at a sharp angle Southwards, passes, with a frequently changing course, by *I'sákchí*, (*Saxia*), between which place and *Ismá'il* it divides into two large branches: of these the Northern and larger arm passes by *Kilia* and enters the Black Sea by the *Kiliyá bóghází* or *Kiliyá* mouth. The Southern arm again forms two branches just below *Túlchah*: (*Τούλτζα*;) 1. the *Sulínah*‡ arm to the North; and 2. the *Georgievsk*, discharged at the *Khed-relez* § *Bógház* to the South. Near the village of *Bar-*

temi the latter branch sends out a third arm, which passes through the lake or morass of *Rámsín*, (*Halmyris Lacus*), connected with that of *Bábá-tágh*, and enters the sea by the *Yál-óvah kuchúk bogházi*, (*Little Yalóvah Mouth*), and some other very small channels: it appears, therefore, that the Danube has now only four mouths instead of the six mentioned by *Ptolemy*. (iii. p. 77, 78.) The discordance of the best Maps, however, shows that little reliance can be placed on the details of any part of them which lies out of the common routes. The whole of the North or left bank of the Danube from above *Silistria* is alluvial and intersected by small streams.

Nígebóli.

This Sanják contains fifteen *Kádílik*s, the chief of which *Nicopolis* is *Nígebóli*, (*Nicopolis*), a city on the side of a hill, in $43^{\circ} 45' N.$ and $24^{\circ} 53' E.$ It is protected by a strong castle difficult of access, and some of its houses are in a stony valley on the banks of the *Ozmah*, leading down to the Danube. It is the residence of a *Beglerbeg* or *Páshá* with three tails, (*túghs*.) Its few Christian inhabitants are very ill treated by their Musulman neighbours, but very proud of their subterranean Church, said to have been built by *St. Paul*. (*Γεωγ. Νεωτ.* p. 342.) Near it, *Sigismund*, King of Hungary, was completely routed by *Báyazíd* in 1396, in consequence of which Bulgaria became a Turkish Province.

Rúshchuk, or *Rúsjuk*, (*Trimmanium*, *Ptol.* iii. 10. *Rutschuk*, p. 78.) lower down on the right bank of the Danube, about 60 miles above *Silistria*, is a great thoroughfare between *Vallakhía* and *Constantinople*. Near it, the united streams of the *Ak* and *Kará* (black and white) *Lóm* join the Danube. It has several Mosques and other public buildings, but its dwelling-houses being all built of wood are very liable to suffer from fire. It is the only Turkish town on the Danube in which Christians are more numerous than Turks. (*Γεωγ. Νεωτ.* p. 342.) *Rúsjuk* rose from the decline of *Cherna vóda*, (*Czerna voda*, *Black Water*, anciently *Palmatis*), 17 or 18 miles to the South-East. *Rahóvá*, (*Orháva*, *Orava*, *Rahova*, or *Oraíova*), on the Danube, nearly as far above as *Rushchúk* is below *Nicopolis*, is the frontier town of this Sanják. It stands in an extensive and level heath, and near it the *Insikrá* (*Skitul*) joins the Danube.*

Sistóv, (*Sistóva*, or *Sistóvi*, anciently *Dyma*), on a hill at a small distance from the Danube, and about 25 miles South-East of *Nicopolis*, is celebrated on account of the battle fought there in 1791, and the subsequent negotiations with the Court of Vienna. About 35 miles South-East of *Sistova* is *Tírnová*, or Great *Túrnavo*, (*Τούρναβος ὁ μέγας*.) in a strong natural position almost surrounded by the *Yantra*, which springs from the foot of the *Svetigora* (*Holy Hill*) to the South-East. It is a Metropolitan See, and was once the *Vóivodahlik*, or Royal City of Bulgaria. It was taken by 'Alí Páshá, Vezír of Sultán *Murád*, in A. H. 790. (A. D. 1388.) On the road between *Túrnavo* and *Rushchúk* there is a plain three miles in width covered with the ruins of a fine city. (*Nicopolis ad Iatrum*?) *Lófchah*, (*Lovacz*, or *Loftcheh*,

* It must not be confounded with another celebrated passage over the Danube about one degree to the West, viz. *Ibráíl*, called by the Russians *Brahñlov*, one day's journey North-West of *Aidós*. It is in *Vallakhía*, but was formerly considered as belonging to the *Páshálik* of *Rúm-ílí*. (*Hájí Khalifah, Rum-ili und Bosna*, p. 34.)

† Anciently *Callatia*, or *Callatis*, (*Κάλατις*), according to *Meletius*, (iii. 48.) but *Galatz* seems to be the modern corruption of *Callatis*.

‡ Claimed by Russia as the boundary, on the plea that the Northern arm is not always navigable.

§ *Gederileh Bugasi*, in the Prussian Map of the routes from the Danube to Constantinople, published in 1828, and *Kodrilie Bogassi*, in General de Vaudoncourt's Map of Turkey in Europe. *A'gios Geórgios* and *Georgievsk* explain the misspelt Turkish name *Khedrelez*, i. e. *Khizr-líyás*, as those words are vulgarly pronounced. *Khizr*, the friend and patron of Mohammed, is supposed to have been animated by the same soul as *Elias* and *St. George*.

* Opposite to *Rushchúk*, on the *Vallakhian* side, is *Yerkenkí*, (earth-root, or fumitory?) in *Vallakhian Júrjova*, (*Giúrgiovo*), the castle of which, on an island, was built by Sultán Mohammed I. A. H. 819. (A. D. 1416.) It is memorable to the Turks on account of their severe defeat by *Mikhál Voivódá* in A. H. 1003, (A. D. 1595.) and is included by them in the Sanják of *Nígebóli*.

ROME-
LIA.

Lovezia, *i. e.* Lovchia,) on the Ozmah, nearly due West of Tîrnova, is on the Eastern side of a hill, surrounded with gardens, and remarkable on account of its fine bridge over the river. It was taken by Mohammed the Conqueror A. H. 866. (A. D. 1462.)

Islamjeh.
Selimno.

Islâmiyeh,* (Selimno,) on a sandy spot in the heart of Balkân, protected from the North by its snowy summits, is completely embosomed in trees, and famous for its manufacture of blankets, better than those of Angora and Begbázár.

3. Vidin.

Widdin.

About 60 miles above Rahóvah (Orayóva) is the Capital of this Sanjâk, Vidin, or Vidini, (Bononia,) a Metropolitan See. The Christians, who form scarcely a tenth of its inhabitants, occupy only a suburb of the town, which is always well garrisoned. A few miles South-East of it, on the Arzar, is Arzar Palanka, or Argul- (Arzul?) ghrád, on the site of Retiaria. Further up the river 50 or 60 miles is Kládova, called by the Turks Fet-h-Islâm, opposite to the tower of St. Severin, and just above the remains of Trajan's bridge. In an island at the great elbow above Kládova is O'rsova; and at the bend of the river, South-West of it, Geugerjinlik, (the Turkish equivalent of its Servian name *Golubinye*, the dovecot,) on the site of Taliatis. Isferlik, (Zverlik,) about 40 miles South-West of Vidin, is singularly situated; the town being on the summit of one and the castle on that of another very steep hill, with a deep ravine between them. "A rock hewn into the form of a woman is shown there," says Hájí Khalífah. (*Rum-ili und Bosna*, p. 48.) The Kádílik of Kládova and Golubinye, which lie between the rivers Timok and Bereska, are now a part of the Sanjâk of Semendireh, and consequently belong to Servia.

Argulgrad.

Kladova.

Trajan's
bridge.Geuverd-
jinlik, or
Gujersinlik.
Isferlik.

4. Sófiyah.

Sophia.

Sófiyah, (*Σοφία*), in 42° 37' N. and 23° 30' E., called by the Slavonians Triaditza, (Trinity,) and placed in an extensive and fertile plain near the site of Sardica, of which ruins still exist, is the residence of a Beglerbeg, and a Metropolitan See. It is on the river Iskra, or Isker, "in a very beautiful but not a very healthy situation," says Meletius, (iii. 50.) and is celebrated on account of its warm springs. It was long besieged in vain by the Turks, and at length taken by a *ruse de guerre*, (Von Hammer, *Gesch.* i. 187.) in A. H. 784. (A. D. 1382.)

Samako.

Samákov, (*Σαμακόβια*), about 25 miles South-East of Sófiyah, is named from the hammers used in its iron-works, (Hájí Khalífah, *Rum-ili*, p. 56.) for there are iron-mines near it, and all its springs are strongly impregnated with that metal. It is at a small distance from the lofty peak whence the Despót tágh (Rhodope) branches off to the South-East from Emíneh tágh, or Balkân, (Hæmus,) which here diverges to the North-East.

Ichliman.

Ten or twelve miles to the North-East of Samákov, is Ihtimán, (*Ιχθυήμαν*, Meletius, iii. 50.) anciently Elea or Helice; just beyond which is the celebrated defile called Succí and Trajan's Gate (Porta Trajani) by the Ancients. There is a double passage, one called Sú-lú

Kopali.

* M. de Vaudoncourt has converted M. de Hammer's Islamjeh (*Rumili*, p. 40.) into Islemdgie, whence some of our Maps have coined the word Islemdgi, which, if it meant any thing, would signify "an Islâm-monger," a term not likely to be tolerated by Musulmáns.

derbend,* (Watery Barrier,) and the other Kapú-lú derbend. (Gated Barrier.)

ROME-
LIA.

Rather more than half way between this pass and Felibeh is Tátár Bázár, (or Bázárjik,) *i. e.* Tátár's market, (*Τατάρι*, in Meletius,) chief town of another Kádílik, where a road turns off to Keustenijeh, *i. e.* Kostaniczà, (Kostanichá,) frequented on account of its two hot springs.

Philippopolis, called by the Turks Felibeh, a fine city taken by Lálá Sháhín Páshá A. H. 765, (A. D. 1364,) is situated on the bank of the Maritza. (Marícheh.) The surrounding country is very productive, and yields large crops of rice. It is a Metropolitan See, and belongs to Romania, or Thrace, rather than to Bulgaria, being to the South and East of Mount Hæmus. Chirpán, Eski Zagharah, (Old Zágora,) (*Δέβελος*), and Kázánlik, lying between the Maritza and Hæmus, are also Kádílik in this Sanjâk. The second, according to Hájí Khalífah, is on the Tunjah, (Taxus,) and well supplied with water. Its name, which signifies on the mountain side, shows that it is on the declivity of Balkân, but Kázánlik is higher up, (Hájí Khalífah, p. 54.) and on the bank of the Tunjah, which flows from thence through Zagharah to Yánbolí, (*Ιωαννούπολις*), which is nearly due South of Islâmiyeh, and equally famous for its counterpanes.

Felibe.

polis.Eski Za-
gara.

Casanlik.

Yamboli.

Nish, (Nissa, called *τὸ Νῆσι* by Meletius, iii. 44.) anciently Naissus, on the Nissava, (Nesos, or Nesis,) is a large town on the high road from Sófiyah to Belgrade. It was taken by the Turks A. H. 777, (A. D. 1375,) and is frequented on account of its warm mineral springs. It is strongly fortified, a Metropolitan See, and the birth-place of Constantine the Great.

Nissa.

Nisz.

5. Vizah.

Vizah, (Byzia,) in modern Greek Vizú, (*Βυζοῦ*), anciently Libethrium, (Melet. iii. 105.) the residence of a Sanjâk-Beg and a Metropolitan See, stands on the Western declivity of Istránjah tágh, (*Σιργέντζη*, Melet. iii. 104.) also called Little Balkân, running from North-West to South-East parallel with the coast of the Black Sea. The adjoining country is very fertile and famous for its onions.

Viza.

The shore of the Bosphorus and Black Sea from Constantinople to the neighbourhood of Mídiyà falls within this district. Beyond the old light-house (*Παλαιοφά-
ναρον*) is the dangerous line of coast called the Seven Sands, (*Επτὰ ἄμμοι*), then Cape Derkos (Karà burún, *i. e.* black nose) and the lake of Derkos, (Derci,) 36 miles South-East of Medéa, (*Μήδεια*), the Mídiyà of the Turks, which is included in the Sanjâk of Kirk Kilisà, (*i. e.* Forty Churches.)

Dercos.

Midiah.

On the West side of the Istránjah mountains is the Kádílik of I'njighiz, in a beautiful country on the banks of the Kará-sú. In the neighbouring mountains there are some very singular excavations of large chambers and passages communicating with each other, (*Rumili*, p. 17.) and the adjoining valley contains a powerfully cathartic spring. Chatáljah, (Little Fork,) anciently Metrà, an Episcopal See, one day's journey from Constantinople, derives its name from its position at the fork of the Kará-sú and another stream. The river thus increased runs almost due South to the well-known village on the Sea

Indchigis.

Tchat-
altcha.

* This Persian word, adopted by the Turks, might be literally rendered door-band; (*thorband*, Von Hammer, *Gesch.* i. 602.) it signifies, properly, a barricaded or fortified gateway.

of Marmora, called Buyúk chekmejeh. (Ponte Grande.) About 50 miles to the West of Chatáljah, on the road from Constantinople to Adrianople, is Chórlú, or Chórlí, (Τούρουλος, or Τερλώη.) on the river Bathynias, in an extensive and productive plain. It was taken by Murád I. in 763, (A. D. 1362,) and is famous for its cheeses. One day's journey from it is 'Arabah, or Chatál Burgház, (Πύργος,) anciently Arcadiupolis. It is a small town without fortifications and surrounded by corn-fields.

The Forty Churches (Kirk Kilísá, in Romaicαἱ σαράντα κλησιαί) is the name of the Sanják lying to the North and North-West of Vízah. Its Capital, (Flaviopolis, or Zela?) whence it takes its name, is about 30 miles North-West of Vízah, on a rivulet running into the Tekhdereh-sú. (Convent-dale-water.) The surrounding country is well wooded, though dry and stony. It is five days' journey from Constantinople. Midiyá, (Μήδεια,) near the ancient Salmydessus, is 36 miles above Derci, (οἱ Δέρκοι,) the first anchorage on the Western shore of the Black Sea. Above it is the port of Yniada, put for Thyniada, (Θυνιάδα,) from the neighbouring cape Thynias, (now Teniyá,) about six or seven miles below the Slavonian village of Samakovo. (Σαμακόβι.) Agh-tebóli, (ἡ Ἀγαθούπολις, now Gatápoli,) Vasilikó, (ο βασιλικός,) At-limán, (Horse-port,) a small roadstead, Cape Zeítun, (i. e. Olive, Ἀκρωτήριο τῆς Ἑλαίας, Meletius, iii. 99.) and Seuzeh-bóli, (Σωζούπολις,) the latter on a peninsula, follow in order along the same shore from South to North. Cape San Nicoló, to the North-West of Seuzeh-bóli, and Akhiyóli, (Anchialé,) opposite to it, form the extremities of the gulf of Burgház, (Πύργος,) the first secure harbour on this coast.

Umur Fakih,* North-West of Aghteh-bóli, (Gatápoli,) Kanárah, and Ereklí. (Heraclea,) are the principal places on the road from Aídós to Kirk Kilísá. Eskí Bába, (old father,) (Cabyle?) a small town or a tributary to the Erkeneh, North-West of Chatál Burgház, Hafsah, (Χαψά, anciently Carpūdæ, or Cappa, Meletius, iii. 103.) named from the foundress of some alms-houses, (Rumili, p. 22.) and Kháss Keuī (Crown-village, because belonging to the Privy Purse) follow in succession on the road from Constantinople to Adrianople.

7. Chirmen.

Tchirmen,

Jenidje
kizil
aghadj.

North-West of Edreneh (Ἀδριανού, Adrianople) about 17 miles is Chirmen, whence this Sanják receives its name. It was taken by Sultán Murád A. H. 767. (A. D. 1366.) Nearly due West of it is the Kádílik of Khirmen-lí, on the high road to Filibeh. (Philippopolis.) North of it, near the confines of the Sanják, is Yení Zagharah, (New Zagora,) at a small distance West of Yánbóli, a district of the Sanják of Sófiyah, according to Háji Khalífah. (Rumili, p. 53.) The latter is on the bank of the Tunjah, (Tænarus, or Tearus?) which here runs nearly due South in its course to the Maríchah. (Hebrus.) About half way to Adrianople, on the same river, is the Yeníjehi Kizil ágháj, (Red-tree New-town,) which has a bridge over the river, and is seven days' journey from Constantinople. At Jisri Mustafá Páshá, (Mustafá Páshá's Bridge,) on the road from Adrianople, there is a bridge over the Maríchah, (Maritza,) and at Khirmen-lí, the next stage, the road to Filibeh branches off and passes through Uzún-jah ovah, (Longish Plain,) the Westernmost Kádílik in this district.

8. Gelibóli.

At the junction of the Ergeneh (Agrianes) and Maríchah (Hebrus) is the town and Kádílik named from the long stone bridge built by Sultán Murád in A. H. 714, (A. D. 1314,) Jisr Ergeneh. It is the Northernmost place in the Sanják of Gelibóli, and is a few miles North-East of Dímotíkah (Δυμότοιχον, a contraction of Δι-δυμότοιχον,) on the Kizil nehr, (Red River,) a tributary to the Maríchah. Sultán Murád, who took it in 762, (A. D. 1361,) adorned it with a splendid Serái, and made it his chief place of residence. It has a whispering bath, built by Urúj Páshá, which is as renowned in Turkey as the whispering gallery in St. Paul's in England. Dímotíkah is also famous for its manufacture of tankards. Khíreh-bóli,* (Kherépoli, from Chariupolis, Meletius, iii. 104.) South-East of Dímotíkah, and half way between it Rhodostó, is the place where the Sultan has his camel-stud. About 40 miles South-East of Khíreh-bóli, on a steep and elevated neck of land projecting into the Sea of Marmarah, is Ereklí, (Heraclea, and more anciently Perinthus,) near the mouth of the 'Arab-dereh-sú. (Negro-dale-water.) It was once the largest city in Thrace, and under the Emperors was adorned with magnificent buildings. Severus gave it possession of the territory round Byzantium, with precedence over that city, whence the Metropolitan of Constantinople received institution from its Metropolitan. It still retains a few wrecks of its ancient magnificence. (Von Hammer, Ansichten, l. 159.) Between Ereklí and Constantinople are Kuchúk and Buyuk Chekmejeh, known to Europeans by the Italian version of their names, (Ponte Piccolo and Grande,) and Silivrí, (Σηλυμβρία, Silymbria, as pronounced by the latter Greeks,) an Episcopal city, called also Eudoxiupolis, a long day's journey from Constantinople. Rhodósjik, (Little Rhodes,) called Rhodostò, (from Rhædestum, Ῥαιδεστόν, anciently Bisanthé,) is two days further Westward, in a fine position, with a small harbour. Ghánós, (Ganus,) at the foot of the Tekkúr tághí, (King's Hill,) and Avrashah, the first an Archiepiscopal See, the second a Capital of a Kádílik, are on the coast which runs in a South-West direction to Examíli, (Ἐξαμίλιον, Six-mile-passage,) at the mouth of the peninsula anciently called the Thracian Chersonese. At Doghán Arslán, a little below it, are probably the remains of Lysimachia, built from the ruins of Cardia on the Western shore of the Chersonese, its name being still preserved by the village on its site.† (Melet. iii. 56.) About 12 miles below Examíli, on a bay in the Eastern side of the peninsula, is Gelibóli, (Callipolis,) in 40° 25' N., the first European fortress possessed by the Turks. It was taken A. H. 759. (A. D. 1357.) Its harbour and arsenal are considered as the key of the Dardanelles, and it there-

† This side of the Chersonese is little known, and only marked as a côte dangereuse in Kauffer's Map. Several places and rivulets, however, are set down by M. de Vaudoncourt. Tourken, in the Society's Map, should be Túrshen keui, as in M. de Vaudoncourt's.

ROME-LIA.	fore ranks as the head of the Kapúdán Páshá's Sanják, which comprehends the Kádílik of Tekkúr tágh, (Ganus,) Khíreh-bóli, Mighalgharah, Dímotíkah, Ibsálah, Keshán, I'nos, Ferehjik, Lemnos, Midillí, (Mitylene, or Lesbos,) Stankoí, (Cos,) and Rodós, (Rhodes,) as well as Monástir in the interior, and places on the Western coast of Greece. Near the Southern extremity of the peninsula is the Kilidu-l-bahr, (Key of the Sea,) an ancient Greek castle fortified by the Turks. It is on the site of Sestus, and its outworks were much strengthened A. H. 1071. (A. D. 1661.) It forms a square of about 190 feet. Near to it is a second and more modern fortress, called Seddu-l-bahr; (Sea-barrier;) and 15 miles lower down, at the mouth of the strait, (Kilid bóghází, Key-strait,) is the Hisár Sultání, (Sultan's Castle,) erected in A. H. 1069 (A. D. 1659) by the celebrated Vezír Keuprílí Mohammed Páshá. Just below the New Castle (Hisár Sultání) is Cabo Griego, (Mastusia,) the Southern termination of the peninsula; and a few miles to the North Crithea, (Κριθεία,) on the site of the ancient Elēus. Crossing the gulf of Sáróz,* (anciently Melas, i. e. black,) on the North-West point of the opposite peninsula is I'nos, (Ænos,) on a deep bay over against the mouth of the Maríchah, (Hebrus,) and 25 miles North of Semendrek. (Σαμοθράκη, or Samothracia.) This gulf abounds in fish; but there are shallows near the shore, and no depth of water sufficient for large ships. To the North-East of I'nos is Keshán, and then Malgharah, or Míghalgharah, (Megalagorà,) a town of moderate size, and the place where the celebrated Sinán Páshá died, A. H. 1004. (A. D. 1596.) Between this place and Rhodostó is Aínehjik,† (Little Mirror,) a small Kádílik on the road from Constantinople to Seláník. (Saloniké.) North-East of Malgharah, on the Maríchah, is Ibsálah, or Ipsálah, (Ἰψάλλα, the ancient Κύψελα,) renovated by Justinian, and thence called Justiniana Nova, on a tributary to the Maríchah. It was taken by Ghází Suleímán, the conqueror of Gallipoli, and its name is pleasantly derived by Háji Khálifah (Rumili, p. 64.) from Ilksaláh, the first prayer offered up by the True Believers. A few miles lower down, near the opposite bank of the Maríchah, is Fereh, or Ferehjik, (Φέρραι,) anciently Berrhæa. Makrí (Μάκρη) is on the coast between Fereh (Pherræ) and Gómuljinah, a place taken by Evrenós, or Ornos Beg in A. H. 763. (A. D. 1362.) Jews were allowed in Háji Khalífah's time to live in its castle there. (Rumili, p. 69.) On the coast West of Makrí is Maronea. (Μαρόνεια.) To the West of Gómuljinah is the bay of Lagos, (Λαγῶς?) the ancient Bistonis, (Βιστωνίς λίμνη,) a lagoon at the mouth of the Kará sú, (Travus,) 10 or 12 miles above which is Tagardí, the chief town of a Kádílik. Yeníjehi Kará-sú, or rather Kará-sú Yeníjeh-sí, (i. e. Blackwater-new-town,) a few miles East of the river (Nestus) whence it is named, and Bereket-lí, (Blessing-town,) are the districts intervening between Tagardí and Kaválah, a seaport surrounded by inaccessible mountains in which there are mines, and guarded by a castle built by Selím I. as a check to the pirates who infest this coast. The Kádílik through which the Kará-sú, or Nestos passes are Razluk, about 25 miles from its source at the foot of a high peak of Despót tághí; (i. e. King's Hill, Rhodope;) Nevrekúb, (Neuro-	copion, anciently Nicopolis,) rich in iron mines; Dirámah, (Drama,) famous for its water, rice, and tent-cloth; and Cháílaik, (or Cháglaik,) near the river's mouth. At Filibeh, half way between Dirámah and Kaválah, are the ruins of Philippi, to the Christian converts in which the Epistle of St. Paul was addressed. It is on the declivity of Mount Pangæus, and remains of its Amphitheatre were still existing in the latter end of the XVIIth Century. (Meletius, ii. 466.) About half way between Kaválah and O'rfán, (Ὀρφάνιον,) at the mouth of the Strymon, is Pirávishtah, (Právista, or Právi, Πράνιστα,) a small place, 10 days' journey from Constantinople. Zíkhnah, (Takhinos?) almost due North of it, is the chief town of another Kádílik, a little way to the South-East of Serres, (Σέρραι, vulgarly Σέρραις, anciently Pherra, or τὰ Σέρρα,) the Sírúz of the Turks. This city is twelve days' journey (300½ miles in a straight line) from Constantinople, (Rumili, p. 73.) and two days' East of Saloníkí. It is on the brow of a hill, and is famous for some warm springs a day's journey to the North-East, for its manufacture of towels and other bathing-cloths, its rice and melons, as well as for the cleverness of its people. In Summer it is unhealthy, and many of its inhabitants remove to the pine forests on the neighbouring mountains. From a tower on a high rock on the South side of these mountains, the surrounding country can be seen to the distance of five days' journey. The manufacturers are Christian women, and the city is a Metropolitan See in the Greek Church.	ROME-LIA. Neurokop. Drama. Tzaglaik. Filibi. Philippi.

Ghiusten-
dil.

10. Kústendíl.

1. Kústendíl, or Gústendíl, (probably a corruption of Constantin,) the Justiniana Prima of the Byzantine Historians, is a moderate-sized, unfortified town surrounded by mountains. Its twelve warm sulphureous springs and apples with rattling seeds are noticed by the Turkish geographer, (p. 88.) The Egrí sú (Crooked Water) forces its way through the hills on its Western side, and both gold and silver are found in the neighbouring mountains. This town is at a small distance South of the Vistritza, and nearly South-West of Sophia, from which it is separated by the Kójah Balkán. (Old Man's Balkán, Mount Scomius.) To the North-East of it is (2.) Rádómíyeh, (Dragomir,) just at the foot of the mountains North-West of (3.) Dúpnichah. (Dúpnicha, anciently Æscus.) The hills to the South-West, usually capped with snow, contain some steel mines, are well wooded, and have many villages on their declivity. Descending the Kará sú, (Strymon,†) about 40 miles on the left, near the Vistritza, one of its tributaries, we find Menelik, (Melénikos,) the chief town of the districts bearing that name. To the South-West, on

Egri sou.

Kodja Bal-
kan.
Dragomir.
Dubnitza.

Menlik.

* The Várdár, whence this place is named, must be near it, and is said by Háji Khalífah (p. 85.) to run between Yenijeh and Vódinah; but Mr. Arrowsmith places the former to the West of the Várdár, nearly on the site of Vódinah, as given by M. de Vaudoncourt.

† The Βενίζης (Vrenézis) of Meletius (ii. 472.) and the Byzantine Historians, therefore Avrenós, and not O'rnós.

‡ The geography of these rivers is perplexing. The Eri (Egrí?) sú of M. de Vaudoncourt, a branch of the Egrí dereh or Ponto River, which runs through the lake of Takinos into the Gulf of Contessa, is the Kará sú, or Struma, of Mr. J. Arrowsmith, who calls M. de Vaudoncourt's Kará sú, or Struma, Anghista, and gives it a shorter course.

the river Radovishta, is (5.) Petrofcheh, (Pétrovich,) distant thirteen days' journey from Constantinople.

6. Tóirán, (Doíran, or Tuílan,) to the South-West, is on the side of Mount Chengel, (Bell Mount,) which divides this Sanjak from Selánik. 7. Ostrómchah, (Stromcha,) on the Radovista, is North-West of Pétrovich, at the foot of a hill, on the summit of which is a ruined castle.

It has some very hot natural baths, and in Summer a much frequented fair is held in the adjoining plain of Túyán. 8. Radovishta is further up on the same Radovitz river, a little to the South-East of (9.) Ishtíp, (Istip, Istip, anciently Astibus,) in a valley watered by the Egrí sú.*

It has a strong castle on a lofty hill, and small steel-works in its neighbourhood. At one day's journey to the North-East, at the junction of the Braunista and Egrí sú, is (10.) Karahtovah, (Karátova,) separated from Gústendíl by a mountainous ridge containing valuable silver and copper mines. It is famous for its copper ware and a very singularly constructed bath; on Mount Karátova there is an ancient Monastery, remarkable on account of the tomb of its founders, who died about A. D. 364. (*Rumili*, p. 94.) Tíkvesh, a few miles South of the confluence of the Cherna, (Tzerna, or Kuchúk Karah sú, *i. e.* Little Black River,) Várdár, South by West of Istíp, and (12.) Keuprílí, (Bridge Kopríli. Town, anciently Belessus,) North-West of Tíkvesh, famous for its water melons, and stone bridge over the Várdár, are the adjoining districts. 13. Vívárinah, (Vrana, *i. e.* frog?) at the confluence of the Vívár and Morava, near Mount Kará tágh, (Black Mount,) and North-West of Gústendíl, is celebrated on account of the neighbouring mines of O'lásinah, from the iron of which the best swords and axes are made. This district, which is North of Egrí sú tágh, or Argentaro, (Scomius,) was detached from Servia, to which it properly belongs, (De Vaudoncourt, p. 35.) doubtless on account of its mines.

11. Uskúb.

Uskup, or
Uskiup.

1. Uskúb, (Scupi, now Scópiá,) on the Várdár, North-West of Istíp, is a handsome town, well supplied with water from Kalkán-delen, (or Kalkán-dereh.) In Háji Kalífah's time it had a town-clock "made in the time of the unbelievers," which struck every hour day and night. 2. Kachánik, (or Kachánlik,) North-West of Uskúb, is remarkable on account of a natural tunnel through the Shár tágh, (Scardus,) on the road to Pristina. 3. Kalkán-delen,† (Kalkán-dereh, Kalkan-Target Valley,) on the Eastern declivity of Shár tágh, is nearly due West of Uskúb, and just below the source of the Várdár. (Axius.) 4. Pirlipeh, or Pirlepeh, (Prilla-pum, now Περλεπέ, says Meletius, ii. 471.) is a castle on the summit of a bare rock North-East of Monástir, (Bitolia,) about half way between that place and Keuprílí. This district properly belongs to the following

Kachanik.

delen.

Perlepe.

* In most Maps erroneously called Egrí dereh, (Crooked Valley, instead of Crooked Stream.) The mountain of Egrí sú, a continuation of Karátovah, says Háji Khalífah, (p. 93.) two days' journey (60 or 70 miles) in length, and two farsangs (five miles) in breadth, is crossed in going from Karátovah to Gústendíl; and the mountain near this latter is separated from that of Egrí sú only by the river so called. This shows that M. de Vaudoncourt is wrong in placing the Karátovah mountain beyond that place instead of Krátovah, midway between it and Kústendíl.

† *Delen* is doubtless the Servian word for "valley," (*dolina*, in Russian, from *dlin*, long,) and therefore equivalent to the Turkish *dereh*.

- ROME-LIA. Sanjak. Morikhovah (Margarovo?) belongs to the same Kádilik.
- Margarovo. The following Kádílik, which form the Sanjak of Monástir, belong to the Military Government (Sanjak) of the Kapadán Páshá.
- Monastir, or Bitolia. 1. Tóli-Monástir, (Bitolia,) on a rocky hill, was formerly the residence of the first Páshá in European Turkey. (*Γεωγρ. Νεωτ.* 262.) The neighbouring plain is very productive of cotton. Near it are ruins, said by its inhabitants to be those of Bylazora, (Azōrus?) but more probably the remains of Heraclea Lyncestidis. (De Vaudoncourt, p. 36.) 2. Filórinah, (Florina,) South-East of Bitolia, on the East side of the mountain of Monástir, is, perhaps, on the site of Cellae. 3. Kesriyeh, (or Geul-Kesriyeh, *i. e.* Lake Castorea, Castoria,) on a peninsula in the North-West side of a lake, and on the site of the ancient Celetrum, (*Liv.* xxxi. 40.) is now a handsome city and a Metropolitan See, seated on an elevated and rocky neck of land connected with the main by a narrow isthmus on which the castle stands. It lies nearly due South of Florina, the road from which is very rugged and dangerous. The neighbouring mountains are inhabited by Servians and Vallakhians.
- Bikhlistas. 4. Bilishtah, (Bikhlista,) to the North-West, which gives its name to a branch of the Injeh Kará sú, (properly called Inikhori,) and (5.) Khórpishtah, (Khrúpista,) South-East of it, inhabited by Bulgarians and Albanians, are adjoining districts. South-East of Kastoria is Lepeni, or Anaselitza, on the Názlícheh, a place of some size North-West of Grevenà, or Kerbenah, called Avlæs by the Greeks, and supposed to be the ancient Elymea, an Episcopal See subject to A'khrida.
- Greuno. South-East of Grevenà is (6.) Serfijeh, (Sérvicha, or Servia,) another Episcopal City, not far from the Southern bank of the Injeh Kará sú. (Haliacmon.) On the Vistritza, (*Æstræus*), North-East of the Lake of Kastoria, is (7.) Sárigeul,* (*Σαριγγιούλ*, Meletius, ii. 470.) or Kitrini, (*Κίτρινη*, *i. e.* Yellow Pool,) also called Kaílari, the Capital of a district containing several villages, and receiving its name from a small lake (Begonites, *Liv.* xliii. 53.) a few miles to the South-East. Across Mount Muriki, and 50 or 60 miles South-East of Kaílari, is Kóziani, (*Κόζιανη*, *i. e.* Kózhani, leathern, a Slavonian name,) a handsome town in a plain at the foot of the hills, inhabited by Christians, and in a very flourishing state a few years before the insurrection at the close of the XVIIIth Century. North-West of Kóziani about nine miles is (8.) Názlícheh, (Anazelitza,) or Lepeni, on the river Názlícheh, (Nazilitza,) detached from Khrúbishtah, and frequented on account of its great autumnal market. North-East of it is Siátista, or Siátzista, a more considerable and wealthy place, till its industrious inhabitants were compelled to take refuge in the Austrian dominions, and increase the Romanic colonies settled at Trieste and Vienna. (*Γεωγρ. Νεωτ.* p. 264.) 9. Egrí bújak, (Crooked Corner,) on the Injeh Kará sú, nearly due East of Siátzista; 10. Jum'ah bázár, (Friday Market, at or near Kastranitza,) inhabited chiefly by Turks; 11. Ostrovah, (O'strova, *i. e.* insular,) on the Vistritza, and (12.) Lánkah, of which the Kádí resides at Díri, (Papso Dereni,† according to M. de Vaudoncourt,)
- Kailari, or Sarigeul.
- Khatista. Chatista.
- Egriboudgiak.
- Diuma Basar.
- Ostrobo. Lanka.

* Sarigol, on the Injeh Kará sú, South-West of Cojain, in Mr. J. Arrowsmith's Map, is a very different place, and probably misnamed, as there is no lake near it. The Turkish Sári geul is his Cailari.

† Papso Dereni, probably, as in the Society's Map, Derveni, being a corruption of *derbend*, "a mountain-pass or defile."

North-East of Kastoria, are the remaining Kádílik in this part of the Kapúdán Páshá's Sanjak.

ROME-LIA.

Trikkala.

12. Tirhálah.

1. Tirhálah, (anciently Tricca, whence the modern Trikkala,) from which this Sanjak receives its name, is a small town nearly due South of Grevenà, at the distance of about 60 miles. It is on the Eastern slope of a mountain, in a beautiful valley compared with the Ghaútah of Damascus, two miles from the river Kostúm, a tributary to the Salamvria, (*Σαλαμβρία*), or Penus, and almost all its inhabitants are Greeks. In Mount Mézovo, (Pindus,) at a short distance from Tirhálah Westwards, are some narrow and difficult passages, particularly at A'ghrafah. (*Ἀγραφα*.) "Across one of these passages, between two high mountains, there is a flying bridge suspended on chains; and many travellers, whose courage fails them, are carried over by men, or even women, from the neighbouring villages."* (*Rumili*, p. 100.) 2. Near the Northern extremity of the Sanjak, on the South side of Mount Volutza, is the Kádílik of Alásónah, (now Elassón, anciently Olösson,) much frequented at its great fair in the beginning of August. It is an Archiepiscopal See. Charíchani, (*Τζαρίτζανη*), a large village on the Sarantáporos, (*i. e.* Tcherit-Forty-ford River, the Eurotas,) is a few miles South of chani. Elassón. 3. Palátamínah, (Platamón,) North-East of Elassón, and on the coast of the Ægean Sea, in 40° N. latitude, is a strong castle on a rocky hill commanding a small harbour. It is a little to the North of the mouth of the Salámberiyah, or Sheftálú-nehr, (Peach River, the Penus,) across which there is a bridge called Pápáz-Keuprí, (Priest's Bridge,) with a paved road through marshes on each side. The town is entirely within the castle, anciently a Convent called Platéa Moné, (*Πλατέα Μονή*), and subsequently an Episcopal See. (Meletius, ii. 459.) Between Elassón and Túrnavo, South-West of Platamón, is (4.) Dómenik; (Dómenicon, vulgarly Domeníco;) and South-East of Túrnavo is (5.) Fanár Kebir, (Great Lighthouse,) a few miles to the East of (6.) Yení-shehr, (New Town,) or Larissa, a large city and Metropolitan See, situated in a fertile plain traversed by the Kostúm, (Penus,) which in Summer-time is fordable. The air is heavy and unhealthy. To South-West of Yení-shehr about 20 miles is Mashkolúr, (*Μασκολούρι*), the ancient Chyretia, where a great fair is held annually on the 10th of May. 7. Velesín (Velestinos, on the site of Pheræ) lies South-East of Yení-shehr, on the road to (8.) Góló, or Gólós, anciently Pagasæ, (*Βούλος*, Vólo,) on the gulf bearing that name. (Sinus Pagasæus.) It has a strong castle and spacious harbour. On that gulf is Demetrias, in modern times made an Archiepiscopal See, and a place of considerable commerce. 9. Armirò, (Armyros,) on the Western side of the gulf of Volo, and (10.) Chatáljeh, (Little Fork,) or Phársala, (Pharsala,) on the river named from it Chatáljeh súi, (Pedanus,) with (11.) A'ghrafah, the chief place of which is Fanár, (Phanari,) due South of Trikkala, are the remaining districts in this Sanjak.

13. Eghríbóz. (Euripus, or Negroponte.)

1. Eghríboz, (Chalcis,) with a strong castle, united Egripo.

* This is probably the earliest notice of a suspension bridge in Europe.

- ROME-LIA. with the main land by a drawbridge, is the metropolis of the Island and a Metropolitan See. In the adjoining plain of Lelanton (Λήλαντον) are some powerfully medicinal warm springs. 2. O'derbóz, (Oreos, or Histiaea,) a castle about a mile from the sea, with a spacious harbour, is famous for its pomegranates. 3. Kizil hisár, (Red Castle, Castel Rosso, anciently Carystus,) is a populous town on a rock near the sea, not far from the Southern point of the island. 4. Izdín, or Zeítún, (Lamia,) is a small town, with an anchorage two miles distant. 5. Módúnij, (Vodonitza,) lies to the West of the Thermopylae. 6. Talandah, (Ταλάνπων,) a large village at the foot of Mount Khlomos, (Kholm, "hill," in the Slavonic dialects,) anciently Cnemus, is near the seacoast, opposite to the Island of Atalanta, and North-East of Livadia. 7. Rúbus (Ῥωβός) is just above the mouth of the Asopus. 8. Kefisah, (Cephissia,) lies a few miles North of Athens. 9. A'tinah, (Ἀθήνα, Meletius, ii. 356.) is a large town, anciently famous as the abode of Plato and other great philosophers, and thence called "the City of Sages." Its castle, on the summit of a rock four miles from the sea, was taken by Timurtash, one of Báyzid's Emirs, in A. H. 789. (A. D. 1387.) Ruins are scattered all the way from the town to the sea, and its honey is the most famous in the world. 10. Opposite to the Island of Eginah, on the coast of Mórak, is Mestúbeh,* a Kádilik near the harbour of Piyádah. Eleusínah (Eleusis) is on the way to (11.) Megharah, which still retains its ancient name, and guards a narrow passage near the castle of Kermeh, a deserted fortress at the end of the gulf of A'tineh. This is the last Kádilik of Egghríbóz on its South-East side. 12. Sálonah, (Σάλωνα,) the ancient Amphissa, is not far from the gulf of Corinth, and a few miles to the West of Kastri, (Delphi,) remarkable on account of its ruins. 13. On the river Mavropótamo, or Gavriàs, (Γαβριάς, Boagrias,) North-East of Salona, and North-West of Talanta, is Turkokhóri, (Turk's Village,) called by the Turks Esed-ábád, (Leontopolis,) a little to the North of which are the ruins of Elatéa. 14. Livádi, (Λειβαδιά, Livadhià, anciently Λεβάδεια, celebrated on account of the neighbouring cave of Trophonius, is now the Capital of the Province. It lies to the South-East of Turkokhóri, two or three miles West of the Lake Topolias, (Τωπόλιας, anciently Cōpaïs.) 15. To the South-West of Livadià is Istifá, (Thiva, Θήβα, Thebes,) "remarkable," says Hájí Khalífah, (p. 111.) "for a kind of soft stone easily cut into blocks and slabs." It is a Metropolitan See, and has still remains of the Cadmea and several other ancient towers. The Turks have two large Mosques (jámi) there, and the Greeks one Church. (Γεωγρ. Νεωτ. p. 193.) 16. The Island of Eginah, (or Aínah,) in the gulf of Athens, has on its Western side a village and a castle near a spacious harbour.
14. Mórak. (Morea, or Peloponnesus.)
- Tripolitza. 1. Trípolíchah, (Τριπολιτζά, Tripolitza, Tripolitià, or Tripis-vunà,) near the ruins of Tegëa, and about nine miles South of the site of Mantinea, has in latter times been the Capital of the Morea and the residence of its Episcopo. Páshà. The old town near it, called Episcopé, was on the site of Tegea. The present town, as its name
- (Tripolitza, Little Three-fields) seems to indicate, sprung up when the Slavonians were masters of Peloponnesus. 2. Arhóz, (Argos,) at the head of the gulf of Anábóli, a village with a castle on a high hill. It is only four miles from Anábóli, so that the call of the Muëzzins in the one place may be heard in the other. (Rumili, p. 113.) Argos was an Archiepiscopal See, but is so now only in name, says Meletius. (ii. 422.) 3. Anábóli, (Nápoli di Romanía, Nauplíá, or Náuplion, vulgarly Ανάπλι, Anapli,) a Metropolitan See, is at the foot of Mount Palamídi, on the shore of a very spacious harbour. Its castle is in a cavity of a projecting hill surrounded on three sides by the sea, but is commanded by a hill on the fourth side. "It was looked upon by the Infidels as a second Jerusalem, but all their batteries and bulwarks could not turn aside the shaft of Fate." (Rumili, p. 114.) Its harbour can give anchorage to 600 ships, and its gulf is separated from that of Athens by the promontory named Chámlíjah, from the island (Hydra) at its extremity. The strait of Biberjik, (Macronisi,) at the end of the promontory of Athens, is 60 miles North-West of the strait of Chámlíjah. On this promontory are the castles of Piyádah, (Piada?) Terfijah, (Tara?) and Kastri; the ports of Mersení, Túzlah, Voltós, and Kúríkus. (Kóraka?) 4. Kóridós (Corinth) is a village at the entrance of the peninsula, with a strong castle, which is a key to it, not being far from the sea on either side: this fortress has 360 towers. 5. Firínah, (Vitina?) between Arhóz and Kalávritah, and (6.) Vitina. Ayá-Petrí, (Hagios Petros, i. e. St. Peter,) to the South-East of Trípolíchah, are Kádiliks between Argos, and (7.) Kalávryta, (τὰ Καλάβρυτα,) a modern town near the ancient Cynætha. 8. Vostíjuh (Vostitza, Βοστίτζα, Vostitza, on the site Ægium) is bounded to the West by (9.) Báliyah Bádírah, (Palæa Patra, Παλαιὰ Πάτρα,) or Patras, Pátras, otherwise called Bádrahjik, (Little Patra,) a large town on a harbour at the North-West extremity of Mórak, opposite to Aínah-bakhti. (Naupactus, or Lepanto.) 10. Holómij, (Khlomutzi, i. e. the Little Hill,) close to Castro Tornese, and very near the Westernmost promontory of the Morea, is at a small distance North-West of Gastenú, (Gastuni,) which has a harbour at the mouth of its river. (the Penëus.) It is 15 miles North-East of Zóklisah. (Zante; Zacynthus.) 11. On the Carbonaro river, South-East of Holómij, is Karítinah, (Kary'tena, ἡ Καρύτυνα,) one of the towns founded in the XIIIth Century by the feudal Lord of Peloponnesus, (Meletius, ii. 403.) and another of them, (12.) Lóndárfi, (Leontarion, Λεοντάριον,) to the South-East of Karytena and on the same river, is Capital of the adjoining district. 13. Fanár, (Phanárion, i. e. the Lighthouse,) nearly due West of Karytena, is about 25 miles North-East of (14.) Arkádiyah, (Arcadía, anciently Cyparissia,) on the shore of the gulf bearing that name. It is eight miles North of (15.) Avárin. (Navarino, Ναβαρίνος.) Its castle, on a cliff overhanging the water, renders it almost impregnable, and its harbour is large enough for nearly 1000 ships. 16. Motún, (Methone, now Mothone, Modon. Μοθώνη,) 16 miles South-East of Navarino, is situated on the Western angle of the fourth promontory of the Morea. It is 15 miles from Cabo Gallo, and opposite to three uninhabited isles called Sapienza. Its castle is guarded on three sides by the sea, and on the fourth by a double foss and a small harbour. "Mótún," says Hájí Khalífah, "was considered as one of the keys of the Ionian sea, as Corfù is the other; and as one has already fallen into the hands of the 'Osmánlis, it is to

* The orthography and meaning of this word are doubtful, as M. de Hammer (p. 120.) has not distinguished long and short vowels or similar consonants. It probably means "graduated."

- ROME-LIA. be hoped that ere long the other will likewise." A battery on the point, erected by the Turks after they took the place, effectually prevented any strangers from attempting the passage between it and the Sapienza islands. 17. Korón, (*Kopónη*, Koróne,) on the Eastern-most point of the same promontory, belongs to the Sanjak, or military government of Mizistirah, (Mistrà,) for the peninsula was originally subdivided into two Sanjaks, Mórak Proper and Mizistirah. This place is surrounded by mountains, and has a small harbour guarded by two castles built by the Venetians. There are shallows extending a mile from the point on which Korón stands. 18. Andurúsah, (Andrusa,) near the Pirnatza, or Dipótamo, (Pamisus,) is North-West of (19.) Kalamata. Kalamátah, (*ἡ Καλαμάρα*, anciently Thalama,) a Kádilik in the Sanjak of Mizistirah. To the South-East of it is the port of Kitris, (Kitriés, *i. e.* citron trees,) and further on Cape Máinah, or Mániyah. (Mána, or Mani, *Mávnē*.) 20. The district bearing that name occupies the Western side of the chain called Pentadáktylon. Its rocky coast and rugged mountains have enabled 15,000 Greek infidels, says Hájí Khalífah, (p. 117.) "to defy the true believers by land and by sea. More than once have they swept away the Beg of Mizistirah with all his people. God grant that some zealous warrior may bring this wretched people under the yoke!" Rúpinah,* a castle on a rock three miles from the shore, and 15 miles from the river Izbárpó, or Ak-sú, (White Water,) on the banks of which some ruins show that there was anciently a large city there, is in this district, as well as the harbour of Portókáli, (Porto Quaglia, or Porto Kaño,) on the Eastern side of the promontory near its extremity, Máinah búrun. (Cape Maína, or Matápan.†) 21. Mizistirah, (*ὁ Μιζιθράς*, contracted into Mistràs, or Mistrà,) on the river Niri, (*Nῆρι*, anciently Eurotas,) three or four miles from the site of Sparta, nearly in the centre of Mana, was the residence of the Sanjak Beg, (*i. e.* Commander of the district,) while the Turks had possession of the plain, for they never were masters of the mountains. It stands on the side of a round, isolated hill, on the top of which is the castle, generally hidden in a cloud of mist. (*Rumili*, p. 115.) A small stream passes through the bazar at the foot of the hill. Adjoining is the district of (22.) Páz-ovah, which extends South-West to the mountains of Maína; and to the South-East about 50 miles distant, on a very small peninsula, is (23.) Mengesheh, (*Μονεμβασία*, Monemvasía, called by the Italians Nápoli di Malvasía,) a very strong fortress. It is 20 miles North-West of Cape Malea, (*Μαλέα*), which is 15 miles North-East of Chókah Atah-sí, (Cloth Island, *i. e.* Tzerigo,) and from Bóghchah Atah-sí (Wrapper Island, *i. e.* Tenedos) 400 miles in a straight line. Mengesheh is 10 miles North-East of the port of Vátikah, and that is 15 miles South of Rúpinah. Malvasia is a place of great trade, and much venerated on account of the Church of Santo Nikoló at the extremity of the point.
15. Aíneh-bakhtí. (*Naupactus*, or *Lepanto*.)
- Epakto. 1. Aíneh-bakhtí, a fortress on the side and summit of a hill opposite to the Northern coast of the Morea, capitulated to the Beglerbeg of Rúm-ílí, Mustafá
- Páshà, in A. H. 905. (A. D. 1500.) The castles on each side of the strait were then built in eighteen days. The harbour has no anchorage for large ships. The other Kádíliks of this Sanjak are (2.) Karavari,* on the Southern side of Mount Vetrenitza, or Vedrinitza, North-East of Návpakto. 3. Abúkór, on the Phidari, (Euenus,) North-West of Karavari. 4. Kirpinish, on the Western side of Mount Liákura, (Parnassus,) and on the river Argolianos. 5. Geul-hisár, (Lake Castle,) South-East of Vrakhorí, on the lake named from that place. 6. Olunduruk, on the Phidari, half way between Geul-hisár and Aíneh-bakhtí, and nearly due North of the latter.
- ROME-LIA. Karavari. Abukor. Kirpinish. Geulhisar Brakhori. Olundurak.
16. Kárlí ílí. (*Charley's Land*.)
- Its Kádíliks are as follows:
1. Altó, (probably Aíta on the Phidari,) nearly due Aito. South of Vrakhorí. 2. Ekseremereh, (Exeremere,) Exemero. North of Geul-hisár. 3. Abúláhór, on the Aspropótami, (White River, anciently Achelous,) West of Exeremere. 4. Engilíkastrí, (Angelókastron,) on the same river, Angelo South of Abúláhór, near a small lake bearing its name. Castro. 5. Vúnijah, (Vonitza, *Bónιζα*, anciently Anactorium,) Vonitza. a fortress near the entrance of the gulf of Nárdah. (Arta.) 6. Ayá Mavrah, (Hagia Mavra, *ἡ Ἁγία Μαύρα*, Santa or Lefkádha, *Λευκάδα*, from Leucas, or Leucadia,) a Maura. Leucadia. town with a castle on an islet between the island and the main land, connected with each by drawbridges. The island is hilly, nearly triangular, and has a spacious harbour called Porto Fico on its South-East side. Porto Fico. 7. Prevezah, (Préveza, *Πρέβεζα*), 10 miles North of Previsa. Ayá Mavrah, and nearly opposite to Vúnijah, is a strong fortress at the mouth of the gulf of Nárdah, erected for the purpose of guarding that narrow passage. This, though on the Northern side of the gulf, is a district attached to Kárlí Alí.
17. Yáninah. (*Joánnina*, *Ἰωάννινα*.)
1. Yáninah, on a lake named from it, (Euræa, on the Lake Pambotis,) is the chief town of the Páshálik, celebrated in modern times as the residence of 'Alí Páshà Tepehdelenlí, and the most flourishing school of learning in modern Greece. It is a place of considerable commerce, and was raised to the dignity of a Metropolitan See by the Emperor Andronicus Comnenus in the latter part of the XIIth Century. Between Joánnina and Zágora is the Monastery of St. Elias, by some supposed to be on the site of Dodona. (Vaudoncourt, p. 43.) 2. Kúnijah, (Kónitza,) "formerly a city, now a village," says Meletius, (ii. 283.) is, perhaps, Stubera on the Voyutza. 3. Korondos, (Dzidza,) Zidza. North-West of Yáninah, though now a separate district, was formerly under its jurisdiction. 4. Nárdah (Arta, the ancient Ambracia) is on the Eastern bank of the river so called, (Arachthus,) and near the gulf bearing that name. This river is navigable only for small vessels. (*Rumili*, p. 130.)
18. Delviniyah, or Delóniyah.
1. Delóniyah, or Delviniyah, (Délvino, or Délbino, Delbino.

* Ruya, in *Rumili una Bosna*, (p. 117.) is evidently, as appears from the sequel, an error of transcription for Rúpinah, *i. e.* Rupina, North-East of Kavó Xyli, (Cape Wood,) near the site of Asopus, now Blitra, according to Colonel Leake.

† *Ματῶπαν*, in the Laconic dialect. (Colonel Leake.)

* The names of these places are given by the Turkish geographer, and their position is taken from M. de Vaudoncourt's Map: but on what authority he has laid them down does not clearly appear. He does not give the Morno, (Hylæus,) and the course of the Phidari, as laid down by him, is irreconcilable with Mr. J. Arrowsmith's data.

ROME-LIA. Δελβινον.) North-West of Yáninah, and nearly opposite to Corfù, is a fortified town four miles from the sea, and North-East of Bucintro, or Butrinto. (Buthrōtūm.) The neighbouring shore is very precipitous. 2. Marazak, (Margarita, Μαργαρίτη,) a small town with a castle, inhabited by Turks, is about 30 miles South of Delvino. At the foot of the mountain bearing its name stood Pargah, (Πάργα, from Ὑπαργος,) a small fortress on a rocky peninsula inhabited chiefly by Albanian traders, says Hájí Khalífah, (p. 131.) "guarded by the inhabitants under the protection (ἐπίσκειψιν) of the Venetian Aristocracy," says Meletius, (ii. 279.) half a century later; "but now," (i. e. in 1806,) adds Anthimus Gazé, in a note, "having a democratic form of government under the protection of the Porte, like Préveza and Vónitza." To the East of Parga lies the mountain of Suli. (Σούλι.) The magnanimity or turbulence which impelled the people of Parga to abandon their town in a body, rather than submit to the Government of 'Alí Páshá, has been warmly debated by political writers, whose intemperate and contradictory statements it is not easy to reconcile so as to form a just notion of the real state of the case; but they who are well acquainted with the general character of the Albanian and Ionian islanders will hesitate before they ascribe to magnanimity what may be accounted for on the supposition of more ordinary motives. 3. North-East of Parga, and North-West of Suli, is Aídanát, (Κάστρον τοῦ Ἁγίου Δονάτου, τὸ ὁποῖον καὶ Παραμυθία λέγεται, καὶ ὑπὸ τῶν Τούρκων Ἀϊδωνά, ἢ ὁποία πρότερον Γλυκὴ ἐκαλεῖτο, Melet. ii. 278.) the Paramythia of the Greeks, anciently Glyky', as the river Thyamis, (Palamàs.) not far from it, is now called. 4. Karvalish, on the seacoast, North-West of Delvino, is called by the Greeks Khimara, (Χειμάρα,) and is at the foot of the celebrated Acroceraunian mountains, now called the mountains of Khimara, (Τῆς χειμάρας τὰ βουνά,) probably from the Chimerian promontory, (Χειμέριον,) which terminates them at the Western extremity of the gulf of Avlona. (Melet. ii. 259.)

19. Avlonah. (Valona.)

Avlona. 1. Avlónah (anciently Aulon, now Ἀβλῶνας, called by the Italians Valona) lies on the Northern side of a bay, at the mouth of which is the Island of Sásenah. (Sasseno.) The town is at one end of the bay, the cape Kará burunù, (black nose,) or Linguetta, (Acroceraunium Prom.) at the other. Its lagune abounds in fish; and the pitch from the neighbouring naphtha springs, with the salt manufactured in the salterns, were formerly a considerable source of revenue to the Porte, whose fleets commonly laid in their water at this place. To the North of Avlónah, the river Voyutza, or Poros, (Βοοῦσα, in Meletius, anciently Aōus, Ἀῶος,) falls into the sea; and near its mouth is Póllina, (Apollonia,) and beyond it, further Northwards, the Lom, (anciently Apsus,) Ergent, Tuberathi, Berátina, Samana, or Kavríoni,* (Καυρίονι, Melet. ii. 253.) on the Northern bank of which is (2.) Muzakíyah; (Μοοσαχία, Melet. *ibid.*, Musachi, Barleti, ii. 15. Musaché, Pouqueville, i. 283.) and several miles further up that river is (3.) Berát, or Arnáúd Belghrád, (i. e. White City of Albania,) **Boiussa River.**

* The Turks, Greeks, Albanians, and Slavonians often give, each, a different name to towns and rivers; hence the discordance of Maps and books of travels, and the consequent confusion in the geography of these Countries.

corrupted into Veládhagra (Βελάδαγρα) by the Greeks, anciently Albanopolis, a town on the summit of a hill, and now the chief place in this Sanják. 4. Iskarpar, (Scrapori,) South-East of Berát, is the adjoining Kádílik. Scrapori. 5. Depeh-delen, (Hill-vale,) called by the Greeks Tepeleni. Tepeléní, a small town at the confluence of the Derópulo, (Celydnus,) and Voyutza, or Voyussa, (Aōus,) near the ruins of Hecatompēdon, is the birthplace of the celebrated 'Alí Páshá, thence called Depeh-delen-lí, or Tepelenios. (Rumili, p. 133. De Vaudoncourt, p. 42.) 6. Piremedí, (Premiti,) on the Voyussa, about Premiti. 20 miles nearly due East of Tepeléní, is North-East of (7.) Póghóniyah, (Palæa, Pogonià,) on the ridge of Pogonia. Mount Tzumerka, (Τζουμέρκα, Melet. ii. 259.) and about half way between that place and Argir-kastrí, (Argyró-kastro,) on the Drino, near the site of the ancient tro. Antigonea.

20. I'lbesán, or Elibasáni.

1. I'lbesán, or Elibasani, on the Ishkúmi, Scombi, El Bassan. or Tobi, (Genusus,*) is the second city in Albania. It was founded by Sultán Mohammed II.† A. H. 861, (A. D. 1458,) as a check on the Albanians then making head against him under Iskander Beg, and is still a place of considerable trade. 2. Istár-ovah, South-West of Starova. Uskúb, and (3.) Istúrgah, (Struga,) on a small lake, Isitirga. just half way between Ilbesán and Uskúb, are in the valley of the Black Drino. 4. Ishbát, on a tributary Isbat. to the Ishkúmi, (Scombi,) is East North-East of I'lbesan. 5. Segím, on that river, is nearly due South of Ishbát, Sedjin. and near the source of the Ishkúmi, according to M. de Vaudoncourt, but about its mid course in Mr. J. Arrowsmith's Map. 6. Poklín, or (Pekini,) is near the Pekini. mouth of that river South-West of I'lbesán. 7. Durráj, Durazzo. (Durazzo,) the ancient Dyrrhachium, is on a small bay, with a very strong castle; Eskí Durráj, (Old Durazzo,) to the South of Durráj, is called by the Italians Capo Cape Lade' Lachi.

21. O'khri. (O'khrida, or A'khrida.)

Its Kádíliks are, 1. Okhrí, (Ὀχρίδα, from Akhrys, Ochrida. about 14 miles North of the ancient Lychnídis,) on the North-Eastern side of a large lake from which the Black or Western Drino (Δριλῶν) issues. The inhabitants River Drin. of O'khri, says the Turkish geographer, (p. 140.) are Bulgarians, and there are mines of silver and sulphur in its neighbourhood. 2. Istárdah,† or Starova, on the Istarda. South-West shore of the lake, is nearly due North of (3.) O'pár, on Mount Tomor, or Tomerit. (Tomarus.) Opor. 4. Tomorincha, (Ταμωρίτζα,) on the Southern side of Mount Tomerit, or the valley of the Lom, South-West of O'pár, lying in the mountains, and occupied by Arnáúds. 5. Kolóniyah, (Colonia,) across the mountains South-East of Tomorincha, and on a tributary to Bikhlista, (Eor-Colonia.

* Respecting this river there is much discordance in Maps and geographical writers. Notwithstanding M. de Vaudoncourt's employment in the Illyrian Provinces, little reliance can be placed on this part of his Map. Mr. John Arrowsmith, following much surer guides, brings this stream from Túrnovo, a few miles South-West of Monástir, about 40 geographical miles nearly due East of Segím. (Sedjim, in Mr. Arrowsmith's Map.)

† From a MS. of S'adu-ddín's History; but see De Hammer's Osm. Reich. ii. 95.

‡ Idarda, in the Society's Map.

ROME-LIA. 6. Górtza, Górejeh, or Koridjé,* (Γυόρτζα, Melet, ii. 254.) North-West of Kolóniyah, to the South of O'khrida, on the Southern bank of the Ishkúmi. 7. Persepeh, (Prespa,) on a small lake to the East of the lake of O'khrida: and 8. Dibrí, (Dibra,) on the bank of the Drín, (Black Drino,) to the North of O'khrí. 9. Mát, (Máttia, or Máthia,) North-West of Dibrí, and North-East of Ak-hisár, (Croya,) on a large river bearing the same name, (Máthia, pronounced by the Slavonians Mafia,) which runs into the sea beyond Ishím. 10. Ak-hisár, (White Castle,) or Kroya, built by Sultán Mohammed as a frontier-town in A. H. 871. (A. D. 1467.) 11. Ishím, (Ishini,) North-West of Kroya, and South-East of Alessio, not far from the mouth of the Máthia river. (Mathis.)

22. Dúkah-gín, (or Oros.)

Its Kádíliks are, 1. Dúkah-gín, (Ducagino, or Oros,†) South-East of Ishím, and lying between the Máthia, (Máfia Kortino, or Oros Badà, i. e. Oros water,) and Mát, or Máthia, is one of the four territories which bear the names of the families by whom they were possessed in the Middle Ages. (Von Hammer, *Osman. Reich.* i. 659.) 2. Altúníli, (Gold Land,) or Ibalí, (Ibah-lí?) on the Black Drino, North-East of Dúkah-gín. 3. Yákovah, on a tributary to the White Drino, North by West of Altúníli. 4. Ipek, (Ipékhi, or Pekhia,) on the White Drino, North-East of Yákovah, now the Capital of a Province. 5. Pláv, (Plava,) North-West of Ipek, and on the North-West side of a considerable lake. It is inhabited by Montenegrines. 6. Podmilah, South-West of Pláva, and South-East of Ipek. 7. Záderinah, (Za-drín, i. e. beside the Drino,) on the left bank of the Drín, North of Alessio, and probably the ancient Drinopolis, also called Drinavár. These two districts, together with Duckagino, are inhabited by the Albanian Tribe called Meredit, or Mirdit, who are Christians, and have to a considerable degree maintained their independence since the time of Scander-Beg.‡ (De Vaudoncourt, p. 40. Malte-Brun, *Précis*, vi. 195.) 8. Lesh, or Lódrín, (Aléssio, anciently Elissus and Lissus,) at the mouth of the Drino, and South-East of Scútari, (Scodra,) a town at the foot of a mountain, on a projection of which is its castle. "The Drino," says Hájí Khalífah, (p. 146.) "is the outlet of the Lake of Okhrí."

23. Uskudár, or Iskenderiyyeh. (Skútari.)

Alexandria. 1. Iskenderiyyeh, i. e. Alexandria, because supposed
Scutari, or by the Turks to have been built by Alexander, anciently
Scodra.

* Koridgé (Gortza of M. de Vaudoncourt) is placed near the source of the Genusus by M. Pouqueville, but far down its course by Mr. J. Arrowsmith, who has a route along its bank as far as Zapondji Kuressi.

† Oros is here given as synonymous with Ducagino, because those two places are in the same position in the Maps consulted: though the latter place is of rare occurrence, except in M. de Hammer's Works and the Histories of Scander-Beg, not being found, perhaps, in any modern Map except that of M. de Vaudoncourt; Oros vada, i. e. the water of Oros, is evidently the river called Máfia Kortino (Little Máfia?) by that geographer. Orosh is the residence of a mitred Abbot, the spiritual Prinik (Princeps) of the Mirdites, (Merdi,) whose temporal Prince belongs to the family of the Lechi. (Letchi?) (Malte-Brun, *Précis*, vi. 196.)

‡ *Σκωρίτζα*, (Melet. ii. 252.) i. e. *Iskender Beg*, "Lord Alexander," the name given by the Turks to Giorgio Castriotes, when he was circumcised.

named Scodra, whence Uskudár and Skútari have been formed by the Turks and Greeks, is at the Southern extremity of a large lake, Bóyánah, or Zenta, (Labeatis,) seven days' journey in circuit, (about 120 miles,) which receives the waters of the Rikóchernovich, (Black River,) Moraka, and Zem, and discharges them by the large stream of the Bóyánah into the gulf of Drino. On a rocky hill stands the castle, between the extremity of the lake and the Drínás, (Drinasso,) which there joins the Bóyánah. One of the Mosques which was built by the Infidels is called Ayá Sófiyah, (i. e. Sta. Sophia, in imitation, no doubt, of the Cathedral at Constantinople.) The salterns and fishery are farmed out by the revenue officers. The river is navigable only by small vessels, and, frequently overflowing its banks, rises with great violence. Skútari, which is the residence of a Páshá or Beglerbey, has many Mosques, Baths, Alms-houses, and other charitable or religious foundations established by Musulmáns, having been the first frontier-city of the Turks ever since it was taken by Mohammed II. A. H. 883. (A. D. 1478.) Geul-báshí (Lake-head) is probably the castle near Skútari, and Drágóz is another castle in that neighbourhood. 2. Shábiyák, (Szabiak, in Schabiack. M. de Vaudoncourt's Map,) at the Northern extremity of the Lake of Bóyánah, (Boleana,) is a strong castle near the borders of Kará tágh. (Monte Negro.) 3. Kara-Karadjah-tágh, (Black Mountain, Monte Negro,) two days' journey North-East of Skútari, is a district inhabited by a mixture of Arnáúds (Albanians) and Servians. 4. Pozh-góriyah, (Podgoritza, i. e. at the mountain's foot,) on the River Morádchah, (Moraka,) North of Shábiyák, in the neighbourhood of Karajah tágh, is a fortress built by Mohammed II. 5. Gizibiládah, a district of Karajah tágh, lies between Iskenderiyyeh and Kótúr. (Cáttaro.) 6. Kótúr (Cáttaro) is a strong castle possessed by the Venetians, at the bottom of a bay from the back of which rises Karajah tágh. (Monte Negro.) 7. Búdúwah,* (Budua,) on the seacoast South-West of Kótúr: with 8. Bár (Antivari) and O'lgún, (Dulcigno,) two castles South-East of Budua, are the remaining Kádíliks; the first on a precipitous cliff overhanging the sea, and the latter 12 miles† from the bank of the Bóyánah, (Boyana, or Boleana,) a large navigable stream.‡ Near Bár there is a small castle called Pástrovich, where the passage along the shore is only two ells broad.

ROME-LIA.

Lake
Botana.
or Zenta.
Boleana.

24. Perserín. (Prisrenda.)

Its districts or Kádíliks are, 1. Perserín, (Prisrenda,) on the Western side of Mount Skierdo, or Shár tagh, (Scodrus,) near the White Drín, North-West of Ibalí and South-West of Pristina. It is inhabited by Arnáúds. 2. Khaváss Perserín, (Noble Prisrenda,) adjoining to the former. 3. Firchovah, near the Black Drín, about 25 miles South of Ibalí. Firczova. 4. Zahórikó, on the White Drín, North of Prisrenda. Sahorika.

* "Porava," in *Rumili*, (p. 137.) for *d*. This and some other obvious errors of transcription have escaped M. de Hammer's vigilance. Búdúwah is correctly spelt in the Map annexed to Hájí Khalífah's *Esfáru-l bihár*, or History of Maritime Wars of the Turks.

† At least 22 miles, but Hájí Khalífah's distances are often wrong.

‡ Hájí Khalífah, according to M. de Hammer's version, places Olgún (Dulcigno) "on a large navigable stream;" but as there is no river near it, the Boyana must be meant.

ROME-LIA. 5. Buhúr, on the Eastern side of the mountains, West by North of Pristina, inhabited by Servians and Arnáuds. 6. Turgushnah, North-West of Buhúr, also inhabited by Servians.

Buhur.
Turguchna.

25. *Veljeterin. (Vushitrin.)*

Busterin. Its districts are, 1. Veljeterin, (Vushitrin, or Usiterna,) a small town five or six miles North-West of Pristina. 2. Pirstinah, (Pristina, Pristino, or Pristen,) a town of middle size, surrounded by low hills, nearly due North of Pristina. The overseer of the mines near Kosovah is stationed at this place. 3. Yánovah, (Yányevo,) on the left bank of the Ibar, nearly due West of Pristina. 4. Kósovah, or Palashimah, an unwalled town on the edge of a long, narrow plain surrounded by hills, a few miles North-East of Pristina. The inhabitants are chiefly miners. On the adjoining plain were fought two great battles, one in A. H. 791, (A. D. 1389,) in which Murád I. suffered martyrdom, according to the Turkish style, and the Kingdom of Servia was ruined: the other in A. H. 848, (A. D. 1444,) in which John Corvinus Hunniyades was killed. 5. Novah Berdah, (Novo Bordo,) a town with a castle, about 30 miles East of Pristina; most of the inspectors of mines are stationed there. 6. Morávah, (Moráβα, Melet. iii. 40.) or Geul khan, (Lake Inn,) near a small lake South-East of Pristina, not far from the source of the Teplitza, one of the branches of the Morava.

Servia.

26. *Alajah hisár. (Krushevatz.)*

Alajahissar. Its Kádílik is, 1. Al'ajah-hisár, (Pretty Castle,) or Krushevatz, on the Western Morava, formerly a considerable place in the land of Lás, (i. e. Lazarus, King of Servia,) and the residence of the Beg. (Rumili, p. 146.) 2. Urkúb, (Perekop,) on the Eastern Morava, South-East of Krushevatz, near the mines of Saplinah. (Siplina?) 3. Medókah, South-West of Perekop, and North-West of Nova Berda. 4. Lezkóvachah, (Lezkovach,) where a great fair is held in the month of August, is South-East of Perekop. 5. Búlován,* North-East of Krushevatz. 6. Parákín, to the East of the Morava, nearly due North of Krushevatz. Near it is the fort of Kurú cheshmeh, (dry spring,) built A. H. 1048. (A. D. 1638.) 7. Kuznik, a village protected by a castle on a tributary to the Ibar, South-West of Krushevatz, and North-West of (S.) Kúrshún-lí, (i. e. leaden, Kurshumbli,) on a tributary to the Toplitza, and about 30 miles South-West of Perekop.

Semendria.

27. *Semendreh. (Semendria.)*

1. Semendreh, in 44° 38' N. and 21° E., on the right or Southern bank of the Tóná, (Danube,) anciently Spenderobia, or Senterovia, an Episcopal See, and, till the subversion of their Kingdom by the second battle of Kos-ovah, in A. D. 1444, the residence of the Kings of Servia. (Láz, according to the Turkish geographer, from Lazarus, King of Servia, who so long resisted the incursions of the Turks.) It was surrendered to Mo-

ammed II. by the King of Ungurús, (Hungary,) A. H. 863, (A. D. 1459,) and is about 27 miles South-East of (2.) Belghrád, (the White City, anciently Alba Græca, on the site of Singidunum,) at the foot of a hill, and at the confluence of the Sávah and the Danube. "It is divided into the Upper and Lower Fortress," says Hájí Khalílah, (p. 149.) "and is provided with strong bulwarks and towers, the highest of which, in the centre of the fort, is called Benovízah (i. e. stronghold) in the Bosniak tongue; it was formerly the prison of the true believers, but is now the arsenal. The cannon-foundry (Tóp-khánah) is on a height outside of the castle. At the confluence of the two streams is the port, custom-house, and fish-market. From one of the gates of the lower fort there is a wooden bridge over a valley; and in one of the towers there is a large clock which strikes every hour, day and night. Most of the houses are outside of the fortress." It was taken by Suleimán the Magnificent A. H. 927, (A. D. 1521,) and was the residence of the Beglerbeg of Budún (Buda) as long as the Turks had any hope of regaining Hungary. 3. Haválah is a fortress on the top of a high hill nine miles South of Belgrade, built by Suleimán to assist in reducing that city, the key to Hungary, Servia, and Bosnia. 4. Potnáchah, a defile near Podnitza, Belgrade, fortified by Aínah Khán, Beg of Semendreh, A. H. 1004. (A. D. 1596.) 5. Pózórófechah, (Pozaro-Passarovach, or Passarovích,) South-East of Semendria, is well known on account of the Treaty concluded there A. H. 1131. (A. D. 1718.) 6. Harám (Old Harám, or Ram) is on the Danube opposite to Uí Palanka in Hungary. 7. Yení (New) Harám (or Yení Palankah, i. e. New Stockade, in Hungarian Uí Palanka) is on the Northern or left side of the Danube. 8. Rózovah (Orzova, or Orsova, or Khirzova) lies between Perákín, Pózórófechah, and Yagvodín. 9. Mâdení Ipek (Maídán Bek) is on the river Bek, South-West of Golubinye, (Geugerjinlik, i. e. Dove-cot,) on the Danube. 10. Kóchnányah (Kochania, or Koczania. Kochaína) lies about half way between Maídán Bek and Passarovích. 11. Tímók is nearly due South of Maídán Bek, and just below the source of the river so called. 12. Yághódínah is a small town on the Western side of the Morava, nearly due West of Timok. Hasan Páshá Hasan Palankah (Hasan Páshá's Stockade) is about half way between this place and Semendria. 13. Kará-góyefachah, (Kragóyevach,) on the Lepenitza, is West of Yagodin. 14. Rúdnik lies North-West of Kragóyevach and on the Yessava, near its source. 15. Cháchakah (Chachak) is on the Morava, South-West of Kragóyevatz. 16. Póshegáh-jik, (Little Póshegáh, Possega,) on a tributary to the same river, is a few miles to the North-West of Chachak. 17. Uzíchah, (Ussichah,) on a tributary to the Morava, lies North-West of Possega, and half a day's journey nearly due East of Visheghrád. 18. Valliyovah, (Vallievo,) on the Kólúbarah, which runs into the Sávah due South of Shabátz, is a small town in a plain covered on one side by hills. (Rumili, p. 157.)

ROME-LIA.
Belgrade.

III. *Iyyáleti Bósnah. The Páshálik of Bosnia.* Bosnia.

When the Turkish Empire had attained its greatest extent, this Páshálik included eight Sanjaks or military divisions. 1. Izvornik, (Zvornik,) forming Proper. 2. Bósnah Seráí, (including Croatia.) 3. Póshegáh. (Posega.) 4. Ráhvíchah, (Orahovicza,) and (5.) Róhisah, now a part of the Austrian Province of

* Bulovan, or Rachnia, North-East of Krushevatz, about four miles East of the Morava, in Mr. J. Arrowsmith's Map, corresponds with Raznia in that of M. de Vaudoncourt, who places Búlaván on the South side of the Eastern Morava, nearly due East of Krushevatz.

ROME-
LIA.Slavonia.
Herzego-
vina.
Dalmatia.

Slavonia. 6. Hersek. (Herzegovina.) 7. Kilis, (Clissa,) and (8.) Kirkah, the Eastern part of Dalmatia. Of these, three only now belong to Turkey, Izvornik, Bósnah Seráí, and Hersek.

1. Izvorník. (Zvornik.)

Bosnia.
Zvornik.

The Kádíliks belonging to this Sanják are, 1. Izvorník, (Zvornik,) on the Drin, South-East of Bród. The bank of the river is here very high and steep, and the castle is itself of a vast height. The Drin is deep and rapid, but boats go no higher up than this place. The large bones often found in the neighbourhood have given rise to a common saying that Solomon's Genii (*djins*) were sunk in the river there. (*Rumili*, p. 171.) 2. On the Sávah, (or Sau,) about 40 miles North-East of Izvornik, is Beugur-delen,* (Spleen-Valley, Shabach,) a strong castle on a high hill East of the Sávah, which, just above, makes a large elbow to the North-East. Near it is an island called Beugur delen átá-sí. (Spleen-Valley-Island.) 3. South-West of Beugur-delen is Korpaínah. (Krupaín.) 4. O'sád, or Sháhín yuvá-sí, (Falcon's Nest,) because its castle is perched upon an almost inaccessible peak in the mountains, is a small town near Válievoh, (Vallievo.) 5. Bukhórínah is between Korpaínah and Ghrádchánichah. 6. Ghrádchánichah (Grachanicha) lies West by South of I'z vorník. 7. Serberníchah (Shrebernik†) is North-West of Zvorník. 8. Memlahateín, (in Arabic, Túzlah, in Turkish, *i. e.* the two salt springs.) 9. Belínah, near the Drin, North of Zvorník, and a few miles South of the Sávah, with (10.) Bádrah bínár, (Spring,) between Shabách and Krupaín, are the remaining districts.

2. Bósnah Seráí. (Seráyevo.)

Bonas-
serai, or
Serajewo.

Its subdivisions are, 1. Bósnah Seráí, (Bosnah Palace,) or Seráyevo, the Capital, in 43° 52' N. and 18° 22' E., which derives its name from the palace built there by Sultán Mohammed II. It has level ground on the West, but is enclosed by high mountains on the other three sides, and "is nearly as large as Edreneh," (Adrianople,) says Hájí Khalífah, (p. 160.) "having two Bezestáns, many Baths, and one hundred Mosques, near one of which there is a clock. The river Miláskah, rising East of the city, runs through it, and soon afterwards falls into the Bósnah. No fruit except grapes will ripen here." 2. North-West of Bósnah Seráí, Búzováchah; (Busovach; ‡) and (3.) a few miles North-West of that place Tirávník, (Travnik, or Traunik,) one of the largest towns in Bosnia. 4. Tishneh, (Teshéin,) a little to the South of the Ussora river, and North-East of Trávník. 5. Derbend, (Derventi,) North-West of Teshéin, on the Okrina, near its junction with the Sávah, a strong mountain-pass, such as are common in Bosnia. 6. Borót, (Brod,) on the Sávah,

Bouso-
vatz.
Traunik, or
Traunik.
Teshéin.
Dervent.

Brod.

* "Bücerdilín," *War in Bosnia*, p. 55. The translator of that Tract has strangely misspelt the names even of common places, writing Tzverník, though the Turkish Izvornik might have told him that the Hungarian or Servian, and not the German, orthography is that followed in German as well as other Maps of Slavonia and Bosnia.

† Another place bearing the same name lies to the South of Zvornik and East of Koprivno. It is not quite clear which of the two is here meant.

‡ Assigned to the Sanják of Izvorník by Hájí Khalífah, (p. 172.)

a place of considerable trade, being the great thoroughfare for all the caravans from Hungary and Austria.

7. Izviniyár, (Sviníar,) on the Sávah, West of Brod; and between that town and (8.) Ghrádishkah, (Gradiska,) or Berbir. 9. Zázínah, (Yazenovach,) at the confluence of the Sávah and Unnah. 10. Dúbíchah, a large fortress on the latter river, nine miles above its junction with the Sávah. "This place," says Hájí Khalífah, (p. 162.) "is the Musulmán border." 11. Bihageh, (Bihach,) at a small distance from the Sávah, in a plain nine miles West* of Kará tágh. (Black Mountain.†) 12. Kóshlánichah, (Kostanicha,) on the Unna, West of Dúbíchah, and North-East of Bihageh. It is bounded by Bánah, Lúkah, and Bihageh. 13. Tódór Nóví, (Novi,‡) a frontier town at the confluence of the Sanna and Unna. 14. Póshímah, (Buchím, or Puzhím,) beyond the Unna, not far from Zázínah. 15. Biláí, (Billay,) South of Novi, not far from the Unna, and on the Western border of Kará tágh. (*Rumili*, p. 166.) 16. Pódráfaticah, (Petrovach,) on the Eastern border of Kará tágh, East of Biláí, inhabited by Serfs. (Servians.) 17. Kulúch, (Kliuch,) on the East side of Kará tágh, near the place where the Sanna issues from the mountains, a few miles East of Petrovach. 18. Móden, (Stari Maídán, *i. e.* Old Maídán, or Plain,) a Stari fort on the Sanna, on the Eastern side of Kará tágh. 19. Kozárazah, (Kozaratz,) below Maídán to the North-East, on a tributary to the same stream. 20. Bánah Lúkah, (Banya-luka, the Bath of Luka,) a large town on each side of the Verbás, (or Verbách, anciently Urbates.) It has two castles; the upper wrested from the Infidels, the lower built by Ferhád, and strengthened by Sháhín Páshá. It is on the left bank of the Verbás, which, a little below, receives the Verbanya, or Verbanitza. The town (várósh) below the castle contains 3000 houses and 40 Mosques. It derives its name from two natural baths, and is about 25 miles from Gradiska on the Sávah. The Verbás is navigable as far as Banya-Luka. 21. Vazárvákazí, or Akhisár, (Varcharev Vakup.§) on the East side of Kará tágh, and between it and Mount Lisinah, (*Rumili*, p. 164.) one day's journey South by West from Banya-Luka. Kará tágh (in Slavonian Chernagora) is a remarkable chain of mountains running from South-East to North-West from Sín (Signo) and Clissa, near the Adriatic, giving rise to the Chettina and Kirka; leaving Pliva, Geul-hisár, Ak-hisár, (Vakup,) and Petrovach to the East, and giving rise to the river Pliva from its Eastern, and to the U'nah (Unna) from its Western side, on which side are the forts of Beláí, or Billáí, and Bihach, in the plain near which it appears to terminate. (*Rumili*, p. 163.) 22. Geul-hisár, (Lake Castle, or Yezero, *i. e.* Island,) a castle on an island formed in a small lake,

* "East," in *Rumili*; (p. 163.) but other passages show that this must be a mistake. The Bosnian name of Bihageh (Behkeh, according to M. de Hammer) is Bihach. (Von Hammer, *Osman. Reichs*, v. 275.)

† Not Monte Negro, as will appear subsequently.

‡ On the Sávah, according to Hájí Khalífah; (p. 163.) but this is probably a mistake. Todor seems to have been added in order to distinguish this place from Nóví (Novigrad) in the Sanják of Kirkah. (*Rumili*, p. 170.)

§ This town seems to be the Ak hisár, also called Vakup by M. de Hammer, (*Rumili*, p. 166.) mentioned by Hájí Khalífah as lying at the foot of pine-covered mountains; but if these places be identical, his distance of one day from Scardona must be wrong. The data given by that writer are often so briefly and indistinctly expressed as to leave considerable doubt respecting the position of the places named.

ROME- through which the Pilávah (Pliva) passes. It is on
LIA. the East side of Kará tágh, and at a small distance
South-West of Ak-hisár. (White Castle, or Vakup.) 23.
River Pliva. Yaíchah, (Egg-town,) North-East of Geul-hisár, at the
confluence of the Pliva and Verbách, an old fortress
said to have been built in imitation of Castell'ovo at
Naples. (Von Engel, *Serv. und Bosn.* 166.) 24. O's-
miyán, (or Oshrina,) South of Yáichah, on the Pliva,
near its source, on the road from Bánah-Lúkah to Kílís.
Jaitza. 25. Yení-Bázár, (New Market, or Novi Bazar,) at the
Ozrina. South-Eastern extremity of the Sanják, North-East of
Novi Bazar, or Ieni Bazar. Pristina, a considerable town, famous for its incom-
parable warm-baths. It is placed at the confluence of
several streams which discharge themselves by one
channel into the Ibav, a few miles Eastwards of the town.
Stari Vlak. 26. Istár Ifák, (Old Vallakhia,) between Pervenek and
Chachak, (Czaczak,) on the Morava, North of Yení-
Preboi. Bázár. 27. Perebói, (Preboi,) South of Visheghrád,
on the Lim, near its confluence with the Vuvach.
Vichegrad. (28.) Visheghrád, on the Drin, nearly due East of
Bósnah Serái. The bridge over the river at this place
is much admired by the Turks. (*Rumili*, p. 161.) 29.
Chelebí Bázár, (Gentleman's Mart,) North of Cháiní-
Chah. (Czainitza,) and South-West of Visheghrád, on
Chelibazar. a tributary to the Drin. 30. O'lúh, (Kózúlíchah,) on
Kosulitza. a branch of the river Krivaya, North-East of Bósnah
Chainitza. Serái. 31. Dúbovichíneh, (Dubovich,) a port South-
Racsa, or West of Bród, one day's journey above Ráchah,
Racza. (Racsa,) on the North side of the Sávah, and opposite
Doubovitz. to its confluence with the Drin.*

6. *Hersek. (Herzegovina.)*

Zakhulmia, afterwards styled the Kingdom of Rama
and Duchy of St. Sabas, was named Herzégovina when
its Sovereign, Stephen, was created Duke (Herzog) by
the Emperor Frederic III., A. D. 1440, and thence this
Sanják is called Hersek by the Turks. Its jurisdictions
or Kádílik are, 1. Mostar, South-West of Bósnah Serái,
Mostar. on the great river Nárent, (Narenta,) over which there is
a remarkable bridge (*most*, whence Mostar) of one arch,
150 cubits in diameter, built A. H. 974, (A. D. 1566,) by
a master-carpenter. The preceding bridge, nothing more
than some wooden planks suspended between chains,
was both alarming and dangerous to the passenger.
Narenta. (*Rumili*, p. 175.) 2. Narenta, perhaps the Belghrádjik
(Little Belghrád) of the Turks, nearly due North of
Mostár, on the Northern border of the Sanják. (*Rumili*,
p. 178.) 3. Kúpres, North-West of Narenta, on the
Keupris. road from Travnik to Clissa. 4. Gulámóch, (Glamoch,)
Glamoez or West of Kúpres, and between the districts of Hili-
Glamotch. nah (Hlivno) and Peksikah. 5. Hili nah, (Hlivno, or
Hliuno, or Hliuno,) on the Eastern side of the Prolog (*i. e.* Inter-
Livno. planitial) mountains, South-West of Kúpres. 6. Kizil
geul, (Red Lake,) or Kusko, on a small lake, a few
Kusko. miles South of Hlivno. 7. Imochkah, (Imoski,) on
Imoschi. the Southern side of the mountains, South of Hlivno
and West of Mostár. 8. Makarskah, on the seashore,
Macarska. South by West of Imoski. This district is also
called Karágustén. (Black Augustine.) The castle of
Zádványah, (Dvasa,) on the Chattínah, North-East of
Almissa, belongs to this Kádílik. 9. Lupushkah, (Gliu-
Glioubouki, boski,) on a tributary to the Narenta, North-West of

(10.) Ghábellah, not far above the mouth of that river. ROME.
LIA. A strong fort there called Sedd Islám* (*i. e.* the Musul-
mán barrier) is the residence of a commander and an
overseer. (*Rumili*, p. 175.) 11. Póchteil, (Bushi-
teíl,) a castle on the Narenta, North of Ghabella. In
the adjoining mountains is the district of Dóbrah.
(Good.) 12. Balagái, (Blagaí), a border-post, South-
Blagaj. West of Mostár, and not far from the castle of Kulúch.†
13. Stolatz, (Throne-town,) South-East of Móstár; Stolatz.
not a separate district in the time of Háji Khalífah.
14. Lúbín, (Gliubigno, *i. e.* Lyubinyo,) South-East of Glioubigní.
Stolatz, on the borders of Dóbrah Venedík. (Ragusa.)
15. Trebinio, (Trebigno,) on the Tribiniestitza, (Tribig-
nestizza,) South-East of Gliubigno, probably the Cher-
benícheh of Háji Khalífah, (p. 178.) 16. Gatsikà, Gasko.
(Gatzko,) North-East of Trebigno, on the road from
Cáttaro to Bosnah Serái. 17. Novah, (Castelnuovo, Castel nu-
i. e. New Castle,) on one of the bays (bocche, *i. e.* ovo.
mouths) of Cáttaro, opposite to the entrance of
the gulf. 18. Novah-zín, (Nevesínio,) North of Glú-
bínio, and East of Móstár. 19. Tarátovah, (Zalum,) Salum.
on the Marava, (Drinovnik,) a branch of the Náren-
tah, near its source, and South-East of Nevesínio.
20. Perepól, (Pryepolye,) East of Gatzko and South-
Priepol. East of Tashlíchah, on the road from Bósnah-Serái to
Yení (Novi) Bázár. 21. Tashlíchah, (Taszlitza,) Tashlidcha,
where the Beg of Hersek resides, North-West of Pere-
pól, on the same road. 22. Cháiníchah, (Cháinitza,) Chainitza.
on a tributary to the Drin, North-West of Tashlíchah,
and North-East of (23.) Fóchah; on the Drin, and Fotcha.
in its neighbourhood, (24.) Belghrádjik,† (Little Belgraded-
Belgrade,) between Serái Móstár and Ak-hisár, (White gik.
Castle,) a place not laid down in our Maps, unless it be
given under some other name. 25. Pózúz, (Possusie,) Possusie.
South of (26.) Duvnah, which properly belongs to Possouchje.
the Sanják of Kílís. (Clissa.) It is East by South of
Livno, or Hliuno, and nearly due North of Imoshkí.
27. Porólózachah,§ (Prolozatz,) between Imóchkah and Prolozatz.
Zádváriyah, (Za-dvaré,) a little way to the West of the
former, and near a small lake. 28. O'mish, (Almissa,) Almissa.
at the mouth of the river Chettínah, and opposite to River Cet-
(29.) Birách, (Brazza,) and Lúzínah, (Lesina,) long tina.
and narrow, but hilly islands, having villages and castles. Islands of
Brazza and
Lesina.
30. Vergórachah, (Vergoratz,) near Yezero, (*i. e.* lake,) Vergoratz.
and North-West of Ghábellah, and (31.) Norín,|| the Jesero, Je-
fork near the mouth of the river of Móstár, (the Narenta,) sova.
and opposite to fort Opus. 32. Kónávlah, between Norin.
Nóvah (Castel Nuovo) and Ragusa, near a small Fort Opus.
castle called Zokólóváchah, (Zakolovac?) neither of Konaoula.
which are found in our Maps. Sacolovatz.

The Sanjáks of Kílís (Clissa) and Kínín, (Knin,) Dalmatia.
which are districts of Dalmatia, are very imperfectly Clissa.
described in Háji Khalífah's Work; and having long Knin.
since been incorporated in the Empire of Austria, do
not now form a part of European Turkey.

See the Baron de Hammer, *Rumeli und Bosna*, Wien,

* There was another Sedd Islám on the mountain North-East
of Zádírah, (Zara,) and 10 or 12 miles from Novi, (Novigrad,)
North-East of that place. (*Rumili*, p. 170.)

† If Kliuch on the Sanna is here meant, Háji Khalífah has
made a great mistake. He has probably confounded Blagái on
the borders, North-West of Kúpres, with the place here mentioned
as lying near Mostár.

‡ No. 20 to 24 belong to Bosnia, being on the Eastern side of
the mountains which divide that Province from Herzegovina.

§ "Porolofdscha," in *Rumili*, (p. 176.) It is here conjectured
that f is a misprint in M. de Hammer's version for s.

|| Nodín, in *Rumili*, (p. 177.) d being erroneously written for r.

ROMESCOT, or } See the Quotations for a suffi-
Ro'MESHOT. } cient explanation.

This Jue was the firste kynge that grauntyd a peny of euery fyre house thorowe this realme to be payed to y^e court of Rome, whiche at this day is callyd *Rome scote*, or Petyr pens, and yet is payed in many placis of England.

Fabyan. Chronicle, ch. 141. p. 130.

And this was the course the Romanes observed in the conquest of England, for they planted some of their legions in all places convenient, the which they caused the countrey to maintaine, putting upon every portion of land a reasonable rent, which they called *Romescot*.

Spenser. Works, vol. viii. p. 457. *View of the State of Ireland*.

ROMP, n.

ROMP, v.

Ro'MPISHNESS.

} See ante, to RAMP. A romp is
a name given to
A girl noisy and boisterous in
her play.

The air she gave herself was that of a *romping* girl, and whenever I talked to her with any turn of fondness, she would immediately snatch off my perriwig, try it upon herself in the glass, clap her arms a kimbow, draw my sword, and make passes on the wall, take off my cravat, and seize it to make some other use of the lace, or run into some other unaccountable *rompishness*, till the time I had appointed to pass away with her was over.

The Spectator, No. 187.

While romp-loving miss
Is haul'd about in gallantry robust.

Thomson. Autumn, p. 439.

First, giggling, plotting chamber-maids arrive,
Hoydens and romps, led on by Gen'ral Clive.

Churchill. The Rosciad.

RONA, NORTH, a small island which, together with Sulisker, forms the Northernmost of the Western Islands. Its length was estimated by Dr. Macculloch at a mile and a quarter, and its breadth, where widest, at half a mile. Its position is nearly East and West, and its highest point, which is near the Eastern extremity, may be computed at about 600 feet. The above gentleman found the island inhabited by one family, consisting of six individuals, of which the female patriarch had been forty years its indweller. The occupant of the farm was a cottar, who cultivated five or six acres, and tended fifty sheep for his employer. His yearly stipend was two pounds per annum. Such is the violence of the wind in this region, that this second Selkirk's house was excavated in the earth, the roof being but little raised above the surface, and covered with a great weight of turf, above which was the thatch.

The soil is of good quality, producing barley, oats, and potatoes; the water is collected in pools from the rain; turf is used for fuel, and the oil of the cuddy for light. Latitude 58° 32' North, longitude 6° West.

Macculloch, *Highlands and Western Isles of Scotland*.

RONA, EAST, an island of the Hebrides, about five miles long, and less than one in breadth, lies between

the main land and the Isle of Skye. It forms a long, parallel ridge, prolonged from the Northern part of Rasay, and is geologically connected with it by the intermediate island of Maltey, forming, according to Dr. Macculloch, the link between the gneiss and the trap islands. Its greatest elevation does not seem to exceed 500 feet, and its whole ridge is broken by deep, irregular valleys into rocky and barren hills. Presenting no picturesque features and but little verdure, it is as repulsive to the eye as it is unproductive in soil. Its scanty proportion of arable land lies around the scattered village which is seated at the bottom of the bay of *Archasig Hirm*, and, consequently, it is chiefly devoted to the rearing of black cattle. This harbour, which is one of four found on the Western side, is completely landlocked by a rocky islet, and with this advantage, and its double entrance, offers a convenient refuge for coasting vessels. On the coast are extensive caves, in some of which are found fine specimens of stalactites. Latitude 57° 35' North, longitude 5° 53' West.

RONA, WEST, an islet of the same group, lies between Benbecula and North Uist. It is about 600 feet in height, much indented, and exhibiting to the East a broken face, apparently consisting of schist much disturbed, and traversed by trap veins. Latitude 57° 27' North, longitude 7° 6'.

Macculloch, *Western Islands*.

RO'NDEAU, or }
RO'NDEL. } Coigrave calls the *rondeau de*

as it begins. } rime a rhyme or sonnet that ends

And at the love of Palamon and Arcite
Of Thebes, though the storie is knowen lite,
And many an himpne, for your holy daies,
That highten balades, *rondels*, *virelaies*.

Chaucer. Prologue to the Legend of Good Women.

Whiche boke was called the Melyader, counteyninge all the songes, baladdes, *rundeaux*, and vyrelayes, whiche the gentyll duke had made in his tyme.

Lord Berners. Froissart. Cronycle, vol. ii. ch. xxvi. p. 71.

This mayer fyrste of all mayers brake that auncient and olde contynued custome, and was rowed thyther by water; for y^e which y^e watermen made of hym a *roudell* or songe to his great prayse.

Fabyan. Chronicle, p. 628.

This sort of writing call'd the *rondeau* is what I never knew practis'd in our nation, and, I verily believe, it was not in use with the Greeks or Romans, neither Macrobius nor Hyginus taking the least notice of it.

Pope. Works, vol. v. p. 81. *Letter 14. To Cromwell*.

About the year 1380, in the place of the provencial, a new species of poetry succeeded in France, consisting of chants, *rogaux*, balades, *rondeaux*, and pastorales. Froissart cultivated it [this new species of poetry] with so much success that he has been called its author.

Warton. History of English Poetry, vol. i. p. 465.

RONDELETIA, in Botany, a genus of the class Pentandria, order Monogynia, natural order Cincho-

RONDE-LETTIA. *naceæ*. Generic character: corolla funnel-shaped, apex of the tube slightly inflated, segments of the border roundish, flat; capsule round, crowned, two-celled; seeds one or many.

Fourteen species, natives of the East Indies.

RONDURE, Fr. *rondeur*, a round, a circle, a globe.

So it is not with me as with that muse,
Stirr'd by a painted beauty to his verse;
Who heaven itself for ornament doth use,
And every fair with his fair doth rehearse;
Making a complement of proud compare,
With sun and moon, with earth and sea's rich gems,
With April's first-born flowers, and all things rare
That heaven's air in this huge *rondeur* hems.

Shakspeare. Sonnet 21.

RONT. See **RUNT**.

RONYON. See **ROYNE**.

ROOD, } A. S. *rode*, *crux*, a cross, gibbet,
ROODBEAM } or gallows, a rood. Somner. Ger.
ROODTREE. } *rode*; Scotch *rude*. Rode is the

common A. S. for *crux* in the A. S. version of the New Testament; in Goth. *galga*, whence our gallows. Junius derives from old Isl. *roda*, an image; and which Dr. Jamieson seems to favour. But the origin may lie more nearly at hand: *rode* is not only a cross, but a certain measurement of land made by a *rod*, and the cross may have been rudely formed in the imagination of the early A. S. converts of transverse *rods*. The ornaments of pictures of our Saviour, the Virgin, and Saints may have been additions of after times.

þoru here luper mode.

Heo brogte oure Lord Jhesu Christ to dye on þe *rode*.

R. Gloucester, p. 61.

And gut quap Reson by þe *rode*. ich shall no reuthe have.

Piers Plouhman. Vision, p. 71.

He died whan I came fro Jerusalem,
And lith ygrave under the *rode-beem*.

Chaucer. The Wif of Bathes Prologue, v. 6076.

This lorde hir asketh euermo
Howe she beleueth, and she seith,
I leue and trust in Christes feith,
Whiche died vpon the *roode tre*.

Gower. Conf. Am. book ii.

By tempeste of thüder and lyghtenyng, a parte of the steeple of the church was throwen downe, and y^e crusifix with the image of our lady. also stondyng vpon the *roode lofte*, was lykewyse ouerthrowen and brokyn, and shatered.

Fabyan. Chronicle, ch. 223. p. 249.

And nigh thereto a little chappel stode,

Which being all with yvy overspred

Deckt all the roofe, and, shadowing the *roode*,

Seem'd like a grove faire braunched over hed.

Spenser. Faerie Queene, book vi. can. 5.

ROOF, *n.* } A. S. *hrof*; D. *roef*; the past participle of *hræf-nan*, *sustinere*. Minshew, Junius, and Skinner derive it from the Greek *οροφος*, *tectum*. Tooke, vol. ii. p. 350. The uses of a roof would lead us to suppose that the word meant a covering, a protection; but according to Tooke's Etymology it is

That which is sustained or supported; sc. by the sides of the building; and thence applied to the covering, that which covers, overspreads, is superimposed; and further, to the whole house or habitation.

For whi tho thingis that ye han seide in derknessis, schulen be seid in light, and that that ye han spokun in eere in couchis, schal be prechid in *rooys*.

Wiclif. Luk, ch. xii.

He goth and geteth him a kneding trough,
And after a tubbe, and a kemelin,
And prively he sent hem to his in,
And heng hem in the *roof* in priuete.

Chaucer. The Milleres Tale, v. 3626.

Like the sparke fired
Up in thy *roofe*, whiche for a throwe
Lieth hid, til whan the windes blowe
It blaseth out on euery side.

Gower. Conf. Am. book ii.

With wailing great, and women's shrill yelling
The *roofes* gan roare.

Surrey. Virgil. Æneis, book iv.

MACB. Here had we now our countrie's honor *roof'd*,
Were the grac'd person of our Banquo present.

Shakspeare. Macbeth, fol. 141.

Thither he bend his way, determin'd there
To rest at noon, and entr'd soon the shade
High *rooft* and walks beneath, and alleys brown
That open'd in the midst a woody scene.

Milton. Paradise Regained, book ii. v. 291.

Heaven's arch is oft their *roof*, the pleasant shed
Of oak and plain oft serves them for a bed.

Drummond. The Speech of Caledonia.

How reverend is the face of this tall pile,
Whose ancient pillars rear their marble heads,
To bear aloft its arch'd and ponderous *roof*,
By its own weight made steadfast and immoveable,
Looking tranquillity!

Congreve. Mourning Bride, act ii.

Their walls, o'ergrown with moss, display;
And columns, awful in decay,
Rear up their *roofless* heads to form the various scene.

Hughes. The Ecstasy.

Whether to *roofy* houses they repair,
Or sun themselves abroad in open air.

Dryden. Virgil. Georgics, book iii.

ROOK, reek or rick, *i. e.* heap.

A litel fyre is mingled with a greate *rooke* of fowell, so that by lytel and litell it setteth at the whole *rooke* on fyre.

Udall. S. James, vol. ii. fol. 34.

ROOK, } A. S. *hroc*; D. *roeck*; cornix, *frugivora*: from the disposition of this bird to theft, Skinner would derive our verb *to rook*, *i. e.* to cheat, to steal. The reverse is more probably the fact. The name of the bird is usually, however, derived from its hoarse voice (*rauc-us*.)

The crows and *rookes* have a cast by themselves; for when they meet with a hard nut which they are not able to cracke nor breake their shales with their bills, they will flie aloft and fling it against some rock or tyle-house.

Holland. Plinie, book x. ch. xii.

If such divine ministeries as these, wherein the angel of the church represents the person of Christ Jesus, must lie prostitute to sordid fees, and not pass to and fro between our Saviour that of free grace redeem'd us, and the submissive penitent, without the truceage of perishing coin, and the butcherly execution of tormentors, *rooks*, and rakeshames sold to lucre. then have the Babylonish merchants of souls just excuse.

Milton. Works, vol. i. p. 21. Of Reformation in England.

Where in venerable rows
Widely waving oaks enclose
The moat of yonder antique hall,
Swarm the *rooks* with clamorous call;
And, to the toils of nature true,
Wreath their capacious nests anew.

Warton. Ode 10.

At the commencement of spring, the *rookery* (in the Temple) which, during the continuance of winter, seemed to have been deserted, or only guarded by about five or six, like old soldiers in a garrison, now begins to be once more frequented; and in a short time all the bustle and hurry of business is fairly commenced.

Goldsmith. Animated Nature. Of the Pie Kind.

ROOK, *v.* See **ROCK**.

ROOF

ROOK.

ROOM.

ROOM, } Goth. *runis*; A. S. *rum*; D. *ruym*;
 Roo'MAGE, } Ger. *raum*; Sw. *rum*. From the
 ROOMTH, } Gr. *ρῦμη*, *platea*, or *εὐρυς*, *latus*. See
 Roo'MY, } Skinner and Junius. It is the past
 Roo'MINESS, } participle of the A. S. *ryman*; D.
 Roo'MLESS, } *ruymen*; Ger. *raumen*; Sw. *ryma*,
 Roo'MSOME. } to roam, *dilatate*, *amplificare*, *ex-*
tendere, (see RUMINAGE.) and means, extended, place,
 space, extent. See Tooke, vol. ii. p. 260.

Dr. Waterland, in a note on the passage quoted from his Works, says, *Arombe* signifies the same with *a far off*, or at a distance, from *removeo*, or the Sax. *ryman*; and adds, that Pecoock has this expression more or lesse, *nygher* or *romber*. Room then is,

Extent, space, place; applied to the different spaces enclosed as apartments in a house. Roomed way, (in Udall,) extended, spacious.

Roomful house, (in Donne,) a house full of room, abounding in room; in common speech, a roomful is a room,—full of, or filled with, people, furniture, &c.

But never was that dent of thunder,
 That so swithe gan downward discend
 As this foule whan it beheld
 That I a roume was in the field.

Chaucer. *The House of Fame*, book ii. v. 32.

His doughter had a bed all by hireselve,
 Right in the same chambre by and by;
 It mighte be no bet, and cause why,
 Ther was no roumer herberwe in the place.

Id. *The Reves Tale*, v. 4142.

Ye wote well that the beast is in a place
 That is not derke, and hath roume and eke space
 To welde an axe, or swerde, staffe, or knife.

Id. *The Legend of Good Women*. Ariadne.

The 23 day the Swallow, to his no small reioicing, came to him againe in the night 10 leagues to the northward of Cape Finister, hauing put roomer and not being able to double the Cape, in that there rose a contrary wind at south-west.

Hakluyt. *Voyages*, &c. vol. ii. part ii. p. 56. *The Seventh Voyage to Guinea*.

For M. Hawkins and his companie went more to the west, vpon which course having sayled a while hee espied another iland, which hee thought to bee Teneriffe, and being not able, by meanes of the fogge vpon the hills, to discerne the same, nor yet to fetch it by night, went roomer vntill the morning.

Id. *Ib.* vol. iii. p. 501. M. John Hawkins.

And sithen what a man mai not have and do at the next and immediatli, he wole be well paied and weel plesid for to have it immediatli, that is to seie, for to have it *arombe*, and hi a meene.

Waterland. *Works*, vol. x p. 262. *Letter to the Rev. Mr. Lewis*. From Pecoock, No. 11.

Thei that are of such sortes, dooe choose the brode and the wide roomed waie, and at the firste vieu delectable and flattering, but leading the streight path to death.

Udall. *S. Luke*, vol. i. ch. xiii. p. 320.

The shyppe wherein Jesus preached is very narowe and roomles to vncleane and synfull persons, and contrarily mooste wyde and large, vnto suche as are in cleane lyfe and purged of theyr synnes.

Id. *S. Marke*, vol. i. ch. iii. fol. 134.

But pride of ritch and rome-some thrones,
 That wingeth now your darts,
 It will (I would not as I feare)
 Worke sorrow to your harts.

Warner. *Albion's England*, book iii.

By this the drouping day-light gan to fade,
 And yield his roume to sad succeeding night,
 Who with her sable mantle gan to shade
 The face of earth and wayes of living wight.

Spenser. *Faerie Queene*, book i. can. 11.

King Candaulus bought of Butarchus a painted table, wherein was drawne the defeature and destruction of the Magnetes, which tooke up no greate roume, and weighed out the poise thereof in good gold.

Holland. *Plinie*, book vii. ch. xxxviii.

We find man, of all sensible creatures, to have the fullest brain to his proportion, and that it was so provided by the Supreme Being for the lodging of the intellective faculties; it must needs be a silent character of hope, when, in the œconomical providence of nature, (as I may term it,) there is good store of roomage and receipt where those powers are stowed.

Reliquiæ Wottonianæ, p. 81. *Survey of Education*.

Now in a roomful house this soul doth float,
 And, like a prince, she sends her faculties
 To all her limbs, distant as provinces.

Donne. *The Progress of the Soul*.

But Rydoll, young'st and least, and for the others' pride
 Not finding fitting roomth upon the rising side,
 Alone unto the west directly takes her way.

Drayton. *Poly-olbion*, song 6.

I see, I see thee, in the fatal hour,
 Subjected to the victor's cruel power;
 Led hence a slave to some insulting sword,
 Forlorn, and trembling at a foreign lord;
 A spectacle in Argos, at the loom,
 Gracing with Trojan fights a Grecian room.

Dryden. *Homer*. *Iliad*, book vi.

With roomy decks, her guns of mighty strength,
 Whose lowlaid mouths each mounting billow laves.

Id. *Annus Mirabilis*.

And what a jail! so little roomy,
 So dank, so sultry and so gloomy,
 Howard, who ev'ry prison knows,
 Ne'er ventur'd there to thrust his nose.

Mason. *The Dean and the Square*.

ROOST, n. } A. S. *hrost*, past participle of the
 Roost, v. } verb *hrest-an*, *rest-an*, to rest. D.
 Roo'STING, n. } *roesten*, in *pertica gallinaria quies-*
cere, *sedere*, *sidere*; it is used (Kilian adds) of birds,
q. d. rusten, to rest, to repose, to lie down. The roost is,
 The place of rest, of repose, slumber or sleep.

The hens run in the mashfat
 For they go to roost
 Straight ouer the ale ioust.

Skelton. *Elinour Rumming*.

No sooner styrres Aurora's starre,
 the lightest lampe of all,
 But they that roused were in rest
 not fraught with fearefull dreames,
 Do pack apace to labours left
 and to their taske doe fall.

Turbervile. *The Louer to his Bed*.

Geate you nowe vp into your pulpites like bragginge cockes on the rowst, flappe your whinges, and crow out aloude.

Jewell. *Works*, p. 35. *Defence of the Apologie*.

When the crowned cock,
 That to the village lately was the clock,
 Comes to roost by him, with his hen, foreshewing
 The shower would quickly fall that then was brewing.

Drayton. *Noah's Flood*.

The husbandman, surveying of his ground,
 'Mongst all the trees this oak had quickly found;
 And, by all signs and likelihood of trade,
 The birds therein their nightly roosting made.

Id. *The Owl*.

More certain was the crowing of the cock
 To number hours, than is an abbey clock,
 And sooner than the matin bell was rung,
 He clapp'd his wings upon his roost, and sung.

Dryden. *The Cock and the Fox*.

ROOT, n. } Sw. *roet*. See ENROOT, where it
 Root, v. } has been said that root is of uncertain
 Roo'TEDLY, } Etymology. The A. S. *wriþan*, *suc-*
 Roo'TER, } *creocere*, to grow, seems to suggest
 Roo'TLESS, } one. The root of a tree is that from
 Roo'TY. } which it grows, which supplies the
 nourishment of its growth.

To root, to infix, as the root in the ground; to establish, to confirm. Also,

ROOM.

ROOT.

ROOT. To eradicate or tear up from the *roots*, from the foundation; to erase, to exterminate.

The prince after þe fest sone his leue toke,
With jolif men of gest toward þe North he schoke,
To chace kȳng Robȳn, where he mȳght him fȳnde,
þat slouh þe gode Comȳn, destroe him rote & rȳnde.
R. Brunne, p. 333.

Mȳ plouh shal be mȳ pȳk staf. and puche a two þe *roles*.
Piers Plouhman. Vision, p. 131.

And al the riche retȳnaunce. þat *roteth* hem on fals lȳvȳnge
Were bȳd to þat brudale.
Id. B. p. 27.

Therefore as ghe han taken Iesus Crist oure Lord, walke ghe in
him and be ghe *rootid* and bildid about in him and confermyd in
the beleue as ghe han lerned, aboundȳnge in him in doynge of
thankȳngis.
Wiclif. Colocensis, ch. ii.

And as they passiden forth eerly thei sayen the fyge tree maad
drye fro the *rotis*.
Id. Mark, ch. xi.

And whan I was not ferre therefro,
The sauer of the roses swote
Me smote right to the heart *rote*.
Chaucer. The Romant of the Rose.

But netheles or he forthe went
A fyry darte me thought he sent
And threwe it through mine herte *roote*.
Gower. Conf. Am. book i.

Whom I pray the euerliuing God, if it be his holy will, shortly
to *root* out from thence.
Hakluyt. Voyages, &c. vol. ii. p. 120. *The Losse of Famagasta*.

The tyme was when it was nedefull to beare with the sinistre
rooted persuasion of the Jewes.
Udall. Galathians, ch. v. fol. 18.

Hannibal, being as yet skarse manne growen, was made captaine
of Carthage, not because there was skarsity of men of more yeres
and experience, but for the natural hatred that was knowen to be
rooted in him againste the Romaines euen from his verye child-
hode.
Arthur Goldyng. Justine, book xxvi. fol. 119.

And Cassander the father of them, the *roter* vp of the king's
house, spared neither women nor children, nor neuer ceased vntill
he had vterly destroyed all the offspring of the king's posteritye.
Id. Ib. book xvi. fol. 80.

Rochester will haue loue to goe before and fayth to spring out
of loue. Thus antichrist turneth the *roles* of the tree vpward.
Tyndall. Workes, p. 130. *The Obedience of a Christian Man*.

But by a long continuance, a stronge depe *roted* habitte, not
lyke a *rooteles* tree, scante vp an end in a lose heape of light sand,
that wil with a blast or two be blowē down.
Sir Thomas More. Workes, p. 1218. *The thirde Booke of Coumfort*.

Feare, feare, lest seas of sinnes our soules do drowne,
Shall he spare us who spar'd not Abram's race?
As they for lack of faith, so may we fall;
What springs in some, is *rooted* in us all.
Stirling. Doomes-day. The second Houre.

— In that fayre face
The false resemblaunce of deceipt, I wist,
Did closely lurke; yet so true-seeming grace
It carried, that I scarce in darksome place
Could it discerne; though I the mother bee
Of falshood, and *roote* of Duessaes' race.
Spenser. Faerie Queene, book i. can. 5.

Hee's but a sot, as I am, nor hath not
One spirit to command; they all do hate him
As *rootedly* as I.
Shakspeare. The Tempest, fol. 251.

— Yet as a syluane hill
Thrusts back a torrent that hath kept a narrow channell still,
Till at his oken brest it beats; but there a check it takes,
That sends it ouer all the vale, with all the stirre it makes;
Nor can with all the confluence break through his *rooty* sides.
Chapman. Homer. Iliad, book xvii. p. 251.

Nay, lady, sit; if I but wave this wand,
Your nerves are all chain'd up in alabaster,
And you a statue, as Daphne was
Root-bound, that fled Apollo.
Milton. Comus, v. 659.

Lampetia would have help'd her, but she found
Herself withheld, and *rooted* to the ground.
Addison. Ovid. Metamorphoses, book ii.

Heap weights instead of wounds; he chanc'd to see
Where southern storms had *rooted* up a tree;
This, rais'd from earth, against the foe he threw.
Dryden. Ovid. Metamorphoses, book xii.

Men may go a great way towards the *rooting* out the very seeds
of religion in their minds, when they have given themselves up to
all manner of wickedness, but the foundation of it standeth sure
and firm.
Stillington. Sermon 2. vol. iii. p. 44.

But the late times made the matter yet ten times worse with us,
when the *rooters* and through-reformers made clean work with the
church, and took away all.
South. Sermon, vol. iv. p. 27. *The Scribe Instructed*, &c.

But the detestation of the Portuguese name was deep in India;
and that *rooted* odium, to which their villanies and cruelties had
given birth and had long nourished, was now felt to militate
against them more than millions in arms.
Mickle. History of the Portuguese Empire in Asia.

ROPE, *n.* } Goth. *raip*; A. S. *rape*; D. *reep*,
ROPE, *v.* } *roop*; Sw. *rep*, *ref.*—The D. *roopen*;
RO'PERY. } Sw. *repa*, *trahere*, to draw, seems to
present the immediate origin of the respective D. and
Sw. nouns; but the A. S. *ræp-an*, *vincire*, to bind, is
probably the original source. A *rope* is *vinculum liga-*
mentum.

That which binds, ties, fastens; a string, a cord, (of
some thickness, greater than string usually so called, or
than cord.)

To *rope*, to draw out, *sc.* with adhesive, glutinous,
slimy continuity of parts; and *ropy*,

Adhering, tenacious, slimy, glutinous.

Me rong bellen in al the toun, & vaste the *ropes* drou.
R. Gloucester, p. 509.

And he cam to hem, and for he was of the same craft he dwellide
with hem and wroughte, and thei weren of *roopmakeris* craftes.
Wiclif. Dedis of Apostis, ch. xviii.

Tȳl Robȳn þe *ropere*. arȳse þei bȳsouhte.
Piers Plouhman. Vision, p. 107.

We cleft the walles and closures of the towne;
Wherto all helpe; and vnder set the feet
With sliding rolles, and bound his neck with *ropes*.
Surrey. Virgil. Æneis, book ii.

Her lewde lypes twayne
They slauer men sayne
Lyke a *ropy* rayne.
Skelton. Elinour Rimming, p. 267.

Viscous bodies, (likewise,) as pitch, wax, birdlime, cheese toasted,
will draw forth and *roape*.
Bacon. Natural History, sec. 845.

And like those upon *ropes* that walk
On gossimer, from stalk to stalk,
The tripping fairy tricks shall play
The evening of the wedding day.
Drayton. The Muses' Elysium. Nymphal 8.

With proper instruments they take the road,
Axes to cut, and *ropes* to sling the load.
Pope. Homer. Iliad, book xxiii.

It is a usual practice in these times for our funambulones, or
dancers on the *rope*, to attempt somewhat like to flying, when they
will, with their heads forwards, slide down a long cord extended.
Wilkins. Works, vol. ii. p. 203. *Dædalus*.

It [Petaminaria] is probably derived from the Greek word *πε-*
τασσαι, which signifies to fly, and may refer to such kind of *rope-*
dancers.
Id. Ib.

Both sick and healthful, old and young, conspire
In this one silly mischievous desire.
Mistaken blessing which old age they call,
'Tis a long, nasty, darksome hospital,
A *ropy* chain of rheums.
Dryden. Juvenal. Satire 10.

ROOT.
ROPE.

ROPE.
—
ROSARY.

Oft drops the *ropy* gore upon her tongue,
With cordy sinews oft her jaws are strung,
And thus suspended oft the filthy hag has hung.
Rowe. Lucan. Pharsalia, book vi.

— The sickly taper,
But glimm'ring thro' thy low-brow'd misty vaults,
Furr'd round with mouldy damps and *ropy* slime.
Blair. The Grave.

Here the *rope-fasten'd* stone they heave on shore,
Which serv'd as anchor to the ship before.

Fawkes. Apollonius Rhodius. Argonautics, book i.

The new *ropery*, and the forges where they put fresh touch-holes
into old cannon, are established upon an extensive plan, but there
is little activity in either.

Swinburne. Travels through Spain. Letter 17.

RO'PERY, } *Rope-tricks* we may suppose to
Ro'PE-TRICKS. } mean tricks of which the contriver
would deserve the *rope*. Steevens. It may be added,
that the word *gallows* is, in vulgar tongue, not unfre-
quently applied as an epithet to a fellow, rogue, &c.,
supposed to be worthy of the *gallows*.

NUR. I pray you, sir, what sawcie merchant was this that was
so full of his *roperie*?

Shakspeare. Romeo and Juliet, fol. 62.

Shee may, perhaps, call him halfe a score knaues, or so. Why
that's nothing; and he begin once, hee'l raile in his *rope-tricks*.

Id. The Taming of the Shrew, fol. 213.

RO'RAL,

Ro'RID,

Ro'RY,

Ro'SCID.

Fr. *rosée*; Lat. *ros, roscidus*, dew.
Dewy, damp, moist.

On Libanon at first his foot he set,
And shooke his wings with *roarie* May-dewes wet.

Fairefax. Godfrey of Boulogne, book i. st. 14.

The posture as well as the colours themselves of the rainbow be
necessary results of the mere matter, and are nothing but the re-
flection and refraction of the light of the sun in the round drops
of *rorid* cloud, as Cartesius has admirably demonstrated.

More. Appendix to Antidote against Atheism, ch. xi. p. 175.

The spirits of the wine do prey upon the *roscide* juice of the
body, and intercommon with the spirits of the body, and so deceive
and rob them of their nourishment.

Bacon. Natural History, sec. 55.

In a rainbow there is really nothing without our sight but a
rorid cloud diversely refracting and reflecting the sunbeams in
such an angle.

Cudworth. Intellectual System, book i. ch. i. p. 9.

The appearance of the rainbow is made by the refracted and re-
flected sunbeams from the falling drops of small *roscid* rain.

Waterland. Works, vol. vi. p. 42. On Genesis, ch. ix. v. 13.

Hygeia's sons with hounds and horn,
And jovial cry, awake the morn.
These see her from the dusky plight,
Smear'd by th' embraces of the night,
With *roral* wash redeem her face,
And prove herself of Titan's race.

Green. The Spleen.

RORIDULA, in *Botany*, a genus of the class *Pen-
tandria*, order *Monogynia*, natural order *Droseraceæ*.
Generic character: calyx five-leaved; corolla, petals
five; anthers with two pores at the apex; a callous ap-
pendage at the base stigma; capsule three-lobed, three-
celled, three-valved; seeds usually single in each cell.

ROSARY, Fr. *rosaire*; It. and Sp. *rosario*; Low
Lat. *rosarium, corona rosacea*, a garland or chaplet of
roses.

See the Quotations.

Among the which friers there was one named Alanus de Rupe,
a blacke frier, which made the *rosarie* of our Ladie's Psalter (so
they terme it.)

Fox. Actes, &c. fol. 667. Edward IV.

Whom erst thy bowed hamme did lowly greet,
When at the corner-crosse thou didst him meete,
Tumbling his *rosaries* hanging at his belt.

Hall. Satire 7. book iv.

The *rosary*, otherwise called Virgin's Psalter, is a new manner
of praying, which, saies Navarrus, never was nor can ever be va-
lued at what it is worth; for it is made up of 150 Ave Maries and
15 Paters tacked together with little buttons upon a string.

Brevint. Saul and Samuel, ch. viii. p. 169.

Christ hath now knit them into *rosaries* and coronets, he hath
put them into promises and rewards, he hath made them part of
the portion of his elect.

Taylor. Holy Dying, ch. iii. sec. 1.

ROSCOMMON, an inland County of Ireland, in the
Province of Connaught, is bounded on the North-West
by the Counties of Mayo and Sligo; on the East by the
river Shannon, which separates it from Leitrim, Long-
ford, Westmeath, and King's County; and on the
South-West by the Suck, which, for the most part of its
course, divides it from Galway. Its length from North
to South is 47 Irish miles; its breadth varies from 30½
miles to 12; and its superficial area is 368,868 Irish
acres.

The country is flat and open, its most prominent fea-
tures being rich and beautiful pastures, interrupted by
extensive bogs; and, as the grass springs up from a
calcareous soil, the verdure is exceedingly luxuriant.
Dr. Beaufort, who wrote in 1792, states that "in the
plains of Roscommon the soil is rich, and as fit for the
ploughman as the grazier; but there is only a small part
under tillage in comparison of what is devoted to the
breeding of black cattle and sheep." Of late years,
however, owing to the extension of the Royal canal and
the improvement of the roads, no inconsiderable quan-
tity of pasture has been laid out into arable. Land lets
in the interior of the County, where the soil is the richest,
at from three to four guineas an acre.

The *Curlews*, which separate Roscommon from Sligo,
are a lofty range of mountains, whose sides are covered
with thriving flocks; the only other mountains in the
County, or, more properly speaking, hills, as they do
not reach a thousand feet in elevation, lie in the parish
of Kiltronan, between Lough Arrow and Lough Allen.
They are rich in mines of coal and iron; and, though lat-
terly the iron-works have been suspended, the collieries
are in full activity. The coal is of the bituminous kind,
and is most conveniently situated for transport, lying
in front of the above-mentioned group of hills, which
rise up from the very margin of the navigable lake
Allen. The best known and longest worked coal-mines
are at Aughabegy, Tullylions, Rover, and Greaghna-
gera; the richest vein of iron yet discovered is at
Aringa.

The fine, long-horned breed of cattle is very nume-
rous in this County; some of the best sheep in Ireland
are reared and fattened here, and extensive flocks of the
long-wooled kind range the hills; the roadsters and
hunters bred in Roscommon are in high esteem.

The chief manufactures are linen and coarse woollens,
the latter principally for home consumption; and the
chief exports are agricultural produce, linens, and wool-
len stockings. Every facility is afforded to trade by
the ready communication, opened by means of the Shan-
non and the navigable canals, with the best ports in the
Kingdom. Besides this noble river, which, with its ex-
pansions, Loughs Allen, Baffin, and Ree, sweeps round
the entire Eastern confines of the County, Roscommon
is likewise watered and fertilized by the beautiful Suck,

ROSARY
—
ROSCOM-
MON.

ROSCOMMON. the Boyle, and the Key. The lake, formed by the latter river, lies wholly within the County; studded with small but lovely islands, and surrounded by luxuriant woods, it is one of the most interesting in Ireland. All these various waters abound in fish.

Roscommon is divided into six Baronies, viz. Boyle, Ballinlobar, *Half* Ballimoe, Roscommon, Athlone, and Maycarne; and these are subdivided into 58 Parishes. It is in the Diocese of Elphin, and Archdiocese of Tuam. Two Members are returned for the County, and one for the Borough of Athlone. Population, in 1792, 86,000; by the last census, in 1831, 267,000.

Beaufort, *Memoir of a Map of Ireland*; Wakefield, *Account of Ireland Statistical and Political*, 1812; Edgeworth and Griffith's *Survey*.

ROSA, in *Botany*, a genus of the class *Icosandria*, order *Polygynia*, natural order *Rosaceæ*. Generic character: calyx pitcher-shaped, fleshy, contracted at the orifice; corolla, petals five; seeds many, hispid, attached to the inside of the calyx.

Roses seem to be confined almost entirely to the Northern hemisphere; nearly two hundred species have been described, and the varieties cultivated in the gardens are more than fifteen hundred, a strong proof of the high estimation in which plants of this lovely genus are held by florists. The Roses most worthy of notice are *R. centifolia*, the common Hundred-leaved Rose, which, for beauty of form, colour, and fragrance, may be considered as the most perfect example; it is remarkable that, like many other plants that have been almost universally cultivated, as the Wheat, Barley, &c., it is now not found wild, and its native Country is unknown; *R. damascena*, of which the variegated York and Lancaster Rose and the red and white Monthly Roses are varieties, is a native of the South of France; from the leaves of this species the essential oil called Attar of Roses is distilled; *R. semperflorens* and *Indica*, natives of China, and their varieties, are very generally cultivated, as they flower most part of the year; an interesting species, *R. sulphurea*, the double Yellow Rose, which will only flourish in some situations, is a native of the Levant; *R. spinosissima*, the Burnet Rose, *R. arvensis*, the white Dog Rose, *R. villosa*, the Apple Rose, *R. tomentosa*, *R. rubiginosa*, the Sweet-brier, and *R. canina*, the common hedge Dog Rose, are natives of England.

ROSE,
RO'SARY,
RO'SEAL,
RO'SEATE,
RO'SED,
RO'SEN,
RO'SET,
RO'SET,
RO'SY,
RO'SINESS.

Fr. *rose*; It. *rosa*; Sp. *rosa*; Lat. *rosa*; Gr. *ῥόδον*.
Rosy, *roseal*, *roseate*, bearing a resemblance to the colour, the *ruddy* colour of the *rose*; to the scent or smell; the fragrant scent of the *rose*.
Roser or *rosary*, a plantation of *roses*.
The *rose-bush* is called by Chaucer the *roser*.

Priue pride in pes es nettill in herbere,
þe rose is myghtles, þer nettill spredis ouer fer.
R. Brunne, p. 280.

For brode *roses*, and open also,
Ben passed in a day or two,
But knoppes will fresh bee
Two dayes at least, or els three.

Chaucer. *The Romant of the Rose*.

His leef a *rosen* chapelet
Had made, and on his head it set. *Id. Ib.*

And after that Lucifer the day sterre hath chased away the

darke nyght, the day the fairer ledeth the *rosen* horse of the sonne.
(*Roseos equos*.)

full of names of blasphemye, she syttyng arayed in purple and
rosecouloure.

Udall. Erasmus. *Preface to the Kinges Majestie Edward VI*.

The *rosiall* colour whiche was wonte to be in his visage
toured into salowe, the resydue pale, his ruddy lypes wan, and
his eyen ledy and holowe.

Sir Thomas Elyot. *The Governour*, book ii. fol. 139.

The golden morning bright with *roset* wheelles did mounting ryse.
Phaer. Virgil. Æneidos, book vii. p. 161.

HAM. Such an act

That blurres the grace and blush of modestie,
Cals vertue hypocrite, takes off the *rose*
From the faire forehead of an innocent loue,
And makes a blister there.

Shakspeare. *Hamlet*, fol. 270.

His hatband too;
Tis of grand price, the stones are *rosial*, and
Of the white rock.

Davenant. *The Wits*, act ii. sc. 1.

With most choice flowers each nymph doth braid her hair,
And not the mean'st but bauldric wise doth wear
Some goodly garland, and the most renown'd
With curious *roseate* anadems are crown'd.

Dryden. *The Muses' Elysium. Nymphal* 3.

Can you blame her then, being a maid, yet *ros'd* ouer with the
virgin crimson of modestie, if shee deny the apparance of a naked
blinde boy?

Shakspeare. *Henry V*. fol. 94.

Her yellow golden heare
Was trimly woven and in tresses wrought,
Ne other tire she on her head did weare,
But crowned with a garland of sweete *rosure*.

Spenser. *Faerie Queene*, book ii. can. 9.

The *rosy-fing' red* morning faire,
Weary of aged Tithone's saffron bed,
Had spread her purple robe through deawy aire.

Id. Ib. book i. can. 2.

And Orna now (importun'd to possess
Her long-wish'd joys) breaks thro' her blushes so,
As the fair morn breaks through her *rosyness*,
And from a like guilt did their blushes grow.

Davenant. *Gondibert*, book iii. can. 1.

Is justice fled from heaven? can that permit
A foul deformed ravisher to sit
Upon her virgin-cheek, and pull from thence
The *rose-buds* in their maiden excellence?

Carew. *Upon the Sickness of E. S.*

Under an elder on his sandy marge
Was Tavy set to view his nimble charge,
And there his love he long time had expected;
While many a *rose-checkt* nymph no wyle neglected
To woo him.

Browne. *Britannia's Pastorals*, book ii. song 3.

As pines the mountains, or as fields the corn,
Or as Thessalian steeds the race adorn;
So *rosy-colour'd* Helen is the pride
Of Lacedæmon, and of Greece beside.

Dryden. *Theocritus. Helen and Menelaus*.

Hence burly corpulence
Is his [Death] familiar wear, and sleek disguise.
Behind the *rosy* bloom he loves to lurk,
Or ambush in a smile.

Young. *The Complaint. Night* 5.

ROSE.

ROSE.
—
ROSS-
SHIRE.

Lo! where the *rosy-bosom'd* hours,
Fair Venus' train, appear,
Disclose the long-expecting flowers,
And wake the purple year!

Gray. *Ode on the Spring.*

What time the jocund, *rosy-bosom'd* hours
Led forth the train of Phœbus and the Spring.

Cooper. *The Tomb of Shakspeare.*

When, not unmov'd, I view'd
Her sparkling eyes, her features *rosy-hued*.

Hoole. *Orlando Furioso*, book xxv.

ROSENIA, in *Botany*, a genus of the class *Synge-
nesia*, order *Superflua*. Generic character: calyx im-
bricated, scariose; receptacle chaffy; down capillary.

One species, *R. glandulosa*, native of the South of
Africa.

RO'SIN, } Fr. *resine*; It. *resina*; Sp. *resina*;
Ro'SINED, } Lat. *resina*; Gr. *ρετινη*, from *ρε-ειν*, to
Ro'SINY. } flow, because it flows from trees, chiefly
the fir or pine.

For *rosine* and raw silke there is great store.

Hakluyt. *Voyages*, &c. vol. iii. p. 502. M. John Hawkins.

Rosin, if it be found in the firre, is thought a fault in the wood,
whereas the only commoditie of the pitch tree is her *rosin*.

Holland. *Plinie*, book xvi. ch. x.

Remember the oracle and common proverbe, That wine vessels
are not to be *rosined*, calked, and trimmed in cold.

Id. *Ib.* book xviii. ch. xxxi.

But, Cargo! my fiddlestick cannot play without *rosin*.

Wilkins. *Inforced Marriage*, act iv.

Of all sorts of soil, the best is that upon a sandy gravel or a
rosiny sand.

Temple. *Works*, vol. iii. p. 229. *Of Gardening.*

RO'SMARINE, } Fr. *rosmarine*; It. *rosmarino*;
Ro'SEMARY. } Sp. *rosmero*; Lat. *rores marini*,
Virg. *culex*, v. 402. Vossius suggests various reasons
for the name: *ros*, because it is of a dewy nature, be-
cause it appears as if sprinkled with dew; or because it
is used in *aspergillis*; and *marinus*, either because it
thrives best in places near the sea, or because it has a
taste like that of sea water.

His herbe propre is *rosmarine*.

Gower. *Conf. Am.* book vii.

And greedy *rosmarines* with visages deforme.

Spenser. *Faerie Queene*, book ii. can. 12.

And throw into the well sweet *rosemarges*,

And fragrant violets, and paunces trim.

Id. *Ib.* book iii. can. 1.

He thaws like Chaucer's frosty Januere,
And sets a month's mind upon smiling May,
And dyes his beard that did his age bewray,
Biting on annys-seede and *rosmarine*.

Hall. *Satire* 4. book iv.

Of roses, violets, and lillies mix'd,
And sprigs of flowing *rosemary* betwixt,
She form'd the chaplet that adorn'd her front.

Dryden. *Ovid. Metamorphoses*, book xii.

ROSMARINUS, in *Botany*, a genus of the class
Diandria, order *Monogynia*, natural order *Labiatae*.
Generic character: calyx five-toothed; corolla ringent,
superior lip two-parted; filaments long, curved, toothed.

Two species, *R. Chilensis*, native of Chili, and *R. offi-
cinalis*, native of the South of Europe and the Levant;
this is the common Rosemary of the gardens: it is used
in the manufacture of Hungary water.

ROSS-SHIRE, one of the largest Counties in the
North of Scotland, extends across the island from the
German Ocean to the Atlantic. On the North it is
bounded by Sutherlandshire, and on the South by Inver-

ness-shire. The frith of Dornoch penetrates nearly 30
miles, among the mountains, between it and Suther-
land; and from Tarbot Ness, a sharp, low point South
of the above frith, and forming the North-Eastern ex-
tremity of the County, its Eastern coast contracts to
the bay of Cromarty, and then trends away to still
narrower dimensions to the South-Eastern limit of the
County, the Moray frith. The intersection of its
Eastern coast by these three arms of the sea forms on
this side two peninsulas, the greater portion of which
belongs to Cromarty; and throughout it is interspersed
with minute sections of this Shire. Along its Western
shore it measures more than 80 miles in a right line,
and is indented by twelve gulfs which roll the ocean
far inland. Its superficial area is estimated at 2427½
geographical square miles, from which must be deducted
240 at present belonging to Cromarty, although the old
County of this name contains only 18½. The island
of Lewis, which belongs to Ross-shire, and the area of
which is computed at 431 square miles, is not included
in the above estimate. The number of English acres
in the main land is about 2,071,466, of which 220,586
belong to Cromartyshire, and 5973 to the district of
Ferintosh, part of the County of Nairn. Lewis con-
tains about 359,093 English acres.

With the exception of part of its Eastern coast, the Face of the
entire face of the County is mountainous, wild, and County.
pastoral. The mountains, which are mostly in groups,
increase in height and sternness of character as they
approach the Western coast, and their bases are en-
circled by straths or valleys, chiefly covered with wood.
Of the detached mountains, the most remarkable is that
of Ben Wyves, or Nish, (the Mountain of Mist,) which
is about 3720 feet above the level of the sea. It lies on
the Eastern coast, and, being round-backed and placed
between two mountains of inferior height, it seems,
when viewed from the South, to be raised on two sup-
porters, or as if flanked by two wings. It is impossible
to conceive a stronger contrast than that presented by
the two natural divisions of the County, or by Easter
Ross and Wester Ross. The former is a rich cham-
paign, with a soft woodland aspect; the latter, sometimes
picturesque, and, with the outlines of its mountain ranges
finely varied, is generally rugged, grand, and imposing.

Proceeding from North to South, the salt-water lakes, Lakes and
formed by the indentations of the sea on the West coast, rivers.
are Loch Enard, Loch Broom, Little Loch Broom,
Loch Greinord, Loch Ewe, Gairloch, Loch Torridon,
Loch Keeshorn, Loch Carron, and Loch Alsh, with its
inner Southerly arm, Loch Duich. Nor has nature
been less bountiful in her distribution of fresh water.
Along the whole West coast numberless mountain
torrents empty themselves into the above numerous arms
of the sea; and various fresh-water lakes, of which the
largest are Lochs Maree and Tannish, are scattered
over the County. Loch Maree, or Mari, is seated in
the Parish of Gairloch, to the South of Loch Broom,
and is about 16 miles in length, with a breadth varying
from one to two miles. It contains twenty-four small,
well-wooded islands, on the largest of which, called *Islan
Mari*, are the remains of an ancient Druidical building.
It discharges itself into an arm of the sea named Loch
Ewe, and the outlet it thus forms is the principal river
on the West coast. The chief rivers on the East side
of the County are the Conon, which runs into the bay
of Cromarty, and the Oikel and Carron flowing into
the frith of Dornoch. The Altgrad deserves mention

ROSS
SHIRE.

ROSS-SHIRE.

from the wildness of its scenery. It has worn a deep chasm in the rock for the space of two miles, being indeed half of its entire course, and this in some places to a depth of 150 feet. The stream occasionally becomes invisible from the extreme narrowness of the channel.

Soil and agriculture.

This County, in respect to its soil, may be divided into three districts of very unequal extent; the Eastern, Middle, and Western. Bordering the bay of Cromarty, and extending from Contin to Tarbet Ness, is a stretch of very fine land about 60 miles long, but seldom more than two broad, which may rival in fertility the soil of more Southern Counties. It differs, however, in its nature, being in parts light and friable; in others, a deep loam. The central district is an extensive and beautiful highland country, its hills supplying abundance of excellent grass for sheep and black cattle, and many of its straths being rich and fertile. The Western district is a large, and apparently uninviting tract, exhibiting vast piles of rocky mountains with their summits broken, serrated, and uncouth, and with snowy glaciers lodged in the deep-shaded apertures; yet amidst these "alpine solitudes" and dreary heaths are valleys both beautiful and rich. Agriculture, throughout the County, wherever the soil is capable of carrying crops, is conducted with equal spirit and skill. A few of the old cultivators retain the idle and slovenly methods to which they were habituated in their youth; but owing to the zeal for improvement, awakened by the success of strangers who have settled here from the finest districts of the South of Scotland, these exceptions are rare, and systematic husbandry is now generally understood. Notwithstanding the unfavourableness of the climate, great attention is now paid to horticulture. Few cottages are without a garden, and the labourer raises for his family the more common and useful vegetables, which a few years since he was in the habit of purchasing from the farmer. Beehives constitute in some parts of Ross-shire a source of great profit to the cottagers.

Geology.

On the East, the low coast to the South of Sutherland is composed exclusively of the sandstone of the red conglomerate, occasionally accompanied by a lamellar sub-crystalline limestone. Near the remarkable headlands, the Sutors of Cromarty, and at the Northern extremity of the narrow mountainous ridge which there occupies the coast, the red conglomerate rises from its horizontal position in the plain of Easter Ross, where it is for the most part in the state of a fine-grained sandstone, and, swelling into hills which bound Shandwick bay on the South, is recumbent with a highly inclined dip upon a granitic rock, very similar to that of the Ord of Caithness. Near this junction, beds of dark-coloured micaceous shale, only visible at low water, dip away from the coast, resting unconformably upon the edges of the sandstone of the red conglomerate. The laminated beds contain a compact blue argillaceous limestone marked by veins of carbonate of lime, and in which are found the fossil shells of the lias. These beds are cut off on the South by lofty cliffs, composed of various primitive rocks, and whose insulated and broken peaks distinguish this bold coast on both sides of Cromarty bay. Southward, the coast is still chiefly occupied by cliffs of the granitic rock; but the black shales and blue limestone beds re-appear in Ethie bay, where a fine-grained whitish variety of the red conglomerate composing that large peninsula of Ross-shire called the "Black Isle," is elevated into lofty

VOL. XXVII.

hills. Although near Cromarty an unstratified granitic rock is occasionally seen in contact with the red conglomerate, yet the greater portion of the cliffs on the Southern part of this coast consists of the stratified primitive rocks. Turning to the Western coast we find the general character of the country to consist of a basis of gneiss forming an irregular and hilly surface, which varies in elevation, in extreme cases, from 100 to 1500 feet, but which often presents a table land of considerable height, with comparatively small inequalities. Various mountains, either far detached, or collected in groups, are placed on this base, all of which rise to an average altitude of about 3000 feet above the level of the sea, or of 2000 above that of the gneiss. They are composed of red sandstone, having very thin and equal strata in the predominant instances, and in all such cases the angle of inclination is low, in some places deviating but slightly from the horizontal position. It is not uncommon for the beds to possess a schistose, or at least a flaggy structure. As the angle of inclination becomes considerable, the distinctness of the stratification diminishes; and where the beds assume the vertical position, the rock acquires the aspect of some granites, or that of the irregular gneiss which accompanies it, and is split into prismatic or angular fragments.

The strata, stretching South and West, in which is found the bituminous coal of Sutherland, are seen at low water to the North of the entrance of Cromarty bay, and towards Rosemarkie; only one bed of the coal has been seen, about four inches thick. Limestone is abundant on the West coast; bitumen has, in several places, been found in gneiss; and a considerable mass of pyrites, which was discovered near Kishorn, was worked for a long time, but is now abandoned from the accumulation of water in the pit.

Ross-shire contains numerous remains of antiquity, chiefly of Druidical Temples; of Pictish, or, as they are often called, of Danish forts or buildings, termed Duns; and of the castles of the ancient Chieftains. Of the first of these, that which lies in the Parish of Kiltarn is the most worthy of notice. This Temple consists of a single row of twelve large upright stones, disposed in the form of two ovals, the areas of which are equal, being 13 feet from East to West, and 10 feet from North to South. These ovals lie on the summit of an eminence, round which are marked out several concentric circles. The circumference of the first, or lower one, is 80 paces, that of the second 50, and that of the third, or highest circle, 35 paces. Cairns are found on many of the neighbouring hills, and these, as well as the traces of ancient encampments, are numerous on the Eastern coast. On the Western are to be seen the ruins of many of the Danish Duns, which "are here said to have served for so many sentinels to the Western Isles, (then under the dominion of Denmark,) who, by the signal of a torch, could give an early information to their nearer insular friends of any approaching danger, which being, in like manner, communicated from one Dun to another, the alarm would become general." Of the abodes of the ancient Chieftains we may notice the ruins of Castle Donan in the peninsula of Kintail, built in the reign of Alexander III., and a seat of the Seaforth family; *Donan Diarmed*, or Fort of Diarmed, in the same Parish, and near which is the tomb of this Fingalian hero, which measures 15 feet by 3; the Castle of Lochlin, with the Abbey of the same name, in the Parish of Fearn; the remains of a

ROSS-SHIRE.

ROSS-SHIRE.

ROS-TRAL.

large fortalice, in the Parish of Avoch, which cover an oblong space about 350 feet long and 160 broad; and Dunskeath, mentioned by Sir David Dalrymple in his *History of Scotland*: (vol. i. p. 121:) it lies at the termination of that range of rocks which overhang the Moray frith. In the Parish of Kincardine is Craighenichan, where the gallant Marquess of Montrose fought his last battle: the ground takes its Gaelic name from this event, which may be translated the *Rock of Lamentation*.

Climate.

The climate is very variable, and much against the finer departments of horticulture, frost and rain occurring at the most untimely seasons. In general, garden produce is about a fortnight later than in the vicinity of Edinburgh, but harvest not so much. A considerable change in the climate has taken place of late years, as indeed generally throughout the Kingdom, the Winters having become mild and open, and the Summer heat less both in amount and duration.

Fisheries.

The salmon fishery, though extensive, has fallen off considerably of late, partly from over fishing, and partly from the change of climate already noticed. The cod fishery at Gairloch is the most productive of any on the Scottish coast, producing annually 20,000 cod, taken by 20 boats, each having about 400 hooks. The fish are small but rich, and when cleaned for salting average about five pounds each. The fishing is from January to April. From natural causes, hitherto unaccounted for, the herring fishery, which was the staple of the Western coast, has declined here so much as to reduce the population to poverty, and greatly to lower the value of the land. However, as the shoals have gradually disappeared from this quarter, they have resorted to the Eastern coast, and the fishery is there prosecuted, especially at Portmahomack and Cromarty, with much success.

Cromarty and Ross are under the jurisdiction of one Sheriff, but each has a Lord Lieutenant. The leading Highland Clans in the County are the Mackenzies, the Rosses, the Frasers, the Mackays, the Macraes, and the Munroes. The valued rent of Ross-shire, including the scattered portions of Cromarty, is £85,709 15s. 3d. Scots; and the real rental is supposed now to exceed £80,000 sterling. Ross-shire contains 28 Parishes and three Royal Burghs, Dingwall, Tain, and Fortrose, and returns one Member to Parliament. Population of Ross and Cromarty, in 1811, 60,853; in 1821, 68,828; and by the last census, in 1831, 74,800.

Macculloch, *Western Islands; Transactions of the Geological Society*, vols. ii. and iii., new series; *Beauties of Scotland*, vol. v. See also our account of LEWIS.

ROSTELLARIA, in *Zoology*, a genus of *Trachelipodous Mollusca*.

Generic character. Shell fusiform, or somewhat turreted, terminated below by a beak-shaped canal of considerable length; outer lip entire, or toothed, more or less dilated with age, and having a groove contiguous to the canal.

Type of the genus, *R. curvirostris*, Lamarck; Lister, *Conch.* pl. 854. fig. 12. Inhabits the Indian Ocean. There are several other species.

RO'STRAL, } Lat. *rostratus*, from *rostrum*, a
RO'STRATED. } *rodendo*; particularly applied to the beaks of birds, and transferred, by metaphor, to ships; the sharp or pointed part of the prow.

A *rostral* or *rostrate* coronet; a coronet given for a naval exploit or victory.

Now for as much as we are light upon the mention of navall or *rostrate* coronets, this would be noted, That in old time the said brasen beake-heads of ships woon from the enemies, and set upon the front of the tribunall or publicke pulpit in Rome, served for an ornament to beautifie the forum or common place of the citie.
Holland. Plinie, book vi. ch. iv.

The first, Plenty, leaned her right arm upon a plough, and under her left held a huge horn, out of which she poured a whole autumn of fruits. The other, Commerce, wore a *rostral* crown upon her head, and kept her eyes fixed upon a compass.

The Tatler, No. 161.

He [Lucullus] brought to Italy an hundred and ten *rostrated* gallies of the fleet of Mithridates.

Yea although his body was laid in graue voide of al life, yet there it did not *rotte* or putrifie.

Udall. Actes, ch. ii. fol. 530.

He alone of all men was not corrupt with any *rottennesse* of vice, or of inordinate desires.

Id. St. Luke, ch. xxiii. fol. 377.

The putrifaction and *rottennesse* of all the bodie might bee noysome, and doe dammage to the head.

Foxe. Actes, &c. fol. 1599. *Queen Marie*.

The flattering fruite is fallen to ground before,
And *rotted* here they were halfe mellow ripe.
Spenser. The Shepherd's Calendar. December.

And I, that whilome wont to frame my pype
Unto the shifting of the shepheard's foote,
Sike follies now have gathered as too ripe,
And cast them out as *rotten* and unsoote. *Id. Ib.*

His cattle must of *rot* and murren die,
Botches and blains must all his flesh imboss,
And all his people.
Milton. Paradise Lost, book xii. v. 179.

There mighty spears for lack of use are eaten
With *rotten* worms.

Sir Thomas North. Plutarch, p. 61. *Numa*.

Wallowing she lay, like to a boist'rous hulk,
Dropsy'd with riots, and her big-swoln bulk
Stuff'd with infection, *rottenness*, and stench.
Drayton. The Moon-Calf.

The hero, levell'd in his humble grave
With other men, was now nor great nor brave;
While here his trophies, like their master, lay,
To darkness, worms, and *rottenness* a prey.
Otway. Windsor Castle.

Yes; give the pulse full empire; live the brute,
Since, as the brute, we die. The sum of man,
Of godlike man! to revel, and to *rot*.
Young. The Complaint. Night 7.

He found conceal'd beneath a fair outside
The filth of *rottenness*, and worm of pride.

Cowper. Expostulation.

ROOTALA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Salicariæ*. *Generic character*: calyx tubular, three-toothed; corolla none; capsule three-celled, many-seeded.

One species, *R. verticillaris*, native of the East Indies.

ROS-TRAL.

ROOTALA.

ROTA
LIA.

ROTALIA, in Zoology, a genus of *Cephalopodous Mollusca*.

ROTE.

Generic character. Shell orbicular, spiral, convex, or conical above; flat, radiated, and tubercular beneath, many-celled; aperture marginal, triangular, resupinate.

Type of the genus, *Nautilus Beccaria*; Montagu, *Test. Britt.* p. 186, pl. xviii. fig. 4. Several species (minute) are found on the coasts of Britain; others of a larger size occur in a fossil state.

ROTA'TION, } Lat. *rota*, a wheel; *rotatio*, the
ROTA'TOR, } motion of a wheel. *Rotator*, Fr.

RO'TATORY. } *rotateur*; two muscles, a greater and less, which turn about the eye. Cotgrave.

A wheeling, revolving motion; motion or progression round; successive change in such progression.

Touching the wheelright you write of, who from a cart came to be a captain, it made me think of the perpetual *rotations* of fortune, which you know antiquity seated upon a wheel in a restless though not violent volubility.

Howell. *Letter* 11. book iii.

Equal *rotation* is equal vicissitude in government, or succession to magistracy confer'd for such convenient terms, enjoying equal vacations, as take in the whole body by parts, succeeding others, thro the free election or suffrage of the people.

Harrington. *Oceana*, p. 54.

As *rota-men* of politicks

Straight cast about to over-reach

Th' unwary conqu'ror with a fetch,

And make him glad (at least to quit

His victory, and fly the pit.)

Hudibras, part ii. can. 3. v. 1108.

This articulation [of the hip] is confirmed and strengthened by great strong muscles; viz. on the outside by three glutes, on the inside by the triceps, together with the levator, and the four little rotators.

Wiseman. *Surgery*, book vii. ch. viii. *Luxation of the Hip*.

ROTE, in old Fr. *rote*; Lacombe and Roquefort. Ritson, *Dissertation on Romance*, p. clxv., explains, in a note, "The *rote* to be from *rota*, a wheel, in modern French *vielle*, and in vulgar English *hurdy-gurdy*, which is seen so frequently, both in Paris and London, in the hands of Savoyards."

Wel coude he singe and plaien on a rote.

Chaucer. *Prologue to the Canterbury Tales*, v. 237.

He taught hir, till she was certayne

Of harpe, citole, and of riote,

With many a tewne, and many a note

Upon musicke, upon measure.

Gower. *Conf. Am.* book viii. p. 256.

There did he find in her delicious boure

The faire Pæana playing on a rote,

Complayning of her cruell paramoure,

And singing all her sorrow to the note,

As she had learned readily by rote.

Spenser. *Faerie Queene*, book iv. can. 9.

ROTE, (to say by.)

See ROTE, ante; Fr. *routine*; to say by rote; to say by memory or recollection, with little attention to the meaning: the metaphor is perhaps borrowed from the motion of a wheel, (*rota*,) which, when once begun, continues with little impulse. *Roated*, in Shakspeare, is, perhaps, rooted, fixed, infixed, impressed, no deeper than your tongue.

Therto he coude endite, and make a thing,

Ther coude no wight pinche at his writing,

And every statute coude he plaine by rote.

Chaucer. *Prologue to the Canterbury Tales*, v. 308.

I know and can by rote the tale that I would tel.

Surrey. *Description of the Fickle Affections*, &c.

I thinke it meete that euery christen man not onely know it by rote, and without the boke, but also exercise himself therein euermore continually, as with the daily bread of the soule.

Tyndall. *Workes*, p. 39. *Prolog. vpon S. Paul to the Romaines*.

ROTE.

ROTUND.

Now it lyes you on to speake to th' people;

Not by your owne instruction, nor by th' matter

Which your heart prompts you, but with such words

That are but *roated* in your tongue;

Though but bastards, and syllables

Of no allowance, to your bosomes truth.

Shakspeare. *Coriolanus*, fol. 17.

For the utmost they can pretend to is a few terms of the atheistical philosophy, which they have learned by rote, and do cant and smatter with as much skill and understanding as parrots do the lessons that are taught them.

Scott. *Christian Life*, part ii. ch. iii. p. 214.

ROTELLA, in Zoology, a genus of *Trachelipodous Mollusca*.

Generic character. Shell convex-conoid, orbicular, shining, without epidermis; spine very short, the lower surface convex and callous; aperture half rounded.

Type of the genus, *Turbo vectarius*, Linnæus; *R. lineolata*, Lamarck, *Anim. sans Vert.* Inhabits the Mediterranean Sea.

ROTHER. See RUDDER.

ROTHIA, in Botany, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. *Generic character*: calyx five-cleft, the two superior segments sickle-shaped, arched, and joined together; corolla pea-flowered, standard deflexed; sheath of stamens open at the back; pod linear, many-seeded; seeds kidney-shaped.

One species, *R. trifoliata*.

ROTTBOELLIA, in Botany, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: flowers polygamous; rachis jointed, mostly filiform; calyx ovate, lanceolate, one or two-valved; corolla small, two-valved.

Seventeen species, grasses, mostly natives of the East Indies.

ROTTLERA, in Botany, a genus of the class *Dioecia*, order *Icosandria*. *Generic character*: male flower, calyx two-parted; corolla none; stamens thirty to forty: female flower, calyx four-toothed; styles three; capsule three-celled, three-valved, three-seeded.

One species, *R. tinctoria*, native of the East Indies.

ROTULA, in Botany, a genus of the class *Pentandria*, order *Monogynia*. *Generic character*: calyx five-parted, persisting; corolla rotate, inferior, five-parted; berry watery, small, one-celled, four-seeded.

One species, *R. aquatica*, native of marshes in Cochinchina.

ROTUND, } Fr. *rotondité*; It. *rotondo*, *roton-*

ROTUNDITY. } *dita*, *rotondare*; Sp. *rotundo*, *rotun-*

didad; Lat. *rotundus*, from *rota*, a wheel, which Vossius derives from the Gr. *ροδεν*, *cum impetu ferri ruere*; he adds, the Gr. *τροχος*, *rota*, is from *τροχεν*, to run. See ROUND.

Circular, globular, orbicular, spherical; having the form of a circle, globe, or sphere.

And thou, all-shaking thunder,

Strike flat the thicke rotundity o' th' world,

Cracke Nature's moulds, all germanes spill at once

That makes ingratefull man.

Shakspeare. *Lear*, fol. 296.

The figure of the atoms of all visible fluids, quæ fluids, seemeth to be globular; there being no other figure so well fitted either to

ROTUND. the making of fluidity, or of that visible *rotundity* to which the drops of water and other liquors do constantly conform.

ROVE.

Grew. Cosmo. Sacra, book i. ch. ii. sec. 18.

After having survey'd this dome, I went to see the *rotunda*, (at Rome,) which is generally said to have been the model of it.

Addison. Remarks on Italy, p. 110.

I have often consider'd with myself whether the ordinary figure of the heathen, or that of the Christian temples, be the most beautiful, and the most capable of magnificence, and can't forbear thinking the cross figure more proper for such spacious buildings than the *rotund*.

Id. Ib.

In the next place, the figure of the shield being round, it is an emblem of perfection, for Aristotle has said the round figure is the most perfect. It may likewise signify the immortal reputation that the emperor has acquired by his great actions, *rotundity* being an emblem of eternity that has neither beginning nor end.

For as I trow, I have you told ynow

To reise a fend, al loke he never so *row*.

Chaucer. The Chanones Yemannes Tale, v. 16330.

What if the land thou seekest were not straunge?

If not unknowen? or auncient Troye yet stode?

In *rough* seas, yet should Troye towne be sought?

Surrey. Virgil. Aeneis, book iv.

To take a cause out of your hands into mine, I do but mine office; you meddle further than your office will bear you, thus *roughly* to handle me for using of mine.

Burnet. Records, book iii. vol. i. p. 255. *Cromwell to Shaxton*.

They that bee not moued with austeritie and *roughnesse*, be wonte to bee wonne with fayre speakyng and ientilnesse.

Udall. St. Mathew, ch. xi. p. 50.

Whereof the winter, for the *roughnesse* of it, is cleane taken away from shootinge: except it be one daye amonges twenty, or one yeare amonges forty.

Ascham. Workes, p. 79. *Toxophilus*.

As a tall ship tossed in troublous seas,

Whom raging windes, threatning to make the pray

Of the *rough* rockes, doe diversely disease,

Meetes two contrarie billowes by the way.

Spenser. Faerie Queene, book ii. can. 2.

Now, for the knitting of sentences, which they call the ioynts and members therof, and for all the compasse of the speech, it is round without *roughnesse*, and learned without hardnesse.

Id. Epistle to Maister Harvey.

The *roughnesse* of paper is polished and smoothed either with some tooth, or els with a porcellane shell: but the letters in such slicke paper will soon fade and decay.

Holland. Plinie, book xiii. ch. xii.

You sit not, rots or burning starres deploring:

In calms, you fish; in *roughs*, use songs and dances.

Fletcher. Piscatory Eclogues. Eclogue 7.

This man, with lyme and *rough-cast*, doth present

Wall, that vile wall, which did these louers sunder.

Shakspeare. A Midsummer Night's Dream, fol. 160.

There's a diuinity that shapes our ends,

Rough-hew them how we will.

Id. Hamlet, fol. 279.

A *rough-hewn* seaman, being brought before a wise just-ass for some misdemeanour, was by him sent away to prison, and being somewhat refractory after he heard his doom, insomuch as he would not stir a foot from the place where he stood, saying, "It were better to stand where he was than go to a worse place."

Bacon. Works, vol. i. p. 536. *Apophthegms*.

Thy head is like a *rough-hewn* statue of jet,

Where marks for eyes, nose, mouth, are yet scarce set.

Donne. Elegy 8.

For wherever that [the *cæsura*] is used, it gives a *roughness* to the verse, of which we can have little need in a language which is over-stocked with consonants.

Dryden. Aeneis. Dedication.

Some, friends to vice, industriously defend

These innocent diversions, and pretend

That I the tricks of youth too *roughly* blame,

Alleging that, when young, we did the same.

Stepney. Imitation of Juvenal.

Imperfect shapes, in marble such are seen,

When the rude chisel does the man begin;

While yet the *roughness* of the stone remains,

Without the rising muscles and the veins.

Dryden. Ovid. Metamorphoses, book i.

ROUGH. However, in occasions of merriment they were first practised ;
and this *rough*-cast, unhewn poetry was instead of stage-plays, for
ROUND. the space of one hundred and twenty years together.

Dryden. Juvenal. Dedication.

This proves that wit does but *rough*-hew,
Leaves art to polish and review.

[Butler. Satire upon Plagiaries.]

Lord, what a monster of a man is there ! With such a workiday,
rough-hewn face too !

Dryden. The Assination, act iii. sc. 1.

I could endure
Chains no where patiently ; and chains at home,
Where I am free by birthright, not at all.
Then what were left of *roughness* in the grain
Of British natures, wanting its excuse
That it belongs to freemen, would disgust
And shock me.

Cowper. The Task, book v.

The nut of [the hiccory] whose shell is thick, hard, and
roughish, contains an agreeable and wholesome kernel.

Grainger. Sugar Cane, book iv. v. 227. note.

ROUMEA, in *Botany*, a genus of the class *Dioecia*,
order *Polyandria*, natural order *Flacourtiaceæ*. (Decan-
dolle.) Generic character : male flower, corolla none ;
stamens surrounded at the base with crenated glands :
female flower, calyx persisting ; apex of the stigma
depressed ; seeds cartilaginous.

Two species, spiny shrubs, natives of the East and
West Indies.

ROUNCEVAL, a pea so called from the place
whence it was imported, Rouncival.

The colewort, colliflower, and cabbage in their season,
The *rouncefall*, great beans, and early ripening peason.

Drayton. Poly-olbion, song 20.

HEAR. And another, stumbling at the threshold, tumbled in his
dish of *rouncevals* before him.

Brome. A Jovial Crew, act iv. sc. 2.

ROUND, or } *A. S. runian ; D. roenen ; Ger.*
ROUNE. } *raunen, mussitare, susurrare*, to mut-
ter, to whisper. In the *Glossary to A View of the*
Lancashire Dialect is found *reawnt*, did whisper.

To mutter, to whisper, to talk or speak whisperingly,
lowly, privately, secretly. This word is sometimes mis-
used, as if from the verb to *round* ; *q. d.* to speak
roundly ; without stop, hesitation, or reserve.

And rod forþ to reson, and *rouned* in her ere,
And seide hym as þe kȳng seide.

Piers Plouhman. Vision, p. 64.

Of what so commeth from any tong,
Be *rouned*, red, or song,
Or spoken in suertie or drede,
Certaine it mote thider nede.

Chaucer. The House of Fame, book ii.

What dost thou at my neighebores hous ?
Is she so faire ? art thou so amorous ?
What *rounest* thou with our maide ?

Id. The Wif of Bathes Prologue, v. 5751.

And ofte he *rouneth* in hir eare,
And ofte his arme now here now there
He laide, as he hir wolde embrace.

Gower. Conf. Am. book iv.

And *rouneth* tales in hir ere.

Id. Ib. book v.

Afterwarde when they wer stepped fro the bar they happed to
be heard *rowne* and reioyce to gether, that thei had giuen good
euidēce for acquitayle of theyr felow, with whō them self had ben
at the same robbery.

Sir Thomas More. Workes, p. 998. The Debellacion of Salem and
Byzance.

It is good that euerie ruler of cominalties, that they be not lad
by follies, ne by none other eare *rowner*, that he ne haue an eygh
of loue to the comontie that he hath to rule.

Foxt. Actes, &c. fol. 505. Henry IV.

But Trompart, that his maistres humor knew
In lofty looks to hide an humble minde,
Was inly tickled with that golden view,
And in his eare him *rounded* close behinde.

Spenser. Faerie Queene, book iii. can. 10.

The very last yeere, a knight of Rome, as he was talking with
another that had been consull, and *rounding* him in the eare, fell
downe starke dead.

Holland. Plinie, book vii. ch. liii.

They're here with me already ; whisp'ring, *rounding* ;
Sicilia is a so-forth.

Shakspeare. Winter's Tale, fol. 279.

ROUND, *adj.*

ROUND, *v.*

ROUND,

ROU'NDLY,

ROU'NDNESS,

ROU'NDISH,

ROU'NDLET,

ROU'NDER.

Fr. ronde, rotondité. Round is
corrupted from the Lat. *rotundus*,
(see *ante*, **ROTUND**.) and has the
same meaning, *viz.*

Circular, globular, orbicular,
spherical, having the form or shape
of a circle, globe, or sphere. It is
also used less rigidly. Having the
even, unbroken motion of a circle or wheel ; having no
odd or uneven parts, as a *round* sum, a *round* number ;
having no stops or breaks ; no secret, unseen lets or
hinderances ; met. no concealed motives or purposes,
as *round* dealing, *i. e.* fair, open, candid, sincere,
hearty.

Rounde about ere þei set,
Out of Aufrik were þei fet.

R. Brunne. Preface, p. cxc.

When he rȳsen romeþ out, and rȳght wel aspief
War he maȳ rapest have a repast op' *rounde* of bacon.

Piers Plouhman. Vision, p. 154.

Full faire was Mirthe, full long and high,
A fairer man I never sigh :
As *round* as apple was his face,
Full roddie and white in every place.

Chaucer. The Romant of the Rose.

And if that he ne constrained hem not este sones, into *rounde*-
nesse enclined, the thynges that been now continued by stable
ordinaunce, thei should departen from hir weale, that is to saine,
from hir beginnyng and fallen, that is to saine, tournen into
nought.

Id. Boecius, book v. De Consolatione.

And she began a *roundell* lustely.

Id. The Flower and the Leaf.

And therupon he telleth this,
That as the shelle whole and sounde
Encloseth all aboute *rounde*
What thyng within a neie belongeth ;
Right so this Orbis vnderfongeth
These elementes euerichone.

Gower. Conf. Am. book vii.

They vse great curiositie in kemminge of their heades, whiche
they *round* very seldome.

Brende. Quintus Curtius, book viii. fol. 233.

I lost the challenge at shooting at *rounds*, and won at *rovers*.
Burnet. Records, book ii. p. 2. King Edward's Journal.

The Spaniardes, vniting themselves, gathered their whole fleete
close together into a *roundell*.

Hakluyt. Voyages, &c. vol. i. p. 598. The Spanish Armada.

Maister Bland answered flatly and *roundly*, as before yee heard.

Foxt. Actes, &c. fol. 1521.

These landes lye ouer against Tartarie, and I doubt not but
that they stretch toward Asia, according to the *roundnesse* of the
world.

Hakluyt. Voyages, vol. iii. p. 239. John Alphonse of Xanctoigne.

Hob. Colin, to heare thy rymes and *roundelays*,
Which thou wert wont on wastefull hilles to sing,
I more delight then larke in summer dayes,
Whose eccho made the neighbour groves to ring.

Spenser. The Shepherd's Calendar. June.

The troubled tears then standing in his eyes,
Through which he did upon the letters look,
Made them to seem like *roundlets* that arise
By a stone cast into a standing brook.

Drayton. The Barons' Wars, book vi.

ROUND.

ROUND.

Her golden lockes she *roundly* did uptye
In breaded tramels, that no looser heares
Did out of order stray about her daintie eares.
Spenser. Faerie Queene, book ii. can. 2.

Through armes and vassals Rome the world subdu'd,
That one would weene that one sole citie's strength
Both land and sea in *roundnes* had survey'd,
To be the measure of her bredth and length.
Id. The Ruines of Rome.

Thus flocked all the folke him *round* about.
Id. Faerie Queene, book i. can. 12.

Her chearefull words much chear'd the feeble spright
Of the sicke virgin, that her downe she layd
In her warme bed to sleepe, if that she might;
And the old woman carefully display'd
The clothes about her *round* with busy ayd.
Id. Ib. book iii. can. 2.

A troupe of faunes and satyres far away
Within the wood were dancing in a *round*,
Whiles old Sylvanus slept in shady arber sownd.
Id. Ib. book i. can. 6.

And therin, Anacharsis the Scythian, or after some, Hyperbios
the Corinthian, invented the cast of turning the *roundell* or globe.
Holland. Plinie, book vii. ch. lvi.

As swift as swallowes on the waves they went,
That their brode flaggy finnes no fome did reare,
Ne bubling *roundell* they behinde them sent.
Spenser. Faerie Queene, book iii. can. 4.

Cud. Sicker, sike a *roundle* never I heard I none.
Id. The Shepherd's Calendar. August.

Attonce he wards and strikes; he takes and paies;
Now forst to yield, now forcing to invade;
Before, behind, and *round* about him laies:
So double was his paines, so double be his praise.
Id. Faerie Queene, book ii. can. 2.

I make no doubt but the doctor, and other court-chaplains,
inform his Majesty and the cavalleers, that they must cry to God
against the Parliamenteers and *Roundheads* now in arms to resist
them.

Prynne. Sovereigne Power of Parliaments, part iii. p. 98.

Marry who thou woot, to make a shew to shroud thee from the
storms, *round-headed* opinion, that sways all the world, may let
fall on thee. *Rowley. A Match at Midnight*, act iii. sc. 1.

But if you fondly passe our proffer'd offer,
'Tis not the *rounder* of your old-fac'd walles
Can hide you from our messengers of warre,
Though all these English and their discipline
Were harbour'd in their rude circumference.
Shakspeare. King John, fol. 5.

Now prepare
Materials for the mill; a sturdy post,
Cylindric, to support the grinder's weight
Excessive; and a flexile sallow, entrench'd,
Rounding, capacious of the juicy hord.
Philips. Cider, book ii.

Indeed, from such people nothing (as they think) comes grace-
fully unless it be imbellished with the ornament of some silly
word they have taken up, either a *round* oath, or a curse, or the
corruption of one, or something that is near akin to it.
Sharp. Works, vol. iv. p. 309. *Sermon* 18.

Each poem his perfection has apart;
The British *round* in plainness shows his art.
Dryden. The Art of Poetry, ch. ii.

It were better to deny *roundly* that the same attributes belong
to both, and then we should clearly apprehend each other.
Waterland. Works, vol. i. part ii. p. 65. *A Defence of some*
Queries. Query 6.

They will not allow you to say that the body of Christ is *round*,
or sweet, or white, or the like. So that here is *roundness* without
any thing being *round*, whiteness without any thing being white,
sweetness without any thing being sweet.
Sharp. Works, vol. vii. p. 209. *Sermon* 12.

Is this the custom of king Arthur's court?
Are all *round-table* knights of such a sort
Dryden. The Wife of Bath's Tale.

Uncautious Arcite thought himself alone,
And less than all suspected Palamon,
Who, listening, heard him, while he search'd the grove,
And loudly sung his *roundelay* of love.
Id. Palamon and Arcite.

Make it thy vernal care, when April calls
New shoots to birth, to trim the hedge aslaunt,
And mould it to the *roundness* of the mound,
Itself a shelving hill.

Mason. The English Garden, book ii.

Home is in this manner the centre, if I may say so, *round* which
the capitals of the inhabitants of every country are continually
circulating, and towards which they are always tending.

Smith. Wealth of Nations, vol. ii. book iv. ch. ii. p. 241.

The effects, therefore, of a capital employed in such a *round-*
about foreign trade of consumption are in every respect the same
as those of one employed in the most direct trade of the same kind,
except that the final returns are likely to be still more distant, as
they must depend upon the returns of two or three distinct foreign
trades.
Id. Ib. book ii. ch. v. p. 137.

ROUSE. See CAROUSE. From the Ger. *rausch*,
semiebrietas as Skinner, or *crupula*, as Wachter inter-
prets, a dizziness of the head. The Ger. verb *rauschen*,
D. *ruyschen*, is *stridere*, *crepare*, *strepitum edere*; in
A. S. *hris-cian*, to make a *rustling* noise. The word
is perhaps formed upon the verb to *rouse*, to *arouse*, to
raise, to excite, to animate. See the Quotation from
Beaumont.

This is the wine,
Which, in former time,
Each wise one of the magi
Was wont to *arouse*
In a frolick bouse,
Recubans sub tegmine fagi.

Beaumont. In the praise of Sack.

OTT. And we will have a *rouse* in each of them, anon, for bold
Britons, & faith.

Ben Jonson. The Silent Woman, act iii. sc. 2.

CAS. 'Fore heauen, they haue giuen me a *rouse* already.

MON. Good-faith a litle one: not past a pint, as I am a souldier.
Shakspeare. Othello, fol. 319.

OR. I have took since supper
A *rouse* or two too much, and by —
It warms my blood.

Beaumont and Fletcher. The Knight of Malta, act iii. sc. 4.

GRAC. Fie! no: I know them,
You need not swear them; your lord, by his patent,
Stands bound to take his *rouse*.

Massinger. The Duke of Milan, act i. sc. 1.

ROUSE, v. } See AROUSE.

ROU'SER. } To raise, to excite, to stir up, to awake,
to make or cause to be alert, to put upon the watch.
A *rousing lye*, says Skinner, one that would awake the
sleeping. *Rouser*, one who, that which *arouses*, awakens,
is used by Swift, *Strephon and Chloe*.

And so at the last
This hart *rouzed* and stale away
Fro all the hounds a preuie way.

Chaucer. Dream.

If they wolde vse but a fewe nombre of houndes, onely to
harborowe or *rouse* the game.

Sir Thomas Elyot. The Governour, book i. fol. 66.

And whan the daie began to rowe,
Tho mighten thei the sooth knowe,
That where thei wende frendes fynde,
Thei fonde frendship all behynde.

Gower. Conf. Am. book iii. p. 80.

Some have heads like harts, some like to snakes,
Some like wild bores late *rouz'd* out of the brakes.

Spenser. Faerie Queene, book ii. can. 11.

ROUND.

ROUSE.

ROUSE.

ROUT.

*Aeneas, rousing as the foe came on,
(With force collected) heaves a mighty stone.*

Pope. Homer. Iliad, book xx.

He put on the outward garb of a devotee, while his heart was still as hard as ever, and his mind not changed. His present fears, rather than any thing of true penitence, *roused* him up, and made him have recourse to God.

Waterland. Works, vol. ix. p. 412. Sermon 33.

Nature, through all her works, in great degree
Borrows a blessing from variety;
Music itself her needful aid requires
To *rouze* the soul, and wake our dying fires.

Churchill. The Apology.

ROUSSEA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-leaved; corolla bell-shaped, four-cleft, inferior, segments revolute; berry four-angled, many-seeded.

One species, *R. simplex*, native of the Island of Mauritius.

ROUSSEAUXIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx, tube hemispherical, smooth, with four broad lobes; corolla, petals four, obovate; anthers oblong, linear; capsule united to the calyx, with four bristly scales at the apex; fruit a berry, bursting at the top; seeds angular, shining.

Two species, natives of the Island of Madagascar.

ROUST, rowest.

Unto Menetes lodesman than thereof full loud he cried,
Why *roust* away so wyde? take here, I say, loue nie the shore,
Fetch me this left-hand land, and on these rocks let beate thine ore.

Phaer. Aeneidos, book v. fol. 113.

While yet he *rousteth* at some uncouth signe,
Nor ever red his tenure's second line.

Hall. Satire 2. book iv. p. 274.

ROUT, *v.* A. S. *hrut-an*; D. *rotelen*, to snort, snore, or *roust* in sleeping. To *rowt* or *rawt* is to low like an ox or cow, Ray, who refers to the A. S. *hrutan*. Hence also the A. S. *hruther*, *bos*, a *rother*-beast.

Riche men *routen* þo, and in here reste were
þo hit shon to þe shephurdes, a she were of blisse.

Piers Plouhman. Vision, p. 234.

For travaille of his gost he groneth sore,
And efte he *routeth*, for his hed mislay.

Chaucer. The Milleres Tale, v. 3642.

His wif bare him a burdon a ful strong;
Men might hir *routing* heren a furlong.
The wenche *routeth* eke par compaignie.

Id. The Reves Tale, v. 4163.

He wote not howe the nygt is gone,
Ne howe the daie is come aboute,
But onely for to slepe and *route*.
Till high middaie, that he arise.

Gower. Conf. Am. book iv. p. 120

Again, while the false dissembling pharisey laye at his ease
routing in his soft bed, Christ contynued without dores, painfully
al night at prayer.
Sir Thomas More. Workes, p. 1353. A Treatyce vppon the Passion.

ROUT, *v.*ROUT, *n.*

ROUTIER, or

RU'TIER,

ROW.

Fr. *route*; It. *rotta*; Sp. *rota*;Ger. *rotte*; D. *rot*; Sw. *rotte*. The

Etymologists are divided between

the Lat. *rupta* and *rota*. See Vos-sius, *De Vitiis*, lib. ii. ch. xvi.;

Menage, Wachter, Spelman, and Junius: and see *ante*,
Riot. If from *rupta*, the meaning will be

An irruption, a bursting or rushing in; then ap-
plied to

Those who make an irruption, an inroad, an invasion;

to the concourse or assembly; to the road, way, path, course, the invaders take; to the consequences of such inroad or invasion; the tumult, devastation, defeat, discomfiture, overthrow (of the invaded.) If from *rota*,

A globe or compact body of men; persons assembled, collected, united together; an assembly or concourse; their acts and deeds; the course they take or pursue. See **Riot**.

A *row* (see the Quotations from Gower and Byron) seems merely a corrupt pronunciation of *route*.

He smote in all þe *route*, and sesid him þe chare.

R. Brunne, p. 217.

Thanne ran þer a *route*, of ratones as it were
And smale mys w^t hem.

Piers Plouhman. Vision, p. 9.

But nightingales a full great *roust*
That flien over his head about.

Chaucer. The Romant of the Rose.

A twenty thousand peres on a *route*.

Id. The Sompnoures Prologue.

And bad vnto his treasourers,
That thei his treasour all about
Depart amonge the poore *route*
Of woman, and of children both

Gower. Conf. Am. book ii.

But of some dele I am beknowe
That I maie stonde in thilke *rowe*
Among hem.

Id. Ib. book ii.

For naked thei ben bore bothe,
The lorde no more hath for to clothe,
As of hym that like throwe,
Then hath the poorest of the *rowe*.

Id. Ib. book iv.

He made the more speed, and so the 23. of September entered Messana with such a noyse of trumpets and shalmes, with such a *roust* and show, that it was to the great wonderment and terror both of the Frenchmen, and of all other that did heare and behold the sight.

Hakluyt. Voyages, &c. vol. ii. p. 21. King Richard the First

Notwithstanding y^e cruelty of this punishment, the souldiers were not sturred to anye sedycion, but repaired by *rowtes* vnto their captaines, and vnto suche as were nere aboute the kyng.

Brende. Quintus Curtius, book x. fol. 297.

A *rutier* or course to be kept for him that will sayle from Cabo Verde to the coast of Brasil, and all along the coast of Brasil vnto the riuer of Plate.

Hakluyt. Voyages, &c. vol. iii. p. 719. Of Sea Currents.

Awhile they fled, but soone retourn'd againe
With greater fury then before was found;
And evermore their cruell capitaine
Sought with his raskall *routs* t'enclose them round.

Spenser. Faerie Queene, book ii. can. 9.

The lustie shepheard swaynes sate in a *roust*,
The which did pype and sing her prayes dew,
And oft reioyce, and oft for wonder shout.

Id. Ib. book vi. can. 9.

But the shot miss'd us all, or else we'd been *routed*.

Cotton. A Voyage to Ireland.

Whereupon the meaner sort *routed* together, and suddenly assailing the Earle of Northumberland in his house, slew him and diuers of his seruants.

Bacon. King Henry VII. p. 68.

Here, at our gates, your brave efforts unite,
Turn back the *routed*, and forbid the flight.

Pope. Homer. Iliad, book vi.

He has certain set forms and *routenes* of speech.

Butler. Remains, vol. ii. p. 272.

The *route* of a camel-driver is a scene that scarce could exist in the imagination of an European, and of its attendant distresses he could have no idea.

Langhorn. Collins. On Oriental Eclogues. Eclogue 2.

A *roust* is where three or more meet to do an unlawful act upon a common quarrel, as forcibly breaking down fences upon a right claimed of common or of way; and make some advances towards it.

Blackstone. Commentaries, vol. iv. book iv. ch. ii. p. 146.

ROUT.
—
ROW.

I said nothing to you about it, [Don Juan,] understanding that it is a sore subject with the moral reader, and has been the cause of a great row.
Byron. To Mr. Hoppner, Oct. 28, 1819.

Tell him [Campbell] all this, and let him take it in good part; for I might have rammed it into a review and rowed him.
Id. To Mr. Murray, May 20, 1820.

ROW, A. S. *ræwa*; Ger. *reihe, reige*; D. *reke*; Sw. *rad*; *linea, ordo, series*, a line, order, or series. See REW.

A line; things standing, set, put, or placed in a line, in lineal order or succession.

But right as floures through the cold of night
Iclosed, stoupen in hir stalkes lowe,
Redressen hem ayen the sunne bright,
And spreaden in hir kinde course by rowe.

Chaucer. Troilus and Creseide, book ii.

But plainly for to make it knowe
Howe that the signes sit a rowe,
Eche after other by degree,
In substance and in propertie.

Gower. Conf. Am. book vii. p. 210.

Greate postes of streight timber set on a row equally dystant a two-fote space one from another, are let into the grounde and fastened agayne on the inside, and rammed surely with a great deale of earth.

Arthur Goldyng. Cæsar. Commentaries, book vii. fol. 191.

As in season due the husband mowes
The waving lockes of those faire yeallow heares,
Which bound in sheaves, and layd in comely rowes,
Upon the naked fields in stalkes he reares.

Spenser. The Ruines of Rome.

Meantime the king, his son, and Helen, went
Where the rich wardrobe breath'd a costly scent.
The king selected from the glittering rows
A bowl; the prince a silver beaker chose.

Pope. Homer. Odyssey, book xv.

And now the train, with solemn state and slow,
Approach the royal gate, through many a row
Of fragrant wood walks, and of balmy bowers,
Radiant with fruitage, ever gay with flowers.

Mickle. The Lusiad, book vii. v. 447.

Row, v. } A. S. *row-an, rewan*; Ger. *ruderen*;
Row, n. } D. *roeden, or roeyen*; Sw. *ro*. Skin-
Ro'WER, } ner derives all from the Ger. *reg-en*, to
Ro'WING, } move. The D. *roer, roeder*, is derived
Ro'WABLE. } by Kilian from D. *roeren*, to move, the
ship being guided or steered by the motion of the rudder.
See RUDDER.

The D. *roeren* is the Goth. *reiran*; A. S. *hreran*; Ger. *ruren*, to move, to rear, to raise. To rowen out of synne, in Piers Plouhman, seems to be, to raise or rouse, move or stir, out of sin. To row is

To move or steer, that is, stir, *sc.* a boat, ship, &c., to move or pass along, as if driven or impelled (as usually implied) by oars.

Ac free wil & free wit. folweþ a man evere
To repenten and ryse. and rowen out of synne
To contrition to confession. til he come to hus ende.

Piers Plouhman. Vision, p. 168.

And thei rowiden to the cuntre of Gerazenes; that is agens Galilee.
Wiclif. Luk. ch. viii.

He seide to hem putte ghe the nett into the right half of the rowwyng and ghe schulen fynde.
Id. Jon, ch. xxi.

Algathes the rowers and the mariners haddn by this ydrawen in to hyr mouthes, and dronken the wicked drinkes.

Chaucer. Boecius, book iv. De Consolatione.

Gonzales hath spent 300,000 ducats in the same, and yet neuer could enter so far into the land as my selfe with that poore troupe or rather a handfull of men, being in all about 100 gentlemen, souldiers, rowers, boat-keepers, boyes, and of all sorts.

Hakluyt. Voyages, &c. vol. iii. p. 637. Sir Walter Raleigh.

In this wide inland sea, that hight by name
The Idle Lake, my wand'ring ship I row,
That knowes her port, and thether sayles by ayme.

Spenser. Faerie Queene, book ii. can. 6.

Or that long barren fen
Once rowable, but now doth nourish men
In neighbour-townes, and feesles the weightie plough.

Ben Jonson. Horace. Of the Art of Poetrie.

Now put to sacred seas
Our black saile; in it rowers put, in it fit sacrifice;
And to these I will make ascend, my so much envied prise,
Bright-cheekt Chryseis.

Chapman. Homer. Iliad, book i. p. 4.

And now a breeze from shore began to blow,
The sailors ship their oars, and cease to row;
Then hoist their yards atrip, and all their sails
Let fall to court the wind and catch the gales.

Dryden. Ovid. Metamorphoses, book x.

He drew the dragging body down with haste,
Then cross a rower's seat the neck he plac'd;
There, awkward, haggling, he divides the bone,
(The headsman's art was then but rudely known.)

Rowe. Lucan. Pharsalia, book viii.

A galley in which were 100 men in Turkish habit, armed with bucklers and sabres, rowed up to the flag-ship.

Mickle. History of the Discovery of India, p. 541.

Row, cloths rowed and unrowed; barbed, rowed, and shorn; unbarbed, unrowed, unshorn. See Rastell, under the title *Drapery*; or Stat. 27 Henry VIII. c. 13. Skinner doubts whether from the Fr. *rouer*, to turn, to wheel, (*rota*.) because cloths are smoothened, *rota circumducta*, by a wheel (or cylinder) drawn over them.

And to certifie us, whether our set clothes be vendible there or not; and whether they be rowed and shorne; because oftentimes they goe vndrest.

Hakluyt. Voyages, &c. vol. i. p. 298. Letter of the Moscovy Company.

RO'WEL, n. } Fr. *rouelle*, from *roue*, a wheel,
Ro'WEL, v. } (*rota*.) Cotgrave says,

Any small hoop, circle, ring, or round thing, that's movable in the place which it holds; *sc.* in the bit of a bridle, in spurs, in armour, in farriery.

Than y^e kinge was aparelled lyke a prelate of the churche, with a cope of reed sylke, and a payre of spurres, with a poynte without a rowell.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 245. p. 753.

A goodly person; and could menage faire
His stubborne steed with curbed canon bitt,
Who under him did trample as the aire,
And chaufft, that any on his backe should sitt;
The yron rowells into frothy fume he bitt.

Spenser. Faerie Queene, book i. can. 7.

Take a sliving or slip of the root and draw it through the eare of sheepe or horse in manner of rowelling.

Holland. Plinie, book xxv. cn. v.

This is truth, and so far I dare speak yet; he has yet past cure of physick, spaw, or any diet, a primitive pox in his bones; and o' my knowledge he has been ten times rowell'd.

Beaumont and Fletcher. The Scornful Lady, act iii. sc. 1.

I would have seen you buried quick first,
Your spurs of knighthood to have wanted rowels,
And to be kickt from your heels.

Id. Wit at Several Weapons, act v. sc. 1.

Enrag'd the more, by what might have reform'd
His horrible intent, again he sought
Destruction, with a zeal to be destroy'd,
With sounding whip, and rowels dyed in blood.

Cowper. The Task, book vi.

ROW.
—
ROWEN.

ROWEN. The *rowen* grasse afterwards commeth up so thicke and high for pasture and forrage, that it yeeldeth as great a benefit as the crops of hay before. *Holland. Plinie, book xviii. ch. xxviii.*

ROXBURGH-SHIRE.

ROXANA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* rather long, slender, pubescent within in the males, simple in the females; *palpi* longer than the head, compressed, ascending, densely clothed with loose scales, somewhat clavate, the terminal joint minute, exposed; *maxillæ* short; head small, with a tuft of loose scales between the antennæ and on the crown; eyes globose; *thorax* slightly crested behind; wings deflexed during repose; anterior elongate-triangular, rounded on the hinder margin; the disc with pencilled metallic figures on a dark ground; posterior ovate-triangular, entire; body rather long, slender, with a largish tuft at the apex in the males, and a small one in the females, the back with a ridge in both sexes; legs short, posterior pair longest and stoutest.

Type of the genus, *Phalæna (Tortrix) arcuana*, Linnaeus; Stephens, *Illust. Britt. Ent. (Haustellata)*, vol. iv. p. 118. One species, found, not uncommonly, in woody places in England in June.

ROXBURGHIA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*. *Generic character*: calyx four-leaved; corolla, petals four; nectary four-leaved, lanceolate, inserted in the middle of the petals; anthers double, hanging from the base of the leaves of the nectary; capsule one-celled, two-valved, many-seeded; seeds inserted in a spongy receptacle.

One species, *R. gloriosa*, a climbing plant, with a large purple flower, native of the East Indies.

ROXBURGHSHIRE, the most Southern County of Scotland, derives its name from the ancient City and Castle of Roxburgh, the Etymology of which has been a subject of much fanciful conjecture, the most honourable of many contradictory opinions being the suggestion that "the Burgh of Roxburgh may have originally been dedicated to Saint Rok or Roch, whence the name may have come." This County is bounded on the North by Berwickshire, with a small portion of Edinburghshire; on the East by Northumberland; on the South by the last-named County, and part of Cumberland; South-East by Dumfries-shire; and on the West by Selkirkshire. Roxburghshire lies between 55° 6' 40" and 55° 42' 52" North latitude; and between 2° 11' and 3° 7' 50" West longitude. According to Dr. Douglas, in his agricultural survey of this County, its medium length is about 30 miles, and its medium breadth rather more than 22, and he estimates its superficial area at nearly 672 square miles, or 430,080 square acres. Measured on the Map annexed to that portion of the County which has been published in the *New Statistical Account of Scotland*, its greatest length, taken from the junction of the Mare burn with the Liddel, is 42 miles; and its extreme breadth from Moodlaw loch to Arkhope cairn is 37½ miles. This County is divided by its waters into several districts. Teviotdale, which constitutes the largest, comprehends the district drained by the Teviot and its tributaries; Liddisdale embraces the alpine country drained by the Lid, the Hermitage, and other streams, whose kindred waters are poured into Solway frith; the third division is that projection which stretches North of the Tweed, between the Gala and the Leader; and the fourth, or lower division of the Shire, is that portion of it which, lying North of the Tweed, is included in the Merse.

VOL. XXVII.

The surface of this County is finely diversified. The Cheviots bound its Eastern and South-Eastern borders, and a remarkable series ranges almost due East and West from Carter fell to Pikellaw hill, in Dumfries-shire. Liddisdale is a congeries of mountains, among which Tinnis hill is a landmark to sailors, and Mellingwood hills rise 2000 feet above the sea level. The interior of Teviotdale abounds more in fertile valleys than in great heights, yet it is studded with many remarkable hills memorable by tradition, and the level of its Northern extremity is distinguished in particular by the Eildon hills and the Minto craigs. Speaking of its Southern and hilly region, Gilpin says, "The downy sides of all these valleys of the Teviot are covered with sheep, which often appear to hang upon immense green walls. So steep is the descent in some parts that the eye, from the bottom, scarce distinguishes the slope from the perpendicular. Several of these mountainous slopes (for some of them are very lofty) are finely tinted with mosses of different hues, which give them every variety of surface." The hills of the County are, indeed, not more ornamental than useful. Adding greatly to its superfluities, they contribute to its pasturage, while they adorn its landscape; few are bleak, and scarcely any rugged.

The rivers and streams which intersect and fertilize the County in every direction are, indeed, sacred to song. Scarcely a vale that has not its stream, and scarcely a stream that has not had its poet. The Tweed, Thomson's "parent stream, whose pastoral banks first heard his Doric reed," enters the Shire at the influx of the Etterick, and, after a winding course of 30 miles, in which it receives the Gala, the Allan, the Teviot, and the Eden, it leaves it at the confluence of the Carham burn. The Teviot, "sweet Teviot, with its silver tide," forms the common drain of the numerous hills which lie on each side of its rather level dale. It rises in the Fan hill, one of the heights between Roxburghshire and Dumfries-shire, and, after meandering "along its wild and willowed shore" for nearly 40 miles, deserts its own dale to join the Tweed. Besides the numerous rivulets which swell its waters, it receives the Borthwick and the Ale from the eminences on its Northern side, and the Allan, Slitrig, Rule, Jed, Oxnam, and the Kail, which have their sources in the heights of the Cheviot range. The Ale and Borthwick both rise in Selkirkshire, and form, for some short distance, the limits of the two Counties; the former, after a course of about 12 miles through the County, falls into the Teviot below Ancrum; the latter, flowing about 13 miles through a pastoral country, mingles with the same river below "the braes of Branxholm." The Jed is the most beautiful of its Southern tributaries; "it rises," writes the Rev. John Purves, "on the North side of the Carlin Tooth, one of the Cheviot mountains, in the Parish of Southdean, at the distance of about 14 miles from Jedburgh, and joins the Teviot about two miles and a half below the town. It receives the tribute of many streamlets, and rushing over a rocky channel, betwixt woody banks and lofty scars fringed with shrubs, and crowned with the oak, the beech, and the weeping birch, presents in its course a succession of highly picturesque and romantic scenes. Its general direction is from South to North. Its waters are pure and salubrious. Its breadth is about 20 yards, and, having a fall of 30 feet per mile, its velocity is considerable." Adjoining the Kail is a rich valley of 1200 or 1500 acres, which rises a few inches only above the surface

ROXBURGH-SHIRE.

Face of the country.

ROX-
BURGH-
SHIRE.

of the water, and is hence, at times, almost entirely overflowed. Liddisdale is emptied of its waters by the Liddel, the Hermitage, and other currents poured from the circumjacent heights. The Hermitage, whose banks are for the most part fringed by natural wood, exhibits the pastoral life in perfection; it rolls over a rocky bottom, in the midst of green hills, and making a turn to the South loses itself in the Liddel. This last river rises near the sources of the Tyne in the midst of an immense bog, surrounded by mountains, and named *Dead Water*. Its course is at first Westerly, and then due South. For 10 miles down the river its banks are entirely naked, but near its confluence with the Hermitage they begin to be covered by thriving plantations. The united stream now tumbles through a more extended valley, with a velocity which has excavated beds for pools of considerable depth; it quits the Shire after a course of 20 miles, at the influx of the Mare burn. Of the two Northern divisions of the County, the upper district is watered by the Allan, the Gala, and the Leader; and the lower division by the Eden, "which derives its descriptive name," says Chalmers, "from the British *Eddain*, denoting the quality of a *gliding* stream."

Soil and
agriculture.

Considered with respect to agriculture, this County may be divided into land under tillage and under pasture. The soils under tillage consist of rich loam, sand and loam mixed, and in some parts the two last are found mixed with gravel. The rich, loamy soil is generally met with near the beds of the rivers; in the higher districts, a very common character of the soil is a heavy, stubborn clay. Thus a sandy loam is the prevailing soil on the arable, and indeed on many of the hills. Moss, marsh, and heath occur in the South-West, and in other directions; throughout Liddisdale there is much mossy ground. It was not till the middle of the XVIIIth Century that the turnip husbandry was introduced by Dr. John Rutherford; but a regular system of cropping was not generally adopted before the complete success of Mr. Dawson—who, after obtaining a practical knowledge of the most approved English husbandry, introduced the new system, in 1753—opened the eyes of the neighbouring farmers. The more recent four-break system is now commonly followed throughout the County. At the period in which Dr. Douglas wrote, 1798, about three-fifths of the surface were in sheep pasture, and the remaining two-fifths under the plough, except about 8000 acres occupied by woods, pleasure-grounds, towns, and villages. As the *New Statistical Account* is yet incomplete, we are without data to show what alterations have taken place in the above proportions. Great improvements have been made of late years in the extension of cultivated as well as planted land, but the amount is not ascertainable. Lands under pasture are commonly distinguished into sweet, sour, and healthy, from the nature of the soil and its grasses, &c.; they are light, and mostly dry, bearing a sward productive of excellent grasses for feeding sheep. Great part of them were anciently under wood and heath; the existence of the former is indicated by the roots of trees yet remaining; the heath has been for the most part destroyed by the sheep.

Considerable quantities of cattle are reared in the County, and the show of the short-horned breed at the meetings of the "Union Agricultural Society" is usually much admired both for number and excellence. The sheep are chiefly of the Cheviot breed, and so long ago as 1805 were estimated at about 260,000 head. The

horses are either of the English breed, with a considerable mixture of blood, or of the Lanarkshire, which are preferred for the plough. With respect to other stock, Chalmers, who wrote in 1810, states that "the breeding of swine is doubled during the last thirty years, and furnishes a small export of their flesh from Berwick to London. Poultry, pigeons, and bees yield considerable profit and some export."

The arable farms vary in size from 50 to 1500 acres, their average being between 300 and 400; they are usually let on leases of nineteen or twenty-one years; the pasture farms are sometimes leased for a shorter period. The stimulus given by the formation of the Agricultural Society above-mentioned has produced the most desirable results. Its meetings are held two years in succession at Kelso, and one year at Coldstream or Cornhill. Regular cattle markets have been established at these places during the Spring and Summer months. Weekly markets for the sale of grain are held at Kelso, Jedburgh, and Hawick. Of the various fairs held in the County, those of St. Boswell and St. James are the principal; the former is held at the Burgh, whence it takes its name, on the 18th of July, for black cattle, sheep, lambs, horses, linen, and woollen cloth; the latter is kept on the 5th of August, on the green of ancient Roxburgh, and for the same produce as that of St. Boswell's.

The felspar porphyry is the most abundant rock of the Cheviot range; and in the Yetholm hills pitchstone porphyry is found either in detached masses subordinate to it, or in irregular beds. Numerous nodules of agate and common jasper are met with in the felspar porphyry; and these are also dispersed in abundance over the surrounding plains, and in the gravel of several of the streams. On descending from the higher ground of Yetholm, towards the North and West, into the vale of the Tweed, the new red sandstone becomes the prevailing formation. West of this sandstone district rise the Eildons: their base is about seven miles in compass, and their height 1364 feet. The rocks of which they are composed are felspar and felspar porphyry. A quarry has recently been cut in the South-West point of these hills, in which the rock is found to consist of regular pentagonal prisms, about 15 inches in diameter: the pillars are very elegant, sharper in their angles than most basaltic columns, and of a pale flesh-colour. At a quarter of a mile South of Jedburgh is the remarkable precipice of which Dr. Hutton has given a drawing in his *Theory of the Earth*. Here, both the primary and secondary formations are seen at one view.

For so mountainous a district, Roxburghshire enjoys few minerals. It is almost destitute of pit-coal; limestone, indeed, abounds, particularly in Liddisdale, but the scarcity of fuel, combined with other causes, renders its calcination too expensive a process to allow much advantage to be derived from it. Marl is found in various parts of the Shire, and the quantity contained in Linton loch alone is estimated from a measurement, so far as this was practicable, at one million of cubic yards. "Its seam varied in thickness from two to eighteen feet. It was sometimes blended with a seam of sand from two to three feet in thickness. The colour of the marl is varied; the greatest part of it being white as lime, and a considerable quantity of it black as moss; and there are portions of it which partake of both colours mingled in various proportions. The black marl was, upon trial, found equally efficacious as the white. Viewed through

ROX-
BURGH-
SHIRE.

Geology
and mine-
ralogy.

ROXBURGHSHIRE.

a microscope, though fine as flour, it presented the appearance of decomposed shells. The black was generally separated from the white marl, and in different layers. A deer's horns, of an extraordinary size, and supposed to be those of the rein-deer, were found imbedded in the marl 14 feet below its surface, above which there were 10 feet of moss. These are now in the possession of Mr. Pringle, of Clifton, the proprietor. They measured three feet in length, and three feet ten inches between each horn." Several skeletons of various animals were likewise found here, one of which exceeded that of a horse in size, and the moss abounded with large and thick oaks. A strong and copious mineral spring was observed to issue from the sand beneath the seams of marl, after it was dug. The expense of digging was so great, in consequence of the great abundance of water which overflowed the pits, that this immense quantity of manure is rendered useless. Freestone is quarried at Sprouston, Denholm, and Pinnacle; and different varieties of whinstone occur in inexhaustible quantities.

Mineral springs.

Mineral and petrifying springs are met with in various parts of the County. That in the *Dead Water* morass is highly impregnated with sulphur, and much frequented by invalids afflicted with cutaneous and scrophulous complaints. At Tudhope, about half a mile from Jedburgh, there is a spring strongly impregnated with iron and sulphur, which has long been resorted to for the cure of scorbutic disorders. Of the petrifying springs, that on the Tweeden seems to be the most powerful: "the progress of the petrification is distinct and beautiful; the fog, which grows on the edge of the spring and is sprinkled with water, is eight inches high; while the lower part is converted into solid stone, the middle appears as if it were half frozen, and the top is green and flourishing. The petrified matter, when burnt, resolves into lime. The spring, when used to irrigate the fields, fertilizes them extremely."

Antiquities.

The streams, and many of the hills, still retain their British names; and sepulchral tumuli have been found in various parts of the Shire containing the supposed remains and military weapons of the people of the Gadani and Ottadini. Roxburghshire also contains numerous monuments, which indicate the worship of its earliest inhabitants. Near Tinnis hill, in Liddisdale, is an oblong cairn, 86 yards long, consisting of freestone of large size, great weight, and square form; at its North end is a Cromlech, and at its South extremity a large upright stone, seven feet above the surface of the moss, and 13 feet in circumference; this is called the *standing stone*, and has for Ages marked the Northern boundary of Canoby, on the debatable ground. On Millburn farm, also in Liddisdale, is a Druid circle, or *oratory*, composed of nine upright stones; and in Morbottle and Linton Parishes are other Druid circles. The highlands of Roxburghshire, forming abundant natural fortresses, present vestiges of fortifications and of ancient *strengths* in every direction. The most Northerly of the Eildon hills, and the Caldshiels hill, which lies two miles West of them, were the great forts of the Gadani, and the commodious centre of the other British works; their summits were protected by a double fosse and rampart. Military roads of a similar character with that of the *Cat-rail* may be traced in the vicinity. British strengths are likewise found in the Western part of Teviotdale, and in Liddisdale; the most conspicuous of those in the first-named tract is at the hamlet of Ches-

ters; and in the second, the fort on Carby hill is the most worthy of notice. The Ottadini have left many corresponding remains in the Eastern districts of the County. The most stupendous of all the works of this kind extant in the Shire is the celebrated *Cat-rail*, which has evidently been a rampart thrown up to protect the Western border, but whether erected by Briton, Saxon, or Roman is uncertain. Whitaker, in his *History of Manchester*, states that "it was in a North-East direction from Canoby on the Esk to Gallow water, beyond Selkirk, lined all the way on the North with forts, and even continues itself by an additional chain of castles along the Gallow to the North." Its whole course is upwards of 45 miles, 18 of which are in Roxburghshire. The great Roman road, the continuation of Watling-street, traversed the County from North to South. The chief evidences of the Saxon occupation of the Country are found in the names they imposed on their places, and in the two Religious Houses of Old Melross, a Monastery, and the Church of Old Jedburgh. Coming to a later date, the ruins of numerous towers, peels, and strongholds attest the warlike propensities of this border land. The Works of Scott have rendered the names, sites, and traditions of the more noted of these "familiar in our mouths as household words;" indeed it were not too much to affirm, that the border history of this County is better known to the mass of English readers than the antiquarian lore of their own land. The "Eildon sisters three," the Castle of Hermitage, Branxholm Tower, Smailholm Tower, (the residence of Scott when a child, and to the impressions created by whose locality he attributed the peculiar character of his poetry,) Melrose Abbey, "*Hawick* and *Haworth*, and merry *Carlisle*," these and many more have been immortalized by too mighty a magician ever to be unknown or forgotten. Abbotsford is situated on the South bank of the Tweed, in Melrose Parish; and in that of Yetholm are located the gipsies, in number about 100, whose tribe furnished the prototype of Meg Merrilies.

In the low situations on the Tweed, the climate is uncommonly mild, and the Spring is usually more forward than in any district to the North of York; still, the Easterly winds, accompanied by cold mists, penetrate here for some months annually. As the country ascends from the Tweed to the South-West, the climate becomes proportionally severe. The autumnal rains in these high districts are extremely violent; and in the Winter months the rains are accompanied by such boisterous winds that few houses are water proof. In general, the inhabitants are healthy and robust, but towards the decline of life the working population is much subject to rheumatisms.

The annual value of the real property in this County, as assessed April 1815, was £254,180. The population, in 1801, 33,682; in 1811, 37,230; in 1821, 40,892; in 1831, 43,700; the rates of increase being for these three terms respectively, 11, 10, and 7 per cent. Roxburghshire contains 34 Parishes, and sends two Members to Parliament; one for the County, and the other for Jedburgh, in conjunction with Dunbar, Haddington, Lauder, and North Berwick.

Nine ſpecies, natives of Africa and the Eaſt Indies.

ROYNE, or } See AROYNT. Fr. *ronger*, which
ROIGNE, } Menage derives from the Lat. *rodere*,
RO'YNISH, } to gnaw.
RO'YNOUS, } To gnaw, to eat, to corrode.
RO'NION. } "A *raynous*, i. e. *roynous*, ſcall

(ſays Tooke) is a ſeparation or diſcontinuity of the ſkin
or fleſh, by a gnawing, eating, forward malady."

The *roynish* clown; lit. the clown who has ſuch ma-
lady; *ronion*, any one who has it; the ſcabby, ſcurvy
clown, or other perſon.

Roynouse ſcabbes'

Bules and botches.

Piers Plouhman. Vision, p. 396.

Her necke was of good faſhion
In length and greatneſſe by reaſon,
Without bleine, ſcabbe, or roine.

Chaucer. The Romant of the Rose.

To hem was well fitting and able
The foule crooked bowe hidous,
That knottie was, and all roinous.

Id. Ib.

The whiche vnto my ladie drawe,
For euer on them I *rounge* and gnawe.

Gower. Conf. Am. book ii. p. 48.

Yet did he murmure with rebellious ſound,
And ſoftly *royne*, when ſalvage choler gan redound.

Spenser. Faerie Queene, book v. can. 9.

2 LORD. My lord, the *roynish* clown, at whom ſo oft
Your grace was wont to laugh, is alſo miſſing.

Shakspeare. As You Like It, fol. 190.

Aroynt thee, witch, the rumpe-fed *ronyon* cryes.

Id. Macbeth, fol. 132.

ROYTISH. Ray ſays, *rowty* is over-rank and
ſtrong; ſpoken of corn or graſs land.

Mr. Moore, (*Suffolk Words*), "*Rout* is coarſe graſs,
which looks brown and ſere in the ſpring."

ROYAL.
—
ROY-
TISH.

ROY-
TISH.RUB-
BAGE.

No weed presum'd to shew its *roytish* face
In this inclosure; nettles, thistles, brakes,
Thorns, briars, cockle, hemlock, rampant grasse,
With all those herbs the meager wizard rakes
Into his deadly boxes, either yet
Were not at all, or far from Eden set.

Beaumont. *Psyche*, p. 85.

RUB, v.

RUB, n.

RU'BBER,

RU'BHING, n.

Ger. *reib-en*; D. *wrüven*, *terere*,
conterere, *fricare*.

To move one thing in close contact
or with pressure against another; to
press hard upon or against, (while in motion;) conse-
quentially, to cause a stoppage, hinderance, or obstruc-
tion; a difficulty, a struggle; to hinder or obstruct;
also, to cleanse, to polish.

Rubber is also, consequentially, applied to a struggle
or contest, sc. at some game or play.

It shall be expedient, after that the bodye is clensed, to *rubbe*
the bodye with a coarse linnen cloth, first softly and easily, and
after to increase more and more to a harde and swift *rubbing*.

Sir Thomas Elyot. *Castel of Helth*, book ii. ch. xxxii. fol. 48.

Some, with holding in the nocke of their shafte harde, *rubbe* the
skinne of their fingers.

Ascham. *Works*, p. 130. *Toxophilus*.

Ah! sir, said Paridel, do not dismay
Yourselfe for this; myselfe will for you fight,
As ye have done for me; the left hand *rubbs* the right.

Spenser. *Faerie Queene*, book iv. can. 1.

Give me a true friend

That, where occasion is to do a benefit,

Aims at the end, and not the *rubs* before it.

Beaumont and Fletcher. *Woman Pleas'd*, act ii. sc. 1.

Sir John after this could have stood down the sun,

Dividing the pulpit and text with one fist,

The glass was compell'd still *rubbers* to run,

And he counted the fift evangelist.

Cartwright. *The Chambermaid's Posset*.

So here's t' you, [Charles,] a *rubber's* to 't;

Here's a cast more; if that won't do 't

Here's half a dozen more.

Brome. *Epistle to C. S.*

JOL. When, at a Tuesday meeting, the country comes in to a
match at two shillings *rubbers*, where they conclude at dinner what
shall be done this parliament.

Killigrew. *The Parson's Wedding*, act i. sc. 3.

Much *rubbing* taketh down the bodie and causeth leanness.

Holland. *Plinie*, book xxviii. ch. iv.

This last allusion gall'd the panther more,

Because, indeed, it *rubb'd* upon the sore.

Yet seem'd she not to winch, though shrewdly pain'd;

But thus her passive character maintain'd.

Dryden. *The Hind and the Panther*.

The servants wash the platter, scour the plate,

Then blow the fire with puffing cheeks, and lay

The *rubbers*, and the bathing sheets display.

Id. *Juvenal. Satire* 3. v. 421.

And those are wonderfully busy and active to throw *rubs* and
stumbling-blocks in our way.

Sharp. *Works*, vol. vi. p. 276. *Sermon* 14.

He used for recreation to bowl in a garden, and Martin Marprelate
thence took this taunting scoff, that the bishop would cry, *Rub, rub,*
rub, to his bowl, and, when 'twas gone too far, say, the devil go
with it, and then, quoth he, the bishop would follow.

Wood. *Athenæ Oxonienses*, part i. p. 713.

Behold him taken up, *rubb'd* down,

In elbow-chair and morning-gown;

Behold him in his latter bloom,

Stripp'd, wash'd, and sprinkled with perfume.

Churchill. *The Ghost*, book iv.

RU'BBAGE,

RU'BBDGE,

RU'BBIISH,

RU'BBLE.

From the verb to *rub*, q. that
which comes off by *rubbing*.

Pieces, fragments, ruins; unused
or useless particles. Baret interprets

the Lat. *rudratio*, A laieng of *rubbish*, a paving with
rubble and like matter tempered with lime.

Causing them to burie the dead carcasses, and to gather vp the
rubbish broken downe from the castle walles, and to scour the
ditches.

Fox. *Actes*, &c. fol. 692. *Henry VII.*

For such conceits as these seem somewhat too fine among this
rubbage, though I do not produce them in sport.

Reliquiæ Wottonianæ, p. 12.

Thou siftedst long-hid dust to find lost ore,

And searchedst *rubbish* to encrease our store.

Cartwright. *To the Memory of Sir Henry Spelman*, p. 545.

Others might be named who, from finding fault with the Council
of Nice for corrupting Christianity, (as they fondly supposed,)
have gradually, and in a course of years, come to reject Christianity
itself as needless and useless, and all revealed religion as mere
rubbish.

Waterland. *Works*, vol. v. p. 102. *Objections removed and Mis-*
takes rectified, ch. v.

Embruted every faculty divine;

Heart-bury'd in the *rubbish* of the world.

Young. *The Complaint. Night* 2.

RUBIA, in *Botany*, a genus of the class *Tetrandria*,
order *Monogynia*, natural order *Rubiaceæ*. Generic
character: corolla of one petal, bell-shaped, four or five-
cleft; berries two, one-seeded; stamens four or five.

Nine species, natives of both hemispheres; *R. tinctor-*
um, which produces the valuable red dye called Madder,
is a native of the South of Europe.

RU'BRICK, adj.

RU'BRICK, n.

RU'BRICAL,

RU'BRICATE, v.

Fr. *rubrique*; It., Sp., and

Low Lat. *rubrica*, from *ruber*,

red. See MINIATE.

Red, the noun, is applied to
certain portions of books (the Prayer Book, law books)
written or printed with *red* ink.

After thy text, ne after thy *rubricke*,

I wol not work as mochel as a gnat.

Chaucer. *The Wif of Bathes Prologue*, v. 5928.

For the confirmation of the premisses, marke heere, [reader] I
beseech thee, the *rubricke* heere following, written before the
Masse of the five woundes in the Masse booke.

Fox. *Actes*, &c. fol. 1271. *Queene Marie*.

For the one he doth *rubricate* onlie with his red letters, the
other he doth *rubricate* with their owne blood.

Id. *Ib.* fol. 536. *Henry V.*

You persecute ingenuous men over all your book, with this one
over-tired *rubrical* conceit still of blushing.

Milton. *Works*, vol. i. p. 99. *Animadversions upon the Remon-*
strants' Defence, &c.

Other festivals I enquire not after, as of St. Dunstan's, and the
rest that stand *rubricate* in old Kalendars.

Spelman. *On the Original of Terms*, ch. ii.

The light and rays which appear red, or rather make objects
appear so, I call *rubrick* or red making.

Newton.

It is prescribed in the *rubrick* of this day's service, that if there
be a sermon at all, and not a homily, it shall be upon this argu-
ment, The Duty of Subjection.

Sharp. *Works*, vol. ii. p. 34. *Sermon* 2.

Then, with his silver beard and magic wand,

Let Comus rise archbishop of the land;

Let him your *rubric* and your feasts prescribe,

Grand metropolitan of all the tribe.

Cowper. *Progress of Error*.

RUBUS, in *Botany*, a genus of the class *Icosandria*,
order *Polygynia*, natural order *Rosaceæ*. Generic
character: calyx five-cleft, corolla, petals five; fruit a
compound berry, each cell one-seeded.

About fifty species, natives of both hemispheres; the
fruit of many are very grateful. *R. idæus*, the Raspberry,
R. cæsius, the Dewberry, *R. corylifolius*, *R. fruticosus*,

RUB-
BAGE.

RUBUS.

RUBUS. the Blackberry, *R. saxatilis*, *R. arcticus*, and *R. chamaemorus*, the Cloudberry, are natives of England. **RUCK.** Seventeen species, among which are the Raspberry, are natives of North America.

RUBY, Fr. *rubis*; Sp. *rubi*; It. *rubino*;
RU'BIED, Low Lat. *rubinus*, from the Lat.
RU'BIFY, v. *ruber*, red. Du Cange calls it the
RUBI'FICK, carbuncle; and see the Quotation
RUBIFICA'TION, from Pliny. A stone so called
RU'BIFORM, from its red colour.
RU'BIOUS. To rubify; to redden or give a
 red colour to.

On alle hure fyve fyngres. rycheliche yrynged
 And per on rede rubies. and oþr riche stones.
Piers Plouhman. Vision, p. 24.

And be ye wise, as ye be faire to se,
 Well in the ring, than is the rubie set.
Chaucer. Troilus and Creseide, book ii.

What nedeth it for to reherse hem alle?
 Wateres rubifying, and bolles galle,
 Arsenik, sal armoniak, and brimston?
 And herbes coude I tell eke many on.
Id. The Chanones Yemannes Tale, v. 16200.

Her inkle, silk, twin with the rubied cherry.
Shakspeare. Pericles, Prince of Tyre, act v. sc. 6.

Tables are set, and on a sudden pil'd
 With angel's food, and rubied nectar flows
 In pearl, in diamond, and massie gold,
 Fruit of delicious vines, the growth of heav'n.
Milton. Paradise Lost, book v. 7. 632.

Thus I sprinkle on thy breast
 Drops that from my fountain pure
 I have kept of precious cure,
 Thrice upon the finger's tip,
 Thrice upon thy rubied lip.
Id. Comus, v. 911.

The coronarium or laton, after that to everie ounce of it there be
 put six scrupals of gold, and be reduced into a verie thin foile, re-
 sembleth the colour of fire, like a rubie or carbuncle stone.
Holland. Plinie, book xxxiv. ch. viii.

And when she spake,
 Sweete wordes, like dropping honny, she did shed;
 And twixt the perles and rubins softly brake
 A silver sound, that heavenly musicke seem'd to make.
Spenser. Faerie Queene, book ii. can. 3.

There be againe who, having prepared and rubified the skin with
 saluitre, do annoint the place where the haire is gone or groweth
 thin.
Holland. Plinie, book xxix. ch. vi.

I have been here time enough in conscience to pass all the de-
 grees and effects of fire, as distillation, sublimation, mortification,
 calcination, solution, descension, dealbation, rubification, and fixa-
 tion.
Howell. Letter 42. book ii. p. 348.

Du. Deere lad, beleuee it;
 For they shall yet belye thy happy yeeres,
 That say thou art a man; Diana's lip
 Is not more smooth and rubious.
Shakspeare. Twelfth Night, fol. 257.

I say then, That while the several species of rays, as the rubifick,
 cerulifick, and others, are by refraction separated one from an-
 other, they retain those motions which are proper to each of them.
Grew. Cosmo. Sacra, book ii. ch. ii. p. 38.

Oh race to death devote! with Stygian shade
 Each destin'd peer impending fates invade.
 With tears your wan, distorted cheeks are drown'd,
 With sanguine drops the walls are rubied round.
Pope. Homer. Odyssey, book ii. v. 425.

His ample forehead bore a coronet
 With sparkling diamonds and with rubies set.
Dryden. Palamon and Arcite, book ii.

Of those rays which pass close by the snow, the rubiform will
 be the least refracted, and so come to the eye in the directest
 lines.
Newton. Optics.

RUCK. See **Rock.**

RUCTION. See **ERUCTATE.** Gr. ἐρεύγειν, to throw out.

A throwing out or ejection, (sc. of wind.)

Absteyne from meate, that ingenders botches, inflammations,
 fumous ructuations or vapours.

Sir Thomas Elyot. Castel of Helth, book iv. fol. 92.

RUD, adj. Rud is red. Ruddy is usually ap-
RUD, n. plied to a slighter or less degree of
RUD, v. colour than red is.
RU'DDY, Ruddle, or red earth. See the
RU'DDINESS, Quotation from Pliny.
RU'DDLE.

Ich sat stille as Pacience wolde. and thus sone þis doctour
 As rody as a rose. roddede hus chekes.

Piers Plouhman. Vision, p. 248.

His ruddle is like scarlet in grain,
 And I you tell in good certain
 He had a seemly nose.
Chaucer. The Rime of Sire Thopas, v. 13594.

But thus much I dare sain, that she
 Was white, rody, fresh, and lifely hewed,
 And every day her beaute newed.

Id. Dream.

Some one, for she is white of skynne,
 Some one, for she is noble of kynne,
 Some one, for she hath a rodie cheke.

Gower. Conf. Am. book v.

While the wondering of the people caste a comly rud in her
 chekes (of whiche she before had most misse) that her great shame
 wan her much praise.

*Sir Thomas More. Workes, fol. 56. The History of King Ri-
 chard III.*

Then they taught to paynt the blacke of eies, and ruddines of
 cheekes, and alter the natural colour of the hairs and visage.

Vives. Instruction of a Christian Woman, p. 84.

Shee threw downe the mantle,
 That bright was of blee;
 And fast, with a redd rudd,
 To her chamber can shee flee.
Percy. Reliques. The Boy and the Mantle, v. 95.

Sweet blushes stayn'd her rud-red cheekes,
 Her eyen were blacke as sloe;
 The ripening cherrie swellde her lippe,
 And all her necke was snowe.
Id. Ib. The Marriage of Sir Gawaine, v. 101.

His ruddy lips did smyle, and rosy red
 Did paint his chearefull cheekes.
Spenser. Faerie Queene, book ii. can. 1.

Her cheeks, like apples, which the sun had rudded.
Id. Ib.

Of all other sorts of red earth, the ruddle of Ægypt and Affricke
 is fittest for carpenters; for if they strike their line upon timber
 with it, that shall bee sure that it will take colour and be marked
 verie well.
Holland. Plinie, book xxxv. ch. vi.

The colour of sandaracha ought to be fierie like a flame; a
 pound thereof is bought for five asses, i. half a denier. Calcine
 this and ruddle together, and of both, being incorporat in equall
 quantitie, you shall have the colour called sandyx.
Id. Ib.

PAUL. Good my lord, forbear:
 The ruddinesse vpon her lippe is wet:
 You'le marre it, if you kisse it; stayne your owne
 With oyle painting.
Shakspeare. The Winter's Tale, fol. 302.

His nose was aquiline, his eyes were blue,
 Ruddy his lips, and fresh and fair his hue.
Dryden. Palamon and Arcite, book iii.

Not so the diamond shifts its trembling beam;
 Not so the ruby flames with ruddy gleam.
Hoole. Orlando Furioso, book x. v. 395.

RUDBECKIA, in Botany, a genus of the class Syn-
 genesia, order Frustranea, natural order Corymbiferae.

RUCTION.

**RUD-
BECKIA.**

RUD-
BECKIA.
—
RUDE.

Generic character: calyx a double order of scales; receptacle chaffy, conical; margin of the down four-toothed; the down is sometimes wanting.

Twelve species, mostly natives of North America.

RU'DDER, or } A. S. *rother*; Ger. *roeder*; D.
Ro'THER. } *roer*, *roeder*; Sw. *roder*; Somner

calls *rother* an oare, the blade or broader part of an oare. It seems to have been applied generally to

That which rows, moves, steers, guides, or directs the course of (sc. a ship, a boat, any thing.)

Edward do turne þe roþer, & fare ouer þe se.

R. Brunne, p. 289.

The queene her selfe accustomed aye

In the same barge to play,

It needeth neither mast ne *rother*.

Chaucer. *Dream*, p. 388.

The ship of loue hath lost his *rother*.

Gower. *Conf. Am.* book ii. p. 64.

At the first shotte he split our *rudder's* head in pieces, and the second shotte he strake vs under the water, and the third shotte he shotte vs through our foremast with a coluering shot, and thus he hauing rent both our *rudder* and maste, and shot vs vnder water, we were inforced to goe in againe.

Hakluyt. *Voyages*, &c. vol. ii. part ii. p. 186. Tho. Sanders.

Yet are they turned about with a very litell stearne whither soeuer the shippe maister's mynde, that gouerneth the *rother*, will set it.

Udall. *Erasmus. St. James*, ch. iv.

And so thei tooke up the ankers, and committed themselves to the sea, and leused withall the joyntes of the sterne and the *rudder*.

Id. *Actes of the Apostles*, ch. xvii.

O thou fayre sonne of gentle faery,

Thou art in mightie armes most magnifyde

Above all knights that ever batteill tryde,

O turne thy *rudder* hetherward awhile.

Spenser. *Faerie Queene*, book ii. can. 12.

Swept from the deck, and from the *rudder* torn,

Far on the swelling surge the chief was borne.

Pope. *Homer. Odyssey*, book v. p. 191.

It is observable that the name of an anchor does no where occur in Homer. The ships of which he speaks had only a *rudder* and ballast.

Fawkes. *Apollonius Rhodius. Argonautics*, book i. v. 1235. note.

RUDDOCK, A. S. *rudduk*, the *rud* or *red-breast*.

The tame *ruddocke* and the coward kite.

Chaucer. *The Assembly of Fowls*.

The greedie carle came within a space

That own'd the good, and saw the pot behinde

Where *ruddocks* lay, and in the *ruddock's* place

A knottie corde, but *ruddocks* could not finde.

Turbervile. *Of two desperate Men*.

The ouzell shrills, the *ruddock* warbles soft.

Spenser. *Epithalamium*, v. 82.

RUDE, } Fr. *rude*; It. *rude*, *rozso*; Sp. *rudo*.

RU'DELY, } Menage derives the It. *rozso* from

RU'DENESS. } *rudis*. Skinner asserts that *rude* is

not, as it might at first sight seem to be, from the Lat. *rudis*, but from the A. S. *rethe*, *sævus*, *ferox*, *impolitus*, *wrath*, *fierie*, barbarous, or unpolished. *Rude*, then, or *wrath*, (q. v.) is *writhed*, tortured, sc. with anger; and *rude* seems to be equivalent to

Rugged or rough, ill or unformed, ill or unfashioned; coarse, uncivilized, untaught, unpolished.

He knew not Caton, for his wit was *rude*,

That bade a man shulde wedde his similitude.

Chaucer. *The Milleres Tale*, v. 3163.

O lend book with thy foule *rudenesse*,

Sith thou haste neither beauty ne eloquence,

Who hath thee caused or yeue the hardnesse

For to appeare in my ladies presence.

Id. *Of the Cuckow and the Nightingale*.

And she was of too litell might.

Defence ageyne so *rude* a knight

To make.

Gower. *Conf. Am.* book v. p. 166.

The matrones and the virgins followe after syngyng a *rude* song after their countrey maner, wherby they beleue to obteyne of Jupiter to shewe his oracle manifest and true.

Brende. *Quintus Curtius*, book iv. fol. 72.

They were all apparelled alike, and that very *rudely* and homely.

Sir Thomas More. *Utopia*, vol. ii. book ii. ch. vi. p. 79.

And go thou into Frese and conquere our herytage, that these Fresones by pride and *rudenes* do witholde fro vs.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 206. p. 640.

Her scattred brood, soone as their parent deare

They saw so *rudely* falling to the ground,

Groning full deadly all with troublous feare,

Gathred themselves about her body round.

Spenser. *Faerie Queene*, book i. ch. i.

And now this wish'd-for, but yet dreadful prey,

To Achis' court they led in haste away,

With all unmanly *rudeness* which does wait

Upon th' immoderate vulgar's joy and hate.

Cowley. *The Davideis*, book iii.

————— I must forsooth be forst

To giue my hand oppos'd against my heart

Vnto a mad-braine *rudesby*, full of spleene,

Who woo'd in haste, and meanes to wed at leysure.

Shakespeare. *The Taming of the Shrew*, fol. 219.

————— Ungracious wretch,

Fit for the mountaines and the barbarous caues,

Where manners nere were preach'd: out of my sight.

Be not offended, deere Cesario:

Rudesby, be gone. Id. *Twelfth Night*, fol. 270.

Imperfect shapes, in marble such are seen,

When the *rude* chisel does the man begin.

Dryden. *Ovid. Metamorphoses*, book i.

It is much to be suspected that many pretend a zeal for scripture who mean nothing by it but to have its fences taken down, that they may deal the more freely or *rudely* with it.

Waterland. *Works*, vol. v. ch. vii. p. 282. *On Ecclesiastical Antiquities*.

My censures of some reputed virtuosi, that live in it, are written with as harmless and friendly designs as was the seeming *rudeness* of the angel to St. Peter, when he struck him on the side and hastily roused him.

Boyle. *Works*, vol. v. part i. p. 509. *Preface to the Christian Virtuoso*.

How oft in raptures, which man scarce could bear,

Have I, when gone, still thought the Muses there;

Still heard their music, and, as mute as death,

Sat all attention, drew in ev'ry breath,

Lest, breathing all too *rudely*, I should wound

And mar that magic excellence of sound.

Churchill. *Gotham*, book iii.

He chooses company, but not the squire's,

Whose wit is *rudeness*, whose good breeding tires.

Cowper. *Retirement*.

RU'DIMENT, { Fr. *rudiment*; It. *rudimente*; Sp.

RUDIME'NTAL. } *rudimentos*; Lat. *rudimentum*.

The *rude* state, the first or embryotic origin or beginning; the first lessons for *rude* ignorance; elementary instruction; elements or earliest principles.

And partly beecause they shoulde by suche maner (as a man would say) of shadowes and *rudimentes*, bee by litle and lytle instructed to those thinges that belonge vnto true godlynes, which is the soule of man.

Udall. *Erasmus. St. Marke*, vol. i. ch. vii. p. 155.

Teache them that muste bee christened the *rudimentes* and first begininges of the ghospel: which *rudimentes* or principles, except a man wil beleue, his baptisme is in vayne.

Id. *Ib. The Actes of the Apostles*, ch. ii. fol. 531.

————— But first I mean

To exercise him in the Wilderness,

There he shall first lay down the *rudiments*

Of his great warfare, ere I send him forth

To conquer Sin and Death, the two grand foes,

By humiliation and strong sufferance.

Milton. *Paradise Regained*, book i. v. 155.

RUDE.
—
RUDI-
MENT.

Is this thy promise then, my child, with care
And cool reserve, to mingle in the war?
Too well, alas! I knew how honour's charms
Would fire thy youth to seek the rough alarms,
In these thy first essays, and rudiments of arms!
Oh! dire essays! too fond was thy delight
To learn the dreadful lessons of the fight!

Pitt. Virgil. Æneid, book xi.

O come not ye near innocence and truth,
Ye worms that eat into the bud of youth!
Infectious as impure, your blighting pow'r
Taints in its rudiments the promis'd flow'r.

Cowper. Conversation.

RUDOLPHIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx two-lipped, superior lobe large, obtuse, inferior lobe acute, two very short lateral lobes; standard of the corolla linear, oblong, straight, and very long; wings and keel short; pod compressed, many-seeded, terminated by the sessile style; seeds flat.

Four species, climbing shrubs, natives of the Islands of St. Domingo and Cuba.

RUE, <i>v.</i>	Anciently also written <i>rew</i> . A. S. <i>hreowan</i> , <i>hreowssan</i> , <i>reowsian</i> ; Ger. <i>reuwen</i> ; D. <i>rouwen</i> ; <i>ingemiscere</i> , <i>lugere</i> , <i>pænitere</i> , to groan, moan, or lament, to repent.
RUE'FUL,	
RUE'FULLY,	
RUE'FULNESS,	
RUE'ING, <i>n.</i>	
RU'THFUL,	
RU'THFULLY,	To moan, to mourn, or be sorry,
RU'THLESS.	to lament, to grieve, to regret, to repent, to grieve with or for, to compassion, or have or feel compassion; and, hence,

Ruth, compassion or sympathy, mercy, pity: as also sorrow, mournfulness.

And slow vaste in eyþer half, þat *reueþ* yt was ynou.

R. Gloucester, p. 175.

An telle out euere þe teþe man, & þe nýne þoru out he nome,
And let smýte of her alre heuedýs, & made a *reufol* dom.

Id. p. 327.

þo kyng þei bonde faste y now, þat *rewliche* he gan crie.

Id. p. 126.

Allas! for Sir Harald, for him was mikelle *reuth*.

R. Brunne, p. 71.

þorgh pite mykelle he les, & *reufulhed* of herte.

Id. p. 263.

þe Walssh wer alle day slayn, now *rewes* þam þer res,
& Leulýn is fulle fayn to pray Edward for pes.

Id. p. 237.

So wol þe fader for gyven folke. of mylde hertes
That *rufulliche* repenten. and restitution maken.

Piers Plouhman. Vision, p. 331.

For though I made ghou soori in a pistle it *rewith* me not
though it *rewide*.

Wiclif. 2 Corinthians, ch. vii.

Whanne his disciplis weren clepide togidere he seyde to hem, y
have *ruthe* on the puple for lo now the thridde day thei abiden me
and han not what to ete.

Id. Mark, ch. viii.

The Lord swoor and it schal not *rewe* hym, thou art a preest
withouten ende bi the ordre of Melchisedech.

Id. Ebrewis, ch. vii.

The listes shal I maken in this place,
And God so wisly on my soule *rewe*,
As I shal even juge ben, and trewe.

Chaucer. The Knightes Tale, v. 1864.

But sens I see there is no better way,
And that too late is now for me to *rue*,
To Diomede I woll algate be true.

Id. Troilus and Creseide, book v.

Tho came this woful Theban Palamon
With flotery berd, and ruggy asshy heres,
In clothes blake ydropped all with teres,
And (passing over of weping Emelie)
The *reufullest* of all the compaignie.

Id. The Knightes Tale, v. 2314.

They cause me to crie so *rufully*.

Chaucer. The Lamentation of Mary Magdalen.

And ye that ben of beauteie croppe and rote,
If therewithall in you ne be no *routh*,
Than is it harme ye liven by my trouth.

Id. Troilus and Creseide, book ii.

And said: O sister, if ye knewe
Of myn estate, ye wolde *rewe*,
I trowe, and my deliuerance
Ye wold shape, and do vengeance
On hym that is so fals a man.

Gower. Conf. Am. book v. p. 166.

In harde weyes men gone softe,
And er thei climbe aulse them ofte,
And men seen all daie, that rape *reweth*.

Id. Ib. book iii. p. 85.

There came a fisher in the weye,
And sigh a man there naked stonde,
And whan that he hath vnderstonde
The cause, he hath of hym great *routh*.

Id. Ib. book viii. p. 254.

Loe in my dreame before mine eies, me thought
With *rufull* chere I sawe where Hector stood;
Out of whose eies there gushed streames of teares.

Surrey. Virgil. Æneis, book ii.

And ofte the owle with *rufull* song complain'd
From the house-top, drawing long dolefull tunes.

Id. Ib. book iv.

If *ruthful* gods haue any power, I trust,
Amid the rocks, thy guerdon thou shalt finde;
When thou shalt clepe full oft on Dido's name.

Id. Ib. book iv.

She from hence is fled
Who was the guide and giuer of my breath,
By whome I was with wished pleasure fed
And haue escapt the *ruthlesse* hand of death.

Turbervile. He sorrowes, &c.

He in great passion all this while did dwell,
More busying his quicke eies her face to view,
Then his dull eares to heare what shee did tell;
And said, Faire lady, hart of flint would *rew*
The undeserved woes and sorrowes which ye shew.

Spenser. Faerie Queene, book i. can. 2.

Who when those pittifull outcries he heard
Through all the seas so *rufully* resownd,
His charett swifte in hast he thether stear'd.

Id. Ib. book ii. can. 8.

For he was false, and fraught with ficklenesse;
And learned had to love with secret lookes;
And well could daunce; and sing with *rufulness*;
And fortunes tell; and read in loving bookes.

Id. Ib. book i. can. 4.

Help me, yee banefull byrds! whose shrieking sound
Is signe of dreery death, my deadly cries
Most *ruthfully* to tune.

Id. The Shepherd's Calendar. August.

I pray God this sudden riches make not again a long repent-
ance; this sudden joy a long *ruing*; this speedy enriching a
longer taking.

Strype. Life of Smith. Speech Fourth, on the Queen's Marrying.

Why should I more molest the world with cries,
The air with sighs, the earth below with tears?
Sith I live hateful to those *ruthless* eyes,
Vexing with untun'd moan her dainty ears.

Daniel. Sonnet 21. To Delia.

Rebellion, worse than witchcraft, they pursued:
The pulpit preach'd the crime, the people *rue'd*.

Dryden. Epistle 12.

Alarm'd, th' inferior demons of the place
Rais'd *ruful* shrieks and hideous yells around.

Thomson. Castle of Indolence.

With boil'd, bak'd, roast, all justling in the street;
Dejecting all, and *rufully* dismay'd.

Dryden. Absalom and Achitophel.

RUE.

RUFF.

Divine Achilles! wilt thou then retire,
And leave our hosts in blood, our fleets on fire?
If wrath so dreadful fill thy ruthless mind,
How shall thy friend, thy Phœnix, stay behind?
Pope. Homer. Iliad, book ix.

But the vex'd droll, by force, was fated
To be conducted where he hated.
The careful carrier held her prize,
In spite of all his rueful cries.

Cooper. Ver-Vert, can. 3.

When, exercise and air my only aim,
And heedless whither, to that field I came,
Ere yet with ruthless joy the happy hound
Told hill and dale that reynard's track was found.

Cooper. The Needless Alarm.

RUE, Fr. *rue*; It. *ruta*; Sp. *ruda*; Lat. *ruta*; Gr. *pura*, from the verb *ῥύ-ειν*, *servare*, to serve, *quia ut Dioscorides docet, valetudinem conservat.* Vossius.

But woo to you farisees that tithen mynte and *ruwe* and echeerbe,
Wiclif. Luk, ch. xi.

First. They [the Exorcists] are to try the devil by holy water, incense, sulphur, *rue*, which from thence, as we suppose, came to be called herb of grace.

Taylor. Polemical Works, p. 334. Dissuasive from Popery.

RUELLIA, in Botany, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Acanthaceæ*. Generic character: calyx five-parted, usually furnished with two bracteal leaves; corolla somewhat bell-shaped, border five-lobed; stamens conjoined; capsule attenuated on both sides; seeds few.

A genus containing sixty species, natives of the tropical climates.

RUFF, *n.* } The A. S. *hrof*, *rof*, *rofe*, is the top,
RUFF, *v.* } the raised, the sustained, the elevated
RU'FFLE, } part of any thing. See ROOF.
RU'FFLE, }
RU'FFLER, } In Fox and Golding, *ruff* seems to
RU'FFLING, *n.* } be elevation, exaltation; in Udall,
} *ruffle*, the elation, haughtiness; in
Hall, a rising, an insurrection, a tumult; and, hence, a
ruff or *ruffle* is

Tumult, confusion, disorder, disturbance. And *ruffler*.

A disorderly person, a disturber of peace or good order.

To *ruff* or *ruffle*; to raise, to throw up; to raise a contest or disturbance, to contest.

Ruff or *ruffle*; articles of dress, so called because raised or puffed out or up, or some parts raised or laid over others, *sc.* in plaits, folds, wrinkles.

Ruff and *ruffle* are, however, evidently used by some writers as if akin to *rough*.

In the fourth booke sufficiently hath beene described the excessive pride and pompe of Antichrist, flourishing in his *ruffe* and securitie, from the time of William Conquerour hitherto.

Foxe. Actes, &c. fol. 364. Edward III.

But Thomyris deuised with her selfe howe she might be reuenged, and with like pollicie and deceypte begyled her enemies nowe being in their chiefe *ruffe* for theyr new gotten victorie.

Arthur Goldyng. Justine, book i. fol. 6.

And some be weeded from the finer stuffe,

Some stande by proppes to maynteyne all their *ruffe*.

Gascoigne. Gardnys.

The lorde mayer had iiii. footemen all in whyte sylke, cutte, *ruffed*, and pounced.

Hall. Henry VIII. fol. 236. The twenty-first Yere.

And thereto they haue so *ruffled* and tangled the temporall and spiritual regiment together, and made thereof such confusion that no man can know the one from the other.

Tyndall. Workes, p. 185. Prologue vnto the Reaer.

VOL. XXVII.

This capitayne moche steyed the citie, notwithstanding that xx. or more persones were sleyne in the *ruffle*.

Hall. Henry VIII. fol. 159. The nineteenth Yere.

Where as he, scant bearing the habit of a clerke, and going in his changes and soft apparell, is more conuersant among the delicat *rufflers* in the court.

Foxe. Actes, &c. fol. 203.

Ye see the entrynges of our philosophie, whereby it was thought good vnto God to saue all mankynde. Ye see the pompe and *ruffling* of the euangelycall schole.

Udall. Erasmus. St. Matthew, ch. iv. fol. 16.

Wherupon Anselmus, iudgyng the king a scismatike, a rebel, and a tyrāt, obstinately withstode him to the very face like a *ruffelinge* rouer.

Bale. Englyshe Notaries, part ii. fol. 65.

Whiles the proud bird, *ruffling* his fethers wyde,
And brushing his faire brest, did her invade.

Spenser. Faerie Queene, book iii. can. 11.

Thenceforth the fether in her lofty crest,
Ruffed of love, gan lowly to auaile;

And her prowd portance and her princely gest,
With which she earst triumphed, now did quaille.

Id. Ib. book iii. can. 2.

Some pranke their *ruffles*; and others trimly dight
Their gay attyre.

Id. Ib.

His *ruffin* raiment all was stain'd with blood
Which he had spilt, and all to rags yrent.

Id. Ib. book i. can. 4.

His gravity is much lessen'd since the late proclamation came out against *ruffs*, and the king himself shew'd the first example; they were come to that height of excess herein that twenty shillings were us'd to be paid for starching of a *ruff*.

Howell. Letter 32. book i. sec. 3. p. 161.

So they being in this *ruff* and jollity, news came suddenly that Aratus was come.

Sir Thomas North. Plutarch, p. 849. Aratus.

The wyld woodgods, arrived in the place,
There find the virgin, doolful, desolate,
With *ruffled* rayments and fayre blubbred face,
As her outrageous foe had left her late.

Spenser. Faerie Queene, book i. can. 6.

Your harpes sweet touch, curl'd lockes, fine shape, and gifts so exquisite,

Given thee by Venus, would have done your fine dames little good,
When bloud and dust had *ruffled* them, and had as little stood
Thy selfe in stead.

Chapman. Homer. Iliad, book iii. p. 38.

A reverend man, that graz'd his cattle nigh,
(Sometime a blusterer, that the *ruffle* knew
Of court, of citie, and had let go by
The swiftest hours) observed as they flew.

Shakspeare. A Lover's Complaint.

Aso. Lady, I cannot *ruffle* it in red and yellow.

Ben Jonson. Cynthia's Revels, act iii. sc. 3.

And both the parlament and people complain'd, and demanded justice for those assaults, if not murders, done at his own doors by that crew of *rufflers*.

Milton. Works, vol. i. p. 377. An Answer to Eikon Basilike.

The tailor staies thy leasure,
To decke thy bodie with his *ruffling* treasure.

Shakspeare. The Taming of the Shrew, fol. 223.

Farewel my eagle; when thou flew'st, whole armies
Have stoopt below thee: at Passage I have seen thee
Ruffle the Tartars, as they fled thy furie.

Beaumont and Fletcher. The Loyal Subject, act i. sc. 3.

While it is thus, it cannot be diseased in that spiritual state wherein it will be wholly separated from all bodily sense and passion; because it has no affection in it that can any way disturb or *ruffle* its calm and gentle thoughts.

Scott. Christian Life, part i. ch. iii. p. 27.

So roll the billows to th' Icarian shore,
From east and south when winds begin to roar,
Burst their dark mansions in the clouds, and sweep
The whitening surface of the *ruffled* deep.

Pope. Homer. Iliad, book ii.

2 B

RUFF.

RUFF.
—
RUG.

Her pinions *ruffle*, and, low dropping, scarce
Can bear the mourner to the poplar shade;
Where, all abandon'd to despair, she sings
Her sorrows through the night.

Thomson. *Spring*.

He shows, on holidays, a sacred pin
That touch'd the *ruff* that touch'd Queen Bess's chin.
Young. *Love of Fame. Satire 4.*

Indebted to some smart wig-weaver's hand
For more than half the tresses it sustains;
Her elbows *ruffled*, and her tott'ring form
Ill propp'd upon French heels.

Cowper. *The Task*, book iv.

The person who works the lace of a pair of fine *ruffles*, for example, will sometimes raise the value of, perhaps, a pennyworth of flax to £30 sterling.

Smith. *Wealth of Nations*, vol. iii. book iv. ch. ix. p. 37.

RUFFIAN, *adj.* } The Fr. *ruffien*, It. *ruffiano*,
RU'FFIAN, *n.* } though differently applied, are
RU'FFIAN, *v.* } no doubt the same word, having
RU'FFIANLY, } the same origin as the English,
RU'FFIANOUS. } namely, to *ruff*, to raise or excite,
sc. disorder, tumult.

Disorderly, tumultuous, licentious, boisterous, brutally violent.

Out of the which chase it was certainly knowē that there escaped Drapes the Senon, who, assone as Gallia fyrste began to rebell, (had) gathered to him the *ruffions* out of al places, calling the bondmen to libertye.

Arthur Goldyng. *Cæsar. Commentaries*, book viii. fol. 259.

But are without fayle the congregacyon of Sathan, and the tyrannouse rable of rauenous *ruffyanes*.

Bale. *Image of both Churches*, part i. fol. 28.

In the meane time a commune and notable *rufyan* or these, whiche hadde robbed and slayne a manne, was entred into the barne where Gysyppus laye.

Sir Thomas Elyot. *The Governour*, book ii. p. 148.

One example more of the like affinitie commeth heere in minde, which ought not to be omitted, concerning a certaine seruing man of the like *ruffianly* order.

Fox. *Actes, &c.* fol. 1084. *Henry VIII.*

If it hath *ruffian'd* so vpon the sea,
What ribbes of oake, when mountaines melt on them,
Can hold the morties.

Shakspeare. *Othello*, fol. 316.

The windes
Who take the *ruffian* billowes by the top,
Curling their monstrous heads, and hanging them
With deaff'ning clamors on the slipp'ry clouds.
Id. *Henry IV.* fol. 85.

Let our *ruffianly* love-locke wearers marke it.
Prynne. *Histrio-Mastix*, part ii. p. 882.

Yet might it serue beside
To shelter the said monument from all the *ruffinous* pride
Of stormes and tempests, usde to hurt things of that noble kinde.
Chapman. *Homer. Iliad*, book vi. p. 93.

Where Casium high o'erlooks the shoaly strand,
A bark with armed *ruffians* straight is mann'd,
And the task trusted to Achillas' hand.

Rowe. *Lucan. Pharsalia*, book viii.

His blood a traitor's sacrifice was made,
And smok'd indignant on a *ruffian's* blade.

Young. *The Last Day*, book ii.

RUG, } A. S. *rooc*; Ger., D., and Sw. *rock*, in-
RU'GINE. } *dumentum*; believed, says Wachter, to be
from the Gr. *pákos*, *lacera vestis*. Skinner thinks it may
be from *rough*, *q. d.* a *rough* garment. Tooke con-
siders it to be the same word as *rock*, *q. v.*, the past par-
ticipple of *wrig-an*, to cover, by the usual change of the
characteristic *i* into *oo* or *u*.

A cover or clothing: it is usually applied to a coarse,
thick covering or coverlet for beds, horses, &c. *Rugine*,
the diminutive of *rug*.

Rug, a kind of dog, may be, as Skinner thinks, a
rough.

The townes built of stone, the people rude in conditions, ap-
parelled in diuers coloured *rugs*.

Hakluyt. *Voyages, &c.* vol. ii. part ii. p. 87. *Reports of Japan*.

I wish'd 'em then get him to bed; they did so,
And almost smother'd him with *ruggs* and pillows.
Beaumont and Fletcher. *The Little Thief*, act v. sc. 1.

Horror assumes her seat, from whose abiding flies
Thick vapours, that like *rugs* still hang the troubled air.
Drayton. *Poly-olbion*, song 26.

MACB. I, in the catalogue ye goe for men,
As hounds, and greyhounds, mungrels, spaniels, cures,
Showghes, *water-rugs*, and demy-wolues, are clept
All by the name of dogges.

Shakspeare. *Macbeth*, fol. 140.

Look, this is the knight, in the *rug-gown*.
Eastward Hoe, act v. sc. 1.

The friendly *rug* preserv'd the ground,
And headlong knight, from bruise or wound.
Butler. *Hudibras*, part i. can. 2.

The lips of [the ulcer] grew turgid with the anguish, and so pain-
ful that she could not endure the wiping the thin ichor from it with
a soft *rug*in with her own hand.

Wiseman. *Treatises*, vol. i. book ii. ch. iv. p. 287.

RUGEN, Isle of, forms part of the Province of Prussian Pomerania. It rises in the Baltic to the North of the mainland, directly opposite Stralsund, and is so deeply indented by the sea as to be divided naturally into four parts, which are connected only by narrow isthmuses. Several smaller islands lie around it, the chief of which are that of *Hiddens* to the North, and that of *Rüden* to the South-East: the latter formed part of Rügen previously to 1309, but was in that year divided from it by a violent invasion of the sea. The Northern portion of the island is chiefly composed of chalk; the central and Southern districts of clay, sand, and flint, as well as of a reddish earth of great fertility, and which seems to be alluvial. In the sand, blocks of granite, of porphyry, and of other rocks, are met with. Its surface is finely undulated, and presents a series of picturesque views, of beautiful gardens, and numerous antiquities. Its most elevated point is the height of *Hertabourg*, which is computed by M. Hagenow to be 153'788 metres above the sea-level; next comes that of *Königsstuhl*, (the King's Seat,) which rises amongst the surrounding cliffs of chalk to the height of 127'365 metres. From the nature of the soil it is evident that agriculture must form the principal occupation of the inhabitants. In fact, Rügen is regarded as the granary of Stralsund; and, in addition to the fine oxen, sheep, and horses supplied from its pastures, the vast numbers of geese, of unusual size, reared here, furnish by their feathers alone a very important article of commerce. The population is for the most part collected into villages, of which *Bergen*, containing about 2000 inhabitants, has assumed the rank and received the privileges of a Capital; and here reside the principal authorities of the island.

The ancient inhabitants of Rügen seem to have been of Slavonic origin, and their conversion to Christianity dates from the XIIth Century. Here was the sanctuary, sacred in the eyes of the Northmen, and so well described by Tacitus; (*De Mor. Ger.* ch. xl.) and the island presents numerous localities, which still live in the songs of the Scandinavian bards. The residence of the ancient Sovereigns of Rügen was at *Carenza*, now *Gartz*, a village containing from 150 to 170 houses, a Church, and a manufactory of sealing-wax.

RUG.
—
RUGEN.

RUGEN.

RUGI-
LUS.

Since 1794, numerous visitors annually resort here in the summer months, from various parts of Germany, to the hot-baths and chalybeate of *Sagard*, a village of about 800 inhabitants, lying in the centre of the peninsula of Jasmund, in the midst of a delightful country; and at *Putbus*, on the Southern coast, salt-water baths have been established within the last twelve years, which attract much company. Population 30,000. Length of the island about 23 miles, by 18 in breadth.

Malte-Brun, *Nouvelle Edition par M. Huot*.

RUGGY, } i.e. rough, roughed; having a torn,
RUGGED, } ragged, wrinkled, uneven surface;
RUGGEDLY, } lit. and met. coarse, unpolished,
RUGGEDNESS. } harsh, severe, rude, uncivil, boisterous.

Tho came this woful Theban Palamon
With flotery berd, and ruggy assy heres,
In clothes blake, ydropped all with teres,
And (passing over of weping Emelie)
The reufullest of all the compaignie.

Chaucer. *The Knightes Tale*, v. 2814.

For experiēce teacheth, that of a rugged colt commeth a good horse.

Hall. *Henry IV.* fol. 9.

Maud, ruggy, thither skipped,
She was vglye hipped
And vglye lipped.

Skelton. *Elinour Rimming*.

The rugged forehead, that with grave foresight
Welds kingdomes, causes, and affaires of state,
My looser rimes, I wote, doth sharply wite
For praysing love as I have done of late.

Spenser. *Faerie Queene*, book iv. can. 1.

ARRI. Come, ye must resolve, say yea or no.

ORIAN. Then no; nay, look not ruggedly upon me,
I am made up too strong to fear such looks.

Beaumont and Fletcher. *The Woman-Hater*, act v. sc. 3.

And as for the ruggednesse of any blade, it the bloud of a bucke goat will take it away more effectually, and pollish it better than the very file.

Holland. *Plinie*, book xxviii. ch. ix.

But, as an elf (the devil's valet)
Is not so slight a thing to get;
For those that do his business best,
In hell are us'd the ruggedest.

Butler. *Hudibras*, part iii. can. 1.

For I am apt to suspect that if we were sharp-sighted enough, or had such perfect microscopes, as I fear are more to be wished than hoped for, our promoted sense might discern in the physical surfaces of bodies both a great many latent ruggednesses, and the particular sizes, shapes, and situations of the extremely little bodies that cause them.

Boyle. *Works*, vol. i. p. 680. *The Experimental History of Colours*.

This respect, therefore, we owe to humane nature, which is common to all men, to file off that unmanly sharpness and ruggedness of humour which renders us perverse and untractable in our conversation.

Scott. *Christian Life*, part iii. ch. ii. p. 579.

Then to my ear transmit some gentle song,
Of those whose lives are yet sincere and plain,
Their bounded walks the rugged cliffs along,
And all their prospect but the wintry main.

Collins. *On the Superstitions of the Highlands of Scotland*.

RUGILUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, the basal joint large, clavate, third slightly longer than the second, which, with the fourth and fifth, are nearly of similar form and length, the remainder gradually increasing in thickness to the tip, the apical joint longer, somewhat conic; *palpi* four, filiform; maxillary with the third joint ovate, rather clavate, the terminal minute; *labrum* with two prominent dentations anteriorly in the middle; head large, orbiculate; eyes small; *thorax* small, much narrowed in front; *abdomen* broad, the penultimate joint longest, the apex obtuse; legs long, slender;

tibiæ simple; *tarsi* pentamerous, with the fourth joint simple.

Type of the genus, *Pæderus orbiculatus*, Fabricius; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. v. p. 278. About half a dozen species found in Europe, of which four occur in Britain, one of which, *R. fragilis*, is a highly beautiful and rare species.

RUGINE, v. } Fr. *rugine*, *ruginer un os*, to scale
RUGINE, n. } or scrape a bone, Cotgrave; from the Lat. *runcina*, a plane; (Menage;) *runcina* from *runcare*, to hew, to hoe, to cut up.

You ought to apply it on the suspected part; and the next day, where you shall find it moist, there you are to *rugine* it.

Wiseman. *Treatises*, vol. ii. book v. p. 109. *Of Wounds of the Head*.

I open'd the fissure with my *rugines*, scraping away its edges that no sanies or matter might be detain'd.

Id. *Ib.* p. 130.

RUGOSE, } Fr. *rugueux*, *rugosité*; It. *rugoso*;
RUGOSITY. } Sp. *rugoso*; Lat. *ruga*; Gr. *ρυτίς*, from *ρυῖν*, *trahere*; *ruga*, a wrinkle, being (Vossius) *aliud nihil quam cutis in plicas et quasi sulcos contracta*.

Wrinkled, drawn or contracted into folds, furrows, or wrinkles.

Weaknesses, whether they be outward, as stiffness, contraction, *rugosity*; or inward, as aches, pains, numbness, palsies, cramps, tremblings.

Smith. *On Old Age*, p. 63.

The signs are evident to the sight: the inside is turned outward, and the tumour is of a fleshy colour and *rugous*, by reason of the folds and wrinkles of the coat.

Wiseman. *Treatises*, vol. i. book iii. ch. ii. p. 352.

RUIN, v. } Fr. *ruiner*, *ruine*; It. *ruinare*, *ruin*;
RUIN, n. } Sp. *arruinar*, *ruina*; Lat. *ruina*, from
RUINATE, v. } *ruere*; and that from Gr. *ρυῖν*, *trahere*, to draw or drag.
RUINATION, }
RUINER, } *Ruere* is to draw, drag, or pull, so
RUINOUS, } as to cause a downfall, a destruction.
RUINOUSLY. } To ruin is, hence,

To destroy, or cause or bring to destruction; to overthrow, to fall or cause to fall, to overturn, to demolish, to subvert, to lay waste; to pull, tear, break, to pieces; to bring to waste or want.

For in this world there is no creature,

As to my dome, that ever saw *ruine*

Straunger than this, through case or aventure.

Chaucer. *Troilus and Creseide*, book iv.

At Rome first if we begin,
The wall and all the citie within
Stante in *ruine*, and in decaies
The felde is where was the palais.

Gower. *Conf. Am.* p. 14. *The Prologue*.

The buildings within it are also of earth, but ruined and out of good order.

Hakluyt. *Voyages, &c.* vol. i. p. 329. *M. Anth. Jenkinson*.

True it is that this part vnderneath remaineth at this day inhabitable, because of the corrupt aire, as also for that by time, which consumeth all things, it is greatly ruined.

Id. *Ib.* vol. ii. p. 199. *The Pilgrimage to Mecca*.

Aurely, whiche, as before ye haue harde, helde and occupied the myddell part of Brytayne, with Cambria or Walis, dyd his dilygence to repayre *ruynous* places, as well temples and other.

Fabyan. *Chronicle*, ch. xcv. p. 69.

The power of this empyre is ruinously deminished.

Bale. *Image of both Churches*, part ii. fol. 133.

Therefore, Sir Terpin, from you lightly throw
This squalid weede, the patterne of dispaire,
And wend with me, that ye may see and know
How fortune will your ruin'd name repaire.

Spenser. *Faerie Queene*, book v. can. 4.

RUGI-
LUS
RUIN.

RUIN.
—
RULE.

Ye heavenly spirites, whose ashie cinders lie
Under deep *ruines*, with huge walls opprest,
But not your praise, the which shall never die
Through your faire verses, ne in ashes rest.

Spenser. *The Ruines of Rome*.

But Priam's amorous birth,
Against Tydides bent his bow, hid with a hill of earth,
Part of the *ruinated* tombe for honor'd Ilus built.

Chapman. *Homer. Iliad*, book xi. p. 149.

Of these Roman coynes great plenty haue beene found, and
daily are found, which were hid, as the Saxon Chronicle saith,
when Maximus carried so many Britaines into France with him,
and at diuers other times ouercouered in the ground in the sodaine
ruinating (in some Editions *ruination*) of townes by the Saxons and
others.

Camden. *Remaines*, p. 199.

She gript his hand, and said,
Mars, Mars, thou *ruiner* of men, that in the dust hast laid
So many cities, and with bloud thy godhead dost disteine.

Chapman. *Homer. Iliad*, book v. p. 64.

And all the hinder partes, that few could spie,
Were *ruinous* and old, but painted cunningly.

Spenser. *Faerie Queene*, book i. can. 4.

So Heien wept, when her too faithful glass
Reflected to her eyes the *ruins* of her face.

Dryden. *Ovid. Metamorphoses*, book xv.

The diadem, with mighty projects lin'd
To catch renown by *ruining* mankind,
Is worth, with all its gold and glitt'ring store,
Just what the toy will sell for, and no more.

Cowper. *Table Talk*.

But I will rally and combat the *ruiner*:
Not a look, not a smile, shall my passion discover.

Goldsmith. *Song*.

Though a particular merchant, with abundance of goods in his
warehouse, may sometimes be *ruined* by not being able to sell them
in time, a nation or country is not liable to the same accident.

Smith. *Wealth of Nations*, book iv. ch. i.

Of all these expensive and uncertain projects, however, which
bring bankruptcy upon the greater part of the people who
engage in them, there is none perhaps more perfectly *ruinous*
than the search after new silver and gold mines.

Id. *Ib.* book iv. ch. vii.

RULE, v. } Fr. *reigler*, *reigle*; It. *regolare*, *re-*
RULE, n. } *golo*; Sp. *reglar*, *regla*, from the Lat.
RU'ABLE, } *regula*, itself from *reg-ere*; of which
RU'LESS, } the Latin Etymologists give no satis-
RU'LER, } factory account. In A. S. we have
RU'LY. } *regol*, *regula*, *norma*, *canon*, and the
verb *ric-sian*, Goth. *raignon*, *reikinon*, *regere*, *reg-*
nare, *imperare*, *gubernare*, to rule or reign, command
or govern. See RIGHT. *Rule-less*, written by Spenser,
rulesse.

As the French *reigler*, to rule, is,

"To order, govern; temper, moderate; guide, square,
direct; to do things by line and level; also, to decree,
establish, determine, ordain; also, to give a rule (or
order) in a cause." Cotgrave.

For richtfulliche reson, sholde *ruete* zow alle.

Piers Plouhman. *Vision*, p. 15.

And for thy rygtful *ruelyng*. be rewardid in hevene.

Id. *Ib.* p. 8.

Take ghe tent to ghou and to al the flok in which the hooly
goost hath sett ghou bisschopis to *reule* the chirche of God which
he purchasid with his blood.

Wiclif. *Dedis of Apostis*, ch. xx.

I crie out on the ministres, quod he,
That shulen kepe and *reulen* this citee;
Harow! alas! here lith my felaw slain.

Chaucer. *The Nonnes Preestes Tale*, v. 15049.

RAISOUN. Knowest him no more?

LAMAUNT. Nay, certes, I,

Saue that he yafe me *rules* there,
And went his way I nist where.

Id. *The Romant of the Rose*.

Their hoost of Southworke that with them went as ye have herde
to fore,
That was *rewler* of them al, of las and eke of more,
Ordeyned their dyner wisely.

RULE.
—
RUM.

The Pardonere and Tapstere.

But whyle the lawe is *ruled* so,
That clerkes to the werre intende,
I not howe that thei shall amende
The wofull worlde.

Gower. *Conf. Am. The Prologue*.

A kinge after the *reule* is holde
To modifie, and to adresse
His yestes vpon suche largesse,
That he measure nought excede,

Id. *Ib.* book vii. p. 221.

Let them learn to know that God hathe appoynted them, in
pain of eternal damnatiō, to be subiectes and not superiours, to be
ruled and not to be *rulers*, to be priuate persons and not reform-
ers of common causes.

Stephan. Bishop of Winchester. *True Obedience*, p. 19. To the
Reader.

The olde queene, sir Roger Mortimer, and the bishop of Elie,
in such sorte *ruled* the rost, that all the rest of the nobles and
barons, cast with themselues howe best they might redresse and
remedie the great inconueniences that vnto the realme, by meanes
of them, grewe and happened.

Fox. *Actes*, &c. fol. 345. Edward II.

I meane the sonnes of such rash sinning sires
Are seldome sene to runne a *ruly* race.

Gascoigne. *The Complaynt of Phylomene*.

Ne shall the Saxons selues all peaceably
Enioy the crowne, which they from Britons wonne
First ill, and after *ruled* wickedly.

Spenser. *Faerie Queene*, book iii. can. 3.

Ne thine be kingdomes, ne the scepters thine,
But realmes and *rulers* thou doest both confound,
And loyall truth to treason doest incline.

Id. *Ib.* book ii. can. 7.

For the removing the impression of your nature to be opiniastre
and not *ruable*; first, and above all things, I wish that, all matters
past which cannot be revoked, your lordship would turn altogether
upon insatisfaction, and not upon your nature or proper disposition.

Bacon. *Works*, vol. iii. p. 192. *Letters Temp. Eliz.*

Lo! there lives also the immortall praise
O womankind, most faithfull to her mate,
Penelope; and from her far awayes
A *rulesse* route of yongmen, which her wood,
All slaine with darts, lie wallowed in their blood.

Spenser. *Virgil. Gnat*.

This author looked upon it as a *ruled* point, a thing universally
agreed to, that there neither was nor could be any demonstration
a priori of the existence of God.

Waterland. *Works*, vol. iv. ch. i. p. 407. *On the Argument a Priori*.

And some, with whom compar'd your insect-tribes
Are but the beings of a summer's day,
Have held the scale of empire, *ru'd* the storm
Of mighty war.

Thomson. *Spring*.

Bold was thy aim, and glorious was the prize!
(Ulysses, with a scornful smile, replies;)
For other *rulers* those proud steeds demand,
And scorn the guidance of a vulgar hand.

Pope. *Homer. Iliad*, book x.

Thy *rulers* load thy credit, year by year,
With sums Peruvian mines could never clear;
As if, like arches built with skilful hand,
The more 'twere press'd the firmer it would stand.

Cowper. *Expostulation*.

RULINGIA, in Botany, a genus of the class Dode-
candria, order Monogynia, natural order Partulacacæ.
Generic character: calyx two-leaved; corolla, petals
five; capsule a slender cone, one-celled, six-valved,
valves deciduous; seeds winged.

Five species, natives of the South of Africa.

RUM, Mr. Thomson says, is "the American name
for spirit distilled from sugar. It was called *kill devil*
by sailors, and thence, in cant, signified a parson. It

RUM. is said, by the annotator on Swift, to be in Ireland "a cant word for a poor country clergyman." By usage, RUMBLE. A queer, odd, indescribable person or thing.

Besides what *rum* we sold by the gallon or firkin, we sold it made into punch, wherewith they grew frolicksome.

Dampier. *Voyage to Campeachy*, Anno 1675.

I pity them greatly, but I must be mum,
For how could we do without sugar and *rum*?

Cowper. *Pity for Poor Africans*.

Thus began his meek wife:

It must and it shall be a barrack, my life,
I'm grown a mere mopus; no company comes,
But a rabble of tenants, and rusty dull *rum*s.

Swift. *The Grand Question debated*.

RUM (Danish, wide, ample, roomy) is one of the Hebrides, in the Shire of Argyll, and Parish of Small Isles. It lies about seven miles to the West of the Isle of Eigg, is eight miles long, and much the same in breadth, and contains upwards of 22,000 acres. The general aspect of this island is mountainous, as it consists of an irregular group of high hills rising out of the sea, without plains, and scarcely diversified by an intervening valley. Oreal, the highest of its Western summits, was estimated by Dr. Macculloch at 1798 feet; and Ben More, the loftiest of its Eastern group, was supposed by him to be 500 feet higher. In proportion to its size it may be deemed the most sterile of the Western Isles; even kelp, the staple produce of this stormy group, being scantily supplied by its rugged cliffs. However, sheep of delicious flavour, though of diminutive size, are reared on it; and its small race of horses is beautifully shaped. From the nature both of soil and climate, there is but little land in tillage here. Its only harbour is Loch Skresort, on its Eastern side: it is spacious, easy of access, and affords good anchorage. Sterile and bleak as *Rum* is, it has its charms: "Although," says the writer just quoted, "the rough and dangerous shores, the trackless surface, and the perennial rain of this island are repulsive to the general traveller, the Geologist will meet with appearances of such interest as to induce him to brave its tempests, and defy the toil which he must encounter in its investigation." He ranges it among the trap islands of this group. Its rocks present examples of both the stratified and unstratified classes. Population 394. North latitude 57°, West longitude 6° 15'.

Macculloch, *Western Islands*.

RUMBLE, v. } Fr. *rommeler*; Ger. *rumpeln*;
RUMBLE, n. } D. *rommelen*, *strepere*, from the
RUMBLING, n. } A. S. *hræman*, to *reem*, to cry out,
to make a noise. See GRUMBLE, and SCREAM.

To make a confused, continued noise, as of any substance heavily rolling.

He slily toke it out, this cursed heine,
(Unweting this preest of his false craft)
And in the pannes botome he it laft.
And in the water rombled to and fro,
And wonder prively toke up also
The coper teine.

Chaucer. *The Chanones Yemannes Tale*, v. 16717.

The peple cried and rombled up and down,
That with his eres herd he how they sayde,
Wher is this false tyrant, this Neroun?

Id. *The Monkes Tale*, v. 14389.

Aboute whome he found mucche heavynesse, *rumble*, haste and busynesse, carriage and conueyaunce of her stuffe into saintuary.
Sir Thomas More. *Workes*, fol. 43. *The History of King Richard III.*

In the mean while the skies gan *rumble* sore.

Surrey. *Virgil. Æneis*, book iv.

For none otherwise dooeth the doctrine of the Ghospell trouble the people, but as a medicine of phisike doeth grutche or stiere the body. For excepte there bee fyrste a stiering and a *roumbleing* in the bodie, it must nedes wholly perishe altogether.

Udall. *Erasmus*, ch. xxiii. fol. 375. S. Luke.

His batt' red ballances in peeces lay,
His timbered bones all broken rudely *rumbled*;
So was the high-aspyring with huge ruine humbled.

Spenser. *Faerie Queene*, book v. can. 2.

The secret heard, she plighted him her troth
(And sacred sure is every woman's oath)
The royal malady should rest unknown,
Both for her husband's honour and her own;
But ne'ethless she pin'd with discontent;
The counsel *rumbled* till it found a vent.

Dryden. *The Wife of Bath's Tale*.

Therefore you wisely scorn your style to humble,
Or for the sense's sake to wave the *rumble*.

Butler. *A Palinode*.

RUMEX, in *Botany*, a genus of the class *Hexandria*, order *Tryginia*, natural order *Polygoneæ*. Generic character: calyx three-leaved; corolla, petals three, conniving; seed one, triangular.

This genus, of which more than forty species have been described, seems to be confined to the Northern hemisphere. *R. sanguineus*, *R. crispus*, *R. acutus*, *R. obtusifolius*, *R. pulcher*, *R. maritimus*, *R. palustris*, *R. aquaticus*, *R. digynus*, *R. acetosa*, the Common Sorrel, and *R. acetosella* are natives of England; some of the species are among the commonest of the English weeds called Dock.

RUMIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* simple in both sexes, a little thickened and obscurely serrated within in the males; *palpi* two, short, rather incurved, very squamous, triarticulate, the basal joint a little stout, bent, second larger, curved outwards, and slightly narrowed, terminal one small, ovate-conic; *maxillæ* long, thickened at the base; head small; *thorax* slender, rather woolly; wings partially expanded during repose; anterior pair entire, posterior obtusely angular in the middle; *abdomen* slender, carinated down the back, rather stouter in the females; *larva* with fourteen legs, elongate, cylindrical; head round, two prominent tubercles on the sixth segment; the sides a little roughened posteriorly; *pupa* slender, formed in a slight web amongst leaves.

Type of the genus, *Phalæna (Geometra) Cratægata*, Linnæus; Wilkes, pl. xxxix. fig. 80. One species, a native of Europe, common in England.

RUMINATE, v. } Fr. *ruminer*; It. *ruminare*,
RUMINATION, } Sp. *rumiar*; Lat. *ruminare*, from
RUMINATOR, } *rumen* or *ruma*, the gullet, the
RUMINANT, adj. } passage to the stomach, from
RUMINANT, n. } *pūma*, the course or passage.

Hence

To *ruminate* is to pass and repass the food to and from the stomach, to repass it for chewing again; and hence, further, to chew the chew'd or cud; and met. to revolve, to reflect, to re-examine; to weigh, to ponder, to deliberate, to muse or meditate upon.

Let hym, before that occasion of ire doth happen, accustome hym selfe to beholde, and marke well them that be angry, with the successe of that anger, and *ruminate* it in his mynde a good space after.

Sir Thomas Elyot. *Castel of Helth*, book i. ch. ii. p. 63.

For my own particular, the more I *ruminate* upon it, the more it astonisheth my imagination and shaketh all the cells of my brain; so that sometimes I struggle with my faith, and have much ado to believe it yet.

Howell. *Letter 24*, book ii. p. 441.

RUMBLE.
—
RUMI-
NATE.

RUMI-
NATE.
—
RUM-
MAGE.

Now there was near unto this place a wild fig-tree which they called *ruminalis*, of the name of Romulus, as the most part thought; or else because the beasts feeding there were wont to come under the same in the extreame heat of the day, and there did *ruminate*, that is, chew their cud in the shadow.

Sir Thomas North. Plutarch, p. 17. Romulus.

It is a melancholy of mine owne, compounded of many simples, extracted from many objects, and indeed the sundrie contemplation of my traueles, in which by [my] often *rumination* wraps me in a most humorous sadness.

Shakspeare. As You Like It, fol. 200.

She [Nature] hath employed all these methods, as fermentation in the stomachs of most terrestrial and all aquatick animals; expression and squeezing in the omasus of *ruminant* quadrupeds, and in the intestines of all creatures.

Ray. Of the Creation, part ii. p. 401.

The description these [writers] give of the muscular part of the gullet, Dr. Drake saith, is very exact in *ruminants*, but not in men.

Derham. Physico-Theology, book iv. ch. xi. No. 40.

A various groupe the herds and flocks compose,
Rural confusion! on the grassy bank
Some *ruminating* lie; while others stand
Half in the flood, and, often bending, sip
The circling surface.

Thomson. Summer.

Perhaps some doctor, of tremendous paunch,
Awful and deep, a black abyss of drink,
Outlives them all; and from his bury'd flock
Retiring, full of *rumination* sad,
Laments the weakness of these latter times.

Id. Autumn.

As when a traveller, a long day past
In painful search of what he cannot find,
At night's approach, content with the next cot,
There *ruminates* a while his labour lost.

Young. The Complaint. Night 9.

RUMMAGE, or
ROO'MAGE, *v. and n.*
Ro'MMAGER,
Ro'MMAGING, *n.*

Skinner says, signifies to
remove the goods in the
hold of a ship. The Quo-
tations from Hakluyt leave

no doubt as to the meaning.

To fill a *room* or space; to find *room* or space for; to pack or stow away; and, hence, to look into, search, examine, the *roomage* or *space* into which things are packed or stowed; to search, to toss or tumble about in searching. See *Room*.

And that the masters of the ships do looke wel to the *romaging*, for they might bring away a great deale more then they doe, if they would take paine in the *romaging*.

Hakluyt. Voyages, &c. vol. i. p. 308. Letter of the Mos. Companie.

The master must provide a perfect mariner called a *romager*, to raunge and bestow all merchandize in such place as is conuenient.

Id. Ib. vol. iii. p. 862. Orders of the Contract. House.

Now whilst the mariners were *romaging* the shippes, and mending that which was amisse, the miners followed their labour for getting together of sufficient quantitie of ore, and the carpenters indeuoured to doe their best for the making vp of the boate or pinnesse.

Id. Ib. vol. iii. p. 88. M. Frobisher.

The first thing he [the said familiar] doth, he seizeth the party's breeches, searcheth his pockets, and taketh his keys, and so *rummageth* all his closets and trunks.

Howell. Letter 42. book i. sec. 5. p. 233.

And this (I take it)
Is the maine motiue of our preparations,
The sourse of this our watch, and the cheefe head
Of this post-hast and *romage* in the land.

Shakspeare. Hamlet, fol. 153.

Last winter, being urged to publish my History of Cold, (which soon after came forth,) I *rummaged* among my loose papers.

Boyle. Works, vol. iii. p. 4. Discourse to the Reader.

Our greedy seamen *rummage* every hold,
Smile on the booty of each wealthier chest,
And, as the priests who with their gods make bold,
Take what they like, and sacrifice the rest.

Dryden. Annus Mirabilis.

RUMMER, from the *D. ruymmer, ampliare*, to enlarge.

A large (*roomy* or spacious) vessel; a large glass.

Then Rhenish *rummers* walk the round;
In bumpers every king is crown'd.

Dryden. Epistle 7.

With that
A German oft has swill'd his throat, and sworn,
Deluded, that imperial Rhine bestow'd
The generous *rummer*, whilst the owner, pleas'd
Laughs inly at his guests, thus entertain'd
With foreign vintage from his cider cask.

Philips. Cider, book ii.

HARM. SEN. He refus'd to pledge the last *rummer*; so I am out of charity with him.

Dryden. Amboyna, act iv. sc. 1.

RU'MOUR, *n.*

RU'MOUR, *v.*

RU'MOURER,

RU'MOROUS.

Fr. *rumeur*; It. *romore*; Sp.

rumor; Lat. *rumor*, from *pūma*,

dictum, or rather from *peūma*,

fluxus; *rumor* being, *nihil aliud*,

quam sermo in populum emanans. It may have sprung from the A. S. *hræman*; see *ante*, to RUMBLE; a word which seems not unhappily to describe the confused, continued, or repeated sound, in or by which *rumours* are conveyed: *rumour* being applied to

A spreading, circulating conveyance of news, indistinct circulation or report; generally, report, fame.

But ye semen certes ye can do nothing a right but if it be for the audience of the people, and for yle *rumours*.

Chaucer. Boecius, book ii. De Consolatione.

And nowe partely a certayne *rumour* and fame of the cumming of Christe beeyng secretly spred abroad by many.

Udall. Erasmus, ch. iii. fol. 10. S. Matthew.

This monster blithe with many a tale gan sow
This *rumor* then into the common ears.

Surrey. Virgil. Aeneis, book iv.

The *rumourouse* fall of antichryst and his kyngdome.

Bale. On the Revel, p. 3.

Rumour doth double, like the voice and eccho,
The numbers of the feared.

Shakspeare. Henry IV. fol. 86.

This bearer will tell you what we hear of certain *rumorous* surmises at N. and the neighbouring towns; God (who is himself the true center of rest) make us all quiet and have you in his love.

Reliquiæ Wottonianæ, p. 377.

BRU. Go see this *rumorer* whipt, it cannot be,
The Volces dare breake with vs.

Shakspeare. Coriolanus, fol. 24.

But ah, I dream! th' appointed hour is fled!
And hope, too long with vain delusion fed,
Deaf to the *rumour* of fallacious fame,
Gives to the roll of death his glorious name.

Pope. Homer. Odyssey, book i.

What then befel him, little I relate,
For various tales are *rumour'd* of his fate.

Hoole. Orlando Furioso, book xxix. v. 39.

RUMP,

RU'MPER,

RU'MPISH.

Ger. *rumpf*; D. *romp, truncus*; Sw.

rumpa, cauda. Wachter derives from

the Lat. *rump-ere, quia truncus est pars a toto avulsa*. It may be from the A. S. *rum, amplus, latus*, large, broad. For *rump*, in English History see the Quotation from Hume.

What may I deeme of thee (faire fawlcen) now,
That neither to my lure nor traine wilt bow,
But this, that when my backe is turnde and gon,
Another gives thee *rumpes* to tyre upon.

Turbervile. To a Fickle and Vnconstant Dame.

Thy diet shall be such,
thy tiring *rumpes* so bare,
As thou shalt know thy keeper well
and for none other care.

Id. To his Friend.

RUM-
MER.
—
RUMP.

RUMP
—
RUN.

It certainly was the most ugly of jades,
His hips and his *rump* made a right ace of spades.
Cotton. Voyage to Ireland, can. 3.

Whacum had neither cross nor pile,
His plunder was not worth the while;
All which the conqueror did discompt,
To pay for curing of his *rump*.
Butler. Hudibras, part ii. can. 3.

Dr. Palmer, a great *rumper*, warden of All Souls' College, being then very ill and weak, had a *rump* thrown up from the street at his windows. He had been one of the *rump-parliament*, and a great favourite of Oliver.
Life of A. Wood, p. 140.

He, Thomas Widdowes, hath written ——— the ——— just devil of Woodstock; or, a true narrative of the several apparitions, the frights and punishments inflicted upon the *rumpish* commissioners sent thither to survey manors and houses belonging to his majesty, Lond. 1649, qu.
Wood. Athenæ Oxonienses, vol. ii. p. 193.

A Turkey carpet was his lawn,
Whereon he lov'd to bound,
To skip and gamble like a fawn
And swing his *rump* around.

Cowper. Epitaph on a Hare.

It was agreed that, burying former enmities in oblivion, all efforts should be made for the overthrow of the *rump*; so they called the parliament, in allusion to that part of the animal body.
Hume. History of England, ch. lxii. Anno 1659.

RUMPHIA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Terebintaceæ*. Generic character: calyx three-cleft; corolla, petals three; drupe three-celled

One species, *R. Amboinensis*, native of the East Indies.

RU'MPLE, v. } A. S. *hrympelle*, a *rimple*, a
RU'MPLE, n. } wrinkle. See RIMPLE.

Ans. The peremptory analysis that you call it, I believe will be so hardy as once more to unpin your spruce fastidious oratory, to *rumple* her laces, her frizzles, and her hobins, tho' she wince and fling never so peevishly.

Milton. Works, vol. i. p. 79. Animadversions upon the Remonstrants' Defence, &c.

And yet Lucretia's fate would bar that vow;
And fair Virginia would her fate bestow
On Rutila; and change her faultless make
For the foule *rumple* of her camel-back.

Dryden. Juvenal. Satire 10.

Each vital speck, in which remains
The entire but *rumpled* animal, contains
Organs perplex'd, and clues of twining veins.

Blackmore. On the Creation, book vi.

RUN, v. } Goth. and A. S. *rinnan*; Ger. *ren-*
RUN, n. } *nen*; D. *runnen*; Sw. *renna*. In
RU'NNEL, } A. S. it was also written *yrnan, ærnan*;
RU'NNER, } in old English *renne, currere, fluere*;
RU'NNING, n, } always applied to swift motion, whe-
RU'NAGATE, } ther of animate or inanimate things,
RU'NAWAY. } as the horse *runs*, the stream *runs*, met.

time *runs*, i. e. moves or passes along, swiftly, speedily.

To move or pass, come or go, swiftly, speedily; to keep, pursue, or follow, to keep or hold, to proceed in a way or path, course or current, train or tract; to flow, to stream, to glide along, to move as a current of water, as any liquid or fluid, to melt.

To *run after*; to pursue, to follow.

To *run away*; to flee.

To *run over*; to overflow; to move; go over hastily, cursorily.

To *run through*; to pierce, to stab; go through, look through, hastily, cursorily.

Ac ladde hym in to London, & ys men echon,
To a *rennyng* water, þat get ys þer y wene.

R. Gloucester, p. 80.

RUN.

þorgh out Chestreschire werre gan þei dryue.
Had þei no stýntýng, bot þorgh alle þei ran,
Unto Wýnchestre, alle þe lond þei wan.

R. Brunne, p. 1

Emþours and erles. and alle manē lordes
þorouh giftes haven geomen. to *rennen* and to ryde.
Piers Plouhman. Vision, p. 51.

And alle Rome *renners*. for robbers in Fraunce
Bere no sulver over see. þut kýnges sýgne shewep.

Id. Ib. p. 70.

And anon alle the puple seynge Ihesus was astonyed and thei dredden, and thei *rennyng* gretten him.

Wiclif. Mark, ch. ix.

And thei tweyne *runnen* togidre, and thilk othir disciple ran bfore Petir and cam first to the graue.

Id. Jon, ch. xx.

Ran cow and calf, and eke the very hogges
So fered were for berking of the dogges,
And shouting of the men and women eke,
They *rennen* so, hem thought hir hertes breke.
Chaucer. The Nonnes Preestes Tale, v. 15391.

The time that may not sojourne
But goth, and may neuer retourne,
As water that doun *runneth* aye
But neuer droppe returne may.

Id. The Romant of the Rose.

For telleth hir, how his hunt hath blow,
And howe his houndes haue well *ronne*,
And howe there shone a mery sonne.

Gower. Conf. Am. book v.

This signe is veraily resembled
Liche to a man whiche haue assembled
In either honde a water spout,
Wherof the stremes *rennen* out.

Id. Ib. book vii.

Those same workes that bee done afore fayth, though they seeme vnto men laudable, yet are they but vayne, and I doe iudge them as great strength, and as swift *running* out of the way.

Barnes. Workes, p. 233. Faith onely iustifieth before God.

We saw many of them wel fauoured, hauing blacke and great eyes, with a cheerefull and steady looke, not strong of body, yet sharp witted, nymble, and exceeding great *runners*.

Hakluyt. Voyages, &c. vol. iii. p. 296. John de Verrazzano.

Whome they coulde not ouercome by battell, they ouercame with fear of beating and made them *run away*, not like enemies ouercome by battell, but like *runnagate* slaues.

Arthur Goldyng. Justine, book ii. fol. 12.

Wondering at it, he demaunded the cause of hys *runnagates*, of whom a great number resorted to him day by day.

Id. Cesar. Commentaries, book vii. fol. 206.

Cesar hauing vnderstanding hereof by hys prysoners and *run-aways*, sent in his horsmen before, and commaunded his footemen to folow immediately after them.

Id. Ib. book v. fol. 119.

That cruell word her tender hart so thril'd,
That suddein cold did *ronne* through every vaine.
Spenser. Faerie Queene, book i. can. 7.

And then with such as with the time did *run*,
In most upright opinion he doth stand;
As one that never cross'd what they began,
But seem'd to like that which they took in hand.

Daniel. History of Civil Wars, book v.

Thus spake she, and Vlysses knew 'twas Pallas by her voyce;
Ran to the *runners*; cast from him his mantle, which his man
And herald, grave Eurybates, the Ithacensian,
That follow'd him, took up.

Chapman. Homer. Iliad, book ii. p. 20.

Variety (as both Music and Rhetoric teacheth us) erects and rouzes an auditory, like the masterful *running* over many cords and divisions.

Milton. Works, vol. i. p. 86. Animadversions on the Remonstrants' Defence.

My son was born a freeman, this a slave
To beastly passions, a fugitive,
And *run away* from virtue.

Beaumont and Fletcher. The Queen of Corinth, act v. sc. 2.

RUN. His discourse *runs* upon this subject; whether God will pardon the sins of men upon any other terms than those which are declared in the Christian religion; the former he calls works, and the latter faith.

RUPALA.

By this the vessel half her course had *run*,
And as much rested till the rising sun.
Dryden. Ovid. Metamorphoses, book x.

By land and sea, where'er my arms he spies,
An ignominious *runagate* he flies.
Rowe. Lucan. Pharsalia, book v.

Pale Melancholy sat retir'd;
And from her wild, sequester'd seat,
In notes, by distance made more sweet,
Pour'd through the mellow horn her pensive soul;
And, dashing soft from rocks around,
Bubbling *runnels* join'd the sound.

Collins. Ode on the Passions.

It obliges all of them to be more circumspect in their conduct, and, by not extending their currency beyond its due proportion to their cash, to guard themselves against those malicious *runs* which the rivalry of so many competitors is always ready to bring upon them.

Smith. Wealth of Nations, vol. ii. book ii. ch. ii. p. 83.

RUN'DLE, } *i. e. a roundlet, from its shape.*
RU'NDLET. } Skinner. In Chapman, his *rundled* target is—his rounded target.

But Ajax a farre greater stone lift up, and (wreathing round,
With all his body layd to it) he sent it forth to wound,
And gave unmeasur'd force to it; the round stone broke within
His *rundled* target.

Chapman. Homer. Iliad, book xvii. p. 101.

I have sent you a *runlet* of it [wine] in the ship Lion, and if it come safe and unprick'd, I pray bestow some bottles upon the lady (you know) with my humble service.

Howell. Letter 36. book i. sec. 1. p. 65.

In that solemn feast of his which hee made at his triumph, did not he [Julius Cæsar] distribute among his guests Falern wines by the whole barrels, and Greeke wine of Chios by the *rundlets*?

Holland. Plinie, book xiv. ch. xv.

Long before that they stood in steed of *rundlets* or small barrels to keepe wine in.

Id. Ib. book xix. ch. v.

— You may
Have there a *rundlet* of brisk claret, and
As much of Alicant.

Cartwright. The Ordinary, act ii. sc. 1.

RUNNET, an apple, also written, and more properly, *rennet, q. v.*

A childe will chose a sweeting, because it is presentlie faire, and pleasant, and refuse a *runnet*, because it is then greene, hard, and soure.

Ascham. Workes, p. 210. The Schole-Master, book i.

RUNNET, also written *rennet, q. v.* In Gloucestershire it is called *running*. *Grose.*

— As nourishing milke, when *runnet* is put in, *Runnes* all in heapes of tough thicke curd, though in his nature thinne.

Chapman. Homer. Iliad, book v. p. 82.

RUNT, or } A Scotch or Welch *runt*, oxen, says
RONT. } Lye, of a much smaller size than ours.
In D. *rind*, *rund*, is *bos*; in Ger. *rind* is also *bos*. Wachter derives from *rennen, co-ire*; the word being properly applied to cattle reserved for breeding. But see Jamieson, and Moore's *Suffolk Words*.

If he porgh traytorie salle be at your deuys,
I salle do him hang hie, or drawe with *runcys*.

R. Brunne, p. 177.

My ragged *rontes* all shiver and shake,
As doen high towers in an earthquake.

Spenser. The Shepherd's Calendar. Februarie.

RUPALA, in Botany, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Proteaceæ*. Ge-

neric character: calyx none; corolla, petals four, cohering at the base; stamens inserted in the centre of the petals; pericarp one-celled, one-seeded.

Two species, natives of the Island of Cayenne.

RUPICOLA, from the Latin *rupis, a rock*, and *colo, to inhabit*. Brisson, *Rockcock*. In Zoology, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak of moderate size, stout, slightly vaulted, and curved at the point, which is compressed and toothed; base of the bill as broad or broader than its depth; lower mandible straight toothed and pointed; nostrils basal, lateral, ovoid, partially open and entirely hidden in the semicircular crest; wings of moderate size, first quill feather elongated into a thread, and the first three shorter than the fourth and fifth; legs stout; tarsus as long as the middle toe, and partially feathered; inner connected to the middle toe beyond the second joint, but the outer only at its root; hind toe very strong and armed with a stout claw.

This genus was first formed by Brisson, but has since been included by Linnæus and Latham among the *Pipræ*, and Cuvier has also included them as a section of that genus. Temminck, however, agrees with Brisson in considering them distinct. Two of the species are natives of America, but the third is found in Asia, and has been described by Sir Stamford Raffles and Dr. Horsfield as a distinct genus by the name *Calypomene*. Temminck, however, does not think there is sufficient variation between them to form a separate genus. They are granivorous.

R. Aurantiaca, Vieill.; *le Coq du Roche*, Buff.; *Guianan*, or *Orange Rockcock*. Rather larger than a Wood Pigeon: general colour of the plumage orange, which becomes more brilliant as the bird increases in age; alar quills brown edged with light yellow, and the first one has its inner web very short for about one-third of its length from the tip; upon the bend and middle of the wings are some touches of white; tail very short and square; the head is ornamented with a crest consisting of two inclining planes of feathers which meet at their tip, and marked on their margin with two semicircles, the lower brown, and the upper light yellow; beak, legs, and claws yellowish-white. The female is distinguished from the male by her plumage being brown, with only slight traces of ferruginous on the rump, tail, and alar quills; the crest is neither so large, so high, nor so round as in the male, but it advances more upon the bill. The young male does not assume his bright plumage at first, but has the brown colour of the female; and at each month more orange is thrown out, till it assumes at last the colours described as those of the adult. It is a native of Guiana, and lives in the deep clefts of rocks and in caverns, the darker parts of which, requiring torchlight to explore, it prefers, and hence it was supposed to be a nocturnal bird; such, however, is not the case, as it is met with in great numbers about the entrance of these caves, but is so shy and active that, unless taken unawares, it escapes to a great distance with a quick but low flight. It feeds on wild fruit, and scratches the earth in search of food like common fowls. Their cry resembles the syllable *ka* pronounced in a shrill, drawling tone. They build their nest of pieces of dry wood in a hole of a rock, and commonly lay two white, spherical eggs about the size of those of a Pigeon. Sonnini mentions having seen them domesticated with poultry at a Dutch post-house on the river Maroni.

RUPALA.

RUPI-
COLA.

RUPI-
COLA.
RURAL.

R. Peruvianus, Tem.; *le Coq de Roche du Pérou*, Buff.; *Peruvian Rockcock*. It is much larger than the last species, and distinguished from it by the tail being longer and not squared; by the wings not being fringed; by the wings and tail being black and the rump ashy; and by the crest being composed of distinct and shorter feathers, and not having any semicircular black stripe upon it. In other respects they so closely resemble the last species, that Buffon has considered them to be merely a variety. It is a native of Peru.

R. Viridis, Tem.; *Calypomena Vir.*; Horsfield, *Green Rockcock*. About six and a half inches long; its general colour brilliant parrot-green, which is lightest around the eyes and on the sides of the neck; head rather large, and the feathers directed forwards from each side so as nearly to conceal the bill; a little above and before the eyes the feathers are deep velvet-black, and only tipped with green, and over the ears the feathers resemble those; wings crossed by three velvet black bands; primary quills and under surface dusky, approaching to black, excepting the outer edges of some which are edged with green; tail short and rounded, green above and bluish-black beneath; irides bluish; legs bluish-black. The female is distinguished by not having any crest, and the feathers of the lore only cover the nostrils; the green is less brilliant, and the black spots on the head are deficient. This species is found among the higher branches of trees in the retired parts of the forests of Singapore and Sumatra.

See Brisson, *Ornithologie*; Buffon, *Histoire Naturelle des Oiseaux*; Temminck, *Planches Coloriées*; Horsfield, *Zoological Illustrations of Java*.

RUPPIA, in *Botany*, a genus of the class *Tetrandria*, order *Tetragynia*, natural order *Fluviales*. Generic character: calyx none; corolla none; seeds four, pedicellate.

One species, *R. maritima*, native of England; it is sometimes found with monoecious flowers.

RUPTION, } Fr. *ruption*, *rupture*; It. *rottura*;
RUPTURE, n. } Sp. *rotura*; Lat. *ruptura*, from *rup-*
RUPTURE, v. } *tum*, past participle of *rump-ere*, to break.

A break or breach, a burst or bursting.

It shalbe necessary lytell and lytell, by chafinge the body, first to mollify the partes consolidate, and to extenuate or make thinne the humours, and to louse and open the poores, and than shall ensue to hym that exerciseth, no peryll of obstruction or rupture.

Sir Thomas Elyot. *Castel of Helth*, book ii. ch. xxxii. fol. 48.

In levell grounds, all ruptures most appeare.

Stirling. *Doomes-day*. *The ninth Houre*.

Mean while the tepid caves and fens and shoares
Thir brood as numerous hatch, from the egg that soon
Bursting with kindly rupture forth disclos'd
Thir callow young.

Milton. *Paradise Lost*, book vii. v. 417.

For we that have business to negotiate here are like to suffer much by this rupture.

Howell. *Letter 27*. book i. sec. 3. p. 151.

The plenitude of vessels or plethora causes an extravasation of blood, by rupture or apertion.

Wiseman. *Treatises*.

When he [Gibbon] returned to England in 1787 I was greatly alarmed by a prodigious increase, which I always conceived to proceed from a rupture.

Lord Sheffield. *Memoirs of Gibbon*.

RURAL, } Fr. *rural*; It. *rurale*; Lat. *ruralis*,
RU'RALLY, } from *rus*; Gr. *ἀρουρα*, *preciso a. Vos-*
RU'RALIST. } *sus*. The Gr. *ἀρούριος*, says Lennep,
denotes *aptum et utilem facere, unde arandi notio*. His
VOL. XXVII.

Editor is inclined to derive *rus* from an obsolete theme, *ῥύ-ειν*, *rumpere*, *rus* being *quod rumpitur, laceratur aratro*, that which is broken, torn asunder by the plough, thus making *rus* mean—*earth*, from the A. S. *er-ian*, which is considered by Tooke to have given the Lat. *ar-are*. May not *rus* have had the same origin?

Rurals, n., countrymen, clowns.

Rural, adj., of or pertaining to the country; having the qualities or properties of country, as opposed to town; suited or adapted to the country.

Where vertue is in a gentyl man, it is commonly myxte with more sufferance, more affabilitie and myldenes thā for the more parte it is in a person *rurall* or of a very base lynage.

Sir Thomas Elyot. *The Governour*, book i. p. 15.

And for the vyllages and men of the countre there about, had ayde the duke agayne the towne and castell, therfore y^e said sir Thomas punysshed the sayd vyllages and *rurallis* by greuous fynes, and helde them i great survytude and daunger.

Fabyan. *Chronicle*, p. 497.

Who knowes not Arlo-hill?

That is the highest head in all men's sights,
Of my old father Mole, whom shepheard's quill
Renowmed hath with hymnes fit for a *rurall* skill.

Spenser. *Faerie Queene*, can. 6. *Of Mutabilitie*.

The wanton wood-nymphs mixt with her light-footed fauns,
To lead the *rural* routs about the goodly lawns.

Drayton. *Poly-olbion*, song 11.

You have recalled to my thoughts an image which must have pleaded strongly with our Egyptian *ruralists* for a direct and unqualified adoration of the solar orb.

Coventry. *Phil. to Hyd. Conv.* 3.

In hunting beasts of prey her youth employs;

And Phœbe rivals in her *rural* joys.

Dryden. *Ovid. Metamorphoses*, book i.

For I have lov'd the *rural* walk through lanes
Of grassy swarth, close cropp'd by nibbling sheep,
And skirted thick with intertexture firm
Of thorny boughs.

Cowper. *The Task*, book i.

The college itself [Jesus] is *rurally* situated at some distance from the body of the town on the Newmarket road.

Wakefield. *Memoirs*, p. 76.

RUSCUS, in *Botany*, a genus of the class *Dioecia*, order *Monadelphia*, natural order *Similacæ*. Generic character: male flower, calyx six-leaved; corolla none; nectary central, ovate, perforated at the apex: female flower like the male; one style; berry three-celled; seeds two.

Seven species, natives of Europe and Africa. *R. aculeatus*, the Butcher's Broom, is a native of England.

RUSH, v. } A. S. *hrecos-an*, *ruere*, *corruere*, *ca-*
RUSH, n. } *dere*, *decidere*; to fall, to fall together;
RU'SHER, } to move with the force and quickness
RU'SHING, n. } of any thing falling. Ger. *rauschen*,
D. *ruyschen*,

To move with force and haste; to push or press on rapidly, violently.

And reyn feldown, and flodis camen, and wyndis blewen, and *ruschiden* into that hous, and it felde not down, for it was foundid on a stoon.

Wiclif. *Matthew*, ch. vii. p. 8.

And hereth him come *rushing* in the greves,
And breking bothe the boughes and the leves,
And thinketh, here cometh my mortal enemy,
Withouten faille, he must be ded or I.

Chaucer. *The Knightes Tale*, v. 1642.

So the Englisshmē brake vp y^e barryers and came to y^e gate, and bet and *rushed* so therat, y^t they made the gate to trymble and shake.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. l. p. 174.

The whiles faire Amoret, of nought affeard,
Walkt through the wood for pleasure or for need,
When suddenly behind her backe she heard
One *rushing* forth out of the thickest weed.

Spenser. *Faerie Queene*, book iv. can. 7.

RURAL.
RUSH.

RUSH.

A gentleman of his train that rode a pretty distance behind him, conceiving by the premises it might be a beginning of some mischievous intent, spurred up his horse, and with a violent *rush* severed him from the duke, who with the rest went on quickly through the town. *Reliquiæ Wottonianæ*, p. 230.

Remit such *rushers* not into the church only but pulpit, to the philosophy school to be shamed.

Whitlock. Manners of the English (1654.)

Wo to the multitude of many people, which make a noise like the noise of the seas, and to the *rushing* of nations, that make a *rushing* like the *rushing* of mighty waters.

Isaiak, ch. xvii. v. 12.

So Belgian mounds bear on their shatter'd sides
The sea's whole weight increas'd with swelling tides;
But if the *rushing* wave a passage finds,
Enrag'd by watery moons, and warring winds,
The trembling peasant sees his country round
Cover'd with tempests, and in oceans drown'd.

Addison. The Campaign.

Upon the *rushing* in of the air into the ether glass (then also made accessible to the atmosphere) the body that at first shone so strongly, and that continued to shine so long, shewed no glimmering of light.

Boyle. Works, vol. iii. p. 169. *Experiments on Light*, &c.

RUSH, *n.* } A. S. *risc* or *rico*. See *ante*, RISE, *n.*,
RU'SHY, } which Mr. Tyrwhitt calls small twigs.
RU'SHED, } D. *rus*, *virgulta*, from *rysen*, to rise or
RU'SHER. } arise. *Rush*, so called from its tall,
upright *rise*, or growth upwards; met.

Any thing of as little value.

Rush-bucklers, perhaps bucklers as slight as if made of *rushes*. *Rusher*, (Ben Jonson,) one who spreads the *rushes*.

To be corsed in constarŷe. hue counteþ nuah a *rusche*.
Piers Plouhman. Vision, p. 47.

That kind bath set through his knowing
About the red roses springing,
The stalke was as *rishe* right,
And thereon stood the knoppe upright.

Chaucer. The Romant of the Rose.

Take into this number also their servants; I mean all that flock of stout bragging *rushbucklers*.

Sir Thomas More. Utopia, vol. ii. book ii. ch. iv. p. 38.

The Portugals haue named them all according to some propriety which they haue; some they call *rushtales*, because their tales be not proportionable to their bodies, but long and small like a *rush*.

Hakluyt. Voyages, &c. vol. ii. part ii. p. 100. *M. Thomas Steuens.*

To come now to the brittle *rushes* that grow in marish grounds, which serve to thatch houses and to make mats.

Holland. Plinie, book xvi. ch. xxxvii.

All the ladies and gallants lie languishing upon the *rushes* like so many pounded cattle in the midst of harvest.

Ben Jonson. Cynthia's Revels, act ii. sc. 1.

Fidlers, *rushers*, puppet-masters, jugglers, and gipsies.

Id. Ib.

A *rushie* ground must be broken up and turned over and over with the broad spade; but if it be stonie, it would be digged with a mattocke or two tined forks.

Holland. Plinie, book xviii. ch. vi.

————— The near'st to her of kin

Is Foothy, tripping down from Vermin's *rushy* lin.

Drayton. Poly-olbion, song 5.

Who thought it not true honor's glorious prize,

By nimble cap'ring in a daintie dance,

To win th' effects of women's wanton eies,

Ne yet did seeke their glorie to aduance

By only tilting with a *rush-like* lance.

Mirror for Magistrates, p. 788.

As slow he winds, in museful mood,

Near the *rush'd* marge of Cherwell's flood.

Warton. Ode 11.

Oft too the coward hare, then only bold
When mischief prompts, or wintry famine pines,
Will quit her *rush-grown* form, and steal, with ear
Up-prick'd, to gnaw the toils.

Mason. The English Garden, book ii.

A narrow brook, by *rushy* banks conceal'd,
Runs in a bottom, and divides the field.

Cowper. The Needless Alarm.

RUSINA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* deeply bipectinated in the males, the pectinations suddenly shortened towards the apex; ciliated in the females; *palpi* two, ascending, densely squamous, with the terminal joint exposed beyond the scales, rather elongate, composed of three somewhat lengthened joints, the terminal one being most slender; the basal joint about half the length of the second, and a little bent, the apical one one-third the length of the preceding, elongate, obtuse; *maxillæ* moderate; head small, pilose; *thorax* not very stout, clothed with loose, hair-like scales, and slightly crested; wings horizontal, entire; the anterior pair elongate, subtrigonal, narrowed at the base, with the shoulder a little rounded; posterior pair orbiculate-triangular, slightly excised towards the costa; body slender, with a tuft at the apex in the males; legs short, robust.

Type of the genus, *Bombyx ferruginea* Esper; Stephens, *Illust. Britt. Ent. (Haustellata)*, vol. iii. p. 112. One species, found occasionally in woods near London, and also in various parts of Europe.

RUSSELLIÆ, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Labiata*. *Generic character*: calyx five-leaved; corolla two-lipped, throat villose, superior lip broad, emarginate; inferior lip three-cleft, segments linear; stigma globose; capsule one-celled, two-valved, many-seeded.

Three species, natives of South America.

RU'SSET, *adj.* } Fr. *rousset*; It. *rossetto*; Lat.

RU'SSET, *n.* } *russus*, somewhat *rosy* or red;

RU'SSET, *v.* } *reddish*, tinged with red; "brown,"

RU'SSETING, *n.* } *ruddy*, inclined to dark red."

Cotgrave.

An apple, so called from its colour.

Russet, *adj.*, is used (Shakspeare) met. as equivalent to homespun; plain, unadorned.

Thus robed in *russett*. ich romede a bonte
Al a somer seson.

Piers Plouhman. Vision, p. 166.

And al so glad of a goun. of a gray *russet*.

Id. Ib. p. 280.

Yea than, (quod I,) what done these priests here,
Nonnes and hermites, freres, and all tho,
That sit in white, in *russet*, and in grene.

Chaucer. The Court of Love.

Which skinnies are painted, some yellow and red, some blacke and *russet*, and euery man according to his owne fancy.

Hakluyt. Voyages, &c. vol. iii. p. 517. *M. John Hawkins.*

Also aboute thys tyme the Gray Fryers were compelled to take theyr old habit *russet*, as the shepe doth dye it.

Fabyan. Chronicles, p. 687.

But his firste wyfe, olde plaine *russet* cote Jone of the cōtrie, good wife truth, commeth creeping home to my lordes cōscience, offering her selfe gently vnto hym, and requiringe hys continuall companie, according to his promis.

Stephan, Bishop of Winchester. Of True Obedience, fol. 62.

That which is either purple or ash-coloured and *russet* to see to, as also that which will soone be dissolved, is of exceeding efficacy.

Holland. Plinie, book xxiv. ch. xii.

RUSSET.

RUSSIA.

Himself a palmer poor, in homely *russet* clad,
(And only in his hand his hermit's staff he had.)
Drayton. Poly-olbion, song 12.

A goodly hotch-potch! when vile *russetings*
Are match'd with monarchs, and with mighty kings.
Hall. Satire 3. book i.

Henceforth my woing minde shall be exprest
In *russet* yeas, and honest kersie noes.
Shakspeare. Love's Labour Lost, fol. 140.

Whole provinces
Appear to our sight then, even leek (like)
A *russet-mole* upon a lady's cheek.
Middleton. The Witch, act i. sc. 2.

Even his Doric dialect has an incomparable sweetness in its clownishness, like a fair sheperdess, in her country *russet*, talking in a Yorkshire tone.
Dryden. Theocritus. Preface.

Thus solitary, and in pensive guise,
Oft let me wander o'er the *russet* mead,
And through the sadden'd grove, where scarce is heard
One dying strain to cheer the woodman's toil.
Thomson. Autumn.

For me, when I forget the darling theme,
Whether the blossom blows, the summer-ray
Russets the plain, inspiring autumn gleams,
Or winter rises in the blackening east;
Be my tongue mute, my fancy paint no more,
And dead to joy, forget my heart to beat.
Id. A Hymn.

Far as the eye could reach no tree was seen,
Earth, clad in *russet*, scorn'd the lively green.
Churchill. The Prophecy of Famine.

RUSSET.

RUSSIA.

R U S S I A.

RUSSIA (in Europe) is bounded on the North by the Arctic Ocean; on the East by the river Kara Baï-garama, the Oural chain, the river Oural to its embouchure in the Caspian, and thence by the shores of this sea to the Eastern extremity of the Caucasian range; on the South by the crest of the Caucasus, and the Black Sea; and on the West by the Principality of Moldavia, Austria, Prussia, the Baltic, and the Norwegio-Swedish Monarchy. Including that portion of Poland which has been annexed to this vast Empire, but excluding Nova Zembla and the archipelago of Spitzbergen, European Russia lies between 18° 20' 15" and 64° 20' 15" East longitude; and between 40° and 70° North latitude. Its extreme length from the Northern slope of the Caucasus, near the sources of the river Samour, to the banks of the Muonio, near Ekontekis in East Bothnia, is 1840 miles of 60 to the degree; and its breadth from the Western slope of the Ourals, near the sources of the Sylva in the Government of Perm, to the Western frontier of Volhynia on a line with Loutsk, is 1300 miles. "The superficial extent," writes Mr. Murray, "notwithstanding very extensive admeasurements, under the direction of the Government, is by no means precisely ascertained. The great Map, of 100 sheets, drawn up chiefly from provincial surveys, gives to it an area of 1,490,000 English square miles. In 1795, the amount was reduced to 1,293,000, by a Map constructed with very great care; but, from some cause or other, this did not include the Provinces of Poltava and Kherson, which, in the great Map, had been rated at 59,000 miles. Since that time, many new astronomical observations have been made, and many errors rectified. Wichmann, in his *Monarchy of Russia*, published at Leipzig in 1813, raised it to 1,396,000. The latest estimate made by Mr. Bramsen, in his *Work of Russia and the Empire of Russia*, published in 1819, raises it to 1,424,000. Humboldt takes it at 2,040,000; but he includes, we presume, the Polish territories. The discrepancies, as to the details, are still more remarkable, and prove that more accurate observations remain to be made, before this vast territory can be considered as duly surveyed."

Face of the country. The surface of European Russia presents an immense undulating plain, bounded on the East by the chain of the Ourals, on the South by Caucasus and the mountains of Taurida, and by those of Finland and Lapland

on the North. Between these points, the entire expanse is an almost unbroken level, in which the elevations never rise beyond a scarcely perceptible table-land, such as the *plateau* of the Valdaï hills, the culminating point of which is only 373 yards,—the low range forming the water-shed between the Arctic and Caspian *versans*, or slopes,—and that which separates the Don and the Volga in the latter half of their courses. It is only to the North of Lake Onega that these hills assume the rank of mountains, under the names of Mounts Olonetz and Maanselka; still these are of inconsiderable height, not exceeding 600 yards, up to their junction with the last ramifications of the chain of the Dofrines. The highest summits in the peninsula of Crimea are those of the Tchatyr dag, which rise to an elevation of 1680 yards. A description has already been given of the Caucasian chain, (see CAUCASUS,) and that of the Ourals may more properly enter into our account of SIBERIA, or ASIATIC RUSSIA.

The geological constitution of European Russia is not very complicated. The predominating formations are tertiary and alluvial; those of an older date, as the secondary, transition, and primitive, occupying comparatively small spaces. In the South, sandstone and calcareous formations are met with on the declivities of the Caucasian chain, in the midst of which occur rocks of igneous origin. The chain of Taurus consists of gneiss, and other micaceous rocks, overlaid on the North by formations similar to those just mentioned as constituting the Northern declivities of Caucasus. From the 47th to the 48th parallel, the Dniepr traverses a primitive district, consisting of gneiss, or of the old red sandstone and calcareous formations; and, between this river and the Don, the Donets flows at the base of a similar district. Two small table-lands of secondary sandstone and calcareous rocks occur on the Northern margin of Lake Bolch, or Bolchoï; and under the 52d parallel, the Volga runs through a soil of like formation to its confluence with the Mologa. Large tracts, composed of the same rocks and of saline deposits, extend between the schistous slopes of the Ourals, the course of the river Oural, and the shores of the Arctic Ocean. Moscow is surrounded by a country of similar character, as well as Lake Ilmen. Gypsum, mercury, and rock-salt are likewise found near the latter, on both sides of the Dvina near the gulf of Livonia, and on either side of the Valdaï

RUSSIA. hills. From the Western extremity of Esthonia to Lake Onega, the soil is traversed by a double band of schistous and calcareous rocks; the mountains, and all the acclivities of Finland, are formed of micaceous rocks, considered to be primitive; and finally, all the plains of Russia, those vast tracts comprised between the points, the geognostic character of which has just been traced, are composed of alluvial deposits and superior sediment.

The small spaces occupied by schistous and crystalline rocks indicate the comparative unimportance of the mineral kingdom in European Russia: the principal mineral repositories of the Russian Empire lying within its Asiatic confines. Iron, however, is more abundant, or has at least been more diligently explored in its European divisions, and occurs from Perm and Orenburg to Viatka and Vladimir, and then from Nijnii-Novgorod to Toula and Tambov. This, which constitutes the central mining district, is a poor sandy tract, probably belonging, according to Mr. Jameson, to the red marl formation: the ore is described as occurring at 60 feet below the surface, in regular beds. Iron mines are likewise worked in the Valdaï hills, and copper abounds in the Government of Olonetz, in the bosom of the mountains environing Lake Onega to the East and North. Bog iron ore is exceedingly plentiful at Petrozavodsk, near the same lake; and the iron-works here are accounted the most considerable in the North of Russia. "On both sides of the salt country of the Ourals," says the writer just quoted, "is a vast tract of what is commonly called *copper sand*, which extends through a great part of the Governments of Viatka, Perm, and Oufa, and completely skirts the South and West sides of the Oural mountains. The sand is of a dull red or green, and is commonly worked for copper. It contains fossil wood impregnated with copper. Mr. Strangway describes a central salt district, of great extent, in the course of the Volga. There is also a rich and extensive tract of red marl, salt, and gypsum, which extends down the course of the Kama, and is probably connected, on the South, with the salt district of the Volga, and on the North by that of Vologda. The principal salt-works are in the neighbourhood of Solikamsk; and the gypsum grottoes of Koungour, in the Government of Perm, are of great size and magnificence." Coal occurs, but in small quantities. There are mines worked at Toula and at Bakhmout, in the Government of Iekaterinoslav, but to no great extent. Slate is found in various parts; and carbonate of lime, which furnishes excellent quicklime, is abundant, in the central Provinces especially. Fuller's and potter's earth are met with in Taurida; petroleum and naphtha flow from the igneous rocks of Caucasus; the coasts of the Baltic and the soil of the Lithuanian forests yield amber or *succinum*; and the mountains of Finland, as well as those in the Government of Olonetz, supply granites and marbles of great beauty.

Agriculture.

Russia is essentially an agricultural Country, for, assuming the population to be 50,000,000, full 47,000,000 are occupied in the various branches of agriculture. The amazing fertility of this immense Empire is owing to a soil of a distinct character. We are acquainted with two points only on the earth's surface in which Nature has deposited a vast and thick layer of decomposed *humus*, entirely formed of vegetable remains: these are the North of Hindostan and the South of Russia. (See Ritter, *Erdkunde*.) This, the principal basis of the agricultural wealth of Russia, extends from

the North of Volhynia, cutting the system of the Dniepr near Kiev and rising from this point towards Orel, thence to Kalouga and to the South of Riazan, until it intersects the system of the Volga between Nijnii-Novgorod and Kazan, and terminates South of Viatka, and near Perm, at the foot of the Oural chain. The same soil is prolonged, on one side, from this line to the Black Sea; and, on the other, stretches from Perm to Orenburg, and thence to the Caspian. It circumscribes the region, recognised by Humboldt to lie on a level with the ocean, from Orenburg to Saratov, and which—sinking to Tsaritsyn and thence to Kizliar, on the Terek—terminates in a semicircle, forming a basin once occupied by the sea, and the level of which is in some parts, as in the vicinity of Astrakhan, 97 metres below the ocean. These vast plains, below or on a level with the sea, form a superficies of 18,800 square leagues; but the entire region, which we have described as a centre of fertility, presents a surface of more than 65,000 square geographical leagues, or, in other words, an extent exceeding France, Spain, and Prussia united. It is covered throughout with a layer of vegetable *humus*, varying from a metre to a metre and a half in thickness, and of such productive powers as not to tolerate the least manure. Its fertility is exhibited in two products, corn and cattle. It supplies almost all the grain consumed by that portion of the Russian territory extending North of the 61st parallel; restores the equilibrium between the production and consumption of the region lying betwixt the 54th and 60th parallels; and finally pours over the rest of Europe by the Baltic and Black Seas, whenever the demand is made, corn to an amount exceeding in value four millions sterling. According to M. Weydemeyer, rye returns, in some districts, twenty, and even thirty for one; barley and oats, from five to fifteen; and wheat from five to thirty fold.

This layer of *humus*, thus distinguished by its luxuriant harvests, is only partly employed in the production of grain, from the thinness of the population. Were it peopled only in the same ratio as Belgium, it could support upwards of 124,000,000 of human beings; but its largest superficies is still covered with the widely extended pastures or *steppes*, on which innumerable herds are reared almost without expense. This line of *steppes*, which is comprehended in the region above described, extends from about 25 leagues South of Kiev to Pavlovsk on the banks of the Don, stretching thence to Saratov on the Volga it strikes the city of Orenburg, and from this point takes into its domain the low, and formerly submarine country, surrounding the Caspian. In the higher grounds are reared horned cattle, sheep, and horses; and in the lower, which are in general sandy and impregnated with salt, the same animals and camels. Two large oases must be noticed as occurring in the midst of these *steppes*; they form the Country of the Little Russians, and that of the Cossacks.

"Estimating the surface of European Russia," writes Forests M. Schnitzler, "at 402,100,552 dessaitines, 156,000,000 of this number are occupied by forests; 178,000,000 by uncultivated land, water, houses, and roads; 61,500,000 dessaitines by arable, and a little more than 6,000,000 by meadow land. On this general view of the surface, it is evident that comparatively little is held in pasture; its increase would secure a better supply of manure. In fact, pasturage to any considerable extent is met with only in Livonia and Kourland,

RUSSIA. where it forms a sixth of the superficies. The forests, on the contrary, cover immense extents, although very unequally; for, whilst the Northern table-land is bristled with them, their want is felt in Little Russia; and timber, generally speaking, is beginning to be dear in European Russia. However, we may compute that a dessaitine of wood occurs for every $2\frac{1}{2}$ dessaitines without it. The forests, indeed, constitute a source of riches which may long continue inexhaustible, and which might be indefinitely increased by strict regulations for their economy and management. Seventy-six millions of dessaitines are still completely covered with pines, firs, and other cone-bearing trees, without counting the oaks, maples, beeches, poplars, and elms, which are by no means rare in the latitudes within the 52d degree, and the birch which grows in still more Northern districts. In 1804, M. Hermann computed that there were in 31 Governments 8,195,295 pines fit for masts, and being at least 2 feet 9 inches in diameter; besides these, he estimated that there were 86,869,243 fit for house timber; and, in 22 Governments, there were found to be 374,804 oaks, 26 inches and upwards in diameter, and 229,570,427 of inferior dimensions. Pines, firs, the lime, and the birch are the most common forest trees; the latter prevails to the 55th degree of latitude, beyond which it gives place to vast forests of pines and firs. The Governments of Novgorod and Tver, in particular, are studded with forests; that of Volkhonskoï, which extends to the Valdaï hills, is one of the vastest known. In the Government of Perm, out of 18,000,000 of dessaitines, 17,000,000 are forest. These immense tracts, covered with wood, are a great blessing in so inclement a climate, as they form a shelter against the winds from the icy seas. The Provinces to the South have not the same want, and are so destitute of wood as to occasion the burning of grass and dung for fuel."

The brushwood, covering a vast extent of country, consists almost entirely of the hazel, the dwarf-birch, (*Betula nana*), the alder, willow, and juniper; the last growing to a large size, and loaded with fruit. In other places, various wild berries grow in great profusion; in particular the cranberry and the wild bilberry. The cranberry (*Vaccinium oxycoccus*) is extensively imported into this Country from Russia.

Grain, &c.

It has been seen that corn constitutes the principal wealth of the Russian soil. Reckoning one year with another, there are sown in its European portion 50,000,000 of chetwerts, which yield about 167,500,000 chetwerts. Almost all the Provinces furnish more than is required for their own consumption. According to M. Schnitzler, there are only the Governments of Petersburg, Moscow, Arkhangel, Vologda, and Perm, which consume more than they produce: the last from being a mining district, the two first from their populousness, and the remaining two from the rigour of the climate. The most fertile Provinces are those of Orel, Kazan, Nijnii-Novgorod, Penza, Tambov, and Kursk. Rye and oats are the grains most generally cultivated, and their yearly produce may be valued at nearly £24,000,000. The finest wheat is raised in the South, where alone the land can be said to be really ploughed; even here the rotation of crops is very little understood. In the interior, the plough is a wretched instrument which merely scratches the surface, and the harrow is wholly of wood. However, these disadvantages set in still stronger light the amazing productiveness of the soil. Hemp and flax form the next most important articles of culture: the first is

raised in abundance in the environs of Novgorod, Tver, and Riga, and grows naturally on the banks of the Volga, the Terek, and the Oural; the second is grown, of excellent quality, throughout central Russia, and the Baltic Provinces; that raised on the banks of the Kama is in most esteem for its length. The export of these articles, of late years, has averaged upwards of two millions sterling. Tobacco is largely cultivated in the Ukraine, and in the Southern Provinces generally. Hops grow wild in numerous places; they are mostly exported. "Vineyards," says M. Schnitzler, "are rare, and their first plantation does not date beyond a century back. The grapes of Astrakhan are distinguished for size and flavour, and are preserved the Winter through; they form, as fruit, an article of commerce, but are not calculated for wine. The wines of the Crimea and those of Caucasus are of indifferent quality, and are only drunk mixed with foreign wines or brandy. Foreigners have been summoned to Russia to introduce the most approved methods into the vineyards here, and, meanwhile, the Cossacks of the Don prepare their *vino marozka*, or frozen wine, with grapes, berries of all sorts, and brandy, an essential ingredient of every good drink manufactured by the Russians and their neighbours." The wants of the two Capitals have brought the raising of vegetables to considerable perfection in the Governments of Petersburg and Moscow; in that of Iaroslav, the environs of Rostov are renowned in this particular. Gardeners from that district are in high request; and the early vegetables raised there are despatched to the most distant parts of the Empire. With the exception of cabbages, which constitute the common food of the lower classes, most vegetables are dear. The turnips excel ours in richness and sweetness of flavour; and the onions of Borovsk, in the Government of Kalouga, are renowned for their size.

Fruits are more abundant than vegetables, although vast quantities are imported from foreign Countries. Russia produces cherries, plums, and apples in the wild state; and the same fruits are cultivated in the central and Eastern districts of the Empire, where, however, the common European varieties are as yet known only through the medium of commerce, the species grown being all natives of Asia. The apples of Kirevsk are noted for their enormous size; a single one will sometimes weigh four pounds. Those called *nalivniè*, which means filled with transparent juice, and which look like artificial ones, are highly esteemed: they are chiefly produced in the Governments of Moscow and Vladimir. The apples of Kalouga and Rostov are likewise in much repute; and the cherries of Vladimir. Cider and cherry wine are made in large quantities; the latter particularly in the *steppes*. But the commonest fruit in Russia, the consumption of which exceeds all belief, are nuts. The Southern Provinces produce the cooling and grateful fruits of warm climes, melons, water-melons, gourds, mulberries, &c. Cotton and madder are produced in the Province of Astrakhan; and the latter is also met with in Taurida, as well as on the banks of the Volga and the Oka. Pepper grows on the banks of the Samara. In the Crimea, all the productions of Greece and Italy might be introduced and multiplied; such indeed are its geographical situation, its climate and soil, that many of them are indigenous.

The animal kingdom supplies European Russia with Zoology important resources. In its Arctic regions the rein-deer, and among its nomad Tatar Tribes the horse, form alike

RUSSIA. the wealth of peasant and of master. Its herds of horned cattle supply tallow, hides, and horns, in immense quantities, both for home use and exportation. The common breed of oxen is of small size; there is a larger race in the Ukraine, Podolia, and Volhynia, but those of Arkhangel are esteemed the finest. The Russian sheep is covered with a harsh, coarse wool, but the breeds are rapidly improving by the introduction of merinoes and the Saxony sheep. Their number is estimated at about 60,000,000; many proprietors possess flocks of 50,000. The beautiful fur, wrought from the fleece of the lamb of Taurida, is well known. Swine abound, and their bristles form a considerable article of export. Goats of every species are numerous among the nomad Tribes. The ass is very common throughout Taurida; and, in the same country, is found an analogous race, termed the *djiguetai*, or wild mule. Whether the camel be really used in the Southern Provinces as a common beast of burden, appears somewhat doubtful.

Among the wild animals, the stag, deer, elk, bear, wolf, lynx, and hare, supply an ample variety for the chase, which is the delight of the Russian Nobility. Weasels, polecats, foxes, marmots, martins, moles, &c., are common in Russia; the hybrid hare, which, although incompletely, turns white in Winter, occurs even in the central Provinces; the otter is found on the banks of the Oural, and on those of the Volga and the Kama the desman, (*Mygale Moscovitica*), the dwarf jerboa, (*Dipus minutus*), and two varieties of the large-headed field mouse. Three of the most remarkable of the smaller quadrupeds are the bobac or Poland marmot, the soulisk or variegated marmot, and the alpine hare or pika.

Russia possesses a great variety of the feathered tribe; partridges, moorfowl, woodcocks, snipes, the wild goose, wild duck, bustard, coot, &c. The ducks of the species termed *Anas mollissima*, and which furnish the eider-down, abound on the Northern coasts, and principally on those of Nova Zembla. The crow and the pigeon are more common here than in other European Countries; the latter being almost considered sacred, especially by the rural population, as emblematic of the Holy Ghost; and the first is protected for its assistance in getting rid of animal garbage. "Several birds, common in Russia," observes Mr. Swainson, "are but rarely seen in other parts of Europe. Among these may be mentioned the cock of the rock, the largest known species of grouse, nearly as big as a small turkey. The beautiful rose-coloured ousel or starling is not uncommon in the Provinces bordering upon Asia; while the pine-finch, the cross-bill, and a few others of less note, inhabit the dreary pine-forests. In the plains has been found the cream-coloured plover, so rare a bird in Britain, that a specimen, shot in Devonshire, and now in the British Museum, was once sold for nearly £30. The European bee-eater is said to breed in great numbers, in the banks of the Southern rivers."

Fisheries.

The following summary of the Russian fisheries is given by M. Schnitzler. "A prodigious quantity of fish is supplied by the rivers and lakes, constituting almost the sole food of the population of extensive districts, and which, during the long Lents, replaces the use of meat. The fisheries of the Volga and the Oka are particularly productive. Without speaking of the carp, the pike, the trout, the herring, especially that species of herring termed *reipouchki*, and of the pilchard, I shall cite the sturgeon, beluga, and salmon fisheries, and the pickled lampreys and mackerel of the Crimea.

RUSSIA. The sterlet of the Volga is a variety of the sturgeon. Caviar, the consumption of which is so great in Russia, is made from the eggs of this fish, and from those of the beluga. A single sterlet will give from 10 to 30 pounds weight; and from a single beluga there may at times, it is said, be taken as much as 120 pounds. The best caviar comes from the Cossacks of the Oural. The sturgeon fishery is usually of considerable value: 1,850,500 fish of this species, caught in the year 1793 in the Volga, near Astrakhan, yielded 124,970 poods of caviar, and 3575 poods of isinglass. The coasts, which are visited by the cachalot, the whale, and other cetaceous fish, and on which are collected a quantity of pearl oysters and mussels, likewise furnish cod and herrings. The largest fishery of the latter is in the Sea of Kamtschatka. The net annual value of the Russian fisheries amounts to more than 10,000,000 rubles."

Among the insects, useful to man, which belong to Russia, may be particularized the bee, the silk-worm, and the *Coccus Polonorum*. The first yields large quantities of wax, and of the wild honey for which Russia is celebrated, and of which considerable supplies are imported into this Country. Mead, made from it, is in great estimation among the peasantry; and it is sold in the towns as a substitute for sugar, and for other purposes. The silk-worm forms part of the wealth of the Countries bordering the Caucasian chain; and the *Coccus Polonorum*, which lives in the Ukraine on a plant termed the *Polygonum minus*, yields in abundance a beautiful crimson dye, which serves as a substitute for cochineal.

The Countries of which European Russia consists are as follows: Russia, strictly so called, which forms the nucleus of the Empire, and which has been improperly termed Muscovy; the territories of the Cossacks of the Don, and of the Black Sea; the former Kingdoms of Kazan and Astrakhan, wrested long since from the Tatars; Biarmia; almost all Lapland, Ingria, Carelia, Finland, Ostrobothnia, Esthonia, Livonia, the archipelagos of Abo and Aland, and the islands of Dago, Oesel, &c., Countries formerly belonging to the Kingdom of Sweden; the largest portion of the once independent Kingdom of Poland, viz., the Governments of Vitebsk, Moghilev, Minsk, Volhynia, Grodno, Vilna, Podolia, the Province of Bialystok, and the new Kingdom of Poland; the former Khanate of Crimea with Little Tatars, Bessarabia, and part of Moldavia, Countries conquered from the Ottoman Empire; and the entire Caucasian region North of the Caucasian range, forced from the natives, the Turks, and the Persians.

"The Russian Government," observes Balbi, "does not recognise the distinction made by geographers betwixt Russia in Europe, Russia in Asia, and Russia in America. The two first are blended in several Governments. For instance, Perm and Orenburg, being traversed by the Ourals, have one part of their territory in Europe and another in Asia. However, having determined the boundaries of Europe by the crest of the Ourals and that of Caucasus, I have admitted into my Table the whole of the two Governments of Perm and Orenburg, although great part of their territory, lying East of the Ourals, belongs in reality to Asia, and I have rejected the general Government of Caucasus, although its Northern portion is situated within the limits assigned by me to Europe. This was the only course I could pursue in order not to divide what the Russian Government has willed to be united, and to preserve the great natural divisions which are the base of all geography."

Geographical and political divisions.

RUSSIA. The following Table is borrowed from that given by M. Huot in the new edition of Malte-Brun's great Work. contains important items not found in the Table of the RUSSIA. Its divisions correspond with those of Balbi; but it latter.

Governments.	Actual Popu- lation at the beginning of 1827.	Chief Towns.	Popula- tion.	Distance in Versts.		Capital de- clared by the Merchants.	Number of Manufactories.	Annual Harvest in Chetverts.	Natives of each Government.
				From St. Petersburg.	From Moscow.				
<i>Baltic Provinces.</i>									
St. Petersburg	845,000	St. Petersburg	448,221	..	698	26,000,000	170	1,030,000	Russians, Fins, Ijors, Germans.

RUSSIA. The coasts of Russia are deeply penetrated by the seas with which they are bathed, and which form numerous gulfs; the principal of which, in the Black and Baltic Seas, have been already described. (See **BLACK SEA**; **BALTIC SEA**.) In the Arctic Ocean, two large gulfs have received the name of seas: the most Easterly is the Sea of Kara, (*Karskoé-Moré*), which bathes at once Europe and Asia. It is 150 leagues long from South-West to North-East, and at its Northern entrance is almost constantly encumbered with ice. The most Westerly is the White Sea, (*Bieloé-Moré*), which is about equal in length to the preceding, with a breadth of from 20 to 25 leagues, and is divided into four smaller, yet considerable gulfs—those of Mezen, Dvina, and Onega, which take their names from the chief rivers that flow into them, and that of Kandalask which communicates by the Kovda, a small river, with Lake Kovdozero. Between these two seas likewise there occur two considerable gulfs; that of Tcheskaïa, separated from the White Sea by the peninsula of Kanin, or Kaniskaia Zemlia, and that formed Eastward of this by the estuary of the Petchora. In the Caspian Sea, the principal gulfs lie on the Asiatic shores: the most considerable on the European side are those of Agrakhan and Kouma. The former, which indents the land to the South of the Terek, is about seven leagues long by three at its greatest width.

Peninsulas, &c. The principal peninsulas and capes on the European coasts are the Crimea, and Kinbourn in the Black Sea; Cape Kanin in the Arctic Ocean; Cape Voronov, which lies under the Arctic circle, in the White Sea; and Cape Agrakhan in the Caspian. Cape Sviatoi (*Sviatoi-noss*, Holy Cape) is the most Northerly tongue of land; it approaches the 69th parallel.

Islands. Among the islands which lie off the coasts of Russia, the chief are situated off its Northern shores. Here we meet with the island of Vafgatch, which is 20 leagues long and 15 broad, and to the North of this Nova Zembla, (*Novaïa-Zemlia*), consisting of two islands separated by a narrow channel, to which has been given the name of the Russian navigator, Matotchkin, who discovered it. The circuit of these two islands conjointly is about 2000 miles, and their length about 630 by 340. Nova Zembla is traversed from South to North by a prolongation of the Oural chain; and, on its Northern side, it is every where surrounded by mountains of ice. Its interior is filled with lakes, among which there is one of salt water; and a few rivers channel its rocky and naked surface, on which a few stunted shrubs and polar plants are scantily found. Its sole inhabitants are the arctic bear, the rein-deer, the fox, and different kinds of aquatic and sea birds. Its shores are frequented by seals and other amphibious animals; hence it is visited every Summer by the Russian fishermen and hunters, who are obliged to clothe themselves after the manner of the Samoyedes, in order to support the extreme cold. The winds blow almost constantly from the North; those from the West and South bring with them rain and snow. For three months of the year these inhospitable shores are enveloped in "uncertain night." The sun commonly disappears about the 15th of November, and does not become visible till the close of January, after a twilight of fourteen days. The gloom of this long night is relieved by the splendours of the Aurora Borealis. Fearful tempests, accompanied by violent rain, but more frequently by a fine yet thick snow, often hinder the poor fishermen from leaving their

smoky huts. Nova Zembla lies between the 53d and 70th degrees of East longitude, and the 68th and 74th degrees of North latitude. To the North-East of the peninsula of Kanin, and 20 leagues from its shores, is the Island of Kolgouev, which is mountainous towards its centre, and is watered by four rivers, of which two will admit large barks for a considerable distance. It is about 20 leagues in length and 14 in breadth; its soil is covered with marshes, interspersed with mosses and shrubs. Foxes are met with here, and the *isatis*, wild swans and geese, with other aquatic birds, abound, the down and flesh of which constitute the commercial wealth of the small number of the Samoyedes who inhabit the island. It is under the 69th parallel; and between 48° 30' and 50° 3' East longitude. In the White Sea, the Isles of Solovetskoi, (*Islands of Nightingales*), the largest of which lies at the entrance of the Gulf of Onega, and is about six leagues long by four broad, seem to have been formed by the heaving up of the granitic soil. Plates of mica are collected here for ships' lanterns and lights. In the Baltic Sea, the Islands of Abo, Aland, and Oesel have already been noticed in alphabetical order. Dago, which lies to the North of the latter, at the entrance of the Gulf of Livonia, is separated from the main land by a strait about five leagues in width. It is 12½ leagues in length, and, where broadest, spreads to about 10½ leagues. Its coasts are much indented, and are surrounded by dangerous shoals. Its soil is sandy and calcareous; not fertile, but covered with excellent pasturage. Its woods are filled with game, wolves, and foxes, and there is a seal fishery on its shores. It has a lighthouse on the West point, called Dagherort; its port, named Teven-Haven or Tohenholm, is on the North-East, and is small. Longitude 22° 58' East, latitude 59° North. Almost the only island that claims to be named in the Black Sea is that of Tendra.

"The soil of Russia," writes M. Huot, "is so slightly undulated, that to consider the spaces traversed by its rivers as true basins would be an abuse of terms; notwithstanding that it contains the most important water-courses in Europe. It would not, perhaps, be more exact to apply the same name to the Black, Caspian, and Baltic Seas, or to the Icy Ocean, in one or other of which all its rivers disembogue. I prefer designating by the denomination of *versans* the inclination of the soil to these several seas, and hence shall term them the Tauric, Caspian, Icy, and Baltic *versans*. The Tauric, to which I give the name because all the water-courses which descend on this side have their embouchures around the peninsula of Taurida, is watered by the Dniestr, the Dniepr, the Boug, and the Don; the Caspian, the waters of which fall into the sea of that name, is furrowed by the Terek, the Volga, and the Oural; the Icy *versant*, formed by the tracts which incline towards the White Sea, and Icy or Frozen Ocean, is watered by the Petchora, the Mezen, and the Northern Dvina; lastly, the Baltic comprehends all the streams which fall into the Baltic, the most important being the Tornéo or Tornéa, the Neva, the Southern Dvina or the Duna, and the Niemen." Following the order thus chalked out in our description of the rivers of European Russia, we begin with the Dniestr. Issuing from a lake at the foot of the Carpathians, it descends from Galicia or Austrian Poland, rolls impetuously its yellow waters over shelves of rocks, and forms near Iampol a fall which stops boat-navigation. Further

RUSSIA. on, it glides in a placid current, and loses itself in the *ilman* or lake of Ovidovo, which communicates with the sea. In its course it separates Bessarabia from the Governments of Podolia and Kherson, and bathes Choczim, Moghilev, Bender, and Akerman. Length 480 miles. The Dniepr rises in the Government of Smolensk, and winding between blocks of granite, rocks of felspar, and banks of the older calcareous formation, dashes down cataracts and eddies into whirlpools, of which there are no less than thirteen of note: in the Spring, however, they all disappear with the floods. It springs from a kind of marsh at the foot of the Valdaï hills, and, after leaving the Government of Smolensk, traverses that of Moghilev, separates the Governments of Minsk, Kiev, and Kherson from those of Tchernigov and Poltava, cuts unequally that of Iekaterinoslav, and, after having separated the Government of Kherson from that of Taurida, empties itself into the Black Sea below Kherson. The chief towns bathed by this fine river are Smolensk, Moghilev, Kiev, Iekaterinoslav, and Kherson. Its principal affluents on the right are the Berezina and Pripet, and on the left the Soj, Desna, and Psiol, with a multitude of lesser streams. It communicates by canals with the systems of the Duna and the Niemen; but its falls, the inconsiderable depth of some of its affluents, the number of floating mills with which it is encumbered, the ice with which it is bound for between four and five months every year, and more than all, want of energy, lessen its commercial importance. Its turbid and troubled waters are the favourite haunt of sturgeons, carp, pike, shad, and many other fish. There is a floating bridge over it at Kiev, which is removed in Winter. At its mouth it forms a large, muddy lake or gulf, about 40 miles long, and from two to four in width, named Lake Dnieprovskoï. It is the ancient Borysthenes. Length 1050 miles. The Don traverses the Governments of Toula, Riazan, Tambov, Orel, Voronej, and the Cossack territory to which it gives name. It terminates in the Sea of Azov, in the Government of Iekaterinoslav, by several mouths, at Dimitria and Tcherkask, above which, except during the spring freshes, navigation is interrupted by a succession of rapids 17 miles long. In this long course the Don bathes the towns of Dankov, Pavlovsk, Tcherkask, and Azov. Its principal affluents on the right are the Sosna and Donets; and on the left, the Voronej, at Tavrovskaja, on which river Peter the Great built his ships for the Black Sea; the Khoper, the Medveditsa, and the Manitch. Length 860 miles. The Terek, which has its source at the base of the Kazbek, separates the Province of Caucasus from Kabardah and Daghestan, and bathes in its course Vladikaukas, Mozdok, and Kizliar. It receives, on the right, the tributary waters of the Songa and the Aksai; and those of the Ouroug, Tcherek, Bekhar, and Malka on the left. It enters the Caspian by three principal mouths, between the Gulfs of Kouma and Agrakhan. The Volga, issuing a rivulet from the forest of Volkonski in the Valdaï hills, traverses Lakes Sterj, Penó, Volga, receives the waters of Lake Seligher, and becomes navigable near Rjev, where it is about 90 feet wide. It then flows in an Eastern direction towards Kazan, where, swelled by the Kama, which may be considered a second Volga, it turns to the South and seems to seek the Sea of Azov; but is constrained by the chain of what Malte-Brun terms the *Volgaic* hills to repair to the Caspian. After receiving the Kama it becomes 600 feet wide, and from this to 1200 feet hence to Saratov.

VOL. XXVII.

RUSSIA. Near Astrakhan, where it embraces many islands, its breadth at the periods of its greatest height is nearly five leagues or 20 versts. According to Guldenstedt, its fall is only six inches in four versts; the lakes, which constitute its sources, cannot then be elevated more than 300 feet above its mouths. The latter, in number 70, are formed by eight principal arms. The depth of its navigable canal varies from 6 to 15 feet. Its waters, though of indifferent quality, teem, as we have seen, with an immense quantity of fish. The valley of the Volga from Ostachkov is a continued bottom, from one verst to 20 in width, enclosed on either side by a rising ground from 15 to 60 feet high, and which discovers the layers of clay, marl, gypsum, sandstone, and coal, of which the neighbouring table-lands consist. Near Nijnii-Novgorod, the river has undermined its bank, by the falling in of which considerable buildings are at times buried; but its general course is regular and calm. So suddenly does it swell on the rains, and the melting of the snow, that its waters will force back those of its affluents. It is covered with ice in the Winter through its whole extent; although, towards the South, there always remain smoking apertures through which the river seems, as it were, to breathe; these *poloumna* endanger travelling by shifting their place. For two months the Volga is a carriage road, and for the two opposite months of the year a navigable canal. More than 5000 barks, built in the forests of Northern Russia, descend the river laden with products of every kind; but the return being difficult they are mostly broken up and sold at Astrakhan. Some of these barks, named *ladia*, bear a cargo of 100,000 poods of salt; the *kayouki*, of 53,000 poods' burden, are laden with corn; and the *nosedî* with wood. As the Volga encircles the central table-land of Russia, and receives in tribute the waters of the Oka, the chief river of this fertile region; as in the upper part of its course it is united to Lakes Ladoga and Onega by the canal of Vichnei Volotchok; and, to sum up, as the Kama bears to it all the waters of Eastern Russia, this noble river is the principal commercial road of the interior of the Empire; "and the city of Astrakhan," says Malte-Brun, "may be regarded as the Alexandria of this Scythian Nile." The chief cities and towns by which it passes are Tver, Ouglitch, Romanov, Iaroslavl, Kostroma, Balakhna, Nijnii-Novgorod, Kozmodemiansk, Tcheboksar, Kazan, Simbirsk, Syzran, Saratov, Tsaritsyn, and Astrakhan. Length 1900 miles. The Oural rises on the Eastern slope of the chain which bears its name, traces for a considerable distance the Eastern and Southern frontiers of the Government of Orenburg, and the Eastern limits of Europe, and bathing in its course Troïtskaïa, Orenburg, and Ouralsk, falls into the Caspian near Gouriev. The Sakmara on the right, and the Ilek on the left, are its principal affluents. Length 1050 miles. The Petchora, not inferior to the Loire in the length of its course, flows through the most solitary deserts of Russia; rarely does the hunter venture into the forests which overshadow its source, or a Samoyede family conduct their rein-deer there. Its Eastern bank is confined for some time by the Kamennoi-Poyas, a chain of the Ourals, which would seem to be a continuation of the primitive calcareous rock of the latter. The calcareous downs formed by this chain along its bank are crowded with ravines and caverns; but, after its confluence with the Oussa, the river flows through immense bogs. There are few fish in its limpid waters; probably the two very salient promontories at its estuary

2 D

RUSSIA.

hinder the finny tribes of the Arctic Ocean from remounting its channel. The Petchora rises on the Western slope of the Ourals, in the Government of Perm, and traverses those of Vologda and Arkhangel. The Mezen, which has its source in the marshes of the Government of Vologda, traverses that of Arkhangel, and, after bathing the little town of Mezen, falls into a gulf of the White Sea, almost under the polar circle. The Dvina is formed by the union of the Soukhona, which flows from Lake Koubinskoe, and of the Iouga near Oustioug-Veliki; at least it is here that it begins to receive the name of Dvina, (*double*;) but it is its junction with the Vychegda, on its right, which makes it a large stream. Its channel, which is navigable and stocked with fish, and is about 600 feet broad, divides near Kholmogory into several arms. It is covered with ice from the beginning of November to about the end of April; in the Spring it overflows, and floods a large extent of country. The mud deposited at its mouths forms an obstacle to the entrance of large vessels. It traverses the Governments of Vologda and Arkhangel, and after passing by the towns of Krasnoborsk, Kholmogory, and Arkhangel, falls into the gulf of this name. Length 700 miles. The Tornéo or Tornéa, rising in Swedish Lapland, forms the boundary of the Empire on this side, bathes the town of Tornéa, and discharges itself into the Gulf of Bothnia. It receives, on its left, the Muonio, which likewise traces for some distance the limit of the Empire, and which passes through Ekontekis. Length 281 miles. "The Neva," writes Colonel Jackson, (see *Journal of the Royal Geographical Society*, vol. v. part i.) "though it be called a river, is more properly a bosphorus or strait. Its length from Schlussemburgh, at the South-West angle of the Ladoga Lake, to its mouth, is 69 versts, its direction that of a straight line from East to West; its medium breadth about 1500 feet; and its depth, in many places considerable, is generally, in the channel, about 50 feet. The water of the Neva is remarkably pure, and though the first use of it by strangers generally produces slight diarrhœa, yet it is very wholesome and extremely palatable. This fine river is the grand and only outlet for the superabundant waters of four great basins, each of which has an extensive natural reservoir of its own. These reservoirs are the Lakes Onega, Ilmen, Saïma, and Ladoga; the latter receiving the drains of the other three. Ten different streams flow into the Onega, whose length, from North to South, is 190 versts; and its breadth from East to West 70. It discharges into the Ladoga by the Sveer, a river 202 versts long, and of very unequal breadth, being in some places only 210 feet wide, and in others spreading to a breadth of two versts. The Ilmen is 55 versts long from North-East to South-West, and about 30 wide from North-West to South-East. It receives eleven streams, and has its outlet into the Ladoga by the Volkoff, 206 versts long, with a medium breadth of 1400 feet. The Saïma, which is rather a collection of lakes, of gulfs, and bays of all shapes and sizes communicating with each other, than a regularly formed and single sheet of water, is estimated by Peter Friccius at 131 versts long, in the direction of West South-West to East North-East, and 120 from North to South, but on the Swedish side it is about 280 versts more. It pays its tribute to the Ladoga by means of the Voksha or Voxa, a river about 180 versts long, very irregular both in direction and breadth, and not navigable in consequence of its several cascades, of

RUSSIA. which the most considerable, that of Imatra, has a fall of upwards of 32 feet. Besides the Sveer, the Volkoff, and the Voxa, the Ladoga receives the waters of thirteen other streams. This, the largest lake of Europe, is about 175 versts long and 105 broad, and of an oval form. The surfaces of the four lakes are thus estimated: the Onega 430 leagues, of 25 to the degree; the Ilmen 36 leagues; the Saïma 210 leagues; the Ladoga 830 leagues; making altogether a superficies of 1506 leagues. From such an accumulation of waters, on which evaporation, however intense the solar heat while it lasts, acts but during three or four months in the year, it is natural to expect an immense outflowing; and accordingly we find the Neva carry into the Gulf of Finland upwards of 116,000 cubic feet of water in a second, a fraction of which proceeds from eight small, though partly navigable, rivers, which fall into it during its course from the Ladoga to St. Petersburg. The ordinary velocity of the river is about 37 inches per second. At St. Petersburg the Neva divides itself into several *deltoidal* branches, the largest of which, at the place where the observations which form the subject of the present notice were made, (*i. e. Observations on the Congelation of the Neva at St. Petersburg, and Temperature of its Waters when covered with Ice*;) is 1260 feet broad; and bears along a mass of about 74,000 cubic feet of water in a second, while the Nile, at the same time, furnishes but 21,800 cubic feet. That such a body of water, moving at the rate of about two miles and one furlong in an hour, should be annually covered with a sheet of ice seldom less and often more than three feet thick, while the mean temperature of the air during the winter months is seldom lower than 4.5° of Reaumur's thermometer, appears surprising; nor could it happen but for the combination of two circumstances, neither of which would be alone sufficient; these are, the drift ice from the Ladoga, and the long duration of the Winter." From a table constructed by the same writer we learn, 1st, that in the long period of 117 years the ice has never broken up before the 6th of March, and only once at that early period; 2dly, that of 117 times, it has broken up 18 in March and 99 in April, and that the general period is from the 5th to the 15th of April; 3dly, that it has only frozen once so late as the 14th December; 4thly, that of 116 times, it has frozen 13 in October, 95 in November, and only eight in December,—and that the general period is from the 5th to the 20th of November; and 5thly, that, one year with another, the navigation of the river may be said to be free for a period of seven months, and frozen over the remaining five. The Duna, otherwise termed the Southern Dvina, rises in a marsh in the Government of Tver, not far from the sources of the Volga, traverses the Governments of Smolensk, Vitebsk, Mitau, and Riga, bathes the towns of Vitebsk, Polotzk, Dinaburg, and Riga, and falls into the Gulf of Livonia. Its chief affluents are the Dryssa and Pedez on the right; and, on the left, the Meja, Oula, and Disna. Length 490 miles. "Whilst ascending this river by the quay," writes Mr. Ritchie, "I saw, beyond the termination of the line of ships, a number of smooth, oblong eminences, resembling the sand hills near the entrance of the harbour at Memel. These, on nearer approach, proved to be the barges which descend the Dvina every year from the interior of the country. Their burthen is usually about 300 tons, and their construction as rude as possible. An immense oblong mound rises from the vessel, filling nearly her whole area, with the exception of a gangway running

RUSSIA. round, and a space at the bow and stern for working the ship. This mound is a vast warehouse, containing also the dwelling-house of the mariners, provided with a door and glazed windows, and being covered with Russian matting (made of the bark of the linden tree) it looks at a little distance exactly like a sandhill. The small boats are real canoes, being made of nothing more than a hollow tree, with a broad pine plank at each side for the gunwale." The navigators of these barks procure what employment they can at the roads, or in the harbour, and subsequently return in gangs to their villages, their vessels with their wooden houses being broken up and sold. "Sometimes," continues the same writer, "these simple edifices are transported bodily into the neighbouring country; and the Livonian peasant inhabits a dwelling built in the interior of Poland." The Niemen, which has its source in the Government of Minsk, traverses that of Grodno, separates the Government of Vilna from the Polish Palatinate of Augustow, and, after bathing Grodno and Kowno, enters Eastern Prussia, where, under the name of the Memel, it disembogues in the Kurische-Haff. Its chief affluent on the right, in the Russian Empire, is the Vilia, which passes through Vilna.

Canals.

A vast system of canalisation, the conception of which is owing to the genius of Peter I., embraces most of the large water-courses of Russia. There are three lines of communication between the Baltic and Caspian Seas: the Southern by the canal of Vichneï-Volotchok and the Tvertsa; the central by the canal of Tichvina and the Mologa; the Northern by the canal of Maria and the waters of the Cheksna. The town of Rybinsk on the Volga, in the Government of Iaroslav, forms the nucleus of these communications.

The canal of Vichneï-Volotchok, so called from the small town of this name in the Government of Tver, joins, by means of the Tsna, an affluent of the Tvertsa, and of the Chlino, an affluent of the Msta, which last river falls into Lake Ilmen, the Volga to the Volkhov, (an affluent of Lake Ladoga,) and, consequently, the Volga to the Neva and the Baltic Sea to the Caspian. This canal, which was begun in 1711, and not finished till the year 1818, is about three miles long, and has three locks; it is embanked at Vichneï-Volotchok by magnificent quays of granite. The Tichvina canal, projected by Peter I., but begun and finished by Alexander, unites the Tikhvin, an affluent of the Sias, (which is an affluent of Lake Ladoga,) with the Volga, by the intermediation of many rivers, as the Somino, Gouronno, Tchagoda, and Mologa: it has 15 locks, 11 of which belong to the course of the Somino. The canal of Maria, projected by Peter I., but begun in 1799 and completed in 1808, connects two rivers which have been rendered navigable in the higher part of their course, the Kovja, an affluent of Lake Bielo, and the Vytegra, an affluent of Lake Onega. It is about four miles long, has 12 locks, and is fed by an aqueduct about two miles in length. Two very important branch canals are united with the canal of Maria: that which has latterly been carried for nearly 40 miles, between the Cheksna and the Kovja, to avoid the navigation of Lake Bielo; and another, called the Svir canal, about 26 miles long, between the Svir (an affluent of Lake Ladoga) and the Vytegra, to avoid the danger and delay of crossing Lake Onega, as well as the falls on the Svir.

Many branch canals enter into the above three systems, either for the purpose of rendering them more

practicable, or of connecting them with another system, the object of which is to form a junction between the Baltic and White Seas, and between the latter and the Caspian. The chief of these are as follows: the Ladoga canal, begun in 1718 and opened for navigation in 1731, which constitutes the link between the three systems just described. It coasts Lake Ladoga, uniting the Volkhov to the Novaia Ladoga, the Neva, and to the town of Schlusselferg or Chlisselburg. It was cut to avoid the dangerous navigation of the lake; 16 locks conduct to the waters of several rivers, and 16 others lead off its superfluous water into the lake. This is the most frequented canal in the Empire, and, in respect of commerce, one of the most important in the world. According to official returns, 25,000 barks of various kinds, carrying goods to the value of above eight millions sterling, annually clear its principal lock, that of Schlusselferg. The canal of Novgorod or Sievers forms a direct communication between the Msta and the Volkhov, near the town of Novgorod; it was cut to avoid the navigation of Lake Ilmen, which is often dangerous, and is about five miles long. The Sias canal unites the river of this name with the Volkhov, as it enters Lake Ladoga.

The following canals open the communication between the White and Caspian Seas, and, consequently, they join the Baltic also to these two seas. The Koubinskoï canal, called, since 1828, the canal of Duke Alexander of Wirtemberg, by joining the Cheksna, an affluent of the Volga, near Kirilov, (a town in the Government of Novgorod,) to Lake Koubinskoe, which empties itself into the Soukhona, a branch of the Northern Dvina, establishes a communication between the White and Caspian Seas. The Cheksna forms the communication with the Baltic, through the Maria canal. The Northern, or Severnoï Ekaterinskoï canal, forms a junction between the White and Caspian Seas, by connecting the Keltma, an affluent of the Vychegda, (an affluent of the Dvina,) with the Dgouritch, which belongs to the basin of the Kama, an affluent of the Volga. This canal was begun under Catherine I., and not completed till 1820.

The following canals establish the communication between the Baltic and Black Seas. That of Lepel, or the Berezinskoï canal, finished in 1801, joins the Duna with the Dniepr by uniting the small lake of Berehta which, through the Oula, belongs to the basin of the Duna, and that of Plavia which is comprised in the basin of the Berezina, an affluent of the Dniepr. It has four locks, and is about five miles long. The Oginskoï canal, begun in 1765 and completed in 1787 at the expense of Michel-Kasimir Oginski, Grand General of Lithuania, who expended 7,800,000 francs in its construction, has been rendered perfectly navigable by the Government since 1801. It is 36 miles long, and has 10 locks. By uniting the Iasiolda, an affluent of the Pripet, (affluent of the Dniepr,) with the Szczara, or Chatkara, an affluent of the Niemen, it establishes the communication between the Black and Baltic Seas. The Royal canal forms another junction between these two seas by uniting the Pina, an affluent of the Pripet, with the Muchiavec, an affluent of the Boug.

Two canals form the direct communication between the Black and Caspian Seas. These are the canal which may be called Peter the First's, and the Ivanovskoï canal. The former, projected by that great man, and begun in his reign, was to have connected the

RUSSIA. Ilavlia, in the country of the Don Cossacks, an affluent of the Don, with the Kamychenka, an affluent of the Volga, in the Government of Saratov. Interrupted by the Swedish and Persian wars, that portion which has been executed bears the name of the Ravine of Peter the Great. Different modifications have been suggested with respect to this canal, but the original plan, with some trifling alterations, has been finally fixed upon. The two rivers are to be joined by means of a canal 90 miles long, into which some parts of the Ilavlia and the whole of the Ravine are to enter. The Ivanoskoï canal, in the Government of Toula, connects the Chat, an affluent of the Oupa belonging to the basin of the Volga, by means of the Oka, with the upper part of the course of the Don.

The following canals establish communications between various gulfs in the Baltic. The canal of Fellin, in Livonia, joins the Gulf of Riga or Livonia with that of Finland, by opening a communication between the Embach, an affluent of Lake Peïpous, whence the Narova issues, and the Pernau which terminates in the Gulf of Livonia. Another canal, that of Verro, opens a communication between Lake Pskovskoë, a branch of the Peïpous, and the Aa, which empties itself into the Gulf of Riga. The Velikié Louki canal joins the Duna with the Neva through the Lovat, Lake Ilmen, the Volkhov, and Lake Ladoga.

Important works are now executing to connect the Vistula with the Duna and the Niemen, in order that the commerce with the Polish Provinces may be carried on out of the pale of the Prussian Commercial League. The Kourland canal is one of the chief branches of this hydraulic system, and is intended to unite the Niemen with the Duna, through the Vilia and other rivers. Duke James's canal in Kourland, forming part of this system, will join the Niemen to the Vindau; and another, beginning near Augustow, is to connect the Niemen with the Vistula, through the Boug and the Narew; it will have 17 locks.

We now proceed to describe the various Governments that have not been inserted in alphabetical order. Some differences, with regard to the population and number of manufactories, will be observed between these accounts and our general Table. We have given our authority for the latter. our guide in the former is the valuable Work of M. Schnitzler, published last year, (1835,) *La Russie, la Pologne, et la Finlande*.

Iaroslav (Government of) depended till 1777 on the Government of Moscow, from which it was then detached and formed into a Lieutenancy which, with the rest, took the title of Government in 1796. It is bounded by Vologda on the North; Kostroma and Vladimir on the East; by the latter on the South; and by Tver on the West, and Novgorod on the North-West. Its surface, generally speaking, is uniform, monotonous, and varied only by some small eminences, and the valleys of the rivers. Containing large tracts of sand and clay, and vast marshes which render the atmosphere damp, this Government is but moderately fertile; yet the climate is healthy, and the air on the whole pure. However, the Winters are exceedingly rigorous and the Summers very short. Its principal river is the Volga, which enters it from the Government of Tver, and at first takes a Northern direction; at Mologa, where it receives the navigable river of this name, it sweeps round to the South-East, until a little beyond the town of Iaroslavl, it again turns to the North,

and enters the Government of Kostroma. Near Rybinsk it receives the Cheksna, another navigable river which falls into it from the North. The chief lakes are that of Rostov or of Néro, which is about 12 versts long by eight in breadth, and the Nokhözéro: there are 36 others of lesser size. Agriculture is carried on here to a considerable extent, but sufficient grain is not raised for home consumption. Rye, barley, wheat, oats, and peas are annually produced to the amount of about 3,000,000 of chetverts; flax and hemp are likewise grown; kitchen gardens are numerous, yielding excellent vegetables, and, in the Southern districts, the orchards furnish cherries and apples in great abundance. The forests contain but indifferent timber, there being few oaks, pines, or firs. The Crown forests cover an extent of 191,530 dessaitines only. The breeding of cattle, horses excepted, is much neglected. The fisheries are highly productive. The manufacturing industry of this Government is considerable. Looms are common in the villages, and the peasants make their own gloves, caps, stockings, harness, and agricultural implements. In 1830, there were 105 manufactories employing 7970 workmen; most of these were contained in the cities and districts of Iaroslavl, Rostov, and Ouglitch. In the city of Iaroslavl alone there were 39; of which number eight were tanneries, four manufactories of linens, three of cottons, two of silk, one paper-mill, two bell-foundries, three hammer-mills, and two snuff manufactories; and in its district, among others, two manufactories of cloth. The paper-mill at Velikoïe-Célo, a large village in the district of Rostov, deserves mention. In general, leather, paper, linen, and cotton stuffs are the staple manufactures; and the chief exports are Russian leather, sail-cloth, salt provisions, and soap. The high roads of the Government are good; and trade is much facilitated by the communications afforded through the Volga and its affluents, as well as through the canals of the system of Rybinsk. *Iaroslav* forms part of the Arrondissement of the University of Moscow, and possesses, in this quality, a College, five district, and four parochial Schools. There are likewise nine Ecclesiastical Schools, with 36 masters and 1607 pupils, belonging to it as an Eparchy. In all, there was found to be, in 1832, one scholar to every 353 individuals. There are two printing-offices, one of which belongs to the Government. The *Eparchy of Iaroslav and Rostov* is of the second class; and, in 1830, it numbered in its Diocese 15 Monasteries, 4 Convents, 873 Churches, and 12 Cathedrals. *Iaroslavl* is the seat of the Military Governor of this Government, united with that of *Vologda*. The expenses of its administration, according to the State, were 72,000 rubles; and its revenue, in 1808, was estimated at 3,416,000 rubles. It comprehends the 10 districts of Iaroslavl, Rostov, Ouglitch, Michkin, Romanov-Borisoglebsk, Rybinsk, Mologa, Pochekhon, Danilov, and Lioubim. The inhabitants of this Government are a fine race of people, the men tall and well made, and the women highly agreeable; the popular proverb runs, "Fair and rosy as a *Iaroslav* woman."

Iaroslavl, its chief town, lies at the confluence of the Kotorosk with the Volga, on an elevated table-land in an agreeable country. It is surrounded by the extensive and beautiful gardens, for which it is celebrated; and its houses built of stone, its three Monasteries, and 44 Churches give it a city-like appearance. Its manufactories have already been noticed; those of Russian

RUSSIA. leather and of linen are the most esteemed. Its commerce puts annually into circulation upwards of 4,000,000 rubles. At the head of its public establishments must be placed the noble foundation, called from its founder, the Lyceum of Demidof, in which 40 poor students receive gratuitously all the advantages of a university education: next to this magnificent institution, which is provided with a well-furnished library, a cabinet of natural history, a laboratory, and press, &c., come the Ecclesiastical Seminary, the Gymnasium, and the Society of Lovers of the Russian Language. It has a Hospital, and two Houses of Charity. Archbishop's See. Longitude $40^{\circ} 30'$ East, latitude $57^{\circ} 37' 30''$ North.

Rostov, on the lake of this name, claims a very high antiquity, being with Novgorod and Kiev one of the oldest cities in Russia. Its circumference of nine versts still attests its former importance; and its Princes enter conspicuously into the annals of the Empire. It is composed of the city and a large faubourg; the former is surrounded by a rampart and fosse. Its situation is unhealthy, being low, and environed by marshes. The Cathedral, an ancient and highly ornamented building, is the principal one in the *Eparchy*; and the Archbishop's Palace is an extensive building, to which are attached a Seminary and five Churches. *Rostov* itself contains 24 Churches and three Religious Houses; and, in addition to its *Gostinoi-dvor*, 180 shops, and 1016 houses. A very important fair is annually held here, about the end of February. It lasts a month, and attracts merchants from all quarters, native, Armenian, Greek, Tatar, &c. In 1832, the value of Russian merchandise brought here amounted to 6,071,121 rubles; goods from other parts of Europe, and colonial produce to 2,882,670 rubles; tea to 1,800,000 rubles; and the spun cotton of Bokhara to 109,500 rubles; making a total of 10,863,291 rubles. To the above must be added, horses to the value of 125,000 rubles. In the same year, 68 nobles, 4500 merchants, and 40,000 individuals of all ranks resorted to the fair. The revenues of the town amounted to 49,000 rubles; and there were paid for the hire of shops 60,000 rubles, and 35,000 rubles for that of lodging. The inhabitants may therefore be considered as decidedly commercial, and they are accustomed to make long journeys in prosecution of trade. Population between 5000 and 6000. Longitude $39^{\circ} 30'$ East, latitude $57^{\circ} 10'$ North.

Ouglitch is also of ancient, though uncertain origin. Mention is made of it as early as the year 1218; and, it is reported to have contained, previously to the fire of 1607, 150 Churches, 12 Religious Houses, and 30,000 private buildings. Its two quarters, the *Zemlianoi-Gorod* and the *Pogad*, are surrounded by a rampart. Several manufactories are established here; and it now contains 25 Churches, two Religious Houses, and 1075 other buildings. Population about 6000. Longitude $38^{\circ} 20'$ East, latitude $57^{\circ} 27'$ North.

Rybinsk, in the centre of the Government, on the right bank of the Volga, is the principal link of the water communication, by means of canals, between Petersburg and the Caspian, and may thus be considered the emporium of the internal commerce of the Empire. It is $2\frac{1}{2}$ versts long, and one in breadth, and is built along the Volga, facing the confluence of the Cheksna. Of the 469 houses of which it is composed, 148 are of stone; and there are many shops, independently of the square specially devoted to purposes of trade. This

town contains three Churches, a School, a Hospital for 30 patients founded by the merchant Popof, and another for the boatmen of the Volga. The leather, oil, candles, &c., furnished by its manufactories, are mostly consumed on the spot; many of the inhabitants are corn-factors, or rather monopolists, and almost all are engaged in commercial pursuits. The river is here crowded with immense barks, (*roschivy*), some of which, whose size prevents their proceeding further up the Volga, take in a lading of 30,000 poods. The actual population of the town is about 3000, of which number above 700 are merchants or dealers; but in the months of May, June, and July, when the navigation is at its height, there are sometimes 50,000 boatmen (*bouvlak*) in the town. Two fairs are yearly held at Rybinsk, at one of which the value of the goods brought for sale is said to amount to 1,000,000 rubles; cloths, of various kinds, form a fifth of this amount. The chief objects of commerce are grain, and the materials of transport, as barks, matting, &c. Longitude $38^{\circ} 52'$ East, latitude $58^{\circ} 3'$ North.

The remaining towns of the Government are of little importance. In the Government Survey, its superficial area is estimated at 596 geographical square miles of 15 to the degree. M. Schnitzler raises this cipher to 600.

Kalouga (Government of) is bounded on the North and North-East by the Government of Moscow; on the East by Toula; on the South and South-West by Orel; and by Smolensk on the West. Its surface is flat, and the uniformity of its appearance is but seldom diversified by slight elevations. Although well cultivated, its produce is insufficient for home consumption; and the soil, being chiefly sand and clay, requires much manure. The climate is mild for Russia, yet its rivers are frozen from November to March. This Government is watered by no less than 1079 rivulets and rivers. The Oka, which is the most considerable, leaving the Government of Toula, enters near Bielev, flows in a Northern direction till it reaches the environs of the city of Kalouga, then turns to the East and forms on the North-East the boundary line betwixt the Governments of Kalouga and Toula, and, further on, that betwixt those of Toula and Moscow. Its breadth, on entering the Government, is only 50 *sagènes*; but, on leaving it, it is full 200 *sagènes*. On its left, it receives the Jizdra and Tarouza; and, on its right, the Oupa. The chief of the other rivers are affluents of these. Rye is the grain chiefly cultivated, then oats, wheat, barley, *lédianka*, flax, and hemp. The farmer has to contend with an ungrateful soil; and the cattle are few in number and neglected. Two studs are maintained by Government for the improvement of the breed of horses. Some profit is derived from the keeping of bees; there is little game; and the fisheries are inconsiderable. The Crown forests occupied, in 1804, a surface of 217,993 *dessaitines*; those which supply the forges are kept in good order. A little iron is furnished by the marshes; but the greater part of the mineral used in the Government iron-works is imported. An active industry supplies the deficiency of occupation afforded by agriculture. Its principal objects are distilleries of brandy, and manufactures of cloths, cottons, sail-cloth, leather, tallow, paper, hats, and soap, with tanneries, &c. In 1828, there were in eight of its twelve districts only, 26 cotton manufactories, 14 paper-mills, 18 hat manufactories, 20 tanneries, 14 melting-houses and manufactories of candles; and, in 1830, there were in all 156 manufac-

RUSSIA. tories of different kinds, giving employment to 18,569 workmen. Most of the peasants likewise are weavers, and their wives especially devote themselves to this occupation. The merchants of this Government are, generally speaking, affluent, and enjoy a good reputation. Independently of internal, some devote themselves to foreign trade—*via* Arkhangel. The exports consist of iron, oil, brandy, potashes, cloth, and sail-cloth. The chief commercial towns are Kalouga and Borovsk. Since the Ukase of the 12th January, 1831, Kalouga belongs to the Arrondissement of the University of Moscow, and the Schools thus dependent on the jurisdiction of the Minister of Public Instruction were, in 1832, 14 in number, having 49 masters and 958 pupils; and, in seven Ecclesiastical Schools, there were more than 1224 scholars receiving instruction from 31 masters. Thus, throughout the Government, there might be reckoned one scholar to every 371 individuals, taking the population with M. Arsénief at 810,000. The single printing-office in the Government belongs to the Crown. Ecclesiastically considered, Kalouga forms a Bishopric of the third class, bearing the joint title of Kalouga and Borovsk, and contains 627 Churches, of which 12 are Cathedrals, 7 Monasteries, and 1 Convent. Kalouga and Toula are united under one Military Governor. The expenses of the Civil Government, according to the State, were 65,456 rubles; and the revenues of the Crown, in 1818, amounted to 3,561,000 paper rubles.

Kalouga, the chief town, lies on the left bank of the Oka, and, although containing only 3827 houses, it is said to be no less than 10 versts in circumference, and is divided into three quarters which are separated by the Oka, and its tributary the Koloujeka. There are 23 Churches in the town, built of stone, one of wood, a Convent built of stone, and of its houses 230 are of brick. Kalouga has, moreover, a Gymnasium, a School for the children of decayed Nobles, a Foundling Hospital, and several other charitable institutions. It is one of the most commercial cities of the Empire; and, independently of their trade in the interior, the merchants of Kalouga export sheep skins, Russian leather, and wax to Dantzic, Breslau, Berlin, and Leipsic. In the environs of the city, the Monastery of St. Lawrence, which receives into its seminary 120 sons of Clergymen, and the Hermitage of St. Tikhon, whose tomb is still frequented by pilgrims, claim attention. Longitude $36^{\circ} 10'$ East, latitude $54^{\circ} 30'$ North.

Borovsk, an ancient city, is of some note in History, especially for its defence, in 1610, by the Prince Volkhonski, against the false Dimitri. Three versts from it is the Monastery *Pafnoutiev-Borovskoi*, founded in 1444, which contains five Churches and considerable treasures. *Borovsk* is celebrated for its onions and garlic. It has five manufactories of sail-cloth, and carries on a considerable trade in hemp, leather, and the above-mentioned vegetables. Population 5000. Longitude $36^{\circ} 15'$ East, latitude $55^{\circ} 17'$ North.

Malo-Iaroslavets, a small town on the river Louja, lying on the high road to Moscow, is celebrated for the battle fought here, October 24, 1812, between the French and Russians.

Kozelsk, situated in the South-East of the Government, on the left bank of the Jizdra, is a regularly built and neat town, having four stone Churches and three wooden ones. Most of the houses are of wood, but rest on stone foundations. The *Gostinoï-Dvor* is wholly of stone, and is surrounded by a gallery containing 34

shops. It is a town of considerable antiquity, and became the property of the Grand Princes of Moscow in the reign of Vassili Dimitriévitch. Population 2000. Longitude $35^{\circ} 37'$ East, latitude $54^{\circ} 4'$ North.

The Government of Kalouga is divided into 11 districts, *viz.* Kalouga, Malo-Iaroslavets, Borovsk, Medynsk, Masalsk, Metchovsk, Jizdra, Kozelsk, Likhvin, Peremychl, and Tarouza. It contains 12 cities, 803 *kélos*, and about 2880 villages, 353 of which belong to the Crown. There are about 1320 residences belonging to the Noblesse, 1441 mills, and 95 public-houses. The superficial area of this Government, according to the Crown Survey, is 545 square geographical miles, which figure is reduced by M. Schnitzler to 395.

Kostroma (Government of) confines on the North with the Government of Vologda; with that of Viatka on the East; with Nijnii-Novgorod and Vladimir on the South; and with Iaroslav on the West. The face of the country is for the most part flat, diversified by a few undulations, and by the elevated banks of the Volga. To the North it is intersected by marshes; and to the South its soil is mixed with sand and clay, so that it requires frequent manuring. Its climate is healthy, although rigorous, especially in the Northern districts, where much humidity prevails; its Southern portion is more dry, and of a milder temperature. The Volga enters the Government a little beyond Iaroslav, soon passes by the town of Kostroma, and then proceeds to bathe its Southern districts. It receives, on its left, the Kostroma and the Ounja, both rising in a table-land of the district of Sol-Galitzkoï at the Northern extremity of the Government; they run from North to South, and the latter, after cutting the Government into two almost equal parts, unites at length with the Volga at Iourevets-Povolgskoï. In addition to these and other rivers, *Kostroma* is likewise watered by several lakes, the largest of which, Lake Galitchskoe, is 15 versts long and eight wide. The inhabitants raise nearly sufficient rye for their consumption, and large quantities of flax and hemp. The country is covered by immense forests; those appertaining to the Crown extend over 2,027,729 dessaitines, and are, generally speaking, kept in better condition than those of the other Governments: lime trees or lindens abound. They contain little game, but many wild animals. Pasturage being scarce, the breeding of cattle is little attended to. The fisheries are important. In 1830, there were 59 manufactories in the Government, employing 5592 workmen. These are for the most part in the town of Kostroma. The chief manufacture is that of Russian leather. Numbers of the inhabitants repair to the neighbouring Provinces every Summer in search of work, as masons, plasterers, carpenters, &c.; and of those who remain many are occupied in the construction of barks or rafts, and in the manufacture of bark mats, (*ragoji*), which are used for many purposes in Russia, among others for sails. The number of Schools in this Government, which depend on the University of Moscow, were, in 1832, 19 with 49 masters and 779 pupils; adding to these 11 Ecclesiastical Schools with 1699 pupils and 37 masters, and taking the population with M. Arsénief at 880,000, the proportion will be one pupil to every 355 inhabitants. There is only one printing-office, which belongs to the Crown; and there is a lithographic establishment, which is a private speculation. The *Eparchy of Kostroma and Galitch* is of the third class, and comprised, in 1830, 13 Cathedrals, 858 Churches, 11 Monasteries, and

RUSSIA.

RUSSIA. 3 Convents. *Kostroma and Vladimir* are under a Military Governor who resides at *Kostroma*. The expenses of the Government are about 77,000 rubles; and its revenue is estimated at 3,283,000 rubles.

Kostroma, the seat of the Government, is an ancient city, pleasantly situated on the high banks of the Volga, and consisting of well-built houses mostly of stone. Its beautiful Cathedral, embosomed by trees, stands on a rising ground of some height, and is surrounded by handsome buildings, among which the Palace of the Governor and the *Gostinói-Dvor* are the most conspicuous. There is no inconsiderable degree of affluence here, and the luxury of large cities is not unknown. The Churches are 44 in number; and in the Tatar faubourg is a Mosque built of wood. Of its two large Monasteries, that of *Ipatiev-Troitskoï* deserves mention from the circumstance of Michel Fædor Romanov having been here with his mother, when he was summoned to the throne in 1613. This event is commemorated by a yearly procession, which takes place March 14. It is likewise the residence of the Bishop. The chief manufactures are those of leather and cloths. Longitude $41^{\circ} 5'$ East, latitude $57^{\circ} 45'$ North. About 40 versts from this city, descending the Volga, is the small town of *Ples*, delightfully seated on the right side of the river, at the base of five small hills. Almost the whole of its population is engaged in weaving. *Galitch*, on the lake of this name, is mentioned in the Chronicles as early as the year 1208. Here are two ancient forts. It has 13 Churches and one Convent. Population about 3000. Longitude $42^{\circ} 30'$ East, latitude $58^{\circ} 18'$ North. *Sol-Galitzkoï* owes its name to its salt springs. The towns of *Makariev* and *Iourievets-Povolgskoï* hold annually several important markets.

This Government consists of 12 districts: *Kostroma*, *Nerekhta*, *Kinekhma*, *Iourievets-Povolgskoï*, *Makariev*, *Galitch*, *Tchoukhlova*, *Sol-Galitzkoï*, *Kologriev*, *Vetloug*, *Varnavin*, and *Bouï*. The Government Survey estimates its superficies at 1441 square geographical miles, which M. Arsénief reduces to 1428.

Koursk (Government of) is limited by that of *Orlov*, or *Orel*, on the North; by *Voronej* on the East; by *Kharkov* or the *Ukraine* on the South; by *Poltava* on the South-West; and on the West by *Tchernigov*. It is one of the most fertile regions in the Empire, encumbered with few marshes or heaths, and having a rich soil generally resting on a clay bottom. The chalk formations rise into hills, or gentle undulations, which, however, are insufficient to relieve the monotonous aspect of the country. "Here," says Malte-Brun, "the change of climate and products becomes sensible; the Winter lasts four months only; and melons and arbuties ripen, but nuts do not." The country is well watered, yet seldom inundated; there are computed to be 13 rivers of moderate size, and 495 lesser streams, none of which are navigable. The lakes and ponds are inconsiderable. The chief rivers are the *Donets*, which rises in this Government and takes a Southern course, and the *Seim* which flows Westerly to join the *Desna* in the Government of *Tchernigov*; the remaining rivers are divided between the *Don* on the East, and the *Dniepr* on the West. The climate is mild and healthy; but it is asserted that the bad quality of the water exposes man to the *tœnia*, and animals to the *fascia hepatica*. Tillage and the breeding of cattle are the chief occupation of the inhabitants. The fertility of the soil is such as to require no manure; consequently, improved methods of

farming and the introduction of better agricultural implements are totally neglected. Corn of all kinds, hemp, tobacco, hops, vegetables, and most fruits except the pear, are raised in abundance, so as to furnish considerable exports. The forests are not numerous, and do not yield fuel sufficient for consumption; those belonging to the Crown cover 80,548 dessaitines. Wolves and foxes infest them in great numbers, and they contain little game, which, however, is abundantly met with in the open country; hares and quails are the most common. The excellent grass of the extensive pastures encourages the rearing of cattle: the horses assimilate to those of the *Ukraine*; the breed of sheep has been improved by crossing with the merino; horned cattle are strong and numerous; swine abound; and the produce of the hive furnishes honey and wax for exportation. Fish is scarce. Some iron is found in the Government, with limestone, gun flints, turf, &c. Although essentially agricultural, this Government borrows additional riches from its manufactures. There were, in 1830, 181 manufactories of woollens, leather, linens, cottons, &c., employing 8466 workmen; "and yet," says Hassel, "the wants of agriculture spare but few hands for domestic industry." In the same year there were computed to be 1606 water-mills, 76 windmills, and 323 inns or public-houses. *Koursk* and *Biel-Gorod* are the principal seats of its trade, which is highly flourishing, but labours under the want of a navigable river and a nearer market. A direct water communication with *Odessa* would prove of great service to this Government. Its exports are grain, flour, hemp, flax, skins, wax, cattle, &c. *Koursk* depends, with respect to the means of education, on the Arrondissement of the University of *Kharkov*. In 1830, there were 21 Schools, consisting of a Gymnasium, 13 District Schools, 5 Communal Schools, and 2 private Boarding Schools, having 99 teachers and 1796 scholars; to these must be added 14 Ecclesiastical establishments, with 42 teachers and 2299 pupils. Taking the population with M. Schnitzler at 1,600,000, this gives a proportion of one person receiving instruction in every 390 individuals. It constitutes an *Eparchy* of the third class, the head of which takes the title of *Archbishop of Koursk and Biel-Gorod*; and which, in 1830, embraced 18 Cathedrals, 859 Churches, 9 Monasteries, and 3 Convents. *Koursk* has sometimes been united with *Orel* under the same Military Governor. In 1796, the expenses of the Government were fixed at 71,990 rubles; and, in 1808, the revenues of the Crown amounted to 5,765,000 rubles.

Koursk, its chief town, lies at the confluence of the *Touskara* and the *Koura*, and is built on a high hill, formerly crowned by a citadel. Its streets are narrow and winding, but paved; most of the houses are of wood, although there are no inconsiderable number of stone; 12 of its Churches are likewise built of this material: 4 are of wood. This city possesses a Seminary, a Gymnasium, Hospital, &c. It is the seat of a brisk trade. The gardens in its neighbourhood are highly cultivated, and are especially noted for their melons and arbuties. Longitude $36^{\circ} 44'$ East, latitude $51^{\circ} 43'$ North.

Korennaiá Poustinia is a *slobod* 27 versts from *Koursk*, on the road to *Orel*, at which a large fair is annually held every Easter. Business to the amount of 23,000,000 rubles was done here in the year 1829. Russian merchandise was disposed of to the value of 20,922,624 rubles; Asiatic to that of 775,870 rubles; and other European merchandise, with colonial produce,

RUSSIA.

RUSSIA. made up the remainder of the 23,000,000. Horses were sold, in the same year, to the amount of 277,200 rubles. Business is transacted in 350 shops belonging to the place, (*boutiques à demeure.*) It is likewise a celebrated place of pilgrimage, and hence the origin of the fair.

The districts of *Chigriy*, *Fatej*, and *Dmitriev* form the Northern part of the Government; their chief towns are of no importance. The same may be said of those of the Western districts, with the exception of *Poutivl*, agreeably situated on the Seim. It is cited as a castle by Margeret, in 1606, is the seat of a considerable trade, and its yearly fair is much frequented. It has 19 Churches, 16 of which are of wood. Population 9000. Longitude $34^{\circ} 15'$ East, latitude $51^{\circ} 17'$ North. The *kélo* of *Glouchkova* is famous for its manufacture of cloths.

Biel-Gorod, (White City,) so called from the chalk hill near which the primitive town was built, lies at the point of junction of the high roads from Koursk and Voronej to Kharkov. It is divided into the Old and New Towns, with three faubourgs. Its stone houses are few; there are 1600 of wood. Excellent fruits are raised in the vicinity. Population nearly 8000. Longitude $36^{\circ} 43'$ East, latitude $50^{\circ} 38'$ North.

Karotchka is a well-built town, on the high road to Voronej, containing nearly 10,000 inhabitants. It is environed by 166 gardens. Longitude $37^{\circ} 23'$ East, latitude $50^{\circ} 50'$ North.

Koursk is divided into 15 districts: Koursk, Fatej, Dmitriev, Lgov, Rytsk, Poutivl, Soudja, Oboian, Kotmyjsk, Biel-Gorod, Karotchka, Novoi-Oskol, Staroi-Oskol, and Chigriy. Its population is disseminated over 17 towns, 137 *slobods*, 446 *kélos*, and 1086 villages. The Nobility is numerous, but possesses not more than 250,000 serfs; hence the superior industry and wealth of this Government compared with many others, arising from its free population. Its superficial area, calculated by Schubert on the large Map of Reymann, is 701 square geographical miles.

Novgorod (Government of) is bounded on the North by Olonetz; by Vologda on the East; by Iaroslav and Tver on the South; and by St. Petersburg on the West and North-West. It is the largest Government of Great Russia. In its Northern districts it is flat and low; but the country rises in a South-East direction in a continuous, though insensible manner, terminating in a series of hills of gentle elevation, the highest of which are only 373 yards above the sea level. These are the *Valdaï* hills, the *Mons Alaunus* of the Ancients, and which occupy a surface of about 24 square geographical miles. These heights separate the system of the Ladoga from that of the Volga. "Immediately," says Pallas, "on leaving the marshes of Ingria we begin to ascend the high grounds of Russia, commonly called the *Valdaï* hills, and meet at every step ancient traces of the sea; at first in a tract intersected by ravines, which has visibly suffered from a most violent inundation, or rather from the flowing off of an enormous mass of water; then, in entire calcareous layers, which can only be owing to the deposits of a quiet sea, and which are rendered visible by the channels of the rivers. There are, in the first place, layers of deposited earth, interspersed with blocks of granite detached from their original rock; and then immense banks of pebbles and gravel, mingled with fragments of calcareous stones, petrifications broken, or changed into gun flints, and even bones. A similar rupture of the original layer, and especially of the calcareous banks, has been traced to the vicinity of

Lake Onega." The prevailing formation is therefore RUSSIA. calcareous, mingled with layers of flint, slate, and gypsum; the blocks of granite with which it is strewn afford excellent materials for the roads. Sometimes covered with sand, at others with clay, this secondary formation is by no means fertile, particularly in the Northern districts; but the hills contain iron, vitriol, alum, gypsum, lime, and coal. This Government is abundantly watered, having 60 lakes, and about 40 rivers. The largest of the former are Lakes Ilmen, Bielo Ozéro, (*White Lake*), and Vojé: of the latter, the principal are the Msta, the Volkhov, the Cheksna, and the Mologa. On referring to our account of the canals of Russia, it will be seen that the three great systems uniting the Baltic and Caspian Seas intersect this Government. The climate, in the three Northern districts especially, is rude and cold; colder even than that of St. Petersburg, where the winds from the sea temper the rigour of Winter. Here it is increased by the elevation of the ground, as well as by the humidity proceeding from its abundant waters. Nevertheless, the climate is healthy. Agriculture, generally, is in a languishing state. The only districts which yield a good return are those of Novgorod and Dimiansk; the soil is unproductive, and the night frosts frequently destroy the hopes of the harvest. Forests still cover great part of its surface; those belonging to Government alone occupy 2,727,208 dessaitines. There are scarcely any orchards or fruit trees. The inhabitants, with the exception of those of the two districts above specified, devote themselves to river navigation and the building of barks. Nevertheless the growth of flax and hemp is considerable, even entering into exportation, as does the timber abundantly supplied by the forests, which likewise furnish some animals valuable for their fur. The cattle are few in number; the fisheries are highly productive; and the salt-works at Staraïa-Rous supply the home consumption and that of the Government of Tver. In 1832, there were 47 manufactories: of these, two were of cloth, two of glass, two brass foundries, 16 tile-works, 11 tanneries, six melting-houses, and three candle manufactories. The inhabitants are accustomed to trade from one fair or market to another; and this traffic, with the horses they let to the posts, and for the purposes of boat-navigation, forms the greater part of their income. *Novgorod* is included in the Arrondissement of the University of St. Petersburg, dependent on which there were, in 1832, 10 Schools with 49 teachers and 915 pupils; these, with 15 Ecclesiastical Schools having 43 teachers and 1713 pupils, make the proportion of those who receive instruction one to every 304 inhabitants, if we estimate the population with M. Arsénief at 800,000. The *Eparchy of Novgorod* is of high antiquity, being the first Russian Bishopric raised to an Archbishopric. In 1572, it was made the Metropolitan See, but now divides this honour with St. Petersburg. The *Eparchy* embraces Novgorod and Olonetz; the titular Metropolitan of Novgorod and St. Petersburg generally resides in the latter town, which, however, does not form part of his Diocese. This comprised, in 1830, 18 Cathedrals, 775 Churches, 21 Monasteries, and five Convents. *Novgorod* is the seat of a Military Governor, whose jurisdiction likewise extends to the Government of Tver. The revenues of the Civil Government amount to 2,733,000 rubles, its annual expenses to 76,954 rubles, which must undoubtedly be silver rubles.

RUSSIA. *Novgorod*, anciently surnamed *Véliki*, (the Great,) and long famous among the cities of the North, is now shorn of its former splendour, which exists only in dilapidated monuments, and the history of past Ages. *Novgorod*, which signifies the *new town*, lies to the North of Lake Ilmen, on the banks of the Volkhov, and is seated in a vast plain, on the high road between Moscow and Petersburg. The river divides the city into two parts, the *Sophiskaia*, and the *Torgovaia*, or the quarter of St. Sophia and the Merchants' quarter. They are connected by a bridge, which has been three times renewed. The third, and last, was built in 1825 of wood, but its piles, and the foundations on each side of the river, are of granite. It has 11 arches, of which the central is upwards of 80 feet in span; it is 6 sagènes wide, and 117½ sagènes long. The *Torgovaia* quarter, which is on the right bank, is a mass of sorry wooden cabins, occupying a vast extent, but irregular, dirty, and the streets mostly unpaved. About 50 Churches of wood or stone, a wooden *Gostinoï-Dvor*, a so-called palace, and a large rope manufactory poorly redeem the wretched appearance of this quarter, once the seat of a flourishing commerce. The *Sophiskaia* is surrounded with an earthen rampart and a deep ditch. Here is the *kreml*, or fort, of an oval form, and fenced by a stone wall, strengthened at set distances by round and square towers. In this is the venerable Temple of St. Sophia, whose banner so often led the inhabitants to victory. Originally built of wood, in 992, it was replaced in the XIth Century by a stone edifice, reared on the model of the Church of St. Sophia at Constantinople. It consists of two buildings—the Winter and the Summer Church; the last, which is the most ancient, was completely restored by the Government in 1832. At its Western extremity are the celebrated gates of bronze, which have employed the erudition of Adelung; (see *Die Korssunschen Thüren*, Berlin, 1823;) and in its archives was found a complete copy of the *Rousskaia Pravda*, or the Code of Iaroslav, on parchment, supposed by Strahl to have been written in 1280. Near the Cathedral, in the Northern part of the *kreml*, is the Archiepiscopal Palace; but the actual residence of the Bishop is a stone house of two stories. The situation of the town is highly favourable for trade; and some business is still effected in corn, hemp, and flax. *Novgorod* is of high historical importance. In 864 it became the chief seat of the Russian power. It was, however, in the XIIth Century that it rose most rapidly to importance. Its situation, so favourable for commerce, soon brought it into an active and intimate connection with Denmark and the German towns. *Novgorod*, although it submitted to pay tribute, was preserved from the desolation which followed in the track of the Mogul conquerors; and to such a height did its good fortune exalt the enthusiastic courage of its inhabitants, that *Kto protif Boga i Velikavo Novgoroda* (Who would attack God and Novgorod the Great!) became their adage. Their name was respected in Russia, feared by the Tchouds, their nearest neighbours, and more than once did the banner of St. Sophia witness the rout of the valiant brotherhood of the "Swordbearers," and the no less warlike Swedes. Its entrance into the Hanseatic League dates from 1269; but it was not till the XIVth Century that the republic either coined money itself, or admitted that of other Countries. Barter alone was the medium of trade. In the same century it was obliged to receive its Governors from Moscow, although it still retained its own constitution; and, in

VOL. XXVII.

the succeeding century, the fatal blow which destroyed its independence was struck by Ivan III., who had resolved that, from the foot of the Ourals to the banks of the Narova, Russia should henceforward have but one master. From this period its commercial consequence underwent various changes, at times dwindling into insignificance, at others reviving to a resemblance of its ancient splendour, until the foundation of St. Petersburg sealed its fate as an emporium of trade. "At present," observes M. Schnitzler, "*Novgorod-Véliki* is a vain name, which one scarcely ventures to employ to distinguish this ancient second metropolis from its homonyms *Nijnii-Novgorod*, *Novgorod Séverskoï*, &c." Longitude 31° 10' East, latitude 58° 30' 3" North.

At a short distance from the town are two celebrated Monasteries, dedicated the one to St. Antony, the other to St. George. The Seminary founded in the former by the Metropolitan Job, in 1697, possesses the very select library of the Archbishop Theophanus Prokopovitch.

Staraiâ Rous, lying to the South of Lake Ilmen, is well situated for purposes of trade, being watered by the Polist and the Parousia, which empty themselves into the lake; and the Lovat and Pola flow at an inconsiderable distance from it. This small town sends annually upwards of 300,000 poods of flax to St. Petersburg; it has likewise a salt-pit, the yearly produce of which is estimated at 152,000 poods. The *Gostinoï-Dvor* is built of stone. Population about 5000. Longitude 31° 10' East, latitude 58° North.

The floating bridge at the little town of *Bronnitsy*, in the district of *Krestzi*, over the Msta, as well as a large hospital of stone near it devoted to the service of the military colonies, and a conical mound to which are attached some popular traditions, deserve to be particularized. There is a beautiful bridge over the Malo-Volkhovetz, between *Bronnitsy* and *Novgorod*, which was begun in 1824, and completed the next year. It is based on granite, is 100 toises long, 35 feet wide, and is fenced by balustrades of cast iron, resting on granite.

Valdaï lies on the high road between the Capitals, on the highest portion of the table-land to which it gives name: the Valdaï Lake, which is North-East of it, is 80 feet lower, and is embosomed in the hills. This town, the ancient property of the Iverskoï Monastery, was peopled by Alexis Mikhaïlovitch with Polish and Swedish prisoners. Here are a Palace for the reception of the Imperial family when travelling, a *Gostinoï-Dvor*, three Churches, and a small number of stone houses; the rest are of wood, and of mean appearance. Longitude 33° 14' East, latitude 57° 55' North. *Zimogorié*, which reckons about 2000 inhabitants, and where the ground again sinks to a level, may be considered a faubourg of *Valdaï*. On one of the islands in the lake is the *Iverskoï-Monastyr*, founded in 1654 by the Patriarch Nikon. It is of the first class, contains six Churches of stone, and a curious library. It is surrounded by a gloomy wood.

Oustioujna, on the East of the Government, and on the high road from St. Petersburg to Iaroslavl, is remarkable for the nature of the ground on which it is built, and whence it derives its surname of *Jélésopolskaia*. (*Field of Iron*.) This metal abounds in the vicinity, and is found almost on the surface of the soil.

Kirilov and *Bielozersk* are the chief towns of the two most Northern districts of the Government. The first is noted only for its Monastery, founded in 1398 by St.

2 E

RUSSIA.

RUSSIA. Cyril. It is surrounded by two thick and lofty walls, which are flanked by six large towers, and on every side it is bathed by small lakes. Its vast enclosure is so filled with buildings, as to present at a distance the appearance of a fortified town. This Monastery possesses a valuable library, accounted one of the richest (*riznitza*) in the Empire, and, in 1764, had 21,600 serfs belonging to it. The Poles laid siege to it in vain, in the years 1612 and 1613. The austere life of its inmates rendered it renowned throughout Russia, and Princes themselves have intrigued for the honour of entering it. Here too the Patriarch Nikon passed his exile. The Monastery contains nine Churches built of stone. *Bielozersk* is seated on the Southern bank of the Lake *Bielo Ozero*; it is a fortified town, of much trade, and of considerable antiquity.

Tikhvin is chiefly known from the circumstance of its giving its name to one of three systems of canal navigation, already fully described. It contains three Churches, and 795 houses; the Monastery of the Assumption, founded here in 1546 by order of Ivan IV., is of much note. Population 3500. Longitude $33^{\circ} 30'$ East, latitude $59^{\circ} 38' 53''$ North. At a short distance from this town is *Stolbova*, celebrated for the Peace concluded there, in 1617, between Russia and Sweden.

Military colonies occupy the Western frontier of this Government, from its Southern boundary *Pskov*, to the town of *Gronzino* near its Northern limit. *Novgorod* and *Staraia-Rous* are environed by these establishments.

Novgorod is divided into 10 districts: Novgorod, Krestzi, Valdaï, Dimiansk, Borovitchi, Oustioujna, Tcherepovetz, Kirilov, Bielozersk, and Tikhvin.

Nijigorod, or *Nijnii-Novgorod* (Government of) is bounded by Kostroma on the North; by Viatka on the North-East; by Kazan and Simbirska on the East; on the South by Penza and Tambov; and on the West by Vladimir. Its superficial area, according to M. Arsenief, is 880 square miles. Generally, the surface of the Government is flat or slightly undulated; yet the hills are rather numerous along the Oka, and the course of the Volga, from Nijnii-Novgorod, runs in a very deep channel. Between Osablikovo and Doskino the road is mountainous, and presents very wild gorges. The soil, chiefly sandy, is in some places mixed with an excellent black earth; sometimes it is ferruginous and reddish, containing ochre and clay. There is an immense difference between the lands to the South of the Volga, which are fertile and marly, and those to the North where extend plains of sand. As there are no marshes the air is healthy and the climate temperate; hence the mortality is inconsiderable. All the heights are crowned with beautiful forests, abounding in oaks and lindens. The Volga, the chief river of the Government, enters it at Katounski; after running from North to South from Iouriévets-Povolgskoï to Nijnii-Novgorod, it turns Eastward near this town, and pursues this direction as far as Kazan, where it again takes a Southern course. At Nijnii-Novgorod it receives the Oka; which river terminates its long and tortuous course after coasting the Eastern frontier of the Government of Vladimir, and entering the territory now under review. The width of the Volga below Nijnii is uniformly one verst at the least. The remaining water-courses are the Tiocha, Vetlougá, and Sereja; the Soura, an affluent of the Volga, and which formerly constituted the limit between Russia and Kazan, belongs to the Government of Simbirska. The lakes are few in number and insignificant. Agriculture

flourishes on this fertile and well-watered soil. In 1808, **RUSSIA.** the wheat alone that was harvested amounted to 4,910,000 chetverts; an amount exceeding the consumption. Flax and hemp are raised in large quantities; and, in the gardens, hops, excellent fruits, and abundance of greens. Magnificent forests cover vast tracts here; those of the Crown alone occupy 1,198,052 desiatines. The breeding of cattle is carefully attended to, although it cannot be called an essential branch of the agricultural industry: there are various studs in the Government, containing the finest horses of the native breed. In addition to its natural wealth, there are few villages in the Government without artisans and looms. In 1830, there were 208 manufactories, employing 6670 workmen; few, however, of these establishments are of any extent. Leather, soap, cast iron, hardware, cordage, cloths, form the chief objects of this manufacturing industry, which is favoured by the vicinity of the Volga and Oka, and more particularly by the great market of the interior held at Nijnii-Novgorod. With respect to education, this Government depends on the Arrondissement of the University of Kazan. In 1832, the number of Schools under its jurisdiction was 20, having 76 masters and 760 scholars; there were likewise seven Ecclesiastical Schools, with 22 teachers and 1342 pupils: thus, estimating the population with M. Schnitzler at 1,200,000 souls, the proportion of those receiving instruction will be as one to 570. There are two printing-offices in the Government, one of which belongs to the Crown. The *Eparchy of Nijnii-Novgorod and Arzamass* is of the third class, and contains 13 Cathedrals, 762 Churches, 8 Monasteries, and 2 Convents. The administration of this Government, as laid down by the State, costs only 71,990 rubles; and its revenues, in 1808, were estimated at 3,770,000 rubles. The imposts levied in 1825 amounted to 1,400,000 rubles.

Nijnii-Novgorod, (Lower Novgorod,) the Capital of the Government, dates its origin as far back as 1222, and long gave its name to a Russian Principality, founded in the midst of Finnish nations. It lies on the high road from Moscow to Siberia, on the high banks of the Oka and the Volga, being seated on the right of the first-named river, at the point where, spreading to a considerable width, it empties itself into the mother (*matouchka Volga*) of Russian rivers, which has here, according to Olearius, a width of 4600 geometrical feet. The *kreml*, or fort, scales the eminence which rises up from the two rivers, and so commands the country as to be visible for a considerable distance. At its foot is the quarter called the *Lower Market*; and, in the opposite angle, formed by the confluence of the Oka and Volga, is annually held the celebrated fair of Nijnii. The left bank of the Volga is perfectly level, but, from the town, the ground shelves rapidly to the river: on the side of the Oka this descent is not so abrupt. The stone wall which, winding round the hill, encloses the citadel, is five toises high and nearly 1000 in length. It was once additionally fortified by 13 towers, which are now in ruins. This enclosure contains, besides other buildings, a Cathedral, a Protestant Church, the new Seminary, and the Government Palace. Near the latter is reared an obelisk of Finland granite, in honour of the citizen Minina and Prince Pojarskoï, who, in 1612, roused the population to arms and victory against the invading Poles; their busts in relief, and of bronze, adorn its pedestal. This monument is 75 feet high, and the view

RUSSIA. from its top is delightful. "The town displays itself at your feet; immense bazaars unfold themselves further on, and the eye follows with delight the course of the two large rivers—of the Volga, with its steep and undulating banks—and of the Oka, crowded with a variety of barks." (Bussière, *Voyage en Russie*.) There is indeed something imposing in the appearance of the town with its cupolas and towers: its circumference is considerable, and its streets are regular, and mostly paved. The street, parallel with the Oka, in the lower town, contains some very handsome stone buildings. Nijni-Novgorod has 26 stone Churches, two Monasteries, and one Convent. The *Stroganov* Church is a pile of considerable beauty. The fair is held on the left bank of the Oka, where, by its junction with the Volga, it forms an extensive level tongue of land. A bridge of boats, half a verst in length, forms the communication between it and the lower town. The ground being inundated by the Volga in the Spring time, it became necessary to raise it three or four toises higher; and to procure earth for this purpose, as well as to enable boats to come up to the shops, a canal has been dug on three sides of the extent of ground to be raised, which communicates with the Volga, by the medium of Lake Mechtcherskoï. Piles were then sunk, on which were built ranges of shops in stone. The expense of this important work was 11,000,000 rubles. On crossing the bridge of boats, the first object that presents itself is a large sand-bank covered with immense block-houses, (*balagani*), in which are stored iron goods, cordage, leather, &c. A second bridge, thrown over an arm of the Oka, leads to the bazaar properly so called—a town of shops and magazines. Along this arm of the Oka extend the buildings of the Chancellery, or the Governor's Hotel, (*Glavnoi-dom*), adorned with a triple range of columns. Hence, one wide street traverses the entire mass of shops, which are divided into twelve ranges, six on either side of the main street; this terminates in a Russian Church, dedicated to St. Macarius, the patron of the fair, and is nearly half a verst long. The above ranges are crossed by three minor streets, running at right angles with the main street; the ranges, thus broken, form 48 separate rows of shops. In front likewise of the Church, both to its right and left, are two transverse ranges of shops, which, being built in the Chinese style, vary the appearance of the bazaar by their capricious forms. All these ranges consist therefore of 52 separate oblong masses of building, each having a double front, or shops on both sides; there being in all 2500 shops. The rental of these, with that of the *balagani*, during the fair, averages 400,000 rubles. Running the entire length of the shops is a large, covered gallery, which is supported by 8000 pillars of cast iron. Flanking the Church of St. Macarius, but on the opposite sides of the canal, are, on the one hand, an Armenian Church, and, on the other, a Mosque with a cylindrical minaret. Between this Mosque and the little lake of Bagrantsovo, are a Theatre, and further ranges of wooden shops. The conveniences and *cloacæ* attached to this vast establishment are of singular magnitude, and, by means of currents of air, fires, pumps, and annual overflows from the water-courses, are maintained in perfect cleanliness. The fair lasts from the 1st of July to the 1st of August; the day of greatest solemnity being July 25th, (Old Style,) the anniversary of the death of the Saint, whose image is yearly sent to consecrate the fair from the Monastery of Makariev.

Originally it was held at Kazan; but, with the view of attracting to the Russian frontier the rich commerce of Asia, of which that city was then the emporium, Vassili Ivanovitch, in 1524, prohibited the merchants of his Empire from resorting thither, and appointed Makariev as the place of commercial exchange with the Asiatic traders. However, little business was transacted there until a century after the re-establishment of the Monastery of St. Macarius attracted a concourse of wealthy pilgrims, and the usual result followed in the increase of trade. On the destruction of the wooden bazaar erected in this town by fire, the fair once more changed place, and was removed, in 1817, to the more convenient site of Nijni-Novgorod. Formerly the fair was guarded by Calmucks; but 300 Cossacks are now found sufficient to preserve order and guard the roads. There is an office specially devoted to the letting of the shops, and another to all banking concerns. The customary post is increased during the continuance of the fair by two departures and two arrivals weekly. The chief objects of the traffic carried on here are, 1st, native products and manufactures: as, cordage, raw hides, sheep skins, furs, hats and boots of felt, cloths, caviar, wooden vessels, glass, lockwork of all kinds, and stuffs and furniture of every description; 2d, foreign merchandise: tea, cotton from Bokhara, spices, Indian shawls, French millinery and jewellery. The goods brought hither are therefore of three descriptions: Russian merchandise, raw or manufactured; merchandise, chiefly manufactured, from the rest of Europe, and colonial produce; Asiatic produce and merchandise from China, Bokhara, the Kirghis, the Armenians, and Persia. The total and respective value of these three descriptions of goods, for five successive years, will be found in the following Table.

Years.	First, or Russian.	Second, or other European.	Third, or Asiatic.	TOTAL Rubles.
1827	67,000,000	16,060,000	22,000,000	105,000,000
1828	72,313,349	13,800,125	21,270,200	107,383,674
1829	77,424,000	17,230,000	17,400,000	112,054,000
1830	84,000,000	15,433,000	17,385,000	116,818,000
1832	89,500,000	17,000,000	16,700,000	123,200,000

Among the Russian products brought here in 1828, fish and caviar entered for the value of 1,500,000 rubles, bark of various trees and mats for 1,000,000, and nuts for 100,000 rubles. In 1830, Russia sent to the fair silks to the amount of 8,500,000 rubles, whilst the foreign silks were estimated at 1,700,000 rubles only; it furnished hides, raw and dressed, to the value of 3,000,000, and fish, dried and salted, to that of 1,600,000 rubles; the cottons of Russian fabric amounted to 19,000,000, and those of foreign manufacture to 3,000,000 alone. The Russian woollens were estimated at 500,000 rubles; the foreign were of the value of 2,200,000 rubles. The furs amounted to 8,000,000 rubles, and iron, in poods, to 2,000,000: 32,368 chests of tea from China were disposed of, and 306,570 pounds of Chinese silk. It is computed that 200,000 individuals are collected at this fair. During the remainder of the year the town is thinly peopled. Nijni-Novgorod contains one Gymnasium, four primary Schools, one Ecclesiastical Seminary, an Orphan School for soldiers' children, and seven Hospitals. Longitude 44° 14' East, latitude 56° 19' 40" North.

Makariev, a small and now insignificant town, lies

RUSSIA. on the left bank of the Volga, at the point where it receives its tributary the Kerjénetz. It is a shapeless heap of houses, reared in the sand, on wooden piles, in front of the Monastery of St. Macarius, which is girdled by a wall 500 toises in circuit, and which contains in its precincts five stone Churches, the residence of the Archimandrite, and the cells of the Monks. Since the removal of the fair, in 1817, Makariev has remained buried in the profound solitude from which it was once roused for a month at least every year. Population 580. Longitude $45^{\circ} 18'$ East, latitude 56° North. *Semenov*, the chief town of a district, is celebrated for its cabinet-work and turnery. Population 600. *Balakhna* is a small town on the high road from Nijnii-Novgorod to Iaroslavl, which carries on some trade in wheat. It contains 15 Churches, independently of those belonging to the Monastery. *Arzamass*, which gives one of its names to the Eparchy, is an ancient city, with 20 Churches. The remaining towns of the Government are of no interest.

The Government is divided into 11 districts: Nijnii-Novgorod, Gorbato, Arzamass, Ardatov, Loukoianov, Sergatch, Vasil, Kniaghinin, Makariev, Semenov, and Balakhna. It contains 13 towns, and 5380 villages and hamlets, of which 762 are *kélos*.

Olonetz (Government of) is bounded by Arkhangel on the North and North-East; on the South-East by Vologda; by Novgorod and St. Petersburg on the South; and by Lake Ladoga and Finland on the West. Its superficial area may be estimated at about 2943 geographical square miles. The Western portion of the Government, which is in general stony, greatly resembles Finland, presenting alternately marshes, lakes, and mountains. The latter extend from Finland to Lake Onega, and along Lake Ladoga. Their base is granite, but slate is every where superposed, excepting where immense detached blocks of soil are scattered amongst the rocks, which seldom rise to a height of more than 60 toises. The *Solomé* or *Solomensk* stone, which is found near Lake Onega, facing Pétravodsk, and extends in a North-West direction for 100 versts, is composed of slate, quartz, and cement. Wet and marshy tracts of land border these rocks, and, to the South, the land is flat, sterile, and sandy. This Government is watered by more than 1500 lakes of all sizes, and 800 rivers or rivulets; Lake Onega is the largest of the former, and the river of the same name is the principal of the latter. The navigation of most of these streams is rendered impassable by cataracts; but the canals of Onega and Maria, in some measure, balance this disadvantage. The climate is moist and cold; the Winters so rigorous as frequently to destroy all the hopes of the husbandman, the mercury being at times frozen into a solid mass; the Summer heats are intense, and accompanied by heavy dews at night—this part of the year, however, is very beautiful, but of short duration. From the nature of the soil and climate, agriculture cannot be very flourishing: the best cultivated district is that of Kargopol. Grain is of course obliged to be imported; although the food of the peasantry consists chiefly of parsnips, turnips, carrots, &c., which roots enter largely into the composition of their bread. Flax and hemp succeed well, particularly between the two large lakes, and are largely exported. Fruit is scarce, but its place is supplied by the wild berries of the thickets and marshes. The forests are immense, and form the principal resource of the inhabitants; those of the Crown alone cover

8,956,795 dessaitines. They consist chiefly of the pine, fir, birch, alder, larch, and juniper, and supply masts, timber, tar, turpentine, pitch, charcoal, &c. Pasturage is scarce: the cattle feed in the woods during the Winter and part of the Summer; both oxen and horses are equally diminutive. Wild beasts are numerous, and, in addition to bears, wolves, foxes, elks, the glutton and some rarer species are met with. The chase and the fisheries are very productive, and, together with the felling of timber, employ the majority of the inhabitants. The first supplies furs in considerable quantity; the second a large proportion of the common food of the people: the small lamprey (*Cyprinus murænula*) is found on most tables. In the larger lakes are fisheries of seals; in the smaller, and in the rivers, of salmon, sturgeon, carp, &c. The mountains yield mineral wealth in abundance: of 27 important mines now open, there are two of gold and silver, five of copper, and 10 of iron; the quarries supply the marble of Carelia, granite, porphyry, the *Poudoj* and *Solomensk* stone, serpentine, alabaster, limestone, &c.; and there are also found clay of excellent quality, colouring earths, salt springs, and traces of mineral waters. The manufacturing industry of this Government is of little account. In 1832, there were 29 tanneries and three forges; and taking into the calculation the workshops (*zavodes*) of every artisan, however petty, there were in all 191 manufacturing establishments of one kind or other. Their insignificance, however, may be estimated from the circumstance of the tanneries and forges, whose number has just been given, employing no more than 126 hands. Commerce is rather active, yet the number of those engaged in it is on the decrease: in 1808, the capital declared by 701 individuals of this class amounted to 2,230,000 rubles. There are about 660 water, wind, and saw mills in the Government. The exports consist of marble, granite, iron, masts, planks, vitriol, flax, hemp, tar, pitch, skins, furs, &c. to St. Petersburg and Arkhangel; the imports of wheat, salt, brandy, manufactured goods, and colonial produce. It is calculated that a third of the population repairs every Summer to the other Governments in search of employment. *Olonetz* does not constitute an *Eparchy*, but is dependent on that of *Novgorod*. It belongs to the Arrondissement of the University of St. Petersburg, and, in 1832, there were 11 Schools, with 31 masters and 402 scholars; the state of the Ecclesiastical Schools is not known. There is no bookseller's shop in the Government, and the only printing-office belongs to the Crown. *Olonetz* has the same Military Governor as Arkhangel. The expenses of the Government were fixed in 1784 at 132,764 rubles; the revenues, in 1808, amounted to 1,180,000 rubles.

Pétravodsk, so named by Catherine II. in memory of the manufacturing establishments (*zavod*) formed there by Peter the Great, is the chief town of the Government. It is seated on a bay of Lake Onega, at the mouth of the Chouskoï, in a very picturesque country, but presents nothing remarkable except its foundery for cannon, anchors, &c., its gunpowder mills, and other Government manufactures for the service of the navy and artillery. Three fairs are held here yearly. Population 6712. Longitude $34^{\circ} 31'$ East, latitude $61^{\circ} 48'$ North. *Olonetz*, on the Olonka, at no great distance from Lake Ladoga, is a commercial town, chiefly noted as the seat of the first dockyard formed by Peter the Great. Population 2570. Longitude $32^{\circ} 30'$ East latitude $61^{\circ} 3'$ North.

RUSSIA.

RUSSIA. This Government is divided into seven districts: Petrozavodsk, Olonetz, Ladeinöi-Polé, Vytegra, Kargopol, Poudoj, and Povienetz; it contains eight towns, 195 *kélos*, and 4630 villages.

Orel, or *Orlov* (Government of) is bounded on the North by Kalouga and Toula; on the East by Tambov and Voronej; on the South by Koursk; and by Tchernigov and Smolensk on the West. Its length from West to East is 600 versts; its width about 200. The superficial area is computed by General Balachef at 38,616 square versts, or 4,022,508 dessaitines; 24,501 dessaitines belonged to the towns and slobods, with their dependencies, and 3,998,007 dessaitines to the districts. He thus divides the total: lands in cultivation, or fit for tillage, 2,163,112 dessaitines; pasture, 329,364 dessaitines; forests, 1,285,008 dessaitines; dwellings, and grounds attached to them, 92,485 dessaitines; unproductive land, 152,538 dessaitines. The surface is generally undulated, and calcareous hills form deep valleys in it; there are few marshes or heaths, and little sterile soil, but frequently a light sand intermixed with fecundating substances. Few districts in Russia are so productive, and its fertility is especially remarkable in its Eastern tracts. The natural productiveness of the soil, which is in general well watered, is assisted by active cultivation. Its waters are divided between the Volga and Dniepr, but the fall of the land is especially directed towards the latter. The chief rivers of the Government are the Desna, the Oka, Sosna, &c.; the Don touches on its Eastern frontier only. The lakes are few in number, and none considerable. The climate is equal, temperate, and even mild; the air is very healthy. The population is chiefly agricultural: in 1821, there was cleared off the ground 5,114,112 chetwerts of grain of various kinds; the quantity sown had been 1,872,326 chetwerts, but the return is sometimes seven and even tenfold. Some flax is likewise raised, hemp in considerable quantities, with tobacco, poppies, hops, &c. Vegetables and fruits are common: in 1821, there were 6256 gardens, and 92,872 kitchen gardens. The forests, composed of birch, alder, pine, lime, and oak trees, cover nearly a third of the surface; those belonging to the Crown extend over 434,369 dessaitines. Wild fowl abound, especially quails; hares and foxes are also common. More attention is now paid to the rearing of cattle, and the breeds are much improved. In 1821, the number of horned cattle was computed at 287,388 head, of sheep at 631,940, and of horses at 488,853; swine and poultry are abundant; and bees form no unimportant object of rural economy. The official returns of 1821 give the following details of the manufacturing industry of the Province: 456 workshops and 27 manufactories, employing together 3518 workmen; 32 (132?) distilleries, which produced 727,978 védros of brandy, of the estimated value of 1,602,727 rubles; and there were likewise 2159 wind and water mills, returning an annual revenue of 600,180 rubles. The exports are grain, flour, flax and hemp seed, hemp, honey, iron, steel, and different metallic products. The chief commercial towns are Orel, Sievsk, Elels, and Briansk. *Orel* is an *Eparchy* of the third class; the titular bears the title of Bishop of *Orel* and *Sievsk*. His Diocese contained, in 1830, 10 Cathedrals, 830 Churches, eight Monasteries, and three Convents. The expenses of the Civil Government, as fixed in 1796, are 72,420 rubles; and the revenues, according to M. Balachef, amount to 10,539,058 rubles. *Orel* forms

part of the district of the University of Moscow; and, in 1832, there were 32 Schools appertaining to its jurisdiction, with 96 teachers and 1656 scholars; the Ecclesiastical Schools, in 1831, were seven, with 25 masters and 2604 pupils: this, taking the population with M. Schnitzler at 1,300,000, would give the proportion of those receiving instruction as one to every 305 inhabitants. The official returns make no mention of either printing or lithographic offices.

Orel, the Capital of the Government, is built of wood, divided into three quarters, and seated at the point of junction of the Oka and Orel: its breadth occupies the space comprised between these two rivers, and its length follows the course of the former. Were it not for the mills which block up its channel, the Oka would be navigable here. Since the commencement of the present century, the progress of this town has been rapid. It is most favourably situated for trade, is the emporium for the grain of Little Russia, and furnishes Moscow with most of its provisions. It likewise sends wheat and flax to St. Petersburg for exportation. Its other articles of trade are the wines of the Southern Provinces which it distributes to the interior, tallow, butter, pig's bristles, leather,—and honey, wax, and wool, which its traders buy up in Little Russia. The town contains tanneries, melting-houses, manufactories of cloth, cordage, &c.; and several large fairs are annually held here. Besides the buildings belonging to the Crown, there are 18 Churches, all, except two, of stone, two Religious Houses, a Bazaar with 150 shops, and about 3000 dwelling-houses; the outskirts are laid out in gardens. Longitude 35° 55' East, latitude 52° 55' North. *Briansk*, on the Desna, and lying on the high road to Smolensk, is a town of considerable trade, with tanneries, a cannon foundry, and a manufactory of arms. Population about 5000. Longitude 34° 19' East, latitude 53° 17' North. *Elels*, on the high road leading from Voronej to Toula and Moscow, is a large, paved town, lying between the river from which it derives its name and the Sosna. It lies on a lofty hill, is of considerable antiquity, and contains 14 Churches. There is an active trade here in corn and cattle. Population 8000. Longitude 38° 40' East, latitude 52° 35' North.

The Government is divided into the 12 following districts: Orel, Mzensk, Bolkhov, Karatchev, Briansk, Troubchevsk, Sievsk, Kromy, Dmitrovsk, Maloarkhangel'sk, Livny, and Elels. It was estimated to contain, in 1821, 12 cities, one slobod or faubourg, and 3949 villages, of which 843 had Churches, (*i. e.* were *kélos*.) There were 19,633 houses in the cities, 70 in the slobod, and 107,762 in the villages, making a total of 127,672 houses.

Pskov (Government of) is bounded on the North by the Governments of St. Petersburg and Novgorod; on the East by those of Tver and Smolensk; on the South by Vitebsk; and on the West by Livonia: Lake Pskovskoë constitutes, for a short space, its North-Western limit. According to the General Survey, made in 1795, its superficial area is 723 geographical square miles. Its surface, which is rather elevated in its Eastern and Southern districts, and scattered with blocks of granite, sinks by gentle declivities towards the North and West. "Sand and marshes," says Maite-Brun, "replace the argillaceous, or shell-limestone soil of the higher lands. The marshes are bordered with fern and turf; and a cloudy sky covers this sterile country, which, nevertheless, owing to its scanty population, exports grain in

RUSSIA.

considerable quantity. Scarcely an oak or apple tree is to be seen, but the marsh plum (*Prunus padus*) abounds; the hollows of trees form the beehives, and all is rude and wild, yet not destitute of picturesque beauty. The limpid waters of the lakes suffer the eye to scan their depths, and the squirrel animates the forests, which yield masts and other timber. . . . The faithful traveller will one day compare this table-land of Pskov and Polotzk with that of the interior of Eastern Prussia: at equal distance from the Baltic, and of similar elevation, they will present an interesting parallel to geognosy." Without possessing any large rivers, this Government, which is only touched upon, at its South-Eastern limit, by the Dvina, but which gives rise to the Chelon, is tolerably well watered. The chief streams, after the latter, are the Velikaia, Lovat, Toropa, Pskova, and Tcherekha. The principal lakes are those of Pskovkoë, which communicates with Lake Peïpous, and is about 20 versts long, of Polisto and Tzevlo, near the Novgorod frontier, and of Jisto and Dvinvilipskoë on the South-East. The climate, which resembles that of St. Petersburg, is cold and cloudy, but not unhealthy. Agriculture constitutes the principal wealth of the inhabitants. The soil, in general, is rendered productive by plentiful manuring alone, and little wheat is raised, but barley, rye, and oats, in such quantity as to leave an excess over the consumption of above a million chetverts for exportation. The whole harvest amounts to about 3,500,000 chetverts. After corn, attention is chiefly directed to the growing of hemp and flax. The forests cover vast tracts, and supply excellent timber; the oak, indeed, is scarce; they abound with game and wild beasts, particularly with wolves and bears. Cattle are not reared in any considerable number; bees are not so common as in other Governments; but compensation is made by the abundant supply of fish which enters largely into the food of the inhabitants. In 1830, the Government contained 61 manufactories, employing 376 workmen only; the different branches of domestic industry are likewise inconsiderable, and, notwithstanding the plentiful supply of grain, even distilleries are rare. Consequently, in addition to its natural products, as timber, tar, corn, hemp and flax, there is little exported except Russian leather, in the preparation of which the inhabitants excel. The titular of the *Eparchy of Pskov, Livonia, and Kourland* is usually an Archbishop: it is of the second class, and embraces 9 Cathedrals, 141 Churches, 8 Monasteries, and 3 Convents. The establishments for education are under the jurisdiction of the University of St. Petersburg. In 1832, there were 41 Schools, with 67 masters and 1240 scholars; in 1831, the Ecclesiastical Schools were seven, with 24 tutors and 870 pupils. Taking the population at 638,000, the proportion of those receiving education is as one to 302. The Government contains but one press, which belongs to the Crown. *Pskov* has long been united with the Baltic Provinces under one Governor-General. In 1808, the Crown drew from it a revenue of 2,214,000 rubles *banco*, and the official statement of the expenses is 51,794 *silver* rubles.

Pskov, the Capital of the Government, lies on the right bank of the Velikaia, and, although long shorn of its power as head of a republic, is still of consequence by its size and trade. In the centre is the *kreml*, surrounded by a wall built in the XIIIth Century, in the reign of Prince Domante, and still called by his name. Around the *kreml* extends the *Middle Town*, in the

shape of a half moon, likewise surrounded with a wall, as is the *Great Town*, which comprises the two others, and is seven versts in circumference. There is also a faubourg. Renouard de Bussière describes *Pskov* as follows: "Ruined walls, the remains of past ages, some ramparts thrown up against the Swedes by Peter the Great, wide and desert streets, 60 Churches of sorry appearance, and an antique Cathedral with its interior glowing with massive gilding, are all that can here fix the attention of the traveller." *Pskov* contains a large Ecclesiastical Seminary, having more than 100 pupils, and four Religious Houses; the Gymnasium does not appear to be yet organized; the *Gostinoï-Dvor* is of stone. A fair is held here every year from the 8th to the 18th of February, (Old Style,) at which merchandise was disposed of in 1826 to the amount of 137,505 rubles; and, in 1827, the sales amounted to 164,645 rubles. Cloths, silks, stuffs from Asia, books, plate, furs, and fancy goods are the articles chiefly brought to the fair. Of the 1486 houses which now constitute *Pskov*, 93 are of stone, and 153 have stone foundations. Longitude 28° 24' East, latitude 57° 48' North.

Toropetz, which takes its name from the Toropa, a tributary of the Duna, is an ancient and commercial town, very advantageously situated by the various lines of water communication with which it is connected for the purposes of trade. Its origin is unknown, but we find it mentioned in the Xth Century, at the epoch of the conversion of Vladimir to Christianity. It has often been taken and retaken in the wars between the Poles and Russians, and frequently laid waste by fire; that of 1758 destroyed 7 Churches and 580 dwelling-houses. *Toropetz* contains a Cathedral, 13 Churches, and 2 Monasteries; it is chiefly built of wood, and its streets are laid down with the same material. Population 7500. Longitude 31° 33' East, latitude 56° 27' North.

The district of *Velikië-Louki* (the Great Meadows) is a continuation of the Southern border of the Government to the West of *Toropetz*. Its chief town, of the same name, lies on the Lovat, and on the high road from Ingria to Smolensk. It is celebrated for its manufacture of Russian leather. Population 3000. Longitude 30° 28' East, latitude 56° 19' North.

Izborsk, in the district of *Ostrov*, which is now only an insignificant burg, deserves mention as having been the seat of Government of one of the three *Vareghi*, the founders of the Russian Empire. It derives its name from *Izbor*, the son of St. Vladimir.

Petchory, on the confines of *Pskov* and *Livonia*, was, in Meyerberg's time, the first Russian town on this border. Near it is the famous Convent of *Pskovo-Petcherskii*, founded in 1473, but built, as it stands at present, in 1519. In 1764, it possessed 4000 serfs.

This Government is divided into the eight following districts: *Pskov*, *Porkhov*, *Kholm*, *Toropetz*, *Velikië-Louki*, *Novorjev*, *Opotchka*, and *Ostrov*.

Riasan will be described under *Tambov*.

Kiev (Government of) is bounded on the North by *Minsk*; on the East by *Tchernigov* and *Poltava*; by *Kherson* and *Podolia* on the South; and on the West by *Podolia* and *Volhynia*. Its superficial area is variously estimated by different geographers: *Wichmann* reduced it to 703 square geographical miles, *Hassel* raised it to 978, but the calculation made on the great Map of Russia, in 1804, according to which its superficial area is 936 square geographical miles, is that adopted

RUSSIA.

RUSSIA. by M. Schnitzler. The Government of Kiev partakes of the features common to the whole of Little Russia, being flat, yet less monotonous in its aspect than the region beyond the Borysthenes. Here the appearance of the country begins to assume more variety; and there are some picturesque sites along the Dniepr, whose elevated banks, the last ramifications of the Krapacs, rise in some points to a height of more than 150 feet. In the district of Tchigrin, a small chain of hills branches from the river in a North-West direction, and enters Podolia after traversing the district of Lipovets, forming throughout this extent a series of slight undulations. North of this chain occurs an excellent vegetable soil; to the South it becomes thinner, sand beginning to predominate. Although the Dniepr touches the Government on its Eastern frontier only, its water-courses belong to the system of this fine river. The Pripet, Ouj, and Teterev water its Northern districts; the Irpen and Ros, its central—the latter river, dividing near Sakhnofka, forms with the Dniepr, into which its two branches flow, a large island covered with lakes and a variety of streams; the Southern districts are watered by the Mochny, the Irden, and the Tiasmin. Notwithstanding these waters are frozen for three months in Winter, the climate is not severe, and the plants of more favoured regions are cultivated with success; the air is dry and healthy. From the general fertility of the soil, this Government is decidedly agricultural: corn of every kind is raised to the annual amount of 5,000,000 of chetverts, which allows 1,000,000 for exportation, and under an improved system of agriculture this return might be considerably increased; the yield is six for one. Hemp, flax, and tobacco, and, in the gardens, vegetables, melons, and arbuties are likewise cultivated; wild fruits abound. The forests cover a large extent, and contain most kinds of timber; those belonging to the Crown occupy 178,000 dessaitines. The pasture lands are rich, and rear fine-horned cattle of the Ukraine breed; the horses are diminutive. There are some sheep, and large herds of swine, and bees form an important article of rural economy. Game is abundant in the forests, wild beasts rare; the rivers yield scarcely sufficient fish to supply the consumption. The products of the mineral kingdom are of little importance.

The manufacturing industry of the Government is inconsiderable; in 1830, there were 109 manufactories, the principal of which were of cloth and glass, employing 3021 workmen. There are numerous distilleries of brandy, but their produce is inconsiderable. The internal trade is rather extensive, but the exports are extremely limited; these consist of grain, hides, cattle, and glass. Odessa is the chief outlet for the exports of the Country. Yearly fairs are held in all the towns of this Government; that which goes under the name of the "Contracts of Kiev" is the most celebrated.

Kiev is now the seat of a separate University jurisdiction. In 1832, there were 20 Schools, with 132 teachers and 2536 scholars; the number of Schools under the direction of the Clergy were, in 1831, one Academy, one Seminary, four district and four Parochial Schools, having 43 instructors and 1157 pupils; thus, taking the population with M. Schnitzler at 1,350,000 individuals, we find that the proportion of those who receive education is as one to 365. There is but one printing-office in the Department.

The Greek *Eparchy*, which is now entitled that of *Kiev and Galitch*, dates from the reign of St. Vladimir,

and was the first in Russia; it ranks at present as the third of the first class, and gives the title of Metropolitan. There are 12 Cathedrals, 1283 Churches, and 19 Religious Houses in the Diocese.

As is the case with most of the Governments of Little Russia, that of Kiev is privileged; that is, it has been suffered to retain some of its ancient administrative forms, and is exempt from the monopoly of brandy. Its chief town is the seat of a Governor-General, whose authority usually extends over Tchernigov and Poltava. The expenses of the Government were fixed, in 1796, at 62,202 rubles, and its revenue was estimated at about 2,500,000.

Kiev, the Capital of the Government, and *mother of the Russian towns*, lies on the right bank of the Dniepr, a little below the confluence of the Desna with this river. It rises majestically from the lofty bank, beginning on one hill and terminating on another, and embraces within its quadruple enclosure four distinct quarters, named the *Podol* or the *Lower Town*, *Old Kiev* or the *High Town*, the *Petchersk* or *Citadel*, and the *Town of St. Vladimir*, founded by Catherine II. The Greek inscriptions on the alabaster tables, discovered among the ruins of the ancient Church of St. Basil, and referred to the year 260 of our era, show the high antiquity of this town which was long the *Pantheon of the Slavonic Divinities*, and at a later period one of the sacred cities of the Greek Church and the Capital of the Russian Empire. Its most remarkable buildings are the Cathedral of St. Sophia, one of the finest temples in Russia, alike distinguished by its antiquity, the richness of its decorations, and the marble tomb of its founder, which last monument is particularly valuable from its affording a correct idea of the state of Art in this part of Europe during the XIth Century; the Imperial Palace; the vast buildings of the Ecclesiastical University; the Arsenal; and the famous Monastery called *Kievo-Petcherskaia lavra*, which holds the first rank, and is the most ancient in the Empire. In the catacombs of this Monastery, which consist of two distinct caverns, are exhibited the bodies of about 150 martyrs in a state of desiccation, but of thorough preservation, and which annually attract pilgrims from all quarters. In 1824 were discovered the ruins of the famous Church of the Tenth, (*Déiatinnaia*), built in 996 by St. Vladimir, and destroyed by the Mongols. In addition to its University and Schools, Kiev possesses a good library. It was here that the Bishop Zaluski formed a library consisting of 200,000 volumes, which he bequeathed to the Republic of Poland, and which was transferred from Warsaw by Catherine II., in the year 1795, to St. Petersburg, where it laid the foundation of the present Imperial library.

The Exchange, or *House of Contracts*, is situated in the Podol, and is a large, handsome building, capable of containing in its largest apartment 3000 persons. The fair of the *Contracts* takes place in the month of January, and continues for a fortnight. It is at once a time of business and of pleasure. In 1830, there was an influx of 4138 individuals, the hire of shops amounted to 93,622 rubles, goods were disposed of to the amount of 626,875 rubles, and Government received for the registry of contracts 40,712 silver, and 61,962 paper rubles; the stamps brought in 52,034 rubles.

Kiev contains 30 Churches, one of which is a Catholic and another a Lutheran place of worship, nine Religious Houses, a Foundling and other Hospitals, and 3728

RUSSIA. houses, the greater number of which are of wood. The streets are crooked and narrow. It lies in $50^{\circ} 26' 53''$ North latitude, and $30^{\circ} 28'$ East longitude.

To the South of the district of Kiev is that of Vasilkov, whose chief town of the same name is unimportant, but within whose district is the town of *Bélaïa-Tserkov*, on the Ros, remarkable for the victory gained here in 1626 by the Poles over the Prekop Tatars, and for the family seat of the wealthy *Branecki*, who possess extensive domains in its vicinity. In the district of Bogouslav is *Traktimirov*, the residence of the Hetmans, and given to the Cossacks by Stephen Batory: it lies on an almost inaccessible rock overhanging the Dniepr. Near *Tchigrin* was the former Capital of the Ukraine Cossacks, which was destroyed in 1678. *Ouman*, which is 259 versts South of Kiev, is a small town surrounded by ramparts, and containing about 3000 inhabitants; near it is the magnificent castle of the Pototzki family, called *Sophiofka*, from the Countess Sophia. *Targovitsa*, on the confines of the Government of Kherson, is noted in History as the seat of the Confederation formed against the Polish Constitution of 1791, and in favour of Russia, May 14th, 1792; and which was headed by *Branecki*, *Pototzki*, and *Rzewuski*.

This Government is divided into the following 12 districts: Kiev, Vasilkov, Bogouslav, Therkasy, Tchigrin, Zvenigorodka, Ouman, Lipovets, Tarachtcha, Skvira, Makhnovka, and Radomysl.

Poltava (Government of) is bounded on the North by Tchernigov and Kursk; on the East by the latter Government and the slobods of the Ukraine; on the South by Iekaterinoslav, Kherson, and Kiev; and on the West by Kiev. According to a calculation made on Reymann's Map, its superficial area has been estimated at 850 square geographical miles. Its surface is flat and monotonous, and, with the exception of the banks of the Dniepr and of a few other rivers, not an eminence is to be seen. The ground is alluvial, being a mixture of sand and clay, and is nearly every where covered by a rich soil; here and there only a thinner soil is announced by heath; and chalk prevails on the high grounds bordering the rivers. These are all affluents of the Dniepr, and the principal are the Soula which traverses the Government from North to South, the Psiol, the Vorskla, and the Orel, which traces with its slow and troubled stream its Southern frontier. There are no lakes. The climate is already considerably ameliorated; melons and arbutus grow in the open air; yet the Summers are dry and burning, and the Winters very rigorous, since there is no protection interposed between this immense plain and the icy winds of the North. This Government, with the surrounding ones, forms the granary of Russia. Few are better cultivated, or covered with such magnificent fields of corn, requiring little manure, and yielding six for one. It produces rye, barley, oats, wheat, millet, buck-wheat, and a kind of unbearded summer wheat called *ghirka*. The harvest averages 6,500,000 chetverts, of which nearly 5,000,000 are absorbed in the consumption. There is little wood in the Government, and so much is the want of it felt in the South-Eastern districts that reeds are used for firing. Horticulture is particularly attended to, and supplies greens, melons, arbutus, hops, turnsol, (from the seeds of which an oil is extracted,) and carrots, which form a considerable item in the food of the labouring class. The excellent grass of the steppes furnishes rich pasture to the beautiful oxen of

the Ukraine, and to the large flocks of sheep, which are beginning to be improved by crossing. Bees abound; some of the peasants will possess a hundred hives, and a white honey obtained from the *linden* is in high estimation. The Polish cochineal is plentiful on the steppes. Game, excepting the winged tribe, is not met with; and the fish caught, although the supply is not scanty, is yet insufficient for the wants of the inhabitants. The produce of the mineral kingdom is unimportant.

The manufacturing industry of the Government, although of consequence, furnishes little for export trade. In 1828, there were 31 manufactories, employing 1938 workmen, of which 7 were of cloth, 2 of cables, 3 of candles, and 15 were melting-houses for tallow. The commerce, of which Odessa is the principal outlet, consists of corn, brandy, flax, hemp, hemp seed, tobacco, wax, honey, tallow, wool, hides, and cattle. Its chief trading towns are Kremenchoug, Poltava, and Romen.

Poltava belongs to the jurisdiction of the University of Kharkov. In 1832, there were 1 Gymnasium, 15 district, 2 parochial, and 2 private Schools, the number of masters being 110 and of pupils 1823; the Ecclesiastical Schools were 5, with 18 masters and 1044 pupils: estimating the population with Hassel at 1,900,000 souls, the proportion of those who receive education is as one to 662 of the inhabitants.

The *Eparchy of Poltava and Péréiaslavl* is of the third class, and embraced, in 1830, 15 Cathedrals, 1015 Churches, 2 Monasteries, and 3 Convents.

Poltava is a privileged Government, and is usually under the same Governor-General as Kiev and Tchernigov. Its Southern border was formerly protected by the fortified lines of the Ukraine, which consisted of a chain of forts extending at intervals from the Dniepr to the Donets, beginning along the right bank of the Orel, and ending along the left bank of a small affluent of the Donets. The expenses of the Government are not stated; its revenue, according to Hassel, amounted in 1808 to 4,732,000 rubles.

Poltava, the Capital of the Government, is chiefly of wood, but with straight and wide streets. It was built by the Cossacks in 1608, and became a Russian town after the Peace of Androussof. In the middle of a handsome square, surrounded by houses of stone, is a monument of granite in honour of Peter the Great; and, among its 10 Churches, may be distinguished the Cathedral. The town is surrounded by a rampart; and cherry orchards are numerous in the vicinity, a liquor being distilled from the fruit. There is some trade carried on here, and various manufactures. North latitude $49^{\circ} 35' 4''$, East longitude $34^{\circ} 37'$.

A funeral service is yearly performed and prayers offered up for the dead on the anniversary of the famous Battle of Poltava.

Kremenchoug is a commercial town, lying near the point where the Kagamlik throws itself into the Dniepr, which is here crossed on a flying bridge. The Raskolniks have a Church and a Monastery in this town; and Armenian, Greek, and Jew merchants are settled here. Population 8000. Péréiaslavl is one of the oldest towns in the Government, being named in the Treaty concluded between Oleg and the Emperor of Constantinople in the year 907. Population variously stated at from 6000 to 8000. Romen, on the Soula, is of importance from its fairs. In 1833, there were brought to the principal one, that of Ascension, cattle, agricultural produce, and merchandise to the value of 11,390,624

RUSSIA. rubles, and sales were effected to the amount of 3,384,510 rubles.

The Government is divided into 15 districts: Poltava, Konstantinograd, Kobyliaki, Kremenchoug, Khorol, Zolotonocha, Peréiaslavl, Piriatin, Prilouki, Romen, Lokhvitsa, Ghadiatch, Mirgorod, Loubny, and Zenkov.

Grodno (Government of) is bounded on the North by Vilna; on the East by Minsk; on the South by Volhynia; by the Kingdom of Poland on the South-West; on the West by the Province of Bialystok; and on the North-West by Poland. Its superficial area is known only by an approximative measurement, and is estimated by M. Lakhnitzki at 722 square geographical miles. The same authority gives 260 and 180 versts as its extreme and least length, computing its extreme breadth at 180 versts, and its least at 140 versts. Its surface presents a vast plain covered by an alluvial soil, with few undulations, excepting the banks of the Niemen, which are of chalk, flat to the North, but swelling occasionally towards the South to a considerable height. These chalk hills contain, among other petrifications, large quantities of belemnites and pyrites. Marshes prevail in the Southern districts, and can only be rendered practicable by canals to carry off the superfluous waters: near *Divin*, on the Southern limit of the Government, these marshes form large lakes which frequently overflow. A large extent of country is likewise occupied by forests; nevertheless, there are extensive tracts adapted to the raising of grain, which alternate with excellent pastures. The principal rivers are the Niemen, Boug, Narev, and Iasiolda. The climate is cloudy and humid; in general temperate, but with very cold Winters. That frightful disease, the *Plica Polonica*, is common here. Rye is the grain chiefly raised: in 1815 there were harvested 1,563,056 chetwerts of rye, and 641,840 chetwerts of oats; of this quantity 816,463 chetwerts were reserved for seed, the consumption required 1,520,861 chetwerts, and consequently there remained an exportable excess of 729,785 chetwerts. Hops, flax, and hemp are likewise cultivated to some extent; horticulture is much neglected. The Imperial forest of *Bialowiez*, of immense extent, and tenanted by the *Urus*, has been noticed in the account of *POLAND*. Much attention is paid to the rearing of cattle, and the breed of native sheep has been improved by the importation of rams from Germany. Honey is procured in considerable quantity; the fisheries are not very productive; and the mineral kingdom supplies only a small quantity of iron, limestone, saltpetre, and some stone for building.

The principal objects of the manufacturing industry of the Government are cloth, leather, and hats. In 1830 there were 37 manufactories, which gave employment to 1940 workmen. Memel and Königsberg are the chief outlets for the exports of the Country, which consist of corn, flour, cattle, wool, honey, and wax. Part of this produce is carried by land to Riga and Libau. The direction of its commerce, however, will be diverted from the first-named towns to the Russian port of Vindau, by means of a canal now forming to connect this port with the navigation of the Niemen.

Grodno depends, with respect to education, on the jurisdiction of the University of Vilna. In 1832 there were 32 Schools, with 102 teachers and 1012 scholars; the state of the Ecclesiastical Schools is not known. There were at the same period two printing-offices in the Government, one of which was private property.

VOL. XXVII.

This Government does not form a separate Diocese. RUSSIA. The Catholic Churches depend on the Bishopric of Vilna, those of the Uniate worship have their Metropolitan at Polotsk, and the Greek belong to the *Eparchy of Minsk*. The number of the latter is about 70.

Grodno is one of the Governments which are termed privileged, and the Jews enjoy rights here which they do not possess out of ancient Poland. The total revenue was estimated, in 1816, at 1,977,599 rubles; the net revenue at 1,517,874 rubles.

Grodno, the Capital of the Government, is a vast but dilapidated town, seated on a rising ground on the right bank of the Niemen, and on the North-West border of the Government. Its origin is unknown, but we find that it was frequently attacked in the XIIIth and XIVth Centuries by the Knights of the Teutonic Order and by the Prussians. The returns of 1816 gave to it 122 houses of stone, and 987 of wood, half of which were occupied by Jews. Several large fairs are held here, and some manufactures are carried on. Its new Castle, the buildings belonging to the Chancellery, its Public Library, and scientific collections are deserving of mention. In this town were signed the terms of the second partition of Poland in 1793, and the abdication of Stanislas-Augustus in 1795. North latitude 53° 40' 44", East longitude 23° 48'.

Novogrodek, to the East of *Grodno*, and on the high road leading to the interior of the Empire, was formerly the Capital of a Lithuanian Palatinate, and considered the chief town of Black Russia. It is surrounded with walls, and contains six Churches, three Religious Houses, one Mosque, and two Synagogues. Population 1200, chiefly Jews. The immense domains of the Radzivill family extend over a large portion of the district of *Novogrodek*. *Slonim*, nearly in the centre of the Government, on the *Chtchara*, is likewise mostly peopled by Jews. It contains 658 houses, of which four only are of stone, six Churches built of stone, and two Synagogues of wood. Population 1500. Six Lithuanian miles from *Slonim* is the estate of *Mérétchofchtchina*, on which Kosciusko was born. *Brzesc-Litevski* is an ancient town, formerly the Capital of a Lithuanian Palatinate, lying at the confluence of the *Moukhavets* and the *Boug*. It contains 463 houses, 17 of which are partly of stone; 14 Churches, three being in part of stone; and two celebrated Synagogues. According to M. Chodzko, this town was distinguished in the XVIth Century for its literary activity; and it was here that the Bible, termed the *Radzivill Bible*, was printed at the expense of Nicolas Radzivill. Population 3602.

In 1817 there were estimated to be within the Government 8 district towns, 88 small towns and burghs, 7998 dwellings belonging to Nobles, 2271 estates belonging to Nobles, (*dvory*), and 104,483 peasants' huts; to the above M. Lakhnitzki adds 559 Churches and Religious Houses, and 7080 brandy shops. (*Karczmy po wioskach*.)

The districts are eight in number: *Grodno*, *Lida*, *Novogrodek*, *Slonim*, *Volkovitchk*, *Proujany*, *Kobryn*, and *Brzesc-Litevski*.

Moghilev (Government of) is bounded on the North by *Vitebsk*; on the East by *Smolensk*; on the South-East and on the South by *Tchernigov*; and on the West by *Minsk*. Its superficial extent, according to Schubert and Hassel, is 867 square geographical miles. Its surface exhibits immense plains, partly covered with forests, and undulated only by the elevation of the banks

RUSSIA. of the rivers: the marshes are numerous. The chief water-courses are the Dniepr, with its affluents the Soj and the Drouts, which traverse it from North to South: there are many lakes, but they are mostly small; the largest are those of Dolghoe and Sienna in the North-West quarter of the Government. The climate is temperate. A large proportion of the soil is productive under active manuring, and the meadow land is good: the grain annually raised amounts to about 4,000,000 chetverts, which far exceeds the consumption; flax and hemp are likewise cultivated, and vegetables, hops, and poppies are produced in the gardens. The forests are of immense extent, and filled with timber of the best description, more particularly those bordering the Soj, in the district of Tcherikov: the Crown forests amount to no more than 51,520 dessaitines. All these forests abound in game. The cattle is of inferior breed; the sheep, however, are beginning to be improved by crossing with merinos or with the Saxon sheep; goats and swine are reared in vast numbers. The rivers and lakes furnish ample supplies of fish; and the marshes, if properly worked, would supply large quantities of iron.

The manufacturing industry of this Government is of little importance. In 1830, there were 31 manufactories, employing 913 workmen; these are for the most part on a very confined scale, and the manufacture of pot-ashes, leather, and even the quantity of tallow melted, are neither proportionate to the extent of the forests nor the number of the cattle. One of the most productive branches of industry is the fabrication of the barks, named *strouses*, for the transport of the natural produce of the Government. Corn, flour, hemp, flax, hemp-seed, flax-seed, timber, fire-wood, cattle, honey, wax, and pig's bristles, are the chief exports.

The Schools of the Government depend on the jurisdiction of the Arrondissement of White Russia. In 1832, there were 25 of these establishments, with 78 teachers and 1265 pupils: the state of the Ecclesiastical Schools is not known.

The Greek *Eparchy of Moghilev* includes the Government of Vitebsk, and contains 379 Churches, five Cathedrals, nine Monasteries, and three Convents; its titular has the rank of Archbishop. The Catholic Bishopric of this city was founded in 1773, and raised to an Archbishopric in 1782: its titular is at the head of all the Catholic Clergy in Russia.

The Governor-General of Moghilev and Vitebsk resides in the town of Moghilev. The expenses of the Government were fixed, in 1778, at 124,465 rubles, and the revenue was valued, in 1808, at 1,408,000 rubles.

Moghilev, the Capital of the Government, is a town of some antiquity, lying on the right bank of the Dniepr, and of handsome appearance. It is divided into four quarters: the first is occupied by the *krem*, and lies on rising ground; two others are surrounded by a rampart; the remaining quarter is only a faubourg. Being the favourite resort of the Nobility of the Country in the Winter season, it then becomes an animated scene. It trades with Riga, Königsberg, Dantzic, and Odessa; and constitutes the head-quarters of the Russian army of the West. Of its 20 Churches, that of St. Joseph is deserving of mention. The two Archbishops have each a Palace here; and the town possesses two Seminaries, one Gymnasium, and several charitable institutions. North latitude 53° 53' 49", East longitude 30° 22'.

Orcha, on the Dniepr, lies at the intersection of the high road from Moghilev to St. Petersburg by that from

Minsk to Smolensk; and it is here that Napoleon, pressed by Koutousof and Miloradovitch, burned the papers from which he had designed in the leisure of his wintering in Russia to compose the memoirs of his life. The whole of this district is memorable as being the scene of the admirable retreat of the heroic Ney. *Mstislavl*, on the Soj, is a town of high antiquity, supposed to derive its name from one of the sons of Vladimir. It was long the seat of a Russian Principality, and formed an apanage of the Princes of Smolensk. The fortifications no longer exist, and it is now a thriving commercial town. It has several Churches, Greek and Catholic, and a Synagogue. Population 5000. The districts of *Mstislavl*, *Rogatchev*, and *Klimovitchi*, were among those selected for the experiment of the military colonies. *Staroï-Bykhov* is deserving of notice from its fortifications having been executed by order of the famous Khodkiévitch, to whom all this region had been given by Stephen Batory.

The following are the 12 districts into which the Government is divided: Moghilev, Kopys, Sienna, Babinovitchi, Orcha, Mstislavl, Tchaouzy, Klimovitchi, Tcherikov, Staroï-Bykhov, Rogatchev, and Nov-Bielitsa.

Minsk (Government of) is bounded on the North by Vitebsk; on the East by the latter Government, Moghilev, and Tchernigov; on the South by Kiev and Volhynia; and by Grodno and Vilna on the West. According to a calculation made on the great Map of Russia, (*podrobnaiâ*), the superficial area of this Government amounts to 1832 geographical square miles. The whole range of the country to the North of Volhynia is flat, and broken by no elevation except the banks of the principal rivers; the soil is alluvial, consisting of sand of every colour, clay, and marl. In the Northern districts the soil, which is covered with thick forests, is still rather dry; to the South, on the contrary, it buries itself under the water of the marshes, and the immense wildernesses of forest become inaccessible. Clay succeeds to sand, in proportion as we advance Southward, until at last the town of Pinsk occurs in the midst of a vast marsh, the substratum of which, indeed, is sand blended with a good black earth, but entirely under water: the surface is intersected in every direction, and pools, rivers, and lakes become more and more frequent. If the Southern region of the Government is too abundantly watered, the Northern is still sufficiently so: its waters chiefly belong to the system of the Dniepr, which river, however, only confines with it on its South-Eastern border, after receiving the Berezina. The Dvina limits its North-Eastern frontier, and drains its extreme Northern waters. The Berezina traverses great part of its extent from North to South; the Plitch intersects its centre; and the Pripet crosses its Southern extremity from West to East. The Oginsky canal, which forms a link of the communication between the Niemen and the Dniepr, is more serviceable as a drainage for the country than used for the purposes of navigation. The lakes are numerous, but small; the marshes extend to a great width, particularly on each side of the Pripet. The climate, which is humid in the Southern, is healthier in the Northern districts; the Winters are very cold and very long. In every respect Minsk is one of the poorest and most backward Governments of the Empire; the districts of Pinsk and of Mozyr are, as we have seen, complete deserts; and in the others agriculture, which is the principal occupation of the inhabitants, is still much neglected. Yet the soil is by no means ungrateful,

RUSSIA. and, under improved methods, its returns would be considerable. Rye is the grain chiefly raised; then barley, oats, and some wheat. The harvest may average 4,000,000 chetwerts, and exceeds the consumption. Flax and hemp are among the best productions of the Country, as are wood, potashes, and tar. The forests are immense; those of the Crown occupy 486,673 dessatines; they are filled with game and wild beasts in great variety. The wild fowl especially are innumerable: horses are likewise met with in the wild state. The rearing of cattle is still imperfectly understood, although some of the Nobles pay much attention to it; the pastures are good, and cattle thrive upon them; the horses are small, but active; the sheep yield a very coarse, indifferent wool; goats and swine are reared by the peasantry in great numbers, and bees form an important branch of rural economy. The fisheries are less productive than might be supposed from the numerous waters comprised in the Government. Manna may be mentioned as one of the vegetable products; the cochineal insect as one of the animal; and the mineral kingdom furnishes lime, marl, rubble for building, and a little iron.

The manufacturing industry of the Government was confined, in 1830, to 20 establishments, giving employment to 335 workmen: it consists of some manufactures of woollens, glass, and iron, and at Pinsk of Russian leather. Brandy is distilled from corn in considerable quantity. There are only about 300 individuals engaged in commercial pursuits: the exports are masts, timber of every kind, potashes, flour, flax, hemp-seed, leather, honey, oxen, and horses.

Until 1832, Minsk was under the jurisdiction of the University of Vilna, but, this having been suppressed, it still remains unattached. In the above year, there were 30 Schools, with 158 teachers and 2159 pupils belonging to the jurisdiction just mentioned; but to know the exact state of education it would be necessary to have returns of the Greek and Uniate Schools peculiar to the Government. There are three printing-offices, one of which belongs to the Crown.

The Archbishop of *Minsk and Lithuania* is placed at the head of the orthodox Eparchy, organized by the Ukase of May 16th, 1793. He presides over the Russian Churches of Lithuania, properly so called, and in 1830 there were included in his Eparchy seven Cathedrals, 413 Churches, six Monasteries, and one Convent. The Catholics have likewise a Bishop at Minsk: the Uniates are under the pastoral care of the Bishop of Polotsk. The Jews have their Synagogues, and the Tatars their *Metchets* or Mosques.

The Government of Minsk is of the number of those which have preserved some of their privileges: its expenses were fixed, in 1795, at 139,529 rubles, and its revenues are valued at 1,836,000 rubles.

Minsk, the Capital of the Government, is seated on the Svislotch, and is, next to Vilna, the largest town of Lithuania. Its streets are narrow and irregular, and its houses mostly of wood; yet the town has a handsome appearance and contains some fine buildings. According to M. Chodzko there are ten Catholic Churches here; and he adds that there are likewise several Churches belonging to the Greek persuasion, as well as a Synagogue. The Gymnasium is stated by him to be upon a very excellent footing; and the Theatre to be large and beautiful. Minsk is the seat of an orthodox Archbishop, and of a Catholic Bishop; and the festival

of S. Joseph attracts yearly a brilliant concourse of the neighbouring Nobility, who come both to transact business and for purposes of amusement. Little is known of the early history of the town. It was made the seat of a waiwodship by the Lithuanians; subsequently the Jesuits were installed here by the Poles; the Russians took possession of it in 1656, but it was afterwards restored to Poland, which preserved it till the partition of 1793. M. Chodzko estimates its population at 20,000; Hassel at 3000! Such are the contradictions perpetually occurring between the best authorities on whatever relates to this vast Empire. North latitude $53^{\circ} 54' 9''$, East longitude $27^{\circ} 36'$.

Borisov, a small burgh with not more than 1000 inhabitants, is celebrated as being the site of the fatal passage of the retreating army of the French over the Berezina, in November, 1812.

Sloutsk was formerly the Capital of the Palatinate of Novogrodek, and subsequently became one of the numerous possessions of the famous Radzivill family. With the exception of the Churches and Religious Houses, it is almost entirely of wood. A central School has recently been organized here, with Professors of the Physical Sciences, Mathematics, Philosophy, Belles-lettres, Latin, and German. Population, among which are many Jews, 5000.

Pinsk, which lies in the midst of the marshes of the Southern extremity of the Government, was the ancient Capital of Polesia. It carries on rather a brisk trade, and is noted for its manufactures of Russian leather. Population 4000.

This Government is divided into the following ten districts: Minsk, Vileika, Disna, Borisov, Igoumen, Bobrouisk, Sloutsk, Pinsk, Mozyr, and Rogatchev.

Podolia (Government of) is bounded by Volhynia on the North; by Kiev on the North-East; by Kherson on the East and South-East; by Bessarabia on the South; and on the West by the Austrian Kingdom of Galicia. According to the Map of Rudlicki, an engineer in the service of the Government, the superficial area of Podolia must be restricted to 738 geographical square miles; an estimate far below those of Brœmsen, Weichman, and Hassel. This Government, dismembered in 1793 from Poland, was formed by the junction of the two Polish Palatinates of Podolia and Bratslav, with the addition of some portions of the Ukraine: the origin of its name is uncertain. Very different from the neighbouring Ukraine, Podolia presents a varied and very picturesque surface. Its greater portion is composed of a table-land of small elevation, from which beautiful hills branch off with gentle descent towards the banks of the Dniestr. These heights, which are called Miodoborski, (*honey-forests*), and the loftiest of which are not 500 feet above the sea level, depend on the Krapacks, one of whose ramifications advances in this manner towards the North-East, and loses itself in the steppes of the Ukraine: they are chiefly formed of transition rocks, but granite is found as they approach the river. The basis of the soil is clay, sometimes mixed with marl, and covered with a very fertile earth; it is only Eastward, in the districts detached from Polish Ukraine, that sandy tracts are met with assimilating in appearance to steppes. Chalk, gypsum, and slate are spread over considerable spaces, and the land is in general so stony as to require as many as twelve oxen to a plough. Podolia is well watered, especially in its Western districts; most of the rivers are absorbed by

RUSSIA. the Dniestr, which forms the limit betwixt this Government and Bessarabia. However, the Boug must be considered its principal stream, as it traverses it for almost its entire length. Neither of these rivers is navigable to any extent; the first, which is very rapid, makes many falls and is extremely variable in point of depth; the latter would be highly favourable to internal transit, were it not for the masses of rock by which its course is at times impeded. The Government contains no lakes, but there are numerous pools, and near Ladysin is a mineral spring. The air is healthy, and the climate very favourable; the temperature is that of Southern climes, and the vine and mulberry succeed in the open air. The greatest cold is experienced in the month of January, but it is often far from rigorous. Although the soil is stony, it is extremely fertile, Podolia having always ranked as one of the most productive as well as populous of the Polish Provinces. In 1820 the harvest amounted to 6,000,000 chetverts of corn, leaving an excess of 2,000,000 above the consumption: flax, hemp, tobacco, and hops are likewise raised, as well as various fruits and vegetables in the gardens. The cultivation of the vine, although extending, is as yet unimportant. So luxuriant is the grass of the meadows that it is said to overtop the cattle fed there: from an extent of about 280,000 dessaitines more than 6,000,000 poods of hay are yearly obtained. The forests cover 991,442 dessaitines, of which 98,827 belong to the Crown, and 15,008 furnish timber fit for the building of ships; they chiefly consist of oak, maples, and limes, are free from wild beasts, and contain large quantities of game. Considerable attention is paid to the breeding of cattle, and the race of horses has been much improved; their number, in 1830, was estimated to be 50,492, with 12,660 mares. At the same period there were computed to be 127,049 bulls and oxen, and 118,475 cows of the beautiful Podolian breed, vast herds of which are yearly exported even to the centre of Germany; the sheep were numbered at 281,319; their wool is of tolerable quality. Goats, swine, poultry, and particularly bees, form important items of rural economy. The kermes, *Coccus Polonorum*, is abundant; the fisheries are very productive; and the mineral kingdom supplies saltpetre, lime, gypsum, alabaster, and some stone for building. The manufacturing industry of the Government is of little account: in 1830 there were 44 manufactories, chiefly of cloth and leather, employing only 750 workmen; but the distillation of brandy is very considerable. Trade is chiefly in the hands of the Jews. Podolia depends, as regards education, on the jurisdiction of the University of St. Vladimir recently founded at Kiev, and opened in 1834, on July 15th, Old Style. We possess no information on the number and state of the schools. The only printing-office in Podolia belongs to the Crown. The *Eparchy of Podolia and Bratslav* is of the second class, and comprised, in 1830, 11 Cathedrals, 1528 Churches, seven Monasteries, and two Convents. In the Catholic Diocese, there are one Cathedral and 84 Churches. Podolia is one of the privileged Governments. The expenses of its administration are fixed at 62,623 rubles; its revenues were estimated, in 1810, at 2,120,000 rubles. Together with Volhynia it depends on the Military Government of Kiev.

Kamienetz, the Capital of the Government, derives its name from *kamenh*, (stone,) being built on steep rocks overhanging the Smotritch, an affluent of the Dniestr. It is defended by a citadel, which is situated

on a hill commanding the town, but which is in its turn commanded by a higher eminence. The fortifications of the town itself were razed in 1812 by order of the Russian Government. The streets are very winding and irregularly built, but the town contains some fine edifices, amongst which the Cathedral of St. Peter and St. Paul, a splendid Gothic building, and the Dominican Church are conspicuous. The number of the houses is about 600. North latitude $48^{\circ} 40' 30''$, East longitude $26^{\circ} 53' 20''$.

Moghilev is a town of moderate size, formerly the seat of a considerable trade, and still possessed of many advantages from its favourable position on the Dniestr. Its Gymnasium is very celebrated. For some years Moghilev has been the centre of the quarters of the Russian army of the West. Population 7000. The remaining towns require no separate notice.

Podolia is divided into the 12 following districts: Kamienetz, Ouchitsa, Moghilev, Iampol, Olgopol, Balta, Gaïsin, Bratslav, Vinnitsa, Litin, Letitchev, and Proskourov.

Kazan (Government of) is bounded by Viatka on the North; on the East by Orenbourg; on the South by Simbirsk; and by Nijnii-Novgorod on the West. Its superficial area is about 1124 geographical square miles. The surface of the country is, generally speaking, flat; but, besides the steep nature of the right or Western bank of the Volga, the ramifications of the Ourals extend into the Eastern districts of the Government. It is thus sufficiently undulated, swelling into heights of more than 200 feet above the common level, particularly along the river. These consist of transition rocks, as limestone, slate, potter's earth, &c., and here and there contain copper. They are nearly everywhere covered with a black earth: in a few places the soil is meagre and sandy, and in some others marshy. All its water-courses belong to the system of the Volga, which bisects the Government: it enters a little above the town of Kozmodemiansk on the Novgorod frontier, runs Eastward to Kazan, and then sweeps to the Southward, entering the Government of Simbirsk a little below the town of Tetiouchi: its width is never less than 2500 feet, and in some parts exceeds three-quarters of a mile; its chief affluent is the Kama. The lakes are numerous, but small. The climate is rigorous; mercury sometimes freezes in the Winter; it is still cold in the month of May, and the frosts return in August; the whole of July is dry and hot; occasionally too there will be some fine days even in September. The air is healthy, and endemic diseases originate solely in the manner of living.

Agriculture constitutes the chief wealth of this Government, and the harvests must be considerable; the exact returns are not known. The grain chiefly raised is rye; then wheat; hemp, flax, and poppies are likewise produced to some extent. Vegetables of various kinds are grown in the gardens, and some of the hardier fruits are found to ripen. Excellent pasture is met with in abundance along the rivers; artificial meadows have not yet been introduced. The forests occupy nearly half of the superficial area of the Government, *viz.*, 3,008,330 dessaitines, of which 2,669,521 belong to the Crown; but they are badly kept, and are often set on fire in the Summer by the carelessness of the wood-cutters. They consist, for the most part, of pines and firs; but likewise produce the oak, maple, birch, and elm; hence they supply large quantities of charcoal, tar, pitch,

RUSSIA.

RUSSIA. potashes, with masts and other timber. Cattle are reared in great numbers, but little attention is given to the improvement of the different breeds. Honey is exported to a considerable amount, and the fisheries annually produce from 40,000 to 50,000 poods weight. Their chief seat is in the Kama. Copper is found in the district of Mamadych, and the mineral kingdom also furnishes lime, clay, &c. The manufacturing industry of the Government consists chiefly of tanneries, manufactures of cloth, candles, copper-mills, glass-works, &c. In 1830 there were 154 manufactories, employing 3532 workmen; there were numerous oil-mills, 85 saw-mills, 66 potash works, and 57 distilleries of brandy. Trades of all kinds are commonly exercised throughout the Country as well as in the towns; and linen is made in every household. The commerce of the Government, of which Kazan is the centre, is highly flourishing through the communications with Perm, Moscow, Astrakhan, and Taganrog, afforded by the Kama and the Volga. The exports consist of flour, timber, tar, potashes, cattle, leather, honey, wax, soap, &c.; the imports of salt, iron, and copper. Kazan is the seat of a University jurisdiction. In 1832, there were 22 Schools, with 112 masters and 1118 scholars; to these must be added the Ecclesiastical and the Mahomedan Schools, of the number of which there is no return. There are two printing-offices maintained by the Government. The *Eparchy of Kazan and Simbirsk* embraces both these Governments, as well as the territory of the Oural Cossacks. It comprises in Kazan about 420 Greek Churches, and several Religious Houses. The Mahomedans depend on the Mufti of Orenbourg: they have 688 Mosques. Kazan is governed by a Governor-General, who likewise presides over the Government of Viatka. The expenses were fixed, in 1781, at 74,420 rubles, and Hassel estimates the revenue at 5,013,000 rubles.

Kazan, the ancient Capital of the Khanate of the same name, is seated on the river Kasanka, about 6 versts to the left of the Volga, and is built on an unequal tract which swells upward from the last-mentioned river, and becomes near the Kasanka a steep and sudden height. This tract is rendered very picturesque by several gorges or ravines which run into it, and is cut on the South by three lakes, named the Upper, Middle, and Lower Kaban, which are connected by a canal, and communicate with the Kasanka by means of the river Boulak. The name of the city is Tatar, and signifies a caldron. It was founded in the XIIIth Century, and was finally wrested from the Turks (the Tatars of the Russians) by Ivan II., in 1552. Kazan is a large and handsome city, and viewed from the Volga, which is here about a mile in width, it presents a very imposing appearance. However, most of the houses are of wood, the streets unpaved, and the ground on which the city, properly so called, stands, is low and marshy. According to M. Erdmann, (*Topographie Médicale de Kazan*), there are in all 907 streets, 72 passages, 10 bridges, 6 barriers, 4310 houses, of which 400 are of stone, 4 Cathedrals, 54 Churches, 4 Religious Houses, 10 Mosques, 2 inns, and about 12 public-houses. Kazan is divided into three parts: the most Northern and elevated is the *kreml* or citadel, which rises on the summit of the high ground above mentioned; to the North-East, and East of the citadel, extends the city, which is regularly built with wide streets, spacious open places and markets, and is the central and most animated part; to the South, East and North of this are the faubourgs, with the Tatar

slobods. Among its principal buildings may be cited the Great Cathedral, in the *kreml*; the beautiful Summer Cathedral, finished in 1808, and surmounted by five cupolas, the loftiest of which is 150 feet high; the Nunery, called *Bogoroditzkoï Kasanskoï*, which contains 6 Churches; the Governor's Palace; the Arsenal; the Palace of the Archbishop; the Government Offices; the *Gostinoy-dvor*; the Hospitals; the large cloth manufactory established in 1714 by Peter the Great, and which now employs about 1000 workmen; and the University. The latter was founded in 1804 by the Emperor Alexander, and was opened in 1814. It embraces the principal faculties of Science and Literature; and in 1835 the number of professors, including associates as well as principals, was 42; the number of students is stated by Balbi to exceed 1000. The study of the Oriental languages, and those of the exact and physical sciences, are cultivated with particular success. The library of the University includes that of the celebrated physician Frank, and consisted in 1834 of 25,793 volumes, to which must be added a collection of about 260 manuscripts, chiefly Oriental. There is a separate library for the general use of the students. The Gymnasium likewise and the Seminary have each distinct libraries. The Observatory is richly provided with instruments; the Cabinet of Russian and Tatar medals is highly interesting; and the Laboratory, the Botanic Garden, the collection of Natural History, and the various Museums and Medical Schools are all deserving of mention. Several papers and periodicals are published at Kazan: the University has its own printing-office. In addition to these means, of instruction, there is a normal School for the preparation of teachers; a Tatar School; and an office devoted to the printing of Works in the Turkish language. Among the public Societies may be specified "the Society of the Friends of National Literature," and the "Missionary Institute" for the conversion of the Tatars, Tchermisses, &c. Kazan is the seat of an active and flourishing trade, and the emporium of the commerce betwixt Siberia and European Russia. It has been one of the most rapidly increasing towns of the Empire, and is the chief seat of the Tatars or Turks, subjected to it, who, by their schools, manufactures, and general industry, claim a high rank among the people of these regions. North latitude 55° 47' 26", East longitude 49° 10'.

The town next in importance is *Tchistopolé*, which has a population of 7350 individuals.

The Government is divided into the 12 following districts: Kazan, Tsarevokokchaïsk, Kozmodemiansk, Tchiboksar, Iadrin, Tsyvilsk, Sviajsk, Tetiouchi, Laichev, Mamadych, Tchistopolé, and Spask.

Orenbourg (Government of) is bounded by Perm on the North; by the Province of Omsk and Government of Tobolsk on the North-West, where it stretches furthest into Asia; on the East and the South by the Kirghiz Tatars; on the West by Astrakhan, Saratov, Simbirsk, and Kazan; and on the North-West by Viatka. Its superficial area, according to M. Schubert, is 5626 geographical square miles. The surface of this immense extent is very diversified. In the Country of the Oural Cossacks, it is a *steppe* destitute of trees, and with a *Flora* peculiar to salt districts. Beyond the Oural chain, it is a plain intersected by marshes and numerous lakes; but on this side the ground is undulated in every direction, presents a remarkable variety, and is often very picturesque. On its entrance into the Government

RUSSIA.

RUSSIA. from the North, the Oural chain takes the name of the Baschkir Oural; that portion which descends directly Southward, parallel with the river Oural, abutting on the latter when it forms an elbow by turning to the West, is called the Gouberlin mountains; these send forth ramifications Westward into the Governments of Saratov and Astrakhan, and form, amongst others, those branches which are denominated the Obchei Siert. The general character of the Ourals will be described in our account of Perm: the entire Western portion of the Government is highly fertile, the soil consisting of a rich clay mixed with sand, and covered with a fat earth. The Oural is the principal river; it has its source in the chain to which it owes its name, in the district of Troitsk, and forms the Eastern limit of the Government as far as Orsk, whence to Ouralsk it traces its Southern frontier, and then becomes its Eastern boundary again. From its shallowness it is of little advantage to navigation; but it serves as a barrier against the nomads of the steppes. The lakes, both saline and others, are numerous; those called Kamych Samarskie are the largest; they are six in number, and when the waters of the great and little Ouzen, which flow into them, rise to any height, they form one large sheet of water of more than 200 versts in circumference. There are springs of sulphur and asphaltum at Serghievsk, in the district of Bogoroslán. The climate varies considerably from North to South; it is much more rigorous beyond than on this side of the Ourals. In the steppes, the heat in Summer is very great, but the nights are cool; the Winters are usually cold. The greatest heat at Orenbourg is $+ 33^{\circ}$ Reaumur; the greatest cold, $- 23^{\circ}$. Whirlwinds or hurricanes are common, and the sudden transitions from heat to cold engender fevers and other diseases. Want of rain and the grasshoppers (*sauterelles*) form another scourge, especially in the South. Agriculture, in which the Tatars excel, is favoured by the fertility of the soil. The grains chiefly cultivated are rye, barley, oats, black wheat, (*sarrasin*), and millet. In 1832 the corn harvest yielded 4,000,000 chetwerts. Flax, hemp, tobacco, vegetables, &c., are produced in very small quantity only. The forests are immense: that called the Baschirian, and which is private property, covers no less than 4,909,313 dessaitines; those belonging to the Crown extend over 10,066,483 dessaitines. The mines alone consume a prodigious quantity of wood; and tar and potashes are likewise made to a considerable amount. Hunting is very productive in these forests; and the lakes abound with wild fowl. However, the chief wealth of the Government consists in its cattle. The horses of the Tatar or Baschkir breed are beautiful and strong: the Baschkirs and Metchériaks possess herds of from 200 to 2000 head; the Russians, Cossacks, and Tatars of from 50 to 100. All have numerous flocks of oxen, goats, and sheep; of which the nomads will own flocks of from 500 to 4000 head, and the settled inhabitants of from 400 to 500. Large herds of swine are likewise kept by the Christian part of the population; and the nomads have many camels. The Baschkirs are celebrated for their management of bees; so much so that their name is derived from this, their principal occupation. The fisheries of the Bielaia and Kama are alone sufficient for the home consumption; those of the Oural are a source of great profit to the Cossacks. Dependent on the mining district of Slatoust are gold and platina sands which are very productive; copper and iron also

abound; 500,000 poods of salt are yearly extracted from the salt mines of Iletsk, and the Cossacks collect salt from their lakes, particularly from that of Inder. Asphaltum, sulphur, vitriol, marble, alabaster, agate, precious stones, mill-stones, and some stone for building are likewise met with. The manufactures of the Government employ 3546 hands: the number of factories and workshops is 126. The commerce of the Government presents some curious particulars: it takes place, on the one hand, with the nomad Tribes, who exchange their cattle, furs, rugs, and coarse manufactures of beaver and wool, for Russian manufactures; and, on the other hand, with the Kirghiz and Boukhars, who expedite caravans to the two great Tatar marts of Troitsk and Orenbourg. Merchandise is forwarded through the same channels to Bokhara, Khiva, Taschkent, and the steppe of the Kirghiz. In 1833, arrived 14 caravans, with 2547 camels and 27 horses; and 13 caravans, with 4769 camels and 264 draught horses, departed for the frontier. The importations were valued at 3,551,198 rubles, the exports at 3,577,921 rubles. This commerce with Asia is already highly important, and promises still greater advantages. The commerce with the interior of the Empire mostly consists of mineral products, which, with the others, enter partly into the exports from the Baltic. Orenbourg depends, as to education, on the jurisdiction of the University of Kazan. The number of the civil Schools in 1832 was 7, with 30 teachers and 625 pupils; of Ecclesiastical Schools, 7, with 21 masters and 564 scholars. There are no returns of the Tatar Schools. The *Eparchy of Orenbourg and Oufa* comprises 280 Churches and 1 Monastery. The Mahomedans, whose Mufti resides at Oufa, have 1714 Mosques. The Government of Orenbourg is organized like those of Great Russia, excepting that the Civil Government neither extends to the Kirghizes nor the Cossacks, who are under military jurisdiction. It is especially the duty of the Military Governor to watch over the safety of the frontier, which is defended towards the Kirghiz steppe by a succession of fortresses, and by the Cossacks, Metchériaks, Baschkirs, and Calmucs, who, on account of this service, are exempt from all taxes. The forts of the *line of Orenbourg* extend from Iletzkaia Kreposth Northward to the Tobol, with intervals of three miles between each; and Southward of the same place, to Gouriev, extends the line of the Cossacks of the Oural. The civil expenses are fixed at 70,700 rubles, and the revenue amounts to 3,520,000 rubles.

Oufa, the Capital, which was destroyed by fire in 1816, but since rebuilt, is of importance only from being the seat of Government, and of the religious authorities both Christian and Mahomedan. North latitude $54^{\circ} 42' 34''$, East longitude $55^{\circ} 50'$. Troitsk is a regularly-built, strong town, animated with all the bustle of an active commerce, and is a principal station for the Customs. Its immense *Gostinói-dvor* and stone Cathedral are deserving of mention. Population 2034.

Orenbourg, seated in a vast plain, is the principal post of the military line to which it gives name, and the residence of the Military Governor. It is of an oval form, regularly built, and well fortified. Its Asiatic commerce is, as we have seen, very extensive; and the grand mart lies on the opposite bank of the river Oural, being a vast square bazaar of stone, which is constantly defended by a camp of Cossacks. Almost all the inhabitants are engaged in traffic. Here is a principal

RUSSIA.

RUSSIA. Custom-house station. In 1825 a School was established, specially designed for the instruction of the Musulmans, and for the study of their languages. Population 2268. The *Territory of the Cossacks of the Oural*, which constitutes the most Southern portion of the Government of Orenbourg, extends for 670 versts along the river, and covers a superficies of 7,000,000 dessaitines. Its population is estimated at 29,353 individuals: they are chiefly occupied in the fisheries and the defence of the frontier, being bound to furnish 10 *polks*, or regiments of horse, of 578 men each. They are wealthy, and disdain all mechanical employments. *Ouralsk*, the seat of their Hetman, is a fortified town on the right bank of the Oural, containing about 4000 inhabitants. *Gouriev* is a fort, with a small harbour, lying above the embouchure of the Oural into the Caspian, where Cossacks, Armenians, and Tatars meet to barter with the Kirghizes.

This Government is divided into the following 12 districts: Oufa, Birsik, Menzelinsk, Bougoulma, Beliebei, Sterlitamak, Verkho-Ouralsk, Troïtsk, Tcheliabinsk, Orenbourg, Bouzoulouk, and Bogoroslân.

Penza (Government of) is bounded by Nijnii-Novgorod on the North; by Simbirsk on the East; by Saratov on the South; and on the South-West and West by Tambov. Its superficial area, according to Schubert, is 777 geographical square miles. The surface presents a monotonous and almost level plain; the soil is in general very fertile, intermixed with a few tracts of clay and sand, and it is watered by 325 streams, mostly belonging to the system of the Volga, and too insignificant to contribute to navigation: the principal are the Soura and the Mokcha. The climate is temperate and agreeable in Summer; the Winters are cold; the air is clear and healthy. The fertility of the soil is such that it needs no manure, and grain of every kind is produced in abundance; in 1808 the harvest amounted to above 9,000,000 chetwerts. Flax and hemp succeed well; horticulture is likewise making considerable progress, but fruit trees are much neglected from the quantities of wild fruits furnished by the woods. The latter cover vast tracts of land, the Crown alone possessing 748,893 dessaitines: the prevailing timber is beech, birch, oak, and alder. Wild beasts are still met with, and game is plentiful. Cattle are reared in considerable numbers, particularly sheep; and, in 1832, there were 819 brood mares in the various studs. In the same year, the number of beehives was estimated at 160,672. The fisheries are insignificant; the mineral kingdom supplies some iron, vitriol, sulphur, and mill-stones. The manufactures were computed, in 1830, to employ 4496 workmen, distributed among 84 manufactories: of these, 12 were of cloths, 6 of beetroot sugar, 7 of soap, 3 were glass-works, 4 iron foundries, and 34 tanneries. Looms are common throughout the country districts for the home supply of coarse stuffs. The distillation of brandy amounts yearly to about 2,000,000 *védro*s. Blankets and carpets are manufactured at Ista, a village of the district of Insara. From its defective water communication, the commerce of the Government is chiefly carried on by land transport, more especially with Nijnii-Novgorod. Yearly fairs are held at Penza, Nij-Lamov, and Saransk. The exports consist of grain, flour, brandy, leather, soap, wax, honey, potashes, wool, sail-cloth, carpets, wooden ware, &c. Penza belongs to the jurisdiction of the University of Kazan: in 1832 there were 9 Schools with 43 teachers and 665 scholars, be-

longing to the above jurisdiction; the number of Ecclesiastical Schools, in 1831, was 5, with 20 instructors and 1230 pupils. To the above must be added the Mahomedan Schools, of which we have no returns. The *Eparchy of Penza* embraces 11 Cathedrals, 608 Churches, 5 Monasteries, and 1 Convent. The Tatars have 70 Mosques. Penza is, in general, delegated to the authority of the Military Governor of Nijnii-Novgorod: the expenses of the Government are fixed at 134,523 rubles, and the revenue amounted, in 1808, to 3,336,000 rubles.

Penza, the Capital, is seated on a rising ground, at the point of junction between the river of the same name and the Soura. It was founded in 1666, is the centre of an active trade, and important by its manufactures. Its Cathedral is a handsome building; and it likewise contains 12 Churches, 6 of which are of stone. The Gymnasium and Ecclesiastical Seminary are of high repute. North latitude 53° 11', East longitude 44° 29'.

The remaining towns are populous, but possess little interest.

This Government is divided into the 10 following districts: Penza, Goroditch, Mokchansk, Saransk, Insara, Krasno-slobodsk, Norovtchat, Kerensk, Nij-Lamov, and Tchembar.

Perm (Government of) derives its name from its ancient occupants, the Permians. It is bounded on the North by Vologda and Tobolsk; by the latter Government on the East; by Orenbourg on the South; by Viatka on the West; and on the North-West by Vologda. Its superficial area, according to M. Moderach, is 5996 geographical square miles. This Government, which is for the most part mountainous and devoid of that monotony which prevails in so many of the other Governments, is divided by the chain of the Ourals, which traverses it from North to South, into two unequal portions—the larger in Europe, the other in Asia. But although the highest summit of the chain, the *Padvinski Kamenn*, rises to an elevation of 6400 French feet above the level of the sea, the inclination is in general so gradual, especially on the European side, as to cause it to appear a mere mountainous mass, presenting neither the lofty crest of a continuous chain, nor the grandeur of a well-defined table-land. In fact, the Ourals deceive the expectations of all travellers on the route from Perm to Iekaterinbourg; they find themselves at the highest point of the range on this road, which is about 1600 feet above the sea level, without being aware of any particular ascent. The breadth of the chain as it traverses the Government varies from 1½ to 15 geographical miles, and the length of this portion is about 100. The country slopes in gentle terraces from the Oural towards the West; rather more rapidly, but to a less depth, on the Asiatic side. Its base is granite, which is covered with alluvial products and stratifications of every kind, serpentine, diorite, talcous schist, limestone, sand, slate, marl, clay, with various intermixtures of metallic particles. The most mountainous districts, those of Tcherdyn, Verkhotourié, Solikamsk, and Iekaterinbourg, are almost entirely covered with forests: in the two first are likewise immense marshes. The Southern districts of the European side, in which clay and sand either alternate or mix, are very susceptible of cultivation; in Asia, the district of Chadrinsk seems to be the most fertile. The country presents a very different appearance according as it is seen, in Europe, above or below the 60th degree

RUSSIA.

RUSSIA. of latitude; in Asia above or below the 58th: on this side is cultivation—beyond, all is barren and desert. It is the chain of the Oural which stamps the character of the country and marks out the course of the rivers. The chief of these is the Kama. There are above 600 lakes in the Government, with some sulphurous and other mineral springs. The climate is unequal; very rigorous in the mountains and to the East, but milder to the South-West: the air is generally salubrious. Agriculture occupies numerous hands, and the produce is abundant in the districts of Chadrinsk and Kamouischlof, as well as in part of those of Irbit, Krasnooufmsk, and Osa; but, even in good years, the returns do not equal the consumption. There are computed to be 1,500,000 dessaitines of land under tillage; and, in 1833, the seed absorbed 1,081,522 chetwerts, and the harvest returned 3,263,273 chetwerts, being 673,221 chetwerts less than the consumption. Rye, barley, oats, potatoes, and flax are the chief products. About 535,842 dessaitines are laid down in meadow, and the pastures may occupy 1,670,000 dessaitines. The forests are almost immeasurable; above 15,000,000 dessaitines belong to the Crown, of which 53,410 yield timber for building. Besides pines, firs, and birches, the oak, beech, elm, lime, maple, and—in the districts of Tcherdyn and Verkhotourié—the cedar are also met with. Game, and beasts of value for their fur, abound; although, with the exception of the Vogols, the chase is but a secondary object with the inhabitants. The produce of the fisheries is insignificant. The number of horned cattle is estimated at 636,892; of sheep at 671,651; of swine at 387,650; of goats at 8700; and of horses at 572,291. The Baschkirs pay much attention to the management of bees, and had formerly a breed of camels, which would seem to be extinct: there are some rein-deer among the Vogols in the North. But the chief wealth of the Government arises from its mineral treasures; and the working of the mines occupies the greater proportion of its inhabitants. Iron, copper in abundance, some lead, gold, silver, salt, marble, jasper, agates, amethysts, loadstone, and some diamonds are the principal products. Gold is found both in sand and in auriferous veins; the latter were long so productive as to cause the former to be neglected; but gold is now extracted by means of washings at every station, for which each workman procures yearly from 32 to 44 zolotniks: latterly there have been procured, one year with another, about 250 poods of this precious metal, and 100 poods of platina. The richest mines are those of Berezov; and the greatest quantity of mineral is found between the Sosva and Bélaïa. There are 25 iron-works (*zavodes*) in the Ourals belonging to the Crown: 13 for the smelting and preparation of iron, 6 for that of copper, 5 for that of gold, and 1 for the manufacture of swords, bayonets, &c.; these occupy 33,000 workmen. Belonging to individuals, there are 99 iron-works, 35 of copper, and 2 of sulphur and vitriol. The whole of the various works in this Government, dependent on the mines, give constant employment to about 95,756 males; and those of the Ourals collectively employ about 154,000. The entire return of the mining districts of the Ourals may be estimated at 300 poods of gold, 200,000 poods of copper, and 1,400,000 poods of iron, wrought and cast. The largest proportion of these products is furnished by this Government, which likewise yields about 7,000,000 poods of salt yearly. In 1830, the manufactures of the Government occupied 4256 hands; there were 125 of

leather, 15 of soap, 9 of tallow, 5 of candles, 2 of potash, 2 glass-works, 1 porcelain manufactory, &c. A single manufactory of cloth, belonging to M. Vsévoljski, produces yearly 8000 *arsheens*; and the same proprietor possesses about 2000 Spanish sheep. The commerce of this Government is exceedingly active; owing, on the one hand, to the water communications opened by the Kama and its affluents, and, on the other, to the numerous fairs established in it. There are no less than 39 of these, 18 of which are held in different towns, the remainder in villages; that of Irbit is the most important. The exports may be known from what has been previously stated respecting the native products of the Government; the imports chiefly consist of corn, cattle, brandy, colonial produce, and manufactured goods. Perm depends on the jurisdiction of the University of Kazan, and in 1832 the public schools under its superintendence amounted to 18, having 54 teachers and 1234 scholars; the private Schools were 16, with 16 masters and 420 pupils; besides these, there were 20 Schools for the Crown miners, with 24 teachers and 1331 scholars. Adding to the above 8 Ecclesiastical Schools, with their 23 instructors and 1084 pupils, we have a total of 4069 individuals receiving instruction; which, estimating the population with M. Schnitzler at 1,200,000, gives the proportion of 1 to every 294 inhabitants. The *Bishopric of Perm and Iekaterinbourg* is of the third class, and embraces 15 Cathedrals, 394 Churches, 3 Monasteries, and 1 Convent. The other Christian denominations possess 4 places of worship. There are 137 Mosques. Perm is under the same Military Governor as Kazan. Its civil expenses were fixed in 1797 at 81,488 rubles, and its revenues, exclusive of the mines, amounted in 1808 to 4,648,000 rubles. The mines, with the population dependent on them, are under a peculiar jurisdiction which is centralized at Iekaterinbourg.

Perm, the Capital, dates its existence from a Ukase of Catherine II., in the year 1780. Its houses, about 1000 in number, are chiefly of wood, but the streets are wide and regular. A kind of boulevard, planted with trees, runs round the city. Having only two Churches, its appearance is very different from that of the generality of Russian cities. It is described by M. Engelhardt as a very quiet town, possessing nothing either to interest or excite; a circumstance accounted for by the non-residence of the Nobles who chiefly own it. North latitude 58°, East longitude 56° 3'. *Iekaterinbourg* is seated in the Oural chain, and lies partly on the side of a hill, partly at its base, about 800 feet above the level of the sea. It is traversed by the river Iceth, and is regularly built and fortified, with long, straight, but unpaved streets: most of the houses are of wood; some, however, are of stone, and are very fine buildings. Altogether Iekaterinbourg wears an aspect of ease, which is not to be found in many of the Russian Capitals. This city received its name from Peter I., in honour of the Empress Catherine, and is the centre of the mining department and its operations. A large square, of stone, built on the bank of the Iceth, contains the Government Offices, a Mineralogical Cabinet, a Chemical Laboratory, the Mint, a Hospital, and various works for the amalgamation and washing of metals, cutting of precious stones, &c. Copper money alone is coined here. In the vicinity are the gold mines of Berezov, which spread over an extent of 56 square versts, and those of Neviansk, as well as the iron mines of the latter; on this

RUSSIA. side of the Ourals are the gold, silver, and iron mines of the system of Blagodath, near the Tchysovaia. In the district of Verkhotourié, auriferous alluvions and gold sands abound: here are the gold and copper mines of Bogoslovsk; the platina mines of Nijneï-Tourinsk; the great iron-foundry of Nijneï-Taghilsk; the washings of Petropavlovskoï, &c. Population 10,695. *Irbít* is a small, ill-built town, on the confines of the Government of Tobolsk, which contained, in 1831, 521 houses, 14 streets, 3 Churches, 1 School, and 1 Hospital. It is well known by the fair held here every year from the 15th of February to the 15th of March, for the exchange of European merchandise and colonial produce, with the products of Siberia and of the neighbouring nomad Tribes. Shops are supplied by a vast *Gostinoï-dvor*, and there are many others in the streets. The value of the merchandise brought here in 1832 was estimated at 14,576,000 rubles. Population 2700.

This Government is divided into the following 12 districts: Perm, Koun gour, Krasnooufinsk, Osa, Okhansk, Solikamsk, and Tcherdyn, in Europe; Verkhotourié, Irbít, Kamouischlov, Chadrinsk, and Iekaterinbourg, in Asia.

History. The early History of Russia, like that of most other Countries, is involved in obscurity. The origin of its rude hordes is as uncertain as the etymology of their names. Southern Europe first became acquainted with the nations that peopled the Sarmatian forests during the fierce visitations of the Goths and Huns; and they seem to have been indiscriminately denominated Sarmatians, or Scythians, until the VIth Century, when the distinct appellation of *slaves* is first met with. The derivation of this name which seems best supported is that from the word *slovo*; (speech;) so that the *slaves* would signify the *speaking*, or the natives, in opposition to the term *niemtsi*, (mutes,) which they applied to those nations which spoke a different language, and by which term the Russian still designates a *foreigner*. Of the numerous Tribes belonging to the great Slavonic family, and which spread themselves in a series of colonies from the Borysthenes to the Elbe, two principal branches are distinguished, rivals of each other, and still cherishing the bitterest animosity—the Russians *great* and *little*, and the Poles. A foreign impulse first propelled them into that career of conquest and acquisition which has been since so steadily pursued. The Vareghi (*conquering*) Russ, one of the enterprising Tribes of Scandinavia, whose fleets had appeared in the Bosphorus during the first half of the IXth Century, were invited by the Slaves in the following terms: “Our Country is large and fertile, but as to order there is none; come, and govern, and reign over us.” This invitation was willingly accepted; and three brothers, Rurik, Sineus, and Trouvor immediately established themselves in the midst of the Slaves of Novgorod, and in the Country of the Vess and the Krivitch. These settlements, in which were comprised the present Governments of Novgorod, Pskov, St. Petersburg, and Esthonia, began henceforward to be known by the name of the Russian Country—*Rousskaïa Zemlia*. Three centuries later, the Tatar invasion effaced all traces of the democratic principle of the Scandinavian Governments, and gave that Oriental impress which has ever since so deeply marked both the polity and habits of the Russian Empire. After a fierce and protracted struggle, these Eastern invaders were driven beyond the limits of Europe; and, finally, the

Moscovite Monarchy was consolidated and established on a firm basis by the victorious arms of Ivan Vasiljewicz, in 1470. With Peter the Great began the civilization of the “giant who had grown up unknown and unobserved in the bosom of his native forests.” His defeat of Charles XII. gave his Country reputation among the nations of Europe; and he laid the foundation of her real strength by enabling her to share in the commercial advantages of the Baltic. The dazzling reign of Catherine II. raised Russia to a perfect equality with the other great Powers; and the results of the last general War which convulsed Europe have given a preponderance to this colossal Empire which is already sensibly felt in the scale of nations.

An enumeration of the territorial acquisitions of Russia, during the last sixty years only, will be the best means of showing the rapid march of her aggrandizement:—

	Inhabitants.
In 1770, Bessarabia	500,000
1771, The Crimea (incorporated 1783) . . .	460,000
1785, Georgia (incorporated 1831) . . .	400,000
1793, Little Poland and the Ukraine . .	6,500,000
1794, Western Russia, including Lithuania, Podolia, &c.	8,500,000
1795, Kourland	400,000
1803, The Lesghis and other Caucasian Tribes	300,000
1809, Finland	1,400,000
1813, Schirwan	140,000
1815, Kingdom of Poland (incorporated 1832)	4,000,000
1827, Erivan and districts adjacent . . .	150,000
1829, Turkish Armenia, and other cessions by Turkey	500,000
Total	23,250,000

“Thus,” observes the writer from whom the above is taken, “little more than half a century has sufficed to extend the sway of Russia from the Gulf of Bothnia to the banks of the Pruth, and from the Araxes to the Vistula; whilst she has added, within that interval, an amount of population to her native resources, which, at the present day, is nearly equal to that of the whole United Kingdom.”

All power in Russia emanates from the Sovereign. Govern-
The title of *Samoderjetz* which he assumes, and which ment.
literally signifies *autocrat*, clearly indicates the nature of his authority, as derivable from God alone. Under the Sovereign are three principal bodies, which stand at the head of the administration: 1st. the *Council of the Empire*, composed of an indefinite number of members, but always including the Minister for the time being, and before which is brought all business of importance, excepting questions of foreign policy: 2dly. the *Directing Senate*, or supreme tribunal, which is the guardian of the laws, and watches over their execution: and 3dly. the *Holy Synod*, which protects the rights of the national Religion, but in the name of the Emperor only, he being the head of the Church as well as of the State. The Russian Empire, according to the best authorities, is divided into 49 Governments and 12 Provinces; (*oblast*;) but various parts of the Empire present great differences with respect to their administration, some being governed according to ancient privileges which have been continued to them, and others according to the constitutions secured to them at the time of their

RUSSIA. annexation to the Empire. Thus, the Cossacks of the Don and those of the Black Sea form what may be termed military republics; the Grand Duchy of Finland enjoys a constitution entirely distinct from that of the other parts of the Empire; and Livonia, Esthonia, and Kourland possess separate and great privileges.

The administration and police of each Government are confided to civil and military functionaries, styled Governors, and to a Council. Its treasury is under the superintendence of the Minister of Finance, and maintains a correspondence with the district receivers. Justice is administered in each by a Civil and Criminal Court, part of the individuals composing which are elective; and by a Court of Appeal, whose Judges are appointed for life. There are also a Council of Public Health, a Committee of Charity, and Greek, Catholic, and Protestant Consistories. A Marshal of the Nobility, elected by this body, presides at stated periods over an assembly composed of deputies from it. District Marshals are subordinate to him.

The municipal organization is divided into three separate classes of jurisdiction: 1st. the Rural Communes; 2dly. the City Communes—each of these is framed on an elective basis; 3dly. the Administration of the Open Country, (or the territory not included in the Communes,) which is confided to the delegates of the Nobility.

The Russian Government has published a collection of all the Ukases, Rules, Ordinances, &c. in vigour in Russia, which amounted, in 1830, to 45 volumes, systematically arranged, with copious indexes, and forming a single body of laws divided into several codes. This measure, according to the Imperial manifesto, dated January 31, 1833, guarantees the execution of the laws for the present, at the same time that it establishes a solid basis for their progressive improvement. This body of laws became the standard code of the Empire with the commencement of the year 1835.

Social condition.

The population of Russia is divided into a great number of classes, among which the Nobles hold the first rank, not merely nominally, but by their privileges and education: the former consist for the most part in exemption from military conscription, and taxes of all kinds; the latter is an object of no mean care, and among the Russian Nobles there are many who would do honour to any aristocracy in Europe. With few exceptions, they fill all public employments; but no one is eligible, whether noble or not, to such appointments, unless he belong to one of the fourteen classes of rank (*tchynny*) into which the civil and military services, and the clergy, are correspondingly arranged. Thus the first class, or highest rank in the army, is that of Field-Marshal, on a par with which is the Chancellor of the Empire in the Civil department, and a Metropolitan in the Ecclesiastical. A fixed term of service, and a prescribed form of examination, are undergone previously to acquiring rank.

Nobility is hereditary; the right of conferring it rests with the Emperor; and corporal punishment is inflicted on a Noble only by special order of the autocrat, or in case of homicide.

The citizens form the second grand division of the Russian nation. Every inhabitant of a town who is neither noble, nor the property of another—that is, who is not a serf—is a citizen, (*meshtchanin*.) The Notables constitute the highest class among them, and possess privileges similar to those of the Nobles. Next

to these come the merchants of the *three Guilds*. The first, or highest Guild, corresponds with the eighth class of rank, and enjoys most of the immunities of the Notables. In fact, whoever has belonged ten years to the first Guild, or twenty to the second, without incurring any visitation of the law, becomes a Notable. All three Guilds are personally free from conscription; but this exemption does not extend to their children, until they themselves become incorporated in one of the Guilds. The qualification for the first Guild is 50,000 rubles; for the second 20,000; and for the third 8000. The foreign merchants (*inostrannii*, or *inorgorodnii-gost*) constitute a fourth class of citizens, and enjoy peculiar privileges. Besides these, there are several minor degrees of citizenship, as the Artisans of Tribes, (*tsekho-vyie*.) &c.

The largest and lowest division of the Russian nation is that of the peasantry or serfs, who go under the general denomination of Christians, (*Krestiane*), a name applied by the Tatars on account of the national Religion, and retained ever since. They may be divided into three principal classes: the serfs of the apanage, (*Udelnye Krestiane*), who are the private property of the Imperial family; the fiscal serfs, (*Kazennye Krestiane*), immediately subject to Government; and the serfs who belong to the Nobility, or private individuals, (*Pomeshtchytchye Krestiane*.) All these serfs are attached to the soil, are incapable of possessing any property in land, are exempted from no public burden, and are the actual property of their landlords. All the males pay a poll-tax, and their owners are bound to enter their names in the Government Registers, (*Skazki*), under penalty of a heavy fine on themselves, and banishment to Siberia for the serf. The means of education are carefully kept from them; the Government regulations for their protection are suffered to become a dead letter; and their happiness or misery entirely depends on the personal character of their master.

In addition to the foregoing classes of serfs, there are a considerable number of rent peasants, (*Obrotchnye Krestiane*), who, by paying an annual rent (*obrok*) to their proprietors, purchase the right of carrying on trade or business on their own account. Some of these have been known to amass considerable property. However, they still continue slaves. There is yet another variety, called free peasants. (*Volnye Krestiane*.) These enjoy personal freedom and immunity from taxes, on condition of keeping post-horses for the public service, which they furnish at a charge regulated by the Government.

The established Religion of the Empire is that of Religion. the Greek Church. All other Religions, however, are not only tolerated, but are free from political disabilities of every kind. The higher orders of the established Clergy are all Monks, living in well-endowed establishments, mostly of irreproachable manners and exemplary life, and often distinguished by their learning. On the contrary, the parish Priests are bound to marry, possess very limited incomes, which they eke out by fees, and are by their general ignorance and vulgar habits but little removed from the lowest class of society. The ceremonies of the Church are gorgeous in the extreme: its doctrines differ from those of the Latin Church chiefly as regards the supremacy of the Pope, the doctrine of the procession of the Holy Ghost from the Son, communion in both kinds, and the marriage of Priests. It terms itself the *orthodox* Greek Church, because it adopts the Seven Œcumenic Councils, as well as the *Quini-*

RUSSIA. *sexum.* Its principal festivals are those of the Resurrection; that which celebrates the breaking up of the ice on the Neva; and another, on a similarly natural occasion, being to hail the first springing up of verdure from the long frozen earth. Each cottage has its image, and every Russian his patron saint.

The following is an approximative estimate of the numbers which belong to the various beliefs professed, or followed, throughout the Russian Empire.

Members of the Orthodox Greek Church .	45,000,000
Dissenters from this Church, called <i>Raskolniks</i> or Heretics, and divided into 72 Sects	350,000
Roman Catholics (including the United Greeks and the United Armenians) ..	3,500,000
Armenians, not united	250,000
Members of the Confession of Augsburg	2,000,000
Members of the Reformed Church	54,000
Moravians	10,000
Memnonites	6,000
Mahomedans	2,500,000
Jews	600,000
Worshippers of the Grand Lama	300,000
Indians, devotees of Fetichism	600,000
Idolaters	170,000
Total	55,340,000

Education. The Minister of Public Instruction is the head of all establishments for education in Russia, whether founded by Government or opened by individuals; and, in connection with the Greek Synod and Consistories of other Sects, he superintends every measure relating to the education of the people. The whole Empire, with respect to the purposes of instruction, is divided into seven University districts, the head-quarters of which are Vilna, Moscow, Dorpat, Kharkov, Kasan, Petersburg, and Helsingfors. In each of these Universities the various branches of education are distributed among four Faculties, according to the German mode, *viz.*, Theology, Jurisprudence, Medicine, and Philosophy. The course of study laid down occupies, in general, six *sémes*tres, or three years. From the despotic nature of the Government, and the strict regulations by which the Professors are confined to merely formal teaching, the only departments of instruction successfully cultivated are those of Medicine and Surgery. Every Capital of a Government has its Gymnasium and Elementary School; and each of the districts into which it is subdivided has an Elementary School in its chief town, and, when this is a town of any importance, mostly its Gymnasium also; all which are under the jurisdiction of their respective University. The total number of Government establishments of this nature throughout the Empire is 1676, which employ 4608 professors and teachers, and afford instruction to 97,572 pupils of both sexes. The number of males thus educated are computed at 78,623, of females 7949.

The Ecclesiastical Academies, Schools, and Seminaries amount to 1498, and the pupils educated in them are about 53,380.

Besides these Gymnasias and Seminaries, and the various establishments conducted by private individuals under the superintendence of the Universities, there are several Military Schools, Schools for Engineers, and Colleges of Medicine under the direction of the Minister for War and the Minister of the Interior.

The Nobility, rich merchants, and manufacturers, and the higher ranks of Government officers, &c. either educate their children at home, or in boarding-schools; and as the mass of the people are slaves, debarred from instruction, it is only the middle class which derives benefit from the University and Ecclesiastical Academies. This class, taken through all the Empire, does not amount to more than 4,500,000; and, estimating the whole population of Russia in round numbers at 50,000,000, the proportion between those who reap advantage from these establishments and those who do not is about as 1 to 11. Again, taking the number of pupils at present receiving instruction in them at the high figure of 200,000, this will give 1 in every 22 of the same class as enjoying the benefits of education, and 1 in every 250 of the population at large.

Russia may now boast a literature of her own. Such Literature. was the impetus given to the national intellect by the institutions founded by Catherine, that whereas previously to the year 1800 there did not exist above 1000 printed Works in the vernacular tongue, this number had quadrupled in 1807, and in 1821 the press had diffused over Russia 13,250 Russian Works; a number which must, at the present date, have considerably increased. Karamzin, by his historical and other writings, has already acquired a European reputation; and Russia justly boasts among her Poets the names of Lomonosov, Sumorokov, and Pushkin.

There are now 79 papers and minor periodicals published in Russia, and about 12 Scientific and Literary Journals. Every Work, however, as well imported as published, is submitted to a double censorship.

In 1791 there were only 15 printing-offices in all Russia; there are now 61, *viz.*, 7 belonging to the Government, and 54 to individuals. Of these, 14 are at Petersburg, and 11 at Moscow.

The number of literary and scientific institutions throughout the Empire, including several purely philanthropic associations, is 47; of which 20 belong to the city of Petersburg, and 9 to Moscow. Many of these are highly endowed. The Academy of Sciences, founded by Peter the Great, completed by Catherine I., and organized according to plans laid down by Wolf and Leibnitz, has an annual revenue of £5000. It comprises the following collections: the Zoological Museum; the Cabinet of Mineralogy; the Collection of dried Plants; the Asiatic Museum; the Collection of ancient Medals and Coins; the three Cabinets of Asiatic, Russian, and modern Medals; the Cabinet of Curiosities; the Library. The latter contains 300,000 printed books and 12,000 manuscripts; it is particularly rich in ancient manuscript Chronicles, and in Chinese, Mandshoo, Javanese, Mongolese, and Tibetan printed books and manuscripts. The above-mentioned Museums present many novel and interesting features; the Asiatic especially, in which are collected the dresses, arms, and implements of the rude nations of Siberia and Tatar, and the ornaments found in the tombs of the Altai. Two specimens also, in two different branches of Natural History, are of paramount interest—the celebrated skeleton of the mammoth, and the mass known under the name of native iron of Pallas, a crystallized aerolite weighing 1656 pounds. Among the celebrated names connected with the Academy may be distinguished those of Gmelin and Pallas. The Academy of Arts enjoys a yearly income of £12,000, which is devoted to the maintenance and instruction of 300 pupils, and to

RUSSIA. the purchase of models of every kind. Moscow possesses several valuable cabinets of Natural History. The Museum of the celebrated Loder in this city is very rich in osteology; the collection of crania intended to illustrate the theory of Gall, and the influence of mercury on the bones, amounting to more than 2000 specimens.

**Manufac-
tures.**

Since the year 1628, the Russian Government has displayed an increasing anxiety to develop the manufacturing industry of the nation. Of late years especially, it has been unwearied in its exertions to promote this end, and the increase has been proportionally rapid. In 1815 the total number of manufacturing establishments was estimated at 3250, which gave employment to about 150,000 workmen: in 1829 these ciphers had increased to 5269 and 231,624 respectively; and in 1832 the manufactories of all kinds exceeded 10,000. Still, with the exception of some of its fabrics of iron and hardware, and of what may be termed its indigenous manufactures, as sailcloth, duck, sheeting, sackcloth, and other coarse articles of flax and hemp, the manufactures of Russia are rude and imperfect. The most profitable branch of its productive industry is undoubtedly the distillation of brandy; the annual value of which amounts to 270,000,000 rubles, yielding the Government an excise of more than 90,000,000 rubles. The chief seat of its iron manufactures is at Toul; and the Government works there furnish annually 17,000 muskets, 6500 brace of pistols, and 16,000 side arms. At Zlatoust, where the Emperor Alexander settled a colony of workmen from Solingen, 30,000 side arms of the best quality are yearly manufactured. Every effort has been employed to establish and perfect the silk and cotton manufactures, and of late years they have made very great progress. The Government of Moscow is the chief seat of these branches of industry, and its various cotton mills contain in all 60,000 looms; the silk looms here are estimated at 16,000, of which 5000 are Jacquard looms introduced since 1827. The value of the cotton yarn imported by Russia averages yearly about £2,000,000 sterling; and her Trans-Caucasian Provinces already supply her with one-third of her annual consumption of raw silk. Yet, notwithstanding the impetus given and the real advancement made, the peasant is still, throughout the greater portion of the Empire, his own manufacturer, and fabricates for himself most of the articles of domestic use.

Commerce.

The important works carried into execution, to facilitate the transport of merchandise to all parts of the Empire, more particularly since the beginning of the present century, have, together with the increase of manufactures, powerfully contributed to extend commercial intercourse, not only between the different Provinces, but with foreign nations. The principal exports are tallow, hemp, flax, timber, flour, iron, copper, leather, hides, sailcloth, potashes, tar, pitch, wax, train-oil, cordage, furs, linseed, &c.; and the chief imports are wines, cotton-yarn, cottons, silks, fine cloths, dyes, tin, tea, sugar, coffee, and other colonial products, fruits, brandy, lead, mercury, tobacco, woods for cabinet-work, rosin, machinery, tools, and instruments of various kinds.

There are three chartered trading Companies in Russia. The *American Company*, established at Petersburg in 1797, and which has branch establishments at Moscow, Kazan, Tomsk, Irkutsk, Yakutsk, Okhotsk, and Kamtschatka; the *Steam Navigation Company*, formed in 1823 for the purpose of promoting navigation on the Volga, the Kama, and in the Caspian Sea; and the

RUSSIA. *South-West Russian Company*, which was set on foot in 1824, in order to extend the means of communication on the great rivers, and in the Black and Baltic Seas.

"In the ten years' interval between 1824 and 1834," according to a statement made in the *Companion to the Newspaper* for July, 1834, "the importation of foreign merchandise into Russia amounted to 1,951,844,649 rubles, (£89,392,230,) which gives an average value of £8,939,223 per annum. During the preceding ten years' interval it was 1,646,904,710 rubles, (£75,475,230.) The average increase in the importations during the last ten years has therefore been £1,391,700 per annum. The amount of exportations between 1824 and 1834 was 2,307,399,005 rubles, (£105,669,950,) or, on the average, £10,566,995 yearly; being also an excess of 125,504,581 rubles (£5,752,290) over the exportations of the preceding ten years, or an average annual increase of £575,229. In the last ten years the excess of exports over imports has, therefore, amounted in the whole to £16,277,720, which gives a yearly average of £1,627,772. The *Duties of Customs*, between 1824 and 1834, so far as foreign merchandise is concerned, produced 673,339,401 rubles, or £30,861,370, and the excess in that produce over the duties collected in the preceding interval (1814 to 1824) amounted to 277,213,113 rubles, or £12,705,650, being an increase of 70 per cent. In the last ten years also, 5000 vessels more arrived in the Russian ports in ballast, for the purpose of taking in Russian produce, than in the ten years preceding."

In the *Statistics* published in the same Work in the January Number for 1836, it is stated that—

	Rubles.
The exports to foreign Countries, in	
1834, amounted to	217,322,446
To Finland	2,440,993
To Poland	10,656,441
Total	230,419,880
or £10,560,900.	
The imports from foreign Countries	
amounted to	214,324,630
From Finland	969,919
From Poland	2,798,803
Total	218,093,352
or £9,996,000.	

Excess of exports over imports £564,900.

The importation of gold and silver exceeded the exportation in the sum of 15,402,575 rubles, or £706,050.

The largest articles of export were:—

Hemp	2,824,935 poods.
Copper	317,222 „
Timber and deals	8,985,489 rubles.
Raw hides	11,235,988 „

"The trade of the Country assumed last year a somewhat new aspect. There was so bad a harvest in 1833 that many Provinces, instead of being large exporters of grain, became, in consequence of the remission of all duties, considerable importers; hence a natural decrease in the imports of other articles. When, however, the necessity of providing supplies of foreign grain ceased, the trade of Russia reverted to its accustomed course.

"The export of raw hides was double the quantity of that exported in 1833, owing to the prodigious number of beasts slaughtered from want of fodder. The export of tallow from the Northern ports amounted to 3,780,831

RUSSIA. poods; somewhat less than the export of the preceding year; but from Odessa there were exported 788,000 poods, being double the quantity exported in 1833.

"With regard to the imports, the most observable fact was, that in 1834, 1,100,000 chetwerts of grain, valued at 20,714,000 rubles or about £949,440, and 469,479 vedros of spirit from corn, were imported for the use of the great brandy distillery in St. Petersburg."

Many important details respecting the trade of Russia are given in the descriptions of *Iaroslav*, *Koursk*, *Nijnii-Novgorod*, *Kiev*, *Poltava*, *Orenbourg*, and *Perm*, embodied in the present article.

Revenues. The revenues of the Russian Government arise chiefly from a capitation tax of 2 rubles on each peasant, and 5 on each burgher; a tax on merchants' capital of about $4\frac{1}{2}$ per cent.; the leases of the Crown lands, and *obrok* of the Crown peasants; the customs; stamps, patents, various licenses, &c.; the monopoly of spirituous liquors and salt; the mines; the purchase of exemption from military service; fines on smugglers and other delinquents; the Crown fisheries, mills, manufactories, and baths, &c.; the Post-office; and the *iassac*, or tribute in furs of the nomad races. If the budget of Russia were judged according to appearances, no state in Europe would be administered with so much economy, or at least with so little expense. However, we are not only ignorant of many of the elements of the public revenue, but there are many sums never carried to the account of either receipts or expenditure, because they are either appropriated to certain local purposes, or are discharged in kind by various portions of the population. Thus the rent of the fisheries on the Oural is not posted among the receipts, as it either serves as pay for specific services, or is assigned in perpetuity to certain classes of the community. It is thus likewise that whole Governments are often required to provision the army, without these supplies ever being noticed in the budget. In some districts, the capitation tax is commuted, either wholly or in part, for labour in the mines, and the carriage of metals, or of salt; in others, whole Tribes are exempted, on condition of performing military service; and, finally, neither the raw produce of the Crown lands, nor the ammunition supplied by its founderies, figure in the financial returns. The annual revenue is estimated at the gross sum of £20,000,000; but the abuses inseparable from the complicated machinery of the Government, a heavy debt, and the depreciated state of the paper money, leave the receipts below the current expenses, even in time of peace. To what this deficiency may amount, as well as many other particulars relative to the finances, is purposely kept secret. However, the Minister confessed, in 1824, to the public debt's exceeding £35,000,000; a debt which the military operations that have since occurred must have considerably increased.

Army. By the official returns, the land forces are estimated at 730,000 men; of which number 130,000 are composed of the irregular cavalry of the Cossacks and other semi-barbarous Tribes; the Imperial guard consists of about 30,000 chosen men. In war time, the entire armed force of Russia is, on the same authority, reported to amount to above 1,000,000. However, these are paper armies, which present a formidable amount of figures, but are not to be found in existence. It is probable that all the troops of the Empire, regular and irregular, do not exceed 300,000 effective men; and, when the extent of the frontiers and the jarring elements of that

Empire are taken into consideration, this amount is far from formidable. The celebrated military colonies, which were to have furnished a regular supply of 3,000,000 of recruits, have entirely failed. The expenses of their establishment, the insubordination excited by the severity of their regulations, and perhaps a wise fear that these colonies might become to Russia what the Prætorian guards were to Rome, have all contributed to this result. They have been entirely re-organized, and are now merely the fixed cantonments of part of the army. There are three of these stations in European Russia; one, the military colony of Novgorod, for a body of about 40,000 infantry; and two others, in the Governments of Kherson and Poltava, for two divisions of cavalry amounting to about 15,000 men.

Every nerve is strained by her Government to render Navy. Russia a naval as well as military power. She maintains squadrons on the Black, Baltic, and Caspian Seas; and is more particularly anxious to organize a powerful marine on the former. In 1832 she possessed 40 ships of the line, 35 frigates, 11 corvettes, 17 brigs, and 297 small craft; in all, 400 vessels. The number of men employed, in the same year, was returned at 44,000.

According to Humboldt, the Russian mines yield **Mines.** annually about 22,000 marks of gold, and 77,000 of silver. In 1828, the produce of gold was 22,256 marks, (or 318 poods, of which 115 were obtained from Imperial, and 203 from private mines,) of silver 76,498 marks, (or 1093 poods,) of platina 6570 marks, (or 94 poods;) and the respective value was, of gold, 4,896,000 Russian dollars, (£700,000,) and of silver, 1,071,000 dollars, (£153,000.) The gold mines of the Oural yielded in

1826 ...	232 poods,	or 14,652 marks.
1827 ...	282	" 19,710 "
1828 ...	291	" 20,340 "

In the first six months of 1829 they gave 142 poods of gold (46 from Imperial, and 96 from private mines) and 43 poods of platina. The total produce of the Oural mines from 1814 to 1828 was 1551 poods, of the value of about £3,413,000; the last five years alone yielded 1247 poods. The yearly produce of gold in Europe and in Asiatic Russia amounts to 26,500 marks of gold, and 292,000 of silver; of which the Russian Empire alone yields 22,000 marks of gold, and 76,500 of silver.

By a document published in the *Russian Mining Journal* for 1830, we find that there were in the Oural districts alone 58 smelting-works, (seven belonging to the Crown, and 51 to individuals,) which produced, in 1827, 9,731,147 poods of cast iron. The forges, which amounted to 105, (8 belonging to the Crown, and 97 to individuals,) sent into the markets, in the same year, 5,578,474 poods of wrought iron. From the same source we learn that the steel manufactured in all the Empire, in 1829, amounted only to 80,000 poods; and that the total produce of copper in the same year was above 200,000 poods; of lead, about 40,000 poods; of salt, 22,000,000 poods; and of alum, 16,000 poods.

The auriferous sands of the Ourals have been lately found to yield diamonds; to what amount is unknown.

An approximative measurement of the superficies of **Superficial** European Russia has already been given; but a very ^{extent.} elaborate calculation having recently been published by M. Sernoff, who has invented an improved method of computing areas, by which he can allow for the inequalities of boundaries, we subjoin the following estimate of its area, as computed by him.

RUSSIA.
—
RUST.

"Russia in Europe, including Russian Poland and the islands of the Baltic and German Ocean, contains 2,078,646 $\frac{7}{10}$ English square miles, of which 151,048 $\frac{1}{10}$ lie within the Frigid zone, and 1,927,598 $\frac{1}{10}$ within the Temperate zone. Siberia (under which designation are included the islands of the North Frozen Ocean, except Nova Zembla, and of the Pacific Ocean, as well as the peninsula of Alyaska in America) contains 4,866,643 $\frac{7}{10}$ English square miles, of which 1,130,495 $\frac{9}{10}$ are situated within the Frigid zone, and 3,736,147 $\frac{1}{10}$ within the Temperate zone. It is impossible to calculate the exact area of Nova Zembla, as the Southern coast of that island has not been laid down; but, if it be supposed to extend in the form of a circle between the promontories of Nikolskoï and Winter, the area would amount to 83,271 $\frac{3}{10}$ English square miles. Thus the whole superficial extent of the Russian Empire is about 7,028,561 $\frac{1}{10}$ English square miles, of which 1,364,815 $\frac{1}{10}$ lie within the Frozen, and 5,663,745 $\frac{9}{10}$ within the Temperate zone."

The extent of Russia had been previously estimated by Kraft at 7,023,252 English square miles: his calculation, however, included 571,858 miles of steppes possessed by the Kirghishes, which are omitted by M. Sernoff.

Population. According to official documents made public, in 1829, by the Minister of the Interior, the entire population of the Empire, excluding Poland, was in that year 44,418,058 souls: adding Poland, which was returned in the same year at 4,581,942, the whole population was officially estimated at 49,000,000. The yearly excess of births over deaths is about 500,000. M. Balbi, in his *Empire Russe comparé aux Principaux Etats du Monde*, computed the population for the end of the year 1826, without Poland, to have been 56,070,000; and M. Huot, who contends that the Ministerial returns are defective, and supports his opinion by many statistical details, computes the gross population of the Empire, at the end of the year 1832, to have been 61,117,627. According to the latter writer, the numbers, belonging to the different races which compose the heterogeneous population of Russia, may be thus apportioned: the Slavonic nations 46,930,000; the Finnish and Finno-Hunnic 2,962,000; the Tatar or Turkish 2,260,200; the Caucasian 1,350,000; the Teutonic and Scandinavian 537,200; the Mongol 213,000; the different petty nations of the North-East, as the Samoyedes, Kamtschadales, Esquimaux, &c., 260,700; various Asiatic nations 667,900: and different European nations, as the Moldavians, Wallachians, with the Greeks, English, French, &c., settled in Russia, 159,000.

The number of hereditary Nobility, in the returns of

1829, was stated at 148,330; of those enjoying personal Nobility or rank 46,441; of regular Clergy or Monks 4592; of Russian secular Clergy 218,418; of merchants of the first guild 1497; of the second guild, 3998; of the third guild, among whom were 7525 Jews and 1050 Mahomedans, 68,212. The peasants belonging to the Crown were estimated at 7,122,389; and those who were the property of individuals at 10,109,668.

RUSSIA.
—
RUST.

RUST, n. } A. S. *rust*, *rustian*; Ger. *rost*; D.
Rust, v. } *roest*; Sw. *rost*; perhaps (see Wachter)
Ru'sty. } from the Lat. *rustus*, and so applied
from the (*russet*) colour it gives to the surface of metals.
Rust, v. is used met.

To spoil for want of use; of action or exertion; to feel or move as if clogged by *rust*.

But gadir ye to you tresouris in hevене, where neither *rust* ne mought distrieth and where thefis delven out and stelen.

Wiclif. *Matthew*, ch. vi. p. 7.

Rust of defame is inseparable.

A Ballad imputed to Chaucer.

And on his haunch a rusty fel fauchoun,
And in his hand he had a rusty sword.

Chaucer. *The Testament of Creside.*

She was adrad, and he out brayde
A rusty swerde, and to hir saide,
Thou shalt be dead.

Gower. *Conf. Am.* book viii.

Their armour they should make look so *rustily* and ill-favouredly as weil might become such wearers.

Sidney. *Arcadia*, book i.

RUST.
—
RUS
TICK.

Some armed with lether, and some with *rustye* mayle, and some there were ryght well armed.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 215. p. 661.

In like wyse as wee see by *rusty* and cankered pottes when they shall be made cleane, fyrst they rubbe away the *ruste*, and after that washe it with water. So did this holy prophete, fyrst by his wepyng scoured and made full cleane his soule from the *rustinesse* and cankerynge of his foule syn, and after washed it with wepyng teares.

Fysher. *Seuen Psalmes*, p. 137.

But at her feet her sword was likewise layde,

Whose long rest *rusted* the bright steely brand;

Yet whenas foes enforst, or friends sought ayde,

She could it sternely draw, that all the world dismayde.

Spenser. *Faerie Queene*, book v. can. 9.

And on his arme a bounch of keyes he bore,

The which unused *rust* did overgrow.

Id. *Ib.* book i. can. 8.

And therefore you shall see Achilles commonly painted scraping off the *rust* of his speare head with his sword into the wound of the said Telephus.

Holland. *Plinie*, book xxv. ch. v.

And on his head a steele-cap he did weare

Of colour *rustie*-brown, but sure and strong.

Spenser. *Faerie Queene*, book v. can. 12.

The powder beeing incorporat in honey and gall-nuts, doth smooth and cleare the *rustinesse* of the windpipes, occasioned by a rheume.

Holland. *Plinie*, book xx. ch. xvii.

Our rational faculties, which being unemploy'd will naturally contract *rust*, and grow every day more weak and restive.

Scott. *Christian Life*, part iii. ch. iii.

The trenchant blade, Toledo trusty,

For want of fighting, was grown *rusty*.

Butler. *Hudibras*, part i. can. 1.

Strange doctrine this! that without scruple tears

The laurel, that the very lightning spares;

Brings down the warrior's trophy to the dust,

And eats into his bloody sword like *rust*.

Cowper. *Table Talk*.

RU'STICK,

RU'STICAL,

RU'STICALLY,

RU'STICATE, v.

RUSTICA'TION,

RUSTI'CITY.

Fr. *rustique*; It. *rustico*; Sp.

rustico; Lat. *rusticus*, from *rus*.

See RURAL.

Of or pertaining to the country;

having the manners of country;

plain, unadorned, simple; also rude,

uncivilized, unpolished

The Lacedemonians sometime purposely caused their *rusticall* seruantes to be made very drunk.

Sir Thomas Elyot. *The Governour*, book iii. p. 212.

They were called Paramisadans, beinge a *rusticall* kinde of men, and most rude amonges al the barbarous nacions.

Brende. *Quintus Curtius*, book vii. fol. 179.

By these examples it doth appere how good men dyd alwaye flee from rewardes all though they mought haue ben lefully taken, whiche in them was neyther folyshenes nor yet *rusticitie*, but of a prudent consideration.

Sir Thomas Elyot. *The Governour*, book iii. p. 202.

This poet, more circumspect then Theocritus, as the matter it self declareth, seemeth to doubt least that eclogue which is intituled Pollio, will not appeare *rusticklike* enough.

Phaer. *The Life of Virgil*, fol. 14.

Whether he useth them by such casualtie and custome, or of set purposes and choise, as thinking them fittest for such *rustical* rudenesse of shepheards, either for that their rough sound would make his rimes more ragged and *rusticall*, or else because such old and obsolete wordes are most used of country folke.

Spenser. *Epistle to Maister Harvey*.

Now as these men have no regard at all to the speculation of Nature, and to the course of the stars; so the other beforenamed are given to much thereto, and rapt they are so high among the stars and planets, that their owne eies bee dazeled therewith; and besides, their subtilties and quiddities doe blind others, considering that the practise of these matters must passe through the hands of

rusticall peasants, who are so far off from conceiving astronomie and the constellations above, that they know not one letter of the book, nor never learned their A B C.

Holland. *Plinie*, book xviii. ch. xxiv.

My brother Jaques he keepes at schoole, and report speakes goldenly of his profit; for my part, he keepes me *rustically* at home, or (to speak more properly) staies me heere at home vnkept.

Shakspeare. *As You Like It*, fol. 185.

Seemeth that such wilde woodes should far expell

All civile usage and gentility,

And gentle sprite deforme with rude *rusticity*.

Spenser. *Faerie Queene*, book ii. can. 6.

But let that same delitious poet lend

A little leave unto a *rusticke* Muse

To sing his mistresse prayse; and let him mend,

If ought amis her liking may abuse.

Id. *Ib.* book iii.

Which he perceiving kindly doth entreat,

Reproves the *rustics* for that offer'd wrong,

Averting it an injury too great,

To such, of right, all kindness did belong.

Drayton. *Moses His Birth and Miracles*, book i.

To you it seemes so, (*rustickly*), Ajax Oileus said;

Your words are suited to your eyes. Those mares leade still that led,

Chapman. *Homer. Iliad*, book xxiii. p. 318.

The truth of it is, the sweetness and *rusticity* of a pastoral cannot be so well expressed in any other tongue as in the Greek, when rightly mixed and qualified with the Doric dialect.

Addison. *Essay on Virgil's Georgics*.

Hence to your fields, you *rusticks*! hence away,

Nor stain with grief the pleasures of the day.

Pope. *Homer. Odyssey*, book xxi.

Lay bashfulness, that *rustic* virtue, by;

To manly confidence thy thoughts apply.

Dryden. *Ovid. Art of Love*, book i.

The time is now come when the town is again beginning to be full, and the *rusticated* beauty sees an end of her banishment.

The Idler, No. 80.

RU'STLE, v.

RU'STLE, n.

RU'STLING, n.

A. S. *hristlan*; Ger. *rasseln*; D.

ruyssele; from Goth. *hrisyan*, to

shake. To make the noise of things

shaken; of armour, (in Pliny,) silk, straw, leaves, &c.; now generally confined to that of things similar in substance to the latter.

Being charged to make a signe to declare if he were a dumbe spirite, he *russeled* and made a noise againe, and that was the sign and token.

Fox. *Actes, &c. Henry VIII.* fol. 1176.

As he let his sword fall upon it, another knight all in black came *rustling* in, who struck the shield almost as soon as he, and so strongly that he brake the shield in two.

Sidney. *Works*, vol. i. book i. p. 115. *Arcadia*.

AB. Go in to him, and fetch him out.

CLO. He is comming, sir, he is comming; I heare his

Straw *rustle*.

Shakspeare. *Measure for Measure*, fol. 77.

In the time of the Cimbrian warres, we have been told that armour was heard to *rustle*, and the trumpet to sound out of heaven.

Holland. *Plinie*, book ii. ch. lvii.

Her bow and quiver at her back behind,

That eas'ly moving with the wanton wind,

Made a soft *rustling*, such as you do hear

Amongst the reeds some gliding river near.

Drayton. *The Man in the Moon*.

Not the sea, when up the North-spirit blows

Her raging billows, bellows so against the beaten shore;

Not such a *rustling* keeps a fire, driven with violent bore,

Through woods that grow against a hill.

Chapman. *Homer. Iliad*, book xiv. p. 196.

So stands the Thracian herdsman with his spear,

Full in the gap, and hopes the hunted bear,

And hears him *rustling* in the wood, and sees

His course at distance by the bending trees.

Dryden. *Palamon and Arcite*, book ii.

They deere begin to goe to *rut* after the rising of the starre Arc-
turus, which is much about the fift of September.

Holland. *Plinie*, book viii. ch. xxxii.

And there arose such *rut* th' unruly rout among,
That soon the noise thereof through all the ocean rung.

Drayton. *Poly-olbion*, song 2.

SOPH. Pray be not mistaken; by this hand
Your wife's as chaste and honest as a virgin,
For any thing I know; 'tis true she gave me
A ring.

PETRU. For *rutting*.

SOPH. You are much deceiv'd.

Beaumont and Fletcher. *The Tamer Tamed*, act iv. sc. 3.

That is an advertisement to a proper maide in Florence, one
Diana, to take heede of the allurement of one Count Rossilion, a
foolish idle boy, but for all that very *rutty*.

Shakspeare. *All's Well that Ends Well*, fol. 248.

What piety forbids the lusty ram
Or more salacious goat, to *rut* their dam.

Dryden. *Ovid. Metamorphoses*, book x.

RUT, } See ante, ROUT.

RUTTY. } The *rut*, course, or tract, (*sc.* of a wheel.)

And as from hills raine waters headlong fall
That all wayes eate huge *ruts*, which met in one bed, fill a vall
With such a confluence of streames, that on the mountaine grounds
Farre off, in frighted shepheards' eares, the bustling noise rebounds.

Chapman. *Homer. Iliad*, book iv. p. 60.

To behold thee not painted inclines somewhat neere
A miracle; these in thy face here were deep *rutts*.

Webster. *The Dutchesse of Malfy*, act ii. sc. 1.

That heav'nly voice I more delight to heare
Than gentle airs to breathe, or swelling waves
Against the sounding rocks their bosoms tear,
Or whistling reeds, that *rutty* Jordan laves.

Fletcher. *Christ's Triumph over Death*.

I was almost killed between Sheffield Place and East Grinstead,
by hard, frozen, long and cross *ruts*, that would disgrace the ap-
proach of an Indian wigwam.

Gibbon to Lord Sheffield, Jan. 1794.

RUTA, in Botany, a genus of the class *Decandria*,
order *Monogynia*, natural order *Rutaceæ*. Generic
character: calyx four or five-parted; corolla, petals
concave, receptacle with ten melliferous punctures; cap-
sule lobed (sometimes four petals and eight stamens.)

Ten species, mostly natives of the South of Europe;
the most remarkable is *R. graveolens*, the Garden Rue.

RUTH. See RUE.

RUTIDOSOMA, in Zoology, a genus of *Coleopterous*
insects.

Generic character. *Antennæ* geniculated, twelve-

jointed, rather short and stout; *funiculus* seven-jointed, *RUTIDO-*
the two basal joints elongate, the remainder nodose; *SOMA.*
club large, acuminate; head produced in front into a
rather long, stout, considerably bent rostrum, inserted
during repose in a pectoral groove, which extends to
the base of the intermediate legs; head rounded, in-
serted up to the eyes, which are globose, in the thorax;
the latter short, narrowed anteriorly, with the sides
rounded, the base bisinuated; *scutellum* obsolete; *elytra*
globose, movable; legs rather long, stout; *femora*
clavate, each furnished with a minute tooth; *tibiæ* with
the apex truncate, armed with a hook; *tarsi* tetramerous.

Type of the genus, *Curculio globulus*, Herbst; Ste-
phens, *Illust. Britt. Ent. (Mandibulata)*, vol. iv. p. 45.
One species, found occasionally on sallows in England.

RUTILANT, Lat. *rutilare*, *rutilus*, from Gr. *ερυθ-*
ρος, red; Fr. *rutiler*, "to glisten, glitter, shine, glare."
Cotgrave.

Parchments coloured with this *rutilant* mixture.

Evelyn, book ii. ch. iv. sec. 1.

RUTLANDSHIRE, an inland County, and the
smallest of the English Shires, is bounded by Leices-
tershire on the North-East and East; by Northamp-
tonshire on the South-East and South; and on the
South-West, West, and North-West by Leicestershire.
It extends from 51° 31' 28" to 51° 45' 34" North lati-
tude; and from 25' to 48' West longitude. It is nearly
of a circular figure; its extreme length is 18 miles, its
greatest breadth 15 miles, and its circumference 58
miles; and its superficial contents, according to the
trigonometrical survey, amount to 149 square miles, or
about 95,360 acres, which exceeds the computation of
Parkinson, in his *Agricultural Survey*, by about seven
square miles.

The general appearance of the County is highly syl- Aspect
van and pastoral, varied by continuous undulations, and of the
having its valleys intersected by abundant springs and County.
rivulets. These valleys are mostly about half a mile in
width, and are formed by a series of gentle elevations,
which run East and West. Its principal vale, that of
Catmose, lies in the centre of the Shire, and is described
by Camden as "a pleasant and fertile valley, perhaps
from *coet maes*, which signify in British, a woody plain:"
much of the cheese called Stilton is made in this
vale, and likewise in the district of Leafield forest.
North of the vale, the ground swells upwards for about
a mile and a half to Burley hill, whence it forms a dead
flat, or table-land, which overlooks the rich plains of
Leicester and Nottingham, and the levels of Lincoln.
Its Eastern districts are the most diversified, its Western
the best wooded; and, on the South, it sinks into a
very extensive valley, mostly open land, which stretches
into Northamptonshire. It is conjectured that the
whole vale of Catmose was once an extensive tract of
woodland, and it is certain, at least, that the forest of
Leafield, or Lyfield, once occupied the greatest part of
Oakham Hundred. Leland, when speaking of this
forest, in the reign of Henry VIII., says, "From Wis-
combe partely through woddy ground of the forest of
Leafield, and so to Rutlandshire, by woddy first, and
then all champain ground, but exceeding rich of coru
and pasture;" and this description is strictly applicable
at the present day, since there is not a tract in the King-
dom of the same extent which presents a richer prospect
of wood and cultivation. Some of the finest views may
be obtained from Manton, which is the highest ground

RUTLAND.

RUTLAND.

Rivers.

in the County; from Beaumont Chase, Burley House, Rakesborough hill, the village of Teigh, the Whissendine hills, and Witchley common.

The only rivers of any importance which water the County are the Guash or Wash, and the Welland. The former, which runs from West to East, bisects the Shire into two nearly equal parts, and its course is aptly described by Leland, who says, "Washe riveret riseth in Leycestershire, and cometh by Greatham in Rutlandshire—the hole course from the hedde of it a little byneth Wasche-bridge where it goeth into Weland river, a little benethe Staunford town, is an xviii. or xx. miles. The common saying is there that Washe and Wiland shall drown al Holonde"—alluding to Holland in Lincolnshire. The Welland, which forms the boundary between this County and Northamptonshire, takes its rise in Leicestershire likewise; it enters Rutlandshire near Caldecott, and, proceeding in a meandering course towards the North-East, runs past Stamford in Lincolnshire, crosses the fens in that County, and empties itself into the Fossdyke: its navigable extent does not reach into Rutland. The only line of internal navigation possessed by the County is that of Oakham Canal, which is an extension of the Melton Mowbray Canal from the river Soar to the latter town. It enters the County near Teigh, and passes by Market Overton, Barrow, Cotsmore, and Burley, until it approaches Oakham on its North side, in the level of the vale of Catmose. Its course through Leicestershire and Rutland is about South-East, for an extent of 15 miles, and its first moiety has a regular rise of 126 feet perpendicular; but after entering the County, it continues on a level. The Rutland line of $6\frac{1}{2}$ miles was completed in 1803; and the whole expense was £86,000, raised in shares of £100. The principal objects of this navigation are the supply of coals and timber, and the transport of agricultural produce.

Though the rivers are few, and comparatively unimportant, the County is, in general, well watered for agricultural purposes; principally, by springs and ponds. Most of the towns and villages, which are not seated on the Wash or the Welland, have, nevertheless, the advantages of possessing other small streams or rivulets, and although water for the purposes of irrigation is not plentiful here, this is of little consequence, since most of the meadows are upland.

Soil.

The soil consists in general of red land, good clay, poor clay, hazel earth, white stony land, black clay, and gravelly clay. Mr. Parkinson discriminates the various soils, observing that the East and South-East parts are of a shallow staple upon limestone rock, with a small mixture of cold woodland and a clay soil; whilst the other parts of the County are composed of a strong loam, to which the vale of Catmose is in some measure an exception, as it consists of good clay, red loam, and a mixture of clay and red loam. The same writer divides the superficies of the County as follows: pasture lands 34,861 acres; meadow 9356 acres; arable 42,536 acres; common 693 acres; waste 30 acres; plantations 65 acres; woods 2815 acres; water 44 acres, allowing for fractions in each part.

Agriculture

The modes of agriculture naturally differ according to the differences of soil, and the lands being open or enclosed. The enclosed lands are partly under the Norfolk mode, of four years' rotation, without feeding off except in the turnip crops; and partly under a mode of more recent introduction, which consists in taking two

crops of spring corn after breaking up the clover, then turnips, next barley with rye grass and clover, after which sheep are turned on for three or four years, and the land is once more broken up for spring corn. On the unenclosed arable lands, the old course of two crops and a fallow prevails, but, to this, there are many exceptions. The crops commonly grown are wheat, barley, oats, peas, beans, turnips, cabbages, tares, and lentils: the average crop of wheat is $22\frac{3}{4}$ bushels per acre; of barley, which is of such superior quality that the Rutland farmers generally call it corn, specifying other kinds of grain by their different names, 32 bushels; of oats, $42\frac{1}{4}$ bushels; of peas $24\frac{3}{4}$ bushels; and of beans $23\frac{3}{4}$ bushels. The artificial grasses are clover, trefoil, ray-grass, and sainfoin. There is no breed of cattle peculiar to the County.

The mineralogy of this County is on a very limited Mineralogy scale. An excellent stone for building is quarried at Ketton, and the limestone found in many parts, both of a soft and hard species, deserves the attention of the naturalist. These stones contain a great number of marine substances, and are themselves to be met with in various degrees of tenacity, from that of mere indurated clay, or hardened sea ooze, to the consistence of stone. The red, ochry tint, common to the soil of the Southern parts, evidently arises from the presence of ferruginous matter; a fact proved by the number of chalybeate springs throughout the County.

The inhabitants of Rutland formed part of that nation or people, termed by the Romans *Coritani*, and on the subjugation of this district, during the reign of the Emperor Claudius, Rutland was included in their division of *Flavia Caesariensis*. During the Saxon Heptarchy, between 582 and 827, it formed part of the Kingdom of Mercia, under eighteen successive Monarchs; and, after the union of the separate Monarchies under one head, it seems to have been the property of the Crown. This County is supposed to have been an Earldom soon after the Conquest. Its antiquities are limited to the remains of a Roman station at Bridge Casterton, the name of which has been a fertile subject of dispute to antiquaries; and the great road, called "Ermine Street," appears to have run in this direction. Among the most interesting antiquarian relics of a later period, may be cited the Castle, Church, County-hall, and Hospital of Oakham; Tickencote, Essendine, Exton, and Ketton Churches; and some handsome monuments in the Churches of Ashwell, Drystoke, and Exton.

The climate of the County is considered to be mild, healthy, and pleasant. According to a register, kept by Samuel Barker, Esq., it appears that during the period from 1791 to 1798 inclusive, there were no preponderant winds in the County, and that the average of rain fallen was 24.61 inches per year; the greatest quantity being 29.40 and the smallest 21.40 inches.

There are no manufactures of any importance in the County, which is very justly attributed by Mr. Parkinson to the want of water and scarcity of fuel.

The population, according to the Returns of 1801, 1811, 1821, and 1831, was severally—16,356, 16,380, 18,487, and 19,400; giving the rate of increase in the two last censuses to be, respectively, 13 and 5 per cent. The annual value of the real property, as assessed April 1815, was £133,487. Rutland has no Boroughs; the only Market Towns are Oakham and Uppingham. It is divided into the four Hundreds of Alstoe, East, Mar-

RUT-
LAND.

tinsley, and Wrandike, and the *Soke* of Oakham, and returns two Knights to Parliament for the Shire, who are elected at Oakham. Rutlandshire lies partly in the Diocese of Peterborough, and partly in that of Lincoln, and is in the Province of Canterbury. It is included in the Midland Circuit: the Assizes and Quarter Sessions are held at Oakham, where is the County gaol; there are seven acting Magistrates. The rates raised in the County for the year ending March 25, 1827, amounted to £14,029 7s., the expenditure to £13,873 14s., of which £9479 18s. were applied to the poor.

The official Tables of the "Occupations of the People," formed on the Population Returns of 1831, furnish the following details as to the divisions of employment among the inhabitants of Rutlandshire:

Occupiers of land employing labourers . . .	429
Occupiers of land not employing labourers . . .	424
Labourers employed in agriculture	1910
Employed in manufacture	12
Employed in retail trade or handicraft	1373
Capitalists, bankers, &c.	150
Labourers not agricultural	269
Other males 20 years of age	224
Male servants	252
Female servants	879

The proportion of offenders to the population, calculated on the same census, was 1 in 775: the centesimal proportion of males 92, of females 8.

Oakham, the Capital of the County, lies in the *Soke* of the same name, in the luxuriant vale of Catmose. The only antiquity of which the town boasted, namely, the Castle, erected here soon after the Conquest by Walkelin de Ferrariis, a Norman baron, has been long demolished; but its ancient privilege is still retained, by which every Peer of the Realm, on his first passing through the place, forfeits a shoe from his carriage or riding horse. On refusal, it may be taken forcibly by the Bailiff of the Lordship, or the forfeit may be commuted for money. This singular custom probably refers to the armorial bearings of the family of Ferrars, which still display three horseshoes; and, among other shoes of curious workmanship and value, preserved in the Town-hall, may be mentioned those given by Queen Elizabeth, by the late Duke of York, and by the late King, when Prince Regent. *Oakham* is divided into two parishes, the Lord's Hold, and the Dean's Hold, belonging respectively to the Earl of Winchelsea and the Dean of Westminster; the former of whom holds Court-leets annually, and the latter triennially, for the election of parochial and other officers. The town is within the jurisdiction of the County Magistrates; and the County Assizes and Quarter Sessions are held in the present Castle, or Shire hall. The living is a Vicarage, with the perpetual Curacies of Barleythorpe, Brooke, Eagleton, and Laughton; it is rated in the King's books at £28 3s. 1½d.; patron, (1829,) Earl of Winchelsea. Its Church, dedicated to All Saints, is a handsome, spacious edifice, in the later style of English architecture. There is a well-endowed Free School here, enjoying exhibitions to Oxford and Cambridge, and to which some charities are annexed: there are likewise a National School and Almshouses. The only manufactory of any consequence is one, established a few years since, for the weaving of silk shag for hats. there is, however, considerable trade in coals and corn. The common gaol and house of

correction is a commodious building, and admits the classification of prisoners. Jeffrey Hudson, the dwarf, introduced in Sir Walter Scott's novel of *Peveril of the Peak*, was born here. Population of Lord's Hold 1364; of Dean's Hold 796. Distance from London 95 miles North North-West.

Uppingham, a Market Town and Parish in the Hundred of Martinsley, derives its name from its situation on a rising ground. It chiefly consists of one long street, with an open place in the centre, and is well paved. The standard of weights and measures for the County is kept here, in pursuance of the Statute of 11 Henry VII. The Grammar School was founded at the same time as that of Oakham, in the year 1584, and enjoys similar advantages: it boasts among its pupils Dr. Charles Manners Sutton, late Archbishop of Canterbury; Lord Manners, late Chancellor of Ireland; and Henry Ferne, D.D., Bishop of Chester. Its living is a Rectory, in the Archdeaconry of Northampton, and Diocese of Peterborough; it is rated in the King's books at £20 0s. 10d.; patron, Bishop of London. The Church, dedicated to St. Peter and St. Paul, is a large Gothic structure. The market, granted by Edward I., in 1280, to Peter de Montfort, is held on Wednesdays; and there are fairs here for horses, horned cattle, coarse linens, &c., twice a-year, on March 7 and July 7. Population 1630. Distance from Oakham six miles; from London 89 miles North North-West.

RUTTER, Fr. *reistre*, a German horseman, Cotgrave. Ger. *reiter*, *reuter*, *equitans*, *eques*, from *reiten*, to ride.

A rider; a horseman, a cavalier.

In the same season there was a cōpany of *rutters* gadered togyder in the wode of Respayle.

Lord Berners. *Froissart. Cronycle*, vol. ii. p. 1.

And with them there was a great *routter* of Byerne, the lorde of Launce playne. *Id. Ib.* ch. 119. p. 340.

Neither shall they be accōpanied wyth a garde of ruffelynge *rutters*. *Bale. The Image of both Churches*, part ii. p. 10.

But now we have in maner generallie given over that kind of artillerie, and certes, the Frenchmen and *rutters*, deriding our new archerie in respect of their corslets, will not let in open skirmish, if anie leisure serve, to turn up their tails, and crie, "Shoote Englishe!" and all because our strong shooting is decaied and laid in bed.

Sir Thomas More. *Utopia*, vol. ii. book ii. ch. x. p. 188.

If brauerie or honour can
make the an happie man,
Lettes by a cut throte *rutterkin*
whiche in beste mannor can
Recyte thy tytles, and thy names,
who also mucche reioyses
To craue, and iog those on the syde
that haue th' electinge voyces.

Drant. *Horace. Epistles*, p. 49.

SOPH. It should be but by'r lady
She holds him out at pikes' end, and defies him,
And now is fortifi'd, such a regiment of *rutters*
Never defied men braver.

Beaumont and Fletcher. *The Tamer Tamed*, act i. sc. 4.

RUTTER. See ROUT.

RUYSCHIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx five-leaved, accompanied by an involucre; corolla, petals five, reflexed; style none; stigmas four or five; berries usually five-celled, many-seeded.

Two species, natives of Martinique and Guiana.

—
RYE-
GATE.

RYANÆA, in *Botany*, a genus of the class *Monadelphia*, order *Monandria*, natural order *Flacourtiaceæ*.
Generic character: calyx five-leaved, coloured on the inside, persisting; a pitcher-shaped appendage between the stamens and pistil; fruit a berry.

One species, *R. speciosa*, native of Cayenne.

RYDER. When a Bill during its progress through the House of Commons has been engrossed on parchment, which is not done until after the House has agreed or disagreed to the Bill as reported by the Committee, it is still competent to any Member to propose amendments or alterations. If the alteration is to be made in one of the clauses of the Bill as engrossed, it is prepared on paper with a reference to the line of the engrossment where it is to be made. But if the alteration consist of the addition of an entirely new clause, this must be prepared on parchment, and, if agreed to by the House, it is tacked to the Bill and called a Ryder. Dwaris, *On Statutes*, 217; Blackstone, *Commentaries*, vol. i. p. 183.

RYE, A. S. *ryge*, *rige*; Ger. *rocken*; D. *rogge*; Sw. *roggh*. Skinner thinks from *hrige*; the ridge, *q. d. ridged* with prickles or spikes. Wachter thinks otherwise. See ROCKEN.

A quarter of whete was solde at London for xvis. and derer shuld haue been, had nat ben the proucyon of marchauntes that brought rye and rye floure out of Spruce.

Fabyan. *Chronicle*, p. 570.

That which is called secale and farrago in Latine, (*i. e. rie*), needeth no more adoe but be harrowed and the clods well broken.

Holland. *Plinie*, book xviii. ch. xvi.

RYE, a Market Town in the County of Sussex, was annexed with Winchelsea to the Cinque Ports, subordinate to the Port of Hastings before the reign of Henry III. One of the towers (Ypres Castle) erected in its fortifications by Edward III. still remains, and is used as the town gaol. Of the walls some ruins may still be traced, and the Northern or Land Gate is yet standing. The town is situated on a cliff at the West side of the mouth of the river Rother. The Church is large and built of stone, but presents nothing remarkable in its architecture. Most of the population are Dissenters. The Market-house and Town-hall are the chief buildings of this ancient Borough, which has returned two Members to Parliament since the reign of Edward III., till the Reform Bill in 1832 reduced the number to one. Rye afforded an asylum to a colony of French refugees after the revocation of the Edict of Nantz, whose descendants are chiefly fishermen. Distance 63 miles South-East from London. Population, in 1831, 3715. Chief trade in hops, wool, timber, cannon, and iron goods. Herring and mackerel fishery. Great improvements, chiefly under the direction of the Reverend Dr. Pope, a neighbouring Clergyman, have been made of late years in the harbour, which had been nearly destroyed by irruptions of the sea. The cliffs near Eastbourne supply an inexhaustible quantity of chalk, which is continually exported from Rye to be burned into lime.

RYEGATE, or REIGATE, a Borough, Market Town, and Parish in the County of Surrey, is situated in the agreeable but chalky valley of Holmsdale, on one of the branches of the river Mole, and the sand rock upon which it stands is supposed to be the finest in the Kingdom. The town consists principally of two streets, and contains a handsome modern mansion called the Priory, built on the foundation of an ancient Friary, the

property of Lord Somers. The Church is dedicated to St. Mary Magdalen; and over the Market-house, which was formerly a Chapel of St. Thomas à Becket, is an apartment used as a Town-hall. The Castle of Reigate stood on the North of the town behind the principal street, and, until its demolition during the Civil Wars, appears to have been of great military importance. The Borough has sent two Members to Parliament from the reign of Edward I., till the Reform Bill of 1832 reduced the number to one. Fuller's earth and medicinal springs are abundant in the neighbourhood. Population, in 1831, 3397. Distance from London 21 miles, Kingston 13, and Guildford 16. Reigate gives the title of Baron to the Earl of Peterborough.

RYTINA, from the Greek *ρυτίς*, a wrinkle, Illig. In *Zoology*, a genus of animals belonging to the family *Cetacea Herbivora*, order *Cetacea*, class *Mammalia*.

Generic character. Neither incisive, cuspid, nor any true molar teeth, but in the place of the latter a pair of bones with irregular surfaces, one in the palate and the other in the lower jaw, not implanted in sockets, but connected to the soft parts by papillæ; muzzle obtuse; no auricles; body covered with a rough, fibrous, and thick cuticle, of a lengthened form and tapering towards the tail; teats pectoral; fore limbs arm-shaped, terminating in a hoof-like callus, but without any toes; hind limbs, if any, not visible externally.

This remarkable genus, of which the only authentic account has been given by Steller, was confounded both by Gmelin and Shaw with the *Manatis*, from which, however, it is readily distinguished by not having true teeth, by the body not being at all hairy, and by the feet not having any toes, and also by its food consisting entirely of sea-weed, and its never coming to land to feed on grass. Illiger, therefore, properly formed it into a new genus, giving it a name which implies the wrinkled appearance of its skin. There is but one species known, *viz.*

R. Stelleri, Desmr.; *Trichechus Borealis*, Shaw. About twenty-three feet in length, and eight thousand pounds in weight. The body is covered with a very thick hide, the cuticle of which resembles the bark of the *Quercus Annua* rather than cuticle; it is black, rough, wrinkled, so hard and tough as scarcely to be cut with an axe, about an inch thick, and not hairy. When cut through transversely it resembles ebony both in colour and smoothness. The folds of this cuticle are circular from the nape to the tail, but on the sides it is very rough, and exhibits numerous cup-like cavities resembling mushrooms, especially about the head. It covers the whole body like a thick crust, and consists of simple tubes placed side by side, implanted vertically on the true skin by their roundish, convex bulbs, giving to the under surface, when a portion is torn off from the true skin, an appearance resembling Spanish leather, and which bulbs are received into corresponding cavities. Through these tubes a mucus exudes which largely imbues the head and sides, but is less copious on the back, so that when the animal has been ashore for a few hours the latter becomes quite dry although the former is still moist. The use of this thick covering is evidently not only to preserve the vital heat, but also to protect them against the blows they are exposed to when thrown about by the waves upon the rocks and among the ice whilst in search of food. When wet, the colour of the cuticle is a dusky black, resembling smoke-dried bacon, but when dry it is quite black;

RYE-
GATE.

RYTINA.

RYTINA. but sometimes it is varied with rather large spots and zones of white.

The head, when compared with the size of the body, is small, of an oblong square figure, and not well defined from the trunk; the summit flat, and the whole head from the occiput to the nostrils slanting down; from thence to the lips also slanting, and the extremity of the muzzle but eight inches thick. Gape not large in comparison with the size of the animal, but quite sufficient for feeding on sea-weed. The lips are double and cleft, the outer upper semicircular, flat, full, and thick, white, smooth, but studded with numerous little tubercles, from the centre of which spring up white transparent bristles from four to five inches long, and about as thick as pigeon's quills; the inner lip, which resembles a calf's tongue, is covered with villi, giving it the resemblance of a broom; it is very movable, and with it the animal tears up the sea-weed and conveys it into the mouth just as do Oxen. The external lower lip is black and smooth, free from bristles, and heart-shaped, as it is called. The bristles are thickest and strongest on the insides of the outer lips of both jaws, answering the purpose of teeth in plucking the weed and preventing the contents of the mouth falling out during mastication, whilst, by means of the lips, the submarine plants which the animal has torn from the rocks, and which are less fit for food than roots, are cut to pieces as completely as with a knife. Mastication is performed by two bones instead of teeth, one of which is placed in the palate and the other in the lower jaw; these are not attached by a bony connection, but are fixed upon numerous papillæ which are received into hollows on the surfaces by which they are connected, whilst the surfaces towards the mouth are hollowed by numerous tortuous and undulating cavities which break down the sea-weed as millstones grind corn. The nostrils are wide and patulous, and internally irregular, with numerous large wrinkles and many black pores; from each of the latter project bristles about half an inch long and as thick as sewing thread. They have no auricle, and the entrance of the auditory passage is so small that it is easily overlooked and mistaken for a pore; it is scarcely large enough to receive the stem of a Cock's quill. The eyes are placed exactly midway between the nostrils and ears, and are extremely small, not being bigger than a small egg; they have no eyelashes nor any other of the external appendages of the eye, but are seen through a small round aperture in the skin scarcely half an inch in diameter.

The junction of the head and neck with the body cannot be distinguished when the animal is at rest, but it has the power of moving the neck so that the head can be bowed down to feed, as is done by cattle. From the shoulders to the navel the body increases in bulk, but from thence to the tail it gradually tapers and terminates in a very hard black fin not divided into rays, but continuous, and for three-fourths of its length prickly, like the fins of some fishes. The fin itself is six feet and six inches wide, but only seven inches and three-quarters long, and an inch and a half thick; its end is crescent-shaped, and both horns are of equal length, in which respect it resembles the Whales, and like them is distinguished from the larger fishes, as Sharks and others. Illiger states that the hind limbs of this animal are enveloped in the fleshy tail: this, however, does not agree with the account given by Steller; he says that two bones are found connected with the spine

which correspond with the pelvic bones, but makes no mention even of rudimentary pieces of either of the other bones of the thigh, leg, or foot, which may therefore be presumed to be deficient. The fore limb, hand or leg, has no vestige of toes, but terminates with the carpus and metacarpus, which are largely covered with fat, tendons, and skin, so that they resemble a human stump after amputation. The skin, and especially the cuticle, is thicker, tougher, and drier at this part, and has a slight resemblance to a horse-hoof, but is thinner, sharper, and better suited for grubbing; its upper surface is smooth and convex, but the lower is flat, sometimes hollowed, and closely set with innumerable bristles about half an inch long resembling a brush. Steller mentions that he has seen this anomalous hoof occasionally cleft like an ox-hoof, but considers this to have arisen from accident rather than as being a natural formation. These arms are to the animal of great importance; with them it swims as with fins and moves along the watery shore, or supports itself and holds upon the slippery rocks; with them it digs and tears up the sea-weed and other marine plants upon which it feeds; with them it strikes and defends itself as a Horse does with its fore feet; and, when caught with the hook, with them it dashes off pieces of the cuticle for the purpose of unfixing the iron.

These animals are fond of shallow, sandy places upon the sea-shore, but, attracted by the sweetness of the water, they freely resort in herds to the mouths of rivulets, always keeping the young and weakly in the centre of the flock, and, as the tide rises, come so close to the shore that they may be touched even with the hand. If touched, they immediately swim off to a greater distance, but, soon forgetting the injury offered, again come to the bank. Most commonly several families, consisting of the male and female with their cubs, live together; they are probably monogamous, and bring forth in Autumn. They are very voracious, and feed with the head under water, only raising their snouts every four or five minutes to breathe, and, in expiring, throw out the air and a little water with a noise similar to that of a Horse snorting. They move along whilst feeding very like Oxen, trailing one leg slowly after the other, partly walking, partly swimming, and have then the back and sides always above the surface. They do not feed indiscriminately on the sea-weed, but principally on *Fucus crispus*, *edulis*, and *saccharinus*; and wherever they have resorted for a day or two large roots and stems of marine plants are found thrown up by the waves upon the beach. Having thoroughly gorged themselves, they sometimes recline on their backs, and being left by the ebbing tide, which does not, however, leave them quite out of water, they are often suffocated by the loose ice which is thrown ashore.

They are caught with a large iron hook, one end of which resembles the fluke of an anchor, and at the other is a ring through which a long stout rope is attached. The fisher, standing in the bow of a boat, is gently rowed by four or five others to the herd, and, having approached as near as convenient, strikes the hook into the animal, immediately on which thirty persons, who are on shore, haul at the rope, whilst the boatmen attaching another rope, the animal is, after repeated efforts, drawn to land, and despatched with knives and other weapons. Large and full-grown animals are much more easily taken than cubs, because the motions of the latter are much more active, and also because the

RYTINA. hook often tears out in consequence of the skin being less tough. But if the animal hooked is more violent than usual, those of his fellows who are near endeavour to assist the captive either by upsetting the boat, lying upon and breaking the line, or detaching the hook from its hold by blows with their tails, in which they not unfrequently succeed. Their conjugal attachment is so great that, if the female be hooked, her mate will, after having made fruitless efforts for her release, and in spite of the blows inflicted on him by the fishers, dash on shore to her, though dead, with the swiftness of an arrow. And Steller mentions that he saw a male visit his dead mate not only on the second day when she was cut in pieces, but also on the third. They utter no cry, but breathe loudly and sigh when wounded.

Occasionally, these animals are thrown by storms dead on the promontory of Kronozkoi and in the Gulf of Awatscha, and are called by the Kamtschatkans, *Kapustnik*, on account of their food. Their skins are used by the Americans for soles to their shoes; and the Tschutkians convert it into boats, spreading it out to dry in form upon sticks. The fat covering the body scarcely equals nine inches in thickness; it is firm and white, and when exposed to the sun becomes yellow like butter; it is not at all like the fat of other marine animals, and is far preferable to that of quadrupeds, as in the greatest heat it does not turn rancid: when boiled, it has a pleasant flavour, resembling that of oil of almonds, and may be used for all purposes like butter. The fleshy fibre is firmer and coarser than ox flesh, and is redder than that of land animals, and it has the curious property of preserving its sweetness in the hottest weather, although exposed to the open air and surrounded with worms: which Steller accounts for by the sea-weed on which the animal feeds containing so little sulphur and so much muriate and nitrate of soda, that no evaporation of the sulphur occurs, and the softening and putridity of the flesh is therefore prevented, just as when meat is salted.

See Steller, *Novi Commentarii Petropolitani*, tom. xi.; Illiger, *Prodromus Mammalium*.

RYZÆNA, from the Greek *ρυζειν*, to snarl like a dog, Illig.; *Suricate*. In Zoology, a genus of animals

belonging to the family *Carnivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth six in each jaw, cuspid long and sharp-pointed; molar six on a side in either jaw; in the *upper* the anterior three, false molars, the fourth a large carnivorous molar with an internal stud, and followed by two small tubercular teeth; in the *lower* four false, one carnivorous, and one tubercular molar; muzzle pointed; the snout obtuse, but lengthy and movable; ears small and rounded; body covered with long fur; tail long; feet four-toed, armed with strong, curved claws, their soles hairy.

This genus was separated by Illiger from the *Viverræ*, among which it was included by Gmelin, on account of its having only four instead of five toes: it also stands higher on the legs.

R. Capensis, Illig.; *le Suricate*, Buff.; *Four-toed Weasel*, Pen.; *Cape Suricate*. Nearly four feet in length, two-thirds of which belong to the tail. Its general appearance and the nature of its fur resembles that of the *Ichneumons*. The nose, ocular circlets, and ears black; sides of the head and muzzle, and under part of the lower jaw whitish; forehead brown; all the upper and outer parts white, brown, yellowish, and black mingled, in consequence of the different markings of the hair, which is of two kinds, the longer being marked with black, brown, and white, the latter woolly and of a yellowish colour; insides of the limbs yellowish, as is also the tail, the upper surface of which is clouded with black, and its extremity tipped with the same. It is found at the Cape of Good Hope, where it is called the *Meer-rat*, and from its making a rattling noise with its tail when pleased *Klapper-maus*. Clapperton mentions that it is also met with on the banks of the rivers in the neighbourhood of the Lake Tschad. It is found also at Java; its native name is *Jupe*, but the Dutch call it *Suricatje*. It is constantly in motion in search of mice and cockroaches, and makes a grunting noise. When at rest, it sits upright with its fore legs dropping on the chest, and moving its head freely about as in the act of listening.

See Illiger, *Prodromus Mammalium*; Pennant, *History of Quadrupeds*.

RYZÆ-
NA.

S.

S.

S (says Ben Jonson) is a most easy and gentle letter, and softly hisseth against the teeth in prolotion. It is called the serpent's letter. It varieth the powers much in our pronunciation. It sometimes inclineth to *z*, as in *muse*, *wise*. So after the liquids, as *bells*, *gems*, *wens*, *burs*. Where the vowel sets hard, it is commonly doubled. Bishop Wilkins observes, that it is framed by

an appulse of the tongue towards the upper teeth or gums, and then forcing out the breath from betwixt the tongue and the upper teeth. The disability of pronouncing this letter is called *lisp*, when it is corruptly sounded *th*. It is of the same affinity with *z*, as *p* with *b*, *t* with *d*, *e* with *g*.

S A B Æ A N S.

SA-BÆANS. SABÆANS, SABIANS, MENDAITES, or Christians of St. John, are names commonly, though very erroneously, used as convertible terms, inasmuch as the persons to whom they are applicable had, strictly speaking, nothing in common either with respect to age, nation, or religion.

1. Sabæans. 1. The Sabæans were the people of Sabæa, or Saba, (שבא) still called Sabá by the Arabs, and named from Abdu-sh Shems, or Sabá ibn Yash-hab, the third or fifth in descent from Ishmael, according to the Arabian genealogists. (Eichhorn, *Mon.* p. 64.) Sabá, afterwards called Máreb, (Idrisí, p. 31. *Geogr. Nubia*, p. 26.) is the Mariaba of Strabo (xvi. p. 768.) and Pliny, (*Nat. Hist.* vi. 28.) and is supposed by Niebuhr to be situate in 15° 45' N. and 44° 58' E. The Province bearing the same name was, together with Hadramaut, (הצרמות, Hazarmaveth, *Gen.* x. 26.) among the most fertile in Arabia Felix, called Yemen by the Arabs; and near to its Capital, the metropolis of the Sabæans, was the lofty mound or dyke (called *al'arim*, i. e. the embankment) thrown across the narrow opening of a valley, which was thus converted into a vast reservoir, receiving the water of seventy torrents. The rupture of that barrier, about three centuries before the beginning of our Era, occasioned the ruin and dispersion of the Sabæans, (Sale, *Koran*, p. 10, 4to. edition,) eight Tribes of whom emigrated Northwards and formed the Principalities of Ghassán and Hírah, to the West of the Euphrates; and those of Diyár-Bekr, Modar, and Rabl'ah, between that river and the Tigris. (Idrisí, p. 229. *Geogr. Nub.* p. 199.) Hence arose the confusion in writers of different periods, respecting the position of the Sabæans; and the application of their name to the professors of the faith held by the ancient inhabitants of the Arabian Desert and Mesopotamia, who are called Sabians by the Arabs.

2. Sabians. 2. That these Sábíyah, or Sabians, mentioned in the *Korán*, and by many Arabian writers, (Pococke, *Spec. Hist. Arab.* p. 138. Prideaux, *Connect.* i. 177.) were distinguished by their creed, and not as a peculiar Tribe or people, and that they had no connection with the Sabæans, is proved also by the spelling of their name. Its first letter differs from that of Saba or Sheba, and it is said to be derived from Sábí,* son of Idrís or Enoch, the founder of their religion; the tenets of which, though unknown to the Greeks, have been clearly stated by several Arabic or Syriac writers; to the latter of whom, the language of the Sabians was vernacular, as it was certainly the Nabatæan† or Chaldaic, which differs very little from the Western Aramæan, or Syriac dialect. And many Works no doubt were extant in the time of the first Khalífs, which, like the Treatise on Agriculture (*Al Faláhat al-Nabatíyat*) translated by Ibn Wahshíyah, were written long anterior to the Christian Era. (*Nouv. Journ. Asiat.*

xv. 235.) Sábah, or Sábíyah, the religion, and Sábí-yún, its professors, are terms of great antiquity, denoting "a Faith," says Maimonides, (*More Neb.* iii. 23.) "which filled the earth;" and was derived immediately from the Patriarchs. In its most impure form, it constituted the earliest kind of idolatry prevalent in the world. In its purest form, it differed little from the religion of the Patriarchs. "The Sabians, or Syrians," says Ibn Shohnah, (D'Herbelot, *Bib. Or.* v. Sabi,) "are descended from the most ancient nation in the world, and speak, to this day, in their books at least, the tongue spoken by Adam and his children. They received their religion and their law from Sheith (Seth) and Idrís, (Enoch,) whose books they still possess, full of precepts warning them to fly from sin and practise righteousness." "Their belief," says Abú-l Faraj, (*Hist. Dynas.* p. 184, 282.) (who was well acquainted with the writings of Thábit Ibn Korrah, a very learned Sabian,) "is the same as that of the ancient Kaldáni-yún: (Chaldæans:) when praying they turn to towards the North Pole; are diligent in cultivating the four cardinal virtues; pray thrice a-day,* at sunrise, noon, and sunset; observe three fasts, one of thirty days in A'dár; (March;) another of nine days in the first Kánún; (December;) and a third of seven in Shébat. (February.) They adore the stars; offer up many holocausts; abstain from eating beans and garlic; some eschewing even kidney-beans, cabbage, cale, and lentils. Their sayings come near to the sayings of the wise men; and their arguments for the unity of God are exceedingly strong. They believe that the souls of the wicked will, after suffering torture for nine thousand ages, be again received into the mercy of God." This may be considered as the Sabian creed in its purest state, such as was held by the most learned and enlightened among its professors; but admiration of the heavenly bodies, and vain notions of their influence on sublunary things, soon led the ignorant and superstitious to consider those luminaries as mediators and inferior deities to whom prayers ought to be addressed: a species of idolatry to which there is a manifest allusion in the book of *Job*, (xxxi. 26—28.) who appears to have dwelt in the immediate neighbourhood of the Sabians. They professed monotheism, and as such were tolerated by the Arabs. Mas'údí, in the Xth Century, speaks of a Sabian Temple at Harrán in Mesopotamia; (*Nouv. Journ. Asiat.* xv. 260.) and Al Shehristání, who died in the middle of the XIIth Century, describes two Sects of Sabians: 1. the *As-hábu-l hayákil*; and 2. the *As-hábu 'l ashkhás*; who both agreed in the doctrine that man cannot approach the Deity without a mediator, but believed that function to be performed by pure spirits invisible to mortals. Hence they supposed an inferior class of mediators to be necessary; such as might be the visible objects of man's supplications. These secondary mediators were believed to make the seven Planets their shrines or tabernacles. The Planets were therefore worshipped by the former, and their images by the latter. The

* Or from their worshipping "the Host of Heaven;" (צבא השמים, *sabá has-samáim*;) but the derivation from Sábí is more probable.

† That the language of the Nabats or Nabatæans was nearly approaching to pure Chaldaic, is clearly proved by M. Quatremère, in his learned dissertation on the origin and history of that people, (*Nouv. Journ. Asiat.* xv. p. 210.) where he gives a very copious list of Works in their language, (p. 227.)

* With a determinate number of genuflexions (*rik'ah*) and prostrations, (*sejadeh*), as is practised to this day by the orthodox Musulmáns, (D'Ohsson, *Tabl. de l'Empire Ottoman*, ii. 82, 139 pl. xiv.) who probably borrowed these ceremonies from the Sabians.

SA-BÆANS.

SA-
BÆANS.

heavenly orbs they imagined to be living bodies animated by these pure Intelligences, just as the human body receives life and intelligence from the soul. Hence they observed the positions, motions, and conjunctions of the Planets; and assigned to the guardianship of one or other of them every day, night, and hour; believing that each had his distinct region and office. These Intelligences they called "Lords and Gods;" but the True God alone "the Lord of Lords." By the aid of these visible mediators a constant intercourse, they imagined, was maintained between earth and heaven. Their influence also was supposed to be conveyed by mystic figures and seals, *i. e.* talismans* constructed according to astrological rules, and rendered efficacious by spells and charms. But such notions were too subtle and refined for the ruder and less cultivated classes; they therefore gave human forms to these celestial bodies, and addressed to such *Images*, their prayers for the mediation of their guardian spirits. The shrines or figures (σχήματα) which they constructed for the reception of these spiritual and intellectual essences were, 1. spherical figures, symbolical of the First Cause, Intellect, Providence, Necessity, and the Human Soul; 2. a hexagon, as the symbol of Saturn; 3. a triangle, for Jupiter; 4. an oblong quadrangle, for Mars; 5. a quadrangle, for the Sun; 6. a triangle inscribed in a quadrangle, for Venus; 7. a triangle circumscribed by an oblong quadrangle, for Mercury; and 8. an octangle, for the Moon. Other rites and tenets, some of them scarcely compatible with those above mentioned, are noticed by other Mohammedan writers; but those here described seem to be the best authenticated. The monotheism of the Sabians is moreover strongly corroborated by the manner in which Mohammed speaks of them in the Korán, (ii. 61. v. 78. xxii. 17.) where he clearly distinguishes them, as well as the Jews, Christians, and Magi, from Polytheists. This, as it was the earliest, seems to have been the latest form of idolatry which prevailed in the regions which gave it birth. The period at which it became extinct does not clearly appear; that it was still flourishing in the XIIth Century is evident from what has been already said; but Abú-l Faraj, who lived in the XIVth, seems to speak of it as no longer extant. (*Hist. Dynast.* p. 184.) The principal seats of the Sabian Faith were Harrán and Rohá, (Edessa,) in Syriac U'rhoi; "Ur of the Chaldees," (*Gen.* xi. 31.)

3. Man-
daïtes, or
Christians
of St. John.

3. As the Musulmáns and Eastern Christians have often applied the term Sábiyah to the professors of any religion except that of the Jews, Christians, or Magians, it is not surprising that the Sect of the Mandaïtes or Christians of St. John should have been so called. But Abraham Ecchellensis, (*Eutyech. Vindic.* p. 327.) the first writer who appears to have given the name of Sabians to the Mandaïtes, was evidently misled by incautiously supposing that what was said of the former, was applicable to the latter; and to his error may be traced that of all the subsequent writers who have confounded the two creeds together. It is also, by a similar error that the Mandaïtes have been called "the Christians of St. John," for they hold Christianity in abhorrence. Compared with the Sabians their creed is of modern

date, and the professors of it are found principally, if not solely, near the mouths of the Euphrates, and on the confines of Persia, near Baghdád and Basrah. Father Philip a Sanctâ Trinitate, the first writer who mentions them, (*Itinerarium*, p. 272.) says, "They call themselves Mendaï, but are named by the Arabs Sobbi; (Sábí;) and Father Ignatius a Jesu, author of a Tract entitled *Narratio originis Rituum et Errorum Christianorum Sancti Joannis*, printed at Rome in 1652, observes, that (p. 12.) "by themselves" they are called Mendaï, and sometimes Mendaï Yahyá, (*i. e.* disciples of John,) but by the Arabs and Persians Sabbi. (Sábí.) The name of John their founder, together with their practice of baptism, led the latter author to suppose that they were disciples of St. John the Baptist; and Abraham Ecchellensis, (*Eutyech. Vindic.* p. 327, *et seq.*) in consequence of their being called Sabians by the Arabs, because they are not idolaters, though neither Jews, Christians, nor Magians, applied to them what the Arabs have said concerning the ancient Sabians; so that writers of great learning, such as Joseph Simon Assemani and others, have fallen into great errors* respecting the name, origin, and doctrines of these visionaries, considered by some as heretical Christians, but believed by others to be Jews. As many, however, if not all of their sacred books have been brought into Europe, an examination of them will give some view of their doctrines, and may lead to some probable inferences as to their antiquity and origin: but to affirm any thing positively on the subject is scarcely possible; for not only are their Sheikhs or superiors too ignorant and jealous to be willing or able to explain their own doctrines, but the style of their Scriptures is extremely obscure and mysterious; the language in which they are written presents almost insuperable difficulties. *Il faut avoir essayé soi-même*, says M. de Sacy, a very competent judge, (*Jour. des Sav.* 1819, p. 659.) *de traduire les livres des Mandaïtes, pour se faire une idée des difficultés... réunies souvent dans un seul mot. Ces difficultés cependant... sont peu de chose encore comparées à celles qui ont leur source dans les choses mêmes dont traite la plus grande partie de ces livres. C'est un sujet extrêmement obscur, qui se compose tout entier d'idées fantastiques, de rêves d'une imagination en délire, d'actes et de raisonnemens attribués à une infinité d'êtres d'une nature étrange, et qui n'ont aucune réalité; des détails de la plus absurde cosmogonie; de l'histoire enfin d'un monde imaginaire, peuplé par des milliers de génies, dont les noms mêmes sont autant d'énigmes, presque toujours insolubles. Pour tout dire en un mot, c'est un sujet sur lequel le raisonnement et le bon sens n'ont aucune prise.*

This difficulty will, however, appear scarcely credible when the reader is told that the *Codex Nasaræus*, or Book of Adam, comprehending a large part of the Mendaïte Scriptures, was published in 1816, with a Latin version by M. Norberg, Professor of Oriental Languages in the University of Lund: but the inaccuracy of his version, and his arbitrary alterations of the text, destroy the authority of his Work, and render it almost useless, except to such as have the means of comparing it with

SA-
BÆANS.

* The word talisman is a corruption of the Arabic plural *tilsemán*; the singular *tilsem* being a corruption of the Greek word *τίλισμα*, a thing perfected by sacred mysteries; and thence a magical figure constructed under a certain horoscope.

* One of the most unfounded of these errors is that of Professor Norberg, who, misled by a Maronite priest named Germane Conti, asserts that they call themselves Galilæans, and are called by others Nazaræans. Hence he gave to their Scriptures the title of *Codex Nasaræus*

SA-
BÆANS.

the MSS. which it professes to copy, and have patience to seek for a solution of the enigmas which the original continually presents. Happily for those who take an interest in the history of religious opinions, this has been in a great measure effected by one of the few men capable of engaging in such a task. The Baron Sylvestre de Sacy, whose deep learning and intimate acquaintance with all the Semitic languages peculiarly qualified him for the undertaking, has not only pointed the sources of Professor Norberg's errors, but has compared a great part of his text with the original MSS. which are preserved in the *Bibliothèque du Roi*, and has thence collected a summary of the Mendaïte doctrine, of which an abstract will be given in the sequel.

The unwillingness of these visionaries to disclose the mysteries of their Faith is such, that it is yet doubtful whether we know even the names of all their sacred books. Those hitherto ascertained are, 1. The *Book of Adam*; 2. The *Book of Yahyá*, or John the Baptist; and 3. The *Kholasteh*, or Ritual. (*Journ. des Sav.* 1819, p. 647.) Of these, the first is the only one hitherto published, or as it should seem, examined with any care. The character and language in which these Scriptures are written, are peculiar to the people who consider them as sacred. The Mendaïte character is apparently derived from the Syriac or Western Aramæan, to which it bears a close resemblance; (Kæmpfer, p. 440. Hyde, *Rel. Vet. Pers.* pl. viii. p. 521.) but it has this peculiarity, that all the vowels, short as well as long, are expressed by the corresponding quiescent consonants A, Y, or W: so that instead of five vowels, as in Syriac, the Mendaïtes have only three. The gutturals are also confounded with each other, *há*, *khéth*, and *'ain* being used promiscuously, and frequently omitted. Final vowels are often suppressed; contractions very common; while inversions, and the permutation of consonants belonging to the same organ, continually occur: and every one of these defects may sometimes be found in the same word. The language itself is a dialect of the Chaldæan or Syriac, containing many words foreign to either of them, and many common to both, used in a sense peculiar to itself; but it has much that agrees only with the Chaldaic or Eastern Aramæan: the writings of the Talmudists, therefore, are almost always the best interpreters of the Mendaïte Scriptures. (De Sacy, *Journ. des Sav.* 1819, p. 651.) A Chaldæan rather than a Syrian origin seems to be indicated by these peculiarities; and Mosheim was, perhaps, right in conjecturing that these religionists may have sprung from the Jewish Sect of the Hemerobaptists. (*De Rebus Christ.* p. 44.) But a review of the contents of the *Book of Adam* will furnish a more solid foundation for speculations as to the origin of this Faith.

The *Sidra l-Adam* (i. e. Book of Adam) (of which one copy in the *Bibliothèque du Roi* was transcribed A. D. 1560) is divided into two parts, of which the first is much the longest. Of the second, Professor Norberg has very unaccountably printed only a portion, (*Cod. Nas.* iii. 124—315.) while in the MSS. which he used it is complete. (*Journ. des Sav.* 1819, p. 649, 656.) The first part contains forty-one separate Tracts of different lengths: the second also consists of many detached Tracts, but seems to be more liturgical, and throws less light on the religious opinions of the Mendaïtes than the first. (*Id.* p. 656.) Most of the Tracts begin with this formula, "In the name of the great primæval, wonderful, excellent Life, above all the worlds (Æons)

of light, and above all works," (i. e. created things.) These worlds (*'alemayá*, like the *'ólamim* in Hebrew, and *aiōνες* in Greek) are evidently the Æons of the Gnostics (Mosheim, *De Rebus Christ.* p. 29.) and the ancient philosophers of the East. In the same manner, the Book of Adam declares that there are two eternal and independent Principles, one called *Fira*,* (in Chaldee *Firá*), the other *Ayar*, (the Greek *ἀἴρ*, *oyar* in Syriac, *auér* in Chaldee,) signifying "space" as well as "air" in the writings of the Talmudists; and answering to the *πλήρωμα* (fulness) of the Gnostics; the *Fira*, therefore, is the *βυθός* or Abyss of the Oriental Philosophy. *Fira* gave birth first to *Mana*, (Ma'ná, "spirit," "intellect," in Arabic,) the Lord of Glory and King of Light, and then to *Yúrá*, the Lord of Light and Brightness. *Mana* produced other *Manas*, and afterwards *Fira* gave birth to millions of *Firas* and myriads of *Shekintas*, (the *Shekinah* or divine presence of the Hebrew, in Chaldee *Shekintá*.)

Each of these secondary *Firas* produced millions of *Tiras*, (probably the *tír* or *tiyyar*, i. e. "watchman," "spy" of the Rabbinical writers,) and innumerable myriads of *Shekintas*. All these beings stand up and praise *Mana*, Lord of Glory, who inhabits *Ayar*, the Lord of Life, who is in Jordan, the white water produced by *Mana*. From Jordan sprang *Life*, by the operation of *Mana*. At the prayer of *Life* *Mana* enabled her to give birth to an *'Utra*, (Wealth,) which sustains her, and is called the *Second Life*. This *'Utra*, dwelling in the Land of Light watered by the first Jordan, called into existence *'Utras*, *Shekintas*, and a second Jordan, which those new *'Utras* inhabited. Three of these latter *'Utras*, jealous of the power of the First Life, called upon the Second Life to give them some of her light and brightness, that they might produce new *Shekintas* and a new world, where they might dwell, and the First Life to be buried in oblivion. The First Life, alarmed at this rebellious project, offered up prayers to the Great *Mana*, who called up a powerful Genius named *Hibil ziva* (the brilliant Abel) and *Manda di Haï*, (the knowledge or gnosis of life,) and asked what he thought of the deeds of these children of Light, who were about to cast themselves into *Súf*, (the Red Sea,) that great sea of darkness? She then declared him Father of the *'Utras*, and sent him down into this lower world, to prevent his children from bringing to pass their mad projects.

Manda di Haï is terrified at the sight of the dark abyss of *Súf*, whence Light is for ever banished. He therefore repairs to the First Light, who gives him an account of the origin of things, but refers him to the Great Ones, (i. e. the Æons,) who will explain to him the origin of darkness. He receives their instructions, and is commissioned to make them known to the faithful. The substance of what he then learns is, that Light and Darkness are entirely distinct principles, which can never be changed or mixed together. After this he goes into "the abode of Darkness, the habitation of the wicked, the place where all corrupters dwell, the space inhabited by dragons, the grate of the devouring flame, the grate of the furnace, the flames of which mount up even to the firmament." There he finds the *Buras*, (*bú'rá*, "torch," "flambeau," in Chaldee,) the rebellious inhabitants of Darkness, whose Chief, named *U'r*, (Fire,) the King of Darkness, together with *Tura*,

(mountain?) prepares, with the aid of the Turis and other rebel Genii, to combat him. Tura, the son of the Planet Venus, also named "*Namrus*" and "*the Holy Ghost*," had been inflamed with a hatred of Manda di Haï, by his mother's discourse; but the mere sight of the Envoy of Life discomfited his enemies. In vain did U'r swallow up the earth; he was forthwith vanquished by his celestial foe, and shut up in a seven-walled tower.

Manda di Haï now prays that Gabriel may be sent to create a new world. His prayer is heard: and it is revealed to him that, after the doctrines of the Seven Planets, the Twelve Signs of the Zodiac, and the Five Stars have prevailed in the world, each in its turn, a new Faith shall succeed them: a *beloved son* shall come, dry up the Abyss, form the world, enlighten it, and breathe into bodies the breath of life. Three 'Utras shall preserve this breath, and two others produce a Jordan in the newly created world, which shall possess every good thing. Manda di Haï then places Rab-ziva (the brilliant Lord) on the throne, and, leaving two 'Utras in charge of the mundane Jordan, returns to the abode of the First Life, and is rewarded with an accumulation of glory and honour.

Another world, in the mean time, is created by the 'Utras with the aid of the Second Life, which encourages the rebellious Genius called the Spirit (*i. e.* the Planet Venus) to entertain a hope of reconquering her dominions from Manda di Haï, by a new generation of creatures similar to herself. For that purpose she solicits an incestuous intercourse with her son U'r, chief of the rebels imprisoned in the Abyss. The fruits of their incest are, 1st, the Seven Planets; 2dly, the Twelve Signs of the Zodiac; and lastly, the Five Stars; but neither of these generations enables her to regain her dominions. While she is sinking in despair, Fetáhil, an inferior 'Utra, is clothed with fire by Life, and descending into the Abyss, dries it up, and, condensing the cloud of dust thus raised, forms the earth, and attempts to join it, by a wall, with the firmament. Just before his work is finished, the Planets, Signs, and Five Stars throw themselves into the arch of Heaven; deceived by the Spirit, he suffers them to remain there, and they soon take possession of the world which he had created. These rebels are called Nefeliyà, in allusion, no doubt, to the Hebrew Nefilím, (Giants, *Gen. vi. 4.*) Fetáhil then proposes to leave the empire of the Earth, and the Abyss, or Sea of Súf, to the Spirit (Venus) and her children, while the Heaven remains in the power of the Genii created by Life. Three hundred and sixty thousand years were to pass before the formation of Adam, and four hundred and eighty thousand after the creation of Adam and the lower world. The length of these years is determined by the *Spirit of Lying*. Fetáhil then comes down again into the lower world, and declares his intention of creating the *Beloved Son*, *i. e.* Adam. "Let us create Eve with Adam," said the Genii of the Seven Planets, "and then he will be ours!" But to Adam, when created, they could not give a soul; Fetáhil, therefore, obtained from Abá-Túr, the Father of 'Utras, and the Third Life, a luminous garment, borrowed from the Great Mana; he then returned to the earth, accompanied by three excellent 'Utras, Hebil, Shetil, and Anúsh, (Abel, Seth, and Enos,) who were appointed to guard the soul of Adam. But not being able to unite the soul with the body, Fetáhil was obliged to apply to Manda di Haï,

VOL. XXVII.

who set Adam on his legs, and breathed the breath of life into him. Adam instructed, as well as animated, by Manda di Haï, renounced the Genii who formed his body, and acknowledged Mana, now called Adakas Ziva, as the real author of his being, and thereby obtained the privilege of entering, after his life is ended, into the brilliant abode of Mana.

SA-
BÆANS.

The Evil Genii held a council on Mount Carmel in order to seduce Adam and Eve, who had been created by Manda di Haï and the good 'Utras as a helpmate for him. This, it may be observed, is in direct contradiction to what was stated above, but no inconsistency or absurdity is too great for the revelations of the Manda di Haï. Adam himself attended to the counsels of his spiritual guardians, but his son, Adam II., gave way to the seductions of the Evil Genii, and was near holding an illicit intercourse with "*the Spirit*," U'r's mother, who assumed the appearance of his wife and sister Eve II. Manda di Haï, however, appeared, and saved him from falling into the snare. That exalted Genius then assumed a corporeal form, visited the powers of Darkness, chained down the Spirit, chastised the Planets, and returned to Adam. The Planets, he said, ought not to be worshipped, for, after dividing the Zodiac among themselves, they brought death into the world; but the souls of the faithful will ascend into the abode of Light, while the Planets remain tied and bound till they are consumed. In this part of the *Sidra l-Adam* the destruction of different Sects is predicted. Each is said to be under the guidance of some Evil Genius; as the Jews, the followers of the Messiah, acknowledge A'donai (the Sun) as their chief; the Yazúkís (Magians) worship fire, the symbol of the Messiah, &c. Each of the Zodiacal Signs has a certain term of years assigned to him, and each has produced divers animals, &c., in order to injure the family of Life; (Mankind;) but by the vigilance of Manda di Haï they have all been rendered serviceable instead of being injurious. This Tract is terminated by some maxims and invocations.

Such are the contents of one of the longest and most curious portions of the Book of Adam; curious more, perhaps, as a monument of human folly and imposture, than in any other point of view; for to draw any satisfactory conclusions from such a tissue of absurdity, not to say indecency and profaneness, is quite hopeless. It shows, however, what these wretched visionaries are taught to believe as a revelation of divine things, and furnishes materials whence a probable conjecture may be formed as to the source whence this doctrine sprang, and the age in which it first appeared.

But it will be proper, before the examination of that question, to notice some other peculiarities which are found in the Book of Adam. 1. The abuse of Christ and his followers. Christ is called Nebú Meshíhá, *i. e.* Nebo, (Mercury,) the Messiah; his followers, it is said, will be clad in a baptismal garment, have a tonsure on their head, and wear a vesture like darkness. He will give life and speech to the dead by his enchantments; will baptize with unclean (or evaporating) water, in the name of the Father, Son, and Holy Ghost, and "abandon the living baptism with which Adam was baptized in Jordan of the living waters." John, son of Abá Sabá and Aníshebát, born in his parents' old age, will baptize in the Jordan forty-two years before Nebu (Mercury) assumes a body. Jesus the Messiah will be baptized by John, but will corrupt his doctrine. The

SA-
BÆANS.

Good Genius Anúsh will come and detect the imposture, acquainting the Jews that he is one of the Seven Planets, and will deliver him up to be crucified.

Manda di Haï, it is said, in another place, was baptized by John the Baptist in the Jordan. (*Cod. Nas. ii. 17.*) Various passages in the Old and New Testaments are imitated or paraphrased in these books, particularly *Psalm cxiv.* (*Cod. Nas. i. 321.*) The destruction of Jerusalem (formed by the incestuous intercourse of the Seven Planets with their mother the Spirit) is prophetically described; and "the sign thereof," it is added, "will be a *white eagle*, which shall rest upon that city." One of the Tracts in the second volume gives a list of the Sects which belong to each of the Planets; but no part of the Work is more difficult of interpretation than this. Many of these Sects are evidently Christian, but the names given to them are very enigmatic. The Zandíkí or Mardemóní, apparently Manichæans, are accused of a most horrible abomination, which has been laid to their charge by some ancient Christian writers. (Mosheim, *De Rebus ante Const.* p. 395.) The worship of images is forbidden. Marriage is highly extolled in these books, and celibacy reprobated. Every kind of meat is allowed. Extreme unction is ordained as indispensable for the progress of the soul to the abode of Light. (*Cod. Nas. ii. 281.*) The juice of the grape will be drunk in that brilliant realm. Daily prayer at sunrise, at the seventh hour, and at sunset; alms, preaching the doctrine of life, clothing the naked, assembling in the Temple at sunrise on the first day of the week, baptizing their children in Jordan on that day, signing them with the sign of life, hearing the true faith preached, and mutually instructing each other, are the duties enjoined. Food dressed by infidels, and the flesh of beasts sacrificed to the Planets, are strictly prohibited. The parent is answerable for his children's faults till they are fifteen years old. The faithful Mendaïtes will be saved, but the faithless will be cast into the deepest pit of the place of Darkness.

With respect to the antiquity of these documents we may observe, 1. that there is no certain evidence that any one of the Tracts contained in the Book of Adam is older than the rest: 2. on the contrary, an exact coincidence in respect to matter, style, and phraseology renders it almost certain that they are all of the same date, and composed by the same author: 3. not only are the Patriarchs, John the Baptist, Jesus Christ, and Mohammed mentioned in them, but likewise the conquest of Persia by the Arabs, and a succession of Arabian Kings of that Country for seventy-one years subsequent to that event, *i. e.* to the beginning of the VIIIth Century: 4. the speaker in these books is usually the Manda di Haï, (*i. e.* the Knowledge of Life, the Gnosis or Logos of the Gnostics,) a Genius of the highest order, called also Yavar, or Yúr, and having a vast number of appellations; (*Onomast. Cod. Nas. p. 62.*) there can be no doubt, therefore, that his words are given as received by inspiration, though it be not distinctly claimed in any part of the book. 5. In the second part, Mana, Intellect, (from the Arabic word *ma'ná*, the internal sense, in opposition to *súrat*, the outward form,) is generally the speaker, and is here an emanation from the Supreme Soul sent to animate the human body.

6. It is manifest that the Mendaïtes are neither Jews, Christians, Mohammedans, nor Sabians; they revile the Apostles of the three first as magicians and impostors, and violate the distinctive tenet of the last by severely condemning all reverence for the Planets: 7. the Mendaïtes are called in their books Nasurayí, a name of uncertain origin and interpretation; they also call Christians Khristiání, but themselves Mendaï, or Mendaï Yahyá, literally Gnostics, or, endowed with knowledge, or disciples of John. That this John was the Baptist appears probable from their reverence for baptism, and from the mention of him in their books; (*Journ. des Sav. 1819, p. 352, 647.*) but 8. the Mendaïtes themselves have a tradition that the John from whom they derive their doctrine died in Shuster, on or near the site of the ancient Susa. Their books, moreover, can hardly be older than the VIIIth Century; it is therefore more probable that the John from whom they are named, was some Hemerobaptist of that age, who pretended to have communications with Genii and Spirits, and engrafted on his former faith such portions of the Gnostic and Valentinian doctrines as accorded with the reveries of his own brain, and seemed likely to suit his purpose. It is not impossible that he may have once embraced the creed of the Gnostics or Valentinians, and, having been expelled from their body on account of some irregularity, may have determined to publish a new revelation, which, by incorporating the most attractive parts of all the systems known to him, might draw over to his party a large number of the ignorant and fanatical among the various hostile Sects then existing in Asia.

Now if this can be made out, I think there is as sure and effectual a foundation laid for the perpetual obligation to observe the *sabbath* as the strictest of the *sabbatarians* can desire.

Sharp. Works, vol. iv. p. 206. *Sermon* 12.

The famous *sabbatical* river for six days bears all before it with a mighty torrent, and carries stones of such incredible bigness that there is no passing over it; the admirable nature of that river is, that it keeps the *sabbath* and rests all that day.

Stillingsfleet. Works, vol. i. p. 329. *Sermon* 8.

Even many of their laws (for instance, the law of jealousy, those for the attendance of the Jews at their three great festivals, and for their resting in the *sabbatic* year) were so contrived, as to be demonstrative proofs of the immediate interposition of God in the affairs of that people.

Atterbury. Works, vol. i. *Sermon* 4.

But with his clumsy port the wretch has lost
His ignorance and harmless manners too.
To swear, to game, to drink; to show at home,
By lewdness, idleness, and *sabbath* breach,
The great proficiency he made abroad.

Cowper. Task, book iv.

Profanation of the Lord's day, vulgarly (but improperly) called *sabbath-breaking*, is a ninth offence against God and religion, punished by the municipal law of England.

Blackstone. Commentaries, vol. iv. book iv. ch. iv. p. 63.

SABBATH, שבת, σαββατον, *Sabbathum*, or *Sabbatum*, rest, ceasing from work.

Its first mention in Scripture occurs in the well-known application of the term Sabbath to the day (*Gen.* ii. 2, 3.) when God ceased from his work, after having appropriated six days to so many successive operations in producing "the heavens and the earth and all the host of them." He is said then to have rested (שבת) on the seventh day, and therefore to have blessed and sanctified it.

The plural שבתות, *my sabbaths*, (as in *Lev.* xix. 30.) is used to denote generally the days which had been sanctified and set apart to religious observances under the Law.

Zanchius, Spenser, Heylin, and others, are of opinion that all these are embraced under the *fourth commandment*; but this is contrary to the specific reasons alleged in the commandment, and wholly without Scripture foundation.

Sabbath (as in *Luke* xviii. 12. xxiv. 1. *John* xx. 19.) designates the whole week.

In *Heb.* iv. 9. it is applied, but figuratively, to describe the blessed rest of God's saints in heaven; the term used is σαββατισμος, a resting, keeping a Sabbath, a time of tranquillity, devotion, and communion with God.

The principal subject of this article is, however, the Sabbath or seventh day, which God sanctified as a day commemorative of his ceasing from the work of creation.

There are several questions which have been formerly raised, and discussed with much learning and ingenuity, relative to this ordinance; and, recently, the subject has again been brought prominently forward. In a Work of this nature, it is desirable not to assume the character of a partisan in such controversies, though every writer is probably insensibly swayed more or less by the bias of his own opinions. So far as this bias can be overcome, and the circumscribed limits of an article for an Encyclopædia will allow, an impartial and general statement of the principal points of controversy relative to the Sabbath will be attempted. And, as all cannot be embraced, the selection will be directed to such points as are at once important, and yet do not lie in the beaten track of similar publications. To facilitate this object, the questions connected with the Sabbath may be distributed under the three following periods.

PERIOD I. From the first *distinct* mention of the Sabbath after the account of the creation, to the next *distinct* mention of it in the sixteenth chapter of *Exodus*, when the Manna was sent to enable the Israelites to rest on that day.

PERIOD II. From the sending of the Manna to the death of Christ.

SAB-
BATH.

PERIOD III. From the death of Christ to the present time.

To each of these periods there are questions belonging; and in order to prevent repetition and to save space, each argument will be numbered, and a corresponding number affixed to the reply.

Period I. From the creation to the sending the Manna, *Exodus xvi.*

The chief questions connected with this period are, whether the Sabbath was instituted immediately after the creation?

Whether it was observed by the Patriarchs or their descendants before the sending of the Manna?

The arguments respecting these (though distinct) questions are so blended together that it may be convenient not to separate them.

Those who maintain the negative may argue thus:

1. The phrase *bless* or *sanctify* (*Gen. ii. 3.*) the seventh day would not necessarily imply the setting apart that day for *devotional* purposes; but that meaning is justly attributed to it, as interpreted through the medium of the Law, and the sense in which Moses must have known that his countrymen would understand it. Therefore the same rule which leads to the conclusion that these words imply an institution of it for religious purposes, would also justify the conclusion that it must have been ordained to be observed with all the rigour of the Jewish Law. But there is evidence that it was not so observed. A miracle was necessary to enable them to observe it in the Wilderness. In Egypt their task-masters would not permit them; and there is no trace of any such rest among the Patriarchs.

2. Admitting this phrase to denote simply a *general* separation of the day for devotional purposes, and not the niceties of the legal Sabbath, the passage itself is to be taken *proleptically*, or by anticipation, as though Moses did not mean to describe the order of time at which the Sabbath was instituted, but merely, in relating the history of the creation, to state (*obiter*) that the completion of creation formed the subject of commemoration of that day of rest, which was not, in fact, separated and sanctified till after their departure from Egypt. Archbishop Whately illustrates this: "Just as any writer now who should notice in a summary of Gospel history the Annunciation to the Virgin Mary, might naturally remark, that this is the event which Christians annually celebrate under the title of our Lady's day, without meaning to imply that it was instituted at this or that period."

3. Up to the time of sending the Manna, a period of between two and three thousand years, there is no mention of the Sabbath having been observed.

4. Its *first institution* is expressly recorded, (*Exodus xvi.*) and a miracle was wrought to enable the people to observe it.

5. In common with all the legal ordinances, it was instituted for purposes, principally, if not solely, relating to the *peculiar* circumstances and polity of the Jews, and it was not known before the Exodus, nor intended to be of force after the consummation of the Law in Christ.

6. In *Nehemiah ix. 12.* God is said, at his coming down from Sinai, to have *made known* the Sabbath; and in *Ezekiel xx. 10—12.* to have *given* it; therefore men could not previously have observed that which was only then *made known and given*.

7. Of the early Christian writers, many contend

that the Patriarchs did not observe the Sabbath; and even Philo admits that his countrymen had lost sight of it in Egypt.

To these arguments it may be replied:

1. The phrase "sanctify," &c. may indeed be reasonably interpreted in the sense in which the historian would naturally expect it to be understood by those for whom his history was written. They would understand *generally*, that it was to be observed as a day set apart for rest and devotion; but it would by no means thence follow, that it was to be understood as originally instituted with *all the particulars* of the legal ceremonial; for they themselves had been long accustomed to a different observance of it. The *general* purport and principle of its institution might be understood in the phrase, without necessarily comprehending all the particulars of their ecclesiastical regulations.

2. There is nothing in *Gen. ii. 2, 3.* to warrant the presumption that Moses spoke *proleptically*. The mention of the sanctification of the seventh day naturally succeeds the account of the creation, and harmonizes with the course of the history. First, creation and provision for man's bodily functions; then, the crown of all, provision for his spiritual functions and the exercise of communion with his Creator.

3. The *no mention* of the observance of it was not extraordinary in the rapid sketch given of so large a portion of the history of mankind, but is rather evidence of its notoriety. For the sacred historian could hardly have overlooked the *reasonable* surprise that his countrymen would have felt at an omission so at variance not only with the strictness of their own Church, but with all notions of the relation between God and man. For the same premises, if they proved the non-observance of the Sabbath, would prove also that *no day whatsoever* had been appropriated to the public and social worship of God from the creation. This would be a state of things scarcely compatible with the existence of any religion. If the contrary to this were not universally understood, surely Moses would have felt it necessary to have offered some explanation. But if the Sabbath had been, in any form, *always* known to the Jews, and was *not* an entirely new ordinance, he would in that case not specially notice it, unless some transaction of his history happened to be essentially connected with some particular observance of it. *Incidental allusions* to its observance would be the utmost we should expect, and these, if occurring, would be the best evidences that its observance had neither been questioned nor *doubted*. Such allusions, it is contended, do occur, as *Gen. iv. 3. Job i. 6. comp. Gen. vi. 2. In Gen. viii. also, v. 8—12.* Noah evidently observes the period of weeks, if he did not actually, as some think, send out the dove on the Sabbath days, as a propitious day. It is maintained by some that the Egyptians themselves observed the seventh day, and would therefore, from their own superstitions, be induced to permit the observance by the Israelites.

4. There is no new institution, nor any thing like it, in *Exodus xvi.* The allusions to the Sabbath arise out of the question put to Moses by the rulers, relative to the people's having on the sixth day gathered a double quantity of Manna contrary to the direction which they had before received, to gather only enough for the day's consumption. Moses tells them that a double portion was sent them, to enable them to observe the Sabbath with complete rest, which they could not do in their

SAB-
BATH.

SAB-
BATH.

migratory state without a miracle; that *therefore* the people *had not done wrong*. He is not instructing them in the nature or intent of the Sabbath, which they already knew, but that because the next day would be the Sabbath, *therefore* they might *gather the food of two days*. The mode in which he here speaks for the first time of the keeping the Sabbath, is a direct confirmation of the argument respecting the *no mention* of it being accounted for by the *notoriety* of its observance. He speaks of it as an ordinance *not new*, but perfectly *familiar* to them. He gives no explanation of what is *meant* by the Sabbath, but simply says, "*to-morrow is the rest of holy Sabbath.*"

5. Though the ordinances of the law had respect to the peculiar circumstances of the Jewish people, yet this was not always the *sole* intent of them. Some of them might be connected also with other dispensations. This, however, will be more fully touched upon in the questions respecting the Sabbath under the Jewish dispensation.

6. The passage in *Nehemiah ix. 12.*, from its connection with the descent upon Mount Sinai, refers to the *solemn proclamation* of the Sabbath to the Jewish nation, not to the first institution of it; for it was unquestionably *made known* to them before—at the giving of the Manna. Though it is urged, that *Nehemiah* in this passage had not in view the order of events, yet there is no ground to disconnect the declaration of the Sabbath from that event, with which the ordinary sense of the passage would join it. If there were, it could not be used as argument for *fixing any time*. The passage in *Ezekiel xx. 12.* declares not the *time* at which, but *one of the purposes* for which, the Sabbath was *given*; that it should be to that people a sign, or, in other words, they should, in keeping it, remember, that God only was their Maker and Lord. The term "*give*," in this sense, does not relate to the original institution, but to this one *purpose*, for which it was urged upon this people; and the Prophet's use of the fact is to set forth, *not the institution* of the Sabbath, but *how* the Jews had *perverted* it, and *disregarded the purpose* for which it was intended.

7. The opinions of the early Christian writers, however their reasonings might be entitled to consideration, are not authorities *on this point*. It may be questioned also whether, in the passages cited by Spenser, Heylin, and Selden, the fathers meant to deny the observance of a seventh day by the Patriarchs, or only their observance, according to Jewish forms, of the *Jewish Sabbath*, (Saturday,) and the solemn days of the Law generally. Their object is to controvert the obligation of the Law properly so called, and oppose the obstinacy with which the Jews and Judaizing Christians contended for its necessity. The use of the doubtful terms, *Sabbata*, plural, and *Sabbatizo*, which had its *controversial* as well as its ordinary sense, and the general combination of these phrases with *circumcision*, offer strong grounds for this question. (Compare also *Irenæus, Adv. Hær. lib. iv. cap. xxx. with cap. xxxi.*) But this is merely thrown out as a *query*, their opinion being, as above stated, no authority on the point discussed.

With respect to the Israelites having lost sight of the institution in Egypt, this may or may not have been the case; but it may be contended, with at least equal probability, that it was observed as well as circumstances permitted, though not as a day of entire rest. Those who maintain that the Sabbath was instituted at the

SAB-
BATH.

creation need not contend for the uninterrupted observance of one particular day, *viz.* every seventh day from the finishing of the creation, but simply that one day in seven was generally observed with whatever accidental interruption, or variation of the mode of its observance, till the giving of the Law.

Period II. From the sending of the Manna to the death of Christ.

The principal questions proposed for consideration under this head will relate to the *fourth commandment*; whether its obligations were meant to be confined to the Jewish nation and to the duration of the law; or were coeval with creation, and to be extended to all worshippers of the Creator of the universe to the end of time.

By those who maintain the former opinions, the following are some of the chief arguments.

1. The whole of the Decalogue, and more particularly the fourth commandment, was given with a special, if not sole, view to the peculiar circumstances of the Jewish nation. The Sabbath, Spenser observes, was a kind of compendium of the history of the creation, which could not be present to the mind of the Jews without putting out all thoughts of idolatrous worship. No sane person could commemorate the work of the universal Creator and at the same time worship the creature. Some also question whether any public religious observances were appointed for this day, or any other observance than mere *rest*.

2. The whole Law, moral and ceremonial, was abrogated by the Christian dispensation.

3. If it be contended that the moral laws were not annulled, being of universal obligation, the fourth commandment is a *positive*, not a moral precept; the duty of resting on the seventh day not being based upon any moral fitness, but solely on the command; it being antecedently to a divine command, wholly indifferent, or at least not determinable by any known principle of moral fitness, whether one day in seven, or one in ten, or any other proportion, were separated for the purpose.

4. The seventh, not a seventh day is named and intended in the commandment; and even admitting the primeval institution of the Sabbath, (*Gen. ii.*) it was the *last*, and not any other day of the week that was appointed by God, and therefore it must be the *last* day of the week, (Saturday,) if any, which must be binding upon us now.

5. If the obligation of any part of the Law in this matter be recognised, we are, as St. Paul argues, "debtors to keep the whole," such as not kindling a fire, (*Exodus xxxv. 3.*) &c.; and if the Patriarchal precept to keep the Sabbath be urged, why are we not equally obliged to obey all other precepts antecedent to the Law, such as abstaining from blood? *Gen. ix. 4.*

6. Christ himself lays down this distinction between the fourth commandment and the rest of the Decalogue when he says, "The Sabbath was made for man, and not man for the Sabbath, and therefore the Son of Man is Lord also of the Sabbath." (*Mark ii. 26, 27.*) For the moral commandments are of intrinsic and eternal obligation, and not made for man. Jesus, therefore, by this distinction, directly lays claim to a power of dispensing with the Sabbath altogether as a positive ordinance.

To these it may be replied:

1. Though it be granted that the several precepts of the Decalogue might have in view the peculiar circum-

SAB-
BATH.

stances and objects of the Jewish Church and nation, it would not thence follow that they could have reference to *no other* circumstances, times, or people.

The Sabbath, under the Law, was observed not only by rest, but also by special religious rites. (*Numbers* xxviii. 9. *Lev.* xxiv. 8.) See also *Acts* xiii. 27. xv. 21.

2. That which was *peculiar* to the Law was abrogated. But it does not hence follow that those principles, which were *common* to the Law, with *all other* dispensations, were also to be abrogated. Those principles of natural religion which lie at the foundation of all piety and morality, whether under the Law, or without the Law, are not to be annulled merely because they were *admitted* into the Law. They appear there (and the order (*Exod.* xix. xx.) in which they are introduced harmonizes with that intent) as the *foundation* of all its religious and moral obligations, and even of obedience to its peculiar precepts; not as a *part* of its *peculiar* features. Comp. Irenæus, cap. xxx. xxxi. St. Paul, *Rom.* i. ii. *et passim*. Our Saviour thus speaks of the commandments when he says they are all comprised in the love of God and of our neighbour; and that on these two principles *hang* all the Law and the Prophets.

3. Whether the observance of the Sabbath be a subject of positive or moral law, it has undoubtedly been placed in the *same Table* with those of which the moral and natural authority is not denied. Though we can discover no moral fitness in the *proportion* of one day in seven, we can discover, if not a moral fitness, at least an *inseparable relation* (as between the means and the end) between the appointment of *some* day set apart for public religious observance, and the natural duty of worshipping God. Neither the primitive character of that part of the command which fixes the proportion of time to be consecrated to God in remembrance of the creation, nor the *adaptation* of the command itself to the peculiarities of the Jewish Church, can divest it of that inseparable relation, nor dissociate it from those *purely moral* precepts among which it has been placed, both by the Creator and by the *motives* of universal obligation by which, at its first institution, it was bound upon his creatures. The reference to the creation, though expressed in the form of a reason for the original institution of the Sabbath, is obviously intended as a *motive* to its observance. The same may be said of *Deut.* v. 15.; though Mede fancies that this implies a change of the original Sabbath day, and, with some other facts, affords a foundation for this theory, that the Jews' Sabbath was the hebdomadal commemoration of the overthrow in the Red Sea. Both his facts and his conclusions have been controverted. (See Molesworth, *On the Passover*, p. 72. note.)

4. The definite article *the* merely denotes *proportion* not *order*; *the* seventh day of rest, in contradistinction to the six days of labour. The keeping of that identical day every seventh from the creation could not have been contemplated, as change of longitude and defective computation would have rendered it impracticable.

5. The fourth commandment, which alone is placed among the moral laws of the two Tables, recognises generally, in its general application as a fundamental law, only the separation of a Sabbath as a day of rest for all, though in its *adaptation* to the Jewish Church it respects the Sabbath of that Church. It commands a rest of men and beasts, but not the details in which that rest and the proper public observances might consist. These last were matters of ecclesiastical regula-

tion, to be adapted to the peculiar circumstances, religious, local, and political, of the Jews. They were not part of the fundamental Law itself, but *ecclesiastical* regulations applying that Law to the polity and circumstances of the Jewish Church. It is true that these, in other parts of the Law, are enjoined by *God himself*; but they are so, only as the *whole polity*, civil and ecclesiastical, was immediately dictated by God. The Sabbath is distinguished from the prohibition to eat blood, and other Patriarchal precepts of a positive nature, by the position which God assigned it among the fundamental laws of all piety and morality, combined with the natural fitness of *some* day being set apart for public and social worship by Divine authority, and with the *universal* obligation of the *reason* assigned for the selection of the *proportion*, the memorial of the mercies of the *universal Creator and Father*.

6. That Jesus, by his Divine authority, might have abrogated the Sabbath altogether, or altered the proportion to be set apart for social worship, cannot be doubted. But he does *not contemplate this authority* (*Mark* ii. 27, 28.) when he says he is "Lord also of the Sabbath," or in those other passages in which he is charged with violating it by healing on that day. He is then (the Law not yet having been fulfilled) an *observer* of the Sabbath, and is repelling the charge of *violating* it, not *admitting* that he violates it, and then justifying the violation by claiming the power to annul it altogether. He denies the charge of himself or his disciples having violated it, upon two grounds: 1st, that they had done no more than David, the Priests, and his very accusers did, in cases of *necessity* and *duty*; 2dly, that, in doing acts of charity and mercy, he was acting according to the *spirit* of the commandment, and not to be condemned for violating it upon the mere letter of it. Man was not made for the Sabbath, but the Sabbath for man. *Therefore* the Son of man, in doing his errand, was *κύριος καὶ τοῦ σαββάτου* even of the Sabbath; might, on occasion, dispense with its real observance without violating its *spirit*; and, *a fortiori*, might set at nought the frivolous or malignant glosses the Pharisees put upon it. His argument, therefore, has no reference to any distinction between the fourth and the other commandments; or to the question, whether it were a positive precept, or part and parcel of the moral law?

Under this period it may be convenient to state, as briefly as possible, what is known respecting the mode of the observance of the Sabbath from the beginning to the death of Christ.

Of the mode of its observance, antecedent to the Manna, we have no express account; nor any means of conjecturing, unless from the interpretation which may be put upon the phrase "sanctified and blessed" the seventh day, in *Gen.* ii., coupled with the *rest* of God from the work of creation, and the commemoration of that event mentioned in the fourth commandment. From this we may *infer* that it was separated for devotional purposes, and to be observed by a cessation from worldly labour. But we have nothing to support the notion that it was observed with all the strictness afterwards imposed by the discipline of the Law. Under the Law it is clear that it was observed with great rigour, and that even death (*Numb.* xv. 32, &c.) was the punishment of its profanation. The Rabbis also superadded a number of very minute and burdensome rules. It has been already stated that (*Numb.* xxviii. 9. *Lev.* xxiv. 8. *Acts* xiii. 27. v. 21.) Scripture bears positive testi-

SAB-
BATH.

SAB-
BATH.

mony of public services being ordained both in the Temple and in the Synagogues for this day. In *Lev.* xxiii. 3. it is also ordered that there shall be a "holy convocation." What precise portion of the day was devoted to these public religious exercises at the time of Moses we have no means of ascertaining. Nor do we know exactly how the "rest" or cessation from labour was then observed. That the injunction of Moses, (*Exodus* xvi. 29.) "Let no man go out of his place," is not to be construed literally, is clear, for they could not then have attended the "convocation." The phrase "Sabbath day's journey" is well known. It is evident too that not only Jesus and his disciples (*Luke* xvii.) were walking in the fields on that day, but also the Jews, who censured them for plucking the ears of corn. The injunction, therefore, refers to their not occupying themselves in going out to gather food. It is clear, however, that after their public services the Jews kept the day as a feast and not as a fast; for Jesus himself is present at an entertainment on that day. (*Luke* xiv. v. i. 7. 12. 15.) The Jewish Sabbath commenced at sunset on Friday, and closed at sunset on Saturday. The length to which this article has extended precludes the enumeration of the numberless minutiae with which the Jews at the time of our Saviour, and in modern times, have observed this day; and it is the less to be regretted, as they may be seen in Buxtorf, *Syn. Jud.* or Calmet, and are generally known more than they are regarded.

Period III. From the death of Christ to the present time.

In this period it is not intended, for reasons already stated, to trace the observance of the Sabbath by the modern Jews, but merely to state the practice of the Christian Church. Here we find that it was observed for some time, but that another day was selected as the Christian day for social worship, called the Lord's Day; that this was the *first*, and not the *last* day of the week; that it finally superseded the Jewish Sabbath. It is held that the Apostles and early Christians, (see Bingham, *Ant.* book xx. ch. 110. sec. 4.) though they observed both the Jewish Sabbath and the Lord's Day, were in the former case induced to do so, not that they considered it as obligatory, but as a compliance with the prejudices of the Jewish converts; and the Apostles often resorted to the Synagogues on that day for the purpose of introducing the Christian doctrine. The Apostles positively claim freedom from the Jewish Law, and the early Christian writers not only follow their example, but endeavour to mark the distinction more clearly between the Lord's Day and the Jewish Sabbath. Ignatius even uses a phrase founded upon this contrast, *μηκετι σαββατιζοτες, αλλα κατα κυριακην ζωνν ζωντες*; and the Council of Laodicea denounces those who should rest on the Jewish Sabbath.

The Lord's Day is, however, traced in *Apostolic* and *primitive practice*, and collected from various passages of Scripture without any formal appointment. The Apostles are found assembled on the first day of the week (*Acts* xx. 7.) to break bread; on that day St. Paul desires them (*1 Cor.* xvi. 2.) to make their collections. St. John (*Rev.* i. 10.) denominates it the Lord's Day; a name under which it was early and commonly known to the Primitive Church, though sometimes called Sunday, particularly in addresses to the Heathens, as most familiar to them. The mode of its observance, and the decrees made to preserve it from violation, are set forth

at large in Bingham, *Christian Antiquities*, book xx. ch. ii. Here it may be sufficient to state, that it was spent in religious exercises, abstinence from business, from public games, and from labour. The Christian Fathers also exhort their brethren not to make their rest from labour, like that of the Jews, a pretext for luxury and voluptuousness, but a holy and reasonable rest.

These being the facts of the case, on what authority is the Lord's Day binding on Christians? "The power of the Church," says Archbishop Whately, "bestowed by Christ himself, would alone (even independent of Apostolic example and ancient usage) be amply sufficient to sanction and enforce the observance."

Undoubtedly it would; but it has nevertheless additional authority. It has the authority of the fourth commandment, so far as the universal authority of that commandment rests upon the *natural* fitness of the Divine separation of *some* day for public and social worship; and on the *proportion* to be so separated having been fixed at the creation by God himself, and not altered by Jesus or his inspired servants. The *proportion* has thus been made common to *all* dispensations of the religion of the only God and Creator; the day and the details of the Jewish Sabbath were the province of the Divine founder of the Jewish Church, as the day and the details of the Christian Sabbath are the province of the same Spirit establishing the Christian Church. When Christ died, the Law, all that was *peculiar* to the Jewish dispensation, was annulled, and his Apostles, under the immediate inspiration of the Holy Ghost, chose for their Sabbath day the day of their new creation—the day when their Lord rose from the dead—the first day of the week—their Lord's Day.

The view of the question here given, though imperfect, may suggest the presumption of dogmatizing upon it, and the consideration with which *legislation* upon it should be undertaken. These are points to which this Work cannot attempt to do justice. But the following landmarks may be important to be kept in view by those who wish to enter deeply into the matter.

The province of the Legislature, as respects the Lord's Day, is to co-operate with the national Church, in maintaining decency and promoting general morality and piety, but not to decide by power controverted questions of Theology.

The province of the Church is to model her public ordinances to the increase of edification; and, as far as circumstances will permit, upon the pattern of Scripture and primitive practice.

The province of individuals is, in their social capacity, to reverence and obey the public ordinances of the Church, and the Legislature, where they do not contravene God's word; in their private capacity, to meditate upon the instruction of God's ministers; to study God's word; to use prayer and all the outward means of grace, that their consciences may be *rightly informed* how the Lord's Day ought *privately* to be observed consistently with their duty to the Church, with the *spirit* of the ordinance, and with their Christian liberty; and then to *act accordingly*, neither abusing nor circumscribing their privileges.

SAB-
BATH.
—
SAC-
CHA-
RUM.

SABBATIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Gentianeæ*. Generic character: corolla pitcher-shaped, border five to twelve cleft; stigma two-parted, with spiral divisions; anthers revolute.

Four species, natives of North America.

SABELLARIA, in *Zoology*, a genus of *Annelides*.

Generic character. Body somewhat cylindrical, attenuated behind, with bundles of awl-shaped setæ in one row on each side, and with spatulous bristles and transverse scales edged with hooked setæ; anterior extremity obliquely truncate, elliptical, crowned with six rows of brilliant scales; mouth an elongated cleft, with two lips; *branchiæ* small, short, placed near the mouth, inhabits a tube composed of grains of sand and frequently of shells, with cup-shaped orifices.

Type of the genus, *S. alveolata*, Lamarck; Pennant, *Britt. Zool.* vol. iv. pl. lv. fig. 1. Inhabits the British and European coasts.

SABIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx five-cleft; corolla, petals five, lanceolate, persisting; stamens straight; drupe superior, reniform, one-seeded; embryo direct, spiral, no perisperm.

One species, *S. lanceolata*, a shrub, native of Bengal.

SABICEA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Cinchonaceæ*. Generic character: involucre two to four-leaved; corolla funnel-shaped, border spreading; stigma five-parted; berry five-celled, many-seeded, (the number of four stamens, cells, &c. sometimes occurs.)

Five species, natives of South America and the West Indies.

SABINEA, in *Botany*, a genus of the class *Diadelphica*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx bell-shaped, margin truncated; corolla pea-flowered, keel obtuse; four of the stamens only have the length of the others; pod stipitate, compressed, linear, many-seeded.

Two species, shrubs, natives of the West Indies. Decandolle.

Burke.

SACÆA. The *Sacæa* (τὰ Σάκαια, Strabo, xi. p. 512.) was a festival celebrated by the Persians in commemoration of the defeat of the *Sacæ*, either by Cyrus, or at an earlier period. A whole night and day was passed in revelling and drunkenness by men and women disguised as Scythians, near a Temple built on the spot and dedicated to Anōites (Náhíd) and her associate deities, Omanus and Anandatus. This festival was also kept by the Babylonians much in the same way as the Saturnalia of the Romans. (Athenæus, xiv. 10.) Five days, beginning with the sixteenth of Lōus, being spent in rioting, and the slaves were allowed to play the master with impunity. (Eustathius, *ad Homer. Il.* xvii. p. 132. *ad Dionys. Perieg.* v. 749. Brisson, *De Regn. Pers.* ii. 187.)

SA'CCHARINE, } Fr. *saccharin*; It. *zaccherino*;

SA'CCHARIZE, v. } Lat. *saccharum*; which (Vossius says) is in the Arab. *saccar*. Pliny calls it a kind of honey, gathered and candied in certain canes. (See SUGAR, and the Quotation from Pliny.) Vossius adds, that the name *saccharium* was given (to sugar) because it resembled this kind of honey so gathered from canes.

Sugary,—having the properties of, or resembling those of sugar.

Manna, which is an essential *saccharine* salt, sweating from the leaves of most plants.

Arbuthnot. *On Aliments*, ch. iii. p. 44.

It is hoped the reader will pardon the introduction of the verb *saccharize*, as no other so emphatically expressed the author's meaning; for some chymists define sugar to be a native salt, and others a soap.

Gräinger. *The Sugar-cane*, book i. p. 483. note.

SACCHARUM, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx a long woolly involucre, two-valved; corolla one or two-valved, with or without bristles, seeds one to three.

Thirteen species, natives of the East and West Indies, Italy, and North America. The most remarkable is the *S. officinale*, the Sugar-cane, said to be native of both

SAC-

RUM.

Indies; but, like many other cultivated plants, the true habitat is doubtful.

SACCO-
PHA-
RYNX.

SACCOMYS, from the Greek σακκος, *a pouch*, and μῦς, *a mouse*, Geoffr. *Pouched Mouse*. In *Zoology*, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth chisel-shaped, two in each jaw, the upper smooth in front, the lower compressed; molar four on a side in either jaw, diminishing in size from before to behind, and compound; muzzle obtuse, upper lip cleft; cheek-pouches external to the mouth and opening downwards; auricles large and elliptical; body short and covered with long silky hair; tail slender, long, and covered with verticillated square scales, from the base of which spring one or two short stiff hairs; feet five-toed, their soles furnished with naked tubercles, of which those on the fore feet are the longest; claws short, sharp, and compressed, excepting those of the thumbs of the fore and the second toe of the hind feet, which are straighter, wider, and flatter.

This genus was first described by Geoffroy from a specimen which he received from North America. He named it

S. Anthophilus, Geoffr. From its cheek being filled with flowers and grain in a perfect state, the former being those of the *Securidaca volubilis*, a plant indigenous to North America; and the latter supposed to belong to a convolvulus. Its length, including the tail, which is as long as the body, is about five inches and a half. The form of the head is similar to that of a Mouse, but more bulky; the upper lip is grooved without being cleft, and dips into the mouth behind the incisive teeth; the lower lip is very thick. Just below the four parallel rows of whiskers which spring from the side of the upper lip, but exterior to the mouth, are two long, narrow apertures, only separated from each other beneath the chin by a narrow partition, which are the openings of a pair of large cheek-pouches; these cover the whole of the cheeks, extend beyond the head, are lost in the skin of the shoulders and arms, and their interior is studded with a few short hairs. The molar teeth, of which there are four on a side in either jaw, diminish from before to behind, the anterior being nearly twice as large as the others, and differing from them in having a deep notch on the outer edge, whilst their crowns are divided distinctly into two by a deep transverse groove; all, however, have fangs distinguishing the genus from the *Saccophori*, which have none. The colour of the silky fur, in which the animal is clad, is light tawny-brown on the head, shoulders, back, and rump, becoming paler on the muzzle, cheeks, limbs, and under parts of the body, and the tail reddish-white. From the length and bulk of the limbs and the sharpness of the claws, together with the flowers filling the cheek-pouches, Geoffroy thinks that it probably lives in trees, and has, perhaps, the habits of the Squirrels.

See Geoffroy, *Mémoires du Muséum*, tom. x.

SACCOPHARYNX, from the Greek σάκκος, *a pouch*, and φαρυγξ, *a throat*, Mitchell. In *Zoology*, a genus of animals belonging to the family *Anguilliformes*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head small and flattened anteriorly; the upper rather longer than the lower jaw, the branches of which, meeting in an acute angle at the chin, are capable of separation so as to render the gape enormously wide; teeth in the intermaxillary bones very fine, pointed, and inclining backwards, sometimes

VOL. XXVII.

also, but not always, in the lower jaw; tongue very small; eyes small and near the tip of the upper jaw; branchial apertures before and below the pectoral fins; body scaleless, compressed, serpentiform, and capable of great distension; tail very long, and becoming filamentous at the tip.

The first description of this curious genus was given in 1824 by Dr. Mitchell, and named by him, from "the pouch-like form of the throat," *Saccopharynx*. Subsequently, in 1827, a Paper was read by Dr. Harwood before the Royal Society, giving an account of "a newly discovered genus of Serpentine Fishes," to which he assigned the name *Ophiognathus*, from the general resemblance of its jaws to those of Serpents. He has mentioned some points overlooked by Dr. Mitchell, but there can be no doubt that both animals belong to the same genus, if not to the same species, although the former measured six feet in length, whilst the latter was only four feet and six inches.

The form of the body is so little fish-like that Dr. Mitchell doubted whether his specimen were a fish until he had discovered the gills: he says, "the belly, when the animal was first seen, was distended as if blown up to the size of a quart decanter or the crown of a hat;" and Dr. Harwood mentions that the captain by whom his fish was caught at first mistook it "for an inflated seal skin, such as the Esquimaux employ in the destruction of large aquatic animals." The head and trunk together form rather less than a fifth of the whole length of the animal, the remainder consisting of a whip-like tail about an inch in diameter at its root, and gradually tapering towards its tip to a thin whipcord-like form, which allows of its being tied in knots. The head is small and triangular; the eyes small, and placed near the tip of the muzzle; the gape from two to three inches in length, and capable of extension to the same width, the junction of the branches of the lower jaw being elastic like that of Serpents, and allowing of considerable separation when the fish is gorging its prey; to what extent this is admitted is shown by the fact, that Dr. Harwood's specimen, when first seen, was occupied in gorging a fish of seven inches in circumference. The intermaxillary bones and the branches of the lower jaw were, in Dr. Harwood's specimen, furnished with fine sharp teeth curved backwards, but in Dr. Mitchell's the lower jaw was toothless. The throat, or pharynx, is of sufficient size to admit the hand, and communicates with an enormous air-bladder, extending in length from the snout twenty inches, which is perforated by the rectum. It is by means of this organ that the body is distended to so large a size, but for what purpose is not at present understood. The gill apertures, placed on either side of the neck, are mere slits about an inch and a half in length, and the gills themselves are found within arranged in three bundles; when the throat is not distended, these apertures are placed almost on the under part of the body, and have only a narrow commissure between them. The skin is scaleless, slimy, and smooth, but has a slightly granular appearance, and is very loose when the air-bladder is not expanded. The dorsal fin, which commences at some distance from the head, is very narrow, composed of simple rays, and insensibly terminates upon the tape-like tail, giving origin near its extremity to a few minute filaments. The anal fin, also narrow, commences immediately behind the vent, and is also lost on the tail. The pectoral fins are each composed of a small fatty disc fringed by

SACCO
PHA
RYNX.

SACCO-PHYNX. a narrow radiated membrane. Both the individuals described were taken in the Atlantic, between 52° and 62° North latitude, and 30° and 57° West longitude. There can be no doubt, from the character of their teeth, that they are predaceous, which is indeed fully proved by the facts related both by Mitchill and Harwood.

The points mentioned particularly, in the descriptions given by the authors alluded to, are as follows: in

S. Mitchilli. A female; length six feet, of which fourteen inches belonged to the body, measuring from the tip of the snout to the vent, and the remainder to the tail, which gradually tapered to a point where the dorsal and anal fins became connected; the caudal fin very indistinct, but numerous hair-like rays might be distinguished; the colour dusky-brown, and from the head along each side of the back, as far as its bony structure could be traced, a whitish line passed, and from either side of the vent another similar one proceeded, and was soon lost on the tail. Filiform processes about an inch long depended on each side of the dorsal stripe to the tail, about fifty pairs: the length of the mouth from the muzzle to the angle was three inches. The lower jaw toothless, but the upper jaw for an inch and a half furnished with a row of bony, hooked teeth. No appearance of any tongue. In its stomach was a fish ten inches in length, and recently swallowed.

S. Harwoodi; Ophiognathus Ampullaceus, Harwood. Four feet and six inches long; colour uniformly purplish-black, excepting the filamentous extremity of the tail, which is lighter; the air-vessel in length from the extremity of the snout twenty inches, its parietes extremely delicate, and, when partially distended, it measured nine inches in circumference below its union with the tail; dorsal fin commencing about eighteen inches from the snout, terminating insensibly on the slender, tape-like tail, which extends about twenty inches and a half beyond, and about the termination of the dorsal fin a few other minute filaments arise; anal fin, commencing from the vent, terminates at about fourteen inches short of the tip of the tail. Tongue almost entirely deficient; teeth disposed above and below in a single row, above only in the margin of the intermaxillary bones, below along almost the whole length of the maxilla; the jaws, when gently opened, measured two inches and a half across, and three and a half from above to below.

See Mitchill, *Annals of the Lyceum of Natural History of New York*, vol. i.; Harwood, *Philosophical Transactions*, 1827.

SACCOPHORUS, from the Greek σακκος, a pouch, and φέρω, to bear, Kuhl. *Pouched Rat*. In *Zoology*, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth two in each jaw, uncovered by the lips, chisel-shaped, the lower smooth, the upper each scored with one or two vertical grooves, of which, when two, the outer is the widest and deepest; molar, five on a side above, inclining obliquely backwards, and four below inclining forwards, penetrating into the alveolar cavities without division into fangs, their crowns discoidal, transversely oblong oval, edged with enamel, and hollowed in the centre; first molar double, its crown presenting two discs separated by a deep furrow; head and trunk bulky; eyes small; ears short; cheek-pouches very large, unconnected with the mouth, but opening downwards and towards it; legs short; feet five-toed, the front claws very long and much curved, hind claws short; tail of variable length.

The first notice of this very curious genus of animals was given by Dr. Shaw to the Linnæan Society in the year 1799, and published in the fifth volume of their *Transactions*, under the name of *Mus Bursarius*. In this very brief account he states that it "belongs to a particular division in the genus, (*Mus*), containing such species as are furnished with cheek-pouches for the temporary reception of their food;" and that these "are far larger in proportion to the animal than in any other of this tribe, and therefore have given occasion to the specific name." He also describes the fore feet as having the claws very large, formed for burrowing in the ground, and in this respect "differently formed from any of the pouched species hitherto described." The figure appended to this notice, and drawn from an animal in the possession of Governor Prescott, to whom it was sent from the upper parts of interior Canada, has a very coarse resemblance to what might be expected from a mule between a Rat and a Mole; but it is especially remarkable for two large oval bags placed on either side of the mouth, and which are of such bulk as to trail upon the ground, according to the sketch, and give to the animal a most curious appearance. Nothing is stated as to the apertures of these bags, which are the cheek-pouches, either whether they open within or without the mouth; nor is the slightest notice taken of the teeth.

In the fifth volume of the *New York Medical Repository*, 1802, edited by Drs. Mitchill and Miller, is found an account of an *Undescribed little Quadruped of Georgia*, by Josiah Meigs, President of the University of New Georgia. "Its body is of the length and thickness of a common sized Rat, and of the same colour; the head is between that of a Rat and a Mole, with small whiskers and a short snout; the tail is without hairs, but shorter than that of a Rat; the fore feet like those of a Mole, with nails nearly an inch long; the hind feet like those of a Rat, but the nails not of the same length; short ears; teeth like a Squirrel, and full as long. On both sides of the jaw, externally, are sacks or wallets where it deposits its food, and each will contain as much as can be put into a large table-spoon."

Kuhl first founded the new genus by the name of *Saccophorus* from a specimen which he saw in Paris in 1818, and has given a very general description of its characters; but he does not notice the form of the molar teeth, and seems to have had no idea of the cheek-pouches being situated other than naturally, though placed externally, as in Shaw's specimens.

The detection of the mistake as to the real situation of the cheek-pouches was first published by Dr. Mitchill, in Silliman's *Journal* for 1822, who became acquainted with it in an accidental conversation with Governor Cass, from whom he had received his specimen. The Governor stated "that the pouches did not appear externally in the living animal; that they were concealed within the skin; that the orifices were on the outside of the neck; and they had been inverted, like pockets turned inside out, for the sake of preserving them from the knife when the skin was taken off, and of drying them more effectually in the stuffed preparation."

Shortly after this notice of Dr. Mitchill's, appeared Major Long's *Expedition from Pittsburgh to the Rocky Mountains*; and in the zoological notes attached to it by Mr. Say, who accompanied the expedition, is found a more full and satisfactory account of

SACCO-PHORUS.

SACCO-PHORUS. the genus than had been previously given. He describes the molar teeth as being destitute of radicles or fangs, in which respect they resemble the Hare and some other animals, but differ from the Hare in having their simple discoidal crowns, which are margined with enamel, without a groove at either of their ends, or a dividing crest of enamel, and in the first molar being double, a profound duplicature being in its side, so that its crown presents two oval discs, of which the anterior is the smaller. Their cheek-pouches are voluminous, are perfectly exterior to the mouth, from which they are separated by the common integument, and downwards and towards it, from the position of these orifices, they might at first be mistaken for supernumerary or false mouths, and Say has therefore given to the genus the name of *Pseudostoma*.

To Professor Lichtenstein, however, is due the credit of having given a full description of the genus, to which he gave the name *Ascomys*, and of showing that the cheek-pouches in Shaw's specimen, which he examined at Bullock's Museum in London, in 1819, were not in the natural position from which they had been everted. His Paper is entitled *Über äussere Backentaschen an Nagethieren*, and is published in the *Abhandlungen der Königl. Akademie der Wissenschaften zu Berlin*, 1822 and 1823. He states that above half an inch behind and above the muzzle, and just above the orifice of the mouth, the skin folds in forming an aperture on each side scarcely an inch long, which reaches to the middle of the neck, and is the commencement of a cavity extending to the shoulder, and about an inch and three-quarters deep; its interior is lined with soft, white hair, and its exterior so firmly connected with the skin that it cannot be separated but by division with a knife, and when this is done, the surface of the sack is found to be overspread with a strong muscle. Lichtenstein gives ten molar teeth to the upper, and eight to the lower jaw, whilst Say says there are but eight in each; the absence of fangs, however, and the double form of the front molar teeth, together with the rest of their description, tally so completely, that there can be no doubt as to the identity of the animals described. The fore legs have immediately below the wrist joint a projecting pad similar to that found in the Climbing Porcupines, (*Synetheres*, F. Cuv.) and other long-clawed animals; the foot is short, and has five toes, each of which only shows externally a single joint, as the second and third are alike covered by the enormous claws, of which that belonging to the middle toe makes a curve nearly an inch in length, that of the fourth toe a quarter of an inch shorter, of the little toe four and a half, and of the hinder toe five and a half lines long, whilst that of the thumb is but two lines in length; all these claws are curved, sharp, white, transparent, and each covered from its root for about a fifth of its length with a nail-skin or quick truncated vertically, which, on the inner toes, supports a brush of stiff hairs, whilst the outer toes and the instep are only covered with a delicate kind of fur. The hind feet, which are almost bare, have also five toes, of which the middle is the longest, then the second, fourth, the thumb, and the outer toe, which is the shortest, and, including the claw, not more than two lines in length. The instep is long and narrow, and the toes do not project much beyond it, but are covered, except one joint, by the nail-skin; and the middle toe, including the claw, is not more than five lines long; the claws of the middle toes are strong, moderately

curved, but blunt and short, the longest not exceeding two lines.

M. Rafinesque Smaltz, in a Paper published by him in 1817, in the *American Monthly Magazine*, has given a short notice of a genus which he has named *Geomys*, consisting of two species, to one of which he refers the *Mus Bursarius* of Shaw, and speaks of its mouth being furnished with external pouches, and its feet resembling those of a Mole; to the other, the Hamster of Georgia, described by Mitchill, Anderson, and Mears; but does not make any observation on the form of their molar teeth. He has also formed another genus, which he names *Diplostoma*, having the mouth double, the exterior consisting of two large cavities or cheek-pouches, approaching each other in front of the incisive teeth, and extending back as far as the shoulders: he speaks of the grooving of the incisive teeth, and of there being four molar teeth on a side in each jaw, but takes no notice of the form of their crowns or of their roots; and he also states that they have no tail. He says further, that they are the animals known to the early French settlers by the name of *Gauffres*.

Dr. Harlan, in his *Fauna Americana*, considers the genus *Geomys* of Smaltz to be the same as Say's *Pseudostoma*, having the cheek-pouches with external openings; he refers Shaw's animal to it, and also the Canadian Gopher; and further observes, that Mitchill's specimen, from which Smaltz had probably formed his *Diplostoma*, had lost its tail, and, by not even naming it, seems to indicate that he did not believe in its separate existence.

This confusion of accounts is not diminished by Dr. Richardson, in his *Fauna Americana*; he considers Lichtenstein's *Ascomys* and Smaltz's *Geomys* as identical, which cannot be the case if his statement be correct, that *Geomys* has the cheek-pouches large, pendulous, and opening within the mouth, and that the number of molar teeth are four on a side in either jaw. With regard to the first observation, Smaltz does not say that the cheek-pouches open internally; and Lichtenstein's description of Shaw's animal, which Richardson is disposed to refer to the genus *Geomys*, shows that they really do open externally. His account of the toes is not so satisfactory as Lichtenstein's; but the other particulars so nearly resemble, with the single exception of the difference of number of the teeth of the lower jaw, that there cannot be much doubt of both being really one and the same genus, the *Saccophorus* of Kuhl. Richardson also considers Smaltz's *Diplostoma* as a distinct genus; but he adds nothing to our knowledge of the form of the molar teeth, which in his specimen were deficient, and seems rather to ground his notion of difference on the hood-like form of the cheek-pouches in his *Diplostoma Fuscus*, which, he says, could not be everted like the pendulous pouches he ascribes to *Geomys*. Further and more accurate observation can alone settle the disputed point as to the cheek-pouches being ever everted, as stated by Shaw, Smaltz, and Richardson; and till then it seems more advisable to consider with Fischer, in his *Synopsis Mammalium*, that *Saccophorus*, *Pseudostoma*, *Geomys*, and *Diplostoma* are really one and the same genus.

S. Bursarius, Kuhl; *Mus Bursarius*, Shaw; *Geomys Cinereus*, Smaltz; *Ascomys Canadensis*, Lichtenstein; *Canadian Pouched Rat*. Length from the muzzle to the root of the tail eight, and of the tail itself five inches; upper surface of the body reddish, inclining to yellowish

SACCO-PHORUS.

**SACCO-
PHORUS.**

on the sides; under parts hoary. They are found in the United States, from Florida as high as Lake Superior, and as far West as the Missouri, extending also into Canada, where they are commonly known as *Gauffres*. Lewis and Clarke observe, that large tracts of land in Louisiana had the appearance of a ploughed field from the labours of these animals; and the mounds of earth which they throw up without any external opening vary in size from a few inches to several yards, and resemble such heaps as would be formed by emptying the loose contents of a flower-pot on the soil. Mr. Schoolcraft, in his *Journal*, states, "that the animal uses its cheek-pouches for carrying the earth out of its hole, filling them with its fore paws, and emptying them by ejecting them from each cheek in the manner that a cap or stocking is turned;" and so thoroughly does it root up the ground that the White Hunters frequently plant corn on the prairies thus mellowed. They feed entirely on the roots of plants, are very voracious, and especially destructive of beet, carrot, and other tap-rooted plants. It is known on the Colombia river by the name of *Camas Rat*, from the bulbous root of the quamash or camas plant being its favourite food.

S. Mexicanus, Kuhl; *Ascom. Mexic. Licht.*; *Mexican Pouched Rat*. Thirteen inches in length from the tip of the muzzle to the root of the tail, and the latter rather more than three and a quarter inches long; it has only a single groove on the front of its incisive teeth; and both the claws of the fore feet and the tail are shorter than in the last species: the upper parts are shining, dusky black, and the under ashy. It is the *Tucan* of Hernandez, and the *Tuza* or *Tozo* of Clavigero. It is a native of Mexico, but very little authentic is known of it.

S. Douglasii, Kuhl; *Geomys Douglasii*, Richardson; *Columbian Pouched Rat*. Length of the head and body six and a half inches, and of the tail nearly three inches. This species has but a single groove on its incisive teeth; the cheek-pouches, according to Dr. Richardson, are large, resembling the thumb of a lady's glove in form and size, and hanging down by the sides of the head; when full, they are of an oblong form, but corrugated or retracted to one-third of the length when empty, and are lined internally with small, orbicular, indurated glands, which are more numerous near the aperture. The colour is dusky-brown above, but on the belly and feet paler. They are very numerous about Fort Vancouver on the Colombia river; feed on acorns, nuts, grass, and potatoes, to which they are very destructive, carrying off a considerable quantity in their cheek-pouches, which they disgorge by squeezing the pouches with their fore paws and chin against the breast whilst sitting up like a Marmot or Squirrel.

S. Umbrinus, Kuhl; *Geom. Umbr.* Richards.; *Umber Pouched Rat*. From the head to the root of the tail measures seven inches, and the tail itself an inch and three-quarters; the upper parts are umber-brown, deepest on the head, and mingled with chestnut on the flanks; the under parts and hind legs are pale grey tinged with brown; the tail clad in greyish-white hair. No account is given of its teeth or of its habits. It is found in Louisiana.

S. Talpoides, Kuhl; *Geomys Talp.* Richards.; *Mole-shaped Pouched Rat*. Length of the head and body rather more than seven inches and a quarter, of the tail nearly two inches; the body resembling that of a Mole. The fore foot has four toes and a rudimental

thumb; the middle toe the longest, and furnished with the largest claw; the first and third are of equal length, the outer shorter and far back, and the thumb still further back, and consisting only of a small claw; hind feet have each four toes and a minute rudiment of a fifth; head and body clad in greyish-black fur; the under and hinder part of the cheek-pouches white; chin and throat white; tail covered with short white hairs. Native of Hudson's Bay

And weare such roabes, as I my selfe take pleasure to beholde.
Gascoigne. Deuise of a Maske.

The parricide was afterwards sow'd up in a *sack* or bag; and in after-times there was sow'd in with him, an ape, a cock, a serpent, (or, as some more particularly, a viper,) and a dog.
Holiday. Juvenalis. Satire 8. note.

This little *sackful* of bones I thought to bequeath to Westminster Abbey, to be interred in the cloyster within the south side of the garden, close to the wall.
Howell. Letter 29. book ii. p. 338.

And, to augment her painefull penance more,
Thrise every weeke in ashes shee did sitt,
And next her wrinkled skin rough *sackcloth* wore,
And thrise-three times did fast from any bitt.
Spenser. Faerie Queene, book i. can. 3.

The antient penitents are described in Scripture as girding themselves with *sackcloth*, and repenting in dust and ashes; in allusion to the antient manner of great and solemn mournings, which was to put on *sackcloth*, cover the head with ashes, and sit in the dust.
Scott. Christian Life, part i. ch. iv. p. 81.

The floating *sack* is thrown aside,
The vestments, proper for a ride,
Such as we oft in Hyde-park view
Of fustian white lapell'd with blue,
By Betty's care were on the spot.
Whitehead. The Dog.

SACK, *v.* } See **SACK**, *ante*. *Saccos, expilare*, to
SACK, *n.* } plunder, bag and baggage. Lye thinks
SA'CCAGE. } it is from *secce, bellum*: also written
sæcce, from *sæc-an, certare, contendere*:
To pillage, to plunder, to rifle.

The plenteous housses *sackt*, the owners end with shame
Their sparkelid goods. *Surrey. Ecclesiastes*, ch. v.

Haue Medea still in minde,
let Circe be in thought:
And Helen that to vtter *sack*
both Greece and Troie brought.
Turbervile. Dispraye of Women, p. 612.

Proceed by processe,
Least parties (as he is belou'd) breake out,
And *sacke* great Rome with Romanes.
Shakspeare. Coriolanus, act iii. sc. 1. fol. 17.

Speake to me, Muse, the man who after Troy was *sack'd*
Saw many townes and men, and could their manners tract.

SACRA-
MENT

SACRA-
MENT.

For this thing a man schal forsake his fadir and modir, and he schal drawe to his wyf, and thei schulen be tweyne in oo fleisch: this sacrament is greet.

Wiclif. *Effesies*, ch. vi.

But finally yeomen is the day,
That to the chirche bothe ben they went,
For to receive the holy sacrament.

Chaucer. *The Marchantes Tale*, v. 9574.

This worde *sacrament* is as much to say as an holy signe, and representeth alway some promise of God.

Tyndall. *Workes*, p. 143.

And priests may receive and take (ministring the *sacrament* and *sacramentals* in the church to the congregation) a living for the same.

Burnet. *Records*, part ii. book i. p. 202. No. 25.

The inward eyes as soone as they see the bread, they passe ouer the creatures, and thinke not of that bread which is baken of the baker, but of hym that called him selfe the bread of lyfe which is signified by the mysticall or *sacramentall* bread.

Fryth. *Workes*, p. 134.

The *sacrament* of the altar was not instituted to be received of one man for another *sacramentally*, no more than one man to receive it in faith and cleanness of life for himself.

Burnet. *Records*, part ii. book i. p. 188. No. 25.

If M. Hardinge had wel considered that whole homile, happily he woulde haue charged Chrysostome him selfe with his *sacramentarie* quarel.

Jewell. *Replie to Hardinge*, p. 334.

That no person be admitted or received to any ecclesiastical function, benefit, or office, being a *sacramentary*, infected or defamed with any notable kind of heresy, or other great crime.

Burnet. *Records*, part ii. book ii. p. 350. No. 10.

But if they be *sacramentaries*, that shamefully abuse and corrupte the holy *sacramentes*, then may M. Hardinge and his frendes rightly be called *sacramentaries*.

Jewell. *Replie to Hardinge*, p. 334.

There cannot be
A fitter drink to make this sanction in.
Here I begin the *sacrament* to all.

Ben Jonson. *Catiline*, act i. sc. 1.

When desperate men have *sacramented* themselves to destroy,
God can prevent and deliver.

Archbishop Laud, p. 86.

And trains, by ev'ry rule
Of holy discipline, to glorious war
The *sacramental* host of God's elect!

Cowper. *The Task*, book ii.

SACRAMENT, (*Sacramentum*.) a term of various import among profane as well as ecclesiastical authors. Literally, it means that by which a person solemnly binds himself to any person or thing. Among the Roman authors it is taken for a formal deposit of a certain sum of money with the Pontifex in civil suits, as well as the money so deposited; which sum was forfeited by the party losing the suit. (Asconius Pedianus, in *Cic. Verr.* i. 9. Varro, *de Linguâ Latinâ*, l. iv. extr.) It also implied the oath of fidelity which was taken by soldiers to their commanding officer; (Pliny, *Ep.* l. x. 97. Scheller, *Latin Lexicon*, sub voce;) and under this idea it was first adopted into the language of religion, as affording a convenient term for an assemblage of ideas which no single Scriptural word would exactly express. In the earlier ages of Christianity its ecclesiastical meaning was very indefinite; and we find it used by the writers of the Latin or Western Church, in order to denote any thing mysterious in religion. (Bingham, *Antiquities*, book xii. ch. i. sec. 4.) By degrees, however, it obtained a more confined and definite signification.

The definitions vary a little even before we come to the mere Protestant notion. As a specimen we may quote that of Gregory the Great: "*Sacramentum est per quod sub integumento rerum visibilium divina*

virtus salutem secretius operatur." The Anglican Church has confined the meaning of the word within somewhat narrower limits, and, like most Protestant bodies, excludes all but the two ordinances of Baptism and the Supper of the Lord from the name of Sacraments, while she differs from them in her notions of the value of these ordinances. Before we quote the definition adopted by the Anglican Church, the following remarks of the judicious Hooker will be found very valuable towards a due estimation of the nature of a Sacrament.

"Sacraments, by reason of their mixed nature, are more diversely interpreted and disputed of than any other parts of religion besides; for that in so great a store of properties belonging to the self-same thing, as every man's wit hath taken hold of some especial consideration above the rest, so they have accordingly seemed one to cross another, as touching their several opinions about the necessity of Sacraments; whereas, in truth, their disagreement is not great. For, let respect be had to the duty which every communicant doth undertake, and we may well determine concerning the use of Sacraments, that they serve as bonds of obedience to God, strict obligations to the mutual exercise of Christian charity, provocations to godliness, preservations from sin, memorials of the principal benefits of Christ. Respect the time of their institution, and it thereby appeareth that God hath annexed them for ever unto the New Testament, as other rites were before with the Old; regard the weakness which is in us, and they are warrants for the more security of our belief; compare the receivers of them with such as receive them not, and Sacraments are marks of distinction to separate God's own from strangers: so that in all these respects they are found to be most necessary. But their chiefest force and virtue consisteth not herein, so much as that they are heavenly ceremonies which God hath sanctified and ordained to be administered in his Church: first, as marks whereby to know when God doth impart the vital or saving grace of Christ to all that are capable thereof; and secondly, as means conditional, which God requireth in them unto whom he imparteth grace." (Hooker, book v.)

The Anglican Church defines a Sacrament to be "an outward and visible sign of an inward and spiritual grace given unto us, ordained by Christ himself, as a means whereby we receive the same, and as a pledge to assure us thereof." In a Sacrament there must first be "an outward and visible sign of an inward and spiritual grace;" that is, a sensible representation of the benefit received, the solemn application of some bodily and sensible thing or action to a means and purpose which of its own nature it hath not: secondly, there must be "an inward and spiritual grace given unto us," i. e. some favour or grace freely bestowed on us from Heaven, by which our inward and spiritual condition, the state of our souls, is made better: thirdly, it must be distinguished from other ceremonies, as having our Lord's authority. Common ceremonies the Church may decree and abrogate at pleasure: they are useful merely for the sake of order, and under different circumstances different ceremonies take place. But a Sacrament, as ordained by Christ, is of perpetual obligation. Fourthly, a Sacrament is "a mean whereby we receive the grace of God." A Sacrament must not only be a sign of grace, but a means whereby we receive it. None but our Lord could appoint such means, and which of his ordinances should be such none but he could determine.

SACRA-
MENT.

SACRA-
MENT.

From his word we are to learn it; and then, if we desire the grace, to use the means. God has, however, annexed conditions to these means, and if we neglect them, and do not seek the grace with the requisite qualifications, we have no right to expect it. By "means of grace" is not signified "means by which we merit grace," but means by which what our Lord has merited is conveyed to us. Reading, hearing the word of God, &c., may be also means of grace, but as these actions do not represent the benefits received, they are not *signs* of grace. Fifthly, a Sacrament is a *pledge* to assure us of grace. God's promise gives us as great an assurance as is possible; but the imagination of man is most deeply and strongly impressed with that which addresses itself to his senses; and in condescension to our infirmity God has graciously added these outward performances to his covenant. (See Bishop Mant, *Commentary on the Catechism*, in his *Commentary on the Book of Common Prayer*.)

Number
of the Sa-
craments.

It is sometimes stated that, under the Jewish dispensation, there were two Sacraments, *viz.* CIRCUMCISION and the PASSOVER; corresponding to which, in the Christian dispensation, are the two (and only two) ordinances of BAPTISM and the LORD'S SUPPER, or EUCHARIST, as it is frequently termed, which were instituted by Jesus Christ himself. The Romish Church authoritatively decreed, in the seventh session of the Council of Trent, "If any shall say that the Sacraments of the new law were not all instituted by our Lord Jesus Christ, or that they are more or fewer than seven, to wit, Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Orders, and Matrimony, or that any of these seven is not truly and properly a Sacrament, let him be accursed." (*Decret. Conc. Trid.* sess. vii. canon 1.) To omit the speculations of some earlier divines of the Romish Church, Otto, Bishop of Bamberg, was the FIRST who, A. D. 1124, enumerated seven Sacraments; and through the influence of Peter Lombard and of Gratian, who introduced the same sentiment into his *Decretum*, the admission of this number became general among the Romish clergy, and received the approbation of Pope Eugenius IV. at the Council of Florence held in 1439; and, finally, in 1537, the Tridentine assembly, on pain of anathema, decreed that there are seven Sacraments instead of the two originally instituted by Jesus Christ. (Muenscher, *Elements of Dogmatic History*, p. 112.) The Church of England and all the Reformed Protestant bodies reject the five Sacraments thus unscripturally superadded by the Romish Church; which, the Anglican Church professes, "are not to be counted for Sacraments of the Gospel, being such as have grown partly of the corrupt following of the Apostles, partly are states of life allowed in the Scriptures, but yet have not like nature of Sacraments with Baptism and the Lord's Supper, for that they have not any visible sign or testimony ordained of God." (*Art.* xxv.) For instance, "Matrimony, Orders, and Penance have the word of God, but they have no outward creature or element; Extreme Unction and Confirmation have neither word nor element. Wherefore these five latter, in proper use of speech, are not taken for necessary Sacraments of the Church. The ancient learned Fathers, Irenæus, Justin Martyr, Tertullian, St. Ambrose, Cyrillus Alexandrinus, and others, speak only of two Sacraments, Baptism and the Lord's Supper, and name no other." . . . "To be short, Cardinal Bessarion says, *Hæc duo sola Sacramenta in Evan-*

geliis manifestè tradita legimus." (Bishop Jewel, *Defence of the Apology*, p. 216.)

The Romish Church asserts that the Sacraments produce justification in their recipients, as a matter of course, *ex opere operato*; the Anglican Church teaches that the "Sacraments ordained by Christ be not only badges or tokens of Christian men's profession, but rather they be certain sure witnesses and effectual signs of grace and God's good will towards us, by the which he doth work invisibly in us, and doth not only quicken but also strengthen and confirm our faith in him." (*Art.* xxv.) The Romish Church denounces an anathema, "if any say that there is not required in the ministers, while they perform and confer the Sacraments, at least the intention of doing what the Church does." (*Decret. Conc. Trid.* sess. vii. canon 11.) In opposition to this mischievous tenet, the Church of England teaches that "the effect of Christ's ordinance is not taken away by the wickedness" of the persons administering them; "nor is the grace of God's gift diminished from such as by faith and rightly do receive the Sacraments ministered unto them; which be effectual because of Christ's institution and promise, although they be ministered by evil men." (*Art.* xxvi.) For the Sacraments are federal acts, which it pleased Jesus Christ to institute, and to the due reception of which he has annexed certain benefits; but it is no where said in Scripture, nor is it agreeable to reason, that the efficacy of these holy ordinances should in any degree depend upon the worthiness of those who administer them. If the faults of ministers vitiate the Sacraments, no one can tell whether he has received the Lord's Supper or whether he has been baptized or not.

The doctrine of the Sacraments, as held by the Romish Church, is copiously discussed by Richard and Giraud in their *Bibliothèque Sacrée*, voce *Sacrement*, tom. xxi. p. 337—353. For the doctrine of the United Church of England and Ireland, and of the Protestant Episcopal Churches in Scotland and in America, the reader is referred to Dr. Barrow, *Doctrine of the Sacraments*, (*Works*, vol. i. p. 517, 518. folio;) Hooker, *Ecclesiastical Polity*, book v. sec. 50—57.; Bishops Burnet and Tomline, *On the Thirty-nine Articles*; and Dr. Waterland, *Charge on The Doctrinal Use of the Christian Sacraments*, (*Works*, vol. viii. p. 129—144.)

According to the Greek Church, "Jesus Christ established in his Church mysteries or holy ordinances, in which, under sensible signs, the invisible grace of God is communicated to believers." This Church holds that, in the New Testament, there are "seven mysteries, *viz.* Baptism, the Chrism, the Eucharist, Repentance, Ordination, Marriage, and the sanctified oil." (Platen, *Orthodox Doctrine*, translated from the Slavonian by Dr. Pinkerton, p. 171, 172, 175.)

Whan the orison was don of Palamon
His *sacrifice* he did, and that anon,
Full pitously, with alle circumstances.
Chaucer. The Knightes Tale, v. 2283.

For Troie in great deuocion
Came also with possession
Aynst this noble *sacrifice*
With great honour, and in this wise
Unto the gates thei it brought.
Gower. Conf. Am. book i.

SACRI-
FICE.

Both did their best, for neither now ran for a sacrifice;
Or for the sacrificers hide (our runners usual prize.)

Chapman. Homer. Iliad, book xxii.

Metellus, the high priest and chief sacrificer at Rome, had a
stutting and stammering tongue.

Holland. Plinie, book xi. ch. xxv.

The Lacedæmonians had a peculiar custom of sacrificing to the
Muses, which was either designed to soften and mollify their pas-
sionate transports, it being their custom to enter the battle calm
and sedate, or to animate them to perform noble and heroical ex-
ploits, deserving to be transmitted by those goddesses to posterity

Potter. Antiquities of Greece, vol. ii. book iii. ch. ix. p. 77.

The soothsayers inspected all the sacrifices, to presage the suc-
cess of the battle; and, till the omens proved favourable, they
rather chose tamely to resign their lives to the enemy than to de-
fend themselves.

Id. Ib.

Although his [Jephthah] vow run generally for the words,
Whatsoever shall come forth, &c., yet might it be restrained in
the sense, for whatsoever was sacrificable, and justly subject to
lawful immolation.

Sir Thomas Brown. Vulgar Errors, book v. ch. xiv. p. 310.

Homer did believe there were certain evil demons who took
pleasure in fumes and nidours of sacrifices; and that they were
ready, as a reward, to gratify the sacrificants with the destruction
of any person, if they so desired it.

Halliwell. Metampr. p. 102.

It being therefore a sacrifice so abominable unto God, although
he had pursued it, it is not probable the priests and wisdom of
Israel would have permitted it; and that not only in regard to
the subject or sacrifice itself, but also the sacrificator, which the
picture makes to be Jephthah.

Sir Thomas Brown. Vulgar Errors, book v. ch. xiv.

This observation will be of use when we come to consider the
Eucharist in its sacrificial view under a distinct chapter below.

Waterland. Works, vol. vii. p. 41.

Pliant and powerless now,
Like new-born infant wound up in his swathes,
Or victim tumbled flat upon its back,
That throbs beneath the sacrificer's knife.

Blair. Grave.

The law may be explained as an institution requiring perfect
obedience, and threatening judgment on every transgression; at
the same time accepting, in mercy, certain sacrificial atonements.

Gilpin. Hint 38. vol. iii.

SACRIFICE, (*Sacrificium*), among the old writers,
appears to have denoted rather the ceremonies of reli-
gious worship than the victim. But its import has not
been confined to this. Sometimes it designated the
victim consumed on the altar; sometimes any kind of
offering, whether consumed or not; and sometimes, in
the sense first alluded to, it was equivalent to *ιερουργια*,
or the worship, rites, and solemnities employed in the
offering, or in the consecration of gifts or persons to the
use or service of the Gods.

By the term Sacrifice, we now generally understand
an offering, wholly or in part consumed upon the altar.
Lactantius mentions a distinction between gifts or offer-
ings and Sacrifices: *Donum est quicquid auro argen-
toque fabricatur, etiam quicquid purpura et serico texi-
tur; Sacrificium est victima, et quæcunque in ara
cremantur.* (lib. vi. c. 25.) This is, perhaps, hardly
accurate enough even for that kind of definition which
our present purpose will need. It is not always neces-
sary that the victim should be burnt, to constitute a
Sacrifice in the common acceptation of the term. Sykes
observes of the Heathen Sacrifices, that those offered to
the Deities of the Ocean were cast into the sea, and it
was not always required that the victim should be
burned on the altar. It was enough that it was con-
sumed in some way, or rendered unfit for the use of the
offerer. Cruden's definition, therefore, will come nearer
our purpose in the term Sacrifice, as employed in this
article: "A Sacrifice differs from a mere oblation in

VOL. XXVII

this, that in a Sacrifice there must be a real change or
destruction of the thing offered, whereas an oblation is
but a simple offering of a gift."

SACRI-
FICE.

In Heb. xiii. 16. the application of the term Sacrifices
to works of charity and beneficence is figurative; indicating
that such works are agreeable to God, as are Sacrifices,
when presented not from any reliance on the mere of-
fering, but from faith in his covenant, and a desire to
please and obey him.

The history of Sacrifice and of the questions connected
with it obviously divides itself into two distinct streams:
the one taking its course through the nations involved
in Paganism; the other through the several dispensa-
tions of God's Church and people recorded in Scripture.
It must be evident also that each of these streams tra-
verses fields of inquiry through which, in a Work of this
kind, they cannot be traced in all their windings, but
only in a few principal and selected points; the principle
of selection being their possessing most interest to the
student or inquirer of the present generation.

Upon this principle little need be said upon the sever-
al kinds of Sacrifice in use among the Heathens; for it
is well known that there was an almost endless multi-
plicity of them. Egypt alone is said to have had no
less than six hundred and sixty-six varieties. The ge-
neral use, adoption, and observance of them also were
based upon such doubtful notions, such mixed and ca-
pricious views and motives, that the reduction of them
to any certain classes is a matter hardly to be accom-
plished. That in some instances their intent was similar
to that of some of the Jewish Sacrifices is true. Some
were regarded as piacular, some as eucharistic, and
some as vicarious. These points of resemblance would,
perhaps, prove little as to the intent of Sacrifice ante-
cedently to the time of Moses, inasmuch as the ideas
themselves might have been borrowed from the Jews
under the Law. And, if we assume that Sacrifice, being
so universal, must have taken its rise from the common
usage, before the dispersion at Babel, still we cannot, per-
haps, thence fairly conclude that it derived from the same
source the above, and not all other peculiarities, merely be-
cause certain Heathen Sacrifices in these points happened
to correspond with those under the Law. They may,
however, be auxiliary to other more conclusive reasons.

It is not questioned that the Heathen Sacrifices were
sometimes federal rites, as between the Deities and the
worshipper; but not so often, perhaps, as is generally
imagined. The solemnities of Sacrifice were frequently
used on great occasions for the purpose of ratifying and
giving greater weight to covenants. But the covenant
was usually between two mortal contracting parties, who
made the offering, and was not intended to refer federally
to the Deities to whom the offering was made. The inter-
vention of the Gods was called for, not as parties, but
as witnesses, to avenge the violation of the compact,
should such be attempted or meditated.

The notion of bribing their Deities by gifts, as well as
other barbarous and superstitious notions, prevailed
among the vulgar worshippers of the Heathens, but we
are not justified in thence concluding that any such
notion was involved in the Jewish doctrine of atone-
ment, or that the error took its rise from that quarter.
The operation of man's ignorance and corruption, when
left to his own devices and trusting in his own wisdom,
will sufficiently account for these errors. Indeed they
seem to stand as proofs and records of his folly for the
instruction and warning of the world.

SACRI-
FICE.

The notion of conciliating an offended or capricious Deity by gifts was not an unlikely one to arise in the mind of worshippers who had no worthy conception of his nature and perfections. But this will hardly apply to the rationale of piacular Sacrifices, of which the principle was reconciliation by shedding of blood, upon the presumption that the life of the offerer was forfeited. The abuse of this notion, and the doubt of the insufficiency of mere brute victims, seems to have given rise to the Sacrifice of human victims.

It is known to every reader that multitudes of perversions of Sacrifice prevailed among the Heathens, and that their worship was debased with the most deplorable superstitions, the vilest brutality and profligacy, and the most atrocious cruelties. The blood of human victims has streamed on the altars of idolatry. Even Greece and Rome, with all their proud pretensions to science and civilization, were disgraced by examples of this horrid practice. The Druidical wholesale murders are familiar to every one who has looked into the early history of this country. Yet sanguinary as were the rites of the Britons, their barbarities were cast into the shade by the still greater prevalence of human Sacrifice among the Scandinavian Tribes from which their invaders issued. Magee cites the authority of De Pauw, (*Rech. Phil. sur les Améric.* vol. i. p. 211.) asserting "that there is no nation mentioned in history whom we cannot reproach with having more than once made the blood of its citizens stream forth in holy and pious ceremonies to appease the Divinity when he appeared angry, or to move him when he appeared indolent." From the prevalence of this practice Magee argues how little likelihood there is in the supposition that "human reason could discover the sufficiency of repentance to regain the favour of an offended God." It was an acknowledgment of the necessity of an atonement, whether a sense of that necessity was derived from the common suggestions of reason, or from some source of revelation or tradition antecedent to the dispersion of mankind.

Every thing tends to carry back the origin of the mere rite of Heathen Sacrifice (not of course all its variations and conditions) to a point to which no profane testimony reaches, and of which only Scripture can give a satisfactory account, viz. the period when all the nations were one family and language. We must turn then to

The Scripture account of Sacrifice.

The first express Scriptural mention of it is in the case of Abel and Cain, (*Gen. iv.*) though the mention of the skins in which Adam and his wife were clothed has been supposed to indicate that they practised it; as the permission to eat animal food is not recorded to have been given till after the Flood, and consequently there is no assignable reason on record, except sacrifice, for which the beasts whose skins were worn should be slain. It is occasionally mentioned during the Patriarchal history, as being offered on remarkable occasions. And under the Law it is enjoined with much ceremonial accompaniment and various adaptations to different offences.

On these points all are agreed. But a great question has been raised upon the origin of Sacrifice, whether it was at first of Divine institution or of human invention, and afterwards adopted by God, and applied to the peculiar circumstances of the Jewish people. Instead of taking the controverted question in the order of time, and beginning with the discussion of the origin of Sacrifice, it will, perhaps, be a more convenient plan for the

purposes of this Article to give an outline of the different kinds of Sacrifice under the Law of Moses, and then to subjoin a summary notice of the questions as to its origin and primeval intent.

The Sacrifices under the Law.

The materials of the Jewish Sacrifices were various: some offerings consisted of animals—sheep and goats, doves and pigeons, bullock, cow, or heifer.

Other offerings were called meat offerings. Of these some were accompanied with drink offerings, and were composed of fine flour prepared with salt and oil, and kneaded into thick cakes or thin wafers. The drink offering was a libation of wine at the base of the altar. "Those meat and drink offerings," says Jennings, "were a sort of appendages to the Sacrifices; they were offered along with all the burnt offerings except of birds; and with the peace offerings, *Numb. xv. 3., &c.*; but not with the sin offerings, except that which was offered at the cleansing of a leper, *Lev. xiv. 10.*

"The meat offerings alone, which were not offered along with animal sacrifices, were either public or private. The public were the wave sheaf, *Lev. xxiii. 10, 11.* and the twelve cakes of shew bread, *Lev. xxiv. 5.* The private were either enjoined by the Law, as that of the Priest at his consecration, *Lev. vi. 20.*, and that which the jealous husband was to offer, *Numb. v. 15.*; or they were allowed in case of poverty, when the persons could not afford a more costly sacrifice, *Lev. v. 11.*

"The meat offerings were all of white flour, except that of the jealous husband, which was of barley meal without any mixture, and the wave sheaf, which was not ground into flour; all the rest were fine wheat flour seasoned with salt, *Lev. ii. 13.* Some were mixed with oil, frankincense, or both, *ver. 15.* Some were offered unbaked, others baked." (Jennings, *Jewish Ant.*)

The principal Sacrifices of the Law are classed under these four denominations:

1. *עֹלֹת*, burnt offerings or holocausts, which were burnt and entirely consumed, except the skin. These were esteemed the most excellent of all the Sacrifices.

2. *חַטָּאת*, sin offerings. These were not always burnt entirely as the former were. On ordinary occasions only the fat was burnt on the altar, some of the blood put on the horns of the altar, and part poured out at the foot of it. (*Lev. iv. 25, 26.*) The flesh was the Priest's due. (*Lev. vi. 25, 26.*)

On certain solemn occasions, however, they were to be entirely consumed, though not as the burnt offerings were, upon the altar, but without the camp; excepting the fat and kidneys, which were burnt on the altar.

3. *אֲשָׁמִים*, trespass offerings. These differ but little from the sin offerings, chiefly indeed in their being offered only for individuals, whereas sin offerings were sometimes used for the whole congregation. In all these three atonement was understood; the offerer, under a sense of sin, sought reconciliation with God, and readmission to the communion and benefits of the Church.

4. *שְׁלָמִים*, peace offerings, either of the flock or of the herd, male or female. The fat only together with the kidneys (and if they were sheep or goats, the rump or tail) were burnt upon the altar. (*Lev. iii. 3—5. 9—11.*) The breast and right shoulder (called the wave breast and heave shoulder) (*Lev. vii. 34.*) belonged to the Priests, to maintain them during their respective terms of attendance at the sanctuary. With the remainder the offerer made a feast with his friends. With

SACRI-
FICE.

SACRI-
FICE.

these peace offerings cakes of flour mixed with oil, leavened and unleavened, were offered and became the Priest's due. (*Lev. vii. 12. 13.*) The peace offerings were not, as the three former, offered under a notion of guilt contracted; but "the offerer was supposed," says Jennings, "to be at peace with God, and the offering was made rather in a way of thankful acknowledgment for mercies received, or as accompanying vows for the obtaining of further blessings; or as a means of preserving and continuing peace with God. Thus the peace offerings are distinguished into Sacrifices of thanksgiving, votive offerings, and voluntary or free-will offerings. (*Lev. vii. 11, 12, 16.*) The Sacrifice of thanksgiving, which the Septuagint renders *θυσια της αλυσσεως*, is evidently referred to in these words of the Epistle to the Hebrews: 'By him let us offer the sacrifice of praise to God.' (*Heb. xiii. 15.*) Some peace offerings were required by the Law to be offered at certain times and on particular occasions; as on the feast of Pentecost; (*Lev. xxiii. 19.*) by a Nazarite when he had accomplished his vow; (*Numb. vi. 14.*) and at the consecration of the Priest. (*Exod. xxix. 28.*) But generally it was referred to the devotion and free will of the people to offer these Sacrifices, when and how often they pleased." (Jennings, *Jewish Ant.* book i. ch. v.)

The three first kinds of Sacrifices were offered, as already stated, for various moral offences and ceremonial transgressions. Some were public offerings for the use of the whole people, and others, again, private, for the offences of particular persons. Of the several offences for which they were respectively appointed, the limits of this Article will not admit of an account. But a very good summary of them may be seen in Jennings's *Jewish Antiquities*, book i. ch. v., from which, chiefly, the above account has been drawn up.

That these Sacrifices under the Law had respect, not only to the peculiar circumstances of the Jews, but also to the great Sacrifice which was to be offered for the sins of the whole world, is laid down with a clearness and decision in the Epistle to the Hebrews, which can leave no doubt on the mind of the believer in the New Testament. They were *types*, and as such, the sacrificial terms are applied to Christ by the inspired writers, both in that Epistle and elsewhere. But relative to the origin of Sacrifice, whether it were, in its beginning, of divine or of human institution, there has been much controversy. In estimating the judgment of the early Christian writers, not only their weight, as *authorities* in this remote question, is to be taken into the account, but also the *bias*, which might dispose them both to receive favourably the notion of the human institution of Sacrifice. The Christians were taunted by their Pagan opponents as *atheists* because they despised Sacrifices, and, therefore, might not be unwilling to admit a tenet so decidedly adverse to this prejudice against their religion; for they could not be, with any show of reason, considered *atheists* for neglecting that which was of mere human invention. And, at the same time, the reluctance of the Heathen to abandon this rite would be increased if he found his opponents admitting its origin to be from God. Many of the old Fathers and some of the Jewish commentators adopted the human institution; and in more recent times, in our own country, the names of Warburton, Spenser, and Sykes have been chiefly distinguished among its advocates. Witsius, Law, and others have taken an opposite view; and, still more recently, the divine origin of Sacrifice has been powerfully

contended for in Magee's well-known Work on the Atonement. In 1825 the controversy was revived by an acute and learned theologian, the late Rev. J. Davison, whose general character claimed great consideration, and whose polemical skill in the Work in question attracted much attention. He took the side of the human invention of Sacrifice. His book was answered by the Rev. G. S. Faber, Rev. W. Vansittart, and the Rev. J. E. N. Molesworth.

Mr. Davison did not reply to any of these, and since that time the question has not been agitated.

The point at issue is argued upon the respective probability or improbability of the divine or the human institution. Upon Abel's Sacrifice, as referred to in the *New Testament*.

Upon the omission of any express mention of the divine institution of it antecedently to the giving of the Law.

Upon Adam and his wife being clothed in the skins of animals, antecedently to the recorded permission to use animal food.

Upon the prohibition to eat blood. (*Lev. xvii. 10—12.* compared with *Gen. ix. 4.*)

Upon the sense which the Jews would naturally put upon the phrases in which the Patriarchal Sacrifices were described.

Upon the peculiar character of Abraham's Sacrifice. (*Gen. xxii.*) Respecting this transaction, the writer of this Article has maintained an original theory, (*vide* Molesworth, *Answer to Davison*, p. 55—59. and, *St. Paul's Key to the Types of Gen. xxii.*) contending that, according to St. Paul, Isaac was not the type of Christ, but of all "the faithful," the spiritual seed of Abraham; that the type of Christ was the ram or male lamb, sacrificed instead of Isaac, the type of the faithful; that the restoration of Isaac, when his life was by his parent's act acknowledged to be forfeited, and the substitution of the victim, provided by God according to his promise, (*Gen. xxii. 8, 13, 14.*) typified the restoration of believers (the spiritual seed of Abraham) through the vicarious Sacrifice of Christ, the victim provided by God, and promised after the fall.

Upon Job's expiatory Sacrifice, (*Job i. 5.*) recognising the connection of atonement with Sacrifice, which could not belong to it antecedently to the Law, without divine appointment.

Upon the interpretation of a disputed passage. (*Gen. iv. 7.*)

Upon the nature and intent of the atonements under the Law, and their application to moral transgression. Upon certain special cases of moral transgression for which atonement is confessedly provided under the Law, but of which the force is sought to be nullified by explaining them only as "abatements or qualifications in the debility of the Law."

Upon St. Paul's account of the "debility of the Law," his describing it as the "ministration of death."

Upon the "progressive character" of God's dispensations.

Upon the notice of Abel's Sacrifice and the recognition of the typical character of the Sacrifices of the Law in the New Testament.

Upon the relation of the Sacrifice of Christ to the primeval promise of the seed that should "bruise the serpent's head," and the alleged continued traces of typical Sacrifice from that period till the fulfilment of the types in the Sacrifice of Christ.

SACRI-
FICE.

SACRI-
FICE.
—
SACRI-
LEGE.

A glance at this catalogue will satisfy the reader of the space which it would require to give a lucid view of the arguments on either side under each of these heads, and that such an attempt would be utterly incompatible with our limits. To those writers who have taken part in the controversy, and specially to Magee, we must refer those who desire to obtain a more complete view of the question.

We shall close this Article with remarking, that the conclusions deducible from the *human* institution of Sacrifice, if such could be established, however they might demand the acquiescence of our *faith*, would militate strongly against the general idea of God's pro-

ceedings, and especially against the apparent system of that dispensation of grace and salvation which was intimated even to our fallen first parents, and is the only refuge of all their posterity. For Dr. Magee has well observed, that those who ascribe Sacrifice to human invention are involved immediately in these consequences. They are thereby "compelled to account for the divine institution of the Jewish Sacrifices as a mere accommodation to prevailing practice; and, consequently, to admit the Sacrifice of Christ itself to have grown out of, and been adapted to, this creature of human excogitation."

SA'CRILEGE, } Fr. *sacrilège*; It. *sacrilegio*;
SACRILE'GIOUS, } Sp. *sacrilegio*; Lat. *sacrilegium*;
SACRILE'GIOUSLY, } *sacrum, legere*, i. e. *furari*, to
SA'CRILEGER, } steal: *et qui nocturnus divum*
SA'CRILEGIST. } *sacra legerit*, (Horace, *Satire* 1,
3, 117,) *legere*, to gather or take up; consequentially,
to take away, to steal.

To commit *sacrilege* is—to take away, to steal any thing *sacred*, or consecrated, or dedicated to holy or religious uses.

Thou that wlatist mawmetis, doist *sacrilegie*.
Wiclif. *Romaynes*, ch. ii.

For ghe han brought these men neither *sacrilegeris*, neither
blasfemynghe ghoure goddesse.
Id. *Dedis of Apostlis*, ch. xix. p. 127.

The thirde, whiche was after shamed,
Was Nabugodonosor named:
And he Hierusalem put vnder,
Of *sacrilege* and many a wonder
There in the holy temple he wrought.
Gower. *Conf. Am.* book v. p. 177.

Sacrilege is the diversion of holy and ecclesiastick things to prophane and secular use:—as Simeon and Levi, theft and *sacrilege* be evil brethren: theft robs thy neighbour, *sacrilege* thy God.
Spelman. *English Words*. Preface.

O Time, hadst thou preserv'd what labouring man hath done,
Thou, long before this day, might'st to thyself have won
A deity with the gods, and in thy temple plac'd;
But *sacrilegious* thou hast all great works defac'd.
Drayton. *Poly-olbion*, song 21.

O Holy Ghost, whose temple I
Am, but of mud walls and condensed dust.
And being *sacrilegiously*
Half wasted with youth's fires, of pride, and lust,
Must with new storms be weather-beat;
Double in my heart thy flame.
Donne. *The Litany*.

In the yeere 1535 the pope sent a messenger into Scotland, requiring king James to assist him against the king of England, whome he had decreed an heretike, scismatike, a wedlocke breaker, a public murtherer, and a *sacrileger*.

Holinshed. *Historie of Scotland*, Anno 1535.

The hand of God is still upon the posterity of Antiochus Epiphanes the *sacrilegist*.

Spelman. *History of Sacrilege*, sec. 6.

Nor was it unfrequent to punish notorious offenders, by dragging their remains out of their retirement, and depriving them of the graves to which they had no just pretension, as may appear from several instances. *Sacrilegious* persons were commonly thus treated.

Potter. *Antiquities of Greece*, vol. ii. book iv. ch. i. p. 174.

Plato makes it the necessary introduction to his laws, to establish the being and providence of the gods by a law against *sacrilege*. And he explains what he means by *sacrilege* in the following

words:—"Either the denial of the being of the gods; or, if that be owned, the denial of their providence over men; or, thirdly, the teaching that they are flexible, and easy to be cajoled by prayer and sacrifice."

Warburton. *Works*, vol. i. *The Divine Legation*, book ii. sec. 3. p. 345.

However, Psyche falls into the snare her sisters had laid for her, and, against the express injunction of the god, *sacrilegiously* attempts this forbidden sight.
Id. *Ib.* book ii. sec. 4.

SAD, } The Etymology of this word has
SA'DDEN, v. } scarcely been attempted. Minshew
SA'DLY, } derives from the Ger. *schatt*, shade,
SA'DNESS. } because *sad* people affect solitude (or the shade.) It seems clearly to be the past participle *sæt*, *sæd*, *sad*, of the A. S. verb *settan*, or *sætan*, *sedere*, *sedare*, to *set*, and to mean, *set*, *settled*, *sedate*.

A *sad* stone (so Wiclif renders *petra*, a rock) is a *set*, *fixed*, firm stone,—firmly set.

Sadness, (*firmitas*, *firmitas*, Wiclif,) is settledness, firmness, fixedness, stability. *Saddere men*, (*firmeores*), in Common Version, *strong*. R. Brunne uses *setness* (see SET) for *settlement*, *settled* agreement. *Sad*, then, is

Fixed, firm, compact, cohesive, heavy, dense, gloomy. *Sedate*, grave, serious, gloomy, melancholy, grievous, mournful.

A *sad* man is a *sedate*, grave man.

A *sad* fellow is one who does *serious* things, things of serious consequence; and, thus, a mischievous fellow.

Ich shal sei the my sone, seide the frere thenne
How seven sithes the *sadde* man, syngeth on the day.
Piers Ploughman. *Vision*, p. 167.

And whanne gret flood was maad the flood was hurlid to that house: and it myghte not move it, for it was foundid on a *sad* stoon.
Wiclif. *Luk*, ch. vi. p. 40.

But the *sad* fundament of God stondith hauynge this mark, the Lord knowith whiche ben hise.
Id. 2 *Tymothy*, ch. ii. p. 105.

But we *saddere* [*firmeiores*] men owen to susteyne the feblenesses of sike men, and not plesse to usself.

Id. *Romaynes*, ch. xv.

For we ben maad parcerneris of Crist, if nethes we holden the begynnynge of his substance *sad* in the ende.

Id. *Ebreyes*, ch. iii.

Though I be absent in bodi, bi spyryt I am with ghoul, ioiynge and seynghe ghoure ordre and the *sadnesse* [Common Version, *stedfastness*] of ghoure bileue that is in Crist.

Id. *Colocensis*, ch. ii. p. 98.

Therefore ye britheren bifore witinge kepe you silff, lest ye be disseiued bi error of unwise men, and falle awei fro youre owne *sadnesse*. [Common Version, *stedfastness*.]

Id. 1 *Peter*, ch. iii. p. 139.

SAD.

Thus saiden *sade* folk in that citee,
Whan that the peple gased up and down.

Chaucer. *The Clerkes Tale*, v. 8879.

Who so it bee that cleare of vertue, *sadde*, and well ordinate of
liuyng, that hath putte vnder foote the proude wierdes, and looketh
vpriht vpon either fortune, he maie holden his chere vndiscom-
fited.

Id. Boecius, book i. p. 409

Ther is no more to say, but est and west
In gon the speres *sadly* in the rest.

Id. *The Knightes Tale*, v. 2532.

For if that on have beautee in hire face,
Another stont so in the peples grace
For hire *sadnesse* and hire benigneitee,
That of the peple the gretest vois hath shee.

Id. *The Marchantes Tale*, v. 9463.

Whiche treaty was wysely handled by *sadde* and discrete coun-
sayle of both parties.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 278.

Whereby as I grant that it seemeth outwardlie to be verie thicke
and well doone : so if you respect the *sadnes* thereof, it dooth prooue
in the end to be verie hollow and not able to hold out water.

Holinshead. *Description of England*, book ii. ch. xxii.

Forth came that auncient lord, and aged queene,
Arayd in antique robes downe to the grownd,
And *sad* habiliments right well beseene.

Spenser. *Faerie Queene*, book i. can. 12.

ANT. Tell me, Panthino, what *sad* talk was that wherewith my
brother held you in the cloister.

Shakspeare. *Two Gentlemen of Verona*, act i. sc. 3.

And settl'd in his face I see
Sad resolution and secure.

Milton. *Paradise Lost*, book vi. v. 540.

VOLP. ————— Go,

Straight give out about the streets, you two,
That I am dead; do it with constancy,
Sadly, do you hear?

Ben Jonson. *The Fox*, act iv. sc. 1.

But, O my virgin lady, where is she?
How chance she is not in your company?

E. B. To tell thee *sadly*, shepherd, without blame,
Or our neglect, we lost her as we came.

Milton. *Comus*, v. 507.

CHLOE. But, sweet lady, say; am I well enough attired for the
court in *sadness*?

Ben Jonson. *Poetaster*, act iv. sc. 1.

— 'Tis my destiny
That you must either love, or I must die.

ANN. Comes this in *sadness* from you?

Ford. 'Tis pity she's a Whore, act i. sc. 2.

From off a hill whose concave womb re-worded
A plaintful story from a sisting vale,
My spirits to attend this double voice accorded,
And down I lay to list the *sad-tun'd* tale.

Shakspeare. *A Lover's Complaint*.

The limping smith observ'd the *sadden'd* feast,
And hopping here and there, (himself a jest,)
Put in his word, that neither might offend;
To Jove obsequious, yet his mother's friend.

Dryden. *Homer. Iliad*, book i. p. 145.

Thus joyful Troy maintain'd the watch of night;
While fear, pale comrade of inglorious flight,
And heaven-bred horror, on the Grecian part,
Sat on each face, and *sadden'd* every heart.

Pope. *Homer. Iliad*, book ix.

Man's feeble race what ills await,
Labour, and penury, the racks of pain,
Disease, and sorrow's weeping train,
And death, *sad* refuge from the storms of fate,

Gray. *The Progress of Poesy*, p. 149.

When I assert that the gloomy grandeur of some among his
moral writings communicates a sympathetic *sadness* to the reader's
mind, I by no means detract from his literary honours.

Knox. *Essays*, No. 92.

Warm Charity, the general friend,
With Justice, to herself severe,
And Pity, dropping soft the *sadly-pleasing* tear.

Gray. *Hymn to Adversity*, p. 147.

SADAF, in Arabic, is the pearl oyster-shell; (Avicenna, canon i. 241.) *sadaf-el-firfir*, the purple oyster-shell (*Ibid.*) is the *Murex* of the Ancients; hence *sadaf* is used for *purpura* in the old medical writers.

SADAF.

SADDLE.

SADAR, a corruption of the Arabic word *Sidar*, is the name of the shrub called *Lotus* by Herodotus, (iv. 177.) whence a people, on the Northern coast of Africa, between the modern Tripoli and Tunis, were called *Lotophagi*, (Lotus-eaters.) *Sidar* is the plural of *Sidrah*; and the fruit is called *nabk* or *nabikah*, a name commonly given to the tree also, at Caïro. It is the *Zizyphus*, or *Rhamnus Spina Christi* of Linnæus, (not his *Lotus*.) a small thorny tree, rather taller than plum or cherry, bearing a very palatable fruit of the size of an olive, and larger than the kindred jujube. It is found in all the more fertile parts of Northern Africa, as well as in Arabia and Palestine. Its fruits, it can hardly be doubted, are the *Baccas semper frondentis Acanthi* of Virgil. (*Georg.* ii. 119.) Figures of it are given by Prosper Alpinus, (*Hist. Nat. Egypt.* ii. 10.) Shaw, (*Trav.* p. 467. fig. 269.) and Sprengel, (*Geschichte der Botanik*, Altenburg, 1817, 8vo.) It is well described by the late M. Desfontaines in the *Memoirs of the Academy of Sciences*; (*An.* 1788, p. 443. tab. 21.) but erroneously spelt *Rabich* for *Nabec*, in Leo Africanus, (p. 257.) *Africae Descriptio*, Lugduni Batavor. apud Elzevir, 1632, 12mo.

Theophrastus, *Hist. Plant.* iv. p. 46.; Dioscorides, *De Mat. Med.* i. 171.; Athenæus, *Deipnosophist.* xiv. 18.; Scylax, *Periplus*, p. 48. ed. Hudsoni.

SA'DDLE, v. } A. S. *sadl*; Ger. *sattel*; D.
SA'DDLE, n. } *sadel*. Skinner is not content with
SA'DDLING, n. } the A. S. *sett*, a seat, from *settan*, to
SA'DDLER. } set or sed, but resorts to the Lat.

sedile.

A *saddle*, a seat on horseback; a *saddling*, a hollow, similar to that between the back and front of a *saddle*; a *saddle-hill*, shaped concavely like a *saddle*.

Sir Hugh of Cressyngham in armes nouht ne deiht,
For ridyng laucht he skam, out of his *sadelle* he fleiht.

R. Brunne, p. 298.

And er that Arcite may take any kepe,
He pight him on the pomel of his hed,
That in the place he lay as he were ded,
His brest to-brosten with his *sadel* bow.

Chaucer. *The Knightes Tale*, v. 2690.

Smarth was it and eke flete;
Gamelyn diddin a peire of
Sporis fast on his fete.

Id. *The Cokes Tale*, p. 610

Then, hurling up his harmefull blade on hy,
Smote him so hugely on his haughtie crest,
That from his *saddle* forced him to fly.

Spenser. *Faerie Queene*, book ii. ch. viii.

Of the *saddles* in use amongst us we find no mention in any ancient writers.

Potter. *Antiquities of Greece*, vol. ii. book iii. ch. iii. p. 13.

Here the land is low, making a *saddling* between two small hills.
Dampier. *Voyages*, Anno 1684, vol. i. p. 112. *Caldera Bay*.

It is a pretty high island, and very remarkable, by reason of two *saddles*, or risings and fallings on the top.

Id. *Ib.* Anno 1685, vol. i. p. 172.

Mr. John Dennis was the son of a *sadler*, in London, born in 1657.

Pope. *The Dunciad* book i.

There is, however, about three or four leagues to the south-west of it, and very near the shore, a remarkable *saddle-hill* which is a good direction to it on that quarter.

Cook. *First Voyage*, book ii. ch. vii.

SADDLE. On each side of this break the land is quite low; beyond the opening rises a remarkable *saddle-like* hill.

SADDUCEES.

Cook. Third Voyage, book vi. ch. iii.

For *saddle-tree* scarce reach'd had he
His journey to begin,
When turning round his head, he saw
Three customers come in.

Cowper. John Gilpin.

SA'DDUCEE, } Their tenets are expressed in
SA'DDUCISM, } the Quotation from Wiclif.
SA'DDUCIZE, v. }

For *saducees* seien, that no rising aghen of deede men is, neithir aungel, neither spirit.

Wiclif. Dedis of Apostlis, ch. xxiii.

For the *saduces* saye, that there is no resurrection, neyther angell, nor spirite.

Id. Bible, Anno 1551.

That earthly and cold disease of *sadducism* and atheism.

More. Song of the Soul. Preface.

Infidelity, or modern Deism, (which is little else but revived Epicureism, *Sadducism*, and *Zendichism*.)

Waterland. Works, vol. viii. p. 80.

Sadducizing Christians, I suppose, they were, who said, there was no resurrection, neither angel nor spirit.

Atterbury. Sermons, vol. ii. Preface.

SADDUCEES, in Hebrew צַדִּיקִים, the name of certain Jewish sectarians, of whose system the distinguishing features were, that they rejected tradition, and denied both the immortality of the soul and the resurrection of the body. If there were authors among them, their Works have perished, so that it is impossible to gather their opinions from their own statements; but the New Testament, Josephus, and the Rabbinical writings, all agree in the above representation of their peculiar tenets.

The origin of the Sect is not equally certain. The Rabbinical account, which most Christian writers have adopted, is this: Antigonus of Socho, a disciple of Simon the Just, whom the Jews make identical with Saddua, High Priest in the time of Alexander the Great, taught, that men should serve God, not from an expectation of recompense, but out of pure love. Sadoc and Baithos, two of Antigonus's disciples, mistook their master's meaning, and went forth and taught, that man has neither reward nor punishment to expect after this life. (See *Pirke Aboth*, c. i. 3. and Maimonides's Comment. on the place.) But this account, notwithstanding its general reception, is not very probable. It seems rather strange that two acute Jewish students should mistake so simple a doctrine, and still more so that they should never have been set right by their master; or, if they were so, that they should continue so incorrigibly obstinate as to persist in their own mistake, and to teach as the doctrine of Antigonus, that which he denied. If there had been only one so stupid or so obstinate, or if they had been two strangers who suddenly walked into his lecture-room, heard this one sentence, and then walked out again without hearing any thing more, the story would have had a little more probability: but that two of his regular students, who heard him every day, and were acquainted with his whole system, should so far mistake a proposition so simple, is altogether incredible. Besides, it is further said, that this Sadoc afterwards left Jerusalem and went to Samaria, and there attained considerable eminence amongst the schismatic Priests of the Temple built in that city. Now, if this be true, it is still more incredible that such a man, a deserter to the Samaritans, should ever gain many and influential followers amongst the Jews. The national

antipathy against every thing Samaritan was too great to suffer even the most abandoned of the Jewish nation to embrace the system or bear the name of a Samaritan Priest. Epiphanius, (*Hæres. xiv. lib. i.*) as cited by Drusius and most writers on this subject, says, "*Sad-ducees* is, by interpretation, *righteous*, for *sedek* is righteousness, and they named themselves righteous." This would lead us to suppose that the Sadducees originally called themselves צַדִּיקִים *Tsaddikim*, and not צַדִּיקִים *Tsaddukim*, and that, therefore, neither the Sect nor the name originated with Sadoc. It is true that the Rabbinical writers never give them this title, but this is no valid objection against Epiphanius's assertion. The Rabbies were accustomed to a sort of punning, which consisted in altering some of the letters so as to change the signification, and practised it particularly if the name of what they hated signified any thing good. Thus they have altered the Hebrew of our Lord's name יֵשׁוּעַ *Jeshua*, into יֵשׁוּ *Jeshu*, so as to signify a fearful imprecation against his name and memory; and the Greek name of the Gospel they write Αὐτοῦ, so as to turn "good tidings" into "a revelation of iniquity." (See Buxtorf, *Lex Talm. in Rad.*, אָוֶה.) It is, therefore, highly probable that, if the hostile Sect called themselves *Tsaddikim*, righteous, they would alter the name into *Tsaddukim*, Sadducees, which would contain an allusion to Sadoc, the apostate Priest; and this alteration in the name probably gave rise to the story of Sadoc's founding the Sect.

The rapid progress of Pharisaism accounts more satisfactorily for the rise of the antagonist party. The attempt of the Pharisees to impose their doctrines and traditions on the Jewish Church naturally called forth the opposition of those who did not choose to be burdened with human inventions, and at length organized them into a Sect. The first Sadducees probably contented themselves with rejecting tradition, and asserting the sufficiency of Scripture. It is at least certain that there was a Sect, a remnant of which continues to this day, which rejects tradition, but believes in the fundamental doctrines of the immortality of the soul and the resurrection of the body; and Maimonides asserts that this Sect, the Karaites, was derived from the Sadducees. The love of opposition, however, led the more zealous to deny, first, that the doctrine of a future state and of the resurrection of the body was taught in the Law of Moses, and ultimately to deny it altogether. It appears from the anathemas of the Pharisees against all who should deny that the resurrection was taught in the Pentateuch, (*Sanhed. c. ii.*) that the first and main object of dispute between them and the Sadducees was not the doctrine of the resurrection generally, but whether it had been taught by Moses. As the Pharisees maintained the affirmative, the Sadducees of course asserted the negative, and the letter of the Mosaic Law seemed most in their favour. Being a national Law, and nations existing only in time, its promises and threats were all of a necessarily temporal nature; the Sadducees therefore falsely concluded from the absence of eternal promises, that the resurrection was not even implied. They asserted truly, that the sanctions of the Law, as regarded the nation, were only temporal, but they inferred falsely that what was true of the nation was also true of individuals. The Lord Jesus Christ showed that the doctrine of a future state was implied in the promise to Abraham; and the laws against

SADDUCEES.

SADDUCEES. seeking counsel of the dead (*Deut. xviii. 11.*) plainly intimate the belief in a state of existence after death.

SAFFRON.

It has been a matter of dispute whether the Sadducees believed in the divine authority of the Prophets and Hagiographa. Some think this impossible, because such a belief seems inconsistent with their peculiar errors respecting the resurrection and the existence of angels; but this inference does not seem sufficient to counterbalance the want of historic evidence, and much less to invalidate the testimony which Lightfoot (in *John iv. 35.*) has adduced from the Talmud to prove that they received all the canonical books. The rationalism of the Germans and modern Socinians shows how easy it is to explain away the plainest language; and Maimonides and Abarbanel, both traditionists, have not scrupled to deny the real and permanent existence of angels, wherever it seemed to interfere with their own system or to favour that of Christians.

The history of the Sadducees does not present many events of interest. They sometimes had influence, as in the time of John Hyrcanus, and again in the days of Alexander Jannæus, when, if the Rabbies say truth, all the members of the Sanhedrim except one were Sadducees. But their power never lasted long, nor did their influence ever become universal. The bulk of mankind are more easily duped by superstition and fanaticism than by scepticism, and therefore their rivals, the Pharisees, were the most successful in gaining the affections and ruling the consciences of the multitude. After the dispersion, all historic traces of the Sect are lost. The troubles of the times probably compelled them to submit to the ordinances of the traditionists, who thenceforward monopolized the name of Jew. It is said that the Sect continued for many centuries, and that one Ananus, about the year 1255, revived and extended it; but the testimony is not sufficient to establish any thing more than this, that there have been individuals amongst the Jews in various ages holding Sadducean opinions, as there are also at present. There is no proof of a continuation of the original Sect. Indeed it would be difficult to imagine how it could possibly exist for any length of time after the expulsion from the land of Israel. Their principle was to observe nothing but what was commanded in the Mosaic Law. But this Law gives no directions about synagogues, nor public prayer, nor any kind of worship, except that of the Temple, which could not be observed in the captivity. A Sect, therefore, which had no place nor order of public worship, and no bond of religious union, could not possibly last long.

Consult Drusius, *De Trib. Sect.*; Scaliger, *Elench. Trihæres.*; Basnage, *Hist. des Juifs*, liv. ii. 12, 13.; Lundius, *Jüdische Heiligthümer*, lib. iv. ch. xii.

SAFFRON, n. } Fr. *saffran*, *saffranée*; It. *zafferano*; Sp. *azafran*; Ger. *saffran*; D. *saffraen*. *Vox Arabica*, a *flavo colore desumpta*, Wachter. See also Menage, and the Quotation from Fuller, *infra*.

It. *saffrano*, from the Arabic *za'ferân*, the *crocus*, צפרן in Chaldee, is probably from the Arabic.

To tinge or stain with yellow, or *saffron* colour.

And in Latin I speke a wordes fewe,
To *saffron* with my predication,
And for to stere men to devotion.

Chaucer. *The Pardoner's Tale*, v. 12218.

His here, his berde, was like *saffron*.

Id. *The Rime of Sire Thopas*, v. 13660.

And so a solemn interview was appointed; but, as the poets say, Hymen had not there his *saffron-coloured* coat.

Give us bacon, rindes of walnuts,
Shells of cockles, and of smalnuts;
Ribands, bells, and *saffron* linnen,
All the world is ours to winne in.

Ben Jonson. *Song* 28. p. 526.

The principall *saffron* groweth in Cilicia, and especially upon the mountaine Corycus, there; next to it, is that of Lycia and namely upon the hill Olympus: and then in a third degree of goodnesse, is reckoned the *saffron* centuripinum in Sicilie.

Holland. *Plinie*, book xxi. ch. vi.

Plenty hereof in this county, growing about Walden, a fair market town; which *saffron* may seem to have coloured with the name thereof. It is called (as Serapione affirmeth) *sahafaran* by the Arabians, whence certainly our English word is derived.

Fuller. *Worthies. Essex*.

SAG, v. supposed to be a corruption of *swag*. It is the Goth. *sig-uan*; A. S. *sig-an*, *asig-an*, *cadere*, *de-labi*, *subsidiere*; Ger. *sieg-en*; Scotch, *to segg*. See Jamieson; also Nares, and Mr. Moore's *Suffolk Words*.

To fall, to sink, to subside, to settle; to move along, as if sinking or dragged down.

The raine I sway by, and the heart I bear,
Shall never *sagg* with doubt, nor shake with fear.

Shakspeare. *Macbeth*, act v. sc. 3.

Syrinx the faire! from whom the instrument
That fills your feasts with joy, (which when I blow,
Drawes to the *sagging* dug milke white as snow)
Had his beginning.

Browne. *Britannia's Pastorals*, book ii. sec. 4.

This said, the aged street [Watling] *sagg'd* sadly on alone.

Drayton. *Poly-olbion*, song 16.

Sure I am, no hospital is tyed with better or stricter laws, that it may not *sagg* from the intention of the founder.

Fuller. *Worthies. London*.

SAGATHY, perhaps the Fr. *sayette*, *saitte*, very coarse silk. And see the Quotation.

I have given myself some time to find out, how distinguishing the frays in a lot of muslins, or drawing up a regiment of thread-laces, or making a panegyrick on pieces of *sagathy* or Scotch-plod, should entitle a man to a laced hat or sword, a wig tied up with ribands, or an embroidered coat.

Tatler, No. 270.

SAGE, adj.

SAGE, n.

SA'GELY,

SA'GENESS,

SAGA'CIOUS,

SAGA'CIOUSLY,

SAGA'CIOUSNESS,

SAGA'CITY.

Sage, seeing or foreseeing, provident or prudent, wise. *Sagacious*, seeing clearly; quick or sharp sighted; quick scented.

As Tullius can determine,
Which in his time was full *sage*,
In a booke he made of age.

Chaucer. *The Romant of the Rose*, p. 209.

In whose tyme sikerlich the seven *sages* were
In Rome ydwelling decently.

Id. *The Marchantes Second Tale*, p. 641

This *sage* then in the starres had spyed the fates
Threatned him death without delay.

Id. *The Death of Zoroas*, p. 443.

And, if by lookes one may the mind aread,
He seem'd to be a *sage* and sober syre.

Spenser. *Faerie Queene*, book ii. can. 1.

SAFFRON.

SAGE.

SAGE.

To *sage* philosophy next lend thine ear,
From heaven descended to the low-rooft house
Of Socrates, see there his tenement,
Whom well inspir'd the oracle pronounc'd
Wisest of men.

Milton. *Paradise Regained*, book iv. v. 269.

Within the walls then view
The schools of ancient *sages*; his who bred
Great Alexander to subdue the world,
Lyceum there, and painted Stoa next.

Id. *Ib.* v. 247.

To whom our Saviour *sagely* thus repli'd.
Think not but that I know these things, or think
I know them not; nor therefore am I short
Of knowing what I ought: he who receives
Light from above, from the fountain of light,
No other doctrine needs, though granted true.

Id. *Ib.* v. 282.

Yourselfe knowe four or five, which as in all good learninge,
vertue, and *sagenesse*, they geve other men example what thinge
they should do, even so by their shootinge they plainlye shewe
what honest pastime other men geven to learninge may honestlye
use.

Ascham. *Works*, book i. p. 77. *Toxophilus*.

So seated the grim feature, and upturn'd
His nostril wide into the murkie air,
Sagacious of his quarry from so far.

Milton. *Paradise Lost*, book x. v. 279.

That instinct suggests to them every where what is most for
their safety, and makes them many times *sagacious* above our
apprehension.

More. *The Immortality of the Soul*, book iii. ch. xiii.

Wherefore they *sagaciously* apprehended that there must needs
be some other mystery or intrigue of nature in this business, than
was commonly dream'd of or suspected.

Cudworth. *Intellectual System*, book i. ch. i. p. 33.

It cannot be imagined, that either he should foresee events so
clearly, or spy opportunities so *sagaciously*, or weigh things so
impartially, or deliberate so calmly, or transact so cautiously, as
the man that is free from those manifold prepossessions which his
mind is fraught with.

Sharp. *Works*, vol. i. p. 33. *Sermon 2*.

Where this love is not only called *πολυμητις*, of much counsel
or *sagaciousness*, which implies it to have been a substantial and
intellectual thing, but also *πρεσβυτατος*, the oldest of all, and there-
fore senior to chaos, as likewise *αυτοτελης*, self-perfect or self-ori-
ginated.

Cudworth. *Intellectual System*, book i. ch. iv. p. 259.

I have a sense of something in me while I thus speak, which I
must confess is of so retruse a nature that I want a name for it,
unless I should adventure to term it divine *sagacity*, which is the
first rise of successfull reason, especially in matters of great com-
prehension and moment.

More. *Philosophical Writings*. *Preface*, p. vii.

Nor thee, his ancient master, laughing *sage*,
Chaucer, whose native manners-painting verse,
Well-moraliz'd, shines through the gothic cloud
Of time and language o'er thy genius thrown.

Thomson. *Summer*.

Another sensible evidence of a divine providence is, the *saga-
cious* providence of things that have no foresight in themselves.

Scott. *Christian Life*, part ii. ch. iv. p. 258.

A quickness in the mind to find out these intermediate ideas
(that shall discover the agreement or disagreement of any other)
and to apply them right, is, I suppose, that which is called *sagacity*.

Locke. *Of Human Understanding*, book iv. ch. ii.

Oh they are in their generations wise,
Each path of interest they have *sagely* trod,—
To live—to thrive—to rise—and still to rise.

Smart. *Ode 7*.

The world grown old her deep discernment shews,
Claps spectacles on her *sagacious* nose,
Peruses closely the true Christian's face,
And finds it a mere mask of sly grimace.

Cowper. *Conversation*.

Natural *sagacity*, improved by generous education, and exercised
in a civilised community, was enabled to make just conclusions

concerning the powers, the passions, the duties, the vices of man
as an individual, and as connected with others in his domestic,
social, and civil relations.

Knor. *Essays*. No. 22.

SAGE, Fr. *sauge*, *saulge*; It. *sàlvia*; Sp. *salvia*,
Lat. *salvia*, from *salvere*, *hoc est*, *salvum esse*.

A herb so called on account of its salutary efficacy.

Our moderne herbarists in these daies, doe call that in Latine
salvia, i. *sange*, which the Grekes name Elelisphacos. An hearbe
it is much resembling mints, of a grey and hoarie colour, and
withall odoriferous.

Holland. *Plinie*, book xxii. ch. xxv.

SAGHALIEN, a large island in the Sea of Okhotsk,
lying between 45° 45' and 54° 35' N., and opposite to
the mouths of the great river Amúr, is separated from
the continent by so narrow a strait as to have been sup-
posed by Admiral de Krusenstern to be a peninsula.
Its true name is Tarakaï, or Taraïkaï, as we learn from
the Japanese, to whom its Southern districts once be-
longed, and by whom alone the strait between it and
the land of the Mancheús has been explored. By them
it is called Karafutó, or Karaftó, and sometimes Oku-
Ye-zo, (Upper Yezo,) or Kità-Yezo. (Northern, or
Khitá (China) Yezo.) By La Pérouse it was named
Chóka, from its largest village. Saghalien is a cor-
ruption of Sakhalian anga-khada, i. e. Black Mouth
Rock, the Mancheú name of the mouth of the Sakhalian-
ula, (Black River,) or Amúr. (Klaproth, *Asia Polygl.*
p. 292. 301.) From that phrase found in the Manchú
Chinese Maps which furnished D'Anville with materials
for this part of his Map of Asia, the word Saghalien was
transferred to the island, where it is still marked as the
name of the Southern division. Karaftó, also called
Narubesi, (Klaproth, *Sankokf Tsou Ran Sets*, p. 189.)
has an irregularly oblong form, and extends due
North and South for about 450 miles, with an average
breadth of about 50 miles. Its Southern extremity is
separated from the island of Ye-zo, improperly called
Matsmaï, (*Sankokf*, p. 182.) by the Strait of La Pé-
rouse. On the West, a channel varying much in breadth,
the Strait of Tessoï of the old, the Gulf of Tartary of
modern Maps, but called M'amia-no Sets (Mamia's
Strait) by the Japanese, separates this island from the
main land, to which it approaches a little way Southwards
of the mouth of the Amúr, so near as to leave a channel
of only four or five miles, which appears to be encum-
bered with sand. This strait was laid down in 1808
by Mamia Rinsöo, from whom it is named, and since
that time more accurately by order of the Japanese
Government. (*Nouv. Journ. Asiat.* iii. 393.) Copies
of this survey were brought to Europe by the enter-
prising Dr. Siebold, (*Bulletin de la Société de Géo-
graphie*, *deux. série*, iv. 57.) and M. de Krusenstern
has candidly abandoned the opinion given in his voy-
age, (*Reise um die Welt*. ii. 191.) but ably combated
by M. Malte-Brun in his *Précis*, (iii. 461.) A chain of
lofty, snow-clad, rugged, and impassable mountains
traverse the island as far as latitude 50° N., whence
they sink into sandy downs to its Southern end, where
the soil appears to be very productive. (*Voyage de la
Pérouse*, iii. 40. 43. iv. 73.) The North-West districts
are inhabited by the Smeren Tribe opposite to the San-
tans* (Saldans of Krusenstern) and Mancheús. (*Sankokf*,
p. 189.) The Eastern coast appears to be uninhabited,
though full of woody valleys. The natives of the island
are Aïnos, called Mo-zin, (in Chinese Mao-shin,) i. e.

Amúr. (*Nouv. Journ. Asiat.* iii. 394.)

SAGHA-
LIEN.

shaggy-skin, by the Japanese, who represent them as having their bodies almost entirely covered with thick hair. (*Oriental Collections*, vol. iii. pl.* p. 137.) Different branches of this race occupy the whole tract from the Southern part of Kamchatka to the Southern extremity of the Island of Ye-so,† or Yezo, (*i. e.* shrimp barbarians,) so named by the Japanese from its inhabitants, who call themselves *Aïno*, *i. e.* Man. *Kuril*, whence the Russians have named the neighbouring islands *Kuril'skiya Ostrovà*, is probably derived from the *Aïno* word "*kur*," "race," "tribe;" (Klaproth, *Asia Polygl.* p. 300.) and the Southern point of Kamchatka has, in like manner, been called *Kuril'skaya Lopatka*, *i. e.* "the Kurilian Shoulder-blade, or Shovel," from its form and inhabitants, who said they were "*kúr*," *i. e.* a "tribe." The *Aïnos* have a peculiar language, of which M. Klaproth has published a Vocabulary; (*San Kokf*, p. 242. *Asia Polygl.* p. 302.) but in features they bear some resemblance to the Japanese. They are, however, taller and stouter, have thick, black, curly hair, and beards almost covering their face; their eyes are not so dark, but their complexion is darker than that of their Southern neighbours. They are gentle and timid, frank and honest; active and skilful in diving, fishing, and the use of the bow. On the chase and their fisheries they depend for the principal part of their food. "They are unacquainted," says a Japanese writer, (*San Kokf*, p. 185.) with the art of writing, the value of precious things, husbandry, or weaving. Their clothes are made of the fibres of plants, the bark of trees, or the skins of beasts. They supply the Russians with sea-otter-skins, (*rakko*, in the *Aïno* tongue *yeri*,) and receive in return sugar, pepper, and brandy. (*Ibid.* p. 199.) Salmon, (*sake*,) herrings, (*kado*,) sea-worms, (*becho do mar*, or *tripang swálá*,) and sea-ears, (*awabi*,) are found in their seas, and the latter are eagerly bought up by the Chinese and Japanese. The best sort of sweet sea-weed (*Fucus saccharinus*; *kumbu*, in Chinese, *kwen-pu*) is found near the South-East coast of this island. The Government of the *Aïnos* is patriarchal, the richest or oldest man in the community has supreme authority, and all disturbers of the public peace are banished. (*Nouv. Journ. Asiat.* vii. 71. 78.) Their huts are sheds formed of grass and rushes, and placed over holes sunk in the ground, and in the Northern tracts they are plastered over with mud. A mat, fishing and hunting implements, and a few pots, are all their furniture. Their faces are tattooed, and the mistress of the house is distinguished by the blue or green paint round her mouth. The mother of the family frequently suckles a bear's whelp, (*Ibid.* p. 75. *San Kokf*, p. 236. *Orient. Collect.* pl. p. 137.) for the purpose of fattening it, and killing it in winter; for bear's flesh is considered as a great luxury, and their gall is a sovereign remedy for many diseases.

The Japanese say that the *Aïnos* have no religion; but at the same time acknowledge that they pray and sacrifice to the Gods. They reverence, and probably adore, the heavenly bodies, and pray daily to *Kotan Kara Kamoï*, (God of the House and Yard,) represented

by a pole five feet high erected near their huts. They believe likewise in Heaven and Hell, and carry about portable temples, obtained probably from the Japanese, whose customs they delight in imitating. (*San Kokf*, p. 241.) They have an annual feast called *Omsia*, at which they partake largely of bear's flesh and *rake*, (brandy.) Members of the same family generally intermarry with each other, but not the nearest relations.* The women are said to be very faithful, and more scrupulous about uncovering their bosom than any other part of their bodies. The men have from four to eight wives, each of whom lives apart from the rest. Adultery is not severely punished. The adult males are distinguished by a kind of hat, which answers the same purpose as the *toga virilis* of the Romans. After death, the body is clothed in a new dress, wrapped up in a mat, and burned, and its ashes, deposited in a chapel, are venerated for some years; but the Southern *Aïnos* embalm the bodies of the deceased, and preserve them in a richly carved sepulchre, which they visit annually, evidently in imitation of their Japanese neighbours. They cover their heads as a sign of mourning, and continue to do so for several years. The children of those who have been killed make a mock-fight, and offer their blood to *Kamoï*, their household God. The Japanese say they have never been able to convert and civilize them; none but the Missionaries of the *Zioódo-sin-siá* (the new observance of the Land of Purity, *i. e.* the Religion of Fo) have had any success. It seems most probable that so simple and free a people as the *Aïnos* are little disposed to adopt the rigorous and sanguinary despotism of the Japanese. M. Klaproth has shown that *Tarái-kaï* is probably the country called *Ta-han* and *Lyeú kweï* by the Chinese in the VIIIth Century. (*Annales*, p. 5.)

Klaproth, *Asia Polyglotta*, Paris, 1823, 4to.; *Annales des Empereurs du Japon*, Paris, 1834, 4to.; *Aperçu Général des trois Royaumes*, Paris, 1832, 8vo.; *Nouveau Journal Asiatique*, Paris, v. y. 8vo.; *Malte-Brun, Précis de la Géographie*, Paris, v. y. 8vo.; *Vsévoljsky, Dictionnaire Géographique de l'Empire de Russie*, Moscou, 1813, 8vo.

SAGINA, in *Botany*, a genus of the class *Tetrandria*, order *Tetragynia*, natural order *Caryophyllæ*. Generic character: calyx four-leaved; corolla, petals four; capsule four-celled, four-valved, many-seeded.

Four species, natives of Europe; *S. procumbens*, *apetala*, and *erecta* are natives of England.

SA'GITTAL. Vossius details various Etymological conjectures; from *sagaci*, *i. e.* *veloci ictu*; from Gr. *σαγμα*, *theca clypei*, from *απίδος*, (*præmissos*), oblique case of *απίς*, *ferrea cusps*, or from *σαγί*, *omnia armorum genera*. Tooke affirms the Lat. *saggitta* (pronounced *sag-hitta*) is the past participle *skit* of the A. S. verb *scytan*, to shoot, to throw, to cast forth.

Belonging, pertaining to, or resembling an arrow.

* In the *San Kokf*, on the contrary, it is said, (p. 232.) *Chez les Yeso, un frère épouse sa sœur*: but Dr. Siebold (*Nouv. Journ. Asiat.* vii. 76.) differs in many things besides this from that Work.

SA-
GITTAL.
—
SAGO.

The way of finding them is, by passing one string from ear to ear, and another from the nose to the crown of the head. The former of these will show you the coronal suture, the second the sagittal, which usually begins where these lines intersect.

Wiseman. Surgery, book v. ch. ix.

SAGITTARIA, in Botany, a genus of the class *Monoecia*, order *Polyandria*, natural order *Alismaceæ*. Generic character: male flower, calyx three-leaved; corolla, petals three; filaments nearly twenty-four: female flower, calyx and corolla as the male flower; pistils many; capsule aggregated; one seed.

Ten species, natives of Europe, North America, and the East Indies; *S. sagittifolia* is a water-plant, native of England.

SA'GO', or **SA'GU'**, signifies, in the Maláyú language, the pith of a kind of palm, (*Sagus* of Gærtner; *Metroxylon* of Koenig in the *Annals of Botany*.) indigenous in the Eastern side of the Malayan Archipelago, from Celebes to New Guinea.* This pith, when separated from the fibres which it encloses, crumbles into a fine meal, which, though not quite so palatable or nutritious as that of bread-corn, is a very good substitute for it. When granulated and dried, the paste of this meal forms the Sago of our *Pharmacopæias*, well known as an agreeable mucilage. A similar substance may be obtained from the internal pith of most palms: and some of the Sago imported into Europe is extracted from the Sagueiro, (Sago-tree, in Portuguese,) the Gomúto of the Malays; (*Saguerus Rumphii* of Roxburgh; *Arenga saccharifera* of Labillardière; *Mémoires de l'Institut*, tom. iv. An. xi.; Rumph. tab. xiii.) the grain of which is commonly called Ságu Burní, (Rumphius, *Hortus Amboinensis*, i. 64.) and is probably no way inferior to the true Sago, as Rumphius adds, "from which grains a pleasant broth is cooked." (*Van welke korreltjes men een smaakelyken bry kookt.*) The *Caryota urens* (in Maláyú called Nibóng besár) is also called Saguaster by Rumphius, (i. 65. tab. xiv.) because its pith yields Sago, but much inferior in taste and value to that of the Rambiyá Labí or true Sago-tree, the *Sagus*, sive *Palma farinaria*, of that writer, (i. p. 72. tab. xvii.) This tree, one of the lowest of the palm tribe, has, like the date-palm, long the appearance of a large bush, with tall, upright fronds, sometimes twenty feet high, armed with rows of sharp thorns; a providential defence against the attack of wild boars, who would otherwise root up the trees for the sake of their pith. The frond is feathered, and its leaflets point upwards, while those of the coco-nut (*kalápa*) point downwards, a difference which distinguishes those trees at first sight. The stem, when once formed, rises with great rapidity, and has the same diameter at first as at its full growth. It consists of the sheaths forming the base of the fronds, which fall off alternately, and leave a solid tube about two fingers thick, and notched outside by the midrib of the leaves. The stalk and edges of the leaves are thorny, but when about twelve feet high, the tree loses all its larger thorns. The shoot whence the fronds issue is from twelve to fifteen feet long, and exceeds that of any other of the tribe except the Nípah;

* It may be remarked that Mr. Crawford's argument, derived from the number of different names given to the Sago-palm, loses much of its force when we observe that these names are all but one (*húda*) etymologically identical; for *Labí*, *Lapiyá*, *Rambiyá*, *Rombiyá*, and *Romihó*, are merely dialectic variations of the same word, which is probably a derivative of *rambái*, or *rombái*, "fringed," "tasselled." *Húda* is the Ternatian name of the *Rambiyá*.

(*Nípah fruticans*, Rumph. tab. xvi.) some feet of SAGO. its summit may be cut off without injuring the growth of the tree, and the fibres of this shoot when twisted form a strong cord; but the tree itself rarely attains the height of thirty feet. When it has reached maturity, usually before it is thirty years old, its fronds become white and mealy, and it shoots out from the centre of them a pointed spathe or sheath three feet in height, out of which, when opened, there issues a large corymb, with branches formed by sheathing scales, from which the male and female flowers spring. The latter are succeeded by a nut, the shell of which is covered with closely adherent scales, and so much resembles the cone of a fir-tree, that the old Botanists called the plant *Palma-pinus*. The native soil of this palm is a bog, nor can it exist without an abundant supply of water. If not belonging to the same genus, it is closely allied to the African palms called *Raphia* by M. Palisot de Beauvois, and *Ruffia* by M. Bory de St. Vincent. (*Voyage aux Quatre Isles dans les Mers des Indes*.) The former of these travellers has given, in his splendid Work on the plants of Benin, (*Flore d'Oware et de Benin*, i. tab. x. fig. 1.) an excellent figure and a complete description of one species of the wine-palm, (*Raphia vinifera*.) The Sago-tree is rarely suffered to come to maturity, as in that case its pith is all absorbed by the inflorescence; but when it has attained the proper age, a short time before the flowering sheath appears, it is cut down near the root, sawed asunder crosswise into several portions, which are then cut in half or into slices lengthwise; from these the pith is scraped out into a trough, at one end of which hangs a coarse sieve made of the fibrous web (*rúnut*) of the *kalápa*. (*Cocos nucifera*.) The soft pith falls through this sieve into water, and leaves the stringy fibrous part behind. After one or two washings, the meal or starch is fit for use. It is then called *ságú mantah*, (raw Sago,) and will keep for a month. Cakes or loaves of Sago-bread are made by simply filling the divisions of an earthen pan, called *bátú ba-pondi*, (stone cell,) (Forrest, *Voyage to New Guinea*, pl. 27.) previously heated, with the dry meal, which is supplied as often as wanted. These cakes, moistened in coco-nut milk, with water, salt, capsicum, and spices, make an excellent soup, says Rumphius, (i. 80.) but when dissolved in warm water, and seasoned with fish sauce and lemon juice, they form *papeda*; "a savoury dish," he adds, "for those who have been drunk the day before, as it drives away vapours, salves a hoarse throat, and makes a turned stomach hungry again." The paste made of the meal mixed with water is rolled into small grains of the size of coriander seed, (Rumphius, i. 64.) and is then the Sago of our shops.

Nor is this all the benefit that can be derived from the Sago-tree. The tough coating, called *kurúrong*, which surrounds the root of the fronds, is gun-shot proof, of the consistence of tough leather, and a proper material for buckets, troughs, &c.; the midrib of the dead fronds, called *gabba-gabba*, makes excellent poles and posts; the fronds themselves, with their leaves, furnish thatch, (*atap*.) and the fibres of the spathes thread; but when the *gabba-gabba* is not well seasoned, it contracts and makes the wall of a house like a row of organ-pipes. (Rumphius, i. 81.) The palmito, heart or cabbage of this palm, is supposed to bring on dropsy and diarrhoea, and is not so palatable as that of the Nibóng, (*Caryota urens*), or the *Kalápa*, (*Cocos nucifera*.)

SAGO. The fermented liquor called Sagwire, or, more properly, *Sagueiro*, from the Portuguese name of the tree producing it, is rarely, if ever, obtained from the Rombiyá, or true Ságú. It is the Gomúto (*Gomutus Rumphii*, *Hort. Amb.* i. 57. tab. xiii. *Borassus Gomutus*, Loureiro, *Flora Cochinchinensis*, p. 618.) which furnishes the Eastern islanders with that liquor. This is a low monoecious palm which, though feathered, differs greatly from the Sago; its fruit-sheathes come out below the fronds; nor does it yield any thing profitable besides its wine, and the tough hairy fibre round its trunk, (*rúnut*), which can be easily manufactured into very strong and durable cables. In order to procure the vinous fluid, the stem of a female spadix or fruit-stalk is bruised and pommelled for two or three days successively to make it soft and pliant, and is then cut off near the parent trunk; a bag of kurúrong, or a joint of bambú, being suspended under it to receive the fluid discharged. The bag is emptied twice a-day; and when first tapped or tyffer'd, as the Dutch say, (from the Portuguese word *tifár*), two or three trees will fill a large jar (*tapáyang*) in the course of one day.

The Sagwire, or Sagueiro, is at first clear and sweet, in colour and taste exactly like fresh towák, (toddy,*) or new wine, (must,) but when it has stood a little it becomes thick, whitish, and rather sharp and biting to the tongue. When fresh, it is considered as unwholesome; but its noxious qualities are removed by steeping two or more bundles of the root of the sesót-tree in a large jar of the liquor, which then takes the colour and consistence of milk and water, with a yellowish tint, and a strong astringency, so as to prevent its bitterness from being unpleasant. (Rumphius, *Hort. Amb.* i. 60.) Its smell and taste are, however, very offensive at first, but this dislike soon goes off, and it becomes a favourite, though, when taken to excess, a very unwholesome beverage. The sweet Sagueir, when exposed to the sun, makes good vinegar. The infusion of the sesót promotes the fermentation of the liquor, and in about eight hours' time it is fit for use and may be kept bottled for a long time. The nut of the Gomúto palm is covered with a hardish white pulp, the juice of which, when it touches the skin, produces an intolerable and painful itching.

The water in which this pulp has been steeped occasions the same annoyance, to such a degree, that it has sometimes proved an useful auxiliary to the islanders when besieged by their enemies. Many other uses and properties of this and the remaining Asiatic palms may be found in the accurate Work of Rumphius, to whom the world is indebted for almost all that is known respecting most of the vegetable productions of the Eastern Archipelago.

Marsden, *History of Sumatra*, London, 1811, 4to.; Crawford, *History of the Indian Archipelago*, Edinburgh, 1820, 3 vols. 8vo.; Kurt Sprengel, *Anleitung zur Kenntniss der Gewächse*, Halle, 1817, 3 tom. 8vo. (tom. ii. tab. vi.)

SAGRA, in *Zoology*, a genus of *Coleopterous* insects. *Generic character.* *Antennæ* nearly filiform, a little thickened towards the apex, composed of eleven cylindrical joints, the last longer than the basal one; *palpi* short, filiform, the terminal joint nearly ovoid; *mandibles* entire, acute; *labium* deeply notched; eyes somewhat acute; legs very unequal, two anterior pair short, hinder pair very long, their femora very large, thickened, compressed, and margined on the lower edge, occasionally dentate; *tarsi* tetramerous, the three joints deeply notched.

Type of the genus, *S. femoralis*, Olivier; *Coleopteres*, vol. v. pl. i. fig. 1. Four or five brilliant species; all natives of the Asiatic and African tropics.

SAGRÆA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. *Generic character:* calyx four-lobed, short, persisting; corolla, petals four, oval; stigma obtuse; fruit a four-celled berry; seeds small, ovate, angular.

Fifteen species, natives of the West India Islands and South America. Decandolle.

SAGUS, in *Botany*, a genus of the class *Monoecia*, order *Hexandria*, natural order *Palmæ*. *Generic character:* male flower, calyx three-leaved; corolla none; filament dilated: female flower, calyx three-leaved; leaves doubly two-cleft; corolla none; style very short; stigma simple; nut imbricated, one-seeded.

Three species, natives of the East Indies; the nutritive Sago is obtained from the trunk of *S. farinifera*.

S A H A R A.

Boundaries.

SAHARA, or, according to the Spanish orthography, Zahara, is nothing more than the Arabic word Sahrá, or its plural Sahará, *i. e.* "plain, or plains," signifying a wide extent of open, level country, and thence, by an easy transition, that vast and dreary expanse of Deserts which forms the central region of Northern Africa, and, stretching from the Atlantic Ocean to the borders of Egypt one way, and from the Southern side of Mount Atlas to the vicinity of the Niger the other, occupies an area of nearly two millions of square miles.

This "ocean of sand," as the Arabs have not inaptly called it, was very imperfectly known to the Ancients, who seem never to have had any, except accidental intercourse with the Negro race; and it is probable that the warlike, predatory, and unsettled habits of the natives

of the Desert presented then, as well as in our own times, a more formidable obstacle to the progress of travellers across their inhospitable territory, than want of water or overwhelming sand storms, which may be generally overcome by care and foresight.

The Niger, or, more properly, Nigir,* a considerable river far South of Libya, and, consequently, very imperfectly known to the Ancients, was considered by them as the boundary between the Æthiops or Negroes and the Leucæthiopes, (*i. e.* Fair Ethiopians,) who seem to answer exactly to the white or tawny (*subfusi*, Leo, p. 12.) inhabitants of Northern Africa, that is, to the *Berbers*, whose widely extended and permanent occupation of the Oases in the Great Desert is evidenced by a

* Properly, *tádi*, or *tári*; the fermented juice extracted from the *tál* or *tár*, (*Borassus flabelliformis*), the lontar of the Malays.

* *Gir* and *Nigir*, the names of the two principal rivers South of Atlas, appear to be words of similar import, the latter being distinguished from the former by the prefix *ni*.

SAHARA. peculiarity in the ancient as well as modern names of many places in that region. Those habitable specks, (whence their Egyptian, Arabian, and Grecian names, Wahe, Wáh, or Oasis,) thinly scattered over this brown and dreary waste, were aptly compared by Cneius Piso, the Governor of such parts of it as were subject to Rome, (Strabo, ii. p. 130.) to the spots which diversify the tawny skin of the leopard. Of these islands in the ocean of sand, few only are yet known; it is, therefore, almost hopeless to think of determining the position of the Tribes and places mentioned by Ptolemy, the only writer among the Ancients who had any thing more than a very superficial knowledge of the regions South of Mount Atlas. If, however, we assume the Egyptian Oases, the Oracle of Jupiter Ammon, Augila, Garama, and Cydamus, as determined points, they afford a scale by which the error in Ptolemy's positions may be checked, and, supposing his intermediate distances to be near to the truth, a plausible conjecture may be formed as to the real position of the places which he names. In the following Table are given the most remarkable points on the coast from the confines of Mauritania to the mouth of the Stachir, or Trachir, as laid down by that geographer,* (iv. 1, 6.) together with the corresponding places in modern Maps; whence it will appear how nearly Ptolemy approached to the truth with respect to the latitude, though, as might be expected, his longitudes are for the most part extremely erroneous.

As Ptolemy's longitudes, with the exception of the Oasis of Ammon, are all greatly in excess, a proportionate reduction must be made in any attempt to ascertain the position of places named by him. His latitudes, as the above Table shows, approach nearly to the truth; and it is possible that, when the African Continent shall

* It is much to be lamented that only one tolerable edition of Ptolemy's *Geography* has ever been printed; even that hardly deserves to be called a critical revision of his text. The numerals in the Latin version often differ from the Greek. Those nearest to the truth have been here adopted.

be better known, the true place of many mountains and rivers marked by him will be ascertained. Taking Cape Arsinarium (Cape Verde) and the mouth of the Daras, (Senegal,) which are placed by him each within two degrees of their true position, as the Western end of the line bounding this region, and the Great Oasis as its Eastern limit, it will be found that the principal mountains and streams mentioned by Ptolemy, going Eastwards from the ocean, are as follows:

	N. lat.	E. long.
The Garamantic Ravine the boundary of the Garamantes extended	13° 0'	38° 37'
The Nubian Lake	17 0	42 37
The Libyan Lake or Morass	19 30	27 37
Mandrus, which gives rise to the Salathus, Massa, and all the streams between them	20 0	6 37
Mount Usargala	22 0	25 37
Mount Sagapöla, or Salapöla.	24 0	5 37
Mount Girgiris	28 0	32 37

From Usargala sprang the Bagradus, (Mejerdah, or Mountains and rivers. N. and 10° 10' E. of Greenwich, (28° 19' E. of Ferro,) in 32° 40' N. and 34° E., according to Ptolemy.

Sagapola gives rise to the Subus, the mouth of which is placed by Ptolemy in 25° N. and 9° E. It is, therefore, probably, the Wád Nún, or Núl, in 28° 40' N. 6° 54' E.

From Girgiris rose the Cinyps from two sources, both in 23° N. or 24° N., and one in 32° 37' E., the other in 37° 37' E., but joining their streams in 27° 34' E.

The two largest rivers of the interior of Africa known to the Ancients were the Gir and Nigir. The former seems to have risen in Mount Usargala, and to have been joined by one from the Garamantic Ravine in 19° N. and 34° 37' E., the united stream terminating in the Lake Chelónides, the centre of which Ptolemy places in 22° or 23° N. and 42° E.

The Nigir, from Mount Mandrus, falls into the Lake Nigrites in 20° N. and 8° E., but as this river is beyond the Southern extremity of the Desert, it need not be further noticed in this place.

To the South of Mount Mandrus were the Nigritæ, Nations, or people on the river Nigir, for this name does not appear to have any relation to the Latin word *niger*; and the Negroes are manifestly the Æthiopians of the Ancients. To the North and West of the Nigritæ were the Melano Gætuli, or Black Gætulians, probably Fúlaks or Berbers; to the West were the Pyrrhæi Æthiopes, (Copper-coloured Æthiopians,) Garamantes, or people of Gárama; and the Nuba, or Nubians, who were the Southern and Eastern neighbours of the former.

From this imperfect outline of the ancient geography of the Great African Desert, the reader will turn with Modern geography. satisfaction to the more ample materials furnished by the Arabs of the Middle Ages, and by the enterprising travellers of our own days. That dreary waste has at length been traversed in various directions; a glimpse of its principal features has been obtained, and a few tracks and resting-places serve to fill up a part of the blank which the good sense of modern geographers has substituted for the unauthenticated names with which their predecessors endeavoured to conceal their ignorance. The different levels, mountains, plains, and valleys by which this extensive space is diversified, are still almost entirely unknown; but, from its general want of water, it may be conjectured that the greater

SAHARA. part is a table-land, undulating, rather than broken into elevated ridges, and rarely, if ever, enclosing any deep or extensive depressions. The valleys, wherever they occur, are blessed with some supply of water, and thence become the resting-places of travellers and the abode of the migratory Tribes who are in effect the proprietors of the Desert. Of its general appearance in distant tracts, the following summary will give some notion.

The Western side of the Sahrá, between the Empire of Morocco and Negroland, (Bilád-es-súdán,) appears from the descriptions of Adams, Scott, and Caillé, who traversed it in opposite directions, to be one scarcely interrupted level, having a gradual and almost imperceptible ascent from the South and East, occasionally traversed by low ridges of sandy downs, till, at about one-third of the distance from its Southern boundary, scattered rocks of granite appear. Tombuktú, which is only nine miles from the Jálíabá, or Nigir, (*Voyage à Tombouctou*, iii. 337.) is situated in an immense plain of white sand, the uniformity of which is broken only by a few downs or hillocks of sand rising here and there, and producing nothing but a few stunted mimosas. (*Mimosa ferruginea*.) Between that place and El-A'rawán, the first Oasis on the road to Táfiláit, a distance of 138 miles, the soil is usually a dry, loose, but rarely deep, sand. As the traveller advances, he occasionally meets with stones or gravel and a rocky soil. Here and there small tracts occur producing arák (*Salvadora Persica*) and prickly saintfoin, (al-háji* Maurorum,) which yield a scanty meal to the camels. The aridity and uniformity of the level is the constant complaint throughout the whole of this route, nor is any water found till within six miles of its termination. A'rawán is an assemblage of about 500 wretched houses, little better than huts, in a hollow surrounded by high downs of sand running in a Westerly direction. Its population, amounting to about 2500, is maintained by the passage of the Caravans, and a trade in rock-salt brought from Túdeneh near Telík, about 200 miles to the North. Downs of moving sand (Caillé, ii. 384.) sometimes vary the prospect, but it often presents one vast field of shining sand bounded only by a distant horizon. (*Ib.* 386.) Small tracts of gravel occasionally intervene, and, it seems, a scanty vegetation affords some pasture for the camels. About midway between A'rawán and Telík, rocks of grey and white quartz, succeeded by sandy downs, show a change of soil and level; and in the plain above the soil is more firm red and black granite occurring among the rocky masses scattered over it. Quartzose gravel, hard sand sprinkled with a stunted herbage, bordered by downs of moving sand, lead to a tract of chalk or gypsum, and afterwards to schistose or slaty beds, when the ground rises rather abruptly for three or four hundred feet, forming a ridge at the Northern foot of which is Telík, in a hollow, the soil of which is a coarse yellow sand. (ii. 402.) At the depth of three or four feet, brackish water is found there. Túdeíní, or Túdeneh, apparently on a bed of rock-salt, is only nine or ten miles to the West of Telík. From it the country to the South and South-East is supplied with salt, which, as we know from Mungo Park, is so great a rarity, and so much prized throughout Negroland.

* This pea is very appropriately called the pilgrim's (Háji) pulse by the Arabs.

Between Telík and El 'Aríb,* a distance of 550 miles, SAHARA. only nine watering-places occur. The soil is more covered with firm quartzose gravelly and granitic nodules, the downs being of harder sand, and producing thorny saintfoin (al-háji Maurorum) on their Western declivity. A chain of higher downs occurs at the distance of 65 miles from Telík; and it is probable that the level on their Northern is always higher than that on their Southern side. Further on large blocks of salt are found on the surface near the Wells of Tegazza. gházá.† The water, as may be supposed, is brackish. Pebbly gravel and higher downs covered with thorny shrubs, eagerly devoured by the camels, lie on the road to the next wells, the tamarisks near which, as well as a cooler atmosphere, are indications of a change of soil and level. A tract of harder ground, probably schistose, leads to a chain of granitic rocks, where fresh water is found and the first ascent of any consequence occurs. Here stunted mimosas are seen, and near the Wells of Ekseif, 230 miles North of Telík, a steep and rugged pass through rocks of rose-coloured granite, may be considered as an indication of the comparative vicinity of Mount Atlas. Here excellent water affords another proof of the entire change of region. (*Ib.* iii. 6.) A similar alternation of gravelly levels and downs of loose sand marks the terrace, for such it may be termed, which is traversed on the Northern side of the granitic hills for 190 miles to the Wells of Mayara, where a narrow pass between cliffs of grey quartz and granite, 70 fathoms high, according to M. Caillé, afford shade, and no doubt moisture sufficient to maintain something like verdure, enough, at least, to make the place appear a paradise to those who have been long fainting in the Desert. A plain covered with black gravel, varied here and there with verdant patches of mimosas, leads to the Wells of Sibisia, in a glen surrounded by hills of granite, and shaded by a grove of date trees. (Caillé, iii. 14.) The level ground may be said here to cease, and, 30 miles further Northwards, the traveller has to descend or mount the rugged defiles on the Southern declivity of Atlas.

A comparison of these statements with the materials furnished by Alexander Scott, (*Edinburgh Philosophical Journal*, iv. 38.) whose route approached that of Caillé, will give some idea of the Western side of the Sahrá; of its central and Eastern tracts a still more correct notion may be formed from the narratives of Clapperton, Brown, and Caillaud.

To the North of Bornú, the Desert may be said to commence in about 10° N.; but the intervals without water are seldom of more than 30 or 40 miles in extent, and the level gradually rises to the Pass of Zaú,‡ about 18° N. A bed of loose, unproductive sand, tossed up into hills by the wind, usually fills the valley, enclosed between two parallel ridges of dark-coloured coarse sandstone. (Denham, p. 28.) The Wádi Kawwár,§ extending from Bilmah to Ané, is a narrow Oasis included

* El Harib in Caillé; but aspirates are generally a shibboleth to Frenchmen. M. D'Avezac, whose authority is considerable, spells the word with 'aïn, not with á.

† "Trasas" in Caillé. (ii. 418.) This is a common name among the Berbers, derived probably from the Tribe so called, but named Trarzas by the French.

‡ Perhaps Jaú, i. e. lowland; the two valleys are called Jau saghír and kabír, i. e. little and great; but zaú means "difficulty," in the language of Bornú.

§ Kawwas in the Map, by mistake for Kawwár. (See Lyon, iii. 256.) The name is not found in Colonel Denham's Narrative.

SAHARA. between those parallel ranges, the singular appearance of which is well represented in Colonel Denham's Plate, (p. 17.) The length of this valley is about 45 miles, and beyond it is a desert of about 30 miles crossing a low ridge of hills entirely barren. Wádí Ikbár, a small but verdant Oasis, overshadowed by a grove of bifurcate palms. (The Dúm of the Arabs, *Crucifera Thebaica* of modern Botanists, and Thebaïc palm of the Ancients.) A desert interval of about 50 miles occurs between Ikbár and Izhya,* (Denham, p. 15.) where there is a scanty supply of water. To the West is the Oasis of Segedem, about 30 or 35 miles from Ikbár. The sandstone ridges continue on each side of the valley, and a narrow stony pass separates Izhya from the plain of La Gaba.† Dark sandstone hills of no considerable height, and one or two hollows producing dúms, occur in the way to Mafras, where there are a few stunted palms near a low ridge of white sandstone hills, about 40 miles to the North of Izhya. Beds of gypsum, with soft sand and gravel, and some ridges of sandstone, are passed in the way to the next watering-place, 45 miles distant. At this place, called El Ahmar, "the red," from the colour of the neighbouring hills, (Denham, p. 12.) there are scarcely any signs of vegetation even in winter; a few straggling shrubs of Arák or Siwák (*Salvadora Persica*) being all the fodder the camels can obtain. From thence to Omah, 80 miles distant, there are no signs of vegetation, though water is found at El Wa'ar, (i. e. the rugged,) where there is a narrow pass, and considerable ascent at Mashrú' (commenced, i. e. the desert) between two chains of sandstone hills running East and West. Between that place, near Teigherí and Mestútah, and another Oasis not very far from Murzúk, the capital of Fezzán, is a desert tract about 30 miles in extent, the last of any magnitude before the extensive and once fertile territory of Fezzán is reached. Between it and Bonjem, on the road to the coast, there are two more intervals of desert, the first of 90, the other of 80 miles, crossed by two or three parallel ranges of hills running from East to West nearly at right angles to the general course of the mountains in this part of Africa. The Sahrá, therefore, on this side, has a far more uneven surface than further West; it has likewise many more valleys where water is found. Of the relative heights of the different levels it is difficult to form any conjecture, from the very imperfect statements given by Colonel Denham and his associates, but it can scarcely be doubted that the Lake Chád, or Tzád, is at a very considerable height above the sea.

This Great Level, for such is the true meaning of its Arabic name, is bounded on the South-East by Háusá and Burnú, and but for the many intervals of desert in the chain of hills running almost due Southwards from Fezzán nearly to the lake just named, might be considered as bounded to the East by those heights; but as the country of the Tibús to the East of them, as far as the Egyptian Oases, nearly resembles the Western Desert, and is overrun by Tawárik and other Berber Tribes, it can hardly be separated from the central and Western Sahrá. This will appear clearly by some extracts from M. Cailliaud's *Travels to the Oses*. "To the West

of Fayyúm," he says, (i. 31.) "the Desert presents nothing to the eye but a boundless plain of sand not producing a single blade of grass." (p. 33.) The soil is calcareous rock, and it rises into hills at a small distance from the valley of the Nile. The hilly tracts here are often covered with an incrustation of salt; below the surface are beds of fossil shells; and on the table-land at their summit are vast plains of sand où la vue s'étend à une grande distance. (i. 38.) A bank of sand a few miles to the North-West is said to extend from North to South for 16 or 18 leagues, (40 or 50 miles.) Near Abú Shajarah (i. e. Father Tree) in this neighbourhood is found a vast quantity of petrified wood, principally stems of palm trees, some of them 50 feet in length. (Ib. 39, 40.) The deep silence which reigns in these Deserts leaves an indelible but almost indefinable impression on the mind. *L'aspect morne et silencieux de ces plaines stériles*, says this traveller, *a pour le voyageur quelque chose de triste et d'accablant qui est indéfinissable*. (p. 43.) Never certainly does man feel that he was "not born to live alone" more than when in the midst of these almost boundless solitudes.

Near the gulf of Sort, or Sidrah,* the Sahrá approaches the sea, and how completely it there deserves to be called the "Ocean of sand" will best appear from the striking picture drawn by the ardent and ill-fated Pacho. (p. 270.) *Là, nulle végétation, quelque grêle et grisâtre qu'elle soit, ne fait hâter le pas du chameau, et n'interrompt la monotonie de sa marche; nulle colline, quelque aride et calcinée qu'elle soit, ne coupe la nudité du désert et ne suggère au voyageur de vagues rêveries par ses formes fantastiques; nul palmier solitaire, agitant au loin sa cime au gré des vents, ne provoque les chants de l'Arabe par l'annonce de la source hospitalière; nul troupeau de gazelles, se jouant dans la plaine, ne vient distraire la caravane attristée: l'hyène même et les autres bêtes sauvages de Libye ne s'aventurent jamais dans cette zone brûlée, et le silence de ce tombeau de la nature n'est pas même troublé par leurs hurlements nocturnes. Un ciel de feu, un sol constamment uni, du sable, toujours du sable, rien que du sable, sans eau, telle est la région qui s'étend du littoral des Syrtes jusqu'à la station de Rassam; et cet espace, en n'en parcourant qu'une ligne, forme au moins trente lieues d'étendue*. Between Rássam, which has scarcely any vegetation about it, and Aujilah, there is another and a similar tract of desert, 20 leagues in extent.

The Oases, or habitable spots in this part of the Sahrá Eastern are probably not more rare than in its Western and central Oases. tracts; but no part of the Desert is less known than that which intervenes between Egypt and Bilmah. Of the Oases in the Western Desert, of which any accounts have been obtained, the following are the most remarkable: 1. Waddán, called Huadem by De Barros, (i. 3. Hoden, o. 12. tom i. p. 260.) and Hoden by Ca da Mosto, (Astley, *Voy.* i. 577.) at the distance of 70 leagues, (De Barros,) and six days on camels, (Ca da Mosto,) Eastwards from the Castle of Arguim, (Arging,) about 200 nautical miles, according to modern Maps. The Portuguese had a factory there for a short time in the reign of John II. (1481—1495.) It appears to be a wretched place, hardly deserving to be called an Oasis, though its

* If this be an Arabic word, it should be written Iz-hiyá. The Tibús call the place Yaát, or Yáth, the *Hiats* of Major Rennell.

† Probably El 'Akabeh, "the ascent." The unlettered Africans commonly eat up the short *a* in *abú, al, &c.*, hence La Gaba for Al-'akabah.

* Sort, of which scarcely any vestige now remains, (Pacho, p. 269.) derived its name from the ancient Syrtis; and Sidrah is the Arabic word signifying lotus, (*Zizyphus spina Christi* of modern Botanists,) from which the inhabitants of the adjoining country were called Lotophagi (Lotos-eaters) by the Greeks.

SAHARA. name* implies that it is provided with moisture, and the Portuguese call it "a Cidade Huádem." If any reliance can be placed on the report of 'Abd-al-latif, a native of Waddán, that place is in an extensive valley, watered by a stream coming from Shingárin, or Shingátí, (a well-known salt mine,) and running to the South-West till absorbed by the Desert. (*Bulletin de la Soc. de Géogr.* xix. 345.) It is, however, most probable that this account is entirely false. The Waddán inhabited by Sidi Ahmed ibn Tuweiri-l jennah is doubtless the Hoden of Ca da Mosto, from its connection with Walátah, which, in Leo's days, was subject to the Wadáyá, who appears to have derived their name from it. (Leo Afric. 37.) It has salt mines, according to the account given to Caillé, (ii. 380.) who supposes it to be 15 or 18 days' journey to the North-West of El A'rawán,† mentioned above as the first station on the road from Tombuktú to Morocco. Nearly half way between Waddán and Kabrah, on the Niger, is Tishít, another Oasis celebrated for its salt mines, as is Shingárin,‡ half way between Tishít and Tombuktú. Ten or twelve miles nearly due West of Telik, and about 140 miles North-West of Tombuktú, is Tudeñí, or Taudeneh, where, at the depth of three or four feet, thick beds of salt are found. The water there is rendered drinkable by a mixture of millet-meal, (dhokhn, *Sorghum saccharatum*,) honey, and cheese made of curdled milk. Taúdeneh§ is probably the Tagháza of Ibn Batútah, (p. 231.) placed by him midway between Sijilmásah and Walátah, at a distance of 25 days from each. According to Caillé's estimate, it is 13 days' journey from Tombuktú, and about 33 days from Táfilált, (which is probably on the site of Sijilmásah,) so that the sum total is four days less than Ibn Batútah's estimate. (Caillé, ii. 404.) To the South of Shingátí, or Shingárin, is Walátah,|| considered by Leo (638.) as the North-Easternmost of the Negro States; but his position does not agree with that which modern accounts have assigned to this place, unless he included in it some of the resting-places in the Desert 300 miles South of Nún, and 500 miles from Tombuktú. (Tombuttu, as he calls it, and as it is still called by the Mandingas.) It contained in his time only three towns and some hamlets enclosed in groves of date-trees. It had been long the capital and great emporium of the Desert, but was superseded by Tombuktú, and had become tributary to it, when visited by Leo at the close of the XVth Century. Its inhabitants were Berbers, but then in a state of great insignificance and ignorance.

There are, no doubt, other cultivable spots in this vast area, as about 150 miles to the South-West of Taúdeneh, according to Alexander Scott's Narrative, there is, lying between the sand and saline clay, a woody tract, which he

* *Weddán*, or *Waddán*, "the moistener," is applied to several small Oases besides this. It is spelled *Wádán* in an itinerary given in the *Memoirs of the Geographical Society of Paris*, (ii. 58.) but that document has many orthographical errors, and therefore cannot be considered as an authority.

† El-A'rawán is the name of a plant.

‡ Probably Shingátín, spelled Shingétí according to the Maghribí pronunciation, in an itinerary given by a Moor of Senegal to Baron Roger. (*Bulletin de la Soc. Géogr.* x. 35.)

§ Probably Taúdeneh, a plural of *Weddán*.

|| Vulgarly pronounced Walét. It is the Eíwaláten of Ibn Batútah, (p. 239.) that being, perhaps, the true Berber name of the place. It is singular that the learned and acute author of the *History of Maritime and Inland Discovery* (p. 207.) should have followed Professor Lee in disfiguring this name by adopting the reading of a very incorrect MS. in preference to that found in Seetzen's copy, and published by Professor Kosegarten.

was two days in crossing; (*Edinburgh Phil. Journ.* iv. 44.) but as these places are out of the straightest line of transit, they are not traversed by the Caravans of traders who necessarily follow the shortest route. To the East of Caillé's route, and nearly in the centre of the Sahrá, is Tewát, one of the largest Oases of which any account has been obtained. As it lies on the direct road from Tripoli to Tombuktú, its existence was ascertained from itineraries procured at the former of those places, but it did not till lately appear in our Maps. It is so slightly noticed by Leo Africanus* (p. 9, 630.) as to have escaped the observation of the older geographers. Leo places it on the Western confines of Tegararin, and to the North of the Desert called Khaír, (good,) from its being less barren than other parts of the Sahrá. It appears to have been then crossed by the Caravans travelling from Telemsán (Tremecen) to Aghadá,† (or Aúdaghast.) Búdá is mentioned by Ibn Batútah as the largest town in Tewát, 70 days' journey from Tekeddá, itself at a considerable distance from Kúkú‡ on the Nile; and as the Arabian traveller came from the South-East, a direction in which we have no other route to Tewát, it is not surprising that his accounts should appear to accord so little with those which we possess. Búdá may also be the ancient or Berber name of Akablí, present capital of Tewát, (Walckenaer, *Recherches*, p. 423.) as in those countries almost every town has more than one name. (*Ibid.* p. 438, *et seq.*) 'Aín-es-saláh, the Easternmost town in this Oasis, lies in 27° 11' N. and 2° 15' E., and is celebrated on account of the holy men (morábits) from whose tombs it derives its name of "Saints' spring." Two days' journey further on is the capital, Akablí, (perhaps al kiblí, i. e. the South-East.) It was built by Abú Na'ámah, (Father Ostrich,) and is said to be dependent on Morocco, but this is probably a mistake. The South-Westernmost place in Tewát is Tenezarof, on the edge of a desert of sand, destitute of all verdure, and as flat as a bowling-green. (*Quarterly Rev.* xxviii. 102.) This place is in 23° 56' N. and 2° 40' E., so that Tewát probably extends somewhat more than three degrees from North to South, and 25 geographical miles from East to West. It is hilly, and can furnish dates, grain,§ and cattle. (Walckenaer, p. 423.)

To the South-East of Tewát, at the distance of more than 500 miles, is Azben, (Azbán?) a mountainous tract rather than an Oasis, the capital of which is Aghádes,|| the Aúdaghast of Ibn Haukal and the older Arabian geographers. It is distant from Sijilmásah, now called Táfilált, as M. Walckenaer (*Rech.* 285.) suspected, and M. D'Avezac (*Bulletin de la Soc. Geogr.* v. 17. 2^e série) has proved, 51 days' journey, (about 1020 miles,) 110 days (2200 miles) from Kaírawán South of Tunis, and 15 days (300 miles) from Ghánah. It stands in a sandy plain at the foot of a barren and naked mountain, and not far from another much higher, and

* Its name is spelled *Teguat* in one place, and *Tuath* in another; but such discrepancies are common in Leo. Perhaps Mármol is more correct, as he does not merely follow the printed text of Leo.

† Agadá, may possibly be the Tekeddá, or Tegedá of Ibn Batútah; but this is very doubtful.

‡ This can scarcely be the Gago of Leo, (646.) which appears not to have been near the Niger.

§ "*Farine de cassave*" (Walckenaer, *loc. cit.*) is a mistake of M. Delaporte, who doubtless thus translated *kasab*, (reed,) the Maghribí name of dhokhn, (*Sorghum saccharatum*.)

|| Agádes, or, perhaps, Akádes, according to the Berber orthography, (Walckenaer, p. 449.) probably, by error, for Akadás. (Agadez.)

SAHARA. remarkable on account of a large bird, apparently of the pigeon tribe, found there, and the trees which yield the gum used in Spain for the purpose of giving a lustre to silks, (Bekrî, in the *Notices et Extraits*, xii. 615.) as well as the antelope called lamt.* In the middle of the Xth Century Aúdaghast was large and populous, possessed of a jámi' (cathedral) and several smaller mosques, and surrounded by gardens and palm-groves. Its sandy soil required constant irrigation by means of buckets,† so that only a small quantity of wheat could be raised; the poorer people were obliged to content themselves with dhurrah, (*Sorghum vulgare*.) Gourds succeeded excellently in such a soil. The fruit from its gardens produced a considerable revenue. Wells of fresh water were found every where, and sheep and oxen were reared in vast numbers. Honey was imported in great abundance by the Negroes. Such was the noise and bustle in the market, that a man could hardly hear what his neighbour said to him. Gold dust (*tibs*) was the current money. The houses were high, and many of them well built, but the air was unhealthy, and the inhabitants were always pale and sal-low. Wheat and dried fruits, such as raisins, &c., were imported from the Musulman countries. Most of the inhabitants were Berbers of different Tribes from Northern Africa; their women, often extremely fair and beautiful, were remarkable for their slender waste and prominent thighs. Their Negro cookmaids were famous for their skill in making pastry and sweetmeats. Excellent amber, easily procured on account of the vicinity of the ocean,‡ and gold of the purest quality, were the principal articles of export from this wealthy city. In A. H. 350 (A. D. 961) Aúdaghast was governed by a Chief of the Sanhájah Tribe of Berbers, who was Lord Paramount over more than twenty Negro Kings. His Empire extended over a tract of country measuring two months' journey (500 or 600 miles) both in length and breadth. He could bring into the field 100,000 chosen men. Aúdaghast was, however, subject to Ghánah in the following century, and was, under colour of its submission to Infidels, taken, plundered, and in a great measure destroyed by the Morábits (A. H. 446, A. D. 1055) inflamed by a holy zeal against these recreant Moslims. (Bekrî, *Notices et Extraits*, xii. 630.) Hence Idrísí represents it as being in the XIIth Century "a town surrounded by deserts with very little water." (*Cl. ii. pt. i. Ar. 45. Lat. 39.*) "The town itself," he says, (*Ibid.* in the MSS. of the unabridged Work, but not in the printed epitome,) "is placed between two mountains exactly as Mecca is. It has few inhabitants and little trade. Its people are possessed of camels, from which they derive their subsistence." He adds, "that near the neighbouring wells mushrooms (*komá'ah*) were found which weigh three rotls," (3 pounds Troy.) They say there are none on the earth like these, and they say the truth! (*Annals of*

Oriental Lit. p. 492.) Aúdaghast* is distant from SAHARA. Jermah in Fezzán, according to the same writer, nearly 25 days' journey, (500 miles,) and 31 days (610 miles) from Wárkálán. (Wergela of the Maps.)

The chains of hills, if not of mountains, some of which are not unproductive, extending nearly from Bornú to the fertile shores of the Mediterranean, appear to form a boundary to the Sahrá considered as one unbroken desert; but it is probable that, if ever this inhospitable region shall be thoroughly examined, the cultivable tracts will still be found to be like islands enclosed by a connected ocean of waste; however, in the present state of our knowledge, that cannot be positively affirmed. This hilly tract, therefore, may for the present be assumed as the Eastern boundary of the Sahrá, and the few scattered notices which can be collected respecting the habitable spots in the Egyptian or Eastern portion of it lying between Bilmah and Kawwár, and the Oases known to the Ancients, may be reserved for the word Wah, the Arabic and old Egyptian name of those secluded valleys. To speculate upon the possibility of diminishing the extent of these frightful deserts would be idle as long as the uncivilized state of the nations on their borders renders any attempt to remedy their physical defects abortive; but the once flourishing state of Aúdaghast is in itself sufficient to show what a powerful and settled government might do towards again "building the ruined places, and planting that that was desolate." Wells might be dug where none are at present to be found, and reservoirs might be made even where there are no springs. By relays of beasts of burden, and proper places of refreshment on the road, journeys which now require months might be performed in a few weeks, and almost all the expense of life and health to which the traveller is now exposed might be obviated. A moderate impost would be amply repaid by the ease and security obtained, and would cover the charge incurred by the accommodation and protection afforded. But from the blind and fluctuating policy of Mohammedan despotism such an enlarged and beneficent enterprise cannot be expected. Should the French nation succeed in colonizing the Algerine territory and reducing the Berber mountaineers and migratory inhabitants of "the Land of Dates" to a permanent subordination, more progress will be made in African civilization and African discovery in a few years than has hitherto been effected in twice as many centuries.

For authorities see BARBARY, FEZZAN, MOROCCO, &c., and the following Works: Caillé, *Voyage à Tombouctou*, 3 tomes, 8vo. 1830; Al. Scott, in *Edinburgh Philosophical Journal*, vol. iv. Edinb. 1821; Denham and Clapperton's *Travels*, 4to. Lond. 1826; Cailliaud, *Voyage à Meroé*, 4 tomes, 8vo. Par. 1827; Pacho, *Voyage dans la Marmarique et la Cyrénaïque*, 4to. Paris, 1828; Ramusio, *Viaggi*, 3 tom. fol. Venezia, 1603; *Bulletin de la Société de Géographie à Paris*, v. y.; Astley, *Collection of Voyages*, 4 vols. 4to. Lond. 1745; Ibn Batútah, *a Kosegarten*, Jenæ, 1818, 4to.; Ibn Batútah, *Travels*, Lond. 1829, 4to.; Walckenaer, *Recherches*

* From *lamt*, miswritten *dant* in Leo Africanus, (751.) the Portuguese have adopted the words *danta* and *anta*. It is odd, as Leo has *lant*, that M. Quatremère (*Not. et Ex.* p. 634.) should spell it *lamat*. "It is like the ghazál," says Abú-l Fedá, "but stronger than it." (*Africa*, p. 13.)

† Watering-wheels, called in India Persian wheels, that is, those to the circumference of which pots or buckets (*delw*, in Arabic) are fixed, such as are to this day universally used in the East, were then rare. (Bekrî, *loc. cit.* 616.) A similar contrivance is adopted in the dredging machines stationed near Woolwich.

‡ The name of the Negro island of U'ílí, which may be pronounced Awálí, or Owálí, reminds us of Awárlí, or Owerí, adjoining to Bení, or Benín, at the mouth of the Niger.

* From Aúdaghast to the Island of U'ílí (or Awálí) one month, (600 miles.) M. Walckenaer places Aghades in 19° 30' N. and 12° 20' E. In the Map attached to Captain Clapperton's *Travels* it is in 16° 5' N. and 8° 34' E., which makes it somewhat less than 12° from the Rio Nún, or mouth of the Niger, a distance much nearer to one month's journey than the interval between it and the Western coast, and so far a confirmation of the conjecture hazarded in the last note; but Al Bekrî seems (p. 636.) to prove that U'ílí was on the Western coast.

SAICK, or, as spelled by the French writers, Saïque, is a corruption of the Turkish word *Shāīkah*, (from the Arabic *Shāhikah*, lofty?) signifying a large merchant-vessel of 300 or 400 tons, built much in the form of the ships of the Middle Ages, with very high prow and stern, only two masts, a lofty main with a main-top and a small mizen. The sails are square. Before the wind these vessels go with great speed, but they can make no way on a side wind. In rivers they can be rowed, but are never used as galleys at sea.

Tyll at last into that place,
Whiche as thei sought, thei arriue,
And striken *sayle*, and forth as bluee
Thei sente vnto the kinge.

Gower. Conf. Am. book v. p. 148.

There I found my sword among some of the shrowds, wishing, I must confess, if I died, to be found with that in my hand, and withal waving it about my head, that *sailers* by might have the better glimpse of me.

Sidney. Works, vol. i. book i. p. 52. *Arcadia*.

Two dayes now in that sea he *sayled* has,
Ne ever land beheld, ne living wight,
Ne ought save perill, still as he did pas.

Spenser. Faerie Queene, book ii. can. 12.

All those, and all that els does horror breed,
About them flew, and fild their *sayles* with feare:
Yet staid they not, but forward did proceed,
Whiles th' one did row, and th' other stifly steare.

Id. Ib.

Like to an eagle, in his kingly pride
Soring through his wide empire of the aire,
To weather his brode *sailles*, by chaunce hath spide
A goshaue, which hath seized for her share
Uppon some fowle.

Id. Ib. book v. can. 4.

Sailers, by their voyages, find out and come to the knowledge of these starres most of any other.

Holland. Plinie, book ii. ch. lxx.

Awhile thus taking breath, our way yet fair in view,
The Muse her former course doth seriously pursue,
From Penmen's craggy height to try her *saily* wings.

Drayton. Poly-olbion, song 9.

Such dalliance as alone the north wind hath with her
Oritha not enjoy'd from Thrace when he her took
And in his *saily* plumes the trembling virgin shook.

Id. Ib.

At last his *sail-broad* vannes
He spreads for flight, and in the surging smoak
Uplifted spurns the ground.

Milton. Paradise Lost, book ii. l. 927.

They have extraordinary good eyes, and will descry a *sail* at sea farther, and see any thing better than we.

Dampier. Voyages, ch. i. Anno 1681.

Sails were commonly of linen, sometimes of any other materials fit for receiving and repelling the winds. In Dio, we have mention of leathern *sails*; it was likewise usual, for want of other *sails*, to hang up their garments; whence came the fable of Hercules, who is feigned to have *sailed* with the back of a lion, because he used no other *sail* but his garment, which was a lion's skin.

Potter. Antiquities of Greece, vol. ii. book iii. ch. xvi.

It is of great use to the *sailor* to know the length of his line, though he cannot with it fathom all the depths of the ocean.

Locke. Of Human Understanding, book i. ch. i. *Introduction*.

On the 13th, at six o'clock in the morning, I *sailed* from Plymouth Sound, with the Adventure in company; and on the evening of the 29th anchored in Funchiale road, in the island of Madeira.

Cook. Second Voyage, book i. ch. i.

Her fancy follow'd him through foaming waves
To distant shores; and she would sit and weep
At what a *sailor* suffers.

Cowper. Task, book i.

Every individual had been sick except the *sail-maker*, an old man between seventy and eighty years of age.

DRA.

Germany, England, &c.; and it has sent forth some of the ablest theologians, lawyers, historians, and statesmen of whom the Kingdom boasts.

The situation of this town, which rises amphitheatrically on the right bank of the Tormes, is highly picturesque, and its surrounding country is both beautiful and fertile. The above river is crossed by a noble bridge of stone, having 27 arches, and being about 530 feet in length; it bathes part of the walls of the city, and waters the fine plain of Salamanca. The Tormes abounds in eels, barbel, and excellent trout. Salamanca is built on a very unequal ground, presenting a series of ascents and descents; it is surrounded by a strong wall; and it still contains many edifices remarkable either for their antiquity or their architecture, notwithstanding the devastations committed during the Peninsular War. Owing to its numerous squares, the city is well ventilated; the largest of these, the *Plaza Mayor*, is one of the finest in Spain, being very spacious, regular, and of modern and elegant architecture. Each side of this square has its piazza; the houses are three stories high, and are adorned by one uniform balcony; and in the archivolted are placed medallions of the Kings of Castile and Leon, down to Charles III.; then of the most illustrious Spanish warriors, among whom the famous Bernardo del Carpio is conspicuous. The entablature of this symmetrical pile of building is surmounted by a balustrade. One of its sides forms the Town Hall. The Cathedral of Salamanca is one of the noblest Gothic monuments in the Kingdom; its façade is majestic and imposing; and its interior is admired for the boldness of its vaulted ceiling, and the rich carving of its ornaments. Among its other religious buildings may be cited the Monasteries of St. Dominic and St. Bernard, that of the Augustin friars, and the Church formerly belonging to the Jesuits, now dedicated to St. Mark. The *Collegios Mayores de San Bartholomeo* may be particularized as one of that class of buildings which, in this city, attract notice from their vast size and imposing mass. The University is of considerable extent. The architecture of its principal entrance, which is referred to the XVth Century, is of high beauty, and harmonizes strictly with the character of the edifice to which it gives admittance, being severe and majestic. The interior is admirably distributed for the purposes of study; and its fine library is adorned with statues of eminent literary and scientific characters. One of its

halls is large enough to contain 2000 persons. The foundation dates from the year 1239; and in its palmy period the University assembled as many as 8000 students, natives of Spain, and 7000 from other parts of Europe. It has 61 chairs, and 80 salaried professors; its revenues amount to above 1,200,000 reals. The number of students is at present about 2000. There are likewise attached to the University four *Collegios Mayores*, or great Colleges, whose professors are always men of high celebrity, and to which the noblest families send their children: there are only seven of these Colleges in all Spain.

At the bridge of Tormes begins the Roman road called *La Plata*, which runs to Merida, and is in some parts in high preservation. In the valley of Valmuza, which lies a few miles South of the city, are seen the remains of an ancient villa and baths, where valuable fragments of the choicest mosaic have been occasionally discovered.

Salamanca is also famous as giving name to one of Wellington's most glorious victories gained over the French by the British and Spanish troops under his command, July 23, 1812. Population 14,000. North latitude 41° 5' 30", West longitude 5° 43'.

SALAMANDER, } Fr. *salamandre*; It. *salamandra*; }
SALAMA'NDRINE. } *mandra*; Sp. *salamandria*; }
Lat. *salamandra*; Gr. *σαλαμανδρινα*, so called, Martinius thinks, *quod amet propre σαλον (humidum) habere μανδραν, (stabulum.)* See the Quotation from Plinie.

The salamander to the ark retires;
To fly the flood, it doth forsake the fires.

Drayton. *Noah's Flood*, p. 470.

The salamander made in fashion of a lizard, marked with spots like to starres, never comes abroad and sheweth it selfe but in great showers; for in faire wheather he is not seene. He is of so cold a complexion, that if hee doe but touch the fire, he will quench it as presently, as if yce were put into it.

Holland. *Plinie*, book x. ch. lxvii.

There is an ancient received tradition of the salamander, that it liveth in the fire, and hath force also to extinguish the fire.

Bacon. *Natural History*, sec. 860.

We laid it [the coquette's heart] into a pan of burning coals, when we observed in it a certain *salamandrine* quality, that made it capable of living in the midst of fire and flame, without being consumed or so much as singed.

Spectator, No. 281.

SALAMANDRA.

SALAMANDRA, from the Greek *σαλαμανδρα*, Laurenti, *Salamander*. In Zoology, a genus of animals belonging to the family *Caudata*, order *Batrachia*, class *Reptilia*.

Generic character. Head flattened; ears concealed beneath the skin, and without a tympanum; jaws armed with numerous small teeth on their edges, and two longitudinal rows in the palate; tongue adherent at the sides, reflected at the extremity; body lengthened, lizard-shaped, covered with smooth, scaleless skin largely provided with mucous pores; tail long, and more or less rounded; four-footed, the front feet having four and the hind feet five nailless toes; generation oviparous.

The animals comprising this genus were included by

Linnæus among the Lizards, from which, however, they were separated by Brogniart. From the family of Lizards the Salamanders are distinguished by their shining, scaleless skin; by the shortness of their limbs, and the unequal length of their nailless toes; by the entire absence of a third eyelid; by the ear being completely hidden, and by the deficiency of its tympanal portion, in place of which the oval hole is covered by a plate of cartilage; by the jaws as well as the palate being armed with teeth, and by the tongue adhering on the sides of the jaw and being reflected at its tip. Laurenti further restricted the genus to such as have the tail more or less rounded, which distinguishes them from the Tritons, or Water Salamanders, as they were formerly called, in

SALA-
MAN-
DRA.

which the tail is compressed laterally. This division has, however, fallen under the severe displeasure of Schneider in his *Historia Amphibiorum*, who thinks the transition in this respect is so gradual among the several species of the old genus *Salamandra*, which included both Salamanders and Tritons, that there is not sufficient reason for dividing it into two genera, but that the two sections, Land and Water Salamanders, only are warrantable. The disposition, however, into two genera, proposed by Laurenti, is generally adopted by modern zoologists; and it may be further observed, that although the generation of the Salamander has yet been but little inquired into and is still doubtful, yet the interesting and curious observations of Rusconi on the Tritons prove that genus to be oviparous, whilst a preparation in the Museum of the College of Surgeons of London, in which ova and young Salamanders furnished with gills are seen in the oviducts, show that this genus is oviparous, and that whilst in their imperfect state they probably live in water, which is supported by the observation of a Naturalist quoted by Latreille: *J'ai vu la Salamandre terrestre déposer ses œufs ou ses fœtus dans le sein des eaux.* Maupertuis had previously noticed the fact in the *Journal de Normandie*, 1788, of two bunches of eggs of a yellowish-white colour, and as large as coriander seeds, being found in a female Salamander, the double uterus of which was also filled with young Salamanders. And Lacepede, in his *Histoire Naturelle des Quadrupèdes Ovipares*, quotes a letter he had received from a Benedictine, who, on opening a pregnant Salamander, found several bags containing the young in various degrees of perfection; the more advanced he found doubled up and surrounded with amnion fluid, having been liberated from which, they soon expanded themselves and moved briskly about. On examining them with a microscope, two kinds of longish fins, (doubtless the gills,) of large size comparatively with the body, were observed sprouting from each side of the head, but there was no appearance of hind limbs. Others, less formed, had a kind of tumour of a deep yellow colour about the middle of the body, but were not so active as those just mentioned. Whilst in some part of the body from its middle to the tip of the tail only was formed, the other part being still composed of the yellow matter just mentioned. The question, therefore, as to the oviparous generation of the Salamanders, and the existence of gills in the young animals, may be fairly considered as decided. It is not easy to assign a reason why animals, rarely if ever met with in their imperfect state either in the water or on its banks, and in their perfect state generally found selecting damp, cool places, under stones, or among broken timber, or in the holes of old walls, even in towns and in great numbers, should travel for some distance to deposit their offspring in the marshes; still, however, it seems probable that such is the case.

As the straightness of the skinny covering of the Salamanders would prevent its growth, they are continually shedding it, Latreille says, every ten days during the warm weather. The skin is not shed entire, but in flakes, which, under the microscope, have a reticular appearance. Dr. Barton observed this process in the *S. Subviolacea*; the first appearance of change was on the tail; a few hours after the skin about the side of the chest began to loosen, and four hours subsequently the loosening had extended over the intermediate part; on the following morning the skin had entirely separated

from the tail and belly, and was scattered about in shrivelled portions; towards afternoon the skin of the feet was thrown off entire like gloves, and on the third morning the old skin had sloughed completely.

The body of the Salamanders is largely covered beneath the skin with glands, or follicles, which secrete and retain a considerable quantity of milky fluid, of a very glutinous nature. According to Dr. Barton's observation, it does not dissolve in water, but is readily soluble in spirits of wine. When the animal is irritated, it secretes this fluid in large quantities, and is capable of ejecting it to some distance. This has given rise to the report of these animals being poisonous, an imputation attached vulgarly to the Toad, which is also capable of ejecting from its pores a similar excretion. To man and the larger animals they certainly are not so, but such is not the case with those of smaller size, for Laurenti has proved that Lizards can be destroyed by it. He provoked two grey Lizards to bite a Salamander, which, after making great efforts to escape from them, at last ejected some of this fluid into their mouths; one of them died immediately, and the other was attacked with convulsions which lasted for a couple of minutes, and then expired. A third Lizard, into the mouth of which some of the same fluid was introduced, became convulsed, the whole of one side of the body was paralyzed, and it very soon died. Dr. Barton says, that the fluid of the *S. Subviolacea* has an extremely acrid taste, closely resembling that of corrosive sublimate, and very astringent. The Romans considered these animals very poisonous; Julius Scaliger states, that whole fields were infected by their pestilential breath, and that whoever ate grain which had been there produced was destroyed by the poison. It is not, therefore, surprising that the laws should adjudge punishment like that of the *Lex Cornelia de Sicariis et Veneficis* to those who wickedly gave hemlock, Salamander, or aconite. So firm was the belief in the poisonous character of Salamanders that Nicander, in his *Alexipharmicus*, details the following symptoms:

*Continuo stupido lingua inflammatur in ore
Et subito torpent languore, malique tremores
Frigida concutiunt solvuntque in corpore membra;
Et quadrupes pronus, pueri instar, inambulat æger;
Usque adeo obtusum est, et hebescit mentis acumen.*

From the relation of these horrible symptoms, Wulf-bain tritely remarks, probably arose the proverb, *Eum quem Salamandra momorderit, tot opus habere medicis quot bestia habet maculas.* It is curious to observe how long this absurd notion was entertained, for it is recorded in the *Acta Academiæ Naturæ Curiosorum*, as a valuable observation, disproving this notion, that a man had eaten a Salamander which his wife, who was desirous of getting rid of him, had put in his food, without having suffered any inconvenience. And the point was only at last finally settled by Maupertuis in 1727, who applied the teeth of a Salamander to the thigh of a Fowl previously plucked of its feathers, to the lips and tongue of a Dog, and also to the tongue of a Guinea Fowl, but in neither instance did any poisonous effects take place. They are really timid, harmless animals, which cannot be induced to bite; indeed, their teeth are so weakly connected with the jaws that any forcible attempt to make them bite immediately detaches them - and rather than engage in any contest, they endeavour to avoid their tormentors by as speedy a flight as their slow pace will allow.

But the most remarkable property attributed to this genus is its power of living in or extinguishing fire. This has been held perfectly true for ages, and even to a very late period there have been believers of and vouchers for the fact, as will be presently noticed. Aristotle is the first who makes mention of the Salamander extinguishing a fire if thrown into it, but the wary old Naturalist qualifies his statement with *ᾧς φασι*. Ælian next speaks of it in book ii. ch. xxxi. : he says that it will live in the fire, and renders the flame green, facts of which there are numerous witnesses among workmen. Nicander, Dioscorides, and Pliny repeat the wondrous tale; nor are there wanting, among the early Fathers of the Church, reporters of the same prodigy. The German Poets of the Middle Ages also made frequent reference to this subject; and Dr. Funk, in his Work *De Salamandræ terrestris vita evolutione et formatione*, has collected all the legendary lore connected with this point, to which the reader is referred. It remained, however, for M. Pothonier, who was French Consul at Rhodes, to give the last and seemingly most authentic narration of this remarkable property of the Salamander, which may be found in the *Bibliothèque Physico-économique* for 1789, and is further curious as showing the effect which preconceived notions will occasionally have on the perceptive faculties. He says, "Whilst engaged in writing in my chamber at Rhodes, I suddenly heard a most extraordinary cry in my kitchen; I ran, and found my cook horribly frightened, who told me he had seen the devil in the fire. I looked attentively, and saw in the midst of the very bright fire a little animal with its mouth wide open and throat palpitating. Having convinced myself that this was not an illusion, I took the tongs and endeavoured to catch hold of it. At my first attempt the animal, which had been motionless up to this time, a space of two or three minutes, ran away into a corner of the chimney, having lost the tip of its tail in making its escape, and buried itself in a heap of hot ashes; but I was more successful in a second attempt, and, having caught it round the body, drew it out. The animal was a kind of small Lizard. I put it into a bottle of spirits of wine for preservation, and afterwards gave it to M. Buffon, who found it different from any he possessed." This marvellous story is, however, completely upset by M. Sonnini, who happened to arrive at Rhodes a few days after the capture of this wonderful animal. M. Pothonier, who he speaks of as *homme fort estimable, mais d'une ignorance complète en tout ce qui a rapport à l'histoire naturelle*, showed the Lizard to him, and was very communicative on the prodigy he had witnessed. Sonnini, however, doubts not that his excited imagination had deceived him as to the length of time which the animal had been in the fire; and adds, moreover, that he did not like to disturb his illusion, which prevented him from seeing that the feet and some parts of the body of this (to his eyes) incombustible animal were half roasted. There can be no doubt that the effusion of fluid from the Salamander's body, increased by the heat of the fire, would for a very short period defend it from the hot ashes, just as a damp cloth would for a time resist burning, but so soon as the moisture is evaporated, both one and the other are naturally consumed. The power of resisting heat attributed to the Salamander, led also to a report of cloth being made of their skins which was incombustible; this is mentioned by Marco Polo, in his Work *De Regionibus Orientalibus*, but he states that

this incombustible cloth was really made of *minera quædam terræ, quæ fila producit, lanæ haud dissimilia*, which was doubtless asbestos, known to the older writers as "Salamander's wool;" and of this material was probably the napkin *ex Salamandra contextam*, presented to the Roman Pontiff by a Tartar King, which was reported to be at Rome in Marco Polo's time, and used as a wrapper to the head-cloth of our Lord there said to be preserved. The old Venetian, however, does not seem to give much credit to the fire-resisting power of the Salamander, and says, *De Salamandra vero serpente, quæ in igne vivere dicitur, nihil explorare potui in orientalibus regionibus*.

Not more than three or four Salamanders are found in Europe, and those only in the warmer climates; but very many have been met with of late years, and described, in America.

S. Maculosa, Laur.; *Lacerta Salamandra*, Lin.; *la Salamandre Commune*, Cuv.; *Spotted Salamander*. Between six and seven inches in length; general colour dull livid-black, spotted with yellow on the upper surface of the body; from behind the eyes extends on each side a series of longitudinal yellow streaks of irregular figure, and separated from each other by the black ground; the belly is of a bluish-black, varied with yellow, as are also the limbs, but on them the yellow is of a paler hue. Along the sides of the head and body are some rows of tubercles, which consist of follicles secreting a kind of milky fluid, acrid, and capable of being projected to some distance when the animal is irritated. They are found in France, and in the warmer parts of Europe, but are not met with in this country. During Winter it becomes torpid, having buried itself in the chinks of old walls, hollow trees, or even in holes in the ground, and so remains till the warmth of Spring again excites it to action. When at rest, it coils itself up like a Snake, and rarely leaves its hole but in rainy or damp weather, which best suits its economy, and it then readily finds the insects and worms on which it feeds.

S. Atra, Laur.; *la Salamandre Noire*, Latr.; *Black Salamander*. About half the size of the last species; upon the back of its head are some flattened, oblong elevations; the neck is narrower than the head; on each of its ribs is a kind of wart; the feet and toes are flatter and more slender. It is entirely black, without admixture of any colour. It is found in Austria, in the mountains of Etscher and Loibel, in which neighbourhood the Spotted Salamander is never met with, and it is commonly called *Tattermandel*.

S. Perspicillata, Savi; *la Salamandre à lunettes*, Cuv.; *Spectacled Salamander*. It is distinguished by having only four instead of five toes on the hind feet; it is black above, and yellow spotted with black beneath; and above each eye is a transverse, yellow stripe. It is found in the Apennines. The three-toed Salamander of Lacepede is a mutilated specimen of this species.

S. Subviolacea, Harl.; *Lacerta Subviol.* Barton; *la Salamandre Venimeuse*, Daud.; *Dusky Violet Salamander*. About seven inches in length; upper surface of the body dusky purple or violet, marked with two longitudinal stripes of fine yellow spots, some round, others oval, coalescing into one stripe on the lower half of the tail; under surface, legs, and tail livid-purple, and marked with very minute bluish-white spots of varying size. It is native of Pennsylvania. In South Carolina there is a variety of larger size, and with differently arranged spots. Dr. Barton mentions that the

SALA-
MAN-
DRA.

SALA-
MAN-
DRA.
—
SALA-
MAN-
DROPS.

milky fluid which exudes from the surface, principally from the upper part of the tail, is of a white colour, very glutinous, but not gummy, and, though it will not dissolve in water, is very soluble in alcohol. When applied to the tongue, it almost immediately communicated a very astringent taste, which soon became caustic, as if corrosive sublimate had been taken into the mouth, occasioning a plentiful flow of saliva, and the caustic taste remained during the greater part of the day, in spite of frequent rinsings of the mouth with water.

S. Tigrina, Green; *Tigerine Salamander*. Eight inches in length; the tail rather longer than the body, tapering, compressed, and rounded at the tip; irides gold and brown; upper parts and sides of the body blackish, marked with numerous large, pale, ochrish spots of irregular size, and largest on the upper part of the tail; throat pale ochrish; under part of body cinereous, irregularly marked with ochraceous spots; under part of the tail unspotted, and having a granular appearance; under part of legs and feet reddish; but it is doubtful if the latter be a permanent character. The skin is smooth, and secretes very little of the glutinous fluid common to the genus. It has a very near resemblance to *S. Vulgaris* and *S. Subviolacea*. It is found in New Jersey.

S. Cylindracea, Harl.; *Round-tailed Salamander*. Five inches in length; the tail rather longer than the body, cylindrical, thick, and gradually tapering; general colour blackish, or dark slate-green, becoming lighter on the throat and under surface of the tail. The male has its head larger than the neck, and rather protuberant on the occiput, which, in the female, is flatter, and along her spine is a slightly impressed longitudinal furrow. Native of South Carolina.

S. Fasciata, Green; *Banded Salamander*. Between four and five inches in length; tail about as long as the body, oval, tapering, and pointed; upper part of the body brown marked with transverse, irregular, blue bands; upper surface of the tail brown marked with light yellow spots; under parts ash-coloured. Native of New Jersey.

S. Sinciput-albida, Green; *White-nosed Salamander*. Three inches long; tail shorter than the body, thick, tapering, and pointed; upper parts dirty ferruginous, under parts yellow; snout oval, and white above. Is a native of New Jersey, and said to be found in shallow streams.

S. Erythronota, Green; *Red-backed Salamander*. About four inches in length; the tail shorter than the

body; back red mingled with brown, the colours forming a stripe from the snout to the tail; throat whitish, with a few crimson spots near the neck, other under parts ashy. Is not uncommon in New Jersey, and found in elevated situations.

S. Japonica, Hutton; *Japan Salamander*. It has the tail long, round, and only slightly compressed at the top; eyes small, furnished with large eyelids; upper parts leaden, under yellowish; a yellow streak extends from the head to the tip of the tail. It is found in Japan, and considered by the natives to possess aphrodisiacal properties.

S. Cinerea, Green; *Dapple Salamander*. Four inches in length; upper parts dark brown dotted with white, under parts black and white mingled. Found in New Jersey.

S. Glutinosa, Green; *Glutinous Salamander*. Six inches in length, and the tail twice as long as the body; upper parts blackish marked with white spots composed of dots; under parts black. It is remarkable for the large quantity of mucus which exudes from its body. Native of New Jersey.

S. Fusca, Green; *Brown Salamander*. Three inches long; the tail of the same length as the body, and slightly compressed; upper parts yellowish-brown; under parts white, with a line of black spots on each side; throat spotted with black. Native of New Jersey.

S. Cirrigera, Green; *Bearded Salamander*. Three inches in length, and the tail rather longer than the body; snout obtuse, and furnished with a pair of thick, fleshy cirrhi about a quarter of an inch in length, projecting between the nostrils and upper lip; it is questionable whether these are permanent, or merely appearing at the time of fecundation, like the membrane on the toes of *Triton Palmipes*, and the crest of *Triton Cristata*. Upper parts yellowish speckled with black points, and bounded on each side by a black line edged above with white, which, commencing behind either eye, is continued a little above the legs, and united at the tip of the tail; along its lower edge is a line of very fine white dots; sides of the body speckled in dusky lines; under surface whitish. The female is more robust, her markings are less distinct, and she has not any cirrhi. They somewhat resemble *S. Erythronota*, and are found near New Orleans.

SALA-
MAN-
DROPS.

SALAMANDROPS, from *σαλαμανδρα*, a *Salamander*, and *ωψ* a *form*, Wagler. In *Zoology*, a genus of animals belonging to the family *Caudata*, order *Batrachia*, class *Reptilia*.

Generic character.—Head broad and flattened; lower jaw furnished with a single row of teeth; upper with two concentric rows, the inner semicircular and palatine; tongue free anteriorly; operculum half way between the posterior edge of the gape and the fore leg; opercular cartilages three, the aperture between the hinder two; outer edge of the feet fimbriated; four toes to the fore, and five to the hind feet, the fourth and fifth of the latter webbed and clawless.

The remarkable animal on which this genus is founded was discovered by the French traveller Michaux, in the Alleghany mountains, and he only gives the following brief notice of it: *Dans les torrens on trouve une espece de Salamandre appelée par les habitants Alligator des Montagnes; il y en a qui ont jusqu'au deux pieds de long.* The animal he obtained was deposited in the Cabinet of Natural History of Paris, and a very short notice of it given by M. Bosc, under the article *Salamandre*, in the *Nouveau Dictionnaire d'Histoire Naturelle*, who states that it was about thirteen inches long, and therefore the largest of the Salamanders; that he could not say whether it was terrestrial or aquatic, though its very short

SALA-
MAN-
DROPS.

and flattened tail edged with a membranous fringe which extended along the back led him to suppose that it was aquatic. In 1812, Dr. B. S. Barton published at Philadelphia a Tract entitled *Memoir concerning an Animal of the Class Reptilia or Amphibia, which is known by the name of Alligator and Hellbender*, which consists of twenty-six pages, and probably gives a detailed account of the animal; but as it is very scarce, and unfortunately not to be met with in London, the only notices to be obtained from it are those contained in other American writers, which are very short.

Professor Mitchell, in Silliman's *Journal*, vol. vii., conceived he had described this animal, which, however, he has only confounded with the *Menobranthus Lateralis*, Harlan, or *Triton Lateralis*, Say; and Captain Leconte, in the *Annals of the Lyceum of Natural Philosophy of New York*, vol. i., though he states the two to be very different animals, yet erroneously considers that the Proteus "may possibly be the larva of this animal; (*Salamandrops*;) for most of the animals that inhabit the lakes are found in the western rivers."

Dr. Harlan of Philadelphia, in an excellent paper, *Observations on the Genus Salamandra*, has, however, proved the right of this animal to be arranged in a distinct genus. It differs from the Salamanders in the want of that remarkable characteristic, *anum habent vulvæ muliebris simillimum*; from the *Menobranthus* by having five toes on the hind feet instead of four, and by never having gills at any period of life, but merely spiracular openings on the sides of the neck covered with a simple flap, in which respect it resembles the *Amphiuma*, Lin., but distinguished from it by the more perfect development of the legs and the semicircular disposition of the hinder row of teeth. Harlan at first gave it the name of *Abranchus*, from its not possessing gills, but subsequently changed the generic name to *Menopoma*, in consequence of the title *Abranchus* having been previously applied by Van Hasselt to a genus of Mollusca. Barton called it, in his paper, *Protonopsis*, and Lechart and Fitzinger named it *Cryptobranthus*. The generic name here used is that employed by Wagler. There is but one species.

S. Alleghanensis, Wagl.; *Menopoma Allegh.* Harl. It is about two feet in length, and sometimes more; is very thick and chubbed; the head is broad, the mouth wide, nostrils prominent, and the spiracles midway between the mouth and the fore leg; the legs are strong and short; the outer edge of the feet fimbriated, and the two outer toes of the hind feet webbed; the tail is compressed vertically, and is nearly as long as the body; the general colour is slate, with darker spots on the body, and a dark line running through the eyes. It is of a very uncouth and disgusting form, is much dreaded by fishermen, and believed by them to be poisonous. It is found in the Ohio and Alleghany rivers; lives in the water, eats flesh, and spares nothing it can devour. The Indians call it *Tweeg*, and by the Anglo-Americans it is called *Hellbender*, *Mud Devil*, *Ground Puppy*, and *Young Alligator*. It does not seem unlikely that it is to this animal Dr. Hildreth refers in his *Notes on certain Parts of the State of Ohio*: "In the Ohio an animal between the Newt and the Alligator is often taken on the hooks set for fish in the Spring of the year. It is between two and three feet in length, and of a most disagreeable and disgusting appearance."

See Wagler, *Natürliches System der Amphibien*; Harlan, in *Annals of the Lyceum of Natural History*

of New York, vol. i.; Barnes, in Silliman's *American Journal of Science and Arts*, vol. ii.; Hildreth in same, vol. x.

SALANX, from the Greek, an unknown fish so called, Cuv. In *Zoology*, a genus of animals belonging to the family *Esocides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head flat; opercles folding upon each other beneath; four flat rays to the gills; jaws short, pointed, and each furnished with a row of curved teeth; upper jaw formed almost entirely of the intermaxillary bones; the lower increased in length beyond the chin by a small appendage furnished with teeth; the palate and tongue smooth and toothless, and the latter without any ridge.

The above is all which is mentioned by Cuvier, who forms it into a genus, and places it between *Chauliodus* and *Belone*.

See Cuvier, *Règne Animal*.

SALARIAS, Cuv. In *Zoology*, a genus of animals belonging to the family *Gobioides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Upper part of the head much compressed, lower part very wide; forehead vertical; lips full and fleshy; teeth very fine, numerous, compressed laterally, and curved, closely set in a single row in each jaw.

This genus, formed by Cuvier, is distinguished from the genus *Blennius* by the extreme minuteness of the teeth, which in a recent specimen move like the keys of a harpsichord. Three species are distinctly noted by this author as belonging to the genus; besides which, he states there are several others, and imagines that the *Blennius Edentulus*, Bloch, also belongs to it, thinking it probable that it has teeth, although stated by Bloch to have none.

S. Quadripennis, Cuv.; *Blennius Gattorugine*, Forskael. Six or seven inches in length; general colour consisting of little reddish, grey, and yellowish spots, with small dashes of red, and a deep reddish-brown stripe extending on to the dorsal fin. It is found in the Mediterranean; called by the Venetians the *Gattorugine*, and by the Arabs *Koschar*. Risso thinks it probable that this species differs from that found in the Atlantic; both, however, are generally considered the same.

S. Simus, Cuv.; *Blenn. Simus*, Sujef. About eight inches in length; general colour olive, dotted symmetrically with small black spots; in front of the anal fin is a fatty substance covered with blackish points, and above each eye is a small appendage. It is caught in the fresh waters of the Var, which separates France from Italy.

S. Saliens, Cuv.; *Blenn. Saliens*, Lacep.; *Allicus Saltatorius*, Commerson. About two inches and a half in length; general colour brown striped with black; it is much compressed laterally so as merely to resemble a thin sword-blade; its pectoral fins are of great size, reaching, when laid close to the body, nearly as far as the vent, and when unfolded resembling a sort of disc, which gives them similar habits to the flying fish, *Exocetus*. It darts with great agility, glides quickly, or rather, as Commerson expresses it, flies upon the surface of the water; and prefers the neighbourhood of rocks against which the waves dash violently. It is found upon the shores and reefs of New Britain, in the South Sea, and was first observed in Bougainville's voyage.

SALE. See SELL.

SA'LEBROUS, } Lat. *salebrosus*, from *salebræ*,
SALEBRO'SITY. } *ut sæpius salientum*; a rough or
rugged way, difficult to pass, requiring the exertion of
leaping.

Rough, rugged, ruttty.

————— We now again proceed

Thorough a vale that's *salebrous* indeed;

————— bruising our flesh and bones;

To thrust betwixt massy and pointed stones.

Cotton. *Wonders of the Peuke*, (1681,) p. 54.

I believe not him that said, if crownes were rightly viewed, there would be more kingdoms than kings; for nature rises to sovereignty, and there is a blaze of honour gilding the bryers and enticing the mind; yet is not this without its thornes and *salebrosity*.

Feltham. *Upon Eccles.* ch. ii. p. 378.

SALEP is part of the Arabic phrase *Khusá-th-tha'-leb*, or *Khusyetu th-tha'-leb*, Fox's Testicles, given as a name to various species of Orchis, from the appearance of their double root. The Persians and Turks, who cannot pronounce *th*, say *sa'leb*; and the latter, like the Germans, always sound a final *sonant* as a *surd*, hence our Turkey merchants, abbreviating the word, write it *Salep*. The *Khusá-th-tha'leb* is, according to Avicenna (Ibn Síná) (*Kánún*, i. 269.) the name of two plants; one the *Satyrium* of Dioscorides, (iii. 143.) and the other, probably, some species of the Orchis tribe. The *Satyrium* was supposed by the old Botanists to be the *Orchis bifolia*, but the Salep of the Levantines appears to be the *Orchis mascula* of Linnæus. This name, as well as *Khusá-l-kelb*, (the *Cynos orchis* of Dioscorides,) is now given by the Asiatics to more than one species of this genus, several of them little known in this country, the roots of which are generally prepared and used by them for medicinal purposes. The *Orchis bifolia* is called *Testiculus vulpinus*, by Lobel, from the *Khusá-th-tha'-leb* of the Arabs, who give the name of *Khusá-l-kelb* (*Cynos orchis*) to the *O. morio*, *mascula*, *militaris*, &c. These, with *Maculata*, *Pyramidalis*, and *Latifolia*, all retain their places in some of the foreign *Pharmacopœias*, though long since expunged from ours as superfluous. The bulb of most, if not all of the species, when stripped of its outer integument, and exposed for a few minutes to the ordinary heat of an oven, acquires the colour and transparency of horn; and when dried in the open air, or by a very moderate

artificial heat, becomes the Salep of commerce. Reduced to powder and dissolved in water, it forms a thick and very nutritious jelly. It was much recommended by Dr. Percival of Manchester as an admirable demulcent, well adapted to prevent the dissolution of the crasis of the blood arising from ulcers on the lungs, wounds, or amputation. The supposed aphrodisiac qualities of the Orchis tribe probably sprung from the visionary doctrine of Signatures. (Woodville, *Med. Bot.*) As the Orchis is found in all our heaths and woods, it is surprising that the value of its roots is so little known. It might be made available for culinary and charitable purposes at a very small expense of trouble or money.

The goddess then: Who best can send on high
The *salient* spout, far streaming to the sky?
His be yon Juno of majestic size.
Pope. Dunciad, book ii. v. 162.

Cold horrors thrill each sick'ning vein;
Deep broken sighs my bosom strain;
The *salient* pulse of health gives o'er,
And life and pleasure are no more.

Blacklock. An Ode.

SALINE, } Fr. *saline*; Sp. *saline*, a salt-pit
SALINATION, } or salt-house; It. *salso*; Lat. *salinarius*, from *sal*, salt.
SALINOUS, }
SALSUGINOUS. } Having the qualities of salt;
having or causing to have the nature of salt.

We read in Plutarch, that Philippus Libertus washed the body of Pompey with salt water, which, perhaps, might be either because it was more abstersive, or that it helped to prevent putrefaction; and it is not improbable the Egyptians might have been accustomed to wash the body with the same pickle they used in *salination*; in order to preserving and embalming it.

Greenhill. Art of Embalming, p. 59.

When wood and many other bodies do petrify, either by the sea, other waters, or earths abounding in such spirits; we do not usually ascribe their induration to cold, but rather unto *salinous* spirits, concretionary juices, and causes circumjacent, which do assimilate all bodies not indisposed for their impressions.

Sir Thomas Brown. Vulgar Errors, book ii. ch. i.

The knowledge of the distinction of salts which we have proposed, whereby they are discriminated into acid, volatile, or *salsuginous*, (if I may, for distinction sake, so call the fugitive salts of animal substances,) and fixed or alcalinate.

Boyle. Works, vol. i. p. 765.

There is one material refreshment which this eastern side of Patagonia seems to be very defective in, and that is fresh waters; for the land being generally of a nitrous and *saline* nature, the ponds and streams are frequently brackish.

Anson. Voyages, ch. v.

He [Aristotle] supposed (and mankind were for ages content with the solution) that the sun continually raised dry *saline* exhalations from the earth, and deposited them upon the sea; and hence, say his followers, the waters of the sea are more salt at top than at bottom.

Goldsmith. History of the Earth, vol. i. ch. xv. p. 137.

SALISBURIA, in *Botany*, a genus of the class *Monoecia*, order *Polyandria*. Generic character: male flower, catkin naked; calyx none; corolla none; anthers imbricated: female flower, calyx four-cleft; drupe with a triangular nut.

One species, *S. adiantifolia*, native of Japan; it is a hardy shrub, and worthy of cultivation: the leaves are very similar to the Ferns of the genus *Adiantum*.

SALISBURY, or NEW SARUM, the Capital of Wiltshire, owes its origin to certain disputes about "walks and limits" betwixt the Bishop and the Castellan of Old Sarum, in which we are told by Holinshed "they fell at last to sad blowes," and during a solemn procession on Rogation Sunday, in the last year of the reign of King Richard I., the soldiery, "espousing their time, gat between the clergie and the town, and so coiled them" that they durst not again attempt the performance of any ceremony of a similar nature. The townspeople of Sarum, missing the "goode cheere" with which they had been accustomed to be entertained on such occasions, espoused the quarrel of the Clergy, and greatly rejoiced when Herbert Poore, their Bishop, obtained permission from Henry III. to build a Church about a mile and a half from their troublesome neighbours in the Castle, on a spot called Merrifield, which, as tradition asserts, was especially recommended for that purpose by the Virgin Mary.

The Cathedral, however, was not begun until Richard

Poore had succeeded his brother Herbert in the See of Sarum, and it was finished six years afterwards, A. D. 1258. It is a noble and regular structure, in the style of architecture then prevalent, when the pointed was rapidly superseding the circular arch; and clusters of tall, slender, and graceful pillars, with capitals of almost Corinthian foliage, were taking place of the short, massive, and little ornamented Saxon and early Norman column. Salisbury Cathedral is indeed esteemed to be the best existing specimen of the architecture of that period; and it is distinguished from every English, and from most continental Cathedrals, by its systematic completion on one uniform plan, and in one consistent style of building, without any subsequent addition or alteration; excepting only the spire, the loftiest in England, which was raised many years afterwards. It is well placed in an open area not encroached upon by walls and houses, and is altogether worthy of the especial attention of the student in the department of architecture commonly called Gothic.

A new town gradually arose in the neighbourhood of the Cathedral, called New Sarum, or Sairesburi, the freedom of which being secured by Royal Charter, a market was instituted, and certain fairs were appointed to be held annually. The greater part of the inhabitants of the old city settled within it; and Edward III. causing the Great Western Road to be turned through its streets, the new city increased as rapidly as the old one declined, and became one of the most thriving and prosperous places in England. The soil is good, the water plentiful and excellent, and the air of the surrounding downs is reckoned particularly healthy.

Salisbury is divided into two unequal portions, each under its own separate jurisdiction, ecclesiastical and civil. In the close, which is the smaller division, are the Cathedral, the Palace, the Deanery, the dwellings of the minor Clergy, and several handsome private houses held on Church leases. The town is built with considerable regularity. Five principal streets run from East to West, and as many from North to South: all of which are at right angles to each other, and along the middle of every street flows a narrow but clear stream, conducted by artificial means from the rivers Avon, Bourne, and Wiley, which unite in the broad valley in which the city is situated. The market-place is very large, and contains a magnificent Council-house, built by the Earl of Radnor in 1795. Since the reign of Edward I. Salisbury has returned two Members to Parliament, who are chosen by the Corporation, which consists of the Mayor, Recorder, High Steward, twenty-four Aldermen, and several minor civil dignitaries. The principal manufactures are flannels, lace, and cutlery, particularly scissors. Distant from London 80½ miles West by South. Population, in 1831, 9876.

Several persons of note have been natives of Salisbury, and many eminent Prelates have held the See. Among the former, the erudite Dr. Bennet, Chubb the celebrated controversialist, and Harris, the author of *Hermes*; and among the latter, the names of Jewell, Abbot, Burnet, and Hoadley need no accompanying comments.

Few traces of the forsaken city of Old Sarum are now remaining. It was once a place of considerable importance; either founded by the Romans, or very early adopted by them as one of their principal stations, and distinguished by the local advantages which usually mark the wisdom of their choice, being situated on a

SALIS-
BURY.

BURY.

SALLAD.

steep hill commanding the whole of the neighbouring country, and with more than one river in its vicinity. The ground plan of the Cathedral, which was finished in the reign of Stephen, may still be traced; some few ruins of the walls and of the Castle are yet standing; and there are extensive indications of its once formidable entrenchments consisting both of deep fosse and earthen rampart. When visited by Leland, in the reign of Henry VIII., he describes old Sarum as "an auntient thyng exceeding stronge," still retaining marks of its former importance, but even then utterly ruinous and almost uninhabited; nevertheless, until the Reform Bill was passed, it continued to send two Members to Parliament, who were chosen by the proprietors of certain adjacent lands.

John of Salisbury, called "the eye and the hand" of Thomas à Becket, and one of the most eminent scholars of the XIIth Century, was a native of Old Sarum.

About two miles South-East of Salisbury stood the Palace of Clarendon, memorable in English records as giving its name to the enactments called "the Constitutions of Clarendon," in the reign of Henry II.

SALIV'AL, } Fr. *salival*; It. *salivale*; Sp. *salivato*; v. } *livoro*; Lat. *saliva*; Gr. *σάλω*, }
SA'LIVATE, v. } from *σείειν*, *movere*, Lennep. *Saliva*, }

SALMASIA, in *Botany*, a genus of the class *Pentandria*, order *Trigynia*. Generic character: calyx five-

parted; corolla, petals five; style none; capsules three celled, three-valved, many-seeded.

One species, *S. racemosa*, native of the woods of Guiana.

SALMEA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: receptacle conical, chaffy, down with two awns; pericarps depressed; involucre imbricated.

Two species, natives of Vera Cruz and Jamaica.

SALMASIA.
SALMO.

S A L M O.

SALMO, from *salio*, I leap, Cuv.; *Salmon*, Pen. In *Zoology*, a genus of animals belonging to the family *Salmonidæ*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head smooth; mouth large, and in the old fish the lower jaw curved upwards and received in a hollow in the upper; teeth conical, pointed, arming all the bones of the mouth, also the tongue and branchial arches; branchial rays ten or twelve, and rarely of corresponding number on both sides; body lengthy; pectoral and ventral fins of moderate size, the latter on middle of the belly, opposite the true dorsal fin, and along their base a fleshy fringe; opposite the anal a spurious dorsal fin, consisting only of fat enveloped in skin; caudal fin attached to a very fleshy root.

According to the modern arrangement, this genus forms only a part of that of Linnæus, which has been converted by Cuvier into a family on account of its containing many individuals with very different, though with a few general characters.

The body of all the true Salmon or Trout kind has a lengthened form; the mouth is large and furnished with powerful conical and pointed teeth, with which all the bones of the mouth, including the tongue and branchial arches, are armed. The margin of the upper jaw forms a single continuous arch, a conformation which is partaken with the *Clupeæ*, and with that exception only found in the higher classes of animals, as M. Agassiz has observed. The branchial rays are also remarkable for being of unequal number on the two sides, and vary from ten to twelve. The ventral fins are placed opposite the dorsal, and along their junction with the body there is a fleshy fringe corresponding to the long scales observed at this part in the greater number of the Herrings. The tail fin is connected with a very strong fleshy root, consisting of very powerful muscles, which enable the fish to perform the surprising leaps for which they are so celebrated.

They are extremely voracious, and feed on living prey, which consists of small fish, both of their own and other species, on aquatic insects and their larvæ, worms, small crustaceous animals, and the eggs of some Echinodermata.

They are found in the temperate and Northern parts of Europe, Asia, and America, but seem to prefer the colder streams; Lewis and Clarke, in their Travels to the source of the Missouri, found Salmon in the upper parts of the Columbia river; Mackenzie, in a journey to explore the Northern Continent of America, caught Trout within the Polar circle; as did also Sir John

Franklin's party in their visits to the Polar seas between the years 1819 and 1822. Salmon is also said to be caught in the Amazons river, near its sources. They are not, however, found in the Mediterranean, which accounts for their being so little known to the Ancients. The Greeks make no mention of any kind; and of the Roman writers there are but two who notice them, viz., Pliny and Ausonius; the former speaks of the Salmon as being found in the rivers of Aquitaine, and the latter in those of the Moselle; he also mentions the *Salar*, which is believed to be the Trout, and another kind which he calls *Fario*, the specific characters of which cannot be ascertained.

All the species are extremely active in their motions, and some traverse considerable distances in the performance of certain of their animal functions. According to the observations of M. Agassiz the seasons have considerable influence on the colours of the individuals forming this genus, which vary so much at different times as to give rise to great difficulty in defining the species. The peculiar kind of food on which they live is another cause of the variety of colour among the same species. M. Agassiz states that the deep colour of the flesh arises from the greater or smaller quantity of *Gammarinæ* which they have devoured. Sir Humphrey Davy, in his *Salmonia*, had previously given the same opinion, stating that Trout which lived in a clear cool river and fed upon larvæ, became, by swallowing their hard cases, much more yellow, and had their red spots in much greater proportion than the black ones. And Mr. Yarrell refers the cause of the brilliant marking of Trout to the albuminous character of the fish spawn on which they often feed. Agassiz also considers that this genus assumes, like birds, gayer colours, or, as he expresses it, "array themselves in a nuptial garb," when the sexes seek each other at spawning time, which occurs between the months of October and January, their tints then becoming more brilliant by the increased quantity of coloured pigment deposited in the mucous tissue.

Some of the genus are considered to be sea fish, though they cannot be strictly so called, since they are spawned in fresh water, and only visit the sea periodically for a short time; indeed, some even of these remain constantly in rivers, being there confined accidentally. But that their annual visit to the ocean is of importance to their economy, is proved by the fact that fish so restrained do not thrive or acquire their usual size. Others, however, are naturally located in rivers and pools of fresh running water which they never leave, and are

SALMO. therefore strictly fresh-water fish. They are all edible fish, generally of high flavour, and highly esteemed. The Salmon especially is most valuable, both on account of the large quantity of excellent food afforded by it, and the great number of persons engaged in its capture.

They are usually divided into two sections, the migratory or sea fish, which annually visit the sea for a few months; and the stationary or river fish, which always continue in the fresh water; but, as to structure and general character, there does not appear to be any material difference.

SECTION I. *Migratory.*

S. Salar, Lin. ; *le Salmone Saumon*, Lacep. ; *Salmon*, Pen. The length of the head is one-fifth of the total length of the animal; it is distinguished from the Bull Trout and Salmon Trout, according to the observations of Mr. Yarrell, by the hinder edge of the gill cover forming part of a circle, by the lower edge of the subopercule being directed obliquely upwards and backwards, and its line of union with the opercule being oblique and parallel with its own lower edge, by its interopercule being narrow vertically, and its union with the opercule considerably above the junction of that with the subopercular bone. The teeth on the vomer, in the middle of the mouth, rarely exceed two, sometimes but one, and these placed on the front of the bone. The body is of a lengthened form, the lateral line dividing it equally, and the convexity of the back and belly corresponding to each other; the scales are of moderate size, oval and thin. The first two rays of the dorsal fin simple, shorter than the third, which is the longest, and it with the remaining rays are branched; the last, however, is double, but springing from a single root and implanted about the middle of the whole length of the body; midway between this and the tail is the hinder end of the fatty fin, opposite the last ray of the anal, which commences midway between the origin of the ventral and lower rays of the caudal fin, its third ray being longest, the first two rays simple, and the others branched; the pectoral fins are two-thirds the length of the head, and the ventrals opposite the middle of the dorsal fin. The dorsal surface of the Salmon is grey or bluish-black, inclining to a lighter tint on the sides; it is sometimes spotted with black, more especially in the females, and at other times plain; the belly silvery; the dorsal, pectoral, and caudal fins blackish, the fatty fin corresponding to that part of the back on which it is placed; ventral fins white on their outer, and more or less dusky on their inner surface; anal white. The *S. Hamatus* of Cuvier is merely the old, and the *S. Gadeni* of Bloch the young of this species, according to Agassiz's observations.

The Salmon is a voracious fish, and its digestion would seem to be very quick, as the stomach, at least of those which are found high up in rivers, so rarely contains food, that fishermen say they never find any in it. Dr. Knox, however, in a paper of his in the *Transactions of the Royal Society of Edinburgh*, states, that the food of the Salmon, and that on which all its estimable qualities and, in his opinion, its very existence depend, and which the fish can only obtain in the ocean, he has found to be the ova or eggs of various kinds of Echinodermata and some Crustacea. Dr. Fleming mentions the Sand Lance as being their favourite food at sea, and the remains of these fish have been found in their

stomachs by Mr. Yarrell. Sir William Jardine also **SALMO.** says that they are often caught on the Haddock lines which are baited with Sand Eels. They rise, however, as is well known, to a fly, and will often not refuse either worm or minnow. Pennant thinks it not improbable that, during the time they are in rivers for the purpose of spawning, they subject themselves to a kind of fast which has connection with the function they are performing. This may, perhaps, be correct, as Sir Humphrey Davy states he was told, that food is found in the stomachs of such Salmon as remain in rivers during winter instead of returning to the sea.

Salmon are found in all the rivers and seas of the Northern climes, but do not extend below the latitude of the Southern coast of Great Britain. In the Mediterranean they have never been taken. It is said that they are caught in the Amazons river, and also that they are taken in the rivers of New Holland. The greater number of them begin to leave the sea about the middle of August, and are found at the estuaries of rivers waiting for a convenient opportunity to ascend the streams, up which they swim for many hundred miles; and thus the Salmon of the Baltic are found passing up the Rhine as high as Schaffhausen, and up the Elbe even to Bohemia. The speed with which they move is much varied according to circumstances; it is usually considered to be about two miles an hour, but this seems to depend much upon the state of the current; and they have been noticed to swim thirty-five miles in a tide. They continue in the rivers till about the middle of February, when they revisit the sea for a few months, and return again about August. Though they approach the estuaries in large shoals, yet, being very shy, they are often frightened back to the sea by storms; and such fish are by many not considered to leave it again for that season. And so again, on endeavouring to enter the rivers in which they have been spawned, which is generally believed to be their habit, if they meet with any material obstruction, they proceed in search of some other stream.

During the summer months, Salmon are found in immense numbers along the coast and at the estuaries of rivers, in which they rest a longer or shorter time without any apparent reason, moving up and down with the tide before they commence their regular ascent of the stream. It has been held, generally, that they come to these stations in search of food; but, as Mr. Stephen says, (*see Report*), "it is known, and disputed by nobody, that Salmon must find abundance of food in the sea, for it is there, and there only, that they arrive at maturity and perfection;" this, therefore, cannot be the reason of their visit. Again, it is said that they take to the fresh water for the purpose of getting rid of the Sea Louse, *Monoculus Piscinus* of Linnæus, which adheres in great numbers to the scales about the shoulders only, whilst the fish remains in the sea, but soon drops off and dies as the fish ascends the rivers; but it cannot be supposed that this louse does the Salmon much harm, as those which are in the highest condition, *i. e.* immediately on leaving the sea, are always thus infested.

The true reason, however, of the entrance of Salmon into rivers seems to be for the purpose of spawning; and their stay at the estuaries, with frequent returns to the sea, appears sufficiently accounted for by the necessity there is for the animal's constitution being gradually accommodated to the great change it is about to undergo in passing from salt water to fresh. This

SALMO. would seem also to be proved by the fact that the fry and the fish which have spawned, when about to return to sea, always remain for some time in the estuaries before they proceed to the ocean.

About the middle of August the milt and roe, which in May had been about as large as the finger, begin to swell rapidly, and towards the end of the month have attained such size as materially to diminish the quality of the fish; for, as they increase, the walls of the belly, which had previously been thick, lose the fat which had been deposited there in large quantities, and to such extent that little more than the skin alone is left. From this time (August) the male fish is called a *Kipper*, and the female a *Baggit*. When the fish have attained this condition, they begin to ascend the rivers, and continue so to do through September and October, by which time they generally reach the spawning ground. It is commonly believed by those engaged in the fisheries that Salmon return to their native streams; and this seems proved by the fact that particular rivers always produce fish which have some minor characters as to form peculiar to them. An instance of this is given by Mr. Mackenzie, in his evidence before the Committee on the Salmon Fisheries, appointed by the House of Commons in 1825. He states, that a fish spawned in the Oykeil was marked by fastening a wire round the body just above the tail, in 1823, and the same fish was caught in the same river in the following year, having in its course up Cromarty Frith passed the mouths of other two rivers. Sir William Jardine also states that, in 1833, Mr. Baigrie marked some fry in the Laxford and Dinard, rivers on the western coast of Scotland, which returned during the same Summer, varying from three and a half to six and a half pounds, to the rivers in which they had been spawned. This appears to be the general rule, but of course exceptions are found, if the fish be frightened by any accidental circumstances from their intended course, in which case they shelter themselves as opportunity offers. The Salmon in its ascent continues its course along the banks of the rivers, preferring the shallow water, and making its way over mill-dams, weirs, and up cataracts with persevering resolution, often for hundreds of miles, till it has reached the proper locality. During its residence in fresh water the fish undergoes a considerable change in appearance, the male becoming striped on the cheek, with orange-coloured marks like a *Labrus*, and the body assuming a golden-orange tint, from which circumstance they are called *Red-fish*; whilst the females, becoming very dark, are called *Black-fish*. The flesh also loses colour and becomes paler. Dr. Flemming does not consider this to prove loss of muscular power; but it is generally considered by those engaged in Salmon fisheries that such is the case. With regard to this change of colour, however, and falling off in condition, Mr. Stephens says, "that it is not different, nor to a greater extent than takes place in all Salmon in the sea towards the close of the fishing season." They select shallow running water at the top and foot of fords, where the bottom is fine and gravelly, or low down in pools where the water begins to run, which assists them in moving the gravel. Although the fish generally select the shallower, and even the shallowest parts of streams, so that the back fin is seen above the surface, yet, not unfrequently, they spawn in fourteen, eighteen, or twenty-four inches depth of water. They commence spawning in October, and the process

is continued during November and December; occasionally some are found spawning at other times of the year, but this is the general rule. Mr. Buist (see *Report*) mentions having heard of a female Salmon being caught a little below Perth, in the Tay, on the 4th of January, 1825, apparently ready to spawn, and the peas of the roe were about the size of ordinary field peas, and, on being counted, were found to be 18,130, the fish weighing sixteen pounds, and the roe four and a half pounds. This was considered a very rare instance.

The business of spawning occupies some time, as the fish are only engaged in it early in the morning or at evening twilight. They go in pairs, and after playing about the ground begin to make furrows, working up the gravel against the stream for a distance of about twelve feet; into this furrow they both deposit the spawn, and as it drops the gravel is turned over it by the male with his tail. Having reached the extremity of the furrow, they sweep round to the point at which they had commenced, and passing along its side form a second, which is in like manner filled with spawn, and this process is repeated till a bed of eight or ten feet in width is produced. It is observed that, at this period, the under jaw of the male becomes considerably lengthened by a long cartilaginous process or bill with which, according to Mr. Little's observations, (see *Report*), the gravel is grooved; and he also says that, occasionally, this grows to such extent as to pierce the upper jaw and destroy the fish by drowning it. Dr. Flemming and others consider this curving of the lower jaw to be a sexual distinction of the male Salmon, and not consequent on the rooting up of the gravel. The ova or eggs are at first about the size of mustard seed, but when about to be dropped are as large as field peas, and the average number contained in the roe is from 18,000 to 20,000, but instances have occurred in which as many as 26,000 have been found. If during spawning time the male is destroyed, the female returns to deep water and selects another mate, after which she returns and completes the exclusion of the eggs. If, as occasionally happens, the shoal of Salmon which has entered a river and chosen its spawning ground be too large for the locality they have selected, great destruction of the spawn occurs by the ground in which that first deposited being afterwards disturbed, as Mr. Sheppard says he has seen in some of the Irish rivers.

The ova remain in the gravel seemingly unchanged for three or four months, after which, as the natural warmth affects the water, the young fish or *fry*, as they are called, begin to rise about the beginning of March, and are all hatched about the middle of April; this, however, varies according to the warmth of the weather, which renders them either earlier or later. Instances indeed, though very rare, have occurred in which the fry has been hatched in January. To use Mr. Little's expression, "They rise from the gravel beds like a crop of oats or thick beard of grain, rushing up all round the stones in very great numbers. The tail comes up first, and they will come from these beds with a part of the pea (or egg) about their heads." They keep in the eddy pools till they acquire strength for their further movements, and then, being from two to three inches in length, and from half an ounce to an ounce in weight, they are called *Smouts*. They descend along the margin of the stream, as being easy water, till they reach the tideway, when they leave the banks and run into the deep water, where they are least disturbed

SALMO.

SALMO. by the action of the tide, and are most free from observation. Here they remain for two or three days, and then go off to sea. They are about a month in coming down, and it is not till the tenth or twelfth of May that they finally leave the rivers. When the spawning is completed, the parent fish resort to the pools, where they remain for a fortnight or three weeks to recruit their strength; the male fish leaves first, but the females remain for a much longer time, and are often seen to descend with the early fry at the end of April or beginning of May. The fish which have spawned are known in Scotland by the name of *Kelts*, or *spent fish*, and in the Shannon as *Slats*. After having dropped their spawn, Salmon are almost or quite black, but in the course of a fortnight usually resume their natural colours; this does not, however, always happen, for in some instances, in the Whittater, for example, which empties itself into the Tweed, the fish remain black as late as March, and are even blacker than those which have not shed their spawn. The form of the Kelt is much altered, it is very thin, being long in comparison with its thickness; the head is large, and the flesh cuts white. The fish which have spawned are considered to be *foul* and equally unfit for food as shortly before spawning, when the ova are large, and they only recover their healthy character by returning to the sea. They begin to come down in February, and continue descending till about the 12th of May, at which period the rivers are generally free of them, excepting some few fish which have been accidentally delayed, and which continue dropping down through the rest of the year. If the weather be dry the fish remain longer in the rivers, but if it be wet they go off more quickly. After remaining for some time in the rivers, Salmon are attacked by another parasitic animal, *Lernæa Salmoæna*, Lin., which fastens upon the gills, and often eats through them. This is doubtless a great annoyance to the Salmon, as the animal attaches itself on a very sensitive part, but it soon drops off after the fish has returned to the salt water. The Kelts, like the fry, when they have descended to that part of the river acted upon by the tide, prefer the deep water, where they are least exposed to the violent action of the waves, and like them, having remained in the estuaries a few days, go off to sea, and retire to the deep water at a considerable distance from the shore.

The growth of the fry, whilst remaining in salt water, is very rapid, as, when they return to the rivers about the middle of June, they weigh from two to three pounds. They are then known as *Gilse* or *Grilse*, and it is matter of great dispute among those engaged in the fisheries, whether they are not a distinct species, as their shape differs considerably from the adult fish, their snout and head being smaller and sharper, the tail smaller, and the caudal fin swallow-tailed instead of nearly straight. The difficulty in deciding this point is also further increased by the well-ascertained fact, that these fish of the year breed during the first Winter; their ova being of equal size with those of the Salmon, but they mature only a much smaller number. That they really are young Salmon there can, however, be no doubt, as the observations made by Mr. Mackenzie and Mr. Baigrie, already referred to, (p. 285.) prove that marked fry and Grilse, at their subsequent visits to fresh water, have become Salmon. As to the difference in the form of the head and tail of the Grilse and the full-grown Salmon, "all this," says Stephens, "is certainly true, in particular with regard to the younger Grilses. But, by

the time they reach six pounds weight, these distinguishing marks have much disappeared, and I do not think there is a greater difference of shape or make between a Grilse and a Salmon, each weighing six pounds, than there is between full grown out not completely formed and full grown completely formed animals of the same species, such, for instance, as the Horse or Bullock." Their growth, whilst on the coast and at the estuaries, is very rapid, and, according to Mr. Little's observations, during the whole period of the fishery they continue increasing steadily at about half a pound a-week, so that by the end of August, which is the height of the Grilse season in the Tweed, they weigh from six to eight pounds. In September they become scarce, and it is believed drop down to the sea, from which they return in the following year as perfect Salmon of eight or nine pounds weight. It is generally believed that Salmon increase at the rate of a sixth of their bulk monthly, and in the course of a season gain from eight to thirteen pounds in weight. On the Dee and Don it is calculated that all under eighteen pounds are young fish, or Salmon in their second year, and those above in their third or more advanced years. To what size the fish may attain seems uncertain: Mr. Mudie mentions one of sixty pounds; Pennant another of seventy-four pounds; and Mr. Yarrell one of eighty-three pounds, a female, short for its weight, but of unusual thickness and depth, which was brought to London about 1821. These were either taken in nets or snares. But two others of large size are mentioned as having been taken with a fly: the one by Sir Humphrey Davy in the Tweed, above Yair Bridge, which weighed forty-two pounds; and the other recorded by Mr. Lascelles, in his *Letters on Sporting*, the weight of which was fifty-four pounds and a half.

It is a question, and rather a curious one, whether all Salmon spawn every year? but it has not been satisfactorily determined. Stephens thinks that they do not, because every year a proportion of old Salmon, weighing about eighteen pounds, are taken in fine condition coming in from the sea, in the months of January, February, and March, when the breeders are only going down the river as Kelts. And he also thinks that a large proportion of the Grilses keep the sea during the Winter, and return in the following year as young Salmon, having in some way got over the spawning time, and speedily recovering their condition come to maturity and enter the rivers in the Spring and Summer months; whilst the breeding Grilses, from their confinement in the fresh water and their exhaustion in spawning, advance little towards the form of Salmon.

It has been already mentioned that, in ascending to their spawning grounds, Salmon contend bravely and successfully with almost incredible obstacles, such as the rapidity of streams, and the falls over which they often pass. It is stated that they employ only three months in ascending to the sources of the Maragnon, or River of Amazons, a distance of more than three thousand miles from the sea, the current of which is remarkably rapid, and thus average nearly forty miles a-day. And this does not seem improbable, if the fact stated by Mr. Little (see *Report*, 1824) be correct, that they will run twenty-five or thirty miles in a tide, if there is a flood in the river.

If the torrent be very rapid, from being pent up in a narrow gorge, the Salmon are not able to withstand its force, though they might be able to surmount its height;

SALMO.

SALMO. they are therefore compelled to wait till the floods convert the fall into a rapid, up which the fish make their way without difficulty. Such is the case at the Keith of Blairgowrie; here the large pool at the foot of the fall, which is about thirty feet deep, is after long continued dry weather filled with Salmon, "not merely," as Mr. Mudie says, in his *British Naturalist*, "covering the extent from side to side, but actually built, as it were, one stratum above another, all hanging suspended in the water, and waiting till a flood shall come, and, by filling the gorge, overflow the rocks, and thus convert the fall into a brawling rapid, which they can ascend." The falls of Kilmorach, on the river Beaulie, in Inverness-shire, is also another of the remarkable Salmon leaps in Scotland, and are rendered famous by a story told of the last Lord Lovat, who, being well aware that of the great number of fish which endeavoured to spring over the fall many often missed their aim and fell upon the bank, placed a large pot on a fire made on the rocks close by, into which the fish occasionally dropped in their unsuccessful attempts, and thus enabled him to boast that, in his country, provisions abounded so much that, if a fire were made and a pot set on to boil on the banks of a river, the Salmon would of themselves leap into it to be boiled without the aid of a fisherman. The falls of Ballyshannon, which are a little below the bridge of that town, are produced by a ridge of rocks of about twelve feet high at the last of ebb tide, but hardly three feet at high water. At the latter time the Salmon swim up without difficulty, but at low water they leap. Mr. Twiss, in his *Tour in Ireland in 1775*, says, "It is hardly credible but to those who have been eye-witnesses that these fish should be able to dart themselves nearly fourteen feet perpendicular out of the water; and, allowing for the curvature, they leap at least twenty. I remained hours in observing them; they do not always succeed at the first leap; sometimes they bound almost to the summit, but the falling water dashes them down again; at other times they dart head foremost and sidelong upon a rock, remain stunned for a few moments, and then struggle into the water again; when they are so lucky as to reach the top, they swim out of sight in a moment. They do not bound from the surface of the water, and it cannot be known from what depth they take their leap; it is probably performed by a forcible spring with their tails bent, for the chief strength of most fish lies in the tail. They have often been shot, or caught with strong barbed hooks fixed to a pole during their flight, as it may be termed; and instances have been known of women catching them in their aprons. Sometimes I have seen fifty or sixty of these leaps in an hour, and at other times only two or three."

A curious circumstance is mentioned by Mr. Hogarth, in his evidence before the House of Commons, in regard to the natural means sometimes afforded to Salmon in their ascent to the upper waters, where from the height or violence of the torrent they would be otherwise unable to pass up. He says, "I know of a natural ladder similar to the one now before me, (alluding to a model of Smith or Thorn,) in one of the small rivers in Sutherland, where the fish go up step by step. The first step is about six feet high, it is like a staircase; the next step is from two to three feet, and the others much the same; they rest on each, and I have seen them taken out there by a loop-net."

As to the mode in which Salmon leap up the falls, it is a commonly received notion that they take their tails

in their mouths and thus spring up; this, however, is a manifest absurdity, for a fish in such position would necessarily be motionless. Mr. Mudie says, "That the fish bends itself laterally is true, because the muscles have of course their principal action in that direction in which the tail can act as an oar in swimming, and as a fulcrum in leaping; and that when they put forth all their vigour, the tail is brought nearly in contact with the head. We have watched them often, both in places where they could succeed and where they could not; but though we could distinctly see the curvature before the fish vaulted into the air, the whole effort was so instantaneous that we could not discover clearly whether the body was bent to or from the fall; we think, however, that it was bent towards it; and as in the eddies from which they take their spring this position would give the tail most power as a fulcrum, there is every reason to believe that this is their position." Opposed even to this modified curving of the Salmon is Pennant's observation, "such as we saw spring up quite straight and with a strong tremulous motion." And Agassiz says, "This elastic tail is to these fishes a most powerful lever; when wishing to leap to a great height they strike the surface of the water with a kind of double stroke." The impetus thus afforded to the animal would seem to be amply sufficient for the purpose without the great curvature of the body mentioned by Mr. Mudie, and may be readily made apparent by smartly striking one end of an elastic rod against any dense body, and then suddenly loosing the other end, immediately upon which the rod springs up to a height proportionate to the weight of the stroke.

Salmon is, as is well known, a very important article of food, but is not at all times in season. The fish which have just come up from the sea are considered to be in finest condition; they do not deteriorate for the first twenty-four hours, but after that time gradually decline in flavour and appearance. They are technically said to be either *clean* or *foul* fish; clean when they first leave the sea and whilst the roe is small, and foul when the roe is advanced near to spawning time; and after that function is completed and the return of the fish to the sea, a residence in which for three months, by the facility it offers for providing the most nutritious food, restores the condition of the fish, which then revisits the estuaries and shores of the sea clean.

The importance of protecting the Salmon in its passage up the rivers to spawn very early attracted the attention of the Government in this Kingdom. An Act in the 13th of Edward I., A. D. 1285, forbade the capture of Salmon from Martinmas (November 1) to Lady-day, in the Humber, Ouse, Trent, Don, Acre, Derwent, Wharfe, Ind, Yore, Swale, and Tees, and all other parts of the Kingdom. The catching of young Salmon at mill-pools, between the middle of April and the 24th of June, was also prohibited. In the year 1337, Edward III. ordered that no young Salmon should be taken. By the Scotch laws the fishermen were obliged to leave a free passage for the fish from Saturday night to Monday morning, which was called *Saterdayes sloppe*, or Saturday's slap, a regulation still in force. By a law of James IV. of Scotland, "Slayers of reide fish or smoltes of Salmon, the third time are punished with death; and siclike he quha commands the samine to be done:" but previous to this enactment the offender was allowed to compound for his life.

Various alterations have been made with reference to

SALMO.

SALMO. the time at which Salmon should not be taken, and the restricted period is called *close time*. This at present is from the 14th of September to the 1st of February. But it having been shown to the satisfaction of the Committee of the House of Commons, which sat on the subject of the Salmon Fisheries, that the time at which the fish entered the rivers for the purpose of spawning varied very considerably, they recommended that the *close time* should be varied accordingly, with this proviso, however, that in all cases its duration should not be less than one hundred and thirty-nine days; and that the weekly close time, or Saturday slap should be observed during the whole fishing season, both in the rivers and lakes, and on the sea-coast.

The fisheries for Salmon are carried on in different modes, according to the difference of situation in which the fish are found, and are either stationary or movable engines. In the coast fisheries and those at the estuaries, the common nets used in Scotland are the stake and bag-nets, which are laid out from the shore at such angles as to intercept the track of the fish as they run along the coast and up the river mouths. These nets have only been used to a great extent during the last few years; but Mr. Cameron (see *Minutes of Evidence*) considers that such fixed engines had been allowed as early as the beginning of the XVth Century on the Scotch coast, and quotes the following passage from Boethius's Introduction to his *Scottorum Historia*: *Sed novus is piscandi mos est. In intimo maris sinu cratem longo tractu directam cœnam inducunt, in angulis suis ternis quaternisve gyris involutam, adversus quam inveniente mari delati in gyris illis sese impli- cant; unde nec facilis manente aqua fit illis exitus; itaque mox abeunte oceano in sicco destituti advenien- tium manibus prædas sese exhibent.* The movable nets used at the mouths of rivers are the seine and the cobble- net, which differ little from each other, and are worked with boats. At Carrick-a-rede, on the Northern coast of Antrim, the Irish fishers lay out a net directly from the shore with a slight curve, forming a bosom in the direction of the approach of the Salmon. From the far end of this net a rope is carried obliquely to another part of the shore, which allows of it being easily swept round like a seine and drawn ashore. A person being set to watch, as soon as he sees the Salmon approaching the net makes a signal, when the further end is hauled in, "whilst the rest of the party," says the Rev. Mr. Hamilton, "keep up an incessant cannonade with their ammunition of stones to prevent the return of the fish till the net has been completely pulled round them; after which they all join forces and drag the net and fish quietly to the rocks." The river fisheries are managed by means of dams or weirs, and cruives or wooden cages, which allow the passage of fish of small dimen- sions, but entrap those of larger size. On some rivers, as in the Spey, a dike is built of loose stones, wide at the lower part, and gradually approaching the shore at the upper so as to leave but a narrow channel, above which a hut, composed of boughs of trees, is built, in which is seated a man who watches the Salmon inter- cepted by the tail of the dike, and as they pass through the upper end strikes them with a five-pronged spear. "Blazing a river" is a mode employed by poachers during spawning time; one person walks in the centre having a faggot made of dry fir, sometimes dry broom, put on a pole, which he carries high above his head. He is attended on each side by others, each carrying a

leister or spear with three prongs, who strike the Salmon discovered by the light as they lie on the spawning beds. **SALMO.**

On taking the fish out of the nets or cruives, it is usual to strike them on the head, which, by depriving them of motion, prevents their beating about and bruising themselves or disturbing the scales, and it is also said makes them crimp better. They are then conveyed either on horses or in carts to the ice-house, where they are packed in ice in boxes which contain about 100 or 130 pounds of fish, and averaging ten or a dozen in number, according to their size. These are generally shipped and sent off to the London markets. The quantity thus forwarded and received in London, ac- cording to Mr. Hogarth's account, (see *Evidence*,) was, in 1834, 31,000 boxes, or 1542 tons, and in 1835, 42,319 boxes, or 2101 tons from Scotland; whilst from the Irish fisheries in the former years 400 boxes were received, and in the latter 467 boxes, each box weighing 111 pounds. This, though of course but a very limited estimate, as it does not include the home consumption in either country, nor the quantity pickled or kippered, may afford a slight notion of the importance of this branch of the British fisheries. The total value of Sal- mon caught in the Scotch rivers has been estimated at £150,000 a-year.

Besides the trade in fresh Salmon, a very large quan- tity is cured by *salting*. This method of preserving the fish has been used for many years, and so highly were they esteemed that, in Henry VI.'s reign, the Queen of Scotland considered them as worthy of forming a royal present, and sent to the Duchess of Clarence ten casks full, which were admitted by the King into England free of duty. Of late years this trade has much fallen off, in consequence of the increase of the Newfoundland fisheries, and little of that salted is used for other than foreign consumption. They are cured by first being split and rubbed with fine salt, after which they are laid in pickle in large tubs for six weeks, and from these they are removed to be packed with layers of coarse Spanish salt in tierces.

In many parts of Scotland Salmon is cured by a pro- cess called *kippering*, which is effected in the following manner. By cutting through the gills immediately after the fish has been killed, all the blood is abstracted; a cut is then made along the back on either side of the spine or backbone, which is taken out to within two or three inches of the tail, the entrails removed and the head taken off, but the skin of the belly is left untouched. The fish is then laid with the skin downwards upon a board and well rubbed and covered with equal parts of salt and pepper, especially the fins, which otherwise in warm weather would very soon become putrid. Some- times a shallow wooden trough is used so as to keep the brine more completely about the fish, of which often two or three are kippered together, one being laid upon the other. Having remained thus for two or three days in a cool place, it is taken out, again rubbed with pepper and salt, and then, having been stretched out with small sticks placed across it, is hung up by the tail and ex- posed to the sun or the heat of a fire for a few days, when it becomes dry and fit for use. A peculiar flavour is sometimes imparted to it by hanging up for two or three weeks in a chimney, where it is smoked with the reek of peat or juniper berries, which mode of treatment is considered to make it more relishing.

Another mode of preparing Salmon is *pickling with vinegar and spices*, first discovered by Mr. Cockburn, of

SALMO. Berwick, in 1763. The Salmon thus prepared is as soon as taken from the nets, and scarcely dead, cut up into small thick pieces, and, having been boiled, immediately headed down in small tubs or *kits* filled with pickle. The boiling of the fish so recently dead gives the Scotch pickled Salmon that crispness and flavour for which it is so celebrated.

Lewis and Clarke, in their *Travels to the Source of the Missouri River and across the American Continent*, &c., mention a mode of drying Salmon employed by the Indians on the river Towahnahooks, a large branch of the Columbia: "After opening the fish and exposing it to the sun on their scaffolds, when sufficiently dried it is pounded fine between two stones till pulverized, and is then placed in a basket, about two feet long and one in diameter, neatly made of grass and rushes, and lined with the skin of a Salmon stretched and dried for the purpose. Here they are pressed down as hard as possible, and the top covered with the skins of fish which are secured by cords through the holes of the basket. The baskets are then placed in some dry situation, the corded part upwards, seven being usually placed as close as they can be put together, and five on the top of them. The whole is then wrapped up in mats and made fast by cords, over which mats are again thrown. Twelve of these baskets, each of which contains from 90 to 100 pounds, form a stack, which is now left exposed till it is sent to market; the fish thus preserved is kept sound and sweet for several years."
